### Using the DTC to Perform Continuous Clock Synchronous Serial Communication CC-RL

---

#### Abstract

This document describes how to perform continuous clock synchronous serial communication using the serial array unit (3-wire serial I/O) and DTC in the RL78/G14.

#### Products

RL78/G14

When using this application note with other Renesas MCUs, careful evaluation is recommended after making modifications to comply with the alternate MCU.

### 1. Specifications

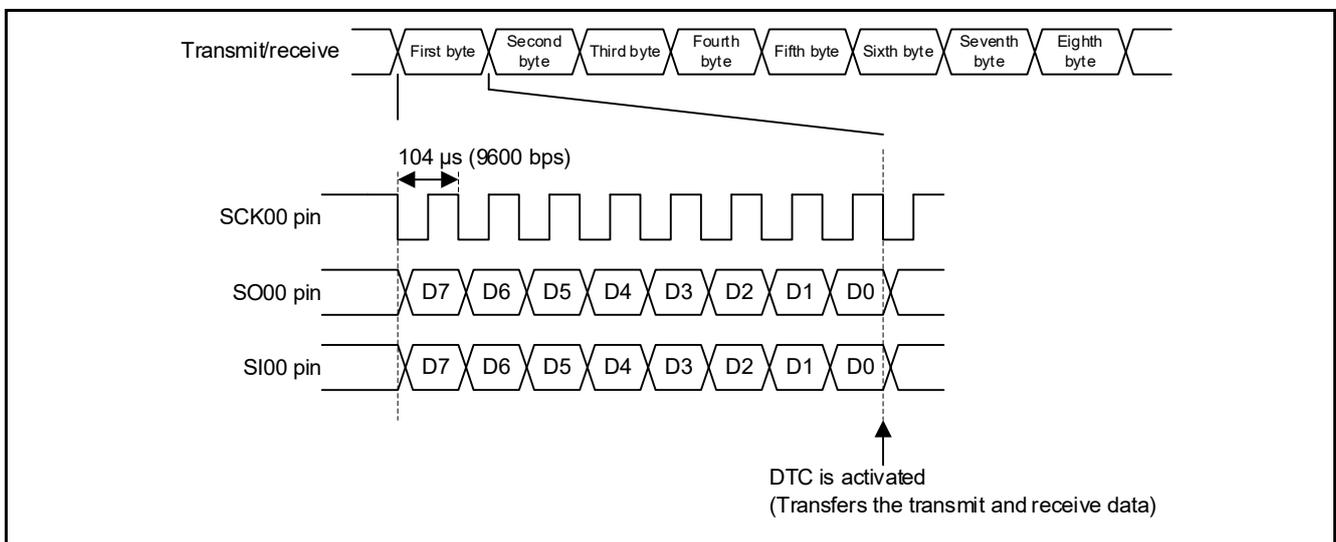

In this application note, the serial array unit (SAU) and DTC are used to successively transmit and receive 8-bit data. The SAU is used as a 3-wire serial I/O interface to output a transfer clock from the SCK00 pin, output transmit data from the SO00 pin, and input receive data to the SI00 pin.

The DTC transfers transmit data and receive data from the transmission source address to the destination address. The DTC is activated by the 3-wire serial I/O interface transfer end.

Table 1.1 lists the peripherals functions and their applications. Figure 1.1 shows the timing and communication format.

**Table 1.1 Peripheral Functions and Their Applications**

Peripheral Function	Application
SAU (unit 0, channel 0)	Performs clock synchronous serial communication
DTC	Transfers transmit data and receive data

**Figure 1.1 Timing and Communication Format**

## 2. Operation Confirmation Conditions

The sample code accompanying this application note has been run and confirmed under the conditions below.

**Table 2.1 Operation Confirmation Conditions**

Item	Contents
MCU used	RL78/G14 (R5F104PJA)
Operating frequencies	<ul style="list-style-type: none"> <li>High-speed on-chip oscillator clock (<math>f_{HOCO}</math>): 32 MHz (typical)</li> <li>CPU/peripheral hardware clock (<math>f_{CLK}</math>): 32 MHz</li> </ul>
Operating voltage	5.0 V (operation enabled from 2.9 to 5.5 V) LVD operation ( $V_{LVD}$ ): 2.81 V at the rising edge or 2.75 V at the falling edge in reset mode

### 3. Hardware

#### 3.1 Hardware Configuration

Figure 3.1 shows a connection example.

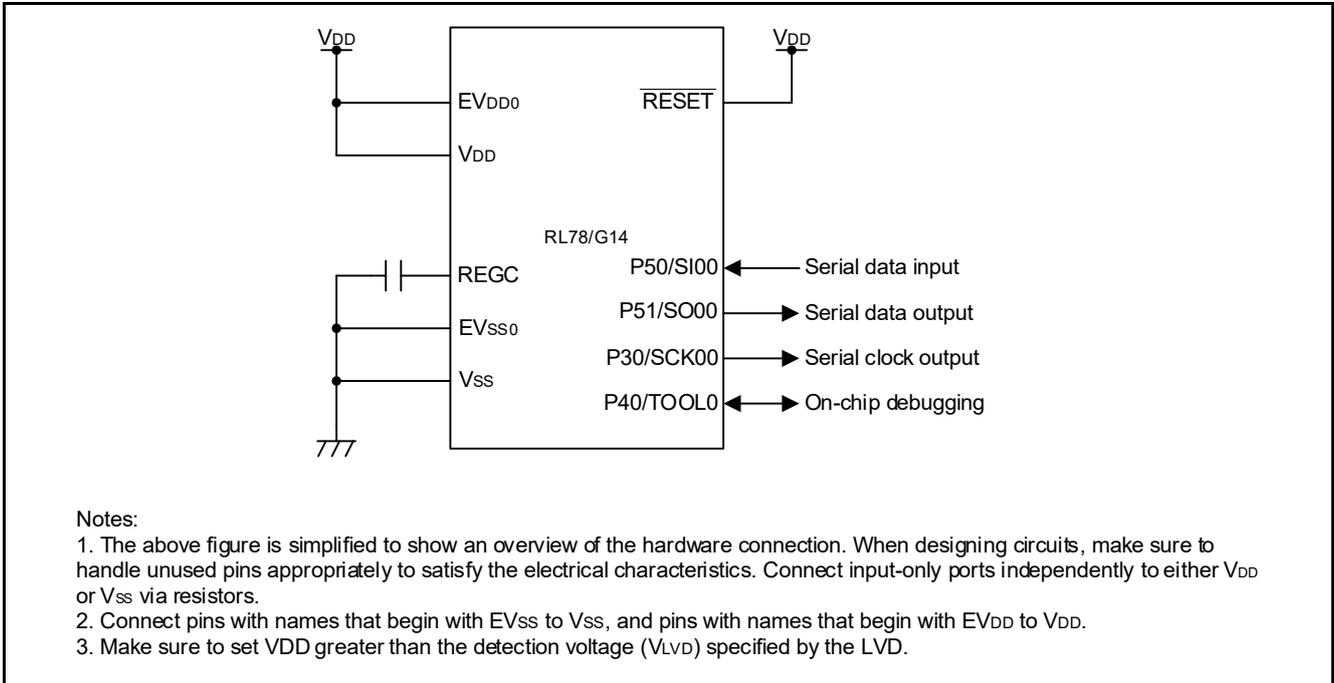

Figure 3.1 Connection Example

#### 3.2 Pins Used

Table 3.1 lists the pins used and their functions.

Table 3.1 Pins Used and Their Functions

Pin Name	I/O	Function
P50/SI00	Input	Serial data input
P51/SO00	Output	Serial data output
P30/SCK	Output	Serial clock output

### 4. Software

As the sample code is created by editing the functions generated by the RL78/G14 code library, the code generator property has been modified. Figure 4.1 shows the code generator property setting.

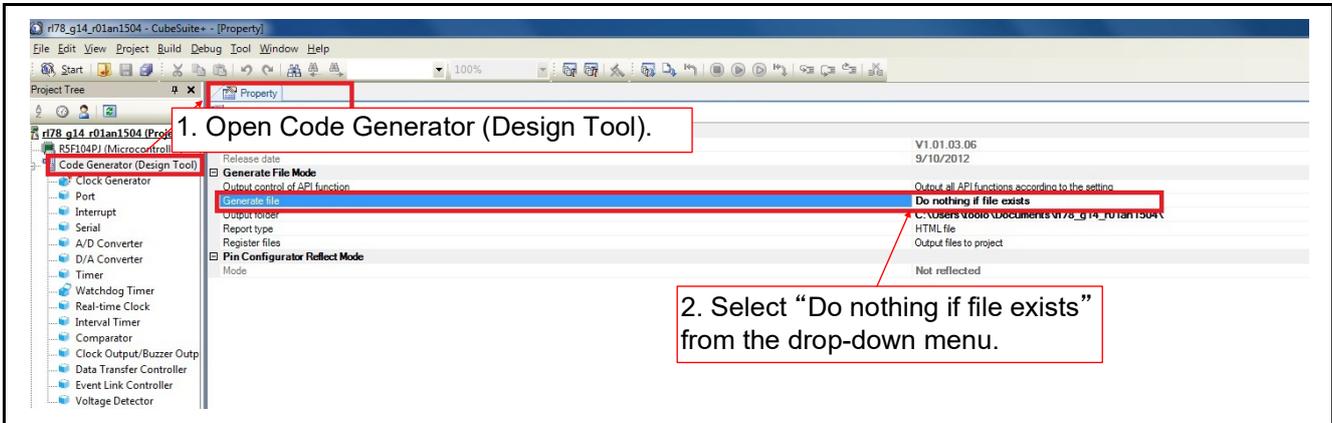

Figure 4.1 Code Generator Property Setting

### 4.1 Operation Overview

RL78/G14 transfers the receive data using the DTC control data 0 (DTCD0), and transfers the transmit data using the DTC control data 1 (DTCD1), and thus successively transmits and receives 8-byte data. Note that the program transfers the first byte of transmit data and the eighth byte of receive data.

Settings for the peripheral functions are listed below.

