User's Manual

Renesas Microprocessor  
RZ Family / RZ/A Series

All information contained in these materials, including products and product specifications, represents information on the product at the time of publication and is subject to change by Renesas Electronics Corp. without notice. Please review the latest information published by Renesas Electronics Corp. through various means, including the Renesas Electronics Corp. website (<http://www.renesas.com>).

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.  
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.  
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.  
Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

(Rev.4.0-1 November 2017)

## General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

### 1. Precaution against Electrostatic Discharge (ESD)

A strong electrical field, when exposed to a CMOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop the generation of static electricity as much as possible, and quickly dissipate it when it occurs. Environmental control must be adequate. When it is dry, a humidifier should be used. This is recommended to avoid using insulators that can easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors must be grounded. The operator must also be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions must be taken for printed circuit boards with mounted semiconductor devices.

### 2. Processing at power-on

The state of the product is undefined at the time when power is supplied. The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the time when power is supplied. In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the time when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the time when power is supplied until the power reaches the level at which resetting is specified.

### 3. Input of signal during power-off state

Do not input signals or an I/O pull-up power supply while the device is powered off. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Follow the guideline for input signal during power-off state as described in your product documentation.

### 4. Handling of unused pins

Handle unused pins in accordance with the directions given under handling of unused pins in the manual. The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of the LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible.

### 5. Clock signals

After applying a reset, only release the reset line after the operating clock signal becomes stable. When switching the clock signal during program execution, wait until the target clock signal is stabilized. When the clock signal is generated with an external resonator or from an external oscillator during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Additionally, when switching to a clock signal produced with an external resonator or by an external oscillator while program execution is in progress, wait until the target clock signal is stable.

### 6. Voltage application waveform at input pin

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between  $V_{IL}$  (Max.) and  $V_{IH}$  (Min.) due to noise, for example, the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between  $V_{IL}$  (Max.) and  $V_{IH}$  (Min.).

### 7. Prohibition of access to reserved addresses

Access to reserved addresses is prohibited. The reserved addresses are provided for possible future expansion of functions. Do not access these addresses as the correct operation of the LSI is not guaranteed.

### 8. Differences between products

Before changing from one product to another, for example to a product with a different part number, confirm that the change will not lead to problems. The characteristics of a microprocessing unit or microcontroller unit products in the same group but having a different part number might differ in terms of internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

## European Union Regulatory Notices:

The WEEE (Waste Electrical and Electronic Equipment) regulations put responsibilities on producers for the collection and recycling or disposal of electrical and electronic waste. Return of WEEE under these regulations is applicable in the European Union only. This equipment (including all accessories) is not intended for household use. After use the equipment cannot be disposed of as household waste, and the WEEE must be treated, recycled and disposed of in an environmentally sound manner. Renesas Electronics Europe GmbH can take back end of life equipment, register for this service at "<http://www.renesas.eu/weee>".

# How to use this manual

## 1. Purpose and Target Readers

This manual is designed to provide the user with an understanding of the functions and operating specifications of this SUB board. This manual is intended for all users of this SUB board. A basic knowledge of electric circuits, logical circuits, and MCUs is necessary in order to use this manual.

The manual comprises an overview of the product, functional specifications, and operating specifications.

Before using this SUB board, thoroughly understand the notes provided in the text of each section in this manual.

The revision history summarizes the locations of revisions and additions. It does not list all revisions. Refer to the text of the manual for details.

The following document applies to the RZ/A2M SUB board RTK79210XXB00000BE.

Document Type	Description	Document Title	Document No.
User manual	Description of functional specifications (mounted devices, memory map, electrical characteristics, etc.) and operating specifications (connectors, switches, etc.)	RZ/A2M SUB Board RTK79210XXB00000BE User's Manual	This user's manual

The following documents apply to the RZ/A2M group. Make sure to refer to the latest versions of these documents. The newest versions of the documents listed may be obtained from the Renesas Electronics Web site.

document Type	Description	Document Title	Document No.
Application note	Application examples, reference programs, etc.	Available from Renesas Electronics Web site.

## 1. Overview

### 1.1 Overview

The RTK79210XXB00000BE is a SUB board for use with the RZ/A2M CPU board. In combination with the RZ/A2M CPU board RTK7921053C00000BE, RZ/A2M functionality and performance can be evaluated, and application software can be developed and evaluated in advance. The RTK79210XXB00000BE has the following features.

- The following external memory is included.
  - SDRAM: 64 MBytes ×1 (16-bit bus connection)
  - EEPROM: 16KBytes × 1
- Includes 50-Pin ML connector for evaluating input/output of digital image signal.
- Includes 1.25 mm pitch connector for evaluating LVDS image output (20-pin x 1, 6-pin x1)
- Includes 26-Pin MIL connector for CMOS camera connection.
- Audio CODEC included for advanced development of audio systems.
- LAN connector included to allow for development and evaluation of Ethernet-compatible software.
- RZ/A2M peripheral feature interface, SD card slot, serial port (USB Micro-B) connector, and USB connector included as standard components.
- USB connector, series A receptacle, and Mini-B receptacle included (cannot be used simultaneously).
- DRP testing 40-pin MIL connector included.

## 1.2 Configuration

Figure 1.1 shows an example of system configuration using RTK79210XXB00000BE.

## 1.8 Absolute Maximum Ratings

Table 1.4 lists absolute maximum ratings for RTK79210XXB00000BE.

Table 1.4 RTK79210XXB00000BE Absolute Maximum Ratings

Symbol	Item	Rating value	Note
D5V	5V power voltage	-0.3V to 6.25V	Vss is the reference.
D3.3V *1	3.3V power voltage	-0.3V to 4.2V	Vss is the reference.
AVcc *1	Analog 3.3V main power voltage	-0.3V to 4.2V	AVss is the reference.
T <sub>opr</sub>	Operational temperature range*2	0°C to 50°C	No condensation formation, corrosive gas environments not permitted
T <sub>stg</sub>	Storage temperature *2	-10°C to 60°C	No condensation formation, corrosive gas environments not permitted

[Note] \*1 Supplied from the connected RZ/A2M CPU board.

\*2 Ambient temperature is the air temperature at a position as close as possible to the board.

## 1.9 Operating Conditions

Table 1.5 - lists operating conditions of RTK79210XXB00000BE.

Table 1.5 RTK79210XXB00000BE - Operational Conditions

Symbol	Item	Rated Value	Note
D5V	5V power voltage	4.75V to 5.25V	Vss standard
D3.3V *1	3.3V power voltage	3.0V to 3.6V	Vss standard
AVcc *1	Analog 3.3V main power voltage	3.0V to 3.6V	AVss standard
—	Maximum consumed current	2A	Includes continuous RZ/A2M CPU board current consumption.
T <sub>opr</sub>	Operational temperature range*2	0°C to 40°C	Do not expose to condensation or corrosive gases

[Note] \*1 Supplied from the connected RZ/A2M CPU board.

\*2 Ambient temperature is the air temperature at a position as close as possible to the board.

## 2. Functional Specifications

### 2.1 Overview of Functions

Table 2.1.1 lists function modules of RTK79210XXB00000BE.

Table 2.1.1 Function Modules of RTK79210XXB00000BE

Section	Function	Description
2.2	CPU	<ul style="list-style-type: none"> <li>● RZ/A2M pin functions used in the RTK79210XXB00000BE.</li> </ul>
2.3	Memory	<ul style="list-style-type: none"> <li>● SDRAM: 64 Mbytes x 1               <ul style="list-style-type: none"> <li>- ISSI S42S16320F-7TL</li> </ul> </li> <li>● EEPROM: 16 KBytes x 1               <ul style="list-style-type: none"> <li>- Renesas R1EX24128ASAS0A                   <ul style="list-style-type: none"> <li>● NAND flash memory: 128 MBytes x 1 is possible to mount on the board pattern.</li> </ul> </li> <li>- Cypress S34ML01G100TFI000</li> </ul> </li> </ul>
2.4	USB interface	Connection for the RZ/A2M USB2.0 host/function module and USB connector
2.5	Serial interface	Connection for the RZ/A2M FIFO internal serial communication interface (SCIFA) and RL78-intermediate USB Micro-B connector
2.6	Interrupt switch	Connection for the RZ/A2M NMI pin, IRQ0 pin, and push switch
2.7	Clock configuration	System clock configuration
2.8	Reset control	Reset control for the RZ/A2M CPU board and devices installed on the RTK79210XXB00000BE
2.9	Power voltage configuration	System power supply configuration for the RZ/A2M CPU board and RTK79210XXB00000BE
2.10	Audio interface	Connection for the RZ/A2M Audio CODEC (WM8978)
2.11	CMOS camera interface	Connection for the RZ/A2M Capture engine unit (CEU) and the CMOS camera connector
2.12	SD card interface	Connection for the RZ/A2M SD host interface (SDHI) channel 1 and SD card slot
2.13	LAN interface	Connection for the RZ/A2M Ethernet controller (ETHERC) and LAN connector via Ethernet PHY
2.14	Key input switch	Connection for the RZ/A2M A/D converter (ADC) and push switches
2.15	VDC6 interface	Connection for the RZ/A2M Video display controller 6 (VDC6) and digital image input/output connector
2.16	LVDS interface	Connection for the RZ/A2M LVDS interface and LVDS connector
2.17	DRP interface	Connection for the RZ/A2M DRP interface and DRP connector
—	Operation specifications	Refer to Chapter 3 for details on connectors and interfaces

## 2.2 CPU

### 2.2.1 Overview of RZ/A2M

RTK79210XXB00000BE is used by connecting to an RZ/A2M CPU board RTK7921053C00000BE equipped with RZ/A2M.

RZ/A2M is a 32 bit RISC microprocessor which operates at a maximum clock speed of 528 MHz.

### 2.2.2 List of RZ/A2M Pin Functions Used on RTK79210XXB00000BE

Table 2.2.1 to Table 2.2.16 lists RZ/A2M Pin Functions used on RTK79210XXB00000BE

Table 2.2.1 List of RZ/A2M Pin Function Selections Used on the RTK79210XXB00000BE (1)

Pin	Pin Name	Pin Function	Description	CN1 Pin	Comments
A1	Vcc				
A2	QSPI1_IO3		Connects to serial flash memory (U2 on the CPU board)	—	
A3	QSPI1_SPCLK		Connects to serial flash memory (U2 on the CPU board)	—	
A4	RPC_WP#		Open	—	
A5	QSPI0_IO3		Connects to serial flash memory (U2 on the CPU board)	—	
A6	PVcc_SPI				3.3V
A7	Vss				
A8	PVcc				
A9	PF_4 / Rx/D2 / DV0_DATA19 / LCD0_DATA4 / MTIOC6A / SSIBCK0 / IRQ1	DV0_DATA19 LCD0_DATA4	Connects to digital image input/output connector (CN15)	113	
A10	PE_6 / ET0_MDIO / VIO_D2 / SSIRxD0 / MTIOC0D / CC2_RD1	ET0_MDIO VIO_D2	Connects to Ethernet PHY1 (U27) Connects to CMOS camera connector (CN17)	107	SW6-4 : ON SW6-4 : OFF
A11	PL_2 / MD_BOOT2 / IRQ6	MD_BOOT2 IRQ6	Connects to DIP switch (SW1 on the CPU board) Connects to USB CC logic controller (U7 on CPU the board)	—	PD_0 : High SW1-3 PD_0 : Low
A12	PE_5 / ET0_MDC / VIO_D3 / SSITxD0 / MTIOC0C / CC1_RD1	ET0_MDC VIO_D3	Connects to Ethernet PHY1 (U27) Connects to CMOS camera connector (CN17)	103	SW6-4 : ON SW6-4 : OFF
A13	P8_4 / A4 / DRP20 / DV0_DATA13 / SSL00 / SSIRxD3	A4 DRP20 SSL00	Connects to SDRAM (U3) Connects to DRP connector (CN2) Connects to Audio CODEC (U21)	101	SW6-1 : ON SW6-1 : OFF SW6-2 : ON SW6-1 : OFF SW6-2 : OFF
A14	P8_6 / A6 / DRP18 / DV0_DATA11 / MOSI0 / SSIFS3	A6 DRP18 MOSI0	Connects to SDRAM (U3) Connects to DRP connector (CN2) Connects to Audio CODEC (U21)	95	SW6-1 : ON SW6-1 : OFF SW6-2 : ON SW6-1 : OFF SW6-2 : OFF

[Note]  : 3.3V power source,  : 1.8V power source,  : 1.2V power source,  : 3.3V or 1.8V power source,  : GND

Red text CPU board setting display.

