

To our customers,

---

## Old Company Name in Catalogs and Other Documents

---

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1<sup>st</sup>, 2010  
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

# MOS INTEGRATED CIRCUIT

# $\mu$ PD17P709

## 4-BIT SINGLE-CHIP MICROCONTROLLER WITH BUILT-IN HARDWARE DEDICATED TO DIGITAL TUNING SYSTEMS

★ The  $\mu$ PD17P709 is produced by replacing the built-in masked ROM of the  $\mu$ PD17704<sup>Note</sup>,  $\mu$ PD17705<sup>Note</sup>,  $\mu$ PD17707,  $\mu$ PD17708, and  $\mu$ PD17709 with a one-time PROM.

The  $\mu$ PD17P709 allows programs to be written once, so that the  $\mu$ PD17P709 is suitable for preproduction in  $\mu$ PD17704,  $\mu$ PD17705,  $\mu$ PD17707,  $\mu$ PD17708, or  $\mu$ PD17709 system development or low-volume production.

**When reading this document, also refer to the publications on the  $\mu$ PD17704,  $\mu$ PD17705,  $\mu$ PD17707,  $\mu$ PD17708, or  $\mu$ PD17709.**

**Note** Under development

The electrical characteristics (including power supply currents) and PLL analog characteristics of the  $\mu$ PD17P709 differ from those of the  $\mu$ PD17704,  $\mu$ PD17705,  $\mu$ PD17707,  $\mu$ PD17708, and  $\mu$ PD17709. In high-volume application set production, carefully check those differences.

### FEATURES

- Compatible with the  $\mu$ PD17704,  $\mu$ PD17705,  $\mu$ PD17707,  $\mu$ PD17708, and  $\mu$ PD17709
- Built-in one-time PROM : 32K bytes (16384  $\times$  16 bits)
- Supply voltage :  $V_{DD} = 5\text{ V} \pm 10\%$

### ORDERING INFORMATION

Part number	Package
$\mu$ PD17P709GC-3B9	80-pin plastic QFP (14 $\times$ 14 mm, 0.65-mm pitch)

The information in this document is subject to change without notice.

★ FUNCTION OVERVIEW

(1/2)

Product		μPD17704Note	μPD17705Note	μPD17707	μPD17708	μPD17709	μPD17P709
Item							
Program memory (ROM)		8192 × 16 bits (masked ROM)	12288 × 16 bits (masked ROM)		16384 × 16 bits (masked ROM)		16384 × 16 bits (one-time PROM)
General-purpose data memory (RAM)		672 × 4 bits		1120 × 4 bits		1776 × 4 bits	
Instruction execution time		1.78 μs (with 4.5-MHz crystal)					
General-purpose ports		• I/O ports : 46 • Input ports : 12 • Output ports : 4					
Stack level		• Address stack : 15 levels • Interrupt stack : 4 levels • DBF stack : 4 levels (operated by software)					
Interrupt		• External : 6 (CE rising edge and INT0 to INT4) • Internal : 6 (timers 0 to 3, serial interfaces 0 and 1)					
Timers		5 channels • Basic timer (clock: 10, 20, 50, 100 Hz) : 1 channel • 8-bit timer with gate counter (clock: 1 k, 2 k, 10 k, 100 kHz) : 1 channel • 8-bit timer (clock: 1 k, 2 k, 10 k, 100 kHz) : 2 channels • 8-bit timer, also used for PWM (clock: 440 Hz, 4.4 kHz) : 1 channel					
A/D converter		8 bits × 6 channels (Hardware or software mode can be selected.)					
D/A converter (PWM)		3 channels (8-bit or 9-bit resolution, selected by software.) Output frequency : 4.4 kHz, 440 Hz (8-bit PWM) 2.2 kHz, 220 Hz (9-bit PWM)					
Serial interface		2 systems (3 channels) • 3-wire serial I/O : 2 channels • 2-wire serial I/O/I <sup>2</sup> C bus : 1 channel					
PLL	Frequency division system	• Direct frequency division system (VCOL pin (MF mode) : 0.5 to 3 MHz) • Pulse swallow system (VCOL pin (HF mode) : 10 to 40 MHz) (VCOH pin (VHF mode) : 60 to 130 MHz)					
	Reference frequency	Can be set to one of 13 frequencies (1, 1.25, 2.5, 3, 5, 6.25, 9, 10, 12.5, 18, 20, 25, or 50 kHz).					
	Charge pump	2 error output pins (EO0 and EO1)					
	Phase comparator	Unlock detection is enabled by software.					
Intermediate frequency counter		• Intermediate frequency measurement P1C0/FMIFC pin : 10 to 11 MHz in FMIF mode 0.4 to 0.5 MHz in AMIF mode P1C1/AMIFC pin : 0.4 to 0.5 MHz in AMIF mode • External gate width measurement P2A1/FCG1 and P2A0/FCG0 pins					

**Note** Under development

(2/2)

Item \ Product	μPD17704Note	μPD17705Note	μPD17707	μPD17708	μPD17709	μPD17P709
BEEP output	2 Output frequency : 1 kHz, 3 kHz, 4 kHz, 6.7 kHz (BEEP0 pin) 67 Hz, 200 Hz, 3 kHz, 4 kHz (BEEP1 pin)					
Reset	<ul style="list-style-type: none"> <li>• Power-on reset (when the power is turned on)</li> <li>• Reset using the <math>\overline{\text{RESET}}</math> pin</li> <li>• Watchdog timer reset Can be set only once at power-on: 65,536 instructions, 131,072 instructions, or non-use can be selected.</li> <li>• Stack pointer overflow/underflow reset Can be set only once at power-on: the interrupt stack or address stack can be selected.</li> <li>• CE reset (CE pin: low → high) A CE reset delay timing can be set.</li> <li>• Power-failure detection function</li> </ul>					
Standby	<ul style="list-style-type: none"> <li>• Clock stop mode (STOP)</li> <li>• Halt mode (HALT)</li> </ul>					
Supply voltage	<ul style="list-style-type: none"> <li>• PLL operation : <math>V_{DD} = 4.5</math> to <math>5.5</math> V</li> <li>• CPU operation : <math>V_{DD} = 3.5</math> to <math>5.5</math> V</li> </ul>					
Package	80-pin plastic QFP (14 × 14 mm, 0.65-mm pitch)					

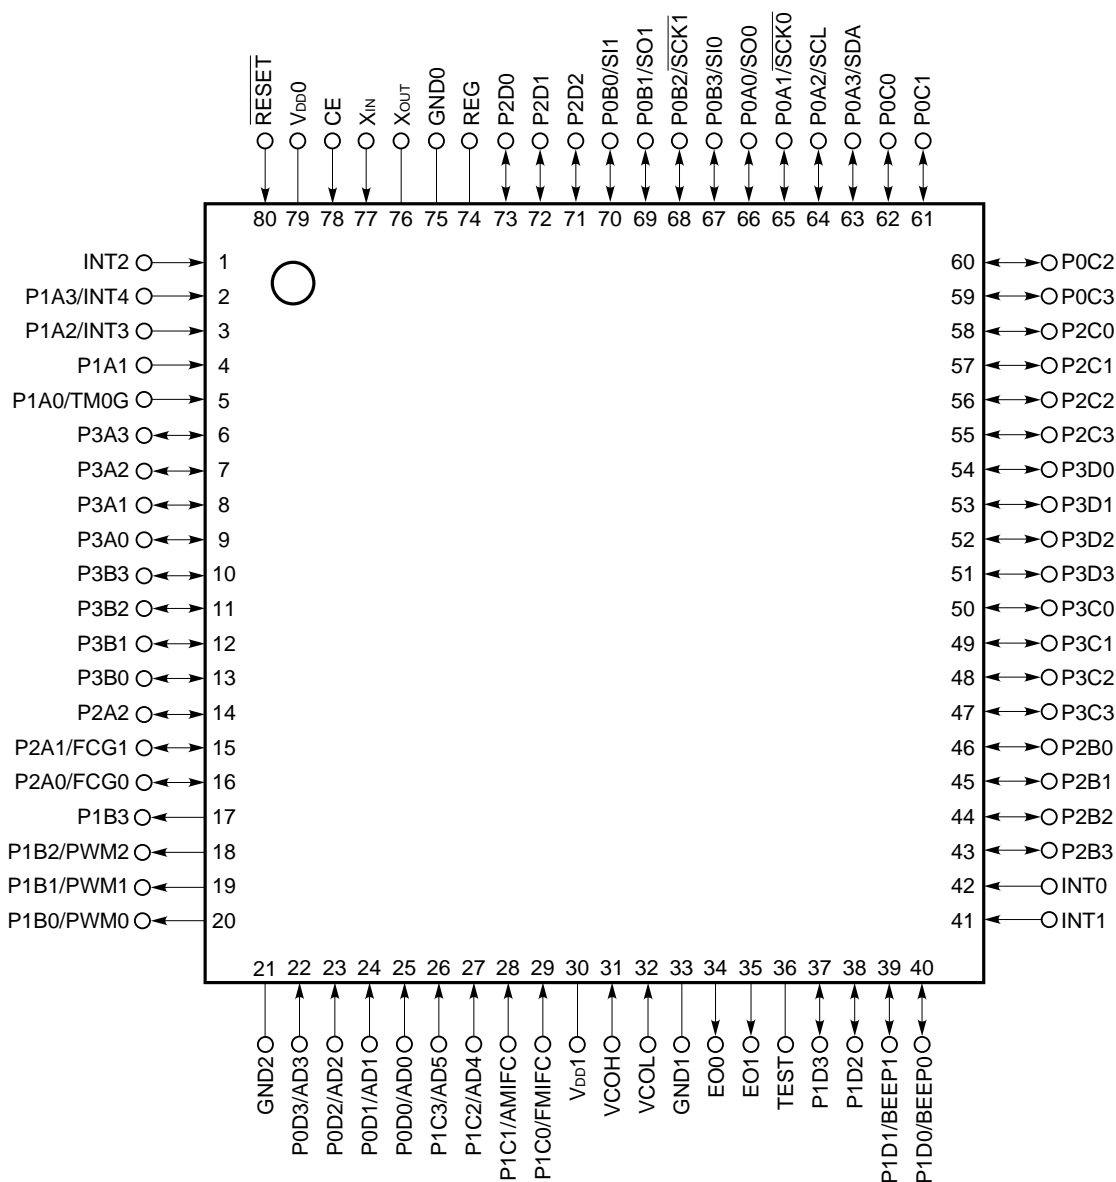

**Note** Under development

# PIN CONFIGURATION (TOP VIEW)

80-pin plastic QFP (14 × 14 mm, 0.65-mm pitch)