#### SAU

- Use single transfer mode
- Set the data length to 8 bits
- Set the data transfer sequence to MSB first
- Set the data transmit/receive timing to type 1
- Set the baud rate to 9600 bps
- Set the interrupt priority to low

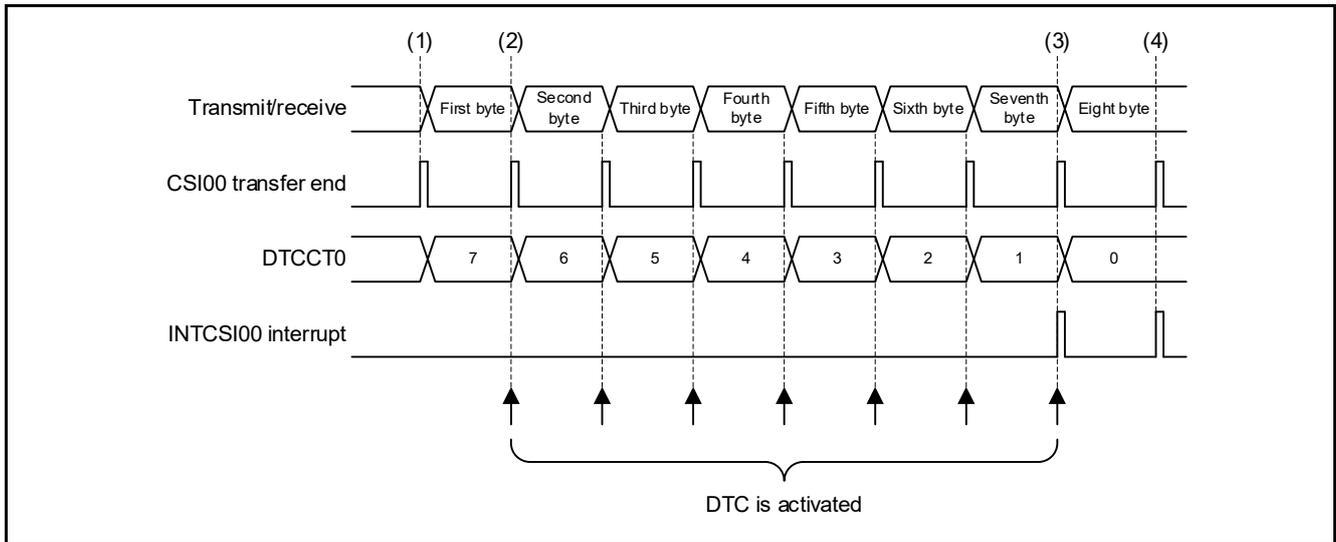

#### DTCD0

- Set the activation source to CSI00 transfer end
- Enable the chain transfer
- Set the transfer mode to normal mode
- Set the data length to 8 bits
- Set the transfer source to FFF10H (SIO00 register address), fixed
- Set the transfer destination to FE900H, incremented
- Set the number of transfers to seven
- Set the transfer block size to 1 byte

#### DTCD1

- Set the activation source to DTC0 transfer end
- Disable the chain transfer
- Set the transfer mode to normal mode
- Set the data length to 8 bits
- Set the transfer source to FE911H, incremented
- Set the transfer destination to FFF10H (SIO00 register address), fixed
- Set the transfer block size to 1 byte

Figure 4.2 shows transmit and receive timing, and DTC activation. Figure 4.3 shows the operation of DTCD0. Figure 4.4 shows the operation of DTCD1.

**Figure 4.2 Timing of Transmission/Reception and DTC Activation**

(1) Transmission/reception start

RL78/G14 starts transmission and reception after the DTC is configured.

Transmission is performed by the program writing the first byte of transmit data to the SIO00 register.

(2) DTC activation

After the first byte of data has been transmitted and received, DTC0 is activated. The first byte of receive data is transferred from the SIO00 register to the transfer destination address.

When transfer of the receive data is completed, DTC1 is activated. The second byte of transmit data from the transmit source address is transferred to the SIO00 register.

When the transmit data is written to the SIO00 register, the next transmission and reception start. The DTC is activated every time when the transmission and reception are completed and the same procedure is repeated until the transmission and reception of the eighth byte data is started. The DTCCT0 register value decrements each time the DTC transfer is activated.

(3) INTCSI00 interrupt generated by the DTC transfer end

When the DTCCT0 register becomes 0, the INTCSI00 interrupt occurs.

Preparations to complete transmission and reception are performed in the program.

(4) INTCSI00 interrupt generated by transmission/reception end

When the transmission and reception of the eighth byte of data is completed, the INTCSI00 interrupt occurs. The program reads and copies the eighth byte of receive data.

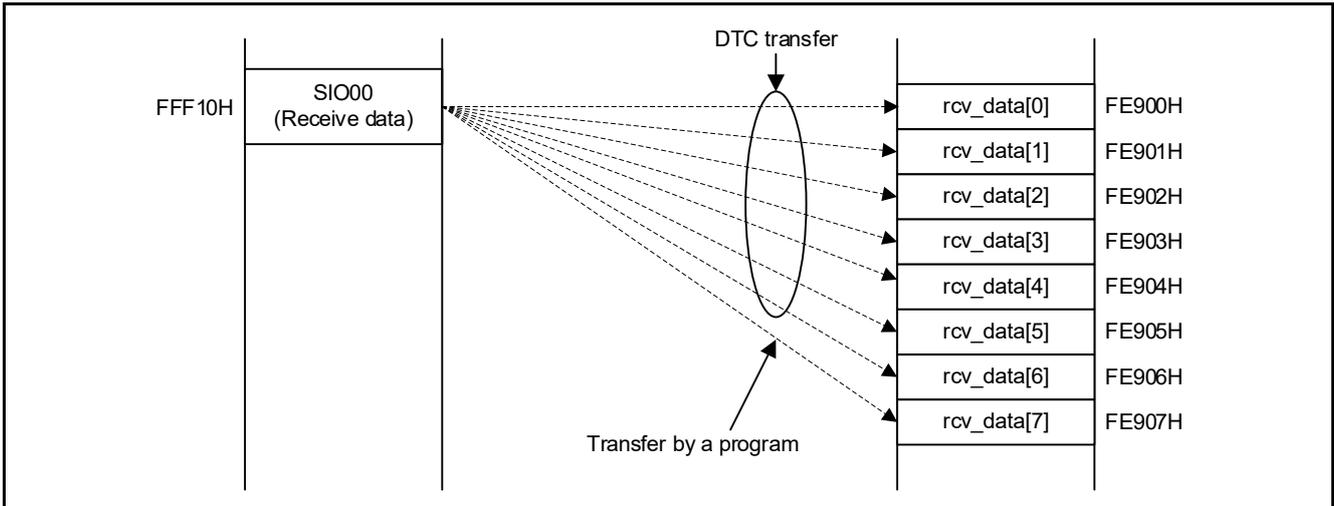

Figure 4.3 DTCD0 Operation

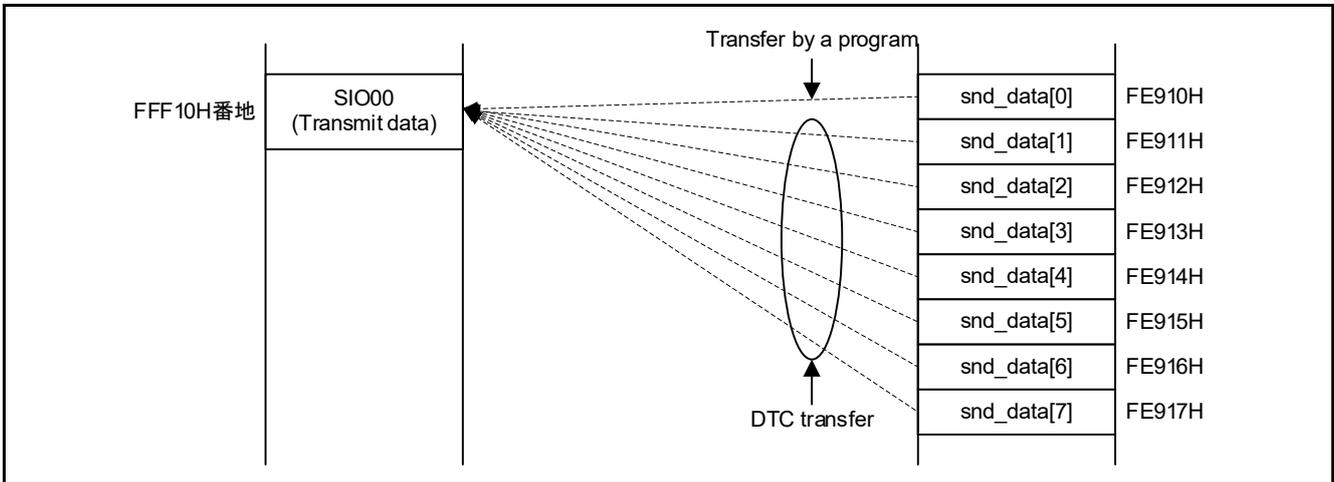

Figure 4.4 DTCD1 Operation

## 4.2 Section Composition

Table 4.1 lists the sections used in the sample code.

**Table 4.1 Sections Used in the Sample Code**

Section Name	Address	Reference Variable	Description
DTC0DST	0FE900H	rcv_data[]	DTCD0 transfer destination address
DTC1SRC	0FE910H	snd_data[]	DTCD1 transfer source address

## 4.3 Option Byte Settings

Table 4.2 lists the option byte settings.

**Table 4.2 Option Byte Settings**

Address	Setting Value	Contents
000C0H/010C0H	11101111B	Stops the watchdog timer (counting is stopped when a reset is canceled)
000C1H/010C1H	01111111B	Sets the LVD in reset mode Detection voltage: 2.81 V at the rising edge, 2.75 V at the falling edge
000C2H/010C2H	11101000B	Sets the HOCO clock as 32 MHz in high-speed main (HS) mode
000C3H/010C3H	10000100B	Enables on-chip debugging

## 4.4 Constant

Table 4.3 lists the constant used in the sample code.

**Table 4.3 Constant Used in the Sample Code**

Constant Name	Setting Value	Contents
TX_RX_DATA_SIZE	8 bytes	Transmit/receive data size

## 4.5 Variables

Table 4.4 lists the global variables, and Table 4.5 lists the static variable.