Table 2.2.2 List of RZ/A2M Pin Function Selections Used on the RTK79210XXB00000BE (2)

Pin	Pin Name	Pin Function	Description	CN1 Pin	Comments
A15	PE_4 / ET0_CRS/RMII0_CRSDV / VIO_D4 / SSIFS0 / MTIOC0B	ET0_CRS/RMII0_CRSDV	Connects to Ethernet PHY1 (U27)	91	SW6-4 : ON
		VIO_D4	Connects to CMOS camera connector (CN17)		SW6-4 : OFF
A16	P9_1 / A9 / DRP15 / DV0_DATA8 / RxD4 / SSIFS2	A9	Connects to SDRAM (U3) connection	83	SW6-1 : ON
		DRP15	Connects to DRP connector (CN2)		SW6-1 : OFF SW6-3 : ON
		RxD4	Connects to USB Micro-B port (CN5) via USB serial converter IC (U23)		SW6-1 : OFF SW6-3 : OFF
A17	PVcc				
A18	Vss				
A19	PE_1 / ET0_RXD0/RMII0_RXD0 / VIO_D7 / RxD2 / POE8 / VBUSIN1 / IRQ1	ET0_RXD0/RMII0_RXD0	Connects to Ethernet PHY1 (U27)	73	SW6-4 : ON
		VIO_D7	Connects to CMOS camera connector (CN17)		SW6-4 : OFF
A20	PA_4 / A20 / DV0_DATA9 / LCD0_DATA14 / SCI_TXD0 / MTIOC0C	DV0_DATA9 LCD0_DATA14	Connects to digital image input/output connector (CN15)	69	SW6-7 : ON
A21	CKIO		Connects to SDRAM (U3)	54	
A22	Vss				
B1	PK_1 / ET1_TXD0/RMII1_TXD0 / NAF4 / CC1_RA0 / CAN_CLK / SSIDATA2	ET1_TXD0/RMII1_TXD0	Connects to Ethernet PHY2 (U28)	137	SW6-5 : ON
		NAF4	Connects to NAND flash memory (U31)		Not used SW6-5 : OFF
B2	Vcc				
B3	QSPI1_IO1		Connects to serial flash memory (U2 on the CPU board)	—	
B4	QSPI1_IO0		Connects to serial flash memory (U2 on the CPU board)	—	
B5	RPC_RESET#		Connects to serial flash memory (U2 on the CPU board)	—	
B6	QSPI0_IO1		Connects to serial flash memory (U2 on the CPU board)	—	
B7	QSPI0_SPCLK		Connects to serial flash memory (U2 on the CPU board)	—	
B8	PF_5 / TxD2 / DV0_DATA20 / LCD0_DATA3 / MTIOC6B / SSIFS0	DV0_DATA20	Connects to digital image input/output connector (CN15)	115	
		LCD0_DATA3			
B9	P6_3 / ET0_TXD1/RMII0_TXD1 / VIO_HD / TxD3 / POE0	ET0_TXD1/RMII0_TXD1	Connects to Ethernet PHY1 (U27)	111	SW6-4 : ON
		VIO_HD	Connects to CMOS camera connector (CN17)		SW6-4 : OFF
B10	PH_0 / AUDIO_CLK / VIO_D1 / GTIOC4A / MTIOC1A / CC1_RD0 / IRQ3	VIO_D1	Connects to CMOS camera connector (CN17)	105	
B11	PL_3 / MD_BOOT1 / IRQ7	MD_BOOT1	Connects to DIP switch (SW1 on the CPU board)	—	PD_0 : High SW1-4
		IRQ7	Connects to USB CC logic controller (U7 on the CPU board)		PD_0 : Low

[Note]  : 3.3V power source,  : 1.8V power source,  : 1.2V power source,  : 3.3V or 1.8V power source,  : GND

### 2.2.3 RTK79210XXB00000BE Interface Use Combination List

Table 2.2.17 shows the usage permission/denial list for each RTK79210XXB00000BE interface. The ○ marks indicate that combined use by both interfaces is possible, while the × marks indicate that combined use is not possible.

Table 2.2.17 RTK79210XXB00000BE Interface Usage Permission List

		RTK7921053C00000BE										RTK79210XXB00000BE

[Note] \*1 PJ\_1 / IRQ0 (DSTBY release) is a shared pin. If the WOL function of the Ethernet PHY1 (U27) and Ethernet PHY2 (U28) is not used, it can be shared.

## 2.3 Memory

### 2.3.1 SDRAM

The RTK79210XXB00000BE is equipped with external SDRAM×1 shown in Table 2.3.1 as the standard configuration. SDRAM control is performed by the RZ/A2M on-chip bus state controller (BSC). There is a 16-bit connection to the SDRAM.

Figure 2.3.1 shows the SDRAM block diagram, and Table 2.3.2 shows the function settings of the DIP switch SW6-1 for system settings. Table 2.3.3 shows clock pulse oscillator settings, and Table 2.3.4 and Table 2.3.5 show the RZ/A2M bus state controller settings (read and write for SDRAM) when the bus clock is operating at 132MHz.

Table 2.3.1 SDRAM Overview

Specifications	Details
Model name	IS42S16320F-7TL
Configuration	64 MBytes (8 Mwords x 16 bits x 4 banks) x 1
Capacity	64 MBytes
Access time	5.4 ns
CAS latency	3 (when system clock is 132 MHz)
Refresh interval	8192 refresh cycle every 64 ms
Row address	A12 to A0
Column address	A9 to A0
Number of banks	4-bank operation controlled by BA0 and BA1

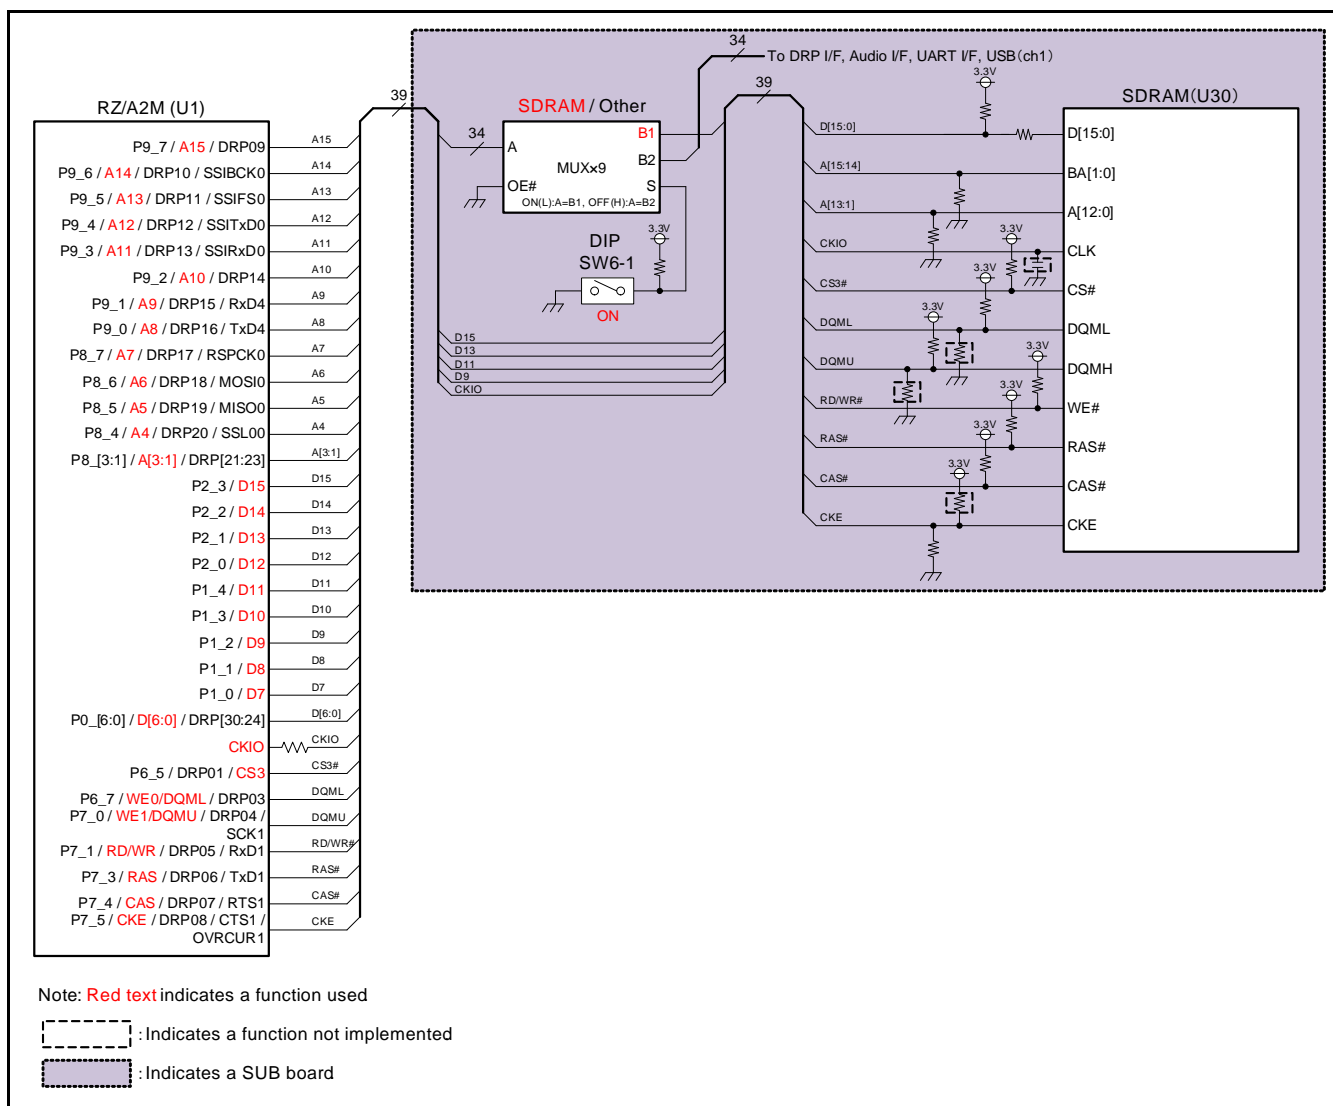

Figure 2.3.1 SDRAM Block Diagram

Table 2.3.2 Function Setting Table of DIP Switch SW6-1 for System Setting

DIP Switch	Function	
	ON	OFF
SW6-1	P9_[7 :0] and P8_[7 :1], P2_2, P2_0, P1_3, P1_[1 :0], P0_[6 :0], P6_7, P6_5, P7_[1 :0], P7[5 :3] are used as SDRAM control pins.	P9_[7 :0] and P8_[7 :1], P2_2, P2_0, P1_3, P1_[1 :0], P0_[6 :0], P6_7, P6_5, P7_[1 :0], P7[5 :3] are used as DRP, audio, UART and/or USB interface pins (default settings).

[Note] ■ indicates setting functions.

### 2.3.2 NAND Flash Memory Interface

RTK79210XXB00000BE is possible to mount NAND flash memory x 1 shown in Table 2.3.7 on the board pattern. NAND flash memory control is performed by the RZ/A2M on-chip NAND flash controller (FLCTL).

Figure 2.3.2 shows NAND flash memory interface block diagram, and Table 2.3.8 shows the function settings of the system setting DIP switches SW6-5 and SW6-6.

Table 2.3.7 NAND Flash Memory Overview

Model name	Bus size	Capacity	Access time
S34ML01G100TFI000	8 bit	128 MBytes (8 bit x 128 M word)	Random: 25 μs (max.) Sequential: 25 ns (min.)

Figure 2.3.2 NAND Flash Memory Interface Block Diagram

Table 2.3.8 Function Setting Table of DIP Switches SW6-5 and SW6-6 for System Setting

DIP Switch	Function	
	ON	OFF
SW6-5	P3_[5 :1] and PH_5, PK_[4 :0] are used as Ethernet PHY2 control pins (default setting).	P3_[5 :1] and PH_5, PK_[4 :0] are used as FLCTL pins.
SW6-6	PJ_[7 :6] are used as VDC6 pins (default setting).	PJ_[7 :6] are used as FLCTL pins.

[Note] [Shaded box] indicates setting function.

### 2.4 USB Interface

RTK79210XXB00000BE is equipped with a USB series A port x 1 and USB Mini-B port x 1 as the standard configuration of USB connectors.

However, USB interface pins are shared by the Series A port pins and Mini-B port pins, therefore Series A port and Mini-B port cannot be used at the same time.

Figure 2.4.1 shows USB interface block diagram, and Table 2.4.1 shows the functions setting tables of DIP switches SW6-1 and SW6-3 for system setting.