μPD17P709GC-3B9

## (1) Normal operation mode

(2) PROM programming mode

**Note** Connect to the same potential as V<sub>DD</sub>.

**Caution** The parentheses above indicate the handling of the pins not used in PROM programming mode.

**L** : Connect each pin to GND through a resistor (470 ohms).

**H** : Connect each pin to V<sub>DD</sub> through a resistor (470 ohms).

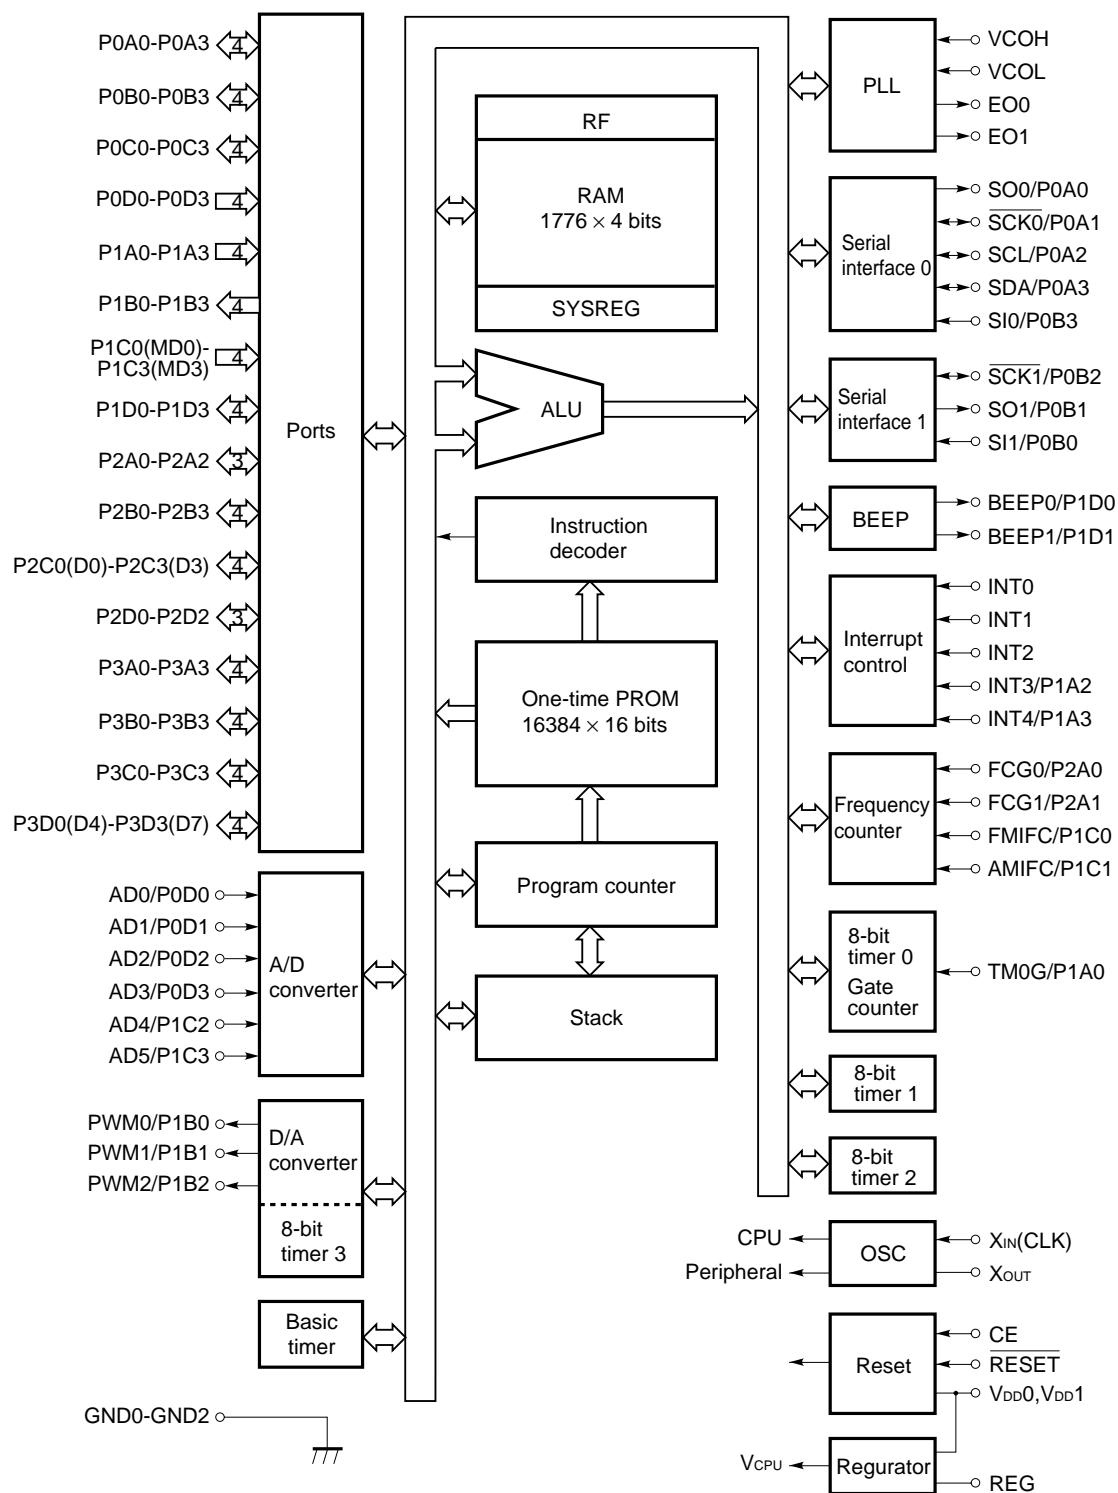

**OPEN** : Leave each pin open.

## PIN NAMES

AD0-AD5	: A/D converter inputs	P2B0-P2B3	: Port 2B
AMIFC	: AM frequency counter input	P2C0-P2C3	: Port 2C
BEEP0, BEEP1	: Beep outputs	P2D0-P2D2	: Port 2D
CE	: Chip enable	P3A0-P3A3	: Port 3A
CLK	: Address update clock input	P3B0-P3B3	: Port 3B
D0-D7	: Data I/O	P3C0-P3C3	: Port 3C
EO0, EO1	: Error outputs	P3D0-P3D3	: Port 3D
FCG0, FCG1	: Frequency counter gate inputs	REG	: CPU regulator
FMIFC	: FM frequency counter input	<u>RESET</u>	: Reset input
GND0-GND2	: Ground 0 to 2	<u>SCK0</u> , <u>SCK1</u>	: 3-wire serial clock I/O
INT0-INT4	: External interrupt inputs	SCL	: 2-wire serial clock I/O
MD0-MD3	: Operating mode selection	SDA	: 2-wire serial data I/O
PWM0-PWM2	: D/A converter outputs	SI0, SI1	: 3-wire serial data input
P0A0-P0A3	: Port 0A	SO0, SO1	: 3-wire serial data output
P0B0-P0B3	: Port 0B	TEST	: Test input
P0C0-P0C3	: Port 0C	TM0G	: Timer 0 gate input
P0D0-P0D3	: Port 0D	VCOH	: Local oscillation high input
P1A0-P1A3	: Port 1A	VCOL	: Local oscillation low input
P1B0-P1B3	: Port 1B	VDD0, VDD1	: Power supply
P1C0-P1C3	: Port 1C	VPP	: Program voltage application
P1D0-P1D3	: Port 1D	XIN, XOUT	: Main clock oscillation
P2A0-P2A2	: Port 2A		

# BLOCK DIAGRAM

**Remark** Pins enclosed in parentheses are used in PROM programming mode.

Pin No.	Symbol	Function	Output format
74	REG	CPU regulator. Use 0.1-μF capacitor to connect it to GND.	—
76 77	X <sub>OUT</sub> X <sub>IN</sub>	A crystal is connected to these pins.	—
78	CE	Input for device operation selection, CE reset, and interrupt signals <ul style="list-style-type: none"> <li>• Device operation selection When CE is high, the PLL frequency synthesizer can be operated. When CE is low, the PLL frequency synthesizer is automatically disabled by the device.</li> <li>• CE reset Setting CE from low to high resets the device upon the detection of a rising edge of the internal basic timer setting pulse. A reset timing delay can also be specified.</li> <li>• Interrupt A vectored interrupt occurs upon the detection of a falling edge of the input signal.</li> </ul>	—
80	RESET	Reset input	—

## 1.2 PROM PROGRAMMING MODE

Pin No.	Symbol	Function	Output format
26 to 29	MD3 to MD0	Input for operating mode selection for program memory write, read, or verification	—
21 33 75	GND2 GND1 GND0	Ground	—
36	V <sub>PP</sub>	Pin to which program voltage is applied during program memory write, read, or verification. +12.5 V is applied.	—
30 79	V <sub>DD1</sub> V <sub>DD0</sub>	Power supply pins. +6 V is applied during program memory write, read, or verification.	—
51 to 58	D7 to D0	8-bit data I/O for program memory write, read, or verification	CMOS push-pull
77	CLK	Clock input for address updating during program memory write, read, or verification	—

**Remark** The pins other than those listed above are not used in PROM programming mode. For the handling of the unused pins, see **PIN CONFIGURATION, (2) PROM programming mode**.

