

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

M16C/62P Group, M16C/64A Group

Differences between M16C/62P and M16C/64A

1. Abstract

The following document describes differences between M16C/62P 100-pin version and M16C/64A 100-pin version. Refer to each device's hardware manual for details.

2. Introduction

The explanation of this application note is applied to the following conditions:
Applicable MCUs: M16C/62P 100-pin version, M16C/64A 100-pin version

3. Differences

3.1 Differences between Functions

Table 3.1 and Table 3.2 list differences between functions.

Table 3.1 Differences between functions (1/2) (1)

Item		M16C/62P	M16C/64A
Minimum Instruction Execution Time		41.7 ns (f(BCLK) = 24 MHz, VCC1 = 3.0 to 5.5 V) 100 ns (f(BCLK) = 10 MHz, VCC1 = 2.7 to 5.5 V)	40 ns (f(BLCK) = 25 MHz, VCC1 = 2.7 to 5.5 V)
Clock Generator		PLL, XIN, XCIN, on-chip oscillator (approx. 1 MHz)	PLL, XIN, XCIN, 125 kHz on-chip oscillator
Power Consumption		14 mA (VCC1 = VCC2 = 5 V, f(BCLK) = 24 MHz) 8 mA (VCC1 = VCC2 = 3 V, f(BCLK) = 10 MHz) 1.8 uA (VCC1 = VCC2 = 3 V, f(XCIN) = 32 kHz, wait mode)	TBD (25 MHz / VCC1 = VCC2 = 3 V) TBD (VCC1 = VCC2 = 3 V, stop mode)
Power Control	Slow read mode	No	Yes
	Low current consumption read mode	No	Yes
CPU Clock After Reset		Main clock divided by 8	125 kHz on-chip oscillator clock divided by 8
NMI Pin		Input port	PM24 bit in the PM2 register = 0 (when $\overline{\text{NMI}}$ is disabled): I/O port (Nch open drain output) PM24 bit in the PM2 register = 1 (when $\overline{\text{NMI}}$ is enabled): Input port
External Bus	Expanded area	04000h to 07FFFh (when PM13 = 0) 08000h to 0FFFFh (when PM10 = 0) 10000h to 26FFFh 28000h to 7FFFFh 80000h to CFFFFh (when PM13 = 0) D0000h to FFFFFh (in microprocessor mode)	04000h to 07FFFh (when PM13 = 0) 08000h to 0CFFFh (when PM10 = 0) 0D800h to 0DFFFh 0E000h to 0FFFFh (when PM10 = 0) 10000h to 13FFFh (when PRG2C0 = 1) 14000h to 26FFFh 28000h to 7FFFFh 80000h to CFFFFh (when PM13 = 0) D0000h to FFFFFh (in microprocessor mode)
Interrupt		External interrupts: 8	External interrupts: 13
Watchdog Timer	Reset start function	No	Selectable from start and stop
	Count source	CPU clock, on-chip oscillator (approx. 1 MHz)	CPU clock, on-chip oscillator (125 kHz)
DMA	DMAC	2 channels Trigger sources: 25	4 channels Trigger sources: 43

PM24 : Bit in the PM2 register
PM10, PM13 : Bits in the PM1 register
PRG2C0 : Bit in the PRG2C register

Note:

1. Refer to hardware manual for electrical characteristics and more details.

Table 3.2 Differences between functions (2/2) (1)