**Table 4.4 Global Variables**

Type	Variable Name	Contents	Function Used
uint8_t	rcv_data[]	Receive data	R_MAIN_UserInit r_csi00_interrupt r_csi00_callback_receiveend
uint8_t	snd_data[]	Transmit data	R_CSI00_Send_Receive transmit_data_set
uint8_t	set_rcv_data[]	Store the receive data	r_csi00_callback_receiveend
uint8_t	csi_status	Transmission/reception end status	main R_MAIN_UserInit r_csi00_callback_receiveend

Table 4.5 static Variable

Type	Variable Name	Contents	Function Used
MD_STATUS	md_status	Status flag	main

## 4.6 Functions

Table 4.6 lists the functions.

Table 4.6 Functions

Function Name	Outline
hdwinit	Initialization
R_Systeminit	Peripheral function initialization
R_CGC_Create	CPU clock initialization
R_SAU0_Create	SAU0 initialization
R_CSI00_Create	CSI00 initialization
R_CSI00_Start	CSI00 operation start
R_CSI00_Send_Receive	CSI00 transmission/reception start
r_csi00_interrupt	CSI00 transfer end interrupt
r_csi00_callback_receiveend	CSI00 receive end callback function
r_csi00_callback_error	CSI00 error callback function
R_DTC_Create	DTC initialization
R_DTCD0_Start	DTCD0 operation start
R_DTCD0_Stop	DTCD0 operation stop
main	Main processing
R_MAIN_UserInit	Main initialization
transmit_data_set	Transmit data setting

## 4.7 Function Specifications

The following tables list the sample code function specifications.

hdwinit	
<b>Outline</b>	Initialization
<b>Header</b>	None
<b>Declaration</b>	void hdwinit(void)
<b>Description</b>	Initializes the peripheral functions.
<b>Arguments</b>	None
<b>Return Value</b>	None

---

R_Systeminit	
<b>Outline</b>	Peripheral function initialization
<b>Header</b>	None
<b>Declaration</b>	void R_Systeminit(void)
<b>Description</b>	Initializes the peripheral functions used in this application note.
<b>Arguments</b>	None
<b>Return Value</b>	None

---

R_CGC_Create	
<b>Outline</b>	CPU clock initialization
<b>Header</b>	r_cg_cgc.h
<b>Declaration</b>	void R_CGC_Create(void)
<b>Description</b>	Initializes the CPU clock.
<b>Arguments</b>	None
<b>Return Value</b>	None

---

R_SAU0_Create	
<b>Outline</b>	SAU0 initialization
<b>Header</b>	r_cg_serial.h
<b>Declaration</b>	void R_SAU0_Create(void)
<b>Description</b>	Initializes SAU0.
<b>Arguments</b>	None
<b>Return Value</b>	None

---

R_CSI00_Create	
<b>Outline</b>	CSI00 initialization
<b>Header</b>	r_cg_serial.h
<b>Declaration</b>	void R_CSI00_Create(void)
<b>Description</b>	Initializes CSI00.
<b>Arguments</b>	None
<b>Return Value</b>	None

---

R_CSI00_Start	
<b>Outline</b>	CSI00 operation start
<b>Header</b>	r_cg_serial.h
<b>Declaration</b>	void R_CSI00_Start(void)
<b>Description</b>	Starts CSI00 operation.
<b>Arguments</b>	None
<b>Return Value</b>	None

---

R_CSI00_Send_Receive	
<b>Outline</b>	CSI00 transmit/receive start
<b>Header</b>	r_cg_serial.h
<b>Declaration</b>	MD_STATUS R_CSI00_Send_Receive(uint8_t * const tx_buf, uint16_t tx_num, uint8_t * const rx_buf)
<b>Description</b>	Prepares the data buffer for CSI00 communication (transmission/reception) and sets the first byte of the transmit data.
<b>Arguments</b>	uint8_t * const tx_buf : Transmit data buffer pointer uint16_t tx_num : Transmit data size uint8_t * const rx_buf : Receive data buffer pointer
<b>Return Value</b>	MD_OK : Setting is completed, operation started MD_ARGERROR : Argument is incorrect
r_csi00_interrupt	
<b>Outline</b>	CSI00 transfer end interrupt
<b>Header</b>	None
<b>Declaration</b>	static void __near r_csi00_interrupt(void)
<b>Description</b>	Performs CSI00 transfer end interrupt handling.
<b>Arguments</b>	None
<b>Return Value</b>	None
r_csi00_callback_receiveend	
<b>Outline</b>	CSI00 receive end callback function
<b>Header</b>	r_cg_serial.h
<b>Declaration</b>	static void r_csi00_callback_receiveend(void)
<b>Description</b>	This function is called when receiving the specified number of bytes of data is completed. 8 bytes of receive data are copied to set_rcv_data[TX_RX_DATA_SIZE].
<b>Arguments</b>	None
<b>Return Value</b>	None
r_csi00_callback_error	
<b>Outline</b>	CSI00 error callback function
<b>Header</b>	r_cg_serial.h
<b>Declaration</b>	static void r_csi00_callback_error(uint8_t err_type)
<b>Description</b>	This function is called when the CSI00 error occurs.
<b>Arguments</b>	uint8_t err_type : Error type
<b>Return Value</b>	None
<b>Remarks</b>	The sample code does not include the error processing. Add processing to the user program as needed.

<b>R_DTC_Create</b>	
<b>Outline</b>	DTC initialization
<b>Header</b>	r_cg_dtc.h
<b>Declaration</b>	void R_DTC_Create(void)
<b>Description</b>	Initializes the DTC.
<b>Arguments</b>	None
<b>Return Value</b>	None
<b>DTCD0_Start</b>	
<b>Outline</b>	DTCD0 operation start
<b>Header</b>	r_cg_dtc.h
<b>Declaration</b>	void R_DTCD0_Start(void)
<b>Description</b>	Starts the DTCD0 operation.
<b>Arguments</b>	None
<b>Return Value</b>	None
<b>R_DTCD0_Stop</b>	
<b>Outline</b>	DTCD0 operation stop
<b>Header</b>	r_cg_dtc.h
<b>Declaration</b>	void R_DTCD0_Stop(void)
<b>Description</b>	Stops the DTCD0 operation.
<b>Arguments</b>	None
<b>Return Value</b>	None
<b>main</b>	
<b>Outline</b>	Main processing
<b>Header</b>	None
<b>Declaration</b>	void main(void)
<b>Description</b>	Performs the main processing.
<b>Arguments</b>	None
<b>Return Value</b>	None
<b>R_MAIN_UserInit</b>	
<b>Outline</b>	Main initialization
<b>Header</b>	None
<b>Declaration</b>	void R_MAIN_UserInit(void)
<b>Description</b>	Performs processing required to initialize the main processing.
<b>Arguments</b>	None
<b>Return Value</b>	None

---

**transmit\_data\_set**

---

<b>Outline</b>	Transmit data setting
<b>Header</b>	None
<b>Declaration</b>	static void transmit_data_set(void)
<b>Description</b>	Sets the transmit data.
<b>Arguments</b>	None
<b>Return Value</b>	None

Value	x	x	1	–	–	x	x	x

- Bit 5

CSIPR100 bit	CSIPR000 bit	Priority level selection
0	0	Specify level 0 (high priority)
0	1	Specify level 1
1	0	Specify level 2
1	1	Specify level 3 (low priority)

For details on register setting, refer to the RL78/G14 User’s Manual: Hardware.

Legend symbol:

x: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

### RL78/G14

#### Clearing the CSI00 error flag

- Serial flag clear trigger register (SIR00)

Symbol	<b>15</b>	<b>14</b>	<b>13</b>	<b>12</b>	<b>11</b>	<b>10</b>	<b>9</b>	<b>8</b>	<b>7</b>	<b>6</b>	<b>5</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>1</b>	<b>0</b>
SIR00	0	0	0	0	0	0	0	0	0	0	0	0	0	FECT00	PECT00	OVCT00
Value	–	–	–	–	–	–	–	–	–	–	–	–	–	1	1	1

- Bit 2

<b>FECT00 bit</b>	<b>Clear trigger of framing error of channel 0</b>
0	Not cleared
1	Clears the FEF00 bit of the SSR00 register to 0

- Bit 1

<b>PECT00 bit</b>	<b>Clear trigger of parity error of channel 0</b>
0	Not cleared
1	Clears the PEF00 bit of the SSR00 register to 0

- Bit 0

<b>OVCT00 bit</b>	<b>Clear trigger of overrun error of channel 0</b>
0	Not cleared
1	Clears the OVF00 bit of the SSR00 register to 0

For details on register setting, refer to the RL78/G14 User's Manual: Hardware.

Legend symbol:

×: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

### Setting the CSI00 operating mode

- Serial mode register 00 (SMR00)  
 Operating clock (f<sub>MCK</sub>): CK00  
 Transfer clock (f<sub>CLK</sub>): Divided f<sub>MCK</sub>  
 Operating mode: CSI mode

Symbol	<b>15</b>	<b>14</b>	<b>13</b>	<b>12</b>	<b>11</b>	<b>10</b>	<b>9</b>	<b>8</b>	<b>7</b>	<b>6</b>	<b>5</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>1</b>	<b>0</b>
SMR00	<b>CKS00</b>	<b>CCS00</b>	0	0	0	0	0	STS00	0	SIS000	1	0	0	<b>MD002</b>	<b>MD001</b>	<b>MD000</b>
Value	<b>0</b>	<b>0</b>	–	–	–	–	–	0	–	0	1	–	–	<b>0</b>	<b>0</b>	<b>0</b>

- Bit 15

<b>CKS00 bit</b>	<b>Selection of operating clock (f<sub>MCK</sub>) of channel 0</b>
0	Operating clock CK00 set by the SPS0 register
1	Operating clock CK01 set by the SPS0 register
Operating clock (f <sub>MCK</sub> ) is used by the edge detector. In addition, depending on the setting of the CCS00 bit and the higher 7 bits of the SDR00 register, a transfer clock (f <sub>CLK</sub> ) is generated.	

