## Old Company Name in Catalogs and Other Documents

---

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

## AM TUNER FOR ELECTRONIC TUNING CAR RADIOS

The  $\mu$ PC2533 is an IC developed as an AM tuner for car stereos and car radios.

It employs an up-conversion type double super-heterodyne configuration (IF1 = 10.71 MHz, IF2 = 450 kHz).

The internal configuration consists of the MIX1 block (MIX1, OSC1, Buff1), MIX2 block (MIX2, OSC2, Buff2), IF amplifier, detection circuit, AGC circuit, signal meter circuit, SD (station detector) circuit, and Lo/DX (short range/long range) circuit.

### Features

- Possible to select stations using only one varactor diode with narrow variable capacitance range
- Tracking adjustment unnecessary
- Coil switching between LW (long wave) and MW (middle wave) unnecessary
- Less sensitivity deviation due to tracking error
- High S/N: 60 dB
- Signal meter output with good linearity
- Signal meter output voltage inclination setting possible by external resistor.
- Can be used with IF (intermediate frequency) counter tuning system or high/low tuning system.

Type Number	SD Sensitivity Setting		Signal Meter Voltage Inclination Setting	Remarks
	IF Counter Output	High/Low Output		
$\mu$ PC2533GS-01	Set by pin No. 7	Set by pin No. 9	Depends on SD sensitivity setting	SD sensitivity of IF counter system and high/low system can be set independently.
$\mu$ PC2533GS-02	Set by pin No. 7		Set by pin No. 9	Tilt of the signal meter voltage can be set without regard to SD sensitivity.

- Lo/DX function on-chip
- Since IFT (intermediate frequency transformer) turn ratio is free from limitation for matching of ceramic filter impedance, it is easy to design MIX gain with IFT.

The information in this document is subject to change without notice.

**Ordering Information**

Part Number	Package
μPC2533GS-01	36-pin plastic shrink SOP (300 mil)
μPC2533GS-02	36-pin plastic shrink SOP (300 mil)

**Block Diagram**

Pin Configuration (Top View)

36-pin plastic shrink SOP (300 mil)

- $\mu$ PC2533GS-01
- $\mu$ PC2533GS-02

**Remark**  $\mu$ PC2533GS-02 pin names are in parentheses. Pins not in parentheses are used in both the  $\mu$ PC2533GS-01 and  $\mu$ PC2533GS-02.

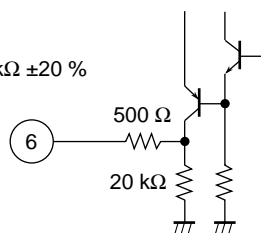

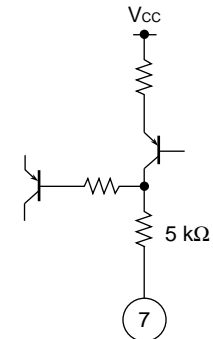

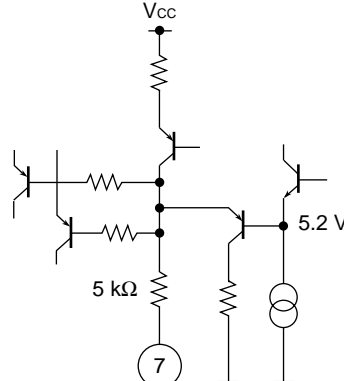

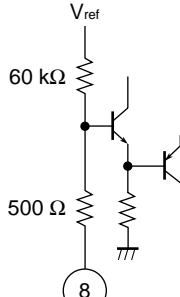

1. Pin Description

Names and symbols in parentheses indicate pin names for μPC2533GS-02. Names and symbols not in parentheses are pin names used in both the μPC2533GS-01 and μPC2533GS-02.