Item		M16C/62P	M16C/64A
Timer	Timer A, timer B count source	Selectable from f1, f2, f8, f32, and fC32	Selectable from f1TIMAB and f2TIMAB, f8TIMAB, f32TIMAB, f64TIMAB, fOCO-S, and fC32
	Real-time clock	No	Count: second, minute, hour, day of week
	PWM function	No	8 bits x 2
	Remote control signal receive function	No	2 circuits
Serial Interface	UART	Clock synchronous/asynchronous x 3 channels	Clock synchronous/asynchronous x 6 channels
	CEC	No	Yes
	Multi-master I ² C-bus interface	No	1 channel
A/D Converter	Resolution	8-bit/10-bit (selectable)	10-bit only
	Sample and hold	Yes/No (selectable)	Yes
CRC Calculator	Generator polynomial	CRC-CCITT ($X^{16} + X^{12} + X^5 + 1$)	Selectable form CRC-CCITT ($X^{16} + X^{12} + X^5 + 1$) and CRC-16 ($X^{16} + X^{15} + X^2 + 1$)
	CRC snoop	No	Yes
Flash Memory	Address FFFFh function setting	ROM code protect select function	Select options <ul style="list-style-type: none"> • Watchdog timer autostart function (after reset) • Count source protection mode select function (after reset) • ROM code protect function
	Memory map	User ROM Program ROM 080000h to 0FFFFFFh Data flash Block A 00F000h to 00FFFFh	User ROM <ul style="list-style-type: none"> • Program ROM1 080000h to 0FFFFFFh • Program ROM2 010000h to 013FFFh Data flash <ul style="list-style-type: none"> • Block A 00E000h to 00EFFFh • Block B 00F000h to 00FFFFh
	User ROM (512-Kbyte)	64 Kbytes x 7 32 Kbytes x 1 8 Kbytes x 3 4 Kbytes x 2	64 Kbytes x 8 16 Kbytes x 1 (program ROM2)
	Data flash	4 Kbytes x 1 (block A)	4 Kbytes x 2 (block A, block B)
	Program method	In units of 1 word (16-bit)	In units of 2 words (32-bit)
	Erase method	Erase all unlocked blocks, block erase	Block erase
	User boot mode	No	Yes

Note:

1. Refer to hardware manual for electrical characteristics and more details.

3.2 Pin Characteristics

Table 3.3 lists differences between Pin Characteristics.

Table 3.3 Difference between Pin Characteristics

M16C/62P	M16C/64A	Changes from M16C/62P
P9_4 / TB4IN / DA1	P9_4 / TB4IN / DA1 / PWM1	Added: PWM1
P9_3 / TB3IN / DA0	P9_3 / TB3IN / DA0 / PWM0	Added: PWM0
P9_2 / TB2IN / SOUT3	P9_2 / TB2IN / SOUT3 / PMC0	Added: PMC0
P9_1 / TB1IN / SIN3	P9_1 / TB1IN / SIN3 / PMC1	Added: PMC1
P8_5 / $\overline{\text{NMI}}$	P8_5 / $\overline{\text{NMI}}$ / $\overline{\text{SD}}$ / CEC	Added: $\overline{\text{SD}}$ /CEC
P8_1 / TA4IN / $\overline{\text{U}}$	P8_1 / TA4IN / $\overline{\text{U}}$ / $\overline{\text{CTS5}}$ / $\overline{\text{RTS5}}$	Added: $\overline{\text{CTS5}}$ / $\overline{\text{RTS5}}$
P8_0 / TA4OUT / U	P8_0 / TA4OUT / U / RXD5 / SCL5	Added: RXD5/SCL5
P7_7 / TA3IN	P7_7 / TA3IN / CLK5	Added: CLK5
P7_6 / TA3OUT	P7_6 / TA3OUT / TXD5 / SDA5	Added: TXD5/SDA5
P7_1 / TA0IN / TB5IN / RXD2 / SCL2	P7_1 / TA0IN / TB5IN / RXD2 / SCL2 / SCLMM	Added: SCLMM
P7_0 / TA0OUT / TXD2 / SDA2	P7_0 / TA0OUT / TXD2 / SDA2 / SDAMM	Added: SDAMM
P6_0 / $\overline{\text{CTS0}}$ / $\overline{\text{RTS0}}$	P6_0 / $\overline{\text{CTS0}}$ / $\overline{\text{RTS0}}$ / RTCOUT	Added: RTCOUT
P4_7 / $\overline{\text{CS3}}$	P4_7 / $\overline{\text{CS3}}$ / PWM1 / TXD7 / SDA7	Added: PWM1/TXD7/SDA7
P4_6 / $\overline{\text{CS2}}$	P4_6 / $\overline{\text{CS2}}$ / PWM0 / RXD7 / SCL7	Added: PWM0/RXD7/SCL7
P4_5 / $\overline{\text{CS1}}$	P4_5 / $\overline{\text{CS1}}$ / CLK7	Added: CLK7
P4_4 / $\overline{\text{CS0}}$	P4_4 / $\overline{\text{CS0}}$ / $\overline{\text{CTS7}}$ / $\overline{\text{RTS7}}$	Added: $\overline{\text{CTS7}}$ / $\overline{\text{RTS7}}$
P2_5 / AN2_5 / A5 (/ D5 / D4)	P2_5 / $\overline{\text{INT7}}$ / AN2_5 / A5, [A5 / D5], [A5 / D4]	Added: $\overline{\text{INT7}}$
P2_4 / AN2_4 / A4 (/ D4 / D3)	P2_4 / $\overline{\text{INT6}}$ / AN2_4 / A4, [A4 / D4], [A4 / D3]	Added: $\overline{\text{INT6}}$
P1_7 / $\overline{\text{INT5}}$ / D15	P1_7 / $\overline{\text{INT5}}$ / D15 / IDU	Added: IDU
P1_6 / $\overline{\text{INT4}}$ / D14	P1_6 / $\overline{\text{INT4}}$ / D14 / IDW	Added: IDW
P1_5 / $\overline{\text{INT3}}$ / D13	P1_5 / $\overline{\text{INT3}}$ / D13 / IDV	Added: IDV
P1_3 / D11	P1_3 / D11 / TXD6 / SDA6	Added: TXD6 / SDA6
P1_2 / D10	P1_2 / D10 / RXD6 / SCL6	Added: RXD6 / SCL6
P1_1 / D9	P1_1 / D9 / CLK6	Added: CLK6
P1_0 / D8	P1_0 / D8 / $\overline{\text{CTS6}}$ / $\overline{\text{RTS6}}$	Added: $\overline{\text{CTS6}}$ / $\overline{\text{RTS6}}$

