

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

H8/300H SLP Series

Clock Display on the LCD Panel Using RTC

Introduction

The RTC function and LCD controller/driver function display the clock on an LCD panel. The clock function counts up at intervals of one second and the time is displayed on the LCD panel in the 24-hour mode.

Target Device

H8/38076R

Contents

1. Specifications	2
2. Description of Functions	3
3. Principles of Operation.....	8
4. Description of Software.....	9
5. Flowchart.....	16

1. Specifications

- The RTC function and LCD controller/driver function display the time on an LCD panel.
- The clock function counts up at intervals of 1 second and the time is displayed on the LCD panel in the 24-hour mode.
- In this sample task, the time starts at 0 hours 0 minutes 0 seconds.
- Figure 1 shows an example of connecting an LCD panel.

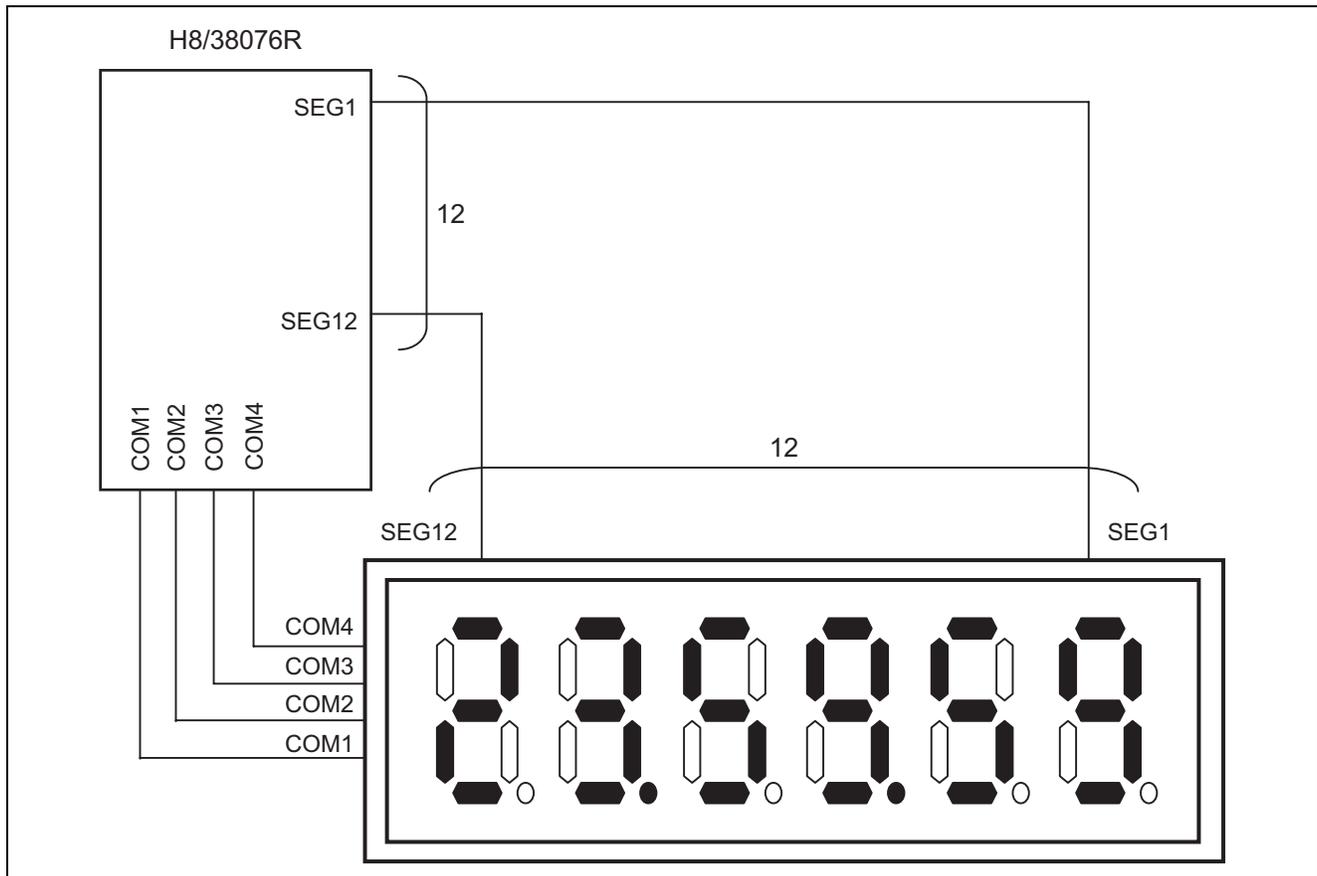

Figure 1 Example of Connection for LCD Panel

2. Description of Functions

2.1 Description of the RTC Function

This sample task uses the RTC function for displaying the time on the LCD panel. Figure 2 is a block diagram of the RTC. The following describes the block diagram.

- System clock (ϕ)
10-MHz reference clock for operating the CPU and peripheral functions
- Prescaler S (PSS)
13-bit counter using ϕ as input that counts up for each cycle
- RTC interrupt flag register (RTCFLG)
