

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

4-BIT SINGLE-CHIP MICROCOMPUTER

Phase-out/Discontinued

DESCRIPTION

The μ PD75117H is a 75X Series 4-bit single-chip microcomputer.

The μ PD75117H is a product which has the same functions as those of the μ PD751 \times F, with the minimum operating voltage reduced from the previous 2.7 V to 1.8 V, and achieving 1.91 μ s operation at 1.8 V. Therefore, it facilitates low-voltage operation for a set requiring high-speed operation.

Functions are described in detail in the following User's Manual, which should be read when carrying out design work.

μ PD75117H User's Manual : IEU-799

FEATURES

- Memory capacity
 - ROM : 24448 \times 8 bits (μ PD75117H)
 - : 16256 \times 8 bits (μ PD75116H)
 - RAM : 768 \times 4 bits
- High-speed low voltage operation
 - Minimum instruction execution time : 1.91 μ s ($V_{DD} = 1.8$ V)
 - : 0.95 μ s ($V_{DD} = 2.7$ V)
- Operating voltage range : 1.8 to 5.5 V ($T_a = -40$ to $+60$ °C) ★
- Input/output ports : 58
- Timer/counter : 3 channels
 - Timer/event counter \times 2 channels
 - Basic interval timer \times 1 channel
- 8-bit serial interface on chip
- Programmable threshold port : 4-bit resolution \times 4 channels
- On-chip PROM product available : μ PD75P117H (One-time PROM)

APPLICATIONS

Cordless telephone subsets, portable radio equipment, pager, etc.

"Unless there are any particular functional differences, the μ PD75117H is described in this document as a representative product."

The information in this document is subject to change without notice.

ORDERING INFORMATION

Ordering Code	Package	Quality Grade
μPD75116HGC-xxx-AB8	64-pin plastic QFP (□14 mm)	Standard

P120 to P123	Input/output	—	N-ch open-drain 4-bit input/output port (PORT 12). On-chip pull-up resistor can be specified bit-wise (mask option). Open-drain: +6 V withstand voltage				*3
P130 to P133	Input/output	—	N-ch open-drain 4-bit input/output port (PORT 13). On-chip pull-up resistor can be specified bit-wise (mask option). Open-drain: +6 V withstand voltage				*3
P140 to P143	Input/output	—	N-ch open-drain 4-bit input/output port (PORT 14). On-chip pull-up resistor can be specified bit-wise (mask option). Open-drain: +6 V withstand voltage	—	Input *4	M	

- * 1. ○ : Schmitt trigger input
- 2. Direct LED drive capability (When V_{DD} = 5 V, I_{OL} = 15 mA).
- 3. Direct LED drive capability (When V_{DD} = 5 V, I_{OL} = 10 mA).
- 4. Open-drain ... high impedance
On-chip pull-up resistor ... high level