(1/7)

Pin No.	Symbol	Name	Equivalent Circuit
1	OSC1 Buff	OSC1 Buff output	
2	ALC	OSC1 ALC	
3	V <sub>ref1</sub>	Reference voltage	Reference voltage (5.3 V)
4	Lo/DX	Lo/DX control	
5	SEEK	Seek request	

(2/7)

Pin No.	Symbol	Name	Equivalent Circuit
6	SD ACOUT	SD AC output	<p><math>R_o = 20.5 \text{ k}\Omega \pm 20 \%</math></p>

33	MIX1IN	MIX1 input	 <p><math>Z_{IN} = 1.2\text{ k}\Omega \pm 20\%</math></p>
34	RF AGC T.C.	RF AGC smoothing	 <p><math>Z_o = 12\text{ k}\Omega \pm 20\%</math></p>

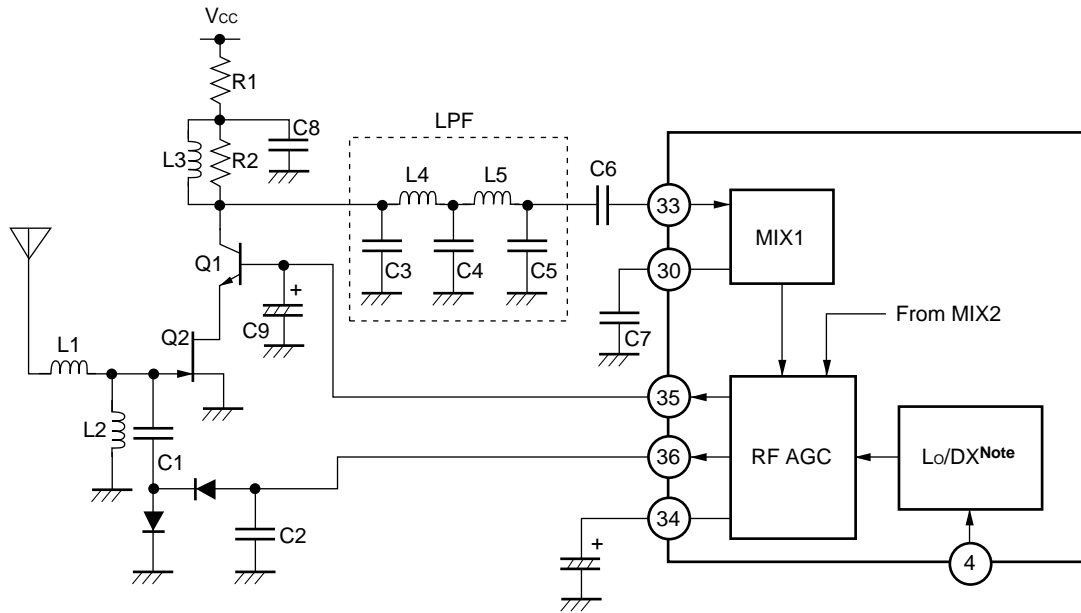

(7/7)

Pin No.	Symbol	Name	Equivalent Circuit
35	RF AGC2	RF AGC output (cascade base)	 <p>The equivalent circuit for pin 35 shows a resistor connected to a reference voltage <math>V_{ref}</math>. This resistor is in series with a node labeled 35. From node 35, the circuit continues through a transistor (represented by a circle with a vertical line and a horizontal line) and then through another resistor connected to ground.</p> <p><math>Z_o = 11\text{ k}\Omega \pm 20\%</math></p>
36	RF AGC1	RF AGC output (PIN diode)	 <p>The equivalent circuit for pin 36 shows a resistor connected to ground. This resistor is in series with a node labeled 36. From node 36, the circuit continues through a transistor, a resistor, another transistor, and finally a resistor connected to ground.</p> <p><math>Z_o = 22\text{ k}\Omega \pm 20\%</math></p>

2. Operation of Each Block

2.1 FR Amplifier Circuit Block

Fig. 2-1 RF Amplifier Circuit

**Note** Lo : 3 V or higher  
 DX : 1 V or lower

In the AM band, the capacitance of a car radio antenna depends on its length, diameter, cable length, etc. Therefore, J-FET is used in the μPC2533 to raise RF input impedance.