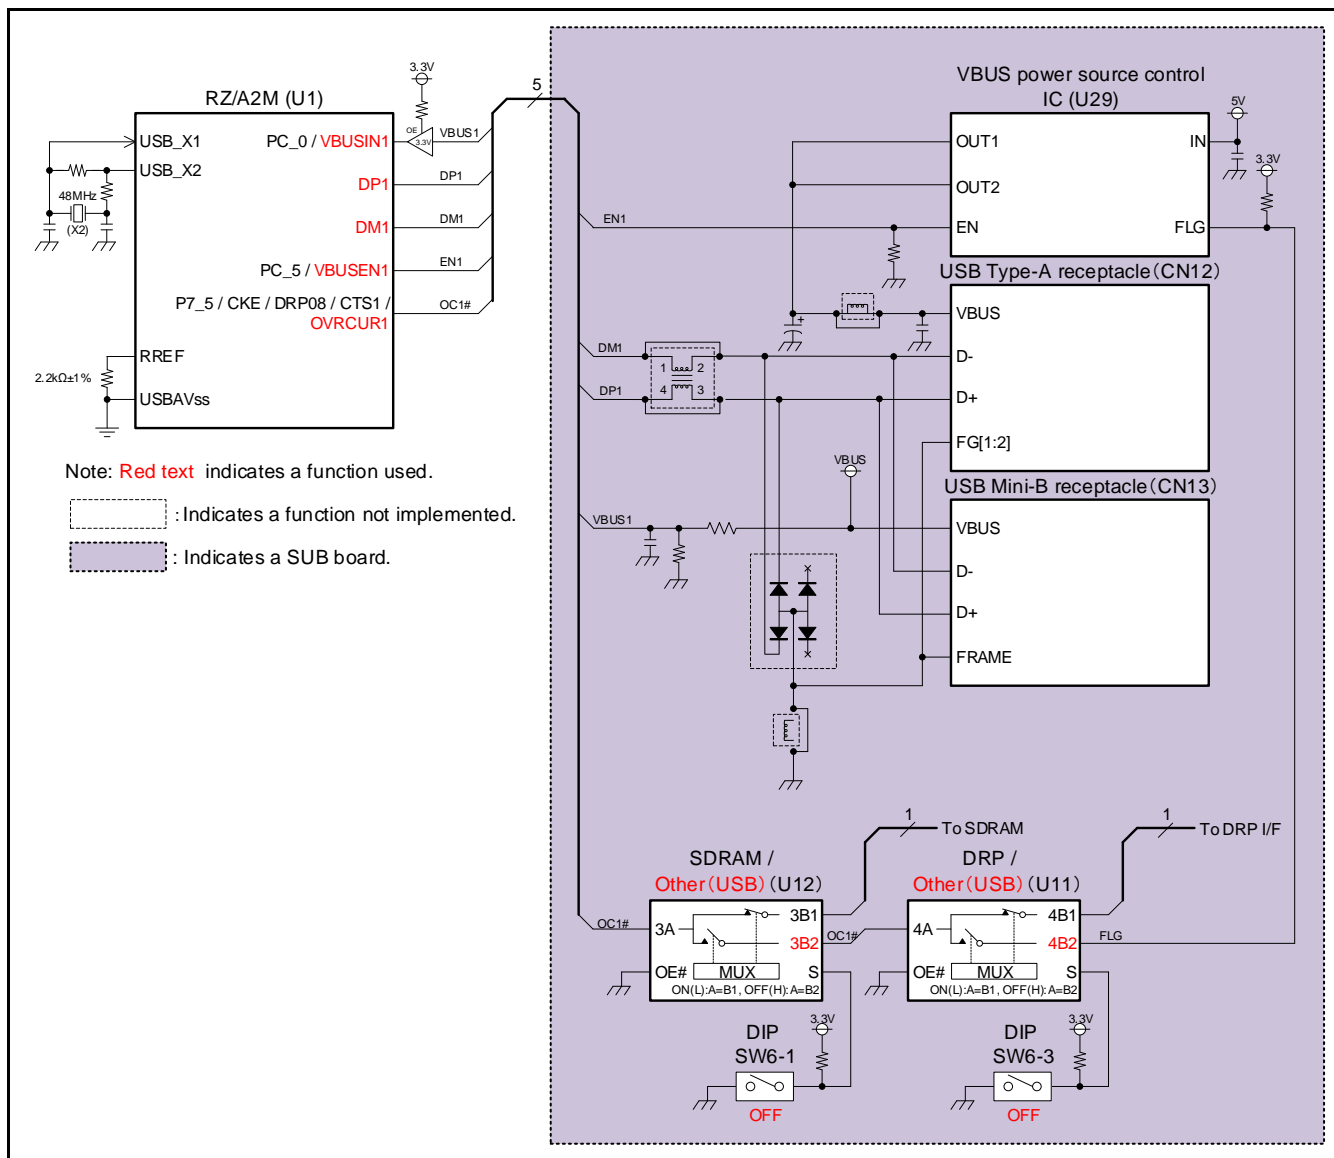

Figure 2.4.1 USB Interface Block Diagram

Table 2.4.1 Function Setting Table of DIP Switches SW6-1 and SW6-3 for System Setting

DIP switch	Function	
	ON	OFF
SW6-1	P7_5 is used as CKE pin.	P7_5 is used as OVRCUR1 pin (default setting).
SW6-3	P7_5 is used as DRP08 and CTS1 pin.	P7_5 is used as OVRCUR1 pin (default setting).

[Note] [Shaded box] indicates setting functions.

## 2.6 Interrupt Switches

RTK79210XXB00000BE is equipped with an RZ/A2M NMI and IRQ0 interrupt signal input push switches (NMI switch and IRQ0 switch).

The interrupt signal from IRQ0 RZ/A2M can be used to cancel the RZ/A2M deep standby mode. However, because the IRQ0pin is shared with the Ethernet PHY1 and Ethernet PHY2, when using the IRQ0 switch, the user must connect JP2 with the 2-pin of JP1.

Figure 2.6.1 shows an interrupt switch block diagram, and Table 2.6.1 shows a jumper JP1 function setting table.

Figure 2.6.1 Interrupt Switch Block Diagram

Table 2.6.1 Function Settings for Jumper JP1

Jumper	1-2	2-3	2-JP2
JP1	PJ_1 is used as Ethernet PHY1 WOL signal interrupt pin.	PJ_1 is used as Ethernet PHY2 WOL signal interrupt pin.	PJ_1 used as IRQ0 switch (SW3) interrupt pin (default setting)

[Note]  indicates setting functions.

### 2.7 Clock Configuration

RZ/A2M receives the following three types of clock inputs from the RZ/A2M CPU board.

- RZ/A2M input clock : 24 MHz
- RZ/A2M USB clock : 48 MHz
- RZ/A2M RTC clock : 32.768 kHz

RZ/A2M receives the following two clock inputs from RTK79210XXB00000BE.

- RZ/A2M audio clock : 11.2896MHz
- RZ/A2M VDC6 clock : 40MHz

Figure 2.7.1 shows clock configuration diagram, and Table 2.7.1 shows the function setting table of DIP switches SW6-4 and SW6-6 for system setting.

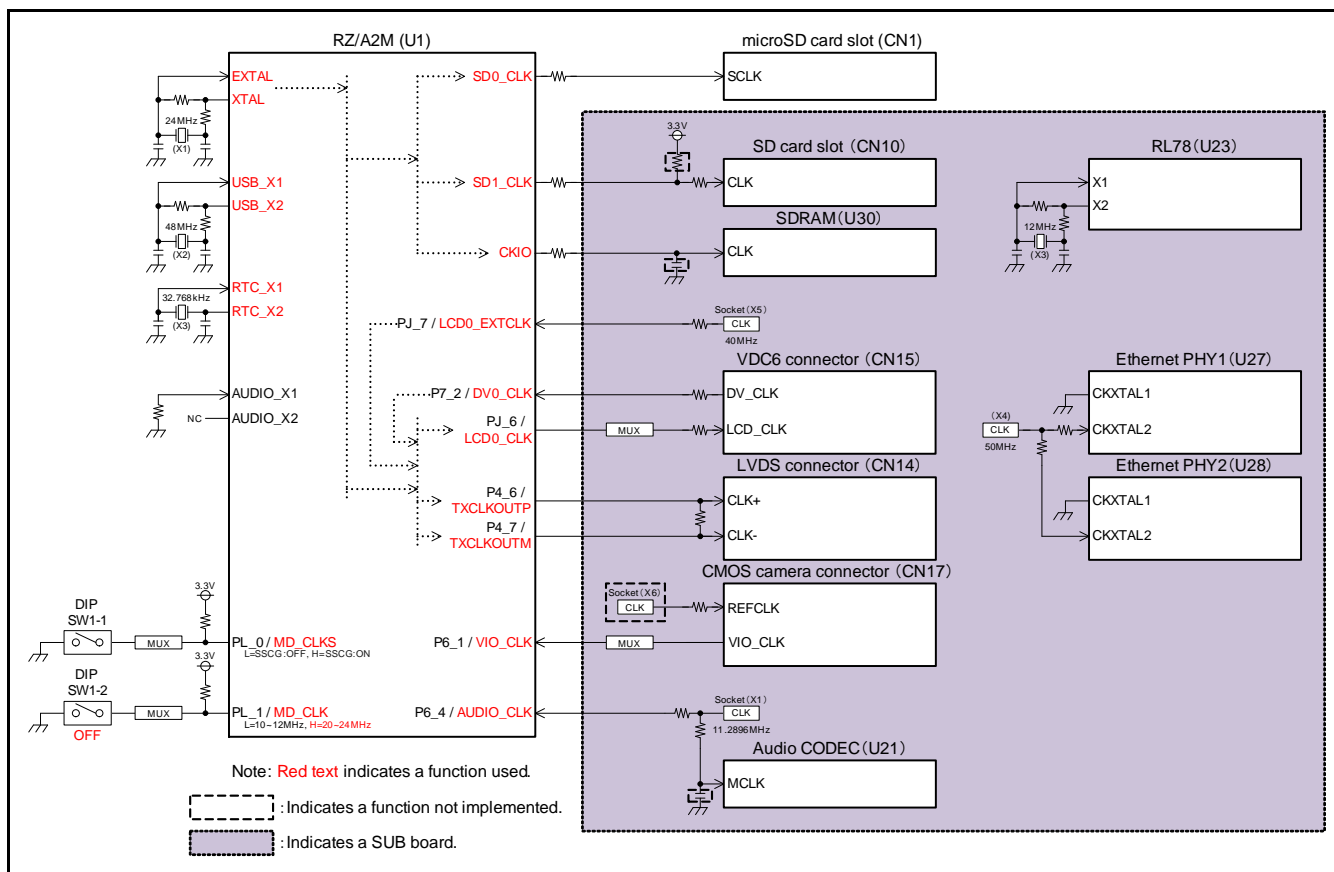

Figure 2.7.1 Clock Configuration Diagram

Table 2.7.1 Function Setting Table of DIP Switches SW6-4 and SW6-6 for System Setting

DIP Switch	Function	
	ON	OFF
SW6-4	P6_1 is used as RMII_TXDEN pin.	P6_1 is used as VIO_CLK input pin.*1 (default setting)
SW6-6	PJ_6 is used as LCD0_CLK output pin. PJ_7 is used as LCD0_EXTCLK input pin. (default setting)	PJ_6 is used as FCE pin. PJ_7 is used as NAF0 pin.

[Note]  indicates setting functions.

\*1 When using P6\_1 as VIO\_CLK input pin, an oscillator must be equipped to X6.

There is no reverse insertion guard on the oscillator socket, so be careful to insert in the direction of pin 1 when connecting.

### 2.8 Reset Control

On RTK79210XXB00000BE, a reset signal from the reset IC on the RZ/A2M CPU board is input to the Ethernet PHY1 (U27), Ethernet PHY2 (U28), and digital image input/output connector (CN15).

There are two types of system reset: power-on reset and switch-based reset.

Figure 2.8.1 shows a reset control block diagram.

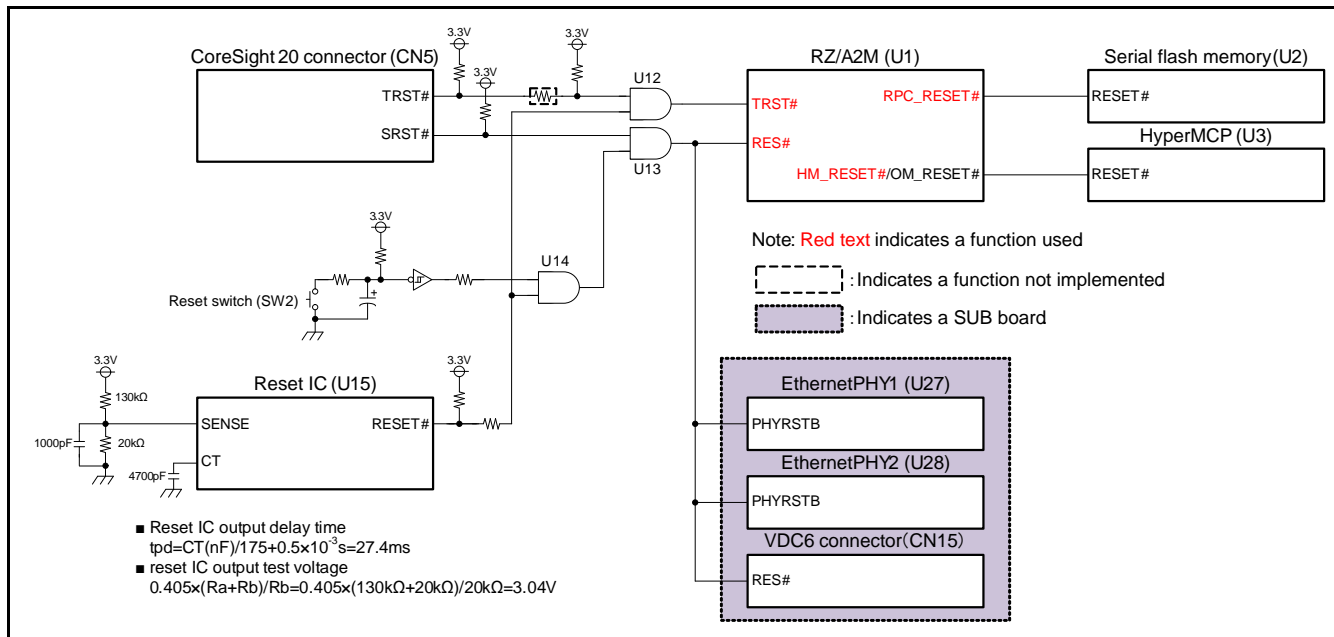

Figure 2.8.1 Reset Control Block Diagram

## 2.9 Power Voltage Configuration

RTK79210XXB00000BE uses 5V power supply, and the regulator on the RZ/A2M CPU board generates 3.3V power supply. 5V power supply can also be supplied from the RZ/A2M CPU board.

USB serial converter IC (U23) is operated by the VBUS power supply provided from USB Micro-B connector (CN5).

Figure 2.9.1 shows a power configuration diagram.

