

To our customers,

---

## Old Company Name in Catalogs and Other Documents

---

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1<sup>st</sup>, 2010  
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

# H8S/2168 Group TFP-144 User System Interface Cable for E6000 Emulator

## HS2168ECN61H User's Manual

Renesas Microcomputer Development  
Environment System  
H8S Family / H8S/2100 Series

## Preface

Thank you for purchasing this user system interface cable (HS2168ECN61H) for the Renesas' original microcomputer H8S/2168 group.

The HS2168ECN61H is a user system interface cable that connects an H8S/2168 group E6000 emulator (HS2168EPI61H; hereinafter referred to as the emulator) to the IC socket for a TFP-144 package on the user system.

## Section 1 Configuration

# CAUTION

**Use an NQPACK144SE socket (manufactured by Tokyo Eletech Corporation) for the TFP-144 package IC socket on the user system.**

Figure 1 shows the configuration of the HS2168ECN61H user system interface cable for the TFP-144 package.

**Figure 1 HS2168ECN61H User System Interface Cable**

Table 1 lists the HS2168ECN61H components. Please make sure you have all of these components when unpacking.

**Table 1 HS2168ECN61H Components**

No.	Component	Quantity	Remarks
1	Cable body	1	Includes coaxial cable and two EIO boards
2	Cable head	1	
3	IC socket	1	For the TFP-144 package
4	Socket cover	1	For installing a TFP-144 packaged MCU
5	Screws (M2.6 x 6 mm)	2	For fastening EIO board 2
6	Screws (M2.0 x 10 mm)	4	For fastening cable head
7	Screws (M2.0 x 6 mm)	4	For installing a TFP-144 packaged MCU
8	CTS screws (M3 x 6 mm)	2	For fastening the emulator station
9	Guide pins ( $\phi$ 1 mm)	3	For determining the IC socket location
10	Screwdriver	1	For tightening screws
11	Documentation	1	User's manual for HS2168ECN61H (this manual)

## Section 2 Connection Procedures

### 2.1 Connecting User System Interface Cable to Emulator Station

#### **WARNING**

**Observe the precautions listed below. Failure to do so will result in a FIRE HAZARD and will damage the user system and the emulator product or will result in PERSONAL INJURY. The USER PROGRAM will be LOST.**

- 1. Always switch OFF the user system and the emulator product before the USER SYSTEM INTERFACE CABLE is connected to or removed from any part. Before connecting, make sure that pin 1 on both sides are correctly aligned.**
- 2. The user system interface cable dedicated to the emulator must be used.**

Make sure the user system and the emulator station are turned off.

#### **CAUTION**

**When connecting or removing the user system interface cable, apply force only in the direction suitable for connection or removal, while making sure not to bend or twist the cable or connectors. Otherwise, the connectors will be damaged.**

### 2.1.1 Connecting User System Interface Cable to Cable Body Connector

After making sure the direction of the cable body connector is correct, firmly insert the cable body connector into the emulator station socket, and fasten the emulator station with two CTS screws (M3 × 6 mm) (figure 2).

**Figure 2 Connecting User System Interface Cable to Emulator Station (1)**

### 2.1.2 Connecting EIO Board 2 to Emulator

1. Remove four screws at the side of the emulator station.
2. Pull up and remove the cover of the emulator casing.
3. Insert connector P5 of EIO board 2 into connector P5 in the emulator station.
4. Fasten EIO board 2 with the provided two screws (M2.6 × 6 mm).
5. Set up the coaxial cable, which has been connected to EIO board 2, into a gutter of the emulator station.
6. Set the cover of the emulator station and fasten four screws.

**Figure 3 Connecting User System Interface Cable to Emulator Station (2)**

### **2.1.3 Removing EIO Board 2 from Emulator**

1. Remove four screws from the side of the emulator station.
2. Pull up and remove the cover of the emulator casing.
3. Remove two screws (M2.6 × 6 mm) from EIO board 2.
4. Remove EIO board 2 from connector P5 of the emulator station.
5. Remove the coaxial cable, which has been connected to EIO board 2, from a gutter of the emulator station.
6. Set the cover of the emulator station and fasten four screws.

## 2.2 Connecting User System Interface Cable to User System

### **WARNING**

**Always switch OFF the user system and the emulator product before the USER SYSTEM INTERFACE CABLE is connected to or removed from any part. Before connecting, make sure that pin 1 on both sides are correctly aligned. Failure to do so will result in a FIRE HAZARD and will damage the user system and the emulator product or will result in PERSONAL INJURY. The USER PROGRAM will be LOST.**

To connect the cable head to the user system, follow the instructions below.

### 2.2.1 Installing IC Socket

After checking the location of pin 1 on the IC socket fasten it to the user system before soldering.

### **CAUTION**

**After confirming the location of pin 1 on the IC socket, apply epoxy resin adhesive to the end of the four projections at the bottom of the IC socket, and fasten it to the user system.**

Use the guide pins provided to determine where to install the IC socket, as shown in figure 4.