★ 1.3 EQUIVALENT CIRCUIT OF PINS

(1) P0A (P0A1/ $\overline{\text{SCK0}}$ , P0A0/SO0)	}	(I/O)
P0B (P0B3/SI0, P0B2/ $\overline{\text{SCK1}}$ , P0B1/SO1, P0B0/SI1)		
P0C (P0C3, P0C2, P0C1, P0C0)		
P1D (P1D3, P1D2, P1D1/BEEP1, P1D0/BEEP0)		
P2A (P2A2, P2A1/FCG1, P2A0/FCG0)		
P2B (P2B3, P2B2, P2B1, P2B0)		
P2C (P2C3, P2C2, P2C1, P2C0)		
P2D (P2D2, P2D1, P2D0)		
P3A (P3A3, P3A2, P3A1, P3A0)		
P3B (P3B3, P3B2, P3B1, P3B0)		
P3C (P3C3, P3B2, P3C1, P3C0)		
P3D (P3D3, P3D2, P3D1, P3D0)		

**Note** In this circuit, a current drained by noise does not increase even if the circuit is in the floating state, because of the internal signal being output when the clock stop instruction is executed.

(2) P0A (P0A3/SDA, P0A2/SCL) (I/O)

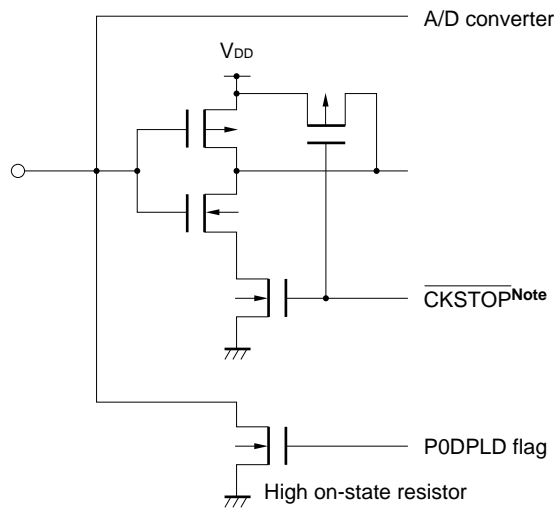

**Note** In this circuit, a current drained by noise does not increase even if the circuit is in the floating state, because of the internal signal being output when the clock stop instruction is executed.

(3) P1B (P1B3, P1B2/PWM2, P1B1/PWM1, P1B0/PWM0) (Output)

(4) P0D (P0D3/AD3, P0D2/AD2, P0D1/AD1, P0D0/AD0) (Input)

**Note** In this circuit, a current drained by noise does not increase even if the circuit is in the floating state, because of the internal signal being output when the clock stop instruction is executed.

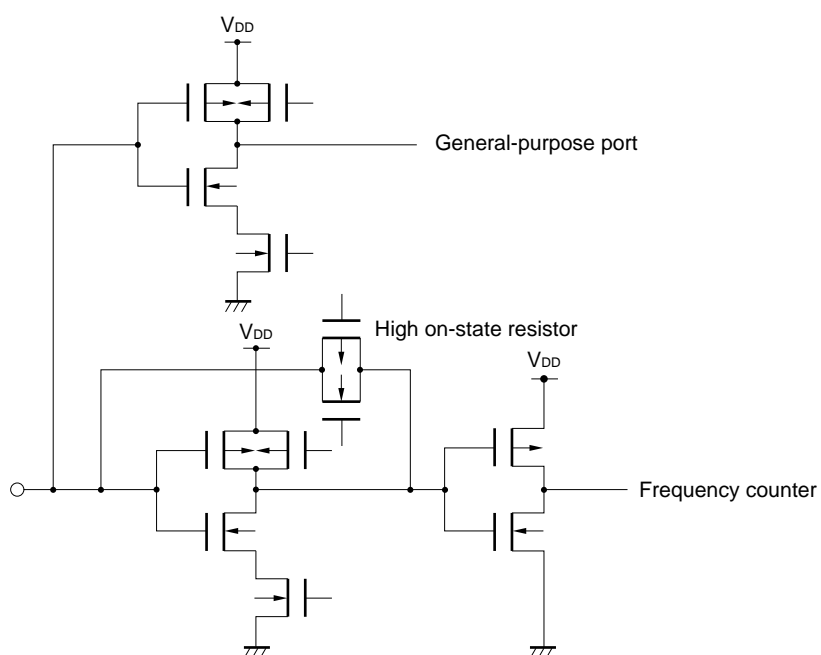

(5) P1A (P1A1) (Input)

(6) P1C (P1C3/AD5, P1C2/AD4) (Input)

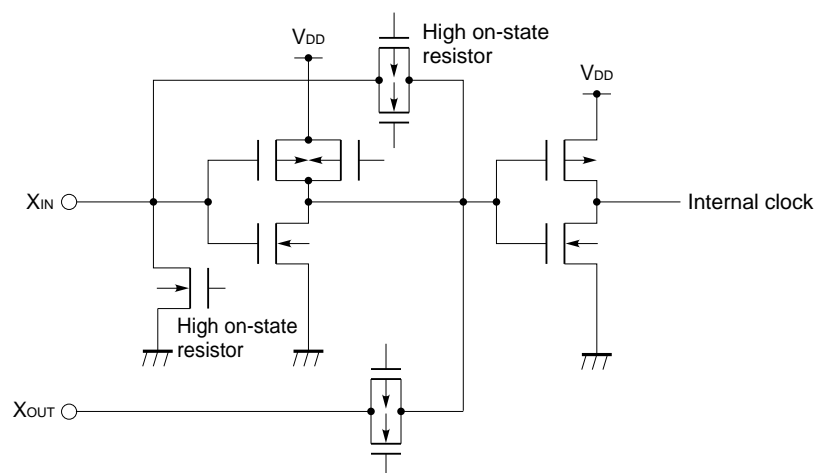

(7) P1C (P1C1/AMIFC, P1C0/FMIFC) (Input)

- (8)  $\overline{\text{CE}}$   
 $\overline{\text{RESET}}$   
 INT0, INT1, INT2  
 P1A (P1A3/INT4, P1A2/INT3, P1A0/TM0G) } (Schmitt-triggered input)

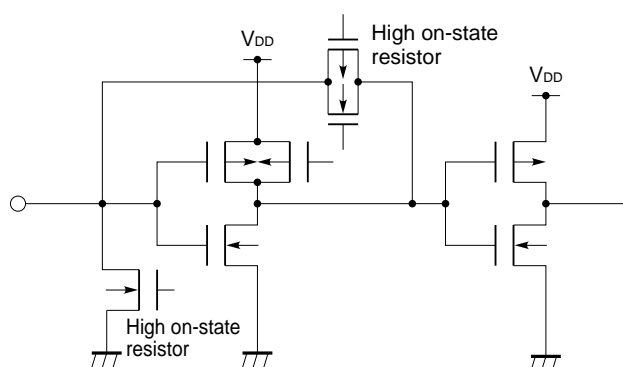

- (9)  $X_{\text{OUT}}$  (Output),  $X_{\text{IN}}$  (Input)

- (10) EO1, EO0 (Output)

**(11) VCOH, VCOL (Input)**

#### 1.4 HANDLING UNUSED PINS

The unused pins should be handled as indicated in Table 1-1.

**Table 1-1 Handling Unused Pins**

(1/2)

Pin		I/O format	Recommended handling
★	P0D3/AD3-P0D0/AD0	Input	Connect each pin to GND through a resistor. <b>Note 1</b>
	P1C3/AD5 P1C2/AD4 P1C1/AMIFC <b>Note 2</b> P1C0/FMIFC <b>Note 2</b>		Specify as a port and connect each pin to V <sub>DD</sub> or GND through a resistor. <b>Note 1</b>
	P1A3/INT4 P1A2/INT3 P1A1 P1A0/TM0G		Connect each pin to GND through a resistor. <b>Note 1</b>
	P1B3 P1B2/PWM2-P1B0/PWM0	N-ch open-drain output	Specify low output, in the software, and leave open.
	P0A3/SDA P0A2/SCL P0A1/SCK0 P0A0/SO0 P0B3/SIO P0B2/SCK1 P0B1/SO1 P0B0/SI1	I/O <b>Note 3</b>	Specify as a general-purpose input port, in the software, and connect each pin to V <sub>DD</sub> or GND through a resistor. <b>Note 1</b>
	P0C3-P0C0		
	P1D3 P1D2 P1D1/BEEP1 P1D0/BEEP0 P2A2 P2A1/FCG1 P2A0/FCG0		
	P2B3-P2B0		
	P2C3-P2C0		
	P2D2-P2D0		

**Notes 1.** When making an external connection to V<sub>DD</sub> with a pull-up resistor, or to GND with a pull-down resistor, note the following: If the resistance of the pull-up or pull-down resistor is too high, the pin approaches the high impedance state, thus increasing the through current drawn by the port. In general, pull-up and pull-down resistors should have a resistance of between 20 and 50 kilohms, depending on the application circuit.