- Bit 14

<b>CCS00 bit</b>	<b>Selection of transfer clock (f<sub>CLK</sub>) of channel 0</b>
0	Divided operating clock f <sub>MCK</sub> specified by the CKS00 bit
1	Clock input fsck from the SCK00 pin (slave transfer in CSI mode)
Transfer clock f <sub>CLK</sub> is used for the shift register, communication controller, output controller, interrupt controller, and error controller. When CCS00 = 0, the division ratio of operating clock (f <sub>MCK</sub> ) is set by the higher 7 bits of the SDR00 register.	

- Bits 2 and 1

<b>MD002 bit</b>	<b>MD001 bit</b>	<b>Setting of operating mode of channel 0</b>
0	0	CSI mode
0	1	UART mode
1	0	Simplified I <sup>2</sup> C mode
1	1	Setting prohibited

- Bit 0

<b>MD000 bit</b>	<b>Selection of interrupt source of channel 0</b>
0	Transfer end interrupt
1	Buffer empty interrupt (Occurs when data is transferred from the SDR00 register to the shift register)

For details on register setting, refer to the RL78/G14 User's Manual: Hardware.

Legend symbol:

×: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

**Setting the CSI00 communication format**

- Serial communication operation setting register 00 (SCR00)  
 Operating mode: Enable transmission/reception  
 Clock phase: Type 1  
 Data transfer sequence: MSB first  
 Data length: 8-bit data length

Symbol	<b>15</b>	<b>14</b>	<b>13</b>	<b>12</b>	<b>11</b>	<b>10</b>	<b>9</b>	<b>8</b>	<b>7</b>	<b>6</b>	<b>5</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>1</b>	<b>0</b>
SCR00	<b>TXE</b> <b>00</b>	<b>RXE</b> <b>00</b>	<b>DAP</b> <b>00</b>	<b>CKP</b> <b>00</b>	0	EOC 00	PTC 001	PTC 000	<b>DIR</b> <b>00</b>	0	SLC 001	SLC 000	0	1	<b>DLS</b> <b>001</b>	<b>DLS</b> <b>000</b>
Value	<b>1</b>	<b>1</b>	<b>0</b>	<b>0</b>	–	×	×	×	<b>0</b>	–	×	×	–	–	<b>1</b>	<b>1</b>

- Bits 15 and 14

<b>TXE00 bit</b>	<b>RXE00 bit</b>	<b>Selection of operating mode of channel n</b>
0	0	Disable communication
0	1	Reception only
1	0	Transmission only
1	1	Transmission/reception

- Bits 13 and 12

<b>DAP00 bit</b>	<b>CKP00 bit</b>	<b>Selection of data and clock phase in CSI mode</b>
0	0	Type 1
0	1	Type 2
1	0	Type 3
1	1	Type 4

- Bit 7

<b>DIR00 bit</b>	<b>Selection of data transfer sequence in CSI and UART modes</b>
0	Inputs/outputs data with MSB first
1	Inputs/outputs data with LSB first

- Bits 1 and 0

<b>DLS001 bit</b>	<b>DLS000 bit</b>	<b>Setting of data length in CSI and UART modes</b>
0	0	9-bit data length (stored in bits 0 to 8 of the SDR00 register) (settable in UART mode only)
1	0	7-bit data length (stored in bits 0 to 6 of the SDR00 register)
1	1	8-bit data length (stored in bits 0 to 7 of the SDR00 register)
Other than above		Setting prohibited

For details on register setting, refer to the RL78/G14 User’s Manual: Hardware.

Legend symbol:

×: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

#### Setting the baud rate

- Serial data register 00 (SDR00)  
Sets the transfer clock to 9600 bps ( $9600 \text{ bps} = f_{MCK} \div 208 = 2 \text{ MHz} \div 208$ )

Symbol	<b>15</b>	<b>14</b>	<b>13</b>	<b>12</b>	<b>11</b>	<b>10</b>	<b>9</b>	<b>8</b>	<b>7</b>	<b>6</b>	<b>5</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>1</b>	<b>0</b>
SDR00	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Value	<b>1</b>	<b>1</b>	<b>0</b>	<b>0</b>	<b>1</b>	<b>1</b>	<b>1</b>	–								

- Bits 15 to 9

SDR00[15:9]							Transfer clock set by dividing the operating clock (fMCK)						
0	0	0	0	0	0	0	$f_{MCK}/2$						
0	0	0	0	0	0	1	$f_{MCK}/4$						
...	...	...	...	...	...	...	...						
1	1	0	0	1	1	1	$f_{MCK}/208 (=f_{MCK}/[(103+1) \times 2])$						

#### Setting the output values from pins SCK00 and SO00

- Serial output register 0 (SO0)

Symbol	<b>15</b>	<b>14</b>	<b>13</b>	<b>12</b>	<b>11</b>	<b>10</b>	<b>9</b>	<b>8</b>	<b>7</b>	<b>6</b>	<b>5</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>1</b>	<b>0</b>
SO0	0	0	0	0	CKO03	CKO02	CKO01	<b>CKO00</b>	0	0	0	0	SO03	SO02	SO01	SO00
Value	–	–	–	–	x	x	x	<b>1</b>	–	–	–	–	x	x	x	

- Bit 8

CKO00 bit	Serial clock output of channel 0
0	Serial clock output value is "0"
1	Serial clock output value is "1"

- Serial output register 0 (SO0)

Symbol	<b>15</b>	<b>14</b>	<b>13</b>	<b>12</b>	<b>11</b>	<b>10</b>	<b>9</b>	<b>8</b>	<b>7</b>	<b>6</b>	<b>5</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>1</b>	<b>0</b>
SO0	0	0	0	0	CKO03	CKO02	CKO01	CKO00	0	0	0	0	SO03	SO02	SO01	<b>SO00</b>
Value	–	–	–	–	x	x	x		–	–	–	–	x	x	x	<b>0</b>

- Bit 0

SO00 bit	Serial data output of channel 0
0	Serial clock output value is "0"
1	Serial clock output value is "1"

For details on register setting, refer to the RL78/G14 User's Manual: Hardware.

Legend symbol:

x: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

### RL78/G14

#### Enabling the CSI00 output

- Serial output enable register 0 (SOE0)

Symbol	<b>15</b>	<b>14</b>	<b>13</b>	<b>12</b>	<b>11</b>	<b>10</b>	<b>9</b>	<b>8</b>	<b>7</b>	<b>6</b>	<b>5</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>1</b>	<b>0</b>
SOE0	0	0	0	0	0	0	0	0	0	0	0	0	SOE03	SOE02	SOE01	<b>SOE00</b>
Value	–	–	–	–	–	–	–	–	–	–	–	–	x	x	x	<b>1</b>

- Bit 0

<b>SOE00 bit</b>	<b>Serial output enable/stop of channel 0</b>
0	Stops output by serial communication operation
1	Enables output by serial communication operation

#### Setting the pin used by CSI00

- Port mode register 5 (PM5)

Symbol	<b>7</b>	<b>6</b>	<b>5</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>1</b>	<b>0</b>
PM5	PM57	PM56	PM55	PM54	PM53	PM52	PM51	<b>PM50</b>
Value	x	x	x	x	x	x		<b>1</b>

- Bit 0

<b>PM50 bit</b>	<b>P50 pin I/O mode selection</b>
0	Output mode (output buffer on)
1	Input mode (output buffer off)

- Port register 5 (P5)

Symbol	<b>7</b>	<b>6</b>	<b>5</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>1</b>	<b>0</b>
P5	P57	P56	P55	P54	P53	P52	<b>P51</b>	P50
Value	x	x	x	x	x	x	<b>1</b>	

- Bit 0

<b>P51 bit</b>	<b>Output data control (in output mode)</b>
0	Output 0
1	Output 1

For details on register setting, refer to the RL78/G14 User's Manual: Hardware.

Legend symbol:

x: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

### RL78/G14

- Port mode register 5 (PM5)

Symbol	7	6	5	4	3	2	1	0
PM5	PM57	PM56	PM55	PM54	PM53	PM52	<b>PM51</b>	PM50
Value	x	x	x	x	x	x	<b>0</b>	

- Bit 1

PM51 bit	P51 pin I/O mode selection
0	Output mode (output buffer on)
1	Input mode (output buffer off)

- Port register 3 (P3)

Symbol	7	6	5	4	3	2	1	0
P3	0	0	0	0	0	0	P31	<b>P30</b>
Value	–	–	–	–	–	–	x	<b>1</b>

- Bit 0

P30 bit	Output data control (in output mode)
0	Output 0
1	Output 1

- Port mode register 3 (PM3)

Symbol	7	6	5	4	3	2	1	0
PM3	1	1	1	1	1	1	PM31	<b>PM30</b>
Value	x	x	x	x	x	x	x	<b>0</b>

- Bit 0

PM30 bit	P30 pin I/O mode selection
0	Output mode (output buffer on)
1	Input mode (output buffer off)

For details on register setting, refer to the RL78/G14 User's Manual: Hardware.

Legend symbol:

x: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

4.8.7 CSI00 Operation Start

Figure 4.11 shows the CSI00 operation start.