**Figure 4 Location Setting of IC Socket**

### 2.2.2 Soldering IC Socket

After fastening, solder the IC socket for a TFP-144 package to the user system.

## CAUTION

**Be sure to completely solder the leads so that the solder slops gently over the leads and forms solder fillets. (Use slightly more solder than the MCU.)**

### 2.2.3 Inserting Cable Head

## CAUTION

**Check the location of pin 1 before inserting.**

Align pin 1 on the IC socket for a TFP-144 package on the user system with pin 1 on the user system interface cable head, and insert the user system interface cable head into the IC socket on the user system, as shown in figure 5.

### 2.2.4 Fastening Cable Head

## CAUTION

1. Use a screwdriver whose head matches the screw head.
2. The tightening torque must be 0.054 N•m or less.  
If the applied torque cannot be accurately measured, stop tightening when the force required to turn the screw becomes significantly greater than that needed when first tightening. If a screw is tightened too much, the screw head may break or an IC socket contact error may be caused by a crack in the IC socket solder.
3. If the emulator does not operate correctly, cracks might have occurred in the solder. Check conduction with a tester and re-solder the IC socket if necessary.

Fasten the user system interface cable head to the IC socket for a TFP-144 package on the user system with the four screws (M2.0 × 10 mm) provided. Each screw should be tightened a little at a time, alternating between screws on opposing corners. Take special care, such as manually securing the IC socket soldered area, to prevent the soldered IC socket from being damaged by overtightening the screws or twisting the components.

**Figure 5 Connecting User System Interface Cable to User System**

### 2.2.5 Fastening Cable Body

Connect the cable body and EIO board 1 to the cable head.

**Figure 6 Fastening Cable Body and EIO Board 1**

When removing the cable body or EIO board 1, push the unfastening jigs.

If the lower part of the cable body is pushed, EIO board 1 may be removed. Push the lower part of EIO board 1 with your fingers.

## 2.3 Recommended Dimensions for User System Mount Pad

Figure 7 shows the recommended dimensions for the mount pad (footprint) for the user system with an IC socket for a TFP-144 package (NQPACK144SE: manufactured by Tokyo Eletech Corporation). Note that the dimensions in figure 7 are somewhat different from those of the actual chip's mount pad.

**Figure 7 Recommended Dimensions for Mount Pad**

## 2.4 Dimensions for User System Interface Cable Head

The dimensions for the user system interface cable head are shown in figure 8.

**Figure 8 Dimensions for User System Interface Cable Head**

## 2.5 Resulting Dimensions after Connecting User System Interface Cable

The resulting dimensions, after connecting the user system interface cable head to the user system, are shown in figure 9.

**Figure 9 Resulting Dimensions after Connecting User System Interface Cable**

## Section 3 Installing the MCU on the User System

### CAUTION

1. Check the location of pin 1 before inserting.
2. Use a screwdriver whose head matches the screw head.
3. The tightening torque must be 0.054 N•m or less.  
If the applied torque cannot be accurately measured, stop tightening when the force required to turn the screw becomes significantly greater than that needed when first tightening. If a screw is tightened too much, the screw head may break or an IC socket contact error may be caused by a crack in the IC socket solder.
4. If the MCU does not operate correctly, cracks might have occurred in the solder. Check conduction with a tester and re-solder the IC socket if necessary.