Register indicating the status of each interrupt request. In this sample task, when a periodic second, minute, or hour interrupt is generated, the corresponding flag is set to 1. Each flag is not automatically cleared when the relevant interrupt is accepted. To clear the flag, write 0.
- Second data register/free running counter data register (RSECDR)
RSECDR counts seconds. The contents of RSECDR are given in the BCD code. RSECDR counts from 0 to 59.
- Minute data register (RMINDR)
When a carry is generated in RSECDR, RMINDR counts a minute. The contents of RMINDR are given in the BCD code. RMINDR counts from 0 to 59.
- Hour data register (RHRDR)
When a carry is generated in RMINDR, RHRDR counts an hour. The contents of RHRDR are given in the BCD code. RHRDR counts from 0 to 11 or 23 according to the setting of the 12/24 bit of RTCCR1.
- RTC control register 1 (RTCCR1)
RTCCR1 controls the start and stop of RTC operation, the operating mode, and reset.
- RTC control register 2 (RTCCR2)
RTCCR2 controls whether to enable or disable each interrupt request. In this sample task, periodic second interrupts are enabled.
- Clock source select register (RTCCSR)
RTCCSR selects a clock source. In this sample task, RTC operation is selected.
- Interrupt enable register (IENR1)
IENR1 controls whether to enable or disable each interrupt request. In this sample task, an RTC interrupt request is enabled.