3.2 OTHER PINS

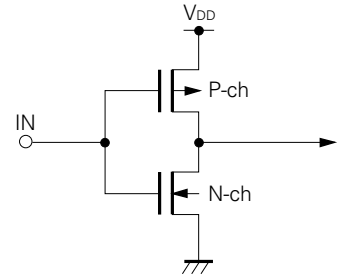

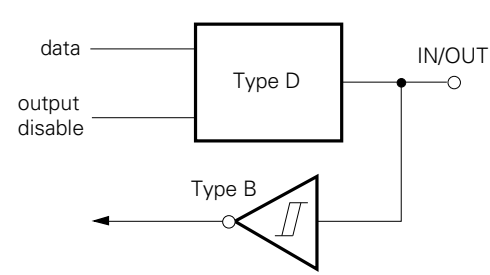

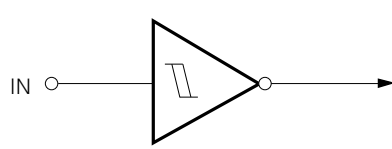

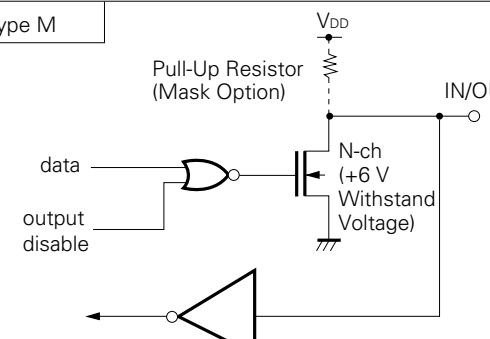

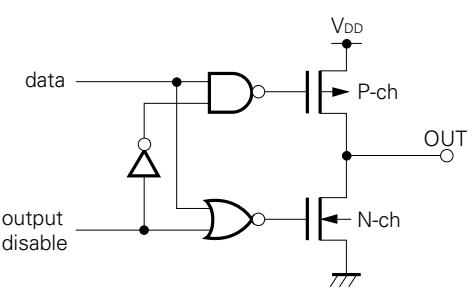

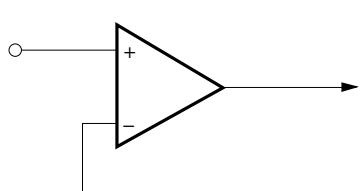

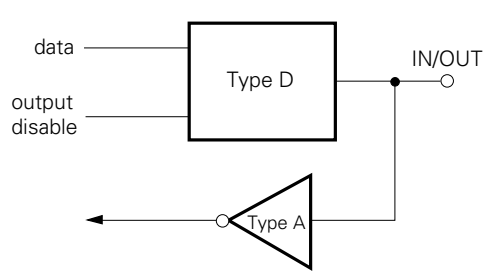

Pin Name	Input/Output	Dual-Function Pin	Function	Reset	I/O Circuit Type *1
PTH00 to PTH03	Input	—	Variable threshold voltage 4-bit analog input port.		N
TI0	Input	—	External event pulse input to timer/event counter. Or edge detection vectored interrupt input, or 1-bit input is also possible.		Ⓑ
TI1					
PTO0	Input/output	P20	Timer/event counter output.	Input	E
PTO1		P21			
$\overline{\text{SCK}}$	Input/output	P01	Serial clock input/output.	Input	Ⓕ
SO	Input/output	P02	Serial data output.	Input	E
SI	Input	P03	Serial data input.	Input	Ⓑ
INT4	Input	P00	Edge detection vector interrupt input (detection of both rising and falling edges)	Input	Ⓑ
INT0	Input	P10	Edge detection vector interrupt input (detection edge selectable)	Input	Ⓑ
INT1		P11			
INT2	Input	P12	Edge detection test input (rising edge detection)	Input	Ⓑ
INT3		P13			
PCL	Input/output	P22	Clock output	Input	E
X1, X2	Input	—	System clock oscillation crystal/ceramic connection pin. When an external clock is used, the clock is input to X1 and the inverted clock is input to X2.		
$\overline{\text{RESET}}$	Input	—	System reset input (low-level active).		Ⓑ
IC	—	—	Internally Connected. IC pin should be connected to V _{DD} directly.		
V _{DD}	—	—	Positive power supply.		
V _{SS}	—	—	GND potential.		

* Ⓑ : Schmitt trigger input

3.3 PIN INPUT/OUTPUT CIRCUITS

The input/output circuits of each pin of the μ PD75117H are shown by in abbreviated form.

Fig. 3-1 Pin Input/Output Circuit List

<p>Type A</p>  <p>CMOS standard input buffer</p>	<p>Type F</p>  <p>This is an input/output circuit made up of a Type D push-pull output and Type B Schmitt-triggered input.</p>

P120 to P123	
P130 to P133	
P140 to P143	
IC	

4. MEMORY CONFIGURATION

- Program memory (ROM) : 24448 \times 8 bits (0000H to 5F7FH) : μ PD75117H
16256 \times 8 bits (0000H to 3F7FH) : μ PD75116H
 - 0000H, 0001H : Vector table in which a program start address after reset is written.
 - 0002H to 000BH : Vector table in which program start addresses after interruption are written.
 - 0020H to 007FH : Table area referred by GETI instruction
- Data memory
 - Data area : 768 \times 4 bits (000H to 2FFH)
 - Peripheral hardware area : 128 \times 4 bits (F80H to FFFH)

Fig. 4-1 Program Memory Map (1/2)
(a) μPD75117H

Note Since the above interrupt vector start address is a 14-bit address, set it in a 16K space (0000H to 3FFFH).