Since the μPC2533 raises the first IF (intermediate frequency) to 10.71 MHz, there is no need for a tuning circuit between the RF amplifier circuit and MIX1. Instead, it employs an LPF (about 6 MHz) consisting of L4, L5 and C3 to C5 between the RF amplifier circuit and MIX1 in order to cut image frequency (21.4 MHz or higher). Because this allows a wide-band RF amplifier circuit to be configured without using a tuning circuit, frequency sensitivity deviation can be minimized to a high degree.

The AGC circuit consists of RF AGC1 by the PIN diode connected to the FET gate and RF AGC2 by the cascade transistor Q1. Use a low-noise transistor even with low current for the cascade transistor Q1 (if a high-noise one is used, the S/N ratio deteriorates).

**Remark** Set bias voltage for cascade transistor Q1 to  $V_c > V_b$ .

2.2 MIX1 Block

Fig. 2-2 MIX1 Block

**Note** Output impedance and input impedance of Buff1 are 330 Ω and 15 kΩ, respectively.

MIX1 (Q101 to Q108) is a DBM (double balanced mixer).

MIX1 output is supplied to 10.7 MHz ceramic filter via Buff1 (output impedance: 330 Ω) for impedance matching.

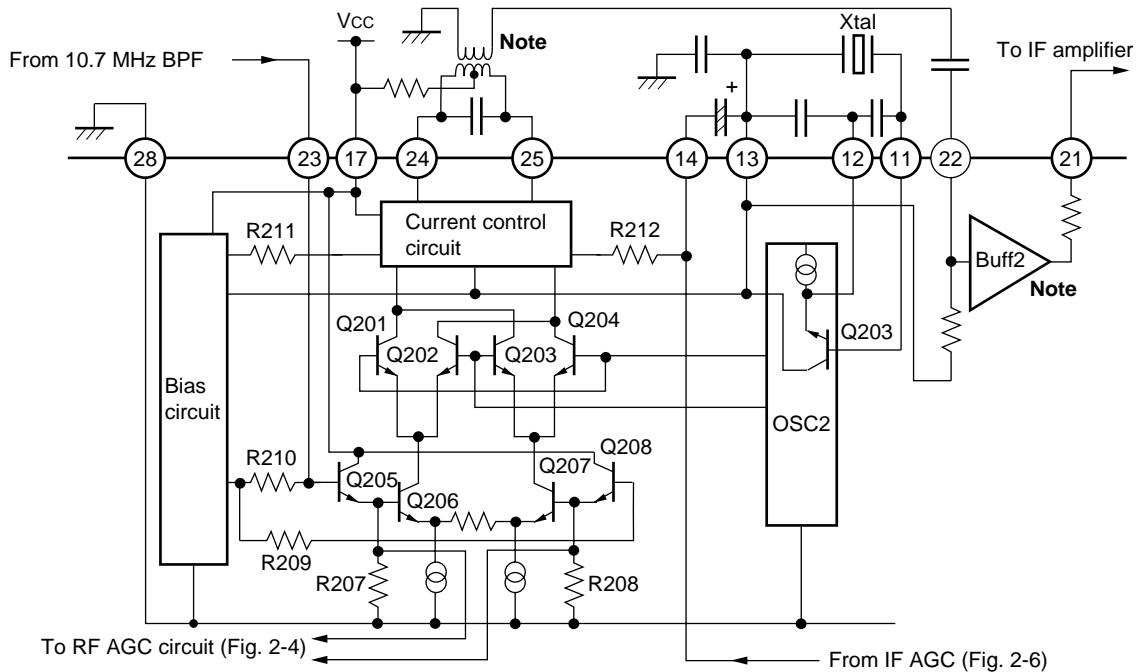

The local oscillation signal is applied to the bases of Q101 to Q104, and the RF signal to the base of Q105. MIX1 (Q101 to 108) multiplies the local oscillation signal by RF signal, and converts to the resonance frequency of IFT T1 for output.

The local oscillation signal is output from pin 1 via Q109 (OSC Buff). It has an amplitude of 110 dBμV and can be directly input to CMOS LSI for use by the PLL synthesizer.

The RF signal applied to the base of Q105 is also input to the detector of the RF AGC circuit.