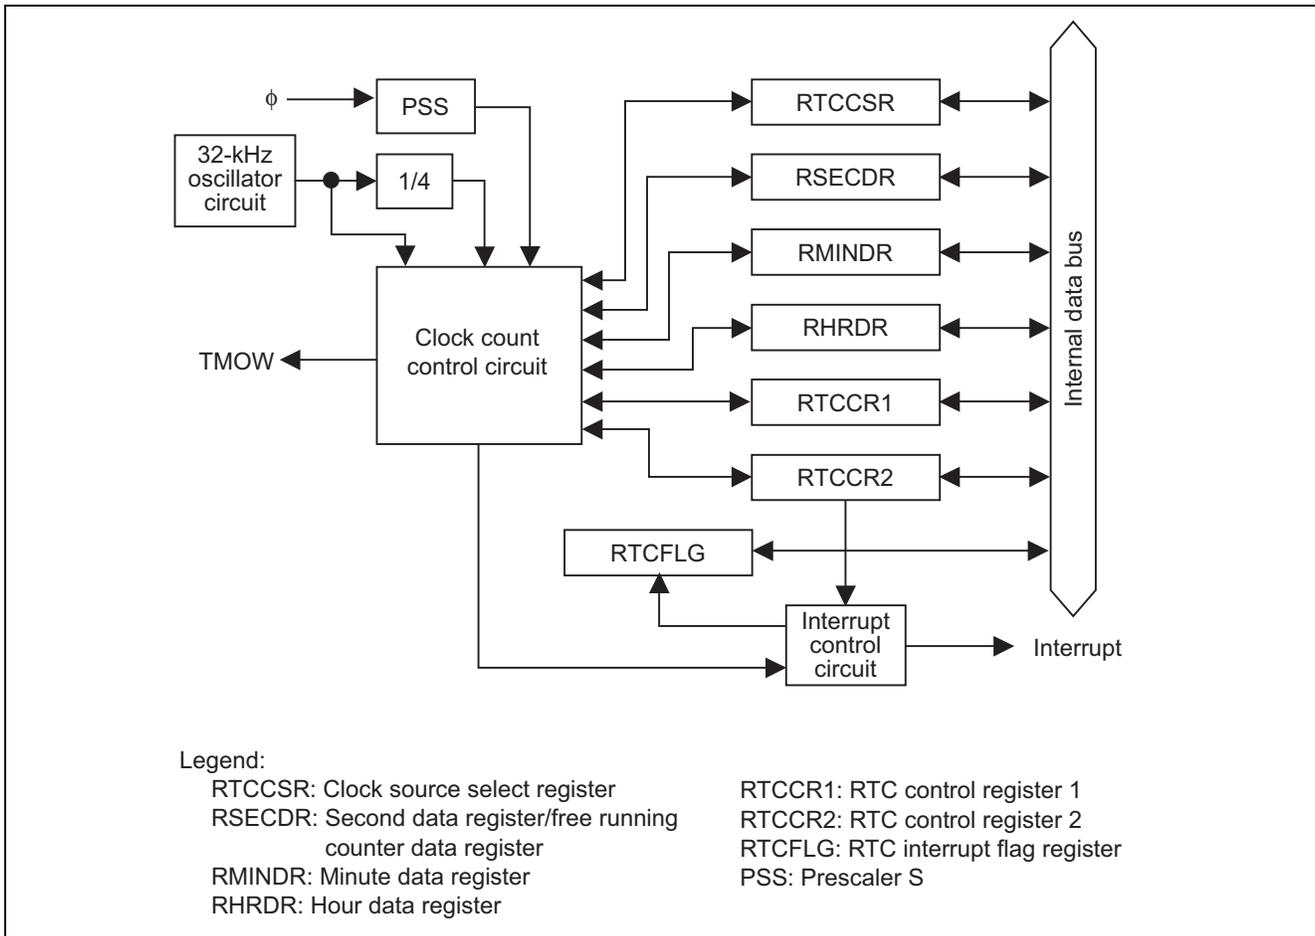

Figure 2 Block Diagram of the RTC

2.2 Description of the LCD

The LCD panel used in this sample task is driven at 1/4 duty cycle at a frame frequency of 64 Hz. Figure 3 shows the name of each LCD panel segment. Table 1 is a list of the relationships between the LCD panel segment signals and LCD RAM. Table 2 is a list of LCD panel display data. The following describes the H8/38076R LCD controller/driver function.

- LCD RAM

The relationships between the LCD RAM and the display segments differ depending on the duty cycle setting. After the registers required for display have been set, by writing data in the locations corresponding to the given duty cycle using the same instructions as those for writing to ordinary RAM, and then turning the display on, display automatically starts.

- LCD port control register (LPCR)

LPCR selects the duty cycle, the LCD driver, and pin functions.

- LCD control register (LCR)

LCR controls the LCD drive power supply and display data, and selects the frame frequency.

- LCD control register 2 (LCR2)

LCR2 switches between A and B waveforms, selects a step-up clock for the 3-V constant-voltage circuit, and controls connection of the LCD power supply split-resistor and on/off of the 3-V constant-voltage power supply.

Note: [A] to [G] and [P] in the table indicate the corresponding LCD panel segment names.
For the correspondence, see figure 3, LCD Panel Segment Names.