**2.** Do not specify AMIFC or FMIFC. If AMIFC or FMIFC is specified, current drain increases.

**3.** I/O ports become general-purpose input ports upon power-on reset, reset by the  $\overline{\text{RESET}}$  pin, watchdog timer reset, or stack overflow/underflow reset.

(2/2)

Pin		I/O format	Recommended handling
Port pins	P3A3-P3A0	I/O <b>Note 2</b>	Specify as a general-purpose input port, in the software, and connect each pin to V <sub>DD</sub> or GND through a resistor. <b>Note 1</b>
	P3B3-P3B0		
	P3C3-P3C0		
	P3D3-P3D0		
Other than port pins	CE	Input	Connect to V <sub>DD</sub> through a resistor. <b>Note 1</b>
	EO1 EO0	Output	Leave each pin open.
	INT0-INT2	Input	Connect each pin to GND through a resistor. <b>Note 1</b>
	RESET	Input	Connect to V <sub>DD</sub> through a resistor. <b>Note 1</b>
	TEST	—	Connect directly to GND.
	VCOH VCOL	Input	Disable PLL, in the program, and leave each pin open.

**Notes 1.** When making an external connection to V<sub>DD</sub> with a pull-up resistor, or to GND with a pull-down resistor, note the following: If the resistance of the pull-up or pull-down resistor is too high, the pin approaches the high impedance state, thus increasing the through current drawn by the port. In general, pull-up and pull-down resistors should have a resistance of between 20 and 50 kilohms, depending on the application circuit.

**2.** I/O ports become general-purpose input ports upon power-on reset, reset by the RESET pin, watchdog timer reset, or stack overflow/underflow reset.

★ **1.5 NOTES ON USE OF THE CE, INT0-INT4, AND  $\overline{\text{RESET}}$  PINS (ONLY IN NORMAL OPERATION MODE)**

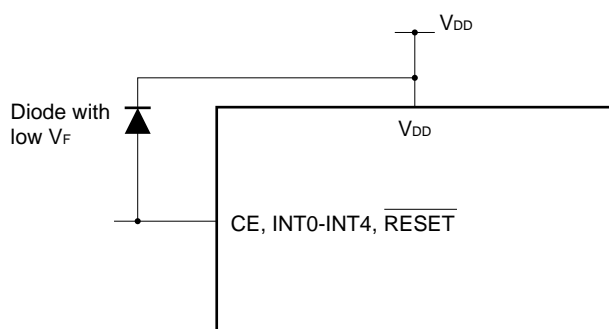

The CE, INT0-INT4, and  $\overline{\text{RESET}}$  pins can be used as the test mode selection pin for testing the internal operation of the  $\mu$ PD17P709 (IC test), besides the usage shown in **Section 1.1**.

Applying a voltage exceeding  $V_{DD}$  to the CE, INT0-INT4, or  $\overline{\text{RESET}}$  pin causes the  $\mu$ PD17P709 to enter test mode. When noise exceeding  $V_{DD}$  comes in during normal operation, the device may not operate normally.

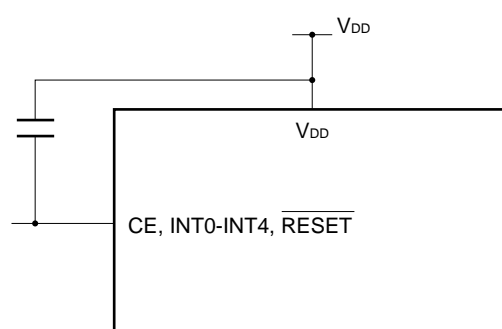

For example, if the wiring from the CE, INT0-INT4, or  $\overline{\text{RESET}}$  pin is too long, noise may be induced on the wiring, causing this mode switching.

When installing the wiring, lay the wiring in such a way that noise is suppressed as much as possible. If noise yet arises, use an external part to suppress it as shown below.

- Connect a diode with low  $V_F$  between the pin and  $V_{DD}$ .

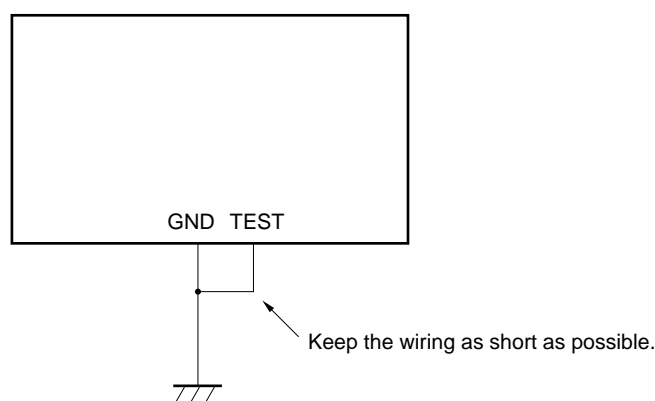

- Connect a capacitor between the pin and  $V_{DD}$ .

★ **1.6 NOTES ON USE OF THE TEST PIN (ONLY IN NORMAL OPERATION MODE)**

Applying  $V_{DD}$  to the TEST pin causes the  $\mu$ PD17P709 to enter test mode or program memory write/verify mode. Keep the wiring as short as possible and connect the TEST pin directly to the GND pin.

When the wiring between the TEST pin and GND pin is too long or external noise enters the TEST pin, a voltage difference may occur between the TEST pin and GND pin. When this happens, your program may malfunction.

## 2. ONE-TIME PROM (PROGRAM MEMORY) WRITE, READ, AND VERIFICATION

The program memory built into the μPD17P709 is a one-time PROM (16384 × 16 bits) that is electrically writable. In normal operation, this PROM is accessed on a 16-bit word basis. During program memory write, read, and verification, the PROM is accessed on an 8-bit word basis. The higher 8 bits of a 16-bit word are located at an even-numbered address, and the lower 8 bits are located at an odd-numbered address.

For PROM write, read, and verification, PROM programming mode must be specified, and the pins listed in Table 2-1 are used.

In this case, address input is not used. Instead, clock input on the CLK pin is used to update addresses.

**Table 2-1 Pins Used for Program Memory Write, Read, and Verification**

Pin	Function
V <sub>PP</sub>	Used to apply the program voltage (+12.5 V)
CLK	Used to apply an address update clock
MD0-MD3	Used to select an operating mode
D0-D7	Used to input/output 8-bit data
V <sub>DD0</sub> , V <sub>DD1</sub>	Used to apply the power supply voltage (+6 V)

For writing to the built-in PROM, a specified PROM programmer and dedicated programmer adapter are to be used. The following PROM programmers and programmer adapters are usable:

PROM programmer	Programmer adapter
PG-1500 + PA-17KDZ (adapter for PG-1500)	PA-17P709GC

Third-party PROM programmers are also available: For example, AF-9703, AF-9704, AF-9705, and AF-9706 (manufactured by Ando Electric Co., Ltd.)

Fig. 2-1 PA17P709GC and PA-17KDZ

## 2.1 OPERATING MODES FOR PROGRAM MEMORY WRITE, READ, AND VERIFICATION

The μPD17P709 is placed in program memory write, read, and verify mode when +6 V is applied to the V<sub>DD</sub> pin, and +12.5 V to the V<sub>PP</sub> pin.

In this mode, one of the operating modes indicated in Table 2-2 is set, depending on the setting of the MD0 to MD3 pins.

The input pins that are not used for program memory write, read, and verification are connected to GND through a pull-down resistor (470 ohms). (See **PIN CONFIGURATION, (2) PROM programming mode.**)

Table 2-2 Operating Modes for Program Memory Write, Read, and Verication

Operating mode specification						Operating mode
V <sub>PP</sub>	V <sub>DD</sub>	MD0	MD1	MD2	MD3	
+12.5V	+6V	H	L	H	L	Program memory address zero-clear mode
		L	H	H	H	Write mode
		L	L	H	H	Read/verify mode
		H	X	H	H	Program inhibit mode