2.3 MIX2 Block

Fig. 2-3 MIX2 Block

**Note** Output impedance and input impedance of Buff2 are 2 kΩ and 30 kΩ, respectively.

MIX2 (Q201 to Q208) is a DBM with a configuration similar to that of MIX1.

The major difference from the MIX1 is that MIX2 is equipped with a current control circuit for output and is controlled by the AGC.

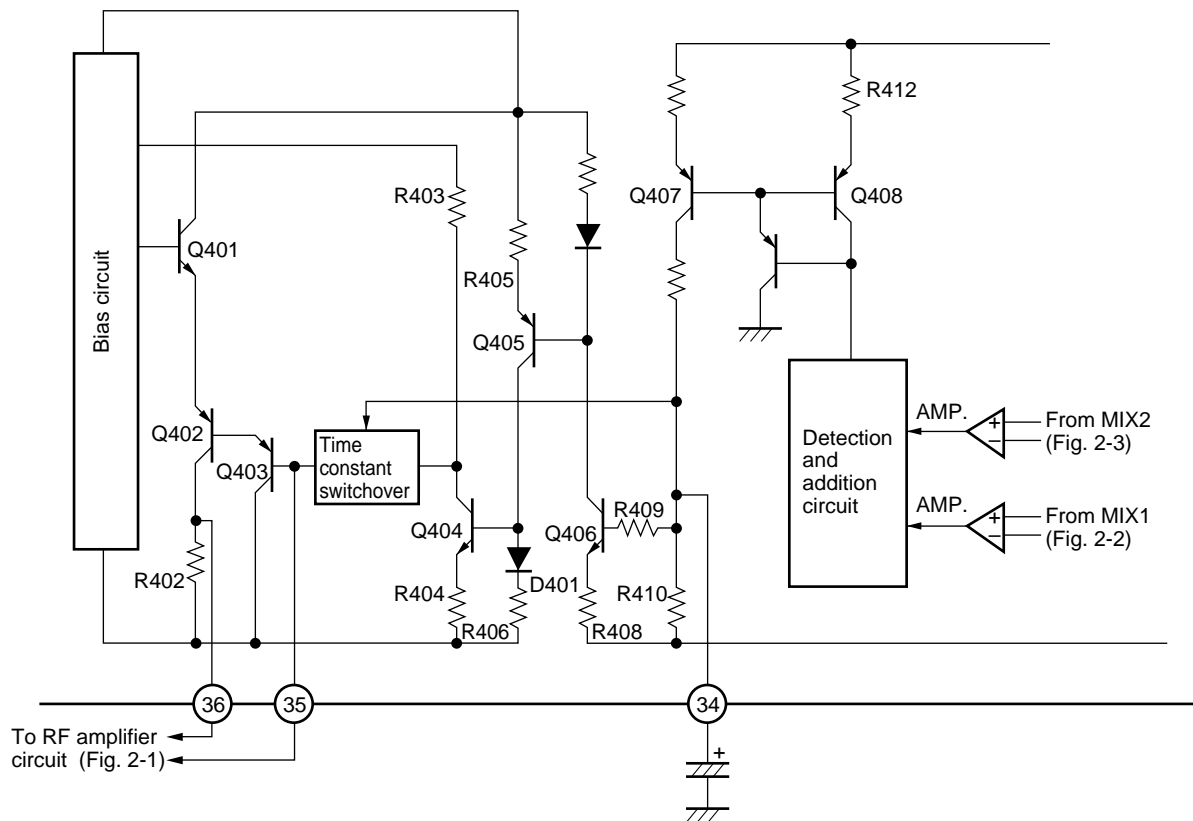

Input impedance of MIX2 is 330 Ω to match the 10.7 MHz ceramic filter. Output impedance of Buff2 is 2 kΩ to match the 450 kHz ceramic filter.

IF signal input from pin 23 is also input to the detector of the RF AGC. The RF AGC is detected by both MIX1 and MIX2 blocks.

The Buff1 and Buff2 ensure impedance matching between MIX1 and MIX2 outputs and each ceramic filter. As a result, IFT design is not restricted by the need to match ceramic filter impedance. For turn ratio, etc., only conversion gain need be taken input account, so it is easy to design.

