

RX671 Group

Using FLL to Boost HOCO Frequency Accuracy

Introduction

This application note explains the use of the frequency locked loop (FLL) function to boost the frequency accuracy of the high-speed on-chip oscillator (HOCO) and describes the provided sample code that uses the clock frequency accuracy measurement circuit (CAC) to measure the HOCO frequency with the FLL enabled and confirm that the frequency error is within the acceptable range.

Target Device

RX671 Group

When using this application note with other Renesas MCUs, careful evaluation is recommended after making modifications to comply with the alternate MCU.

1. Specifications

Enabling the FLL boosts the HOCO frequency accuracy by using the subclock to apply correction to the HOCO. The sample program accompanying this application note confirms that the HOCO frequency error is within the acceptable range before using the HOCO with FLL enabled for the main processing. In addition, this application note shows how to use the CAC to measure the HOCO frequency.

2. Operation Confirmation Environment

2.1 Operation Confirmation Conditions

The operation of the sample code accompanying this application note has been confirmed under the conditions listed in Table 2.1.

Table 2.1 Operation Confirmation Conditions

Item	Description
MCU used	R5F5671EHDFB (RX671 Group)
Operating frequencies	- HOCO: 20 MHz - Subclock: 32.768 kHz - Oscillator drive capacity (standard CL) - System clock (ICLK): 20 MHz (HOCO × 1)
Operating voltage	3.3 V
Integrated development environment	Renesas Electronics e ² studio Version: 2021-07
C compiler	Renesas Electronics C/C++ Compiler Package for RX Family V3.03.00 Compile option Default settings of integrated development environment
BSP module version	Version 6.11
CAC module version	Version 1.9.0
iodefine.h version	Version 1.00
Endian order	Little endian
Operating mode	Single-chip mode
Processor mode	Supervisor mode
Sample code version	Version 1.00
Board used	Renesas Starter Kit+ for RX671 (product No.: RTK55671EDC10000BJ)

3. Related Application Note

An application note related to this application note is listed below. Refer to it in conjunction with this document.

RX Family Board Support Package Module Using Firmware Integration Technology (R01AN1685EJ)

4. Software

4.1 Operation Overview

The sample program accompanying this application note uses code output by Smart Configurator.

The BSP `clock_source_select` function is used to make FLL settings. After this, the CAC is used to measure the HOCO frequency and the frequency accuracy is checked. Table 4.1 lists the clocks used by the CAC.

Frequency measurement starts after a reset and is performed four times consecutively. `CAC_BUSY` is stored in the variable `g_cac_status` while measurement is taking place.

The mean of the four measurements is used as the measurement result for confirming whether the frequency error is within the acceptable range. The program described in this application note uses “within $\pm 0.25\%$ of the clock frequency” as the acceptable range for the HOCO frequency. The method used to check whether the frequency error is within the acceptable range is to compare the measurement result to the values set in the CAC upper-limit value setting register (`CAULVR`) and CAC lower-limit value setting register (`CALLVR`).

The clock frequency error is within the acceptable range when `CALLVR` register value $\leq$ measurement result $\leq$ `CAULVR` register value, so such a result is judged to be normal. In this case, `CAC_OK` is stored in the variable `g_cac_status`.

The clock frequency error is outside the acceptable range when measurement result $<$ `CALLVR` register value or measurement result $>$ `CAULVR` register value, so such a result is judged to be abnormal. In this case, `CAC_ERROR` is stored in the variable `g_cac_status`.

Table 4.1 Clocks Used by CAC

Clock	Frequency
Measurement reference clock	0.000032 MHz (subclock (32.768 kHz) $\times$ 1/1,024)
Measurement target clock	0.625 MHz (HOCO (20 MHz) $\times$ 1/32)

4.2 BSP Settings

Table 4.2 and Figure 4.1 show the BSP settings specified in Smart Configurator. Note that the default values are used for settings not listed in Table 4.2.