4. Detailed Comparison

4.1 Differences between Protections

Table 4.1 lists Differences between Registers Associated with Protect Functions.

Table 4.1 Differences between Registers Associated with Protect Functions

Symbol	Address		Bit	Differences	
	M16C/62P	M16C/64A		M16C/62P	M16C/64A
PRCR	000Ah	000Ah	3	Protect bit 3 Enable write access to registers VCR2, and D4INT	Protect bit 3 Enable write access to registers VCR2, VWCE, VD1LS, VW0C, VW1C, and VW2C
			6	No register bit	Protect bit 6 Enable write access to the PRG2C register

4.2 Differences between Resets

Table 4.2 lists Differences between Resets and Table 4.3 lists Differences between Registers Associated with Resets.

Table 4.2 Differences between Resets

Item	M16C/62P	M16C/64A
Types of resets	Hardware reset Brown-out detection reset Oscillation stop detection reset Watchdog timer reset Software reset	Hardware reset Voltage monitor 0 reset Voltage monitor 1 reset Voltage monitor 2 reset Power-on reset Oscillation stop detect reset Watchdog timer reset Software reset
Cold start, warm start discrimination method	WDC5 bit in the WDC register	CWR bit in the RSTFR register (operates at the same time as voltage monitor 0 reset)

Table 4.3 Differences between Registers Associated with Resets

Symbol	Address		Bit	Differences	
	M16C/62P	M16C/64A		M16C/62P	M16C/64A
RSTFR	—	0018h	—	—	M16C/64A only

4.3 Differences between Voltage Detectors

Table 4.4 lists Differences between Voltage Detectors and Table 4.5 lists Differences between Registers Associated with Voltage Detectors.

Table 4.4 Differences between Voltage Detectors

Item	M16C/62P	M16C/64A
Voltage detection interrupt monitor level	Vdet4	<ul style="list-style-type: none"> • Vdet1 (voltage detector 1) • Vdet2 (voltage detector 2)
Voltage detection reset monitor level	Vdet3	<ul style="list-style-type: none"> • Vdet0 (voltage detector 0) • Vdet1 (voltage detector 1) • Vdet2 (voltage detector 2)

Refer to the hardware manual and electric characteristics on detection voltage.

Table 4.5 Differences between Registers Associated with Voltage Detectors

Symbol	Address		Bit	Differences	
	M16C/62P	M16C/64A		M16C/62P	M16C/64A
VCR2	001Ah	001Ah	5	Reserved bit	Voltage detector 0 enable bit 0: Voltage detector 0 disabled 1: Voltage detector 0 enabled
			6	Reset Level Monitor Bit 0 : Disable reset level detection circuit 1 : Enable reset level detection circuit	Voltage detector 1 enable bit 0: Voltage detector 1 disabled 1: Voltage detector 1 enabled
			7	Low Voltage Monitor Bit 0 : Disable low voltage detection circuit 1 : Enable low voltage detection circuit	Voltage detector 2 enable bit 0: Voltage detector 2 disabled 1: Voltage detector 2 enabled
VWCE	—	0026h	—	—	M16C/64A only
VD1LS	—	0028h	—	—	M16C/64A only
VW0C	—	002Ah	—	—	M16C/64A only
VW1C	—	002Bh	—	—	M16C/64A only
VW2C	—	002Ch	—	—	M16C/64A only
D4INT	001Fh	—	—	M16C/62P only	—

4.4 Differences between Clock Generators

Table 4.6 lists Differences between Clock Generators and Table 4.7 lists Differences between Registers Associated with Clock Generations.