2.3 Assignment of Functions

Table 3 is a list of the assignment of functions. The functions are assigned as listed in the table and the RTC function and LCD controller/driver function are used to display the time on the LCD panel. The clock function counts up at intervals of one second and the time is displayed on the LCD panel in the 24-hour mode.

Table 3 Assignment of Functions

Elements	Description
RTCFLG	Periodic second, minute, and hour interrupt request flags
RSECDR	Second data register
RMINDR	Minute data register
RHRDR	Hour data register
RTCCR1	Controls the start and stop of RTC operation, operating mode, and reset.
RTCCR2	Enables periodic second, minute, and hour interrupts.
RTCCSR	Selects RTC operation.
LCDRAM	Stores LCD display data.
LPCR	Selects the duty cycle, the LCD driver, and pin functions.
LCR	Controls the LCD drive power supply and display data, and selects the frame frequency.
LCR2	Selects the A waveform for driving, and controls connection of the LCD power supply split-resistor and on/off of the 3-V constant-voltage power supply.
IENR1	Enables an RTC interrupt request.

3. Principles of Operation

- Figure 4 describes the operation. By hardware and software processing as shown in the figure, the RTC clock function and LCD controller/driver function are used to display the time on the LCD panel. The clock function counts up at intervals of 1 second and the time is displayed on the LCD panel in the 24-hour mode.