Table 4.2 Modified Clock Settings

Clock	Frequency	Setting Value
Subclock	Frequency	32.768 kHz
	Oscillator drive capacity	Standard CL
HOCO	Frequency	20 MHz
	Enable FLL function	Enabled
System clock	Frequency	20 MHz
	Clock source	HOCO × 1

Figure 4.1 Clock Settings in Smart Configurator

4.3 CAC Settings

Table 4.3 and Figure 4.2 show the CAC settings specified in Smart Configurator.

Table 4.3 Modified CAC Settings

Main Item	Subitem	Setting Value
Measurement reference setting	Clock select	Sub-clock
	Frequency	1/1,024 (0.000032 MHz)
	Digital filter selection	Disabled
	Valid edge	Rising
Measurement target setting	Clock select	HOCO clock
	Frequency	1/32 (0.625 MHz)
Counter value comparison setting	Maximum positive deviation	0.25%
	Maximum negative deviation	0.25%
Interrupt setting	Enable frequency error interrupt (FERRI)	Unchecked
	Enable measurement end interrupt (MENDI)	Level 15 (highest)
	Enable overflow interrupt (OVFI)	Unchecked

The screenshot shows the Smart Configurator interface for CAC settings. It is organized into four main sections, each with a title bar and a list of settings:

- Measurement reference setting:**
 - Clock select: Sub-clock (dropdown)
 - Frequency: x 1/1024 (dropdown), 0.000032 (input), (MHz) (label)
 - Digital filter selection: Disabled (dropdown)
 - Valid edge: Rising (dropdown)
- Measurement target setting:**
 - Clock select: HOCO clock (dropdown)
 - Frequency: x 1/32 (dropdown), 0.625 (input), (MHz) (label)
- Counter value comparison setting:**
 - Maximum positive deviation: 0.25 (input), (%) (label), (Actual value: 0.250888) (text)
 - Maximum negative deviation: 0.25 (input), (%) (label), (Actual value: 0.250882) (text)
- Interrupt setting:**
 - ☐ Enable frequency error interrupt (FERRI)
 - Priority (Group BL0): Level 15 (highest) (dropdown)
 - ☒ Enable measurement end interrupt (MENDI)
 - Priority (Group BL0): Level 15 (highest) (dropdown)
 - ☐ Enable overflow interrupt (OVFI)
 - Priority (Group BL0): Level 15 (highest) (dropdown)

4.4 File Structure

Table 4.4 lists the file containing the sample code. Note that files generated by the integrated development environment are omitted.

Table 4.4 Sample Code File

File Name	Description	Remarks
main.c	Main processing	

4.5 Option Setting Memory

Table 4.5 lists the status of the option setting memory used by the sample code. Settings should be optimized for the user system as necessary.

Table 4.5 Option Setting Memory Used by Sample Code

Symbol	Address	Setting Value	Description
MDE	FE7F 5D03h to FE7F 5D00h	FFFF FFFFh	Little-endian
OFS0	FE7F 5D07h to FE7F 5D04h	FFFF FFFFh	Voltage monitor 0 reset disabled after a reset HOCO oscillation disabled after a reset
OFS1	FE7F 5D0Bh to FE7F 5D08h	FFFF FFFFh	IWDT stopped after a reset

4.6 Constants

Table 4.6 and Table 4.7 list the constants used in the sample code.

Table 4.6 Constants Used in Sample Code (Modifiable by User)

Constant Name	Setting Value	Description
CHECK_CNT	4	Frequency measurement count*1

Note: 1. Only set a value between 1 and 255.

Table 4.7 Constants Used in Sample Code (Not Modifiable by User)

Constant Name	Setting Value	Description
CAC_ERROR	0x00	Frequency measurement result is abnormal.
CAC_OK	0x01	Frequency measurement result is normal.
CAC_BUSY	0x02	Frequency measurement is in progress.

4.7 Variables

Table 4.8 and Table 4.9 list the global variables used in the sample code.