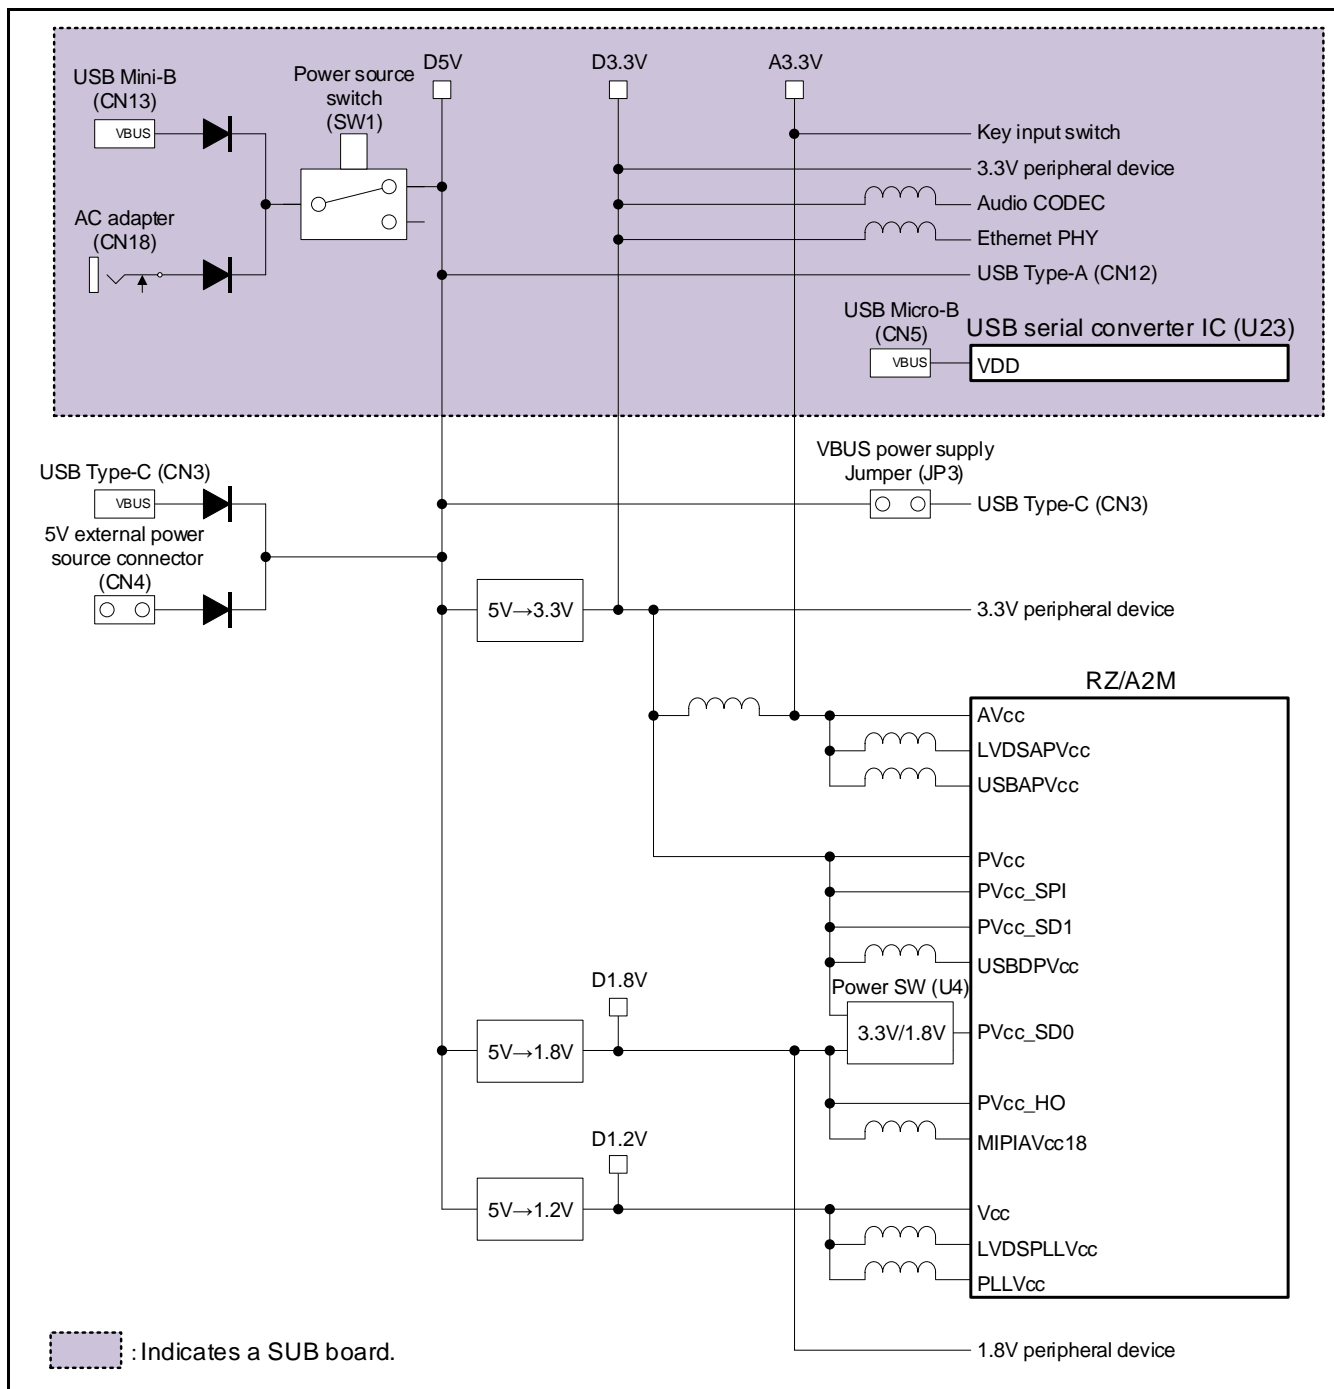

Figure 2.9.1 Power Configuration Diagram

### 2.10 Audio Interface

RTK79210XXB00000BE is equipped with a Cirrus audio CODEC WM8978 × 1 for audio interface. The WM8978 register control is performed on the channel 0 of the RZ/A2M on-chip Renesas serial peripheral interface (RSPI), and the input/output control for audio data is performed on the channel 0 of the RZ/A2M on-chip serial sound interface (SSIF-2).

Figure 2.10.1 shows the audio interface block diagram, and Table 2.10.1 shows the function setting table of DIP switches SW6-1 and SW6-2 for system setting.

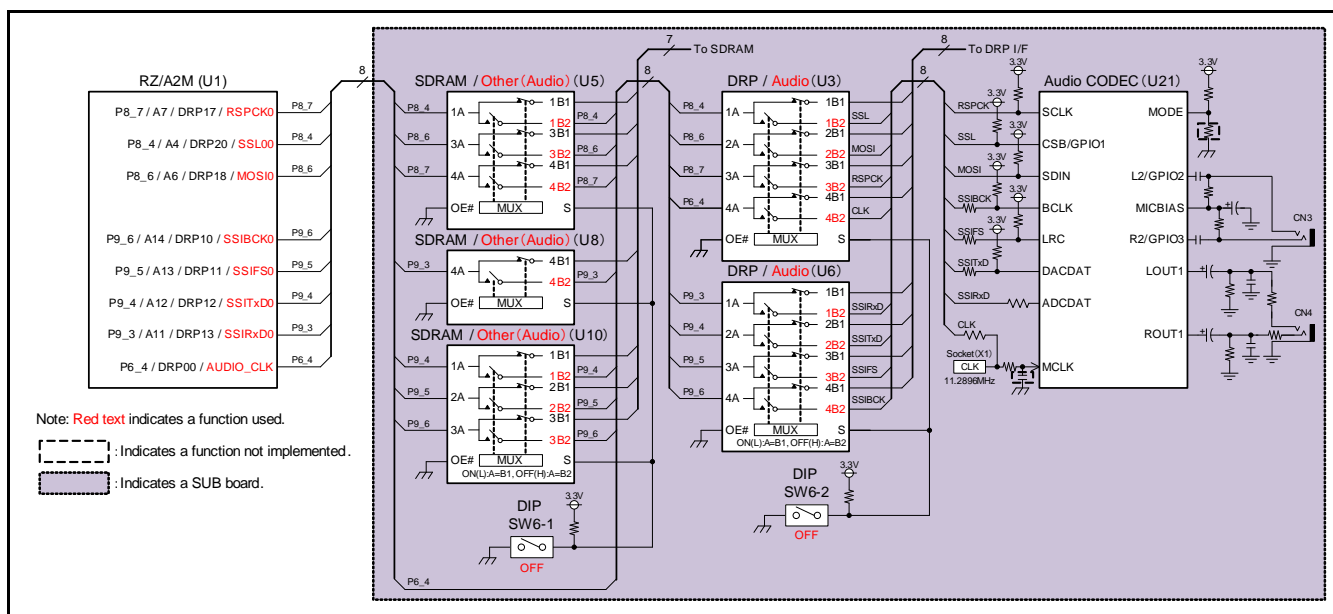

Figure 2.10.1 Audio Interface Block Diagram

Table 2.10.1 Function Setting Table of DIP Switches SW6-1 and SW6-2 for System Setting

DIP switch	Function	
	ON	OFF
SW6-1	P8_4 and P8_[7 :6], P9_[6 :3] are used as SDRAM control pins.	P8_4 and P8_[7 :6], P9_[6 :3] are used as audio interface pins (default settings).
SW6-2	P8_4 and P8_[7 :6], P6_4, P9_[6 :3] are used as DRP pins.	P8_4 and P8_[7 :6], P6_4, P9_[6 :3] used as audio interface pins (default settings).

[Note] [Shaded Box] indicates setting functions.

### 2.11 CMOS Camera Interface

RZ/A2M is equipped with an on-chip capture engine unit (CEU) that captures digital image data externally input, and transfers the data to memory. On RTK79210XXB00000BE, CEU pins of RZ/A2M connect with 26 pin MIL pitch connector to enable connection with various CMOS cameras.

X6 can be connected to an oscillator to input a sampling clock externally for the CMOS camera.

A pull-up resistor for I2C-bus is already mounted on RTK79210XXB00000BE, therefore it is not needed for the CMOS camera side.

Figure 2.11.1 shows CMOS camera interface block diagram, and Table 2.11.1 shows a function setting table of DIP switch SW6-4 for system setting.

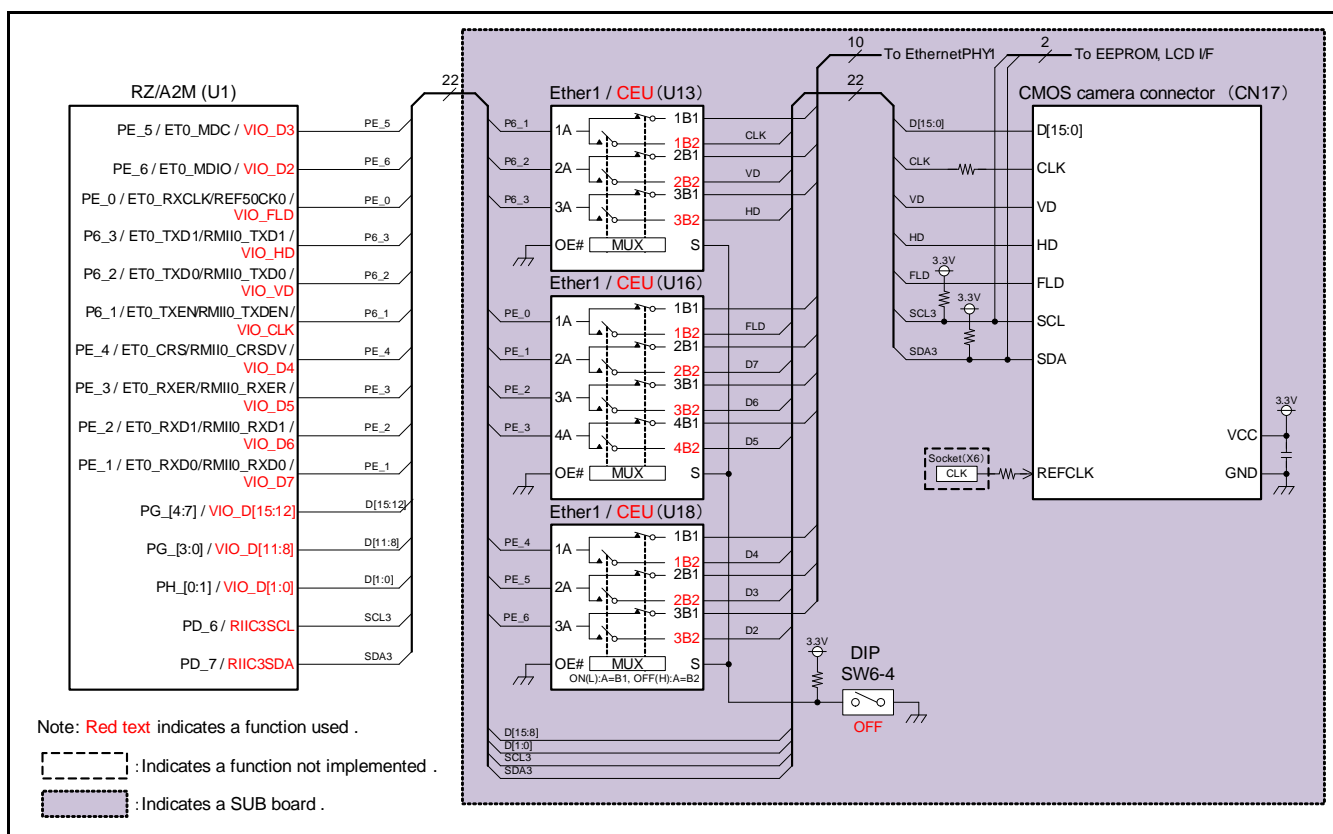

Figure 2.11.1 CMOS Camera Interface Block Diagram

Table 2.11.1 Function Setting Table of DIP Switch SW6-4 for System Setting

DIP switch	Function	
	ON	OFF
SW6-4	P6_[3 :1] and PE_[6 :0] are used as Ethernet PHY1 control pins.	P6_[3 :1] and PE_[6 :0] are used as CEU pins. (default setting)

[Note]  indicates setting functions.