Table 4.6 Differences between Clock Generators

Item	M16C/62P	M16C/64A
Clock output function	Selectable from fC, f8, and f32	Selectable from fC, f8, f32, and f1
CPU clock after reset	Main clock (default setting of the CM21 bit: 0)	125 kHz on-chip oscillator clock (default setting of CM21 bit: 1)
Peripheral clock (fC)	Supply constantly	Provided or not provided can be selected by the PM25 bit
On-chip oscillator frequency	Approx. 1 MHz	Approx. 125 kHz
Calculation formula for PLL clock frequency	$f(XIN) \times n$	$f(XIN)/m \times n$

CM21: Bit in the CM2 register

PM25: Bit in the PM2 register

n: Multiply ratio set by bits PLC02 to PLC00 in the PLC0 register

m: Division ratio set by bits PLC05 to PLC04 in the PLC0 register

Table 4.7 Differences between Registers Associated with Clock Generations

Symbol	Address		Bit	Differences	
	M16C/62P	M16C/64A		M16C/62P	M16C/64A
CM1	0007h	0007h	3	Reserved bits	XIN-XOUT feedback resistor select bit 0 : Internal feedback resistor connected 1 : Internal feedback resistor not connected
			4		125 kHz on-chip oscillator oscillation stop bit 0 : 125 kHz on-chip oscillator on 1 : 125 kHz on-chip oscillator off
PCLKR	025Eh	0012h	—	Different address	
			5	Reserved bit	Clock output function extension bit (valid in single-chip mode) 0: Selected by bits CM01 to CM00 in the CM0 register 1: Output f1
PLC0	001Ch	001Ch	4	Reserved bit Set to 1.	Reference frequency counter set bit 00: No division 01: Divide-by-2 10: Divide-by-4 11: Do not set
			5	Reserved bit	
PM2	001Eh	001Eh	0	Specifying wait when accessing SFR at PLL operation 0 : 2 waits 1 : 1 wait	Reserved bit Set to 1.
			2	WDT count source protect bit 0: CPU clock is used as the watchdog timer count source 1: On-chip oscillator clock is used as the watchdog timer count source	No register bit
			4	Reserved bit	NMI interrupt enable bit 0: NMI interrupt disabled 1: NMI interrupt enabled
			5	No register bit	Peripheral clock fC provide bit 0: Not provided 1: Provided

4.5 Differences between Power Controls

Table 4.8 lists Differences between Power Controls and Table 4.9 lists Differences between Register Associated with Power Controls.

Table 4.8 Differences between Power Controls

Item	M16C/62P	M16C/64A
Slow read mode	No	Yes
Low current consumption read mode	No	Yes

Table 4.9 Differences between Register Associated with Power Controls

Symbol	Address		Bit	Differences	
	M16C/62P	M16C/64A		M16C/62P	M16C/64A
FMR2	—	0222h	—	—	M16C/64A only

4.6 Differences between Processor Modes

Table 4.10 lists Differences between Register Associated with Processor Modes.

Table 4.10 Differences between Register Associated with Processor Modes

Symbol	Address		Bit	Differences	
	M16C/62P	M16C/64A		M16C/62P	M16C/64A
PM1	0005h	0005h	0	$\overline{CS2}$ area switch bit 0: 08000h to 26FFFh (block A disabled) 1: 10000h to 26FFFh (block A enabled)	$\overline{CS2}$ area switch bit 0: $\overline{CS2}$ area (0E000h to 0FFFFh) 1: Data flash (0E000h to 0FFFFh)
PRG2C	—	0010h	—	—	M16C/64A only

4.7 Differences in Programmable I/O Ports

Table 4.11 lists Differences between Programmable I/O Ports and Table 4.12 lists Differences between Registers Associated with Programmable I/O Ports.