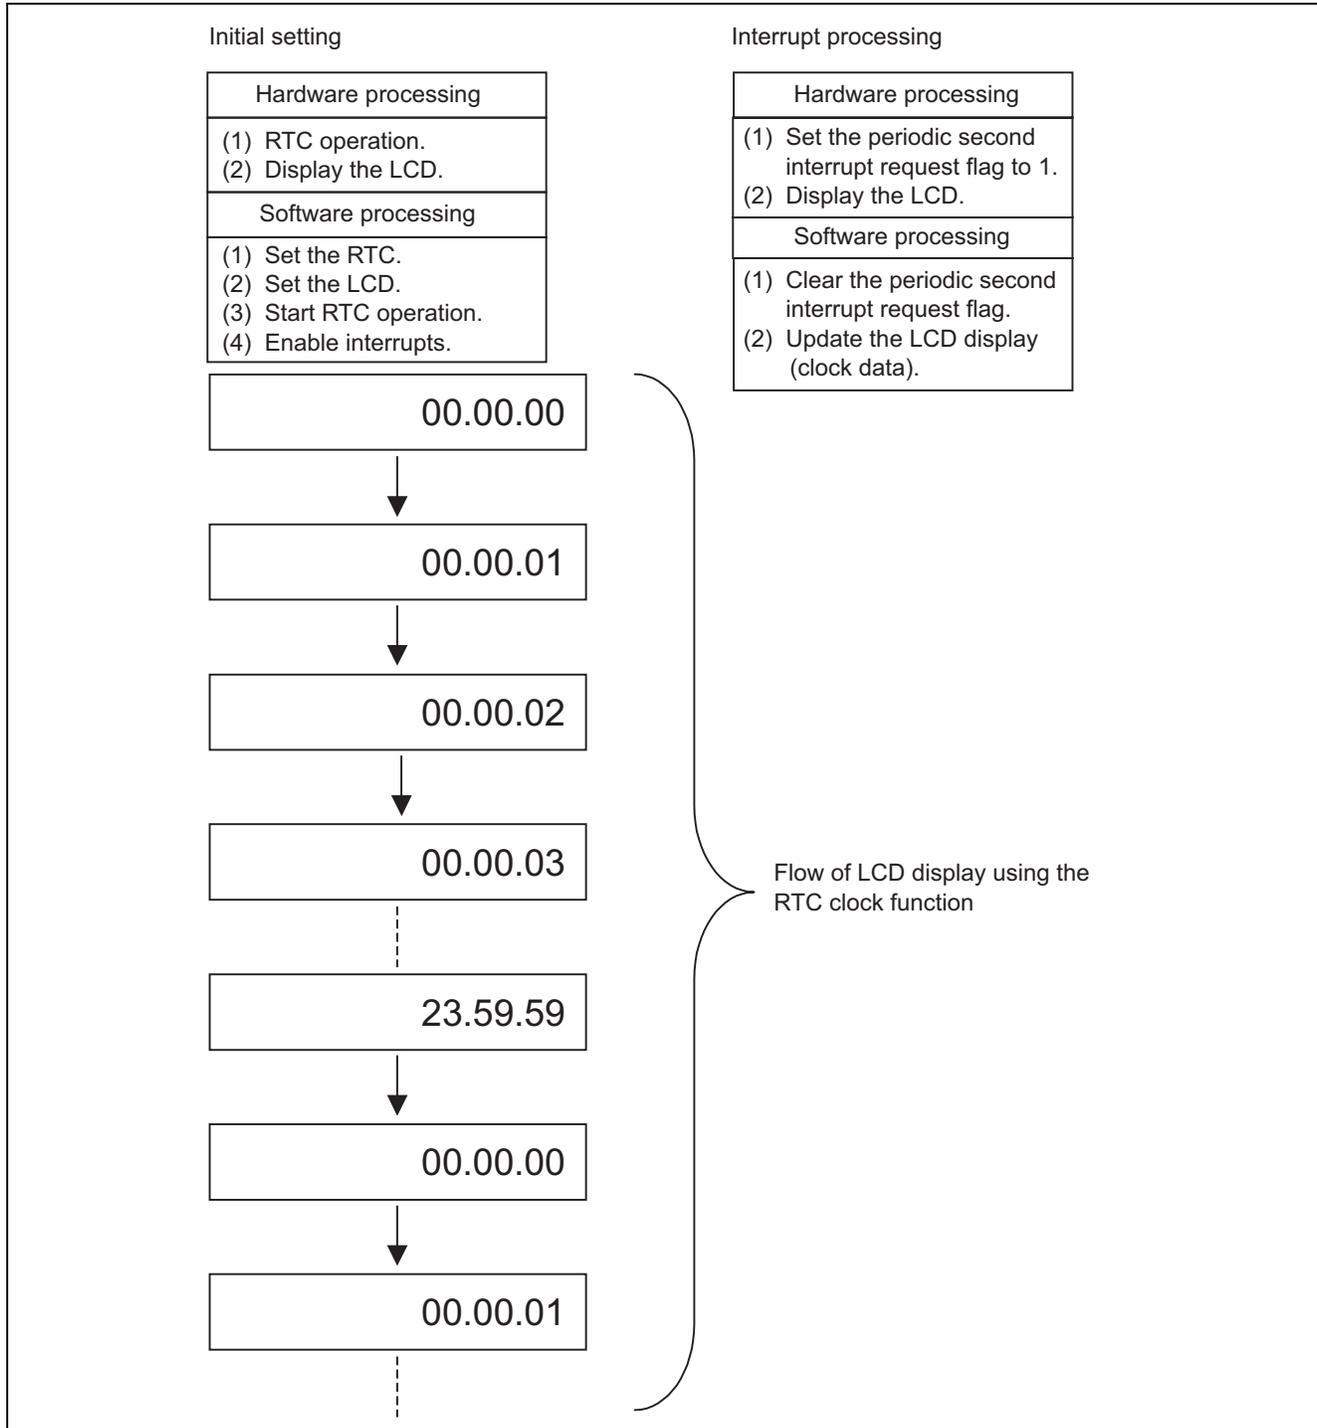

Figure 4 Principles of Operation

4. Description of Software

4.1 Description of Modules

Table 4 is a list of the modules used in this sample task.

