

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

BIPOLAR ANALOG INTEGRATED CIRCUIT

μ PC2753GR

IF DOWN-CONVERTER IC FOR 3 V GPS RECEIVER

The μ PC2753GR is a monolithic IC designed as IF down-converter for GPS receivers. This IF down-converter IC features high gain and the GC (gain control) function, and operates on 3 volts typ. Therefore, this IC is suitable for enhancing the performance and reducing the power consumption of user's application sets.

This IC is packaged in a 20-pin shrink SOP that enables high-density surface mounting.

The μ PC27 \times \times series is manufactured using NEC original silicon bipolar process technology called "NESAT™ III" ($f_T = 20$ GHz). This process technology includes direct silicon nitride film and gold electrode structure. Semiconductor chips produced with this technology have excellent moisture resistivity, anticorrosion, current characteristics, and high-frequency performance. As a result, this IC features excellent reliability and electrical characteristics.

FEATURES

- Low power operation: power supply $V_{CC} = 3.0$ V typ.
- Low power consumption: $I_{CCTOTAL} = 6.5$ mA typ.
- High gain of 79 dB in total: 38 dB typ. in down-converter block ($V_{GC} \leq 12$ V), and 41 dB typ. in 2nd IF amplifier block
- GC function: GC dynamic range (D_{GC}) = 19 dB typ.
- Available in 20-pin shrink SOP : enabling high-density surface mount

ORDERING INFORMATION

Part Number	Package	Packing Style
μ PC2753GR-E1	20-pin plastic Shrink SOP (225 mil)	Embossed tape 12-mm wide. No. 1 pin is in pull-out direction. 2500 pieces/reel
μ PC2753GR-E2	20-pin plastic Shrink SOP (225 mil)	embossed tape 12-mm wide. No. 1 pin is in roll-in direction. 2500 pieces/reel

Remark To order evaluation samples, please contact local NEC sales representative, mentioning " μ PC2753GR."

Caution electro-static sensitive device

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.
Not all devices/types available in every country. Please check with local NEC representative for availability and additional information.

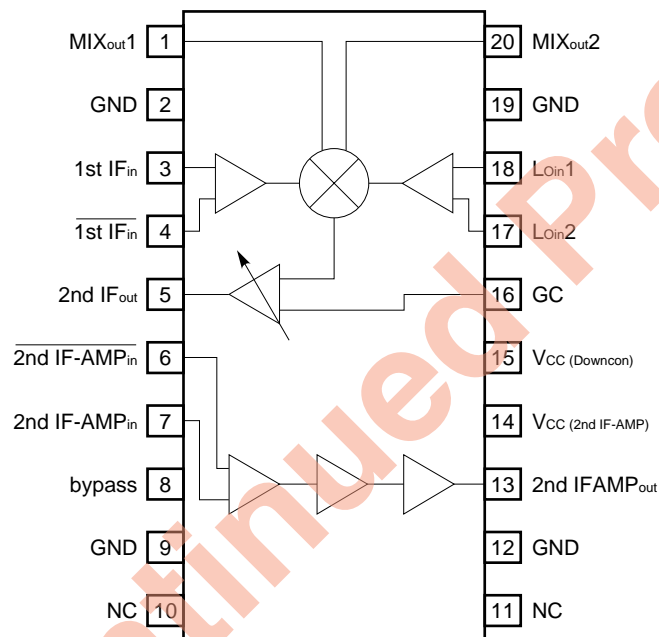

PRODUCT LINE-UP (T_A =+ 25 °C, V_{CC} = 3.0 V)

Type	Part Number	I _{CC} (mA)	Gain (dB)	SSB NF (dB)	f _{in} (GHz)
RF Down-converter	μPC2756T	6	14	12	0.1 - 2.0
IF Down-converter	μPC2753GR	6.5	60 to 79 ^{Note}	12	DC - 0.4

Remark Typical values of major parameters. For test conditions, refer to Electrical Characteristics Tables.