Remarks Apart from the above instructions, branching is possible to an address at which only the PC low-order 8 bits have been changed by the BR PCDE or BR PCXA instruction.

Fig. 4-1 Program Memory Map (2/2)
(b) μPD75116H

Remarks Apart from the above instructions, branching is possible to an address at which only the PC low-order 8 bits have been changed by the BR PCDE or BR PCXA instruction.

Fig. 4-2 Data Memory Map (2/2)
(b) μPD75116H

5. PERIPHERAL HARDWARE FUNCTIONS

5.1 PORT

There are the following three digital input/output ports.

- CMOS input (PORT0, PORT1) : 8
 - CMOS input/output (PORT2 to PORT9) : 32
 - N-ch open-drain input/output (PORT12 to PORT14) : 12
- Total : 52

Table 5-1 Port Function

Port Name	Function	Operation/Features	Remarks
PORT 0 PORT 1	4-bit input	Regardless of the operating mode of the shared pin, reading or test is always possible.	These pins are shared with SI, SO, SCK, INT0 to INT4.
PORT 3 *1 PORT 6 *1	4-bit input/output	Can be set in the input or output bit-wise.	_____
PORT 2 *1 PORT 4 *1 PORT 5 *1 PORT 7 *1 PORT 8 *1 PORT 9 *1		Can be set in the input or output mode as a 4-bit unit. Ports 4 and 5, 6 and 7, and 8 and 9 are paired and data input/output is possible as an 8-bit unit.	Port 2, PTO0, PTO1, and PCL share the same pins.
PORT12 *2 PORT13 *2 PORT14 *2		Can be set to input or output mode as a 4-bit unit. Ports 12 and 13 are paired and data input/output is possible as an 8-bit unit.	On-chip pull-up resistor specifiable bit-wise by mask option.

