- Keep gate loop compact
- Minimize coupling with power loop

Power loop: (For reference see page 13)

- Minimize power loop path inductance
- Minimize switching node coupling with high and low power plane
- Add DC bus noise filter (RC_{DCL}) to reduce to voltage ringing
- Add Switching node snubber for high current operation

Parameter	Symbol	Value
Single Gate Resistor (d)	R_G ($R_{G(OFF)}$ only)	18 Ω (D1/D2/$R_{G(ON)}$: NS)
Dual Gate Resistor (d)	Effective $R_{G(ON)}$ / $R_{G(OFF)}$	18 Ω / 18 Ω
Operating frequency	F_{sw}	<100 kHz
Steering Diode	D1/D2	Schottky diode (Vr≥20V, Vf≤0.5V,Io≥1.5A)
Gate Ferrite Bead (d)	FB	180 — 270 Ω at 100MHz

Note:
d. For every design and layout, a range of ferrite beads (FB), R_G and DC link RC filter should be evaluated to help suppress any high frequency ringing and optimize performance.
e. RC_{SN} (100pF + 10Ω) is needed if

- R_G is smaller than recommended value;
- Layout is not optimized;
- Requires high current operation.

Design Considerations

The fast switching of GaN devices reduces current-voltage crossover losses and enables high frequency operation while simultaneously achieving high efficiency. However, taking full advantage of the fast switching characteristics of GaN switches requires adherence to specific PCB layout guidelines and probing techniques.

Before evaluating Renesas GaN devices, see application note Printed Circuit Board Layout and Probing for GaN Power Switches. The table below provides some practical rules that should be followed during the evaluation.

When Evaluating Renesas GaN Devices:

DO	DO NOT
Minimize circuit inductance by keeping traces short, both in the drive and power loop	Twist the pins of TO-220 or TO-247 to accommodate GDS board layout
Minimize lead length of TO-220 and TO-247 package when mounting to the PCB	Use long traces in drive circuit, long lead length of the devices
Use shortest sense loop for probing; attach the probe and its ground connection directly to the test points	Use differential mode probe or probe ground clip with long wire
See Printed Circuit Board Layout and Probing