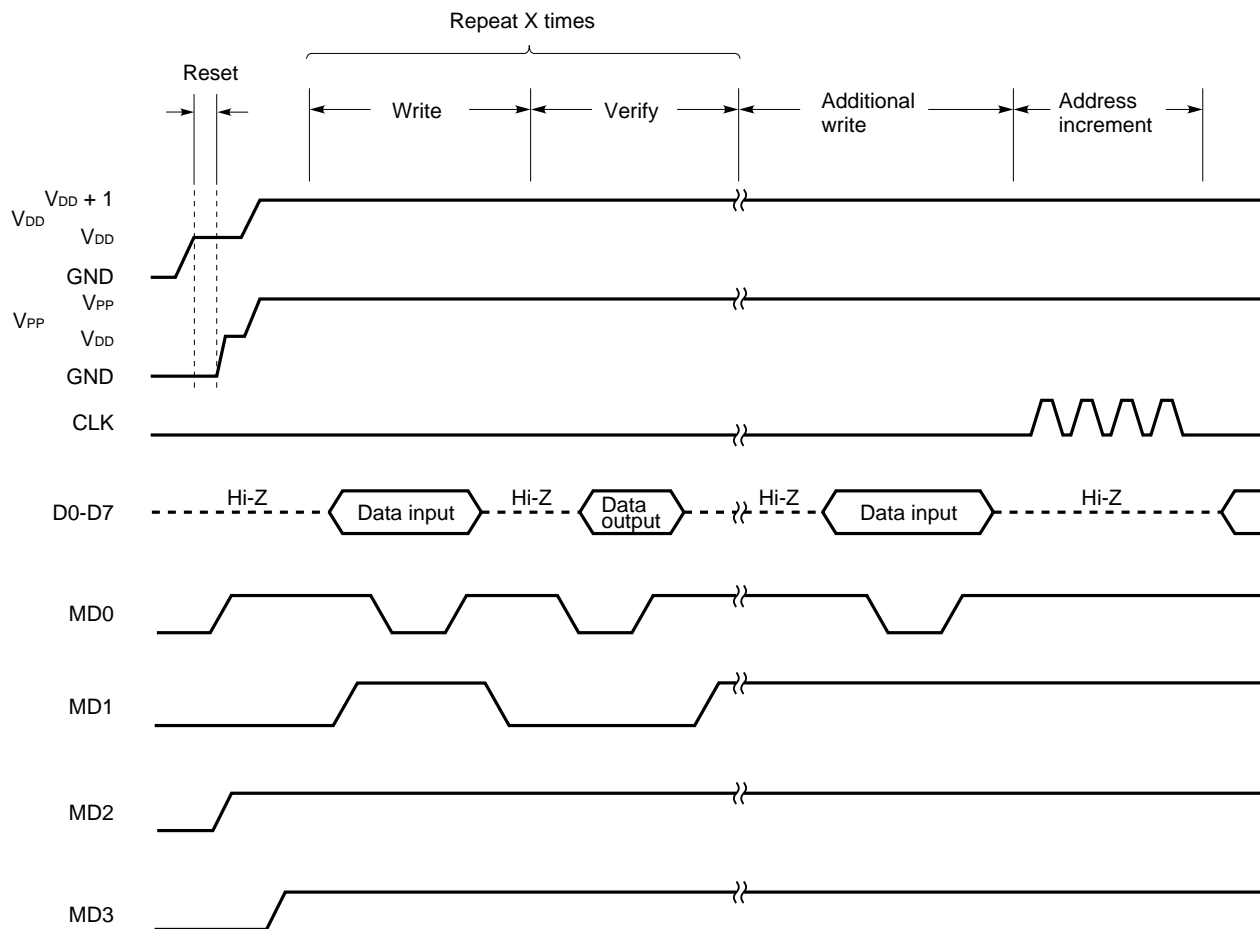

**Remark** X: L or H

## 2.2 PROGRAM MEMORY WRITE PROCEDURE

The program memory write procedure is described below. The procedure allows high-speed write operation.

- (1) Connect the unused pins to GND through pull-down resistors. The CLK pin must be low.
- (2) Apply 5 V to the  $V_{DD}$  pin. The  $V_{PP}$  pin must be low.
- (3) Apply 5 V to the  $V_{PP}$  pin after waiting 10  $\mu$ s.
- (4) Specify program memory address zero-clear mode, using the mode setting pins.
- (5) Apply 6 V to  $V_{DD}$ , and 12.5 V to  $V_{PP}$ .
- (6) Program inhibit mode
- (7) Write data in 1-ms write mode.
- (8) Program inhibit mode
- (9) Verify mode. When data has been written normally, proceed to step (10). When data has not been written normally, repeat steps (7) to (9).
- (10) Perform an additional write operation ((X: Number of write operations performed in steps (7) to (9))  $\times$  1 ms).
- (11) Program inhibit mode
- (12) Apply four pulses to the CLK pin to increment the program memory address by 1.
- (13) Repeat steps (7) to (12) until the last address is reached.
- (14) Program memory address zero-clear mode
- (15) Change the voltage applied to the  $V_{DD}$  and  $V_{PP}$  pins to 5 V.
- (16) Turn off the power.

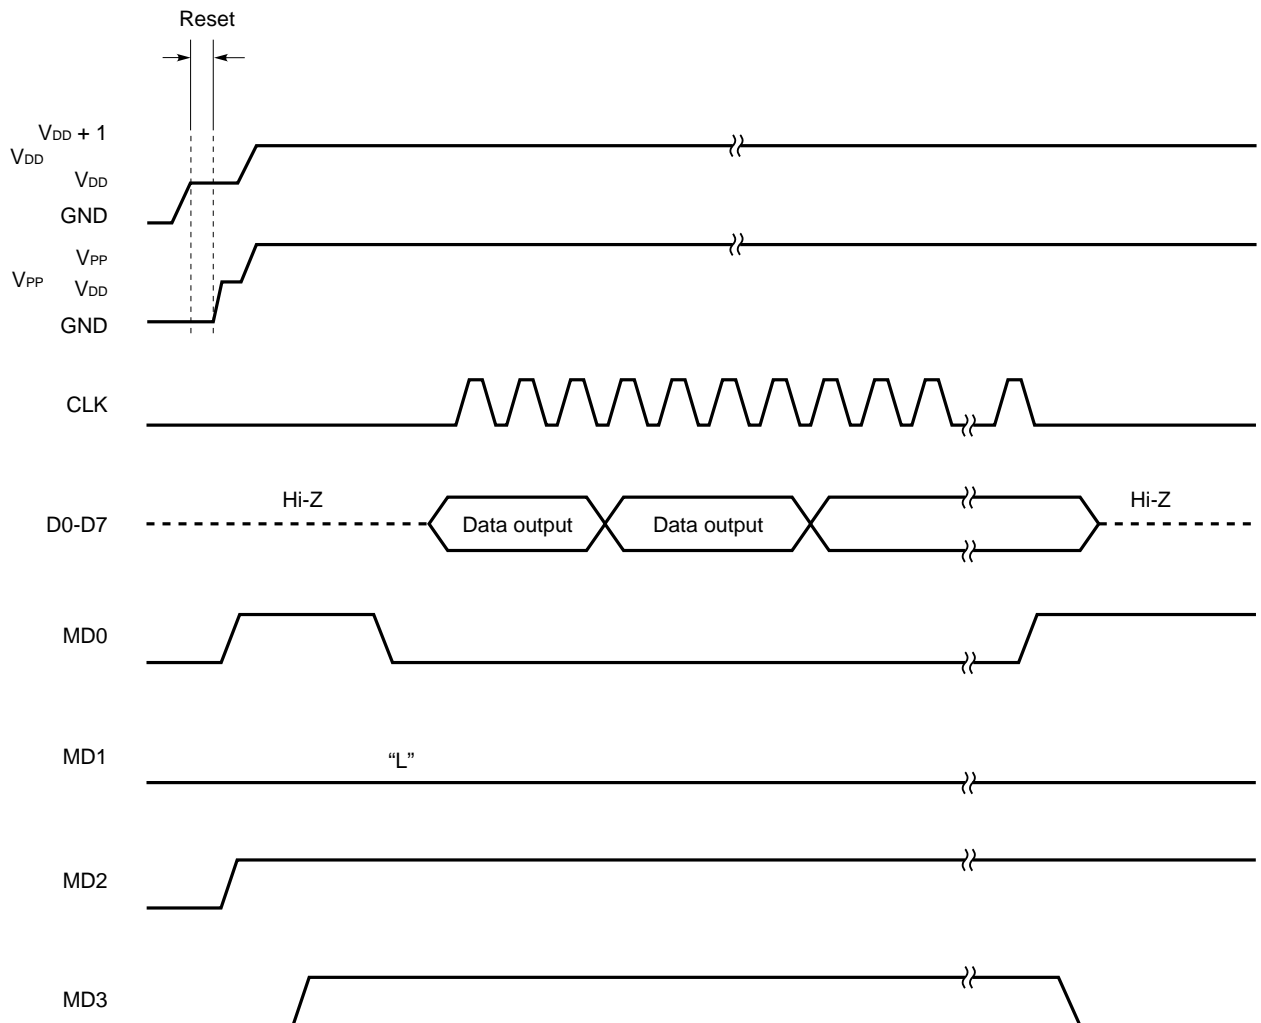

Steps (2) to (12) are illustrated below.

### 2.3 PROGRAM MEMORY READ PROCEDURE

- (1) Connect the unused pins to GND through pull-down resistors. The CLK pin must be low.
- (2) Apply 5 V to the  $V_{DD}$  pin. The  $V_{PP}$  pin must be low.
- (3) Apply 5 V to the  $V_{PP}$  pin after waiting 10  $\mu$ s.
- (4) Specify program memory address zero-clear mode, using the mode setting pins.
- (5) Apply 6 V to  $V_{DD}$ , and 12.5 V to  $V_{PP}$ .
- (6) Program inhibit mode
- (7) Verify mode. When a clock pulse signal is applied to the CLK pin, data is output for each address every four clock pulses.
- (8) Program inhibit mode
- (9) Program memory address zero-clear mode
- (10) Change the voltage applied to the  $V_{DD}$  and  $V_{PP}$  pins to 5 V.
- (11) Turn off the power.

Steps (2) to (9) are illustrated below.