Table 4 Description of Modules

Function Name	Function
main	Performs RTC and LCD controller/driver initial settings, LCD display control, and enables interrupts.
second_int	Processes RTC periodic second interrupts, clears the SEIFG flag, and updates the LCD display data.

4.2 Description of Arguments

No arguments are used in this sample task.

4.3 Description of Internal Registers

The following lists the internal registers used in this sample task.

- RTCFLG RTC interrupt flag register Address: H'F067

Bit	Bit Name	Setting	R/W	Function
2	SEIFG	0	R/W*	[Setting condition] A periodic second interrupt is generated. [Clearing condition] When SEIFG = 1, a value of 0 is written in SEIFG.

* Only a value of 0 can be written to clear the flag.

- RSECDR Second data register/free running counter register Address: H'F068

Bit	Bit Name	Setting	R/W	Function
7	BSY	0	R	RTC busy This bit is set to 1 when the RTC is updating (operating) the values of the second, minute, and hour data registers. When this bit is 0, the values of the second, minute, and hour data registers must be used.
6	SC12	0	R/W	Counting tens position of seconds
5	SC11	0	R/W	Counts from 0 to 5 for 60-second counting.
4	SC10	0	R/W	
3	SC03	0	R/W	Counting one's position of seconds
2	SC02	0	R/W	Counts from 0 to 9 once per second. When a carry is generated, the tens position of seconds is incremented by 1.
1	SC01	0	R/W	
0	SC00	0	R/W	

• RMINDR Minute data register

Address: H'F069

Bit	Bit Name	Setting	R/W	Function
7	BSY	0	R	RTC busy This bit is set to 1 when the RTC is updating (operating) the values of the second, minute, and hour data registers. When this bit is 0, the values of the second, minute, and hour data registers must be used.
6	MN12	0	R/W	Counting tens position of minutes
5	MN11	0	R/W	Counts from 0 to 5 for 60-minute counting.
4	MN10	0	R/W	
3	MN03	0	R/W	Counting one's position of minutes
2	MN02	0	R/W	Counts from 0 to 9 once per minute. When a carry is generated, the tens position of minutes is incremented by 1.
1	MN01	0	R/W	
0	MN00	0	R/W	

• RHRDR Hour data register

Address: H'F06A

Bit	Bit Name	Setting	R/W	Function
7	BSY	0	R	RTC busy This bit is set to 1 when the RTC is updating (operating) the values of the second, minute, and hour data registers. When this bit is 0, the values of the second, minute, and hour data registers must be used.
5	HR11	0	R/W	Counting tens position of hours
4	HR10	0	R/W	Counts from 0 to 2.
3	HR03	0	R/W	Counting one's position of hours
2	HR02	0	R/W	Counts from 0 to 9 once per hour. When a carry is generated, the tens position of hours is incremented by 1.
1	HR01	0	R/W	
0	HR00	0	R/W	

• RTCCR1 RTC control register 1

Address: H'F06C

Bit	Bit Name	Setting	R/W	Function
7	RUN	1	R/W	RTC operation start 0: Stops RTC operation. 1: Starts RTC operation.
6	12/24	1	R/W	Operating mode 0: The RTC operates in the 12-hour mode. RHRDR counts from 0 to 11. 1: The RTC operates in the 24-hour mode. RHRDR counts from 0 to 23.
4	RST	0	R/W	Reset 0: Normal operation 1: Resets all registers and control circuits other than RTCCSR and this bit. After setting this bit to 1, be sure to clear it to 0.

• RTCCR2 RTC control register 2

Address: H'F06D

Bit	Bit Name	Setting	R/W	Function
2	1SEIE	1	R/W	Periodic 1 second interrupt enable 0: Disables a periodic 1 second interrupt. 1: Enables a periodic 1 second interrupt.