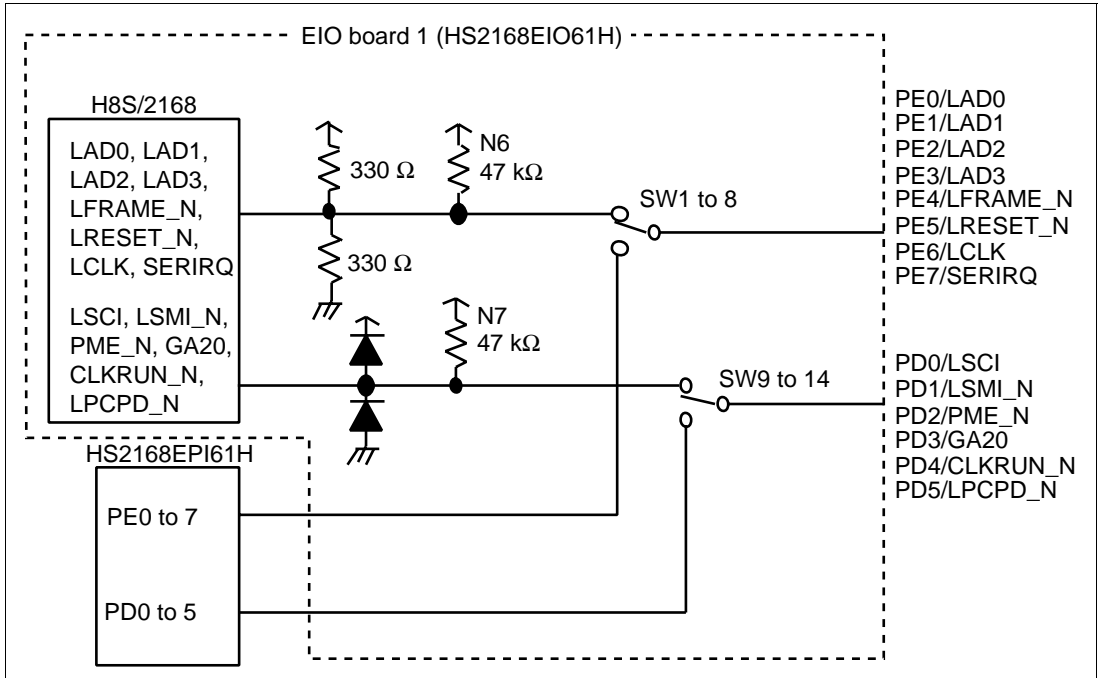

Check the location of pin 1 before inserting the MCU into the IC socket on the user system, as shown in figure 10. After inserting the MCU, fasten the socket cover with the provided four screws (M2.0 × 6 mm). Take special care, such as manually securing the IC socket soldered area, to prevent the IC socket from being damaged by overtightening the screws or twisting the components.

**Figure 10 Installing MCU to User System**

## Section 4 User System Interface Circuit

The microcomputer (H8S/2168) is installed in this user system interface cable for emulating the LPC function. An interface circuit, as shown in figure 11, is provided for the user system interface signal of the H8S/2168. Figure 12 and table 2 show the settings of switches.

**Figure 11 User System Interface Circuit**

**Figure 12 Settings of Switch**

**Table 2 Settings of Switches**

<b>Switch Number</b>	<b>Pin 1 Side</b>	<b>Pin 3 Side</b>
SW1	Port E7	SERIRQ
SW2	Port E6	LCLK
SW3	Port E5	LRESET_N
SW4	Port E4	LFRAME_N
SW5	Port E3	LAD3
SW6	Port E2	LAD2
SW7	Port E1	LAD1
SW8	Port E0	LAD0
SW9	Port D5	LPCPD_N
SW10	Port D4	CLKRUN_N
SW11	Port D3	GA20
SW12	Port D2	PME_N
SW13	Port D1	LSMI_N
SW14	Port D0	LSCI

## Section 5 Verifying Operation

1. When using the E6000 emulator for the H8S/2168 group, turn on the emulator according to the procedures described in the H8S/2168 Group E6000 Emulator User's Manual (HS2168EPI61HE).
2. Verify the user system interface cable connections by accessing the external memory and ports to check the bus states of the pins with the MEMORY\_FILL command (emulator command). If an error is detected, recheck the soldered IC socket and the location of pin 1.
3. The emulator connected to this user system interface cable supports two kinds of clock sources as the MCU clock: an emulator internal clock and an external clock on the user system. For details, refer to the emulator user's manual (HS2168EPI61HE).
  - To use the emulator internal clock  
Select the clock in the emulator station as the system clock ( $\phi$ ), by using the CLOCK command (emulator command).
  - To use the external clock on the user system  
Select the target clock by using the CLOCK command (emulator command) and supply the external clock from the user system to the emulator. When a crystal oscillator to the EXTAL and XTAL terminals for the system clock ( $\phi$ ) the crystal oscillator will oscillate in the circuit as shown in figure 13. External clock must be input from the EXTAL terminal. The clock input conditions are same as those for the H8S/2168 group in the hardware manual.

Figure 13 Oscillator Circuit

## Section 6 Notice

1. Make sure that pin 1 on the user system IC socket is correctly aligned with pin 1 on the cable head before inserting the cable head into the user system IC socket.
2. The dimensions of the recommended mount pad for the user system IC socket are different from those of the MCU.
3. To avoid breaking wires in the cable body, do not place heavy or sharp metal objects on the user system interface cable.
4. While the emulator station is connected to the user system with the user system interface cable, force must not be applied to the cable head. Position the emulator station, user system interface cable, and user system as shown in figure 14.

**Figure 14 User System Interface Cable Location Example**

5. The P1 short connector is for testing. Do not remove the jumper pin inserted in the side of pin 1 and pin 2.

**Figure 15 P1 Short Connector**

6. To prevent EMI noise, enclose the user system interface cable head in a case. The recommended material of the case is iron plated with nickel or resin plated with nickel inside. The case must be large enough to include the user system interface cable head, user system interface cable, and target system.

## Cautions

Keep safety first in your circuit designs!

1. Renesas Technology Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corporation product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corporation or a third party.
2. Renesas Technology Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corporation or an authorized Renesas Technology Corporation product distributor for the latest product information before purchasing a product listed herein. The information described here may contain technical inaccuracies or typographical errors. Renesas Technology Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors. Please also pay attention to information published by Renesas Technology Corporation by various means, including the Renesas Technology Corporation Semiconductor home page (<http://www.renesas.com>).
4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
5. Renesas Technology Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corporation or an authorized Renesas Technology Corporation product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
6. The prior written approval of Renesas Technology Corporation is necessary to reprint or reproduce in whole or in part these materials.
7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination. Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
8. Please contact Renesas Technology Corporation for further details on these materials or the products contained therein.
