

## RF to IF Dual Downconverting Mixer

1400 - 2200 MHz F1152NBGI

### GENERAL DESCRIPTION

This document describes the specifications for the IDTF1152 Zero-Distortion™ RF to IF Downconverting Mixer. This device is part of a series of mixers offered with high side or low side injection options for all UTRA bands. See the Part# Matrix for the details of all devices in this series.

The F1152 dual channel device is designed to operate with a single 5V supply. It is optimized for operation in a Multi-mode, Multi-carrier BaseStation Receiver for RF bands from 1700 - 2200 MHz with Low Side Injection or from 1400 to 1700 MHz with High Side Injection. IF frequencies from 50 to 350 MHz are supported. Nominally, the device offers +43 dBm Output IP3 with 327 mA of  $I_{CC}$ . Alternately one can adjust 4 resistor values and a toggle pin to run the device in low current mode with +40 dBm Output IP3 and 232 mA of  $I_{CC}$ .

### COMPETITIVE ADVANTAGE

In typical basestation receivers the RF to IF mixer dominates the linearity performance for the entire receive system. The Zero-Distortion™ family of mixers dramatically improve the maximum signal levels ( $IM_3$  tones) that the BTS can withstand at a desired Signal to Noise Ratio (SNR.) Alternately, one can run the device in Low Current Mode to reduce Power consumption significantly. Zero-Distortion™ technology allows realization of either benefit.

- ✓  $IP3_0$ :  $\uparrow$  **9 dB** STD Mode,  $\uparrow$  **6 dB** LC Mode
- ✓ Dissipation:  $\downarrow$  **40%** LC Mode,  $\downarrow$  **12%** STD Mode
- ✓ Allows for higher RF gain improving **Sensitivity**

### PART# MATRIX

| Part#        | RF freq range      | UTRA bands   | IF freq range   | Typ. Gain  | Injection       |
|--------------|--------------------|--|-----------------|------------|-----------------|
| F1100        | 698 - 915          | 5,6,8,12,13,14,17,19,20  | 50 - 450        | 8.5        | High Side       |
| F1102        | 698 - 915          | 5,6,8,12,13,14,17,19,20  | 50 - 250        | 8.5        | Both            |
| F1150        | 1700 - 2200        | 1,2,3,4,9,10,33,34,35,36,37,39   | 50 - 450        | 8.5        | High Side       |
| <b>F1152</b> | <b>1400 - 2200</b> | <b>1,2,3,4,9,10,11<sup>1</sup>,21<sup>1</sup>,24<sup>1</sup>,33,34,35,36,37,39</b> | <b>50 - 350</b> | <b>8.5</b> | <b>Low Side</b> |
| F1162        | 2300 - 2700        | 7,38,40,41   | 50 - 500        | 8.9        | Both            |

1 - with High side injection

### FEATURES

- Dual Path for Diversity Systems
- Ideal for Multi-Carrier Systems
- 8.5 dB Gain
- Ultra linear **+43 dBm  $IP3_0$**
- Low NF < 10 dB
- 200  $\Omega$  output impedance
- Ultra high +13 dBm  $P1dB_1$
- **Pin Compatible** w/existing solutions
- 6x6 36 pin package
- **Power Down mode**
- < 200 nsec settling from Power Down
- Minimizes Synth pulling in Standby Mode
- Low Current Mode :  $I_{CC} = 232$  mA
- Standard Mode:  $I_{CC} = 327$  mA
- NOTE production BOM on p. 20

### DEVICE BLOCK DIAGRAM

### ORDERING INFORMATION

**ABSOLUTE MAXIMUM RATINGS**

|   |                                    |
|---|------------------------------------|
| VCC to GND  | -0.3V to +5.5V                     |
| STBY, LC <sub>MODE</sub>  | -0.3V to (VCC <sub>-</sub> + 0.3V) |
| IF_A+, IF_B+, IF_A-, IF_B-, LO1_ADJ, LO2_ADJ                              | -0.3V to (VCC <sub>-</sub> + 0.3V) |
| LO_IN, LO_IN_ALT, RF_A, RF_B  | -0.3V to +0.3V                     |
| IF_BiasA, IF_BiasB to GND   | -0.3V to +0.3V                     |
| RF Input Power (RF_IN[A+, A-, B+, B-])                                    | +20dBm                             |
| Continuous Power Dissipation  | 2.2W                               |
| $\theta_{JA}$ (Junction – Ambient)  | +35°C/W                            |
| $\theta_{JC}$ (Junction – Case) The Case is defined as the exposed paddle | +2.5°C/W                           |
| Operating Temperature Range (Case Temperature)                            | T <sub>C</sub> = -40°C to +100°C   |
| Maximum Junction Temperature  | 150°C                              |
| Storage Temperature Range   | -65°C to +150°C                    |
| Lead Temperature (soldering, 10s) .                                       | +260°C                             |