★ 3. ELECTRICAL CHARACTERISTICS

**ABSOLUTE MAXIMUM RATINGS** ( $T_A = 25\text{ }^{\circ}\text{C}$ )

Parameter	Symbol	Condition	Rating	Unit
Supply voltage	$V_{DD}$		−0.3 to +6.0	V
PROM program voltage	$V_{PP}$		−0.3 to +13.5	V
Input voltage	$V_i$	At other than CE, INT0-INT4, and $\overline{\text{RESET}}$ pins	−0.3 to $V_{DD} + 0.3$	V
		CE, INT0-INT4, and $\overline{\text{RESET}}$ pins	−0.3 to $V_{DD} + 0.6$	V
Output voltage	$V_o$	At other than P1B0-P1B3	−0.3 to $V_{DD} + 0.3$	V
High output current	$I_{OH}$	At one pin	−8.0	mA
		Total for P2A0-P2A2, P3A0-P3A3, and P3B0-P3B3	−15.0	mA
		Total for P0A0-P0A3, P0B0-P0B3, P0C0-P0C3, P1D0-P1D3, P2B0-P2B3, P2C0-P2C3, P2D0-P2D2, P3C0-P3C3, and P3D0-P3D3	−25.0	mA
Low output current	$I_{OL}$	At one pin of P1B0-P1B3	12.0	mA
		At one pin of other than P1B0-P1B3	8.0	mA
		Total for P2A0-P2A2, P3A0-P3A3, and P3B0-P3B3	15.0	mA
		Total for P0A0-P0A3, P0B0-P0B3, P0C0-P0C3, P1D0-P1D3, P2B0-P2B3, P2C0-P2C3, P2D0-P2D2, P3C0-P3C3, and P3D0-P3D3	25.0	mA
		Total for P1B0-P1B3	25.0	mA
Output withstand voltage	$V_{BDS}$	P1B0-P1B3	14.0	V
Total loss	$P_t$		200	mW
Operating ambient temperature	$T_A$		−40 to +85	$^{\circ}\text{C}$
Storage temperature	$T_{stg}$		−55 to +125	$^{\circ}\text{C}$

**Caution** Absolute maximum ratings are rated values beyond which physical damage will be caused to the product; if the rated value of any of the parameters in the above table is exceeded, even momentarily, the quality of the product may deteriorate. Always use the product within its rated values.

**RECOMMENDED OPERATING RANGES** ( $T_A = -40\text{ to }+85\text{ }^{\circ}\text{C}$ )

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
Supply voltage	$V_{DD1}$	While the CPU and PLL are operating	4.5	5.0	5.5	V
	$V_{DD2}$	While the CPU is operating but the PLL is halted	3.5	5.0	5.5	V

**RECOMMENDED OUTPUT WITHSTAND VOLTAGE** ( $T_A = -40\text{ to }+85\text{ }^{\circ}\text{C}$ )

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
Output withstand voltage	$V_{BDS}$	P1B0-P1B3			12	V

**DC CHARACTERISTICS** ( $T_A = -40$  to  $+85$  °C,  $V_{DD} = 3.5$  to  $5.5$  V)

Parameter	Symbol	Condition		Min.	Typ.	Max.	Unit
Supply current	I <sub>DD1</sub>	The CPU is operating but the PLL is halted, with a sinusoidal wave applied to the X <sub>IN</sub> pin. (f <sub>IN</sub> = 4.5 MHz ±1%, V <sub>IN</sub> = V <sub>DD</sub> )			1.5	3.0	mA
	I <sub>DD2</sub>	The CPU and PLL are halted, with a sinusoidal wave applied to the X <sub>IN</sub> pin. (f <sub>IN</sub> = 4.5 MHz ±1%, V <sub>IN</sub> = V <sub>DD</sub> ) The HALT instruction is used.			0.7	1.5	mA
Data hold voltage	V <sub>DDR1</sub>	The crystal oscillator is operating.		3.5		5.5	V
	V <sub>DDR2</sub>	The crystal oscillator is halted.	The timer flip-flop is used for detecting power failure.	2.2		5.5	V
	V <sub>DDR3</sub>		Data memory contents are held.	2.0		5.5	V
Data hold current	I <sub>DDR1</sub>	The crystal oscillator is halted.	V <sub>DD</sub> = 5 V, T <sub>A</sub> = 25 °C		2.0	4.0	μA
	I <sub>DDR2</sub>				2.0	30.0	μA
High input voltage	V <sub>IH1</sub>	P0A0, P0B1, P0C0-P0C3, P1A0, P1A1, P1C0-P1C3, P1D0-P1D3, P2A2, P2B0-P2B3, P2C0-P2C3, P2D0-P2D2, P3A0-P3A3, P3B0-P3B3, P3C0-P3C3, P3D0-P3D3		0.7V <sub>DD</sub>		V <sub>DD</sub>	V
	V <sub>IH2</sub>	P0A1-P0A3, P0B0, P0B2, P0B3, P2A0, P2A1, CE, INT0-INT4, RESET		0.8V <sub>DD</sub>		V <sub>DD</sub>	V
	V <sub>IH3</sub>	P0D0-P0D3		0.55V <sub>DD</sub>		V <sub>DD</sub>	V
Low input voltage	V <sub>IL1</sub>	P0A0, P0B1, P0C0-P0C3, P1A0, P1A1,P1C0-P1C3, P1D0-P1D3, P2A2, P2B0-P2B3, P2C0-P2C3, P2D0-P2D2, P3A0-P3A3, P3B0-P3B3, P3C0-P3C3, P3D0-P3D3		0		0.3V <sub>DD</sub>	V
	V <sub>IL2</sub>	P0A1-P0A3, P0B0, P0B2, P0B3, P2A0, P2A1, CE, INT0-INT4, RESET		0		0.2V <sub>DD</sub>	V
	V <sub>IL3</sub>	P0D0-P0D3		0		0.15V <sub>DD</sub>	V
High output current	I <sub>OH1</sub>	P0A0-P0A3, P0B0-P0B3, P0C0-P0C3, P1D0-P1D3, P2A0-P2A2, P2B0-P2B3, P2C0-P2C3, P2D0-P2D2, P3A0-P3A3, P3B0-P3B3, P3C0-P3C3, P3D0-P3D3 V <sub>OH</sub> = V <sub>DD</sub> - 1 V		-1.0			mA
	I <sub>OH2</sub>	EO0, EO1 V <sub>DD</sub> = 4.5 to 5.5 V, V <sub>OH</sub> = V <sub>DD</sub> - 1 V		-3.0			mA
Low output current	I <sub>OL1</sub>	P0A0-P0A3, P0B0-P0B3, P0C0-P0C3, P1D0-P1D3, P2A0-P2A2, P2B0-P2B3, P2C0-P2C3, P2D0-P2D2, P3A0-P3A3, P3B0-P3B3, P3C0-P3C3, P3D0-P3D3 V <sub>OL</sub> = 1 V		1.0			mA
	I <sub>OL2</sub>	EO0, EO1 V <sub>DD</sub> = 4.5 to 5.5 V, V <sub>OL</sub> = 1 V		3.0			mA
	I <sub>OL3</sub>	P1B0-P1B3 V <sub>OL</sub> = 1 V		7.0			mA
High input current	I <sub>IH</sub>	P0D0-P0D3 are pulled down. V <sub>IN</sub> = V <sub>DD</sub>		5.0		150	μA
Output-off leakage current	I <sub>LO1</sub>	P1B0-P1B3 V <sub>IN</sub> = 12 V				1.0	μA
	I <sub>LO2</sub>	EO0, EO1 V <sub>IN</sub> = V <sub>DD</sub> , V <sub>IN</sub> = 0 V				±1.0	μA
High input leakage current	I <sub>LIH</sub>	Input pin V <sub>IN</sub> = V <sub>DD</sub>				1.0	μA
Low input leakage current	I <sub>LIL</sub>	Input pin V <sub>IN</sub> = 0 V				-1.0	μA

**AC CHARACTERISTICS** ( $T_A = -40$  to  $+85$  °C,  $V_{DD} = 5$  V  $\pm 10\%$ )

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
Operating frequency	$f_{IN1}$	VCOL pin in MF mode				
		Sinusoidal wave applied to the $V_{IN}$ pin = $0.15V_{p-p}$	0.8		3	MHz
	$f_{IN2}$	Sinusoidal wave applied to the $V_{IN}$ pin = $0.20V_{p-p}$	0.5		3	MHz
		VCOL pin in HF mode, with a sinusoidal wave applied to the $V_{IN}$ pin = $0.1V_{p-p}$ <b>Note</b>	10		40	MHz
	$f_{IN3}$	VCOH pin in VHF mode, with a sinusoidal wave applied to the $V_{IN}$ pin = $0.1V_{p-p}$ <b>Note</b>	60		130	MHz
	$f_{IN4}$	AMIFC pin, with a sinusoidal wave applied to the $V_{IN}$ pin = $0.15V_{p-p}$	0.4		0.5	MHz
	$f_{IN5}$	FMIFC pin in FMIF count mode, with a sinusoidal wave applied to the $V_{IN}$ pin = $0.20V_{p-p}$	10		11	MHz
	$f_{IN6}$	FMIFC pin in AMIF count mode, with a sinusoidal wave applied to the $V_{IN}$ pin = $0.15V_{p-p}$	0.4		0.5	MHz
SIO0 input frequency	$f_{IN7}$	External clock			1	MHz
SIO1 input frequency	$f_{IN8}$	External clock			0.7	MHz

**Note** The condition of sinusoidal wave input  $V_{IN} = 0.1V_{p-p}$  is the rated value when the  $\mu$ PD17P709 alone is operating. Where influence of noise must be taken into consideration, operation under input amplitude condition of  $V_{IN} = 0.15V_{p-p}$  is recommended.