### 2.12 SD Card Interface

RTK79210XXB00000BE is equipped with 4-bit SD card slot, and it connects to the channel 1 of the RZ/A2M on-chip SD/MMC host interface (SDHI).

Figure 2.12.1 shows the SD card interface block diagram.

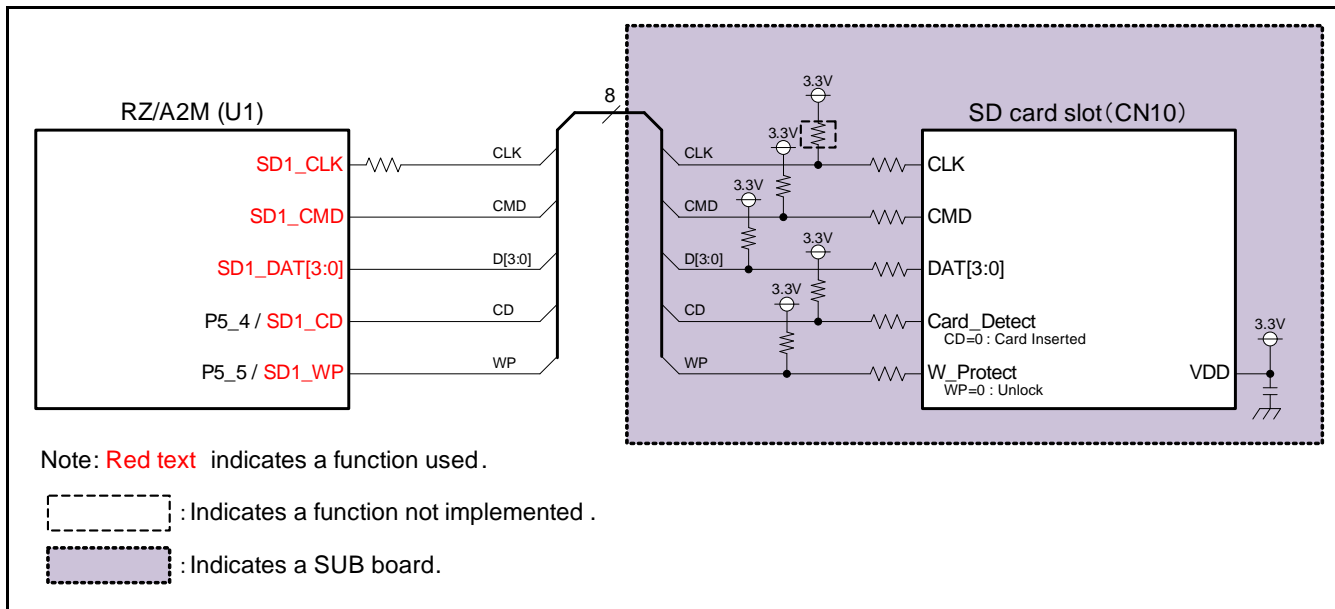

Figure 2.12.1 SD Card Interface Block Diagram

## 2.13 LAN Interface

RTK79210XXB00000BE is equipped with Realtek Ethernet PHY RTL8201FL-VB-CG × 2, which can communicate with the channel 0 and channel 1 of the RZ/A2M on-chip ethernet controller (ETHERC).

The Ethernet PHY incorporates the Wake-On-Lan (WOL) functionality, and outputs a WOL signal when a Magic Packet has been detected, allowing the deep standby mode of RZ/A2M to be canceled.

Figure 2.13.1 shows the LAN interface (channel 0) block diagram, Figure 2.13.2 shows the LAN interface (channel 1) block diagram, Table 2.13.1 shows the RZ/A2M CPU board port L function switching table, Table 2.13.2 shows the function setting table of DIP switch SW6-4 for system setting, Table 2.13.3 and Table 2.13.5 show the function setting table of jumper JP1, and Table 2.13.4 shows the function setting table of DIP switch SW6-5 for system setting.

Table 2.13.1 RZ/A2M CPU Board Port L Function Switching Table

Pin	Function	
	High	Low
PD_0	PL_[3 :0] is used as system setting pin.	Use PL_[3 :0] is used as RQ input pin.

[Note]  indicates setting functions.

Table 2.13.4 Function Setting Table of DIP Switch SW6-5 for System Setting

DIP switch	Function	
	ON	OFF
SW6-5	P3_[5 :1] and PH_5, PK_[4 :0] are used as Ethernet PHY2 control pins (default settings).	P3_[5 :1] and PH_5, PK_[4 :0] are used as FLCTL pins.

[Note] [ ] indicates setting functions.

Table 2.13.5 Function Setting Table of Jumper JP1

Jumper	1-2	2-3	2-JP2
JP1	PJ_1 is used as Ethernet PHY1 signal interrupt pin.	PJ_1 is used as Ethernet PHY2 signal interrupt pin.	PJ_1 is used as IRQ0 switch (SW3) interrupt pin (default setting).

[Note] [ ] indicates setting functions.

### 2.14 Key Input Switches

Port P5\_6 is set as an analog input pin (AN006), and can be used as a key input switch through an A/D converter (ADC)

Figure 2.14.1 shows the key input switch block diagram, and Table 2.14.1 shows the AD input pin voltage and AD value when each switch is pressed.

Figure 2.14.1 Key Input Switch Block Diagram

Table 2.14.1 AD Input Pin Voltage and AD Values When Switch Is Pressed

Switch	Pin voltage (V)	8 bit AD value	10 bit AD value	12 bit AD value
SW4	0.80	62	248	991
SW5	1.65	128	512	2048

[Note] Calculated at AVcc=3.3V, and AVss= 0V. Errors of resistor and voltage are not included.

### 2.15 VDC6 Interface

RZ/A2M has a digital image signal input pin (DV pin) which supports YCbCr422, YCbCr444, RGB888, RGB666, and RGB565 images. In addition, there is a digital image signal output pin (LCD pin) which supports a maximum image size of 1999 pixels (horizontal) by 2035 lines (vertical). On the RTK79210XXB00000BE, there is a 50 pin MIL connector to connect the DV pins and LCD pins of RZ/A2M.

Figure 2.15.1 shows the VDC6 interface block diagram, and Table 2.15.1 shows the function setting table of DIP switches SW6-6 and SW6-7 for system setting.

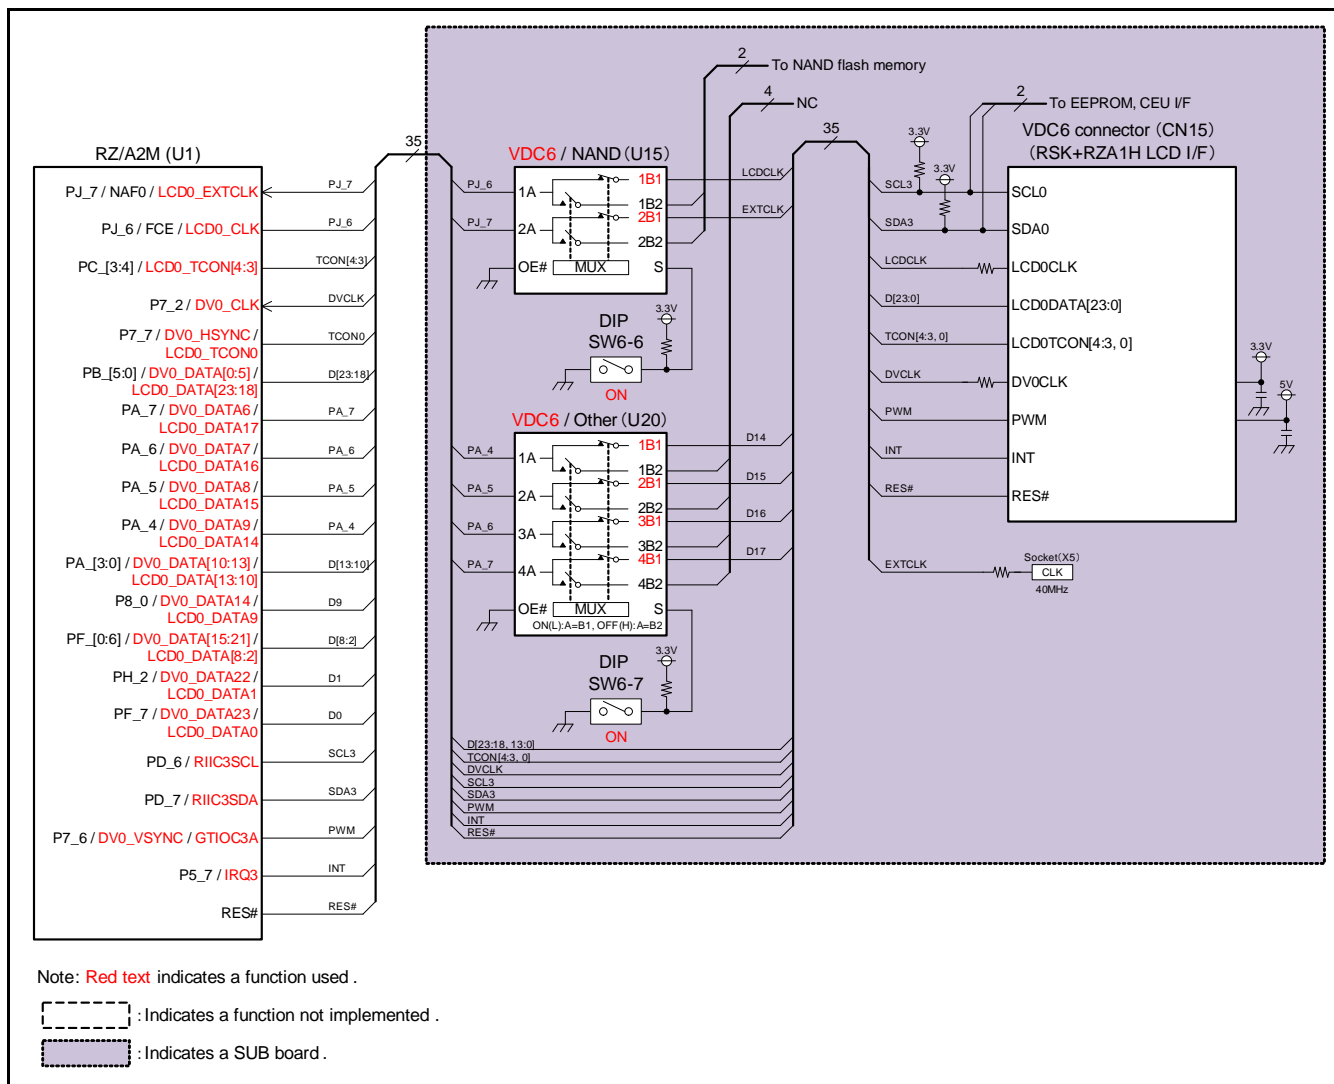

Figure 2.15.1 VDC6 Interface Block Diagram

Table 2.15.1 Function Setting Table of DIP Switches SW6-6 and SW6-7 for System Setting

DIP switch	Function	
	ON	OFF
SW6-6	PJ_[7 :6] is used as VDC6 pin (default setting).	PJ_[7 :6] is used as FLCTL pin.
SW6-7	PA_[7 :4] is used as VDC6 pin (default setting).	NC

[Note] [Shaded box] indicates setting functions.

### 2.16 LVDS Interface

RTK79210XXB00000BE is equipped with a 1.25mm pitch 20 pin connector, which allows connection with the RZ/A2M LVDS interface. There is also a connector for the LVDS backlight.

Figure 2.16.1 shows the LVDS interface block diagram.

Figure 2.16.1 LVDS Interface Block Diagram

### 2.17 DRP Interface

RTK79210XXB00000BE is equipped with a 40 pin MIL connector, which allows interface with the RZ/A2M DRP interface.

Figure 2.17.1 shows the DRP interface block diagram, and Table 2.17.1 shows the function setting table of DIP switches SW6-1, SW6-2, and SW6-3 for system setting.

