650V SuperGaN® GaN FET in TOLT (source tab)

Description

The TP65H030G4PRS 650V, 30mΩ Gallium Nitride (GaN) FET is a normally-off device using Renesas' Gen IV plus platform. It combines a state-of-the-art high voltage GaN HEMT with a low voltage silicon MOSFET to offer superior performance, standard drive, ease of adoption and reliability.

The Gen IV plus SuperGaN® platform uses advanced epi and patented design technologies to simplify manufacturability while improving efficiency over silicon via lower gate charge, output capacitance, crossover loss, and reverse recovery charge.

Benefits

- Superior normally off architecture with D-mode GaN HEMT
- Compatible with standard silicon drivers
- Enhanced noise immunity with a 4V threshold voltage with no negative gate drive required
- Enables high-efficiency, high power density, and reliable power conversion
- Facilitates cost-effective GaN adoption reducing system size, weight, and costs
