## A Note on Using the High-performance Embedded Workshop V.4.00.00 --On Debugging Members of the R8C/Tiny Series of MCUs--

Please take note of the following problem in using the High-performance Embedded Workshop V.4.00.00, an integrated development environment:

- On debugging members of the R8C/Tiny series of MCUs
- 

### 1. Product and Version Concerned

High-performance Embedded Workshop V.4.00.00 is concerned when it is used in combination with the following debuggers:

- Emulator software products for the E7 emulator V.2.06 Release 00 and earlier
- Emulator software products for the E8 emulator V.1.02 Release 01 and earlier

### 2. Description

If members of the R8C/Tiny MCU series are debugged using any of the debuggers stated in Section 1 and the product concerned, disassembly is not performed properly.

This problem occurs if your High-performance Embedded Workshop is included in any of the above debuggers and has been updated from V.3 to V.4.00.00 using the version 4.00.00 bundled with another product.

### 3. Solution

Upgrade yours to the High-performance Embedded Workshop V.4.00.00 in either of the following ways (if you have already upgraded yours to V.4.00.00, be sure to upgrade it again):

1. Upgrade yours using the update program to the High-performance Embedded Workshop V.4.00.00 or later. It can be downloaded from the Software Download Site.
2. Upgrade yours using the update program to the emulator software for the E8 emulator

V.2.00 Release 00. It can be downloaded from the Software Download Site.

**NOTICE:**

We are bundling the High-performance Embedded Workshop V.4 with the emulator software for the E7 emulator V.3.00 Release 00 and later. So, if you are using the E7 emulator, resolve this problem in the method described in Item 1 above.