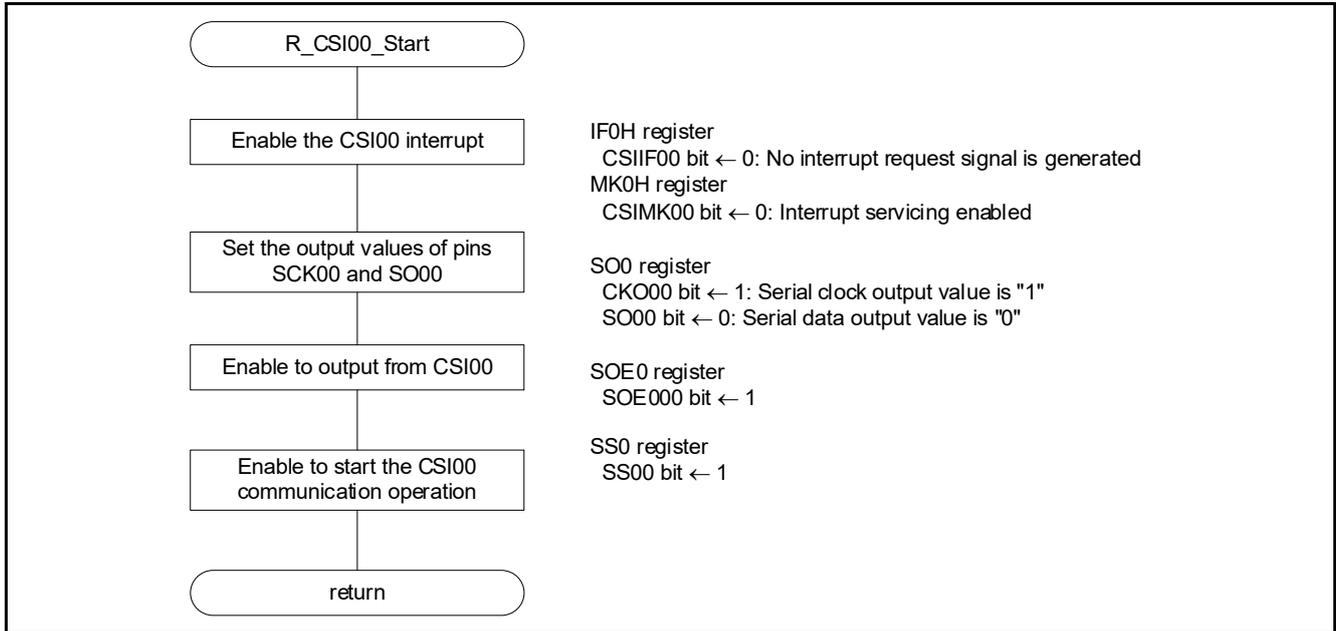

Figure 4.11 CSI00 Operation Start

Enabling the CSI00 interrupt

- Interrupt request flag register (IF0H)

Symbol	7	6	5	4	3	2	1	0
IF0H	SREIF0 TMIF01H	SRIF0 CSIF01 IICIF01	STIF0 <b>CSIF00</b> IICIF00	0	0	SREIF2 TMIF11H	SRIF2 CSIF21 IICIF21	STIF2 CSIF20 IICIF20
Value	x	x	0	–	–	x	x	x

- Bit 5

CSIF00 bit	Interrupt request flag
0	No interrupt request signal is generated
1	Interrupt request signal is generated, interrupt request status

For details on register setting, refer to the RL78/G14 User’s Manual: Hardware.

Legend symbol:

x: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

### RL78/G14

- Interrupt mask flag register (MK0H)

Symbol	7	6	5	4	3	2	1	0
MK0H	SREMK0 TMMK01H	SRMK0 CSIMK01 IICMK01	STMK0 <b>CSIMK00</b> IICMK00	1	1	SREMK2 TMMK11H	SRMK2 CSIMK21 IICMK21	STMK2 CSIMK20 IICMK20
Value	x	x	0	–	–	x	x	x

- Bit 5

<b>CSIMK00 bit</b>	<b>Interrupt servicing control</b>
0	Interrupt servicing enabled
1	Interrupt servicing disabled

### Setting the output values from pins SCK00 and SO00

- Serial output register 0 (SO0)

Symbol	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
SO0	0	0	0	0	CKO03	CKO02	CKO01	<b>CKO00</b>	0	0	0	0	SO03	SO02	SO01	SO00
Value	–	–	–	–	x	x	x	1	–	–	–	–	x	x	x	

- Bit 8

<b>CKO00 bit</b>	<b>Serial clock output of channel 0</b>
0	Serial clock output value is “0”
1	Serial clock output value is “1”

- Serial output register 0 (SO0)

Symbol	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
SO0	0	0	0	0	CKO03	CKO02	CKO01	CKO00	0	0	0	0	SO03	SO02	SO01	<b>SO00</b>
Value	–	–	–	–	x	x	x		–	–	–	–	x	x	x	0

- Bit 0

<b>SO00 bit</b>	<b>Serial data output of channel 0</b>
0	Serial clock output value is “0”
1	Serial clock output value is “1”

For details on register setting, refer to the RL78/G14 User’s Manual: Hardware.

Legend symbol:

x: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

### RL78/G14

#### Enabling the CSI00 output

- Serial output enable register 0 (SOE0)

Symbol	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
SOE0	0	0	0	0	0	0	0	0	0	0	0	0	SOE03	SOE02	SOE01	<b>SOE00</b>
Value	–	–	–	–	–	–	–	–	–	–	–	–	x	x	x	1

- Bit 0

SOE00 bit	Serial output enable/stop of channel 0
0	Stops output by serial communication operation
1	Enables output by serial communication operation

#### Enabling to start the CSI00 communication operation

- Serial channel start register 0 (SS0)

Symbol	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
SS0	0	0	0	0	0	0	0	0	0	0	0	0	SS03	SS02	SS01	<b>SS00</b>
Value	–	–	–	–	–	–	–	–	–	–	–	–	x	x	x	1

- Bit 0

SS00 bit	Operation start trigger of channel 0
0	No trigger operation
1	Sets the SE00 bit to 1 and enters the communication wait status

For details on register setting, refer to the RL78/G14 User's Manual: Hardware.

Legend symbol:

x: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

4.8.8 CSI00 Transmission/Reception Start

Figure 4.12 shows the CSI00 transmission/reception start.

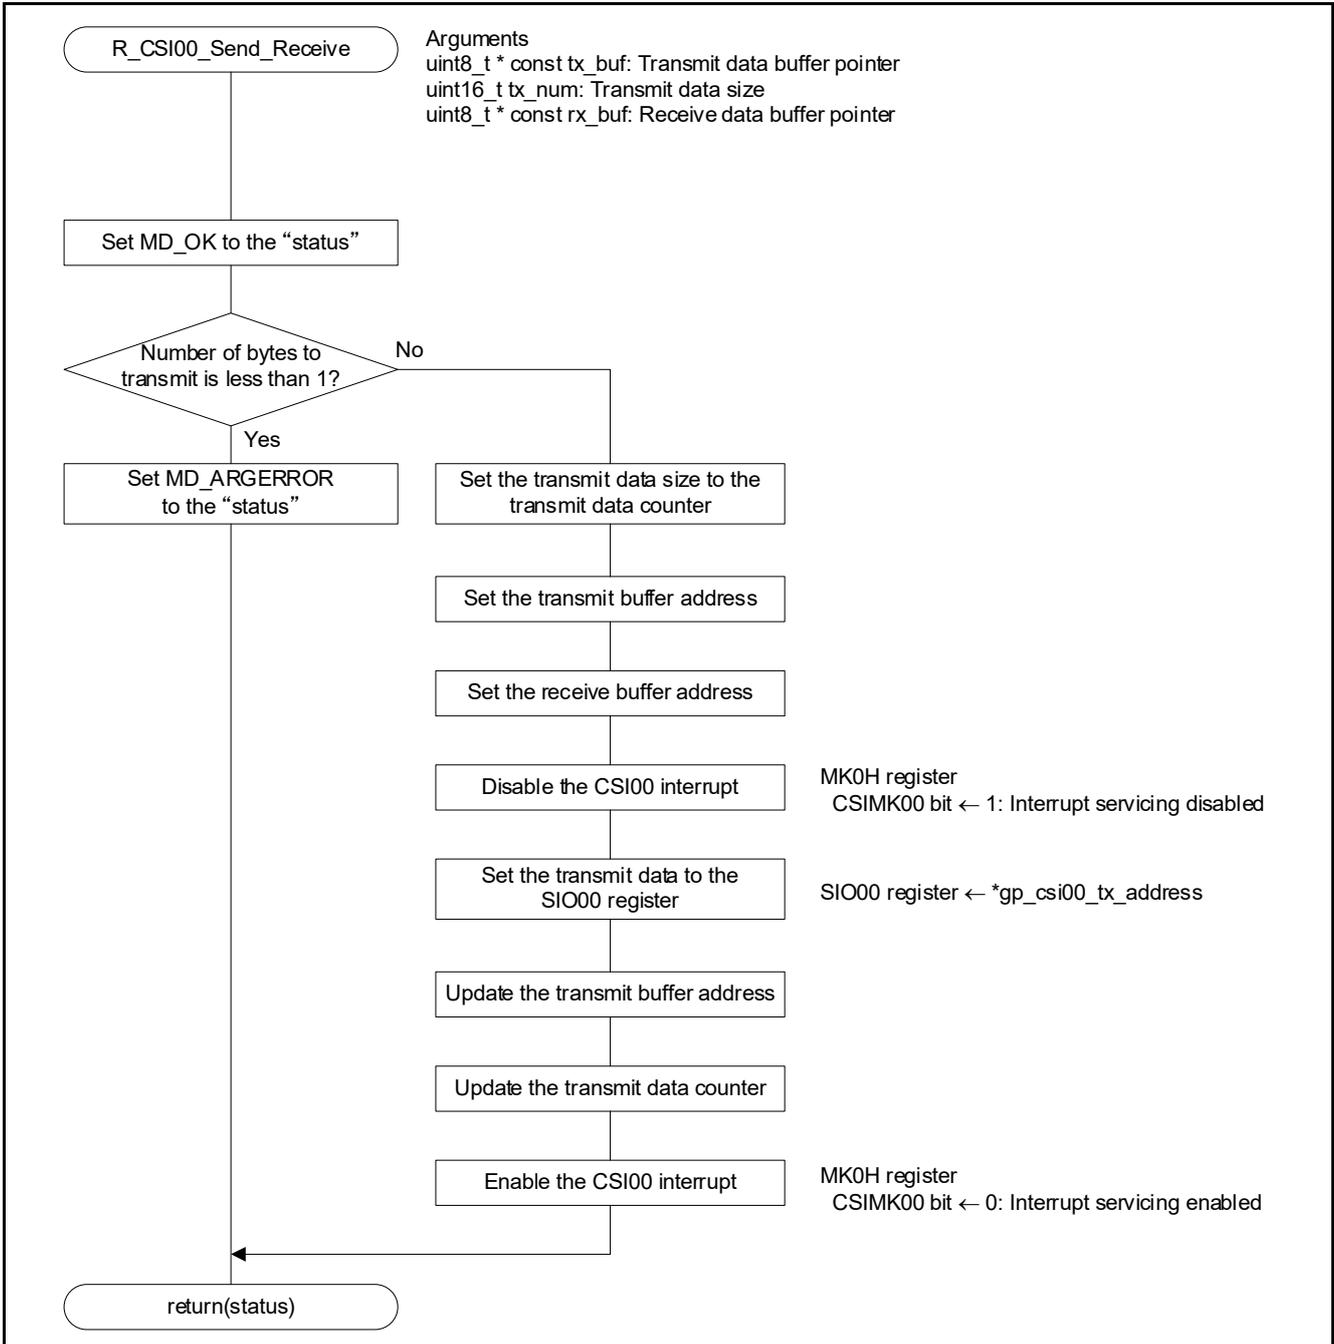

Figure 4.12 CSI00 Transmission/Reception Start

#### Disabling the CSI00 interrupt

- Interrupt mask flag register (MK0H)