**A/D CONVERTER CHARACTERISTICS** ( $T_A = -40$  to  $+85$  °C,  $V_{DD} = 5$  V  $\pm 10\%$ )

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
Total error in A/D conversion		8 bits			$\pm 3.0$	LSB
Total error in A/D conversion		8 bits $T_A = 0$ to $85$ °C			$\pm 2.5$	LSB

**REFERENCE CHARACTERISTICS** ( $T_A = +25$  °C,  $V_{DD} = 5.0$  V)

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
Supply current	$I_{DD3}$	The CPU and PLL are operating, with a sinusoidal wave applied to the VCOH pin. ( $f_{IN} = 130$ MHz, $V_{IN} = 0.3V_{p-p}$ )		6.0	12.0	mA

**DC PROGRAMMING CHARACTERISTICS** ( $T_A = 25\text{ }^{\circ}\text{C}$ ,  $V_{DD} = 6.0 \pm 0.25\text{ V}$ ,  $V_{PP} = 12.5 \pm 0.5\text{ V}$ )

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
Input high voltage	$V_{IH1}$	Other than CLK	$0.7V_{DD}$		$V_{DD}$	V
	$V_{IH2}$	CLK	$V_{DD} - 0.5$		$V_{DD}$	V
Input low voltage	$V_{IL1}$	Other than CLK	0		$0.2V_{DD}$	V
	$V_{IL2}$	CLK	0		0.4	V
Input leakage current	$I_{LI}$	$V_{IN} = V_{IL}$ or $V_{IH}$			10	μA
Output high voltage	$V_{OH}$	$I_{OH} = -1\text{ mA}$	$V_{DD} - 1.0$			V
Output low voltage	$V_{OL}$	$I_{OL} = 1\text{ mA}$			1.0	V
$V_{DD}$ supply current	$I_{DD}$				30	mA
$V_{PP}$ supply current	$I_{PP}$	$MD0 = V_{IL}$ , $MD1 = V_{IH}$			30	mA

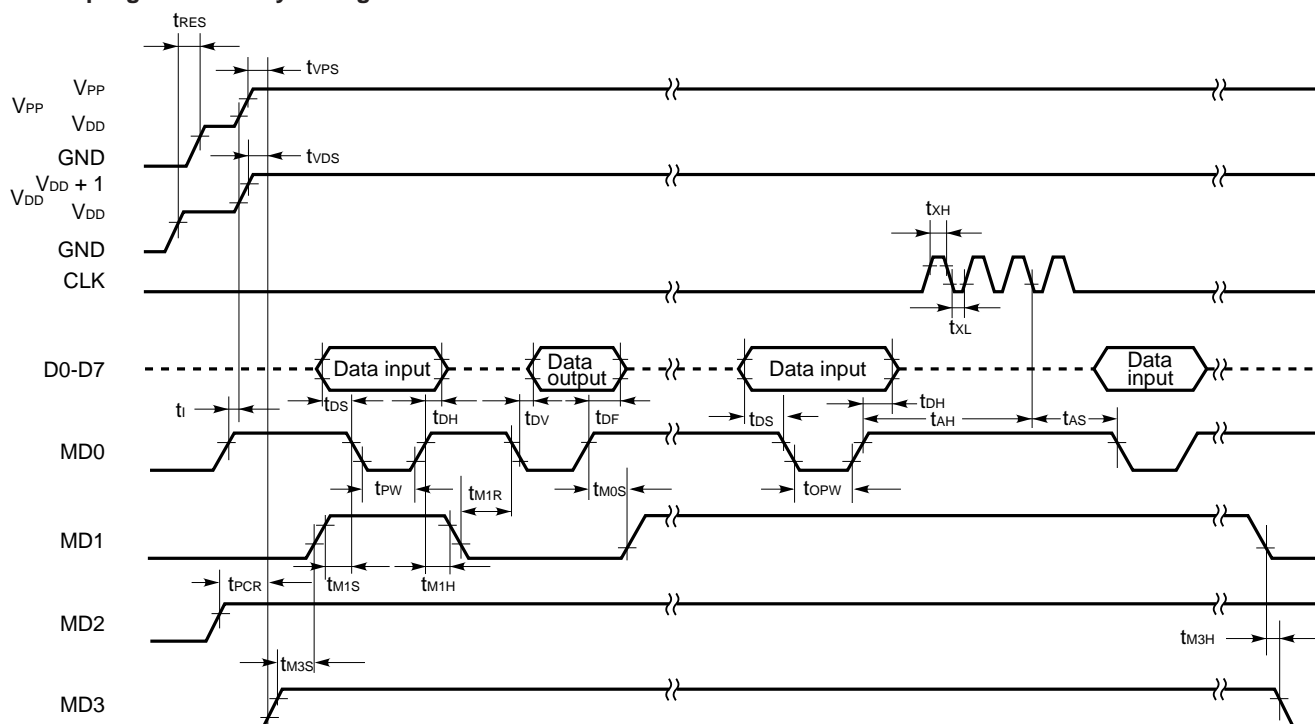

- Cautions**
1.  $V_{PP}$  must be under +13.5 V including overshoot.
  2.  $V_{DD}$  must be applied before  $V_{PP}$  on and must be off after  $V_{PP}$  off.

**AC PROGRAMMING CHARACTERISTICS** ( $T_A = 25\text{ }^{\circ}\text{C}$ ,  $V_{DD} = 6.0 \pm 0.25\text{ V}$ ,  $V_{PP} = 12.5 \pm 0.5\text{ V}$ )

Parameter	Symbol	Note 1	Condition	Min.	Typ.	Max.	Unit
Address setup time <sup>Note 2</sup> (referred to MD0↓)	$t_{AS}$	$t_{AS}$		2			μs
MD1 setup time (referred to MD0↓)	$t_{M1S}$	$t_{OES}$		2			μs
Data setup time (referred to MD0↓)	$t_{DS}$	$t_{DS}$		2			μs
Address hold time <sup>Note 2</sup> (referred to MD0↑)	$t_{AH}$	$t_{AH}$		2			μs

Data output float delay from MD0↑	$t_{DF}$	$t_{DF}$		0		130	ns
$V_{PP}$ setup time (referred to MD3↑)	$t_{VPS}$	$t_{VPS}$		2			μs
$V_{DD}$ setup time (referred to MD3↑)	$t_{VDS}$	$t_{VCS}$		2			μs
Initial program pulse width	$t_{PW}$	$t_{PW}$		0.95	1.0	1.05	ms
Additional program pulse width	$t_{OPW}$	$t_{OPW}$		0.95		21.0	ms
MD0 setup time (referred to MD1↑)	$t_{M0S}$	$t_{CES}$		2			μs
Data output delay from MD0↓	$t_{DV}$	$t_{DV}$	$MD0 = MD1 = V_{IL}$			1	μs
MD1 hold time (referred to MD0↑)	$t_{M1H}$	$t_{OEH}$	$t_{M1H} + t_{M1R} \geq 50\text{ }^{\mu}\text{s}$	2			μs
MD1 recovery time (referred to MD0↓)	$t_{M1R}$	$t_{OR}$		2			μs
Program counter reset time	$t_{PCR}$	—		10			μs
CLK input high, low level range	$t_{XH}, t_{XL}$	—		0.125			μs
CLK input frequency	$f_X$	—				4.19	MHz
Initial mode set time	$t_i$	—		2			μs
MD3 setup time (referred to MD1↑)	$t_{M3S}$	—		2			μs
MD3 hold time (referred to MD1↓)	$t_{M3H}$	—		2			μs
MD3 setup time (referred to MD0↓)	$t_{M3SR}$	—	When reading program memory	2			μs
Data output delay from address increment <sup>Note 2</sup>	$t_{DAD}$	$t_{ACC}$				2	μs
Data output hold time from address increment <sup>Note 2</sup>	$t_{HAD}$	$t_{OH}$		0		130	ns
MD3 hold time (referred to MD0↑)	$t_{M3HR}$	—		2			μs
Data output float delay from MD3↓	$t_{DFR}$	—				2	μs
Reset setup time	$t_{RES}$	—		10			μs