2.4 RF AGC Block

Fig. 2-4 RF AGC Block

The configuration of the RF AGC is shown in Fig. 2-4. After being detected by the RF AGC detector and added, the input signal from MIX1 and MIX2 is smoothed by external capacitor of pin 34, and its DC voltage controls the RF AGC.

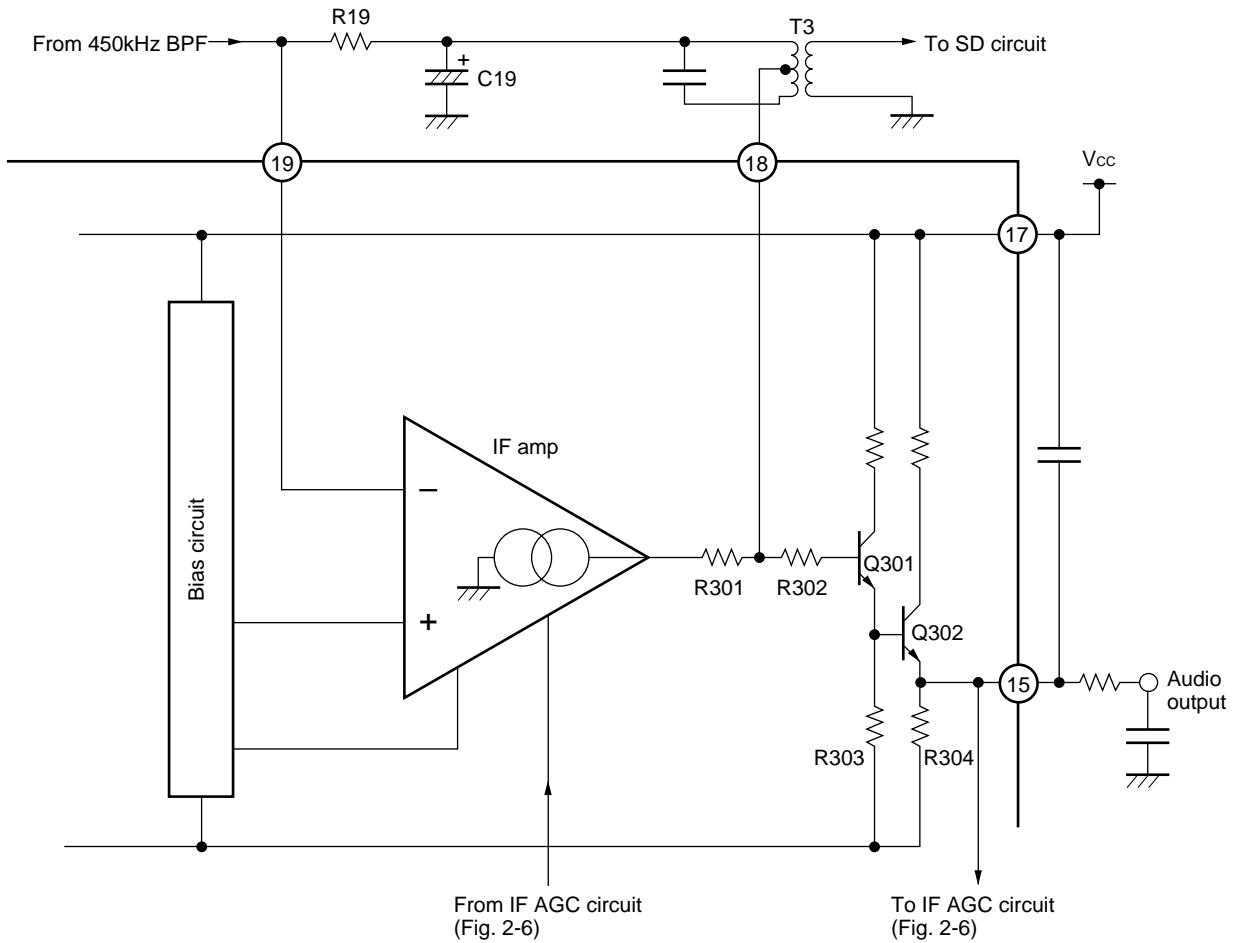

RF AGC output controls the PIN diode from pin 36 and controls base voltage of cascade transistor which determines FET  $V_{DS}$  from pin 35. In addition, by detecting sudden fluctuation of pin 34 voltage and switching over time constants, RF AGC response convergence when the electric field suddenly changes is improved.