Symbol	7	6	5	4	3	2	1	0
MK0H	SREMK0 TMMK01H	SRMK0 CSIMK01 IICMK01	STMK0 <b>CSIMK00</b> IICMK00	1	1	SREMK2 TMMK11H	SRMK2 CSIMK21 IICMK21	STMK2 CSIMK20 IICMK20
Value	x	x	1	–	–	x	x	x

- Bit 5

CSIMK00 bit	Interrupt servicing control
0	Interrupt servicing enabled
1	Interrupt servicing disabled

#### Setting the transmit data

- CSI00 data register (SIO00)

Symbol	7	6	5	4	3	2	1	0
SIO00	–	–	–	–	–	–	–	–
Value	00H to FFH							

#### Enabling the CSI00 interrupt

- Interrupt mask flag register (MK0H)

Symbol	7	6	5	4	3	2	1	0
MK0H	SREMK0 TMMK01H	SRMK0 CSIMK01 IICMK01	STMK0 <b>CSIMK00</b> IICMK00	1	1	SREMK2 TMMK11H	SRMK2 CSIMK21 IICMK21	STMK2 CSIMK20 IICMK20
Value	x	x	0	–	–	x	x	x

- Bit 5

CSIMK00 bit	Interrupt servicing control
0	Interrupt servicing enabled
1	Interrupt servicing disabled

For details on register setting, refer to the RL78/G14 User's Manual: Hardware.

Legend symbol:

x: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

4.8.9 CSI00 Transfer End Interrupt

Figure 4.13 shows the CSI00 transfer end interrupt.

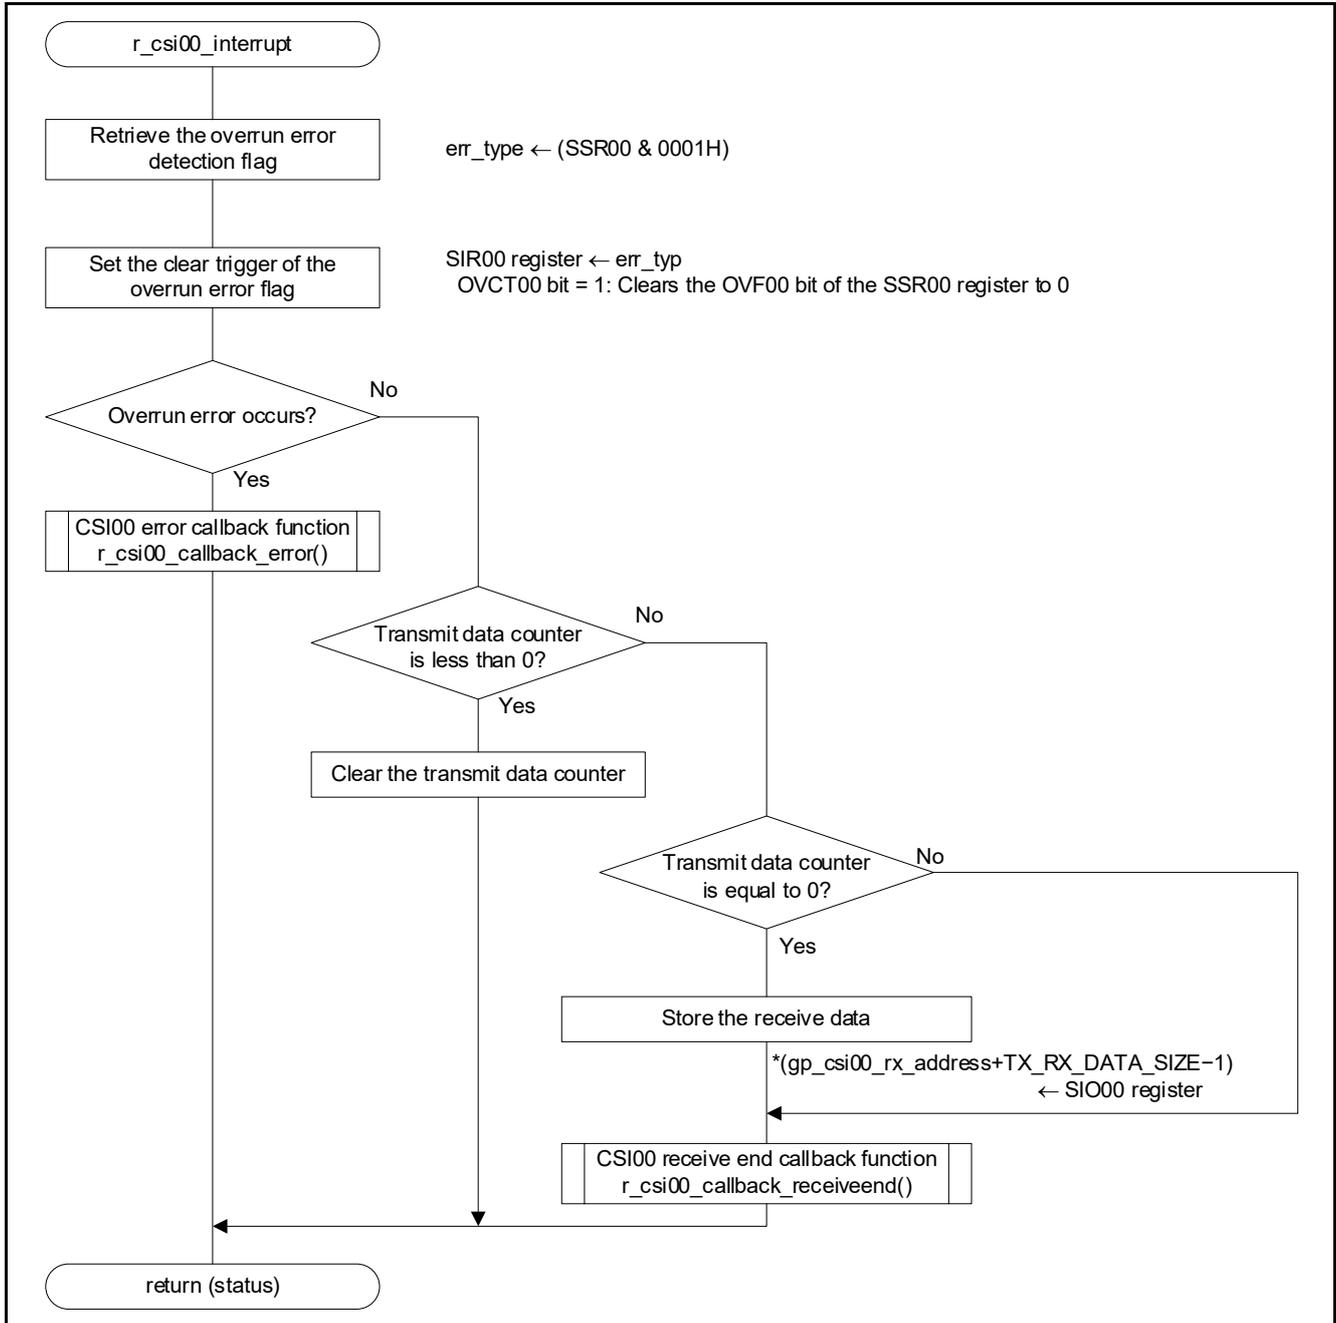

Figure 4.13 CSI00 Transfer End Interrupt

**RL78/G14**

**Retrieving the overrun error detection flag status**

- Serial status register 00 (SSR00)

Symbol	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
SSR00	0	0	0	0	0	0	0	0	0	TSF 00	BFF 00	0	0	FEC 00	PEC 00	<b>OVC 00</b>

- Bit 0

<b>OVC00 bit</b>	<b>Overrun error detection flag of channel 0</b>
0	No error occurs
1	An error occurs

**Setting the clear trigger of the overrun error flag**

- Serial flag clear trigger register (SIR00)  
Clears an overrun error flag when an overrun error occurs.

Symbol	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
SIR00	0	0	0	0	0	0	0	0	0	0	0	0	0	FECT00	PECT00	<b>OVCT00</b>
Value	–	–	–	–	–	–	–	–	–	–	–	–	–	x	x	1

- Bit 0

<b>OVCT00 bit</b>	<b>Clear trigger of overrun error flag of channel 0</b>
0	Not cleared
1	Clears the OVF00 bit of the SSR00 register to 0

**Storing the receive data**

- CSI00 data register 00 (SIO00)  
Reads the receive data

Symbol	7	6	5	4	3	2	1	0
SIO00	–	–	–	–	–	–	–	–

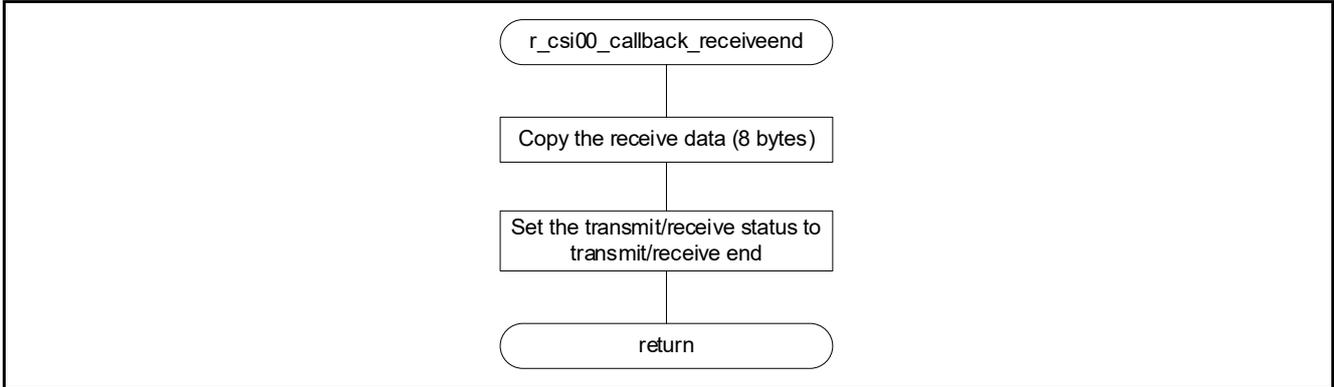

For details on register setting, refer to the RL78/G14 User’s Manual: Hardware.