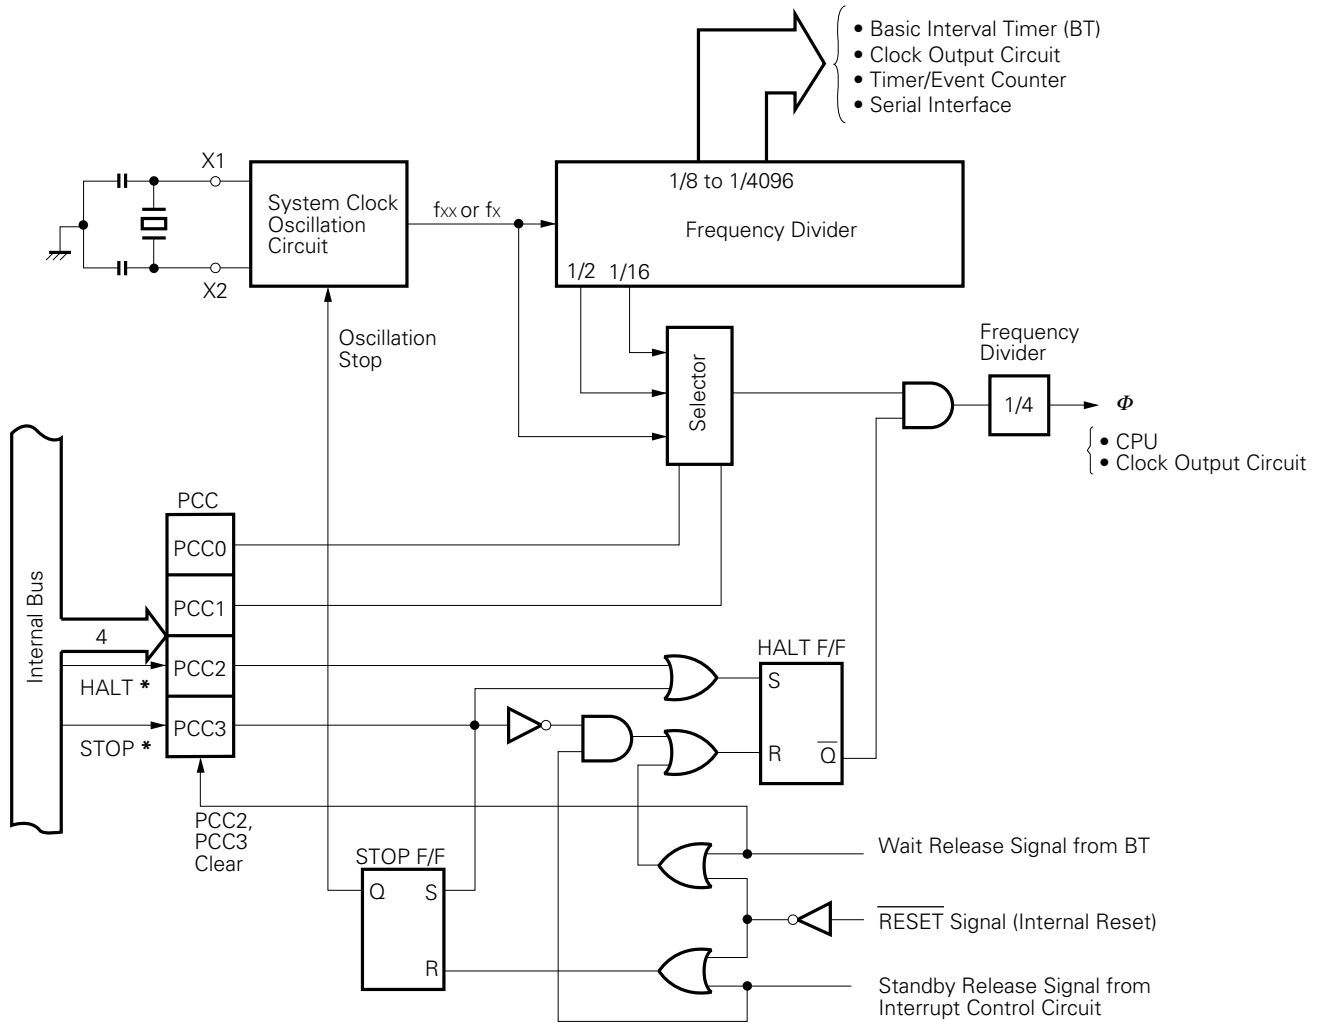

★ * 1. When $V_{DD} = 5\text{ V}$, $I_{OL} = 15\text{ mA}$.
 ★ 2. When $V_{DD} = 5\text{ V}$, $I_{OL} = 10\text{ mA}$.

5.2 CLOCK GENERATOR

The clock generator operation is determined by the processor clock control register (PCC). This circuit can also change the instruction execution time.

- 0.95 μs/1.91 μs/15.3 μs (4.19 MHz operation)

Fig. 5-1 Clock Generator Block Diagram

* Instruction execution

- Remarks**
1. f_{xx} = Crystal/ceramic oscillator frequency
 2. f_x = External clock frequency
 3. Φ = CPU Clock
 4. PCC : Processor clock control register
 5. One Φ clock cycle (t_{cy}) is one machine cycle. See "AC CHARACTERISTICS" in 12. "ELECTRICAL SPECIFICATIONS" for t_{cy} .

