

SmartServer IoT & LoRaWAN: Better Together

Integrate LoRa with BMS and SCADA

Enable intelligent automation at the Edge

Extending LoRa solutions into operational management systems or edge applications multiplies its value to end customers; however, this requires complex integration in order to do so. SmartServer IoT is an open, easy to use and freely customizable edge server that solves this problem for you with a rich set of benefits:

- End to end platform with built in drivers and interfaces to industrial controls and automation systems
- Easy to use and freely available CMS, integration tools and APIs to create unlimited applications
- Reference LoRa driver and technical guidelines for a LoRa system implementation
- Open web service optimized APIs to free data access and enable best of breed analytics and cloud solutions

SmartServer IOT & LoRaWAN give you the ability to affect change by making data actionable in buildings, factories and cities. Save costs, conserve resources and reduce your carbon footprint.

Building and Retail

- Energy optimization
- Space analytics
- Security and access controls

Factory and Industrial

- Digital twin
- Equipment monitoring and maintenance
- Process and logistics optimization

Smart Grid and Energy

- Critical asset monitoring and maintenance
- Environmental and hazard response
- Demand response