Legend symbol:

x: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

**4.8.10 CSI00 Receive End Callback Function**

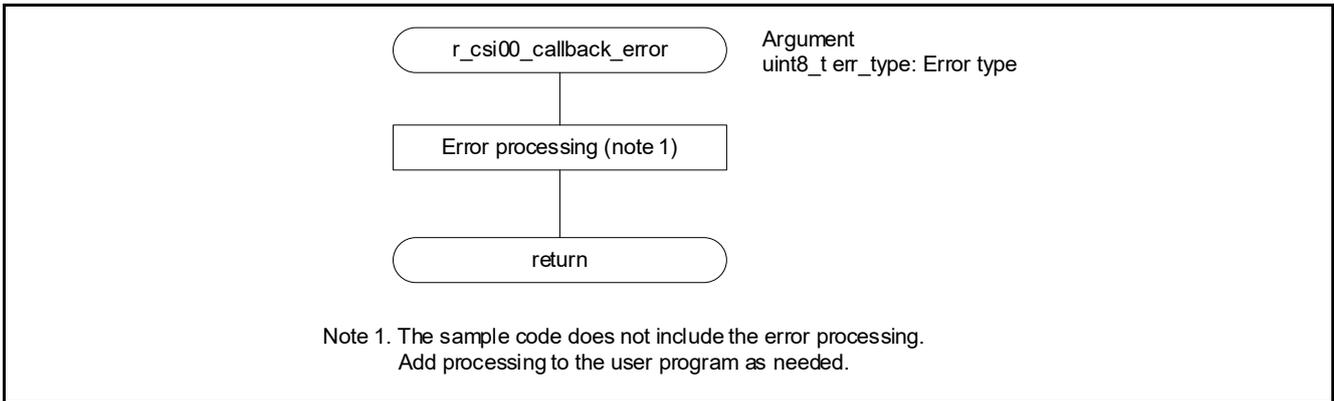

Figure 4.14 shows the CSI00 receive end callback function.

**Figure 4.14 CSI00 Receive End Callback Function**

**4.8.11 CSI00 Error Callback Function**

Figure 4.15 shows the CSI00 error callback function.

**Figure 4.15 CSI00 Error Callback Function**

4.8.12 DTC Initialization

Figure 4.16 shows the DTC initialization.

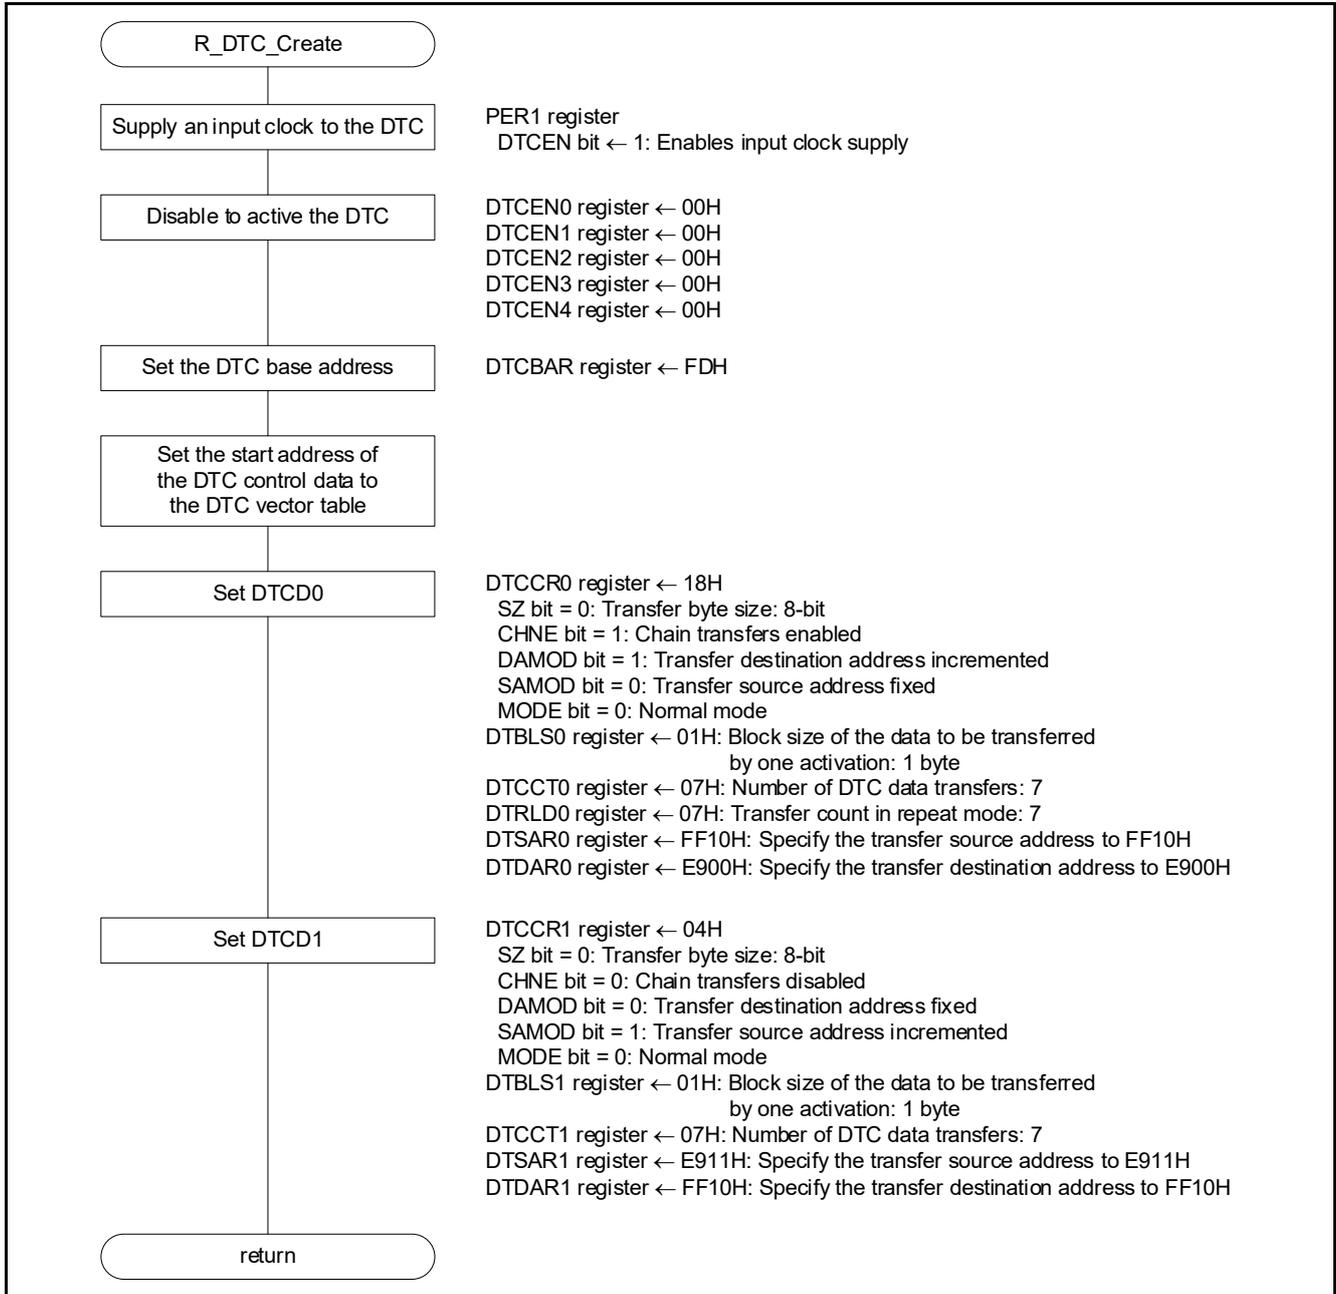

Figure 4.16 DTC Initialization

Supplying an input clock to the DTC

- Peripheral enable register 1 (PER1)

Symbol	7	6	5	4	3	2	1	0
PER1	DACEN	TRGEN	CMPEN	TRDOEN	DTCEN	0	0	TRJ0EN
Value	x	x	x	x	1	–	–	x

- Bit 3

DTCEN bit	Control of DTC input clock supply
0	Stops input clock supply <ul style="list-style-type: none"> <li>DTC cannot run.</li> </ul>
1	Enables input clock supply <ul style="list-style-type: none"> <li>DTC can run.</li> </ul>

Disabling to activate DTC0

- DTC activation enable register i (DTCENi, i = 0 to 4)

Symbol	7	6	5	4	3	2	1	0
DTCENi	DTCENi7	DTCENi6	DTCENi5	DTCENi4	DTCENi3	DTCENi2	DTCENi1	DTCENi0
Value	0	0	0	0	0	0	0	0

- Bit 7

DTCENi7 bit	DTC activation enable i7
0	Activation disabled
1	Activation enabled

- Bit 6

DTCENi6 bit	DTC activation enable i6
0	Activation disabled
1	Activation enabled

- Bit 5

DTCENi5 bit	DTC activation enable i5
0	Activation disabled
1	Activation enabled

For details on register setting, refer to the RL78/G14 User’s Manual: Hardware.

Legend symbol:

x: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

- Bit 4

<b>DTCENi4 bit</b>	<b>DTC activation enable i4</b>
0	Activation disabled
1	Activation enabled

- Bit 3

<b>DTCENi3 bit</b>	<b>DTC activation enable i3</b>
0	Activation disabled
1	Activation enabled

- Bit 2

<b>DTCENi2 bit</b>	<b>DTC activation enable i2</b>
0	Activation disabled
1	Activation enabled

- Bit 1

<b>DTCENi1 bit</b>	<b>DTC activation enable i1</b>
0	Activation disabled
1	Activation enabled

- Bit 0

<b>DTCENi0 bit</b>	<b>DTC activation enable i0</b>
0	Activation disabled
1	Activation enabled

**Setting the DTC base address**

- DTC base address register (DTCBAR)
  - Sets the start address of the DTC control data area.