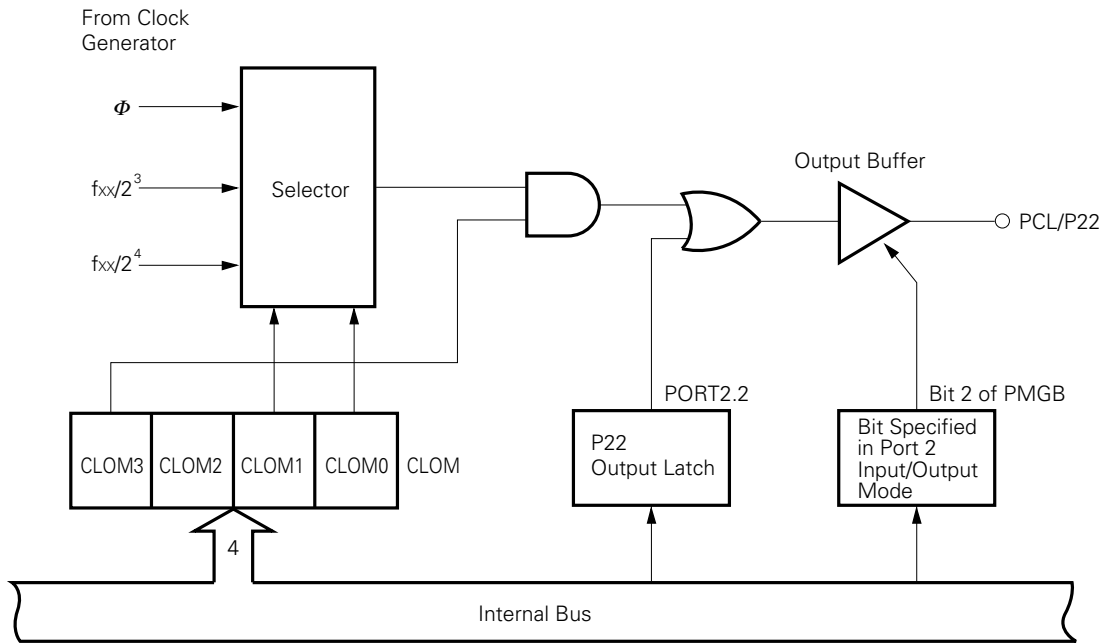

5.3 CLOCK OUTPUT CIRCUIT

The clock output circuit is a circuit which outputs a clock pulse from P22/PCL and is used to supply clock pulses to remote control outputs or peripheral LSI's.

- Clock output (PCL) : Φ , 524 kHz, 262 kHz (4.19 MHz operation)

Fig. 5-2 Configuration of Clock Output Circuit

5.4 BASIC INTERVAL TIMER

The basic interval timer includes the following functions.

- It operates as an interval timer which generates reference time interrupts.
- It can be applied as a watchdog timer which detects when a program is out of control.
- Selects and counts wait times when the standby mode is released.
- It reads count contents.

Fig. 5-3 Basic Interval Timer Configuration

* SET1 indicates instruction execution.