Operation start time of the RF AGC can be delayed slightly by connecting a resistor parallel to the external capacitor of pin 34.

2.5 IF Amplifier Block and Detection Block

Fig. 2-5 IF Amplifier and Detection Block

In the IF amplifier block, DC feedback is carried to pin 19 via an external low pass filter (composed of T<sub>3</sub> and C<sub>19</sub>) from pin 18, an output pin. The DC electric potential of pin 18 is designed to be fixed approximately equal to the (+) side input of the IF amplifier. The value of R<sub>19</sub> is the input impedance, so impedance matching to 450 kHz ceramic filter is possible.

The output signal current of the IF amplifier is converted to signal voltage by being resonated by T<sub>3</sub> and input to the detection circuit after frequency selection.

Emitter follower detection by Q<sub>302</sub> is adopted for the detection circuit block.

2.6 IF AGC Block

Fig. 2-6 IF AGC Block (for μPC2533GS-01)

IF AGC block configuration is shown in Fig. 2-6. The signal detected from pin 15 is smoothed by the capacitor of pin 20, and its DC voltage controls the IF AGC.

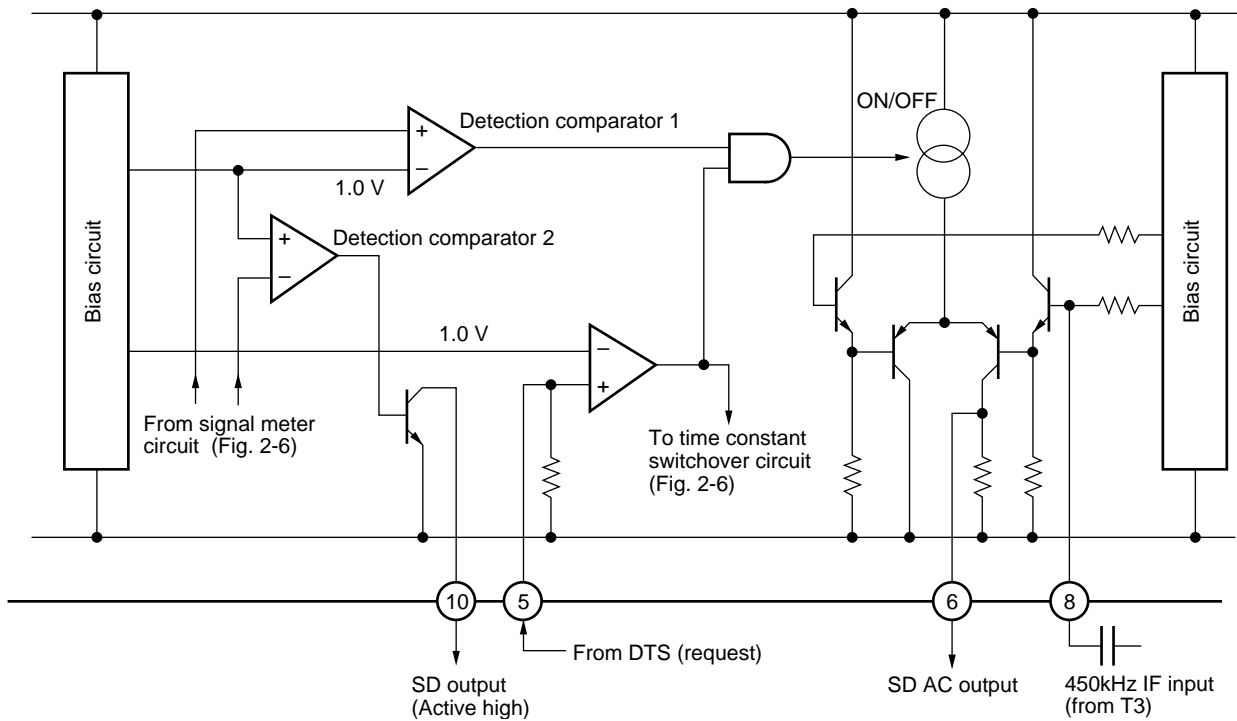

The IF AGC controls the IF amplifier and MIX2. In the operation sequence, it first controls the gain of the IF amplifier, then controls the gain of MIX2.