Symbol	<b>7</b>	<b>6</b>	<b>5</b>	<b>4</b>	<b>3</b>	<b>2</b>	<b>1</b>	<b>0</b>
DTCBAR	<b>DTCBAR7</b>	<b>DTCBAR6</b>	<b>DTCBAR5</b>	<b>DTCBAR4</b>	<b>DTCBAR3</b>	<b>DTCBAR2</b>	<b>DTCBAR1</b>	<b>DTCBAR0</b>
Value	FDH							

For details on register setting, refer to the RL78/G14 User’s Manual: Hardware.

Legend symbol:

×: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

#### Setting the DTCD0

- DTC control register 0 (DTCCR0)
  - Data size: 8 bits
  - Chain transfer: Enabled
  - Transfer destination address: Incremented
  - Transfer source address: Fixed
  - Transfer mode: Normal mode

Symbol	7	6	5	4	3	2	1	0
DTCCR0	0	<b>SZ</b>	RPTINT	<b>CHNE</b>	<b>DAMOD</b>	<b>SAMOD</b>	RPTSEL	<b>MODE</b>
Value	–	<b>0</b>	×	<b>1</b>	<b>1</b>	<b>0</b>	×	<b>0</b>

- Bit 6

SZ bit	Data size selection
0	8 bits
1	16 bits

- Bit 4

CHNE bit	Enabling/disabling chain transfers
0	Chain transfers disabled
1	Chain transfers enabled

- Bit 3

DAMOD bit	Transfer destination address control
0	Fixed
1	Incremented

- Bit 2

SAMOD bit	Transfer source address control
0	Fixed
1	Incremented

- Bit 0

MODE bit	Transfer mode selection
0	Normal mode
1	Repeat mode

For details on register setting, refer to the RL78/G14 User's Manual: Hardware.

Legend symbol:

×: Unused bit; blank cell: unchanged bit; –: reserved bit or unallocated bit

## Using the DTC to Perform Continuous Clock Synchronous Serial Communication CC-RL

### RL78/G14

- DTC block size register 0 (DTBLS0)  
Set the DTC0 block size to 1 byte.

Symbol	7	6	5	4	3	2	1	0
DTBLS0	<b>DTBLS07</b>	<b>DTBLS06</b>	<b>DTBLS05</b>	<b>DTBLS04</b>	<b>DTBLS03</b>	<b>DTBLS02</b>	<b>DTBLS01</b>	<b>DTBLS00</b>
Value	<b>01H</b>							

- DTC transfer count register 0 (DTCCT0)  
Set the number of transfers by DTC0 to 7.

Symbol	7	6	5	4	3	2	1	0
DTCCT0	<b>DTCCT07</b>	<b>DTCCT06</b>	<b>DTCCT05</b>	<b>DTCCT04</b>	<b>DTCCT03</b>	<b>DTCCT02</b>	<b>DTCCT01</b>	<b>DTCCT00</b>
Value	<b>07H</b>							

- DTC transfer count reload register 0 (DTRLD0)  
Set the number of transfers in repeat mode to 7 (This register can be used in repeat mode).

Symbol	7	6	5	4	3	2	1	0
DTRLD0	<b>DTRLD07</b>	<b>DTRLD06</b>	<b>DTRLD05</b>	<b>DTRLD04</b>	<b>DTRLD03</b>	<b>DTRLD02</b>	<b>DTRLD01</b>	<b>DTRLD00</b>
Value	<b>07H</b>							

- DTC source address register 0 (DTSAR0)  
Specify the transfer source address for data transfer to FF10H.

Symbol	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
DTSAR0	<b>DTSA R015</b>	<b>DTSA R014</b>	<b>DTSA R013</b>	<b>DTSA R012</b>	<b>DTSA R011</b>	<b>DTSA R010</b>	<b>DTSA R09</b>	<b>DTSA R08</b>	<b>DTSA R07</b>	<b>DTSA R06</b>	<b>DTSA R05</b>	<b>DTSA R04</b>	<b>DTSA R03</b>	<b>DTSA R02</b>	<b>DTSA R01</b>	<b>DTSA R00</b>
Value	<b>FF10H</b>															

- DTC destination address register 0 (DTDAR0)  
Specify the transfer destination address for data transfer to E900H.

Symbol	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
DTDAR0	<b>DTDA R015</b>	<b>DTDA R014</b>	<b>DTDA R013</b>	<b>DTDA R012</b>	<b>DTDA R011</b>	<b>DTDA R010</b>	<b>DTDA R09</b>	<b>DTDA R08</b>	<b>DTDA R07</b>	<b>DTDA R06</b>	<b>DTDA R05</b>	<b>DTDA R04</b>	<b>DTDA R03</b>	<b>DTDA R02</b>	<b>DTDA R01</b>	<b>DTDA R00</b>
Value	<b>E900H</b>															

For details on register setting, refer to the RL78/G14 User's Manual: Hardware.

Legend symbol:

×: Unused bit; blank cell: unchanged bit; -: reserved bit or unallocated bit

#### Setting the DTCD1

- DTC control register 1 (DTCCR1)
  - Data size: 8 bits
  - Chain transfer: Disabled
  - Transfer destination address: Fixed
  - Transfer source address: Incremented
  - Transfer mode: Normal mode

Symbol	7	6	5	4	3	2	1	0
DTCCR1	0	<b>SZ</b>	RPTINT	<b>CHNE</b>	<b>DAMOD</b>	<b>SAMOD</b>	RPTSEL	<b>MODE</b>
Value	–	<b>0</b>	×	<b>0</b>	<b>0</b>	<b>1</b>	×	<b>0</b>

- Bit 6

## Using the DTC to Perform Continuous Clock Synchronous Serial Communication CC-RL

### RL78/G14

- DTC block size register 1 (DTBLS1)

Sets the DTC1 block size to 1 byte.

Symbol	7	6	5	4	3	2	1	0
DTBLS1	<b>DTBLS17</b>	<b>DTBLS16</b>	<b>DTBLS15</b>	<b>DTBLS14</b>	<b>DTBLS13</b>	<b>DTBLS12</b>	<b>DTBLS11</b>	<b>DTBLS10</b>
Value	<b>01H</b>							

- DTC transfer count register 1 (DTCCT1)

Set the number of transfers by DTC1 to 7.

Symbol	7	6	5	4	3	2	1	0
DTCCT1	<b>DTCCT17</b>	<b>DTCCT16</b>	<b>DTCCT15</b>	<b>DTCCT14</b>	<b>DTCCT13</b>	<b>DTCCT12</b>	<b>DTCCT11</b>	<b>DTCCT10</b>
Value	<b>07H</b>							

- DTC source address register 1 (DTSAR1)

Specify the transfer source address for data transfer to E911H.

Symbol	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
DTSAR1	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>	<b>DTSA</b>
	<b>R15</b>	<b>R14</b>	<b>R13</b>	<b>R12</b>	<b>R11</b>	<b>R10</b>	<b>R19</b>	<b>R18</b>	<b>R17</b>	<b>R16</b>	<b>R15</b>	<b>R14</b>	<b>R13</b>	<b>R12</b>	<b>R11</b>	<b>R10</b>
Value	<b>E911H</b>															

- DTC destination address register 1 (DTDAR1)

Specify the transfer destination address for data transfer to FF10H.

Symbol	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
DTDAR1	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>	<b>DTDA</b>
	<b>R15</b>	<b>R14</b>	<b>R13</b>	<b>R12</b>	<b>R11</b>	<b>R10</b>	<b>R19</b>	<b>R18</b>	<b>R17</b>	<b>R16</b>	<b>R15</b>	<b>R14</b>	<b>R13</b>	<b>R12</b>	<b>R11</b>	<b>R10</b>
Value	<b>FF10H</b>															

For details on register setting, refer to the RL78/G14 User's Manual: Hardware.

1.00	Jan. 29, 2016	—	First edition issued
1.01	Feb. 2, 2020	—	Made some modifications to the sample software

# General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

## 1. Precaution against Electrostatic Discharge (ESD)

A strong electrical field, when exposed to a CMOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop the generation of static electricity as much as possible, and quickly dissipate it when it occurs. Environmental control must be adequate. When it is dry, a humidifier should be used. This is recommended to avoid using insulators that can easily build up static electricity.

Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors must be grounded. The operator must also be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions must be taken for printed circuit boards with mounted semiconductor devices.

## 2. Processing at power-on

The state of the product is undefined at the time when power is supplied. The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the time when power is supplied. In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the time when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the time when power is supplied until the power reaches the level at which resetting is specified.

## 3. Input of signal during power-off state

Do not input signals or an I/O pull-up power supply while the device is powered off. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Follow the guideline for input signal during power-off state as described in your product documentation.

## 4. Handling of unused pins

Handle unused pins in accordance with the directions given under handling of unused pins in the manual. The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of the LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible.

## 5. Clock signals

After applying a reset, only release the reset line after the operating clock signal becomes stable. When switching the clock signal during program execution, wait until the target clock signal is stabilized. When the clock signal is generated with an external resonator or from an external oscillator during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Additionally, when switching to a clock signal produced with an external resonator or by an external oscillator while program execution is in progress, wait until the target clock signal is stable.

## 6. Voltage application waveform at input pin

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between  $V_{IL}$  (Max.) and  $V_{IH}$  (Min.) due to noise, for example, the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between  $V_{IL}$  (Max.) and  $V_{IH}$  (Min.).

## 7. Prohibition of access to reserved addresses

Access to reserved addresses is prohibited. The reserved addresses are provided for possible future expansion of functions. Do not access these addresses as the correct operation of the LSI is not guaranteed.

## 8. Differences between products

Before changing from one product to another, for example to a product with a different part number, confirm that the change will not lead to problems. The characteristics of a microprocessing unit or microcontroller unit products in the same group but having a different part number might differ in terms of internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
  - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
  - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