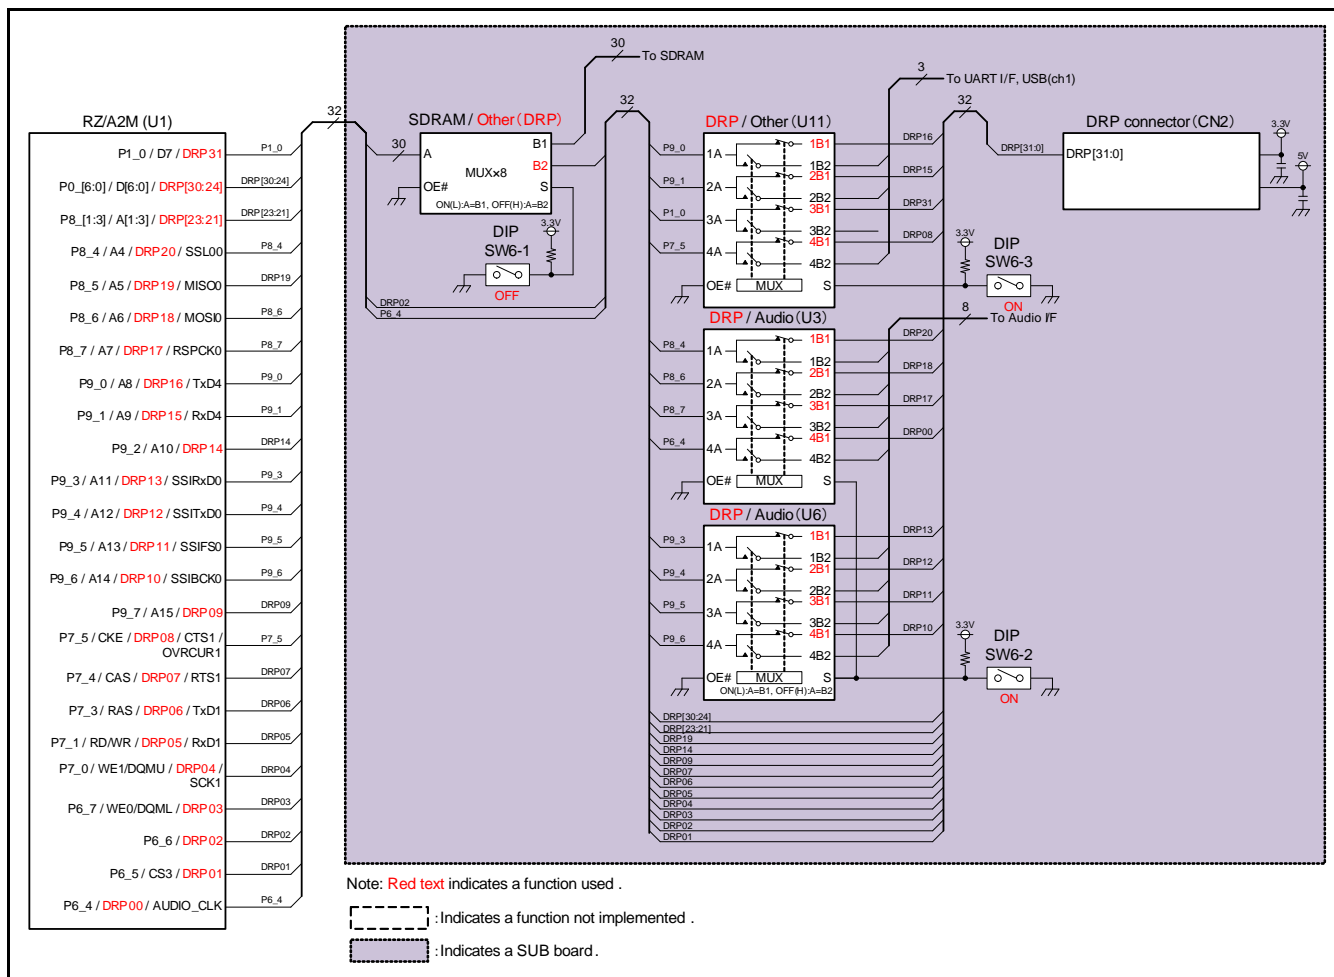

Figure 2.17.1 DRP Interface Block Diagram

Table 2.17.1 Function Setting Table of DIP Switches SW6-1, SW6-2, and SW6-3 for System Setting

DIP switch	Function	
	ON	OFF
SW6-1	P1_0 and P0_[6 :0], P8_[7 :1], P9_[7 :0], P7_[5 :3], P7_[1 :0], P6_7, P6_5 are used as SDRAM control pins.	P1_0 and P0_[6 :0], P8_[7 :1], P9_[7 :0], P7_[5 :3], P7_[1 :0], P6_7, P6_5 are used as DRP pins (default setting).
SW6-2	P8_4 and P8_[7 :6], P6_4, P9_[6 :3] are used as DRP pins.	P8_4 and P8_[7 :6], P6_4, P9_[6 :3] are used as audio interface pins (default settings).
SW6-3	P9_[1 :0] and P1_0, P7_5 are used as DRP pins.	P9_[1 :0] and P7_5 are used as UART or USB interface pins (default settings).

[Note]  indicates setting functions.

### 3. Operating specifications

#### 3.1 Overview of Connector

Figure 3.1.1 and Figure 3.1.2 show connector layout diagrams for RTK79210XXB00000BE.

Figure 3.1.1 RTK79210XXB00000BE Connector Layout Diagram (C Side Top View)

Figure 3.1.2 RTK79210XXB00000BE Connector Layout Diagram (S Side Top View)

### 3.1.1 CPU Board Connector (CN1)

The RTK79210XXB00000BE can be connected to the RZ/A2M CPU board RTK7921053C00000BE via the CPU board connector (CN1).

Figure 3.1.3 shows the CPU board connection pin layout diagram, and Table 3.1.1 to Table 3.1.3 show CPU board connector pin layout table.

Figure 3.1.3 CPU Board Connector (CN1) Pin Layout Diagram

Table 3.1.1 CPU Board Connector (CN1) Pin Layout Table (1)

Pin	Signal name	Pin	Signal name
1	D5V	2	D5V

[Note] Red characters indicate functions in use.

### 3.1.3 Mic-in Pin Jack (CN3)

RTK79210XXB00000BE is equipped with the mic-in pin jack (CN3).

Figure 3.1.5 shows the mic pin jack layout diagram, and Table 3.1.5 shows the mic-in pin jack layout table.

Figure 3.1.5 Mic-in Pin Jack (CN3) Layout Diagram

Table 3.1.5 Mic-in Pin Jack (CN3) Layout Table

Pin	Signal name
1	GND (AVss)
2	L2 (audio CODEC Lch analog input pin)
3	R2 (audio CODEC Rch analog input pin)

### 3.1.4 Line out Pin Jack (CN4)

RTK79210XXB00000BE is equipped with the line out pin jack (CN4).

Figure 3.1.6 shows the line out pin jack layout diagram, and Table 3.1.6 shows the line out pin jack layout table.

Figure 3.1.6 Line Out Pin Jack (CN4) Layout Diagram

Table 3.1.6 Line Out Pin Jack Layout Table

Pin	Signal name
1	GND (AVss)
2	LOUT1 (audio CODEC Lch analog output pin)
3	ROUT1 (audio CODEC Rch analog output pin)

### 3.1.5 Serial Board Connector (CN5)

RTK79210XXB00000BE is equipped with a serial board (USB Micro-B) connector (CN5).

Figure 3.1.7 shows the serial board connector pin layout diagram, and Table 3.1.7 shows the serial board connector pin layout table.

Figure 3.1.7 Serial Board Connector (CN5) Pin Layout Diagram

Table 3.1.7 Serial Board Connector (CN5) Pin Layout Table

Pin	Signal name
1	VBus (UVBUS)
2	D- (UDM0)
3	D+ (UDP0)
4	ID (NC)
5	GND (Vss)

### 3.1.6 LAN Connector (CN8, CN9)

RTK79210XXB00000BE is equipped with the LAN connectors (CN8, CN9).

Figure 3.1.8 shows the LAN connector pin layout diagram, and Table 3.1.8 shows the LAN connector pin layout table.

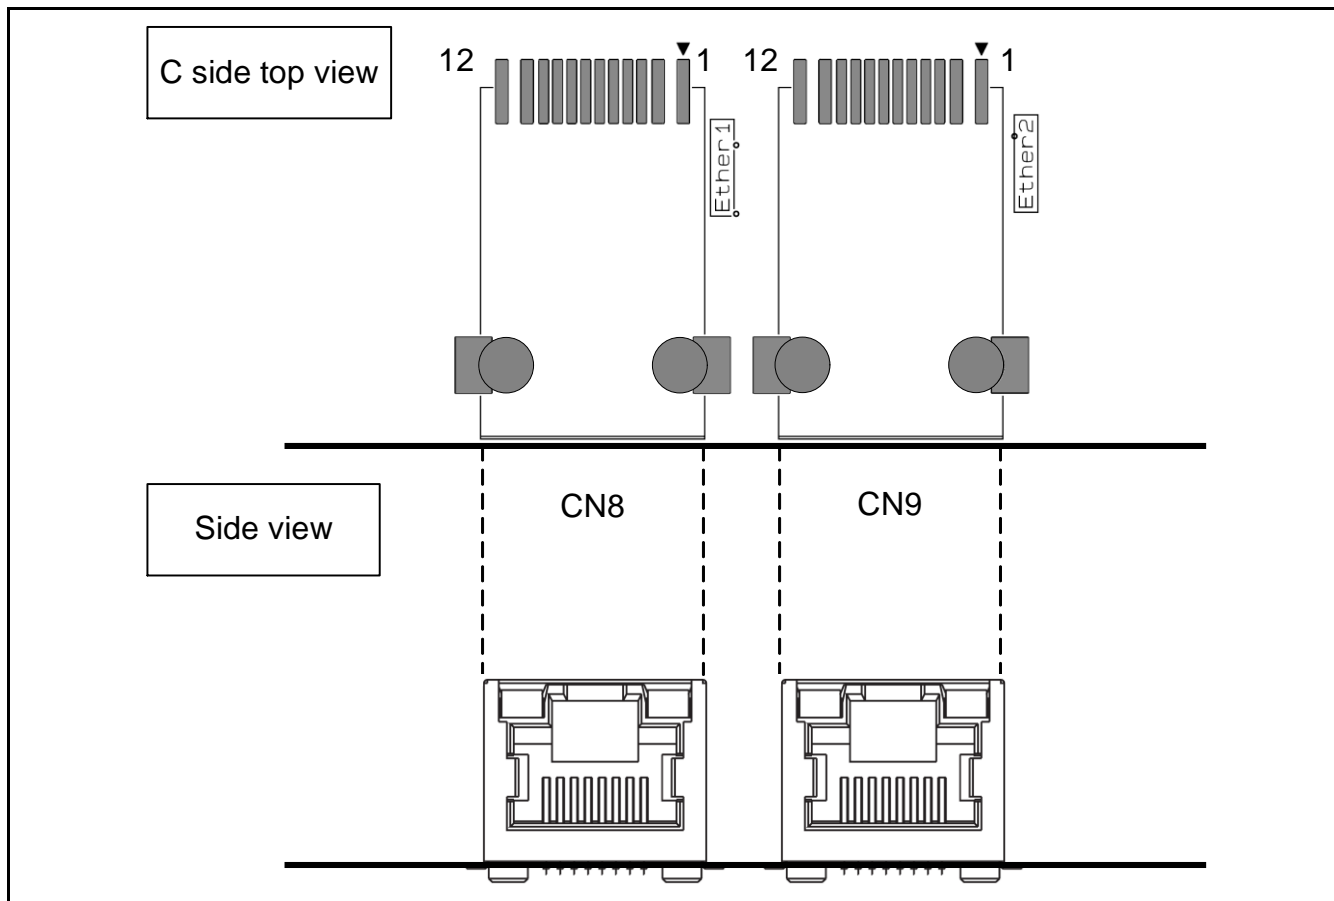

Figure 3.1.8 LAN Connector (CN8, CN9) Pin Layout Figure

Table 3.1.8 LAN Connector (CN8, CN9) Pin Layout Table

Pin	Signal name	
	CN8	CN9
1	LED-A (Y) (+3.3V)	LED-A (Y) (+3.3V)
2	LED-K (Y) (LED0/PHYAD[0])	LED-K (Y) (LED0/PHYAD[0])
3	TD+ (MDI+[0])	TD+ (MDI+[0])
4	TD- (MDI-[0])	TD- (MDI-[0])
5	CT1	CT1
6	CT2	CT2
7	RD+ (MDI+[1])	RD+ (MDI+[1])
8	RD- (MDI-[1])	RD- (MDI-[1])
9	NC	NC
10	CAP	CAP
11	LED-K (G) (LED1/PHYAD[1])	LED-K (G) (LED1/PHYAD[1] and P3_0 / <b>ET1_LINKSTA</b> )
12	LED-A (G) (+3.3V)	LED-A (G) (+3.3V)

[Note] **Red characters** indicate functions in use.

### 3.1.7 SD Card Slot (CN10)

RTK79210XXB00000BE is equipped with the SD card slot (CN10).

Figure 3.1.9 shows the SD card slot pin layout diagram, and Table 3.1.9 shows the SD card slot pin layout table.

Figure 3.1.9 SD Card Slot (CN10) Pin Layout Diagram

Table 3.1.9 SD Card Slot (CN10) Pin Layout Table

Pin	Signal name
1	CD/DAT3 ( <b>SD1_DAT3</b> )
2	CMD ( <b>SD1_CMD</b> )
3	VSS1 (Vss)
4	VDD (+3.3V)
5	CLK ( <b>SD1_CLK</b> )
6	VSS2 (Vss)
7	DAT0 ( <b>SD1_DAT0</b> )
8	DAT1 ( <b>SD1_DAT1</b> )
9	DAT2 ( <b>SD1_DAT2</b> )
10	Write_Protect (P5_5 / <b>SD1_WP</b> )
11	Card_Detect (P5_4 / <b>SD1_CD</b> )
12	COMMON (Vss)

[Note] Red characters indicate functions in use.

### 3.1.8 USB Connector (CN12, CN13)

RTK79210XXB00000BE is equipped with the series A port (CN12) and Mini-B port (CN13).

Figure 3.1.10 shows the series A port pin layout diagram, and Figure 3.1.11 shows the Mini-B port pin layout diagram.

Table 3.1.10 shows the series A port pin layout table, and Table 3.1.11 shows the Mini-B port pin layout table.