The signal meter circuit output (current output) is in proportion to the DC voltage smoothed by pin 20, and converted to voltage by the external resistor of pin 7 or 9. Therefore, output voltage value and gain can be set by the value of the external resistor. *Note*

**Note** For relation between the external resistor and the signal meter, refer to **Signal meter output voltage (adjustment by resistor between pin 9 and GND)** in section 4. **Characteristic Curves.**

2.7 Station Detector Circuit Block

Fig. 2-7 Station Detector Circuit Block

The configuration station detector (SD) circuit block is shown in Fig. 2-7.

The SD circuit stops scanning or seeking when a broadcast wave is received when auto scanning or seek tuning. Since the μPC2533 has two outputs (DC high/low signal (open collector) and AC IF signal (f = 450 kHz)), it can be used according to DTS (digital tuning system) type. Input the SD request signal from DTS to pin 5.

The SD sensitivity setting methods of the μPC2533GS-01 and μPC2533GS-02 differ.

With the μPC2533GS-01, SD sensitivities in the IF counter output system and in the high/low output system are set by external resistor between pin 7 and GND and by external resistor between pin 9 and GND.

With the μPC2533GS-02, SD sensitivities in both the IF counter output system and high/low output system are set by external resistor between pin 7 and GND (refer to Fig. 2-6).

Table 2-1 SD Sensitivity Setting Examples

Value of Resistor between Pin 9 or Pin 7 and GND	SD Sensitivity (AC, DC)
51 kΩ	27 dBμV
24 kΩ	29 dBμV
10 kΩ	33 dBμV

The reference voltage of the  $\mu$ PC2533-01 and  $\mu$ PC2533-02 detection comparator has been internally fixed at 1.0 V.

Under the influence of R501 (5 k $\Omega$ ) and R502 (5 k $\Omega$ ) of the signal meter circuit (Fig. 2-6), signal meter output voltage and detection comparator input voltage do not perfectly coincide. For SD sensitivity setting, refer to the following formula.

Detection comparator input voltage =

$$\text{Signal meter output voltage} \times \left( 1 + \frac{R501}{\text{Value of resistor between pin 7 and GND}} \right)$$

**Remark** Because DC output is open-collector type (Active high), connect pull-up resistor to pin 10 to use.

**3. Electrical Characteristics**

**Absolute Maximum Ratings (T<sub>A</sub> = 25 °C)**

Item	Symbol	Rating	Unit
Power supply voltage	V <sub>CC</sub>	10	V
Power dissipation	P <sub>D</sub>	600	mW
Operating ambient temperature	T <sub>A</sub>	-40 to +85	°C
Storage temperature	T <sub>stg</sub>	-55 to +125	°C

**Caution** Exposure to Absolute Maximum Ratings for extended periods may affect device reliability; exceeding the ratings could cause permanent damage. The parameters apply independently. The device should be operated within the limits specified under DC and AC Characteristics.