• RTCCSR Clock source register

Address: H'F06F

Bit	Bit Name	Setting	R/W	Function
3	RCS3	1	R/W	Clock source select
2	RCS2	0	R/W	0000: $\phi/8$ Free running counter operation
1	RCS1	0	R/W	0001: $\phi/32$ Free running counter operation
0	RCS0	0	R/W	0010: $\phi/128$ Free running counter operation
				0011: $\phi/256$ Free running counter operation
				0100: $\phi/512$ Free running counter operation
				0101: $\phi/2048$ Free running counter operation
				0110: $\phi/4096$ Free running counter operation
				0111: $\phi/8192$ Free running counter operation
				1xxx: 32.768 kHz RTC operation

Note: x: Don't care.

• LCD RAM

Addresses: H'F370 to H'F37F

Label Name	Address	Setting	R/W	Function
SECOND1	H'F370	H'D7	R/W	After the registers required for display have been set, by writing data in the locations corresponding to the given duty cycle using the same instructions as those for writing to ordinary RAM, and then turning the display on, display automatically starts. For details, see section 2.2, Description of the LCD.
SECOND10	H'F371	H'D7	R/W

• LCR2 LCD control register 2

Address: H'FFA2

Bit	Bit Name	Setting	R/W	Function
7	LCDAB	0	R/W	A waveform/B waveform switching control Selects whether to use the A or B waveform as the LCD drive waveform. 0: Drives the LCD using the A waveform. 1: Drives the LCD using the B waveform.
6	HCKS	0	R/W	Step-up clock select for the 3-V constant-voltage circuit Selects a step-up clock for the 3-V constant-voltage circuit. As the step-up clock, the clock selected using the CKS3 to CKS0 bits of LCR is divided by 4 or 8. 0: Uses the LCD clock divided by 4 as the step-up clock. 1: Uses the LCD clock divided by 8 as the step-up clock.
5	CHG	1	R/W	Connection control of the LCD power supply split-resistor Selects whether to connect the LCD power supply split-resistor to or disconnect it from the LCD drive power supply. 0: Disconnects the split-resistor. 1: Connects the split-resistor.
4	SUPS	1	R/W	3-V constant-voltage power supply control The 3-V constant-voltage power supply can be turned off when the LCD display is not used in the power-down mode or when an external power supply is used. 0: Turns the 3-V constant-voltage power supply off. 1: Turns the 3-V constant-voltage power supply on.

• IENR1 Interrupt enable register 1

Address: H'FFF3

Bit	Bit Name	Setting	R/W	Function
7	IENRTC	1	R/W	RTC interrupt request enable 0: Disables an RTC interrupt request. 1: Enables an RTC interrupt request.

4.4 Description of Constants

Table 6 is a list of the constants used in this sample task.