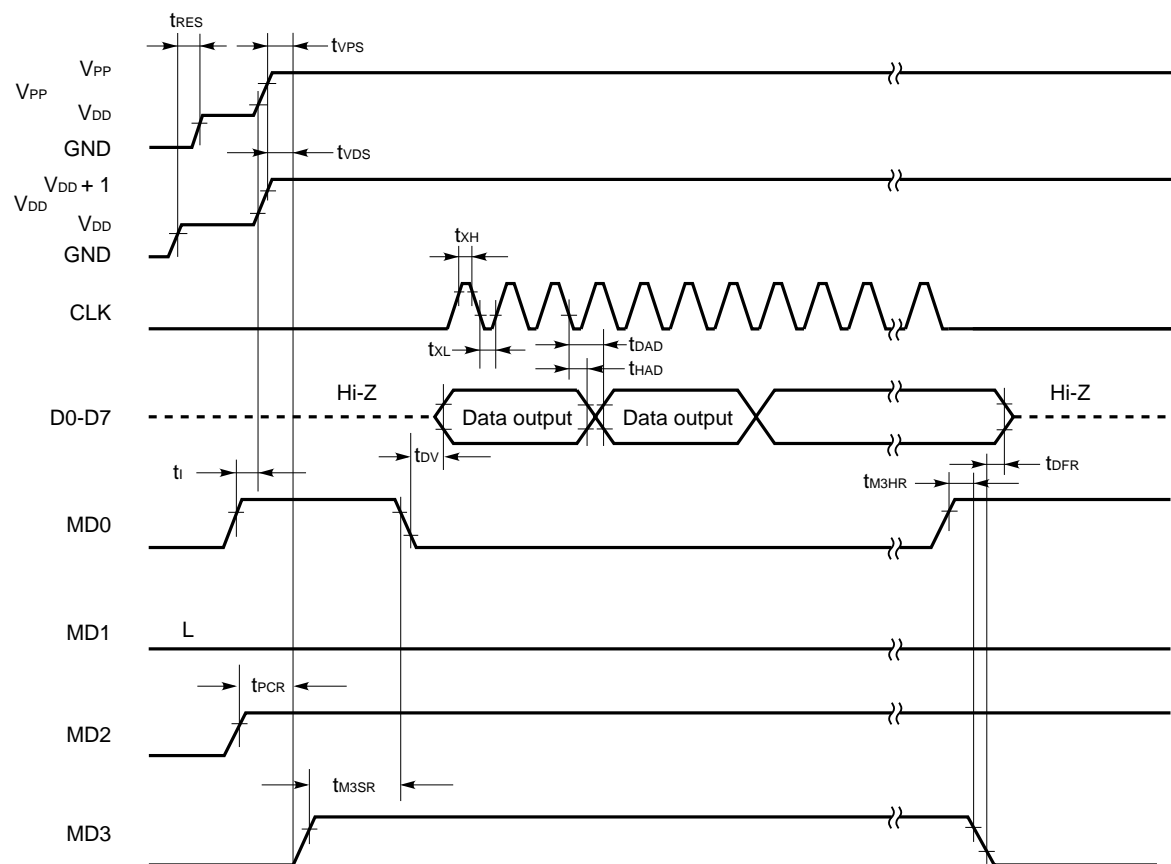

- Notes**
1. Symbols used for the μPD27C256 (The μPD27C256 is used only for maintenance.)
  2. The internal address signal is incremented by 1 on the falling edge of the third clock (CLK) pulse, with four CLK pulses treated as one cycle. Internal addresses are not connected to pins.

### Write program memory timing

**Remark** The dashed line indicates high-impedance.

### Read program memory timing

#### 4. PACKAGE DRAWING

##### 80 PIN PLASTIC QFP (14×14)

detail of lead end

#### NOTE

Each lead centerline is located within 0.13 mm (0.005 inch) of its true position (T.P.) at maximum material condition.

## 5. RECOMMENDED SOLDERING CONDITIONS

The conditions listed below shall be met when soldering the μPD17P709.

For details of the recommended soldering conditions, refer to our document *SMD Surface Mount Technology Manual* (C10535E).

Please consult with our sales offices in case any other soldering process is used, or in case soldering is done under different conditions.

**Table 5-1 Soldering Conditions for Surface-Mount Devices**

**μPD17P709GC-3B9: 80-pin plastic QFP (14 × 14 mm, 0.65-mm pitch)**

Soldering process	Soldering conditions	Recommended conditions
Infrared ray reflow	Peak package's surface temperature: 235 °C Reflow time: 30 seconds or less (at 210 °C or more) Maximum allowable number of reflow processes: 2	IR35-00-2
VPS	Peak package's surface temperature: 215 °C Reflow time: 40 seconds or less (at 200 °C or more) Maximum allowable number of reflow processes: 2	VP15-00-2
Wave soldering	Solder temperature: 260 °C or less Flow time: 10 seconds or less Number of flow processes: 1 Preheating temperature: 120 °C max. (measured on the package surface)	WS60-00-1
Partial heating method	Terminal temperature: 300 °C or less Heat time: 3 seconds or less (for one side of a device)	—

**Caution** Do not apply more than a single process at once, except for “Partial heating method.”

## APPENDIX DEVELOPMENT TOOLS

The following support tools are available for developing programs for the μPD17P709.

### Hardware

Name	Description
In-circuit emulator [ IE-17K IE-17K-ET <sup>Note 1</sup> EMU-17K <sup>Note 2</sup> ]	The IE-17K, IE-17K-ET, and EMU-17K are in-circuit emulators applicable to the 17K series. The IE-17K and IE-17K-ET are connected to the host machine (PC-9800 series or IBM PC/AT™) through the RS-232C interface. The EMU-17K is inserted into the extension slot of the host machine (PC-9800 series). Use the system evaluation board (SE board) corresponding to each product together with one of these in-circuit emulators. <i>SIMPLEHOST™</i> , a man machine interface, implements an advanced debug environment. The EMU-17K also enables user to check the contents of the data memory in real time.
SE board (SE-17709)	The SE-17709 is an SE board for the μPD17709 sub-series. It is used alone for evaluating the system. It is also used for debugging, in combination with an in-circuit emulator.
Emulation probe (EP-17K80GC)	The EP-17K80GC is an emulation probe for the μPD17P709GC. When used with the EV-9200GC-80 <sup>Note 3</sup> , this emulation probe connects the SE board to the target system.
Conversion socket (EV-9200GC-80 <sup>Note 3</sup> )	The EV-9200GC-80 is a conversion socket for the 80-pin plastic QFP (14 × 14 mm). It is used to connect the EP-17K80GC to the target system.
PROM Programmer (PG-1500)	The PG-1500 is a PROM programmer for the μPD17P709. Use this PROM programmer with the PA-17KDZ (adapter for the PG-1500) and PA-17P709GC programmer adapter, to program the μPD17P709.
Programmer adapter (PA-17P709GC)	The PA-17P709GC is a socket unit for the μPD17P709. It is used with the PG-1500.

**Notes** 1. Low-end model, operating on an external power supply

2. The EMU-17K is a product of I.C Corporation. Contact I.C Corporation (Tokyo, 03-3733-1163) for details.
3. The EP-17K80GC is supplied together with one EV-9200GC-80. A set of five EV-9200GC-80s is also available.

**Remark** Third-party PROM programmers are also available: For example, AF-9703, AF-9704, AF-9705, and AF-9706 (manufactured by Ando Electric Co., Ltd.). These PROM programmers can be used with the PA-17P709GC programmer adapter. For details, contact Ando Electric Co., Ltd. (Tokyo, 03-3733-1151).

Software

Name	Description	Host machine	OS		Distribution media	Part number
17K series assembler (AS17K)	AS17K is an assembler applicable to the 17K series. In developing $\mu$ PD17P709 programs, AS17K is used in combination with a device file (AS17704).	PC-9800 series	MS-DOSTM		5.25-inch, 2HD	$\mu$ S5A10AS17K
					3.5-inch, 2HD	$\mu$ S5A13AS17K
		IBM PC/AT	PC DOSTM		5.25-inch, 2HC	$\mu$ S7B10AS17K
					3.5-inch, 2HC	$\mu$ S7B13AS17K
Device file (AS17704)	AS17704 has a device file for the $\mu$ PD17P709 . It is used together with the assembler (AS17K), which is applicable to the 17K series.	PC-9800 series	MS-DOS		5.25-inch, 2HD	$\mu$ S5A10AS17704
					3.5-inch, 2HD	$\mu$ S5A13AS17704
		IBM PC/AT	PC DOS		5.25-inch, 2HC	$\mu$ S7B10AS17704
					3.5-inch, 2HC	$\mu$ S7B13AS17704
Support software (SIMPLEHOST)	SIMPLEHOST, running under WindowsTM, provides a man machine interface in developing programs by using a personal computer and in-circuit emulator.	PC-9800 series	MS-DOS	Windows	5.25-inch, 2HD	$\mu$ S5A10IE17K
					3.5-inch, 2HD	$\mu$ S5A13IE17K
		IBM PC/AT	PC DOS		5.25-inch, 2HC	$\mu$ S7B10IE17K
					3.5-inch, 2HC	$\mu$ S7B13IE17K

**Remark** The following table lists the versions of the operating systems described in the above table.

OS	Versions
MS-DOS	Ver. 3.30 to Ver.5.00A <sup>Note</sup>
PC DOS	Ver. 3.1 to Ver. 5.0 <sup>Note</sup>
Windows	Ver. 3.0 to Ver. 3.1

**Note** MS-DOS versions 5.00 and 5.00A and PC DOS Ver. 5.0 are provided with a task swap function. This function, however, cannot be used in these software packages.

## NOTES FOR CMOS DEVICES

### ① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

**Note:** Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

### ② HANDLING OF UNUSED INPUT PINS FOR CMOS

**Note:** No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS device behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to  $V_{DD}$  or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

### ③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

**Note:** Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

[MEMO]

**Caution** This product contains an I<sup>2</sup>C bus interface circuit.  
When using the I<sup>2</sup>C bus interface, notify its use to NEC when ordering custom code. NEC can guarantee the following only when the customer informs NEC of the use of the interface:  
Purchase of NEC I<sup>2</sup>C components conveys a license under the Philips I<sup>2</sup>C Patent Rights to use these components in an I<sup>2</sup>C system, provided that the system conforms to the I<sup>2</sup>C Standard Specification as defined by Philips.

## Regional Information

Some information contained in this document may vary from country to country. Before using any NEC product in your application, please contact the NEC office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

The export of this product from Japan is regulated by the Japanese government. To export this product may be prohibited without governmental license, the need for which must be judged by the customer. The export or re-export of this product from a country other than Japan may also be prohibited without a license from that country. Please call an NEC sales representative.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