**Recommended Operating Conditions (T<sub>A</sub> = 25 °C)**

Item	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Power supply voltage	V <sub>CC</sub>		7.5	8.0	8.5	V
Input voltage	V <sub>IN</sub>				132	dBμV

**Electrical Characteristics**

(Unless specified, T<sub>A</sub> = 25 °C, V<sub>CC</sub> = 8 V, f<sub>IN</sub> = 999 kHz, f<sub>MOD</sub> = 400 Hz, AM<sub>MOD</sub> = 30 %, R<sub>SD1</sub> (resistor between pin 7 and GND) = R<sub>SD2</sub> (resistor between pin 9 and GND) = 24 kΩ, 15-pin measurement load = 100 kΩ)

Item	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Circuit current	I <sub>CC</sub>	No input (excluding FET)	–	45	55	mA
Detection output	V <sub>O</sub>	V <sub>IN</sub> = 74 dBμV	150	180	210	mV <sub>rms</sub>
Signal-to-noise ratio	S/N	V <sub>IN</sub> = 74 dBμV	53	60	–	dB
Total harmonic distortion 1	THD1	V <sub>IN</sub> = 74 dBμV	–	0.3	1.0	%
Total harmonic distortion 2	THD2	V <sub>IN</sub> = 74 dBμV, AM <sub>MOD</sub> = 80 %	–	0.7	1.0	%
Total harmonic distortion 3	THD3	V <sub>IN</sub> = 130 dBμV, AM <sub>MOD</sub> = 80 %	–	0.7	1.5	%
Signal meter output voltage 1	V <sub>S1</sub>	No input	–	0	0.2	V
Signal meter output voltage 2	V <sub>S2</sub>	V <sub>IN</sub> = 30 dBμV	0.5	1.5	2.5	V
Signal meter output voltage 3 <sup>Note</sup>	V <sub>S3</sub>	V <sub>IN</sub> = 74 dBμV	4.8 (4.3)	5.5 (5.0)	6.7 (5.5)	V
Local buffer output 1	V <sub>OSC</sub>	1-pin load: 20 pF or less	106	110	114	dBμV

**Note** Specifications in parentheses for signal meter output voltage 3 are for μPC2533GS-02. Values of other items are the same for μPC2533GS-01 and μPC2533GS-02.

## Reference Characteristics

Item	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Maximum sensitivity	MS	$V_{IN}$ making $V_O$ $-10$ dB, where $V_O = 0$ dB at $V_{IN} = 74$ dB $\mu$ V	–	13	–	dB $\mu$ V
S/D sensitivity (AC)	SS(AC)	$V_{IN}$ making SEEK, SD AC OUT level 101 dB $\mu$ V or more	–	29	–	dB $\mu$ V
S/D sensitivity (DC)	SS(DC)	$V_{IN}$ making SEEK, SD AC OUT voltage 4.8 V or more	–	29	–	dB $\mu$ V
S/D output time	T-SD	Delay time from the time when changing SEEK $V_{IN} = 0 \rightarrow 40$ dB $\mu$ V to the time when pin 10 voltage becomes 4.8 V or more	0	5	25	ms
$V_O$ stabilization time	T- $V_O$	$V_{IN} = 60 \rightarrow 100$ dB $\mu$ V, $V_O = \pm 3$ dB	60	160	260	ms
Tweet	TW	$V_{IN} = 74$ dB $\mu$ V, 2IF	–	60	–	dB
2nd local buffer negative impedance	$Z_{osc2}$	Maximum value of a series resistor with which the crystal can oscillate	400	–	–	$\Omega$
Usable sensitivity	US	$V_{IN}$ making S/N = 20 dB	–	25	–	dB $\mu$ V

Process	Conditions	Symbol
Infrared ray reflow	Peak temperature: 235 °C or below (Package surface temperature), Reflow time: 30 seconds or less (at 210 °C or higher), Maximum number of reflow processes: 2 times.	IR35-00-2
VPS	Peak temperature: 215 °C or below (Package surface temperature), Reflow time: 40 seconds or less (at 200 °C or higher), Maximum number of reflow processes: 2 times.	VP15-00-2
Wave soldering	Solder temperature: 260 °C or below, Flow time: 10 seconds or less, Maximum number of flow processes: 1 time, Pre-heating temperature: 120 °C or below (Package surface temperature).	WS60-00-1
Partial heating method	Pin temperature: 300 °C or below, Heat time: 3 seconds or less (Per each side of the device).	—

**Caution** Apply only one kind of soldering condition to a device, except for “partial heating method”, or the device will be damaged by heat stress.

The application circuits and their parameters are for reference only and are not intended for use in actual design-ins.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