Table 6 Constants

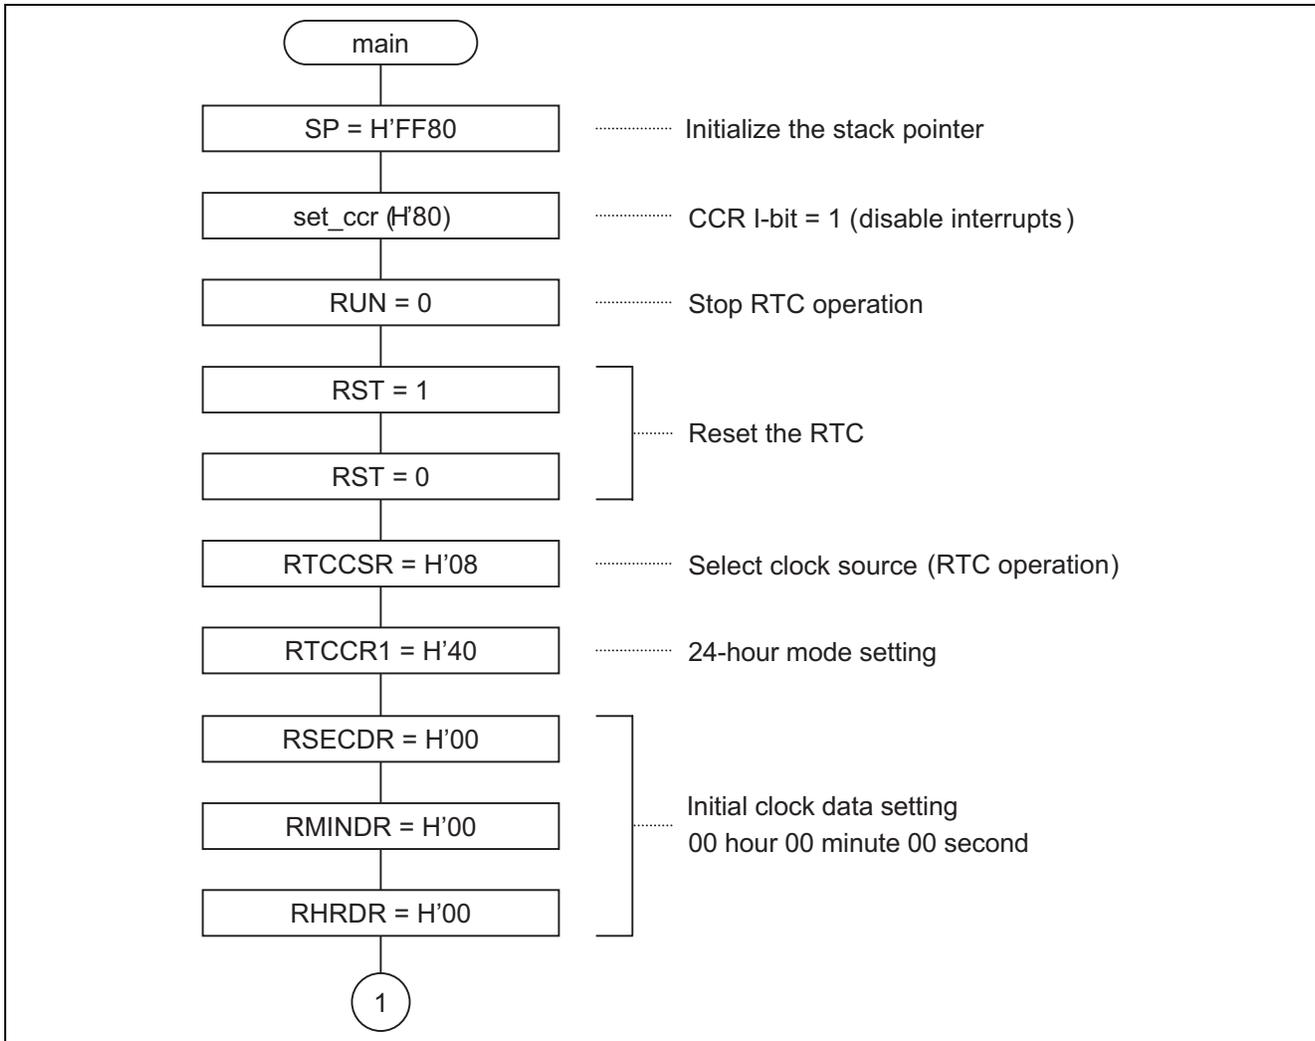

Buffer Name	Constant Value	Function (LCD Panel Display Data)	Used Function Names
LCD[0]	H'D7	0	main
LCD[1]	H'06	1	second_int
LCD[2]	H'E3	2	minute_int
LCD[3]	H'A7	3	hour_int

Keep safety first in your circuit designs!

1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.
2. Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.
The information described here may contain technical inaccuracies or typographical errors. Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.
Please also pay attention to information published by Renesas Technology Corp. by various means, including the Renesas Technology Corp. Semiconductor home page (<http://www.renesas.com>).
4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
5. Renesas Technology Corp. semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
6. The prior written approval of Renesas Technology Corp. is necessary to reprint or reproduce in whole or in part these materials.
7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
8. Please contact Renesas Technology Corp. for further details on these materials or the products contained therein.