Note V_{GC} = 0 to 2.4 V

PIN CONFIGURATION AND BLOCK DIAGRAM (Top View)

PIN FUNCTION

Pin No.	Symbol	Pin Voltage (V)	Description	Equivalent Circuit
3	1st IF _{in}	2.5	No. 3 pin is the input pin of the 1st IF amplifier. No. 4 pin should be connected to GND via a bypass capacitor.	
4	1st IF _{in}	2.5		
5	2nd IF _{out}	1.1	No. 5 pin is the output pin of the 2nd IF. The output signal comes from the mixer unit via the GC amplifier. This output pin features low impedance because of its emitter-follower output port.	
6	2ndIF-AMP _{in}	2.1	No. 6 and 7 pins are the input pins of the 2nd IF amplifier. These two inputs are internally connected to each base of the pair transistors of the differential amplifier. No.6 pin should be connected to GND via a bypass capacitor.	
7	2ndIF-AMP _{in}			
8	bypass	2.1	No. 8 pin is connected to the feedback loop of the 2nd IF amplifier. This pin should be connected to GND via a bypass capacitor to stabilize the DC bias.	
13	2ndIF-AMP _{out}	1.4	No. 13 pin is the output pin of the 2nd IF amplifier. This output pin features low impedance because of its emitter-follower output port.	

PIN FUNCTION

Pin No.	Symbol	Pin Voltage (V)	Description	Equivalent Circuit
16	GC	0 to 2.4 (Supply voltage)	No. 16 pin is the gain control pin for the GC amplifier. The gain of the GC amplifier is controlled by the applied voltage of this pin. This GC amplifier functions as a reverse GC.	
17	Lo2	2.5	No. 17 and 18 pins are the local input pins of the mixer. The Lo2 pin should be connected to GND via a bypass capacitor.	
18	Lo1	2.5		
15	Vcc (Downcon)	–	No. 15 pin is the Vcc supply pin for the IF down-converter block. This pin is independent of the Vcc pin for the IF amplifier. Apply 3 V to the No. 15 pin.	–
14	Vcc (2nd IF-AMP)	–	No. 14 pin is the Vcc supply pin for the 2nd IF amplifier. This pin is independent of the Vcc pin for the IF down-converter unit. Apply 3 V to the No. 16 pin.	–
2 9 12 19	GND	–	This pin is the ground pin for the entire chip. Therefore the ground of the IF down-converter and 2nd IF amplifier blocks are not separated. The ground pattern to be connected to this pin should be formed as wide as possible to minimize its impedance.	–
10 11	NC	–	No. 10 and 11 pins are not connected to the internal circuits. Connecting these pins to GND is recommended, though these pins may be left unconnected.	–
1	MIX _{out1}	–	No. 1 and 20 pins are the output pins of the mixer block. These pins are used to monitor the signal output from the 2nd IF amplifier and to be input to the GC amplifier. When this IC is actually used, these pins should be left opened.	–
20	MIX _{out2}	–		

ELECTRICAL SPECIFICATIONS

Absolute Maximum Ratings

Parameter	Symbol	Conditions	Rating	Unit
Supply Voltage	V _{CC}	T _A = +25 °C	4.0	V
Gain control Voltage	V _{GC}	T _A = +25 °C	4.0	V
Power Dissipation	P _D	When mounted on double-sided copper clad epoxy glass board of 50 x 50 x 1.6 mm, T _a = +85 °C	34	mW
Operating Ambient Temperature	T _{opt}		-40 to +85	°C
Storage Temperature	T _{stg}		-55 to +150	°C

Recommended Operating Conditions

Parameter	Symbol	MIN.	TYP.	MAX.	Unit
Supply Voltage	V _{CC}	2.7	3.0	3.3	V
Operating Ambient Temperature	T _{opt}	-40	+25	+85	°C
Lo Input Level	P _{LoIn}	-20	-	0	dBm

