

RE Partner Solution TOSHIBA RECAIUS Speech Recognition

Solution Summary

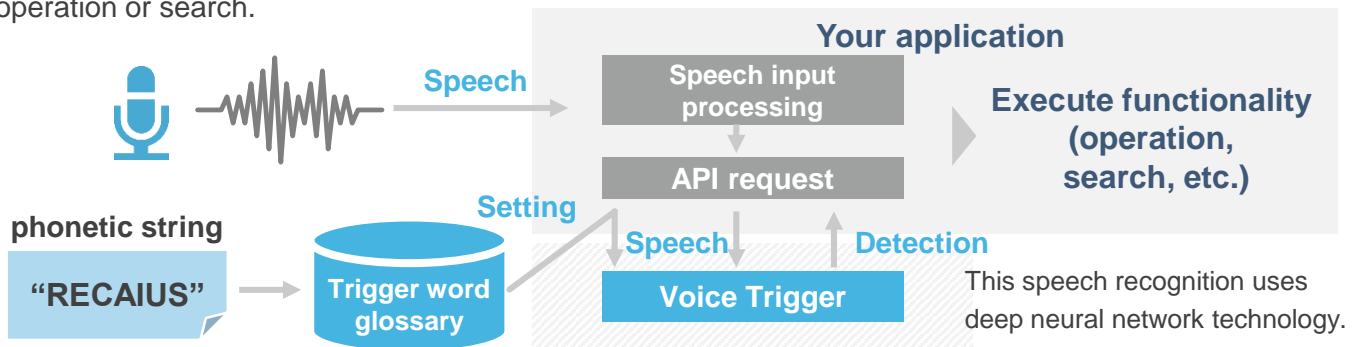

RECAIUS, speech recognition middleware voice trigger, is a software component which detects prespecified words and allows hands-free operation without using a switch to initiate listening. Out-of-box support is now available for the [RE Family of MCUs](#).

Features/Benefits

- SW solution realize talk-switch less and hands-free system detecting pre-defined word (Trigger Word) .
- No Internet connection required.
- Trigger word can be defined by customer.
- Suitable for edge device due to small memory size and less CPU performance.
- Partner Beamforming, Noise suppression technology can be used.

Block Diagram

In your application, implement the functions desired as the response to the detection, such as device operation or search.

Target Markets and Applications

- Industrial Controls
- Smart Home
- Home Appliance
- Smart Buildings
- Consumer Electronics