Table 4.8 Global Variables Used in Sample Code

Type	Variable Name	Description	Used by Function
volatile uint8_t	g_cac_status	Frequency measurement status 0x00: Frequency measurement result is abnormal. 0x01: Frequency measurement result is normal. 0x02: Frequency measurement is in progress.	R_CAC_Start r_Config_CAC_mendi_interrupt

Table 4.9 Static Variables Used in Sample Code

Type	Variable Name	Description	Used by Function
static uint8_t	s_measure_counter	Frequency measurement counter	R_CAC_Start r_Config_CAC_mendi_interrupt
static uint32_t	s_result_buffer	Frequency measurement result storage buffer	R_CAC_Start r_Config_CAC_mendi_interrupt
static uint32_t	s_result_average	Mean frequency measurement result storage buffer	R_CAC_Start r_Config_CAC_mendi_interrupt

4.8 Functions

Table 4.10 lists the functions used in the sample code.

Table 4.10 Functions

Function Name	Description	Contained in File
main	Main processing	main.c
R_CAC_Start	Clock frequency measurement start	Config_CAC_user.c

4.9 Function Specifications

The sample code function specifications are listed below.

main	
Outline	Main processing
Header	None
Declaration	void main (void)
Description	This function starts clock frequency measurement.
Arguments	None
Return value	None
R_CAC_Start	
Outline	Clock frequency measurement start processing
Header	Config_CAC.h
Declaration	void R_CAC_Start (void)
Description	Performs processing to start clock frequency measurement.
Arguments	None
Return value	None
r_Config_CAC_mendi_interrupt	
Outline	CAC measurement end interrupt handler
Header	Config_CAC.h
Declaration	void r_Config_CAC_mendi_interrupt (void)
Description	Judges whether the HOCO's frequency error is within the acceptable range based on the measurement result.
Arguments	None
Return value	None

4.11 Procedure for Using Sample Code in CS+

This application notes support the following development tools.

- e² studio Version: 2021-07 and RX Compiler CC-RX V3.03.00
- CS+ V8.06.00 and RX Compiler CC-RX V3.03.00

Using this application note with CS+

This application note contains a project only for e² studio. When you use this project with CS+, import the project to CS+ by following procedures.

General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

1. Precaution against Electrostatic Discharge (ESD)

A strong electrical field, when exposed to a CMOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop the generation of static electricity as much as possible, and quickly dissipate it when it occurs. Environmental control must be adequate. When it is dry, a humidifier should be used. This is recommended to avoid using insulators that can easily build up static electricity.

Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors must be grounded. The operator must also be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions must be taken for printed circuit boards with mounted semiconductor devices.

2. Processing at power-on

The state of the product is undefined at the time when power is supplied. The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the time when power is supplied. In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the time when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the time when power is supplied until the power reaches the level at which resetting is specified.

3. Input of signal during power-off state

Do not input signals or an I/O pull-up power supply while the device is powered off. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Follow the guideline for input signal during power-off state as described in your product documentation.

4. Handling of unused pins

Handle unused pins in accordance with the directions given under handling of unused pins in the manual. The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of the LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible.

5. Clock signals

After applying a reset, only release the reset line after the operating clock signal becomes stable. When switching the clock signal during program execution, wait until the target clock signal is stabilized. When the clock signal is generated with an external resonator or from an external oscillator during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Additionally, when switching to a clock signal produced with an external resonator or by an external oscillator while program execution is in progress, wait until the target clock signal is stable.

6. Voltage application waveform at input pin

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (Max.) and V_{IH} (Min.) due to noise, for example, the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (Max.) and V_{IH} (Min.).

7. Prohibition of access to reserved addresses

Access to reserved addresses is prohibited. The reserved addresses are provided for possible future expansion of functions. Do not access these addresses as the correct operation of the LSI is not guaranteed.

8. Differences between products

Before changing from one product to another, for example to a product with a different part number, confirm that the change will not lead to problems. The characteristics of a microprocessing unit or microcontroller unit products in the same group but having a different part number might differ in terms of internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
5. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
6. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.

7. No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENASAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENASAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENASAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENASAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENASAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
8. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
12. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
13. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