Electrical Characteristics (Unless otherwise specified, T_A = +25 °C, V_{CC} = 3.0 V, Z_s = Z_o = 50 Ω)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Circuit Current	I _{CC TOTAL}	No signal, V _{GC} = GND	4.7	6.9	8.5	mA
(1) IF Down-converter Block						
1st IF Input Frequency	f _{1st IFIn}	Within -3 dB from CG at f _{1st IFIn} = 50 MHz f _{1st IFOut} = 4 MHz, V _{GC} = GND	DC		400	MHz
2nd IF Output Frequency	f _{2nd IFOut}	Within -3 dB from CG at f _{1st IFIn} = 200 MHz f _{1st IFIn} = 200 MHz, V _{GC} = GND	DC		20	MHz
Conversion Gain	C.G	f _{1st IFIn} = 200 MHz, f _{2nd IFOut} = 4 MHz V _{GC} = GND	35	38	42	dB
Noise Figure	SSB NF	f _{1st IFIn} = 200 MHz, f _{2nd IFOut} = 20 MHz V _{GC} = GND	-	12	15	dB
* Input VSWR	VSWR1	f _{1stIF} ≤ 400 MHz		1.5 : 1		
* Lo Leak to 2nd IF output pin	LO 2nd IFout	f _{LO} = 1 to 400 MHz		-62		dBm
* Lo Leak to 1st IF input pin	LO 1st IFIn	f _{LO} = 1 to 500 MHz		-25		dBm
Gain control Voltage	V _{GC}	Voltage at CG = max.			1.2	V
Gain control Dynamic Range	D _{GC}	f _{1st IFIn} = 200 MHz, f _{2nd IFOut} = 4 MHz V _{GC} = 1.2 V to 2.4 V	15	19		dB
(2) 2nd IF Amplifier Block						
Input Frequency	f _{AMPIn}	Within -3 dB from the gain at f = 4 MHz	DC		20	MHz
Output Voltage	V _{AMPout}	f = 4 MHz, Z _o = 1 MΩ/27 pF	350	450	550	mV _{P-P}
Gain	S ₂₁	f = 4 MHz	38	41	45	dB

SYSTEM APPLICATION EXAMPLES: GPS Receiver Schematic

GPS RECEIVER CHIP SET

Caution This block diagram schematically represents the chip set product line-up only, and does not imply a detailed application circuit.

For details on the related devices, refer to the latest data sheet of each device.

PACKAGE DIMENSIONS

★ 20 PIN PLASTIC SSOP (225 mil) (UNIT: mm)

NOTE Each lead centerline is located within 0.10 mm of its true position (T.P.) at maximum material condition.

ATTENTION ON USING THIS IC

- (1) Observe precautions for handling because of electrostatic sensitive devices.
- (2) The ground pattern should be designed as wide as possible to minimize its ground impedance. Otherwise, undesired oscillation may occur.
- (3) The track length of the ground pins should be as short as possible.
- (4) A bypass capacitor should be inserted between the Vcc pin and the Vcc line.

RECOMMENDED SOLDERING CONDITIONS

The following conditions must be met when soldering this product.
 Please consult with our sales offices in case other soldering process is used, or in case soldering is done under different conditions.

μPC2753GR

Soldering Process	Soldering Conditions	Symbols
Infrared Ray Reflow	Peak temperature of package surface : 235 °C, Reflow time : 30 seconds or less (210 °C or higher), Number of reflow processes : 2, Exposure limit : none ^{Note}	IR35-00-2
VPS	Peak temperature of package surface : 215 °C, Reflow time : 40 seconds or less (200 °C or higher), Number of reflow processes : 2, Exposure limit : none ^{Note}	VP15-00-2
Wave Soldering	Solder temperature : 260 °C or lower, Flow time : 10 seconds or less, Number of reflow processes : 1, Exposure limit : none ^{Note}	WS60-00-1
Partial Heating Method	Pin temperature : 300 °C or lower, Time : 10 seconds or less for each pin, Exposure limit : none ^{Note}	

Note Exposure limit before soldering after dry-pack package is opened.
 Storage conditions : 25 °C and relative humidity of 65 % or less.

Caution Do not apply more than one soldering method at any one time, except for the partial heating method.

NESAT (NEC Silicon Advanced Technology) is a trademark of NEC Corporation.

- **The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.**
 - No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.
 - NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.
 - Descriptions of circuits, software, and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software, and information in the design of the customer's equipment shall be done under the full responsibility of the customer. NEC Corporation assumes no responsibility for any losses incurred by the customer or third parties arising from the use of these circuits, software, and information.
 - While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.
 - NEC devices are classified into the following three quality grades:
"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.
 - Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
 - Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
 - Specific: Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.
- The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.