Figure 3.1.10 Series A Port (CN12) Pin Layout Diagram

Table 3.1.10 Series Port (CN12) Pin Layout Table

Pin	Signal name
1	VBus

Pin	Signal name
1	VBus (PC_0 / <b>VBUSIN1</b> )
2	D- (DM1)
3	D+ (DP1)
4	IC (connects to test pin TP3)
5	GND (Vss)

[Note] **Red characters** indicate functions in use.

### 3.1.9 LVDS Connector (CN14, CN16)

RTK79210XXB00000BE is equipped with the LVDS connector (CN14) and the back light connector (CN16) for power supply.

Figure 3.1.12 shows the LVDS connector and LVDS backlight connector pin layout diagram, Table 3.1.12 shows the LVDS connector pin layout table, and Table 3.1.13 shows the LVDS back light connector pin layout table.

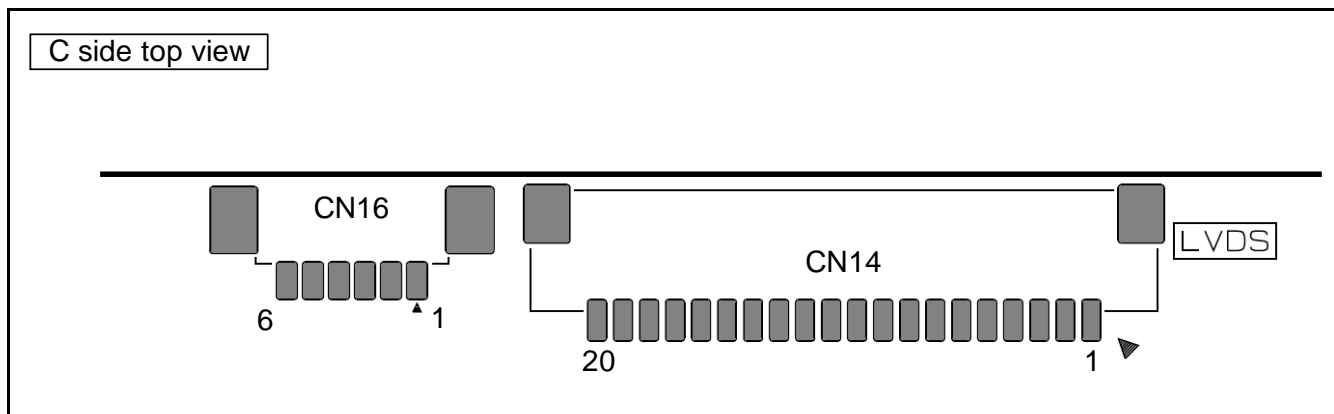

Figure 3.1.12 LVDS Connector (CN14, CN15) Pin Layout Diagram

Table 3.1.12 LVDS Connector (CN14) Pin Layout Table

Pin	Signal name
1	Vcc (+3.3V)
2	Vcc (+3.3V)
3	GND (Vss)
4	GND (Vss)
5	RX0- (P4_1 / TXOUT0M)
6	RX0+ (P4_0 / TXOUT0P)
7	GND (Vss)
8	RX1- (P4_3 / TXOUT1M)
9	RX1+ (P4_2 / TXOUT1P)
10	GND (Vss)
11	RX2- (P4_5 / TXOUT2M)
12	RX2+ (P4_4 / TXOUT2P)
13	GND (Vss)
14	CLK- (P4_7 / TXCLKOUTM)
15	CLK+ (P4_6 / TXCLKOUTP)
16	GND (Vss)
17	L/R or RX3- (connects to +3.3V via 680Ω resistor)
18	U/D or RX3+ (connects to +3.3V via 680Ω resistor)
19	GND (Vss)
20	GND (Vss)

[Note] Red characters indicate functions in use.

Table 3.1.13 LVDS Back Light Connector (CN16) Pin Layout Table

Pin	Signal name
1	VLED (5V) (+5V)
2	VLED (5V) (+5V)
3	DIMMER (Brightness Adjust) (connects to +3.3V via 10kΩ resistor)
4	ENABLE (connects to +3.3V via 10kΩ resistor)
5	GND (Vss)
6	GND (Vss)

### 3.1.10 Digital Image Input/output Connector (CN15)

RTK79210XXB00000BE is equipped with the digital image input/output connector (CN15).

Figure 3.1.13 shows the digital image input/output connector pin layout diagram, and Table 3.1.14 shows the digital image input/output connector pin layout.

Figure 3.1.13 Digital Image Input/output Connector (Cn15) Pin Layout Diagram

Table 3.1.14 Digital Image Input/output Connector (CN15) Pin Layout Table

Pin	Signal name	Pin	Signal name
1	DATA0 (PF_7 / DV0_DATA23 / LCD0_DATA0)	2	DATA1 (PH_2 / DV0_DATA22 / LCD0_DATA1)
3	DATA2 (PF_6 / DV0_DATA21 / LCD0_DATA2)	4	DATA3 (PF_5 / DV0_DATA20 / LCD0_DATA3)
5	DATA4 (PF_4 / DV0_DATA19 / LCD0_DATA4)	6	DATA5 (PF_3 / DV0_DATA18 / LCD0_DATA5)
7	DATA6 (PF_2 / DV0_DATA17 / LCD0_DATA6)	8	DATA7 (PF_1 / DV0_DATA16 / LCD0_DATA7)
9	DATA8 (PF_0 / DV0_DATA15 / LCD0_DATA8)	10	DATA9 (P8_0 / DV0_DATA14 / LCD0_DATA9)
11	DATA10 (PA_0 / DV0_DATA13 / LCD0_DATA10)	12	DATA11 (PA_1 / DV0_DATA12 / LCD0_DATA11)
13	DATA12 (PA_2 / DV0_DATA11 / LCD0_DATA12)	14	DATA13 (PA_3 / DV0_DATA10 / LCD0_DATA13)
15	DATA14 (PA_4 / DV0_DATA9 / LCD0_DATA14)	16	DATA15 (PA_5 / DV0_DATA8 / LCD0_DATA15)

49	5V (+5V)	50	5V (+5V)

[Note] Red characters indicate functions in use.

### 3.1.11 CMOS Camera Connector (CN17)

RTK79210XXB00000BE is equipped with a CMOS camera connector (CN17).

Figure 3.1.14 shows the CMOS camera connector pin layout diagram, and Table 3.1.15 shows the CMOS camera connector pin layout.

CMOS camera connector (CN17) does not have a reverse insertion prevention guide, so be sure to insert in the direction of the #1 pin during connection. Moreover, confirm that the camera device signal pin is compatible with the circuit board.

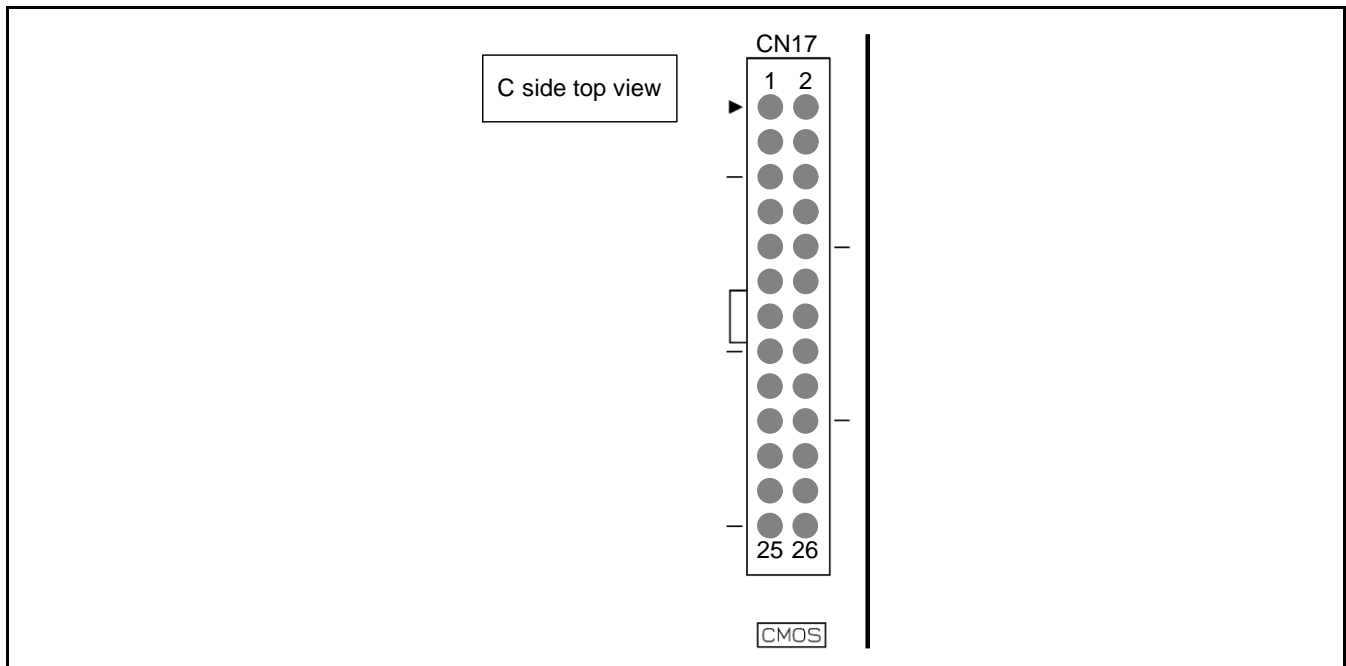

Figure 3.1.14 CMOS Camera Connector (CN17) Pin Layout Diagram

Table 3.1.15 CMOS Camera Connector (CN17) Pin Layout Table

Pin	Signal name	Pin	Signal name
1	Vcc (+3.3V)	2	GND (Vss)
3	SCL (PD_6 / <b>RIIC3SCL</b> )	4	SDA (PD_7 / <b>RIIC3SDA</b> )
5	VSYNC (P6_2 / ET0_TXD0/RMII0_TXD0 / <b>VIO_VD</b> )	6	HSYNC (P6_3 / ET0_TXD1/RMII0_TXD1 / <b>VIO_HD</b> )
7	PCLK (P6_1 / ET0_TXEN/RMII0_TXDEN / <b>VIO_CLK</b> )	8	XCLK
9	D7 (PE_1 / ET0_RXD0/RMII0_RXD0 / <b>VIO_D7</b> )	10	D6 (PE_2 / ET0_RXD1/RMII0_RXD1 / <b>VIO_D6</b> )
11	D5 (PE_3 / ET0_RXER/RMII0_RXER / <b>VIO_D5</b> )	12	D4 (PE_4 / ET0_CRS/RMII0_CRSDV / <b>VIO_D4</b> )
13	D3 (PE_5 / ET0_MDC / <b>VIO_D3</b> )	14	D2 (PE_6 / ET0_MDIO / <b>VIO_D2</b> )
15	D1 (PH_0 / <b>VIO_D1</b> )	16	D0 (PH_1 / <b>VIO_D0</b> )
17	GND (Vss)	18	I/O (PE_0 / ET0_RXCLK/REF50CK0 / <b>VIO_FLD</b> )
19	I/O ( <b>PG_4</b> / <b>VIO_D15</b> )	20	I/O ( <b>PG_5</b> / <b>VIO_D14</b> )
	D15 (PG_4 / <b>VIO_D15</b> )		D14 (PG_5 / <b>VIO_D14</b> )
21	D13 (PG_6 / <b>VIO_D13</b> )	22	D12 (PG_7 / <b>VIO_D12</b> )
23	D11 (PG_3 / <b>VIO_D11</b> )	24	D10 (PG_2 / <b>VIO_D10</b> )
25	D7 (PG_1 / <b>VIO_D9</b> )	26	D8 (PG_0 / <b>VIO_D8</b> )

[Note] Red characters indicate functions in use.

### 3.1.12 DC Power Supply Jack (CN18)

RTK79210XXB00000BE is equipped with the DC power supply jack (CN18) for providing power to the system.

Figure 3.1.15 shows the power supply connector pin layout diagram, and Table 3.1.16 shows the power supply connector pin layout table.

Figure 3.1.15 Power Supply Connector (CN18) Pin Layout Figure

Table 3.1.16 Power Voltage Connector (CN18) Pin Layout Table

Pin	Signal name
1	GND (Vss)
2	GND (Vss)
3	+5V

### 3.2 Operational Component Layout

Figure 3.2.1 shows the RTK79210XXB00000BE operational component layout diagram.

