## Old Company Name in Catalogs and Other Documents

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

\* 1. Confirmation

Specify the name of the product being ordered.

Three EPROMs are required for each pattern if this order is performed by EPROMs.

One floppy disk is required for each pattern if this order is performed by a floppy disk.

Microcomputer name:

M38024M6-XXXSP

M38024M6-XXXFP

Ordering by EPROMs

If at least two of the three sets of EPROMs submitted contain identical data, we will produce masks based on this data. We shall assume the responsibility for errors only if the mask ROM data on the products we produce differs from this data. Thus, extreme care must be taken to verify the data in the submitted EPROMs.

Checksum code for entire EPROM

(hexadecimal notation)

 $\square$ 27512 EPROM address 000016 Product name ASCII code 'M38024M6-000F16 001016 A07F16 A08016 data ROM (24K-130) bytes FFFD16 FFFE16 FFFF16

EPROM type (indicate the type used)

In the address space of the microcomputer, the internal ROM area is from address A08016 to FFFD16. The reset vector is stored in addresses FFFC16 and FFFD16.

- (1) Set the data in the unused area (the shaded area of the diagram) to "FF16".
- (2) The ASCII codes of the product name "M38024M6-" must be entered in addresses 000016 to 000816. And set the data "FF16" in addresses 000916 to 000F16. The ASCII codes and addresses are listed to the right in hexadecimal notation.

Address		Address	
000016	'M' = 4D16	000816	'–' = 2D16
000116	<b>'</b> 3' = 3316	000916	FF16
000216	<b>'8'</b> = <b>38</b> 16	000A16	FF16
000316	'O' = 3016	000B16	FF16
000416	'2' = 3216	000C16	FF16
000516	'4' = 3416	000D16	FF16
000616	'M' = 4D16	000E16	FF16
000716	'6' = 3616	000F16	FF16

Mask ROM number

## 740 FAMILY MASK ROM CONFIRMATION FORM SINGLE-CHIP MICROCOMPUTER M38024M6-XXXSP/FP RENESAS TECHNOLOGY

We recommend the use of the following pseudo-command to set the start address of the assembler source program because ASCII codes of the product name are written to addresses 000016 to 000816 of EPROM.

EPROM type	27512
The pseudo-command	*= △\$0000 .BYTE △ 'M38024M6-'

Note : If the name of the product written to the EPROMs does not match the name of the mask confirmation form, the ROM will not be processed.

Ordering by floppy disk

We will produce masks based on the mask files generated by the mask file generating utility. We shall assume the responsibility for errors only if the mask ROM data on the products we produce differs from this mask file. Thus, extreme care must be taken to verify the mask file in the submitted floppy disk.

The submitted floppy disk must be 3.5-inch 2HD type and DOS/V format. And the number of the mask files must be 1 in one floppy disk.

File code					(hexadecimal notation)
Mask file name					.MSK (equal or less than eight characters)

# 2. Mark specification

Mark specification must be submitted using the correct form for the package being ordered. Fill out the appropriate mark specification form (64P4B for M38024M6-XXXSP, 64P6N for M38024M6-XXXFP) and attach it to the mask ROM confirmation form.

\* 3. Usage conditions

Please answer the following questions about usage for use in our product inspection :

(	(1)	How will	vou use	the	XIN-XOUT	oscillator

Ceramic resonator	Quartz crystal
External clock input	Other ( )
At what frequency?	f(XIN) = MHz

(2) In which operation mode will you use your microcomputer ?

□ Single-chip mode

□ Microprocessor mode

# 4. Comments
---------------