*Stresses above those listed above may cause permanent damage to the device. Functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.*

**RF to IF Dual Downconverting Mixer**
**1400 - 2200 MHz F1152NBGI**
**IDTF1152 SPECIFICATION**

Specifications apply at  $V_{CC} = +5.00V$ ,  $T_C = +25^\circ C$   $F_{RF} = 1850 \text{ MHz}$ ,  $F_{IF} = 200\text{MHz}$ ,  $P_{LO} = 0 \text{ dBm}$ ,  $STBY = GND$ ,  $LC_{MODE} = V_{IH}$  (STD Mode), EVKit BOM = Standard Mode, Transformer Loss included (not de-embedded) unless otherwise noted.

| Parameter                   | Comment  | Symbol           | min         | typ          | max                    | units     |

**TYPICAL OPERATING CONDITIONS**

Unless otherwise Noted, the following Apply to the Typ Ops Graphs

- Low Side Injection, 200 MHz IF, 800 KHz Tone Spacing
- RF frequency = 1850 MHz for single point measurements
- Average of Channel A & Channel B
- Pin = - 10 dBm (all graphs, note exception immediately below)
- Pin = -5 dBm (STD Mode IP3 Traces)
- LO port = Pin 19 (Main Port)
- Listed Temperatures are Case Temperature ( $T_C$  = Case Temperature)
- Where noted,  $T_A$  or  $T_{AMB}$  = Ambient Temperature

TYPICAL OPERATING CONDITIONS (-1-)

PINOUTS

Black Text denotes recommended external connection

Red Text denotes internal Function or Connection

- DB GND = Downbonded to Paddle
- Internal NC = Pin not connected

Please Note!

- Only connect to one LO feed
- Choose Either Pin 19 or Pin 27
- Do not connect the unused LO pin to ensure good LO return loss

**PIN DESCRIPTIONS**

| Pin                             | Name                        | Function   |
|---------------------------------|-----------------------------|--|
| 1                               | RF_A                        | Main Channel RF Input. Internally matched to 50Ω. DO NOT apply DC to these pins  |
| 2, 8, 20                        | RF_Artn,<br>RF_Brtn, LO_rtn | Transformer Ground Returns. Ground these pins.   |
| 3, 5, 7, 18, 24,<br>28          | GND                         | Ground these pins.   |
| 4, 6, 12, 15,<br>31, 23, 26, 34 | N.C.                        | No Connection. Not internally connected. OK to connect to Vcc. OK to connect to GND  |
| 10, 16, 21, 30,<br>36           | VCC                         | Power Supply. Bypass to GND with capacitors shown in the Typical Application Circuit as close as possible to pin.  |
| 9                               | RF_B                        | Diversity Channel RF Input. Internally matched to 50Ω  |
| 11                              | IF_BiasB                    | Connect the specified resistor from this pin to ground to set the bias for the Diversity IF amplifier. This is NOT a current set resistor  |
| 13, 14                          | IFB+, IFB-                  | Diversity Mixer Differential IF Output. Connect pullup inductors from each of these pins to VCC (see the Typical Application Circuit).   |
| 17                              | LO1_ADJ                     | Connect the specified resistor for either Standard or LC mode from this pin to ground to set the LO common buffer Icc  |
| 19, 27                          | LO_in<br>LO_in_alt          | Local Oscillator Input. Connect the LO to this port through the recommended coupling capacitor. <b>Note that you can only drive one LO port at a time. Remove the series capacitor from the unused port.</b>   |
| 25                              | LC_MODE                     | Low Current Mode. Set this pin to low or ground for LC mode. Set to high or No-Connect for Standard mode. There is an internal pull-up resistor.   |
| 22                              | STBY                        | STBY Mode. Pull this pin high for Standby mode (~20 mA). Pull low or Ground for normal Operation   |
| 29                              | LO2_ADJ                     | Connect the specified resistor for either Standard or LC mode from this pin to ground to set the LO drive buffers Icc  |
| 32, 33                          | IFA-, IFA+                  | Main Mixer Differential IF Output. Connect pullup inductors from each of these pins to VCC (see the Typical Application Circuit).  |
| 35                              | IF_BiasA                    | Connect the specified resistor from this pin to ground to set the bias for the Main IF amplifier. This is NOT a current set resistor   |
|                                 | — EP                        | Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the noted RF performance. |
|                                 |                             |  |

**EVKIT PICTURE/LAYOUT/OPERATION**

**RF to IF Dual Downconverting Mixer**
**1400 - 2200 MHz F1152NBGI**
**EVKIT BOM**

For Standard Mode, Open the LC<sub>MODE</sub> jumper in conjunction with positioning the 4 dual jumpers to select the resistors in **red**.

For Low Current Mode close the LC<sub>MODE</sub> jumper in conjunction with positioning the 4 dual jumpers to select the resistors in **blue**.

**F1152 BOM**