Table 4.11 Differences between Programmable I/O Ports

Item	M16C/62P	M16C/64A
NMI / \overline{SD} digital filter	No	Use of digital filter is selectable by the NMIDF register

Table 4.12 Differences between Registers Associated with Programmable I/O Ports

Symbol	Address		Bit	Differences	
	M16C/62P	M16C/64A		M16C/62P	M16C/64A
PD8	03F2h	03F2h	5	No register bit	Port P8_5 direction bit 0 : Input mode (Functions as an input port) 1 : Output mode (Functions as an output port)
PUR0	03FCh	0360h	—	Different address	
PUR1	03FDh	0361h	—	Different address	
PUR2	03FEh	0362h	—	Different address	
PCR	03FFh	0366h	—	Different address	
			3	No register bit	Reserved bit
			4	No register bit	CEC output enable bit
			5	No register bit	$\overline{INT6}$ input enable bit
			6	No register bit	$\overline{INT7}$ input enable bit
7	No register bit	Key input enable bit			
NMIDF	—	0369h	—	—	M16C/64A only

4.8 Differences between Interrupts

Table 4.13 lists Differences between Interrupts and Table 4.14 to Table 4.15 list Differences in Interrupt Vectors, and Table 4.16 lists Differences between Registers Associated with Interrupts.

Table 4.13 Differences between Interrupts

Item	M16C/62P	M16C/64A
NMI enable function	Enable only	Enable or disable is selectable by the PM24 bit in the PM2 register

Table 4.14 Differences between Interrupt Vectors - (1/2)

Software Interrupt Number	Vector Address	M16C/62P	M16C/64A
0	+0 to +3 (0000h to 0003h)	BRK instruction	BRK instruction
1	+4 to +7 (0004h to 0007h)	— (Reserved)	INT instruction interrupt
2	+8 to +11 (0008h to 000Bh)		INT7
3	+12 to +15 (000Ch to 000Fh)		INT6
4	+16 to +19 (0010h to 0013h)	INT3	INT3
5	+20 to +23 (0014h to 0017h)	Timer B5	Timer B5
6	+24 to +27 (0018h to 001Bh)	Timer B4, UART1 start/stop condition detection, bus collision detection	Timer B4, UART1 start/stop condition detection, bus collision detection
7	+28 to +31 (001Ch to 001Fh)	Timer B3, UART0 start/stop condition detection, bus collision detection	Timer B3, UART0 start/stop condition detection, bus collision detection
8	+32 to +35 (0020h to 0023h)	SI/O4, INT5	SI/O4, INT5
9	+36 to +39 (0024h to 0027h)	SI/O3, INT4	SI/O3, INT4
10	+40 to +43 (0028h to 002Bh)	UART2 start/stop condition detection, bus collision detection	UART2 start/stop condition detection, bus collision detection
11	+44 to +47 (002Ch to 002Fh)	DMA0	DMA0
12	+48 to +51 (0030h to 0033h)	DMA1	DMA1
13	+52 to +55 (0034h to 0037h)	Key input interrupt	Key input interrupt
14	+56 to +59 (0038h to 003Bh)	A/D converter	A/D converter
15	+60 to +63 (003Ch to 003Fh)	UART2 transmit, NACK2	UART2 transmit, NACK2
16	+64 to +67 (0040h to 0043h)	UART2 receive, ACK2	UART2 receive, ACK2
17	+68 to +71 (0044h to 0047h)	UART0 transmit, NACK0	UART0 transmit, NACK0
18	+72 to +75 (0048h to 004Bh)	UART0 receive, ACK0	UART0 receive, ACK0
19	+76 to +79 (004Ch to 004Fh)	UART1 transmit, NACK1	UART1 transmit, NACK1
20	+80 to +83 (0050h to 0053h)	UART1 receive, ACK1	UART1 receive, ACK1
21	+84 to +87 (0054h to 0057h)	Timer A0	Timer A0
22	+88 to +91 (0058h to 005Bh)	Timer A1	Timer A1
23	+92 to +95 (005Ch to 005Fh)	Timer A2	Timer A2
24	+96 to +99 (0060h to 0063h)	Timer A3	Timer A3
25	+100 to +103 (0064h to 0067h)	Timer A4	Timer A4

4.9 Differences in Watchdog Timers

Table 4.17 lists Differences between Watchdog Timers and Table 4.18 lists Differences in Registers Associated with Watchdog Timers.

Table 4.17 Differences between Watchdog Timers

Item	M16C/62P	M16C/64A
Count source protect mode enable setting	Set the PM22 bit to 1.	Set the CSPRO bit to 1. ⁽¹⁾
Watchdog timer cycle in count source protection mode	Approx. 32.8 ms (32768 / approx. 1 MHz)	Approx. 32.8 ms (4096 / approx. 125 kHz)
Watchdog timer initialization	Watchdog timer counter is initialized and starts counting by writing to the WDTS register.	Write 00h, and then FFh to the WDTR register
Count start conditions		Count automatically starts after reset by setting the WDTON bit in the OFS1 address to 0. Count starts by writing to the WDTS register.