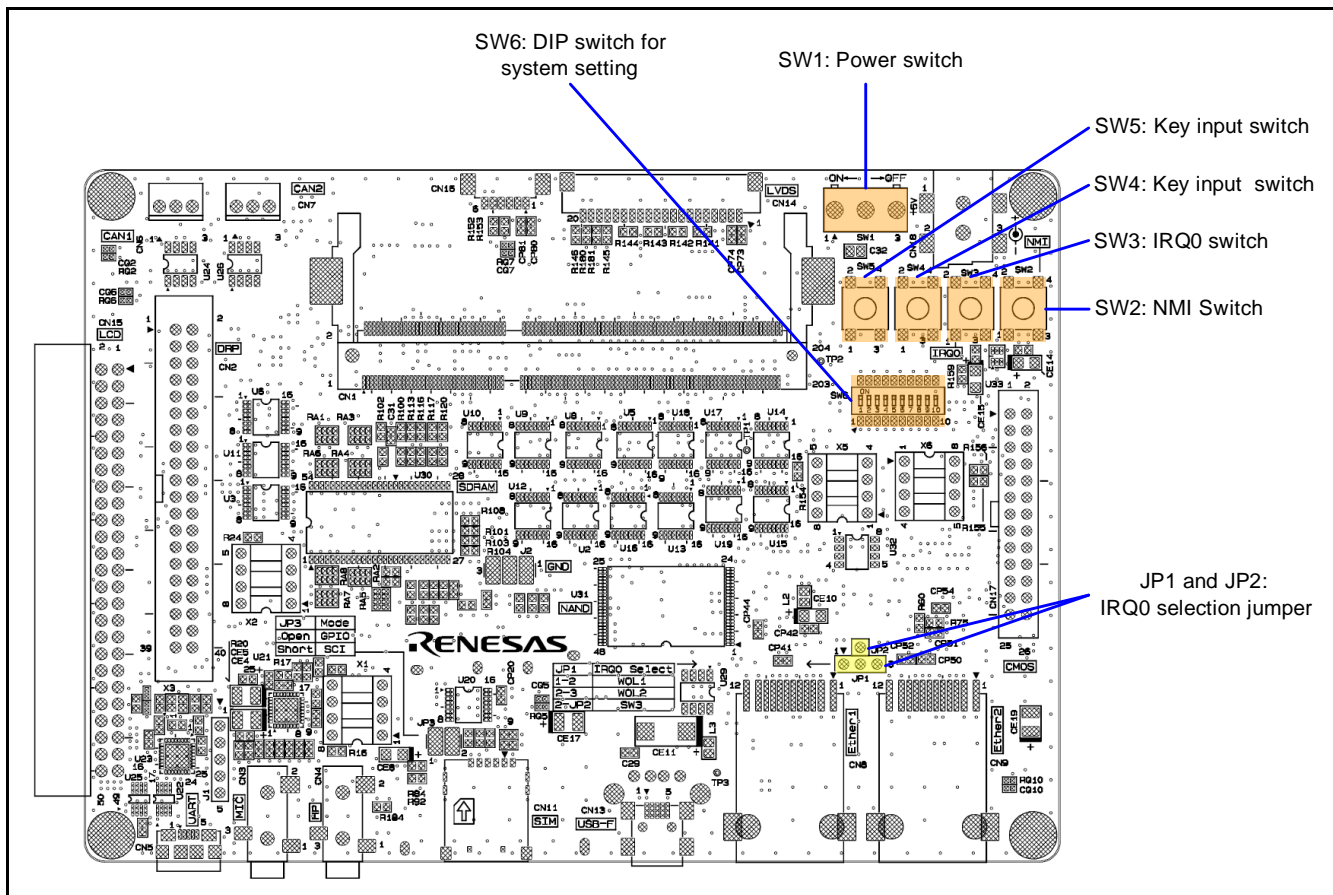

Figure 3.2.1 RTK79210XXB00000BE Operational Component Layout Diagram (C Side Top View)

### 3.2.1 Jumpers (JP1 and JP2)

RTK79210XXB00000BE is equipped with two system setting jumpers.

Figure 3.2.2 shows the jumper layout diagram, and Table 3.2.1 shows the jumper setting table.

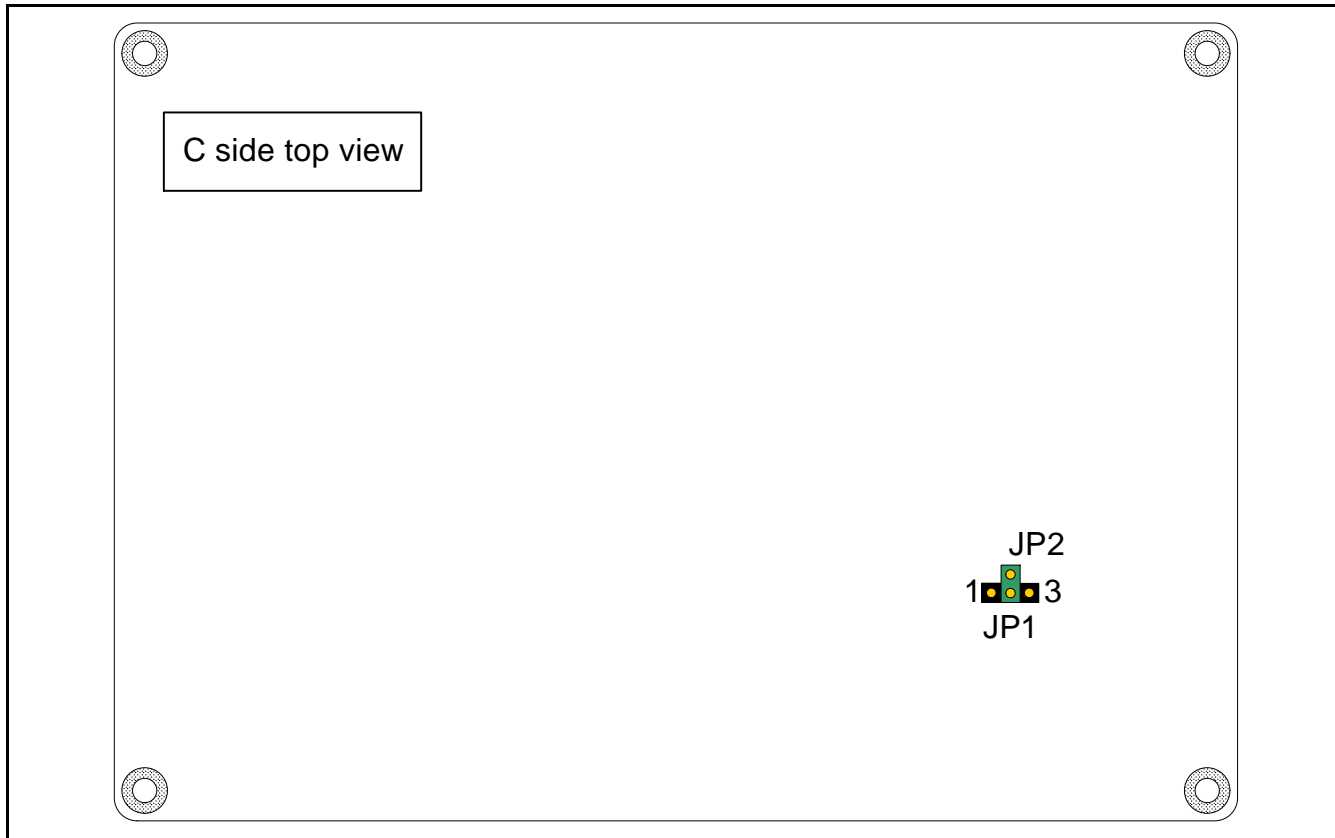

Figure 3.2.2 RTK79210XXB00000BE Jumper Layout Diagram

Table 3.2.1 Jumper Setting Table (JP1 and JP2)

Jumper	Settings	Function
JP1 IRQ0 input selection	1-2	Ethernet PHY1 (U27) WOL pin
	2-3	Ethernet PHY2 (U28) WOL pin
	2-JP2	IRQ0 switch (SW3)

[Note]  displayed during initial settings.

Be sure to turn off the power before altering the jumper settings.

### 3.2.2 Switch Functions

RTK79210XXB00000BE is equipped with six switches.

Figure 3.2.3 shows the mounted switch layout diagram, Table 3.2.2 lists the mounted switches, and Table 3.2.3 provides the explanation of DIP switch functions.

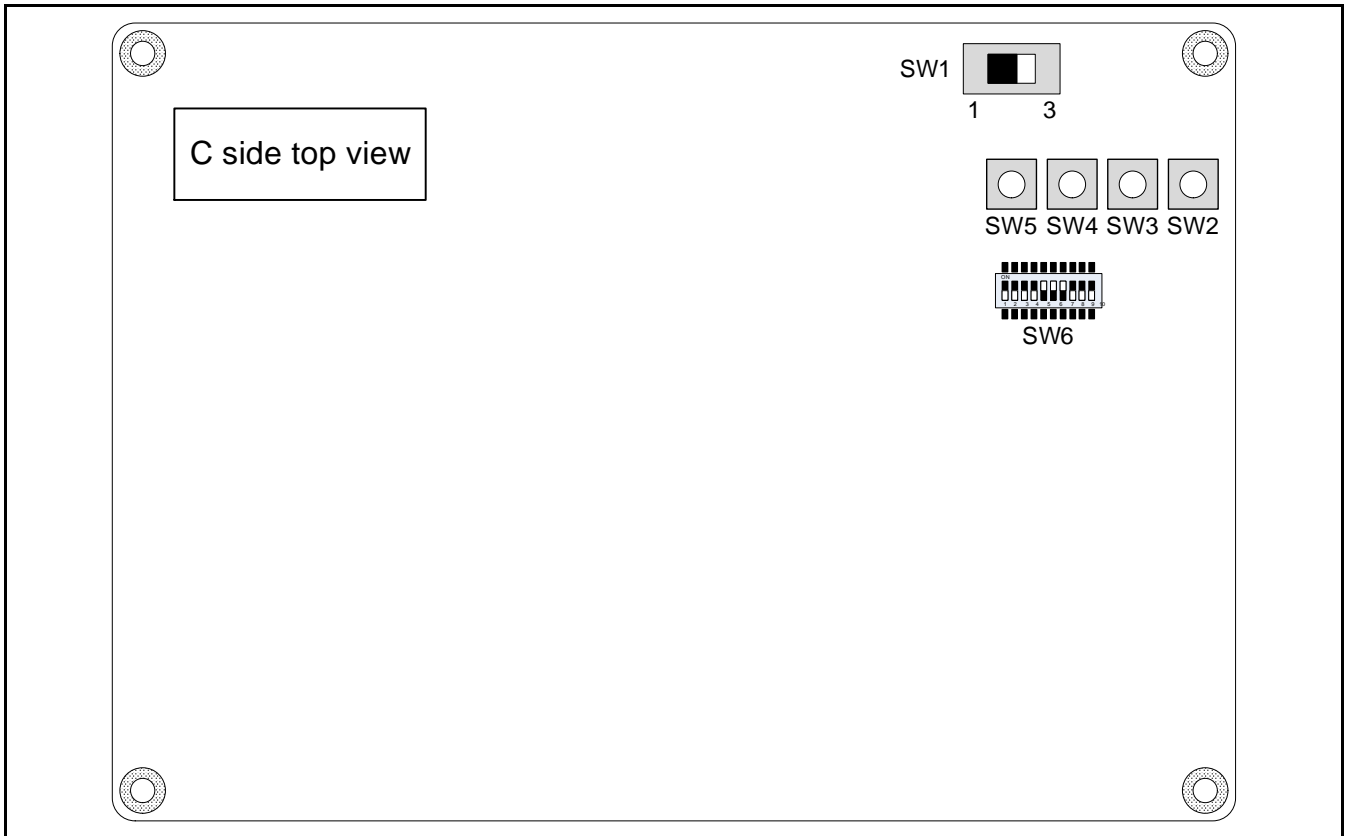

Figure 3.2.3 RTK79210XXB00000BE Mounted Switch Layout Diagram

Table 3.2.2 Mounted RTK79210XXB00000BE Switch Overview

Numbers	Function	Note
SW1	Power supply switch	
SW2	NMI switch	Refer to section 2.6 for details.
SW3	IRQ0 switch	
SW4	Key input switch	Refer to section 2.14 for details.
SW5	Key input switch	
SW6	DIP switch for system settings	Refer to Table 3.2.3 for further details

Table 3.2.3 Explanation of DIP Switch Functions (SW6)

Numbers	Settings	Function	
SW6-1 P9_[7:0], P8_[7:1], P2_2, P2_0, P1_3, P1_[1:0], P0_[6:0], P6_7, P6_5, P7_[1:0], P7[5:3] connection address selection	OFF	SDRAM#/Other = "H"	Used as DRP, audio, UART, and USB interface pins
	ON	SDRAM#/Other = "L"	Used as SDRAM control pin
SW6-2 P8_4, P8_[7:6], P6_4, P9_[6:3] connection address selection	OFF	DRP#/Audio = "H"	Used as audio interface pin
	ON	DRP#/Audio = "L"	Used as DRP pin
SW6-3 P9_[1:0], P1_0, P7_5 connection address selection	OFF	DRP#/Other = "H"	Used as UART and USB interface pins
	ON	DRP#/Other = "L"	Used as DRP pin
SW6-4 P6_[3:1], PE_[6:0] connection address selection	OFF	Ether1#/CEU = "H"	Used as CEU pin
	ON	Ether1#/CEU = "L"	Used as Ethernet PHY1 control pin
SW6-5 P3_[5:1], PH_5, PK_[4:0] connection address selection	OFF	Ether2#/NAND = "H"	Used as FLCTL pin
	ON	Ether2#/NAND = "L"	Used as Ethernet PHY2 control pin
SW6-6 PJ_[7:6] connection address selection	OFF	VDC6#/NAND = "H"	Used as FLCTL pin
	ON	VDC6#/NAND = "L"	Used as VDC6 pin
SW6-7 P7_[7:4] connection address selection	OFF	VDC6#/Other = "H"	NC
	ON	VDC6#/Other = "L"	Used as VDC6 pin
SW6-8	OFF	NC	
	ON	NC	
SW6-9 P5_3	OFF	P5_3 = "H"	Generic input port P5_3 = "H"
	ON	P5_3 = "L"	Generic input board P5_3 = "L"
SW6-10 PC_2	OFF	PC_2 = "H"	Generic input port PC_2 = "H"
	ON	PC_2 = "L"	Generic input port PC_2 = "L"

[Note]  indicates default setting.

Be sure to turn the board power to off before altering the DIP switch setting.

### 3.3 External Dimensions

Figure 3.3.1 shows the external dimensions of the RTK79210XXB00000BE C side top view.