Note:

1. When the CSPROINI bit in the OFS1 address is 0, the value after reset becomes 1.

Table 4.18 Differences between Registers Associated with Watchdog Timers

Symbol	Address		Bit	Differences

4.14 Differences between A/D Converters

Table 4.31 lists Differences between A/D Converters and Table 4.32 lists Differences in Registers Associated with A/D Converters.

Table 4.31 Differences between A/D Converters

Item	M16C/62P	M16C/64A
Conversion rate per pin	Without sample and hold 8-bit resolution: 49 ϕ AD cycles 10-bit resolution: 59 ϕ AD cycles With sample and hold 8-bit resolution: 28 ϕ AD cycles 10-bit resolution: 33 ϕ AD cycles	Minimum 43 ϕ AD cycles
External op-amp connection mode	Yes	No
Resolution	8-bit/10-bit (selectable)	10-bit
Sample and hold	Yes/No (selectable)	Yes
Open-circuit detection assist function	No	Yes

Table 4.32 Differences in Registers Associated with A/D Converters

Symbol	Address		Bit	Differences	
	M16C/62P	M16C/64A		M16C/62P	M16C/64A
ADCON1	03D7h	03D7h	3	8/10-Bit Mode Select Bit 0: 8-bit mode 1: 10-bit mode	No register bit
			5	Vref Connect Bit 0: Vref not connected 1: Vref connected	A/D standby bit 0: A/D operation stopped (standby) 1: A/D operation enabled
			7-6	External Op-Amp Connection Mode Bit 0 0: ANEX0 and ANEX1 are not used 0 1: ANEX0 input is A/D converted 1 0: ANEX1 input is A/D converted 1 1: External op-amp connection mode	Extended pin select bit 0 0: ANEX0 and ANEX1 are not used 0 1: ANEX0 input is A/D converted 1 0: ANEX1 input is A/D converted 1 1: Do not set
ADCON2	03D4h	03D4h	0	A/D Conversion Method Select Bit 0: Without sample and hold function 1: With sample and hold function	No register bit
AINRST	—	03A2h	—	—	M16C/64A only

4.15 Differences between CRC Calculators

Table 4.33 lists Differences between CRC Calculators and Table 4.34 lists Differences between Registers associated with CRC Calculators.

Table 4.33 Differences between CRC Calculators

Item	M16C/62P	M16C/64A
CRC generator polynomial	CRC-CCITT ($X^{16} + X^{12} + X^5 + 1$)	CRC-CCITT ($X^{16} + X^{12} + X^5 + 1$) or CRC-16 ($X^{16} + X^{15} + X^2 + 1$)
MSB/LSB selection	No	MSB/LSB (selectable)
CRC snoop	No	Yes

Table 4.34 Differences between Registers associated with CRC Calculators

Symbol	Address		Bit	Differences	
	M16C/62P	M16C/64A		M16C/62P	M16C/64A
CRCMR	—	03B6h	—	—	M16C/64A only
CRCSAR	—	03B4h to 03B5h	—	—	M16C/64A only

4.16 Differences between Flash Memories

Table 4.35 lists Differences between Flash Memories and Table 4.36 lists Differences between Software Commands, and 4.37 lists Differences in Registers Associated with Flash Memories.

Table 4.35 Differences between Flash Memories

Item	M16C/62P	M16C/64A
Program method	1-word units (16-bit)	2-word units (32-bit)
Number of program and erase cycle	100 times (all area) or 10,000 times (block A, clock 1)/1,000 times (all other blocks in user ROM area)	1,000 times (program ROM 1, program ROM 2)/10,000 times (data flash)
User boot function	No	Yes
Forced erase function	No	Yes

Table 4.36 Differences between Software Commands

Software Command	M16C/62P				M16C/64A					
	First bus cycle		Second bus cycle		First bus cycle		Second bus cycle		Third bus cycle	
	Address	Data	Address	Data	Address	Data	Address	Data	Address	Data
Program	WA	XX40h	WA	WD	WA	XX41h	WA	WD0	WA	WD1
Erase all unlocked blocks	X	XXA7h	X	XXD0h	—	—	—	—	—	—
Block blank check	—	—	—	—	X	XX25h	BA	XXD0h	—	—

WA: Even write address (but in M16C/64A, set the end of the address to 0, 4, 8, or C (hexadecimal) only.)

WD: 16-bit write data

WD0: 16-bit write data lower word

WD1: 16-bit write data upper word

BA: Highest-order block address (even address)

X: Any even address in user ROM area

XX: Eight high-order bits of command code (ignored)

Table 4.37 Differences in Registers Associated with Flash Memories

Symbol	Address		Bit	Differences	
	M16C/62P	M16C/64A		M16C/62P	M16C/64A
FIDR	01B4h	—	—	M16C/62P only	—
FMR0	01B7h	0220h	—	Different address	
FMR1	01B5h	0221h	1	EW1 mode select bit 0: EW0 mode 1: EW1 mode	Write to FMR6 register enabled bit 0: Disabled 1: Enabled
			7	Reserved bit	Data flash wait bit 0: 1 wait 1: Follow the setting of the PM17 bit
FMR2	—	0222h	—	—	M16C/64A only
FMR6	—	0230h	—	—	M16C/64A only

4.17 Differences between Flash Memory Block Configurations

The flash ROM block configurations differ between the M16C/62P and the M16C/64A. Figure 4.1 shows the Differences between Flash Memory Block Configurations. The differences are marked in yellow.

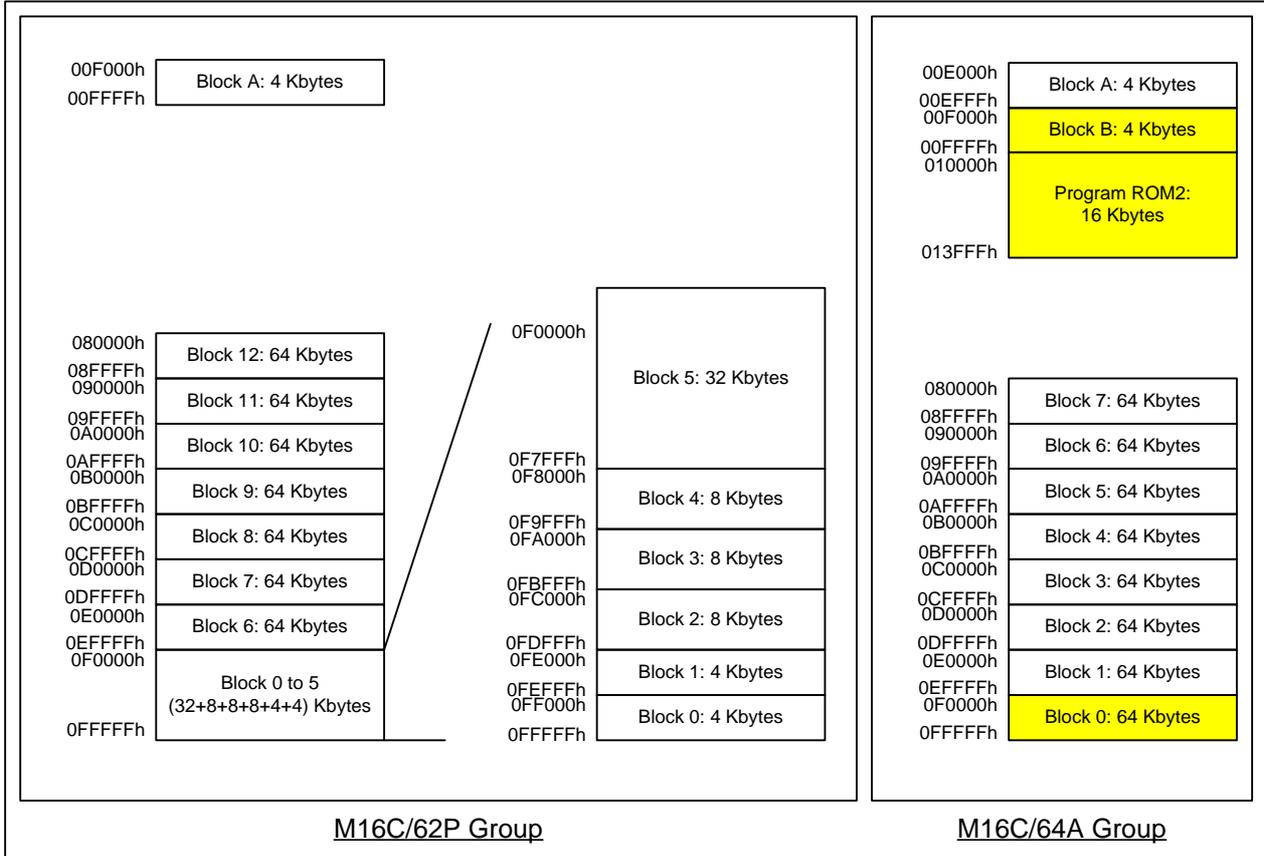

Figure 4.1 Differences between Flash Memory Block Configurations

4.18 New Functions added in the M16C/64A

The following functions have been added in the M16C/64A Group MCU:

- Multi-master I²C-bus interface
- CEC function
- Real-time clock
- PWM function
- Remote control signal receiver

4.19 Differences in Development Tool

Table 4.38 lists Differences in Development Tool.

Table 4.38 Differences in Development Tool

Types of Tool	M16C/62P	M16C/64A
C compiler	M3T-NC30WA	M3T-NC30WA
Real-time OS	M3T-MR30	M3T-MR30
Emulator debugger	PC7501	E100(R0E001000EMU00)
Emulation probe	M3062PT2-EPB	—
MCU unit	—	R0E530650MCU00
Compact emulator	M3062PT3-CPE	—
On-chip debugging emulator	E8 E8a (seven-wire system)	E8a (single-wire system)

Notes regarding these materials

1. This document is provided for reference purposes only so that Renesas customers may select the appropriate Renesas products for their use. Renesas neither makes warranties or representations with respect to the accuracy or completeness of the information contained in this document nor grants any license to any intellectual property rights or any other rights of Renesas or any third party with respect to the information in this document.
2. Renesas shall have no liability for damages or infringement of any intellectual property or other rights arising out of the use of any information in this document, including, but not limited to, product data, diagrams, charts, programs, algorithms, and application circuit examples.
3. You should not use the products or the technology described in this document for the purpose of military applications such as the development of weapons of mass destruction or for the purpose of any other military use. When exporting the products or technology described herein, you should follow the applicable export control laws and regulations, and procedures required by such laws and regulations.
4. All information included in this document such as product data, diagrams, charts, programs, algorithms, and application circuit examples, is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas products listed in this document, please confirm the latest product information with a Renesas sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas such as that disclosed through our website. (<http://www.renesas.com>)
5. Renesas has used reasonable care in compiling the information included in this document, but Renesas assumes no liability whatsoever for any damages incurred as a result of errors or omissions in the information included in this document.
6. When using or otherwise relying on the information in this document, you should evaluate the information in light of the total system before deciding about the applicability of such information to the intended application. Renesas makes no representations, warranties or guaranties regarding the suitability of its products for any particular application and specifically disclaims any liability arising out of the application and use of the information in this document or Renesas products.
7. With the exception of products specified by Renesas as suitable for automobile applications, Renesas products are not designed, manufactured or tested for applications or otherwise in systems the failure or malfunction of which may cause a direct threat to human life or create a risk of human injury or which require especially high quality and reliability such as safety systems, or equipment or systems for transportation and traffic, healthcare, combustion control, aerospace and aeronautics, nuclear power, or undersea communication transmission. If you are considering the use of our products for such purposes, please contact a Renesas sales office beforehand. Renesas shall have no liability for damages arising out of the uses set forth above.
8. Notwithstanding the preceding paragraph, you should not use Renesas products for the purposes listed below:
 - (1) artificial life support devices or systems
 - (2) surgical implantations
 - (3) healthcare intervention (e.g., excision, administration of medication, etc.)
 - (4) any other purposes that pose a direct threat to human life

Renesas shall have no liability for damages arising out of the uses set forth in the above and purchasers who elect to use Renesas products in any of the foregoing applications shall indemnify and hold harmless Renesas Technology Corp., its affiliated companies and their officers, directors, and employees against any and all damages arising out of such applications.
9. You should use the products described herein within the range specified by Renesas, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas shall have no liability for malfunctions or damages arising out of the use of Renesas products beyond such specified ranges.
10. Although Renesas endeavors to improve the quality and reliability of its products, IC products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Please be sure to implement safety measures to guard against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other applicable measures. Among others, since the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
11. In case Renesas products listed in this document are detached from the products to which the Renesas products are attached or affixed, the risk of accident such as swallowing by infants and small children is very high. You should implement safety measures so that Renesas products may not be easily detached from your products. Renesas shall have no liability for damages arising out of such detachment.
12. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written approval from Renesas.
13. Please contact a Renesas sales office if you have any questions regarding the information contained in this document, Renesas semiconductor products, or if you have any other inquiries.