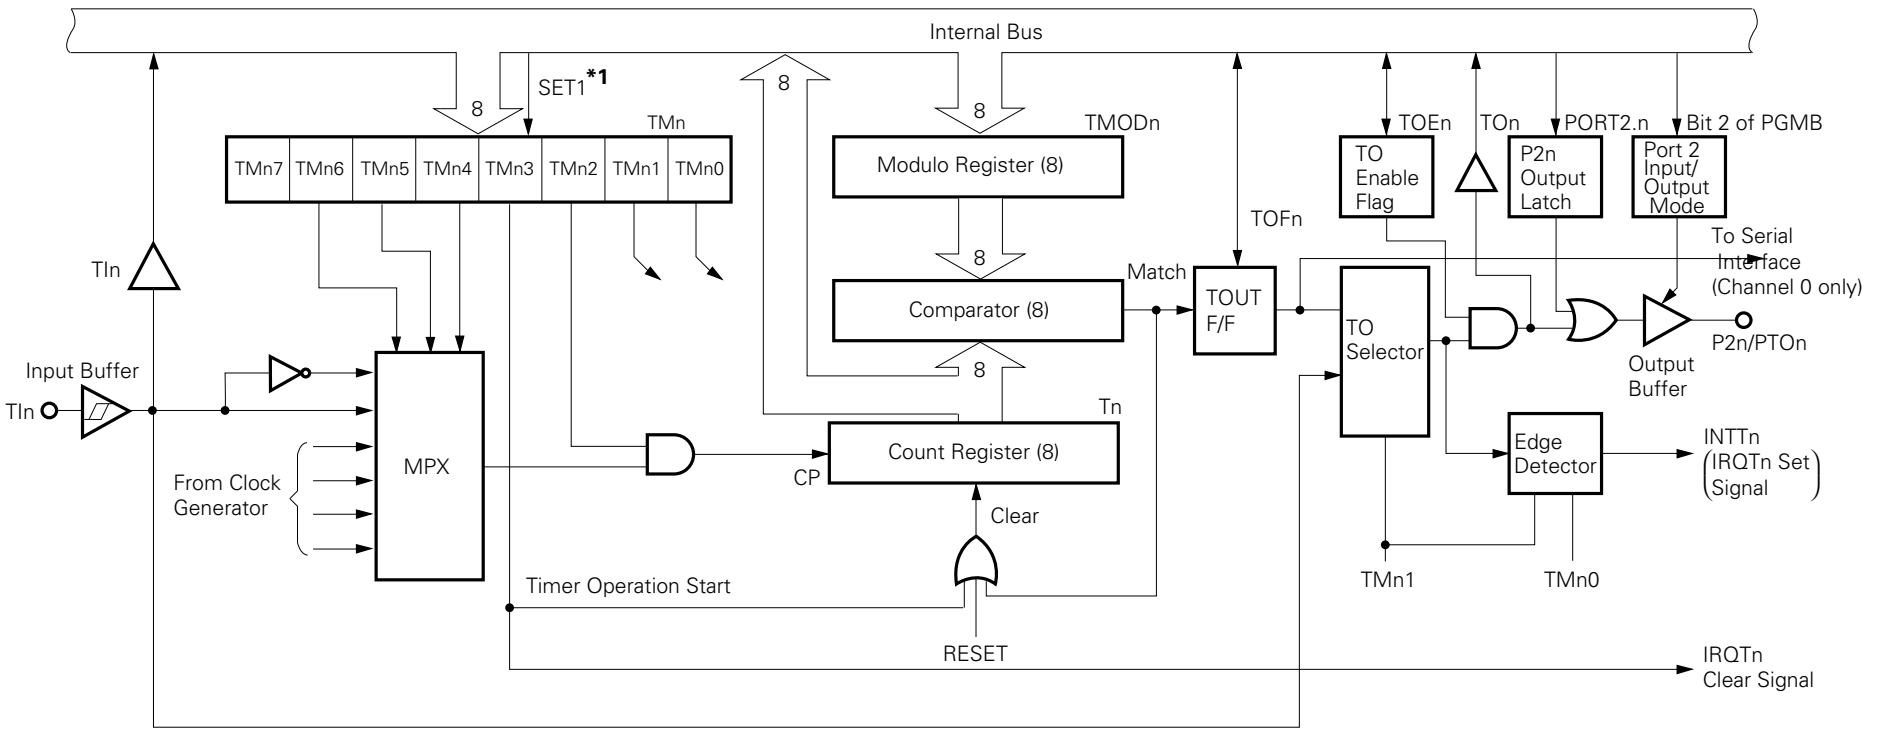

5.5 TIMER/EVENT COUNTER

The μPD75117H incorporates two internal timer/event counter channels.

Timer/event counter channel 0 and channel 1 differ only in selectable count pulse (CP) and clock supply function to serial interface and are the same in other configurations and functions.

- Operates as a programmable interval timer.
- Outputs square waves in the desired frequency to the PTO_n pin.
- Operates as an event counter.
- Use of TIn pin as an external interrupt input pin.
- Divides the TIn pin input into N divisions and outputs it to the PTO_n pin (frequency divider operation).
- Supplies a serial shift clock to the serial interface circuit. (channel 0 only)
- Count status read function.

Fig. 5-4 Timer/Event Counter Block Diagram (n = 0, 1)

* SET1 : Instruction execution.

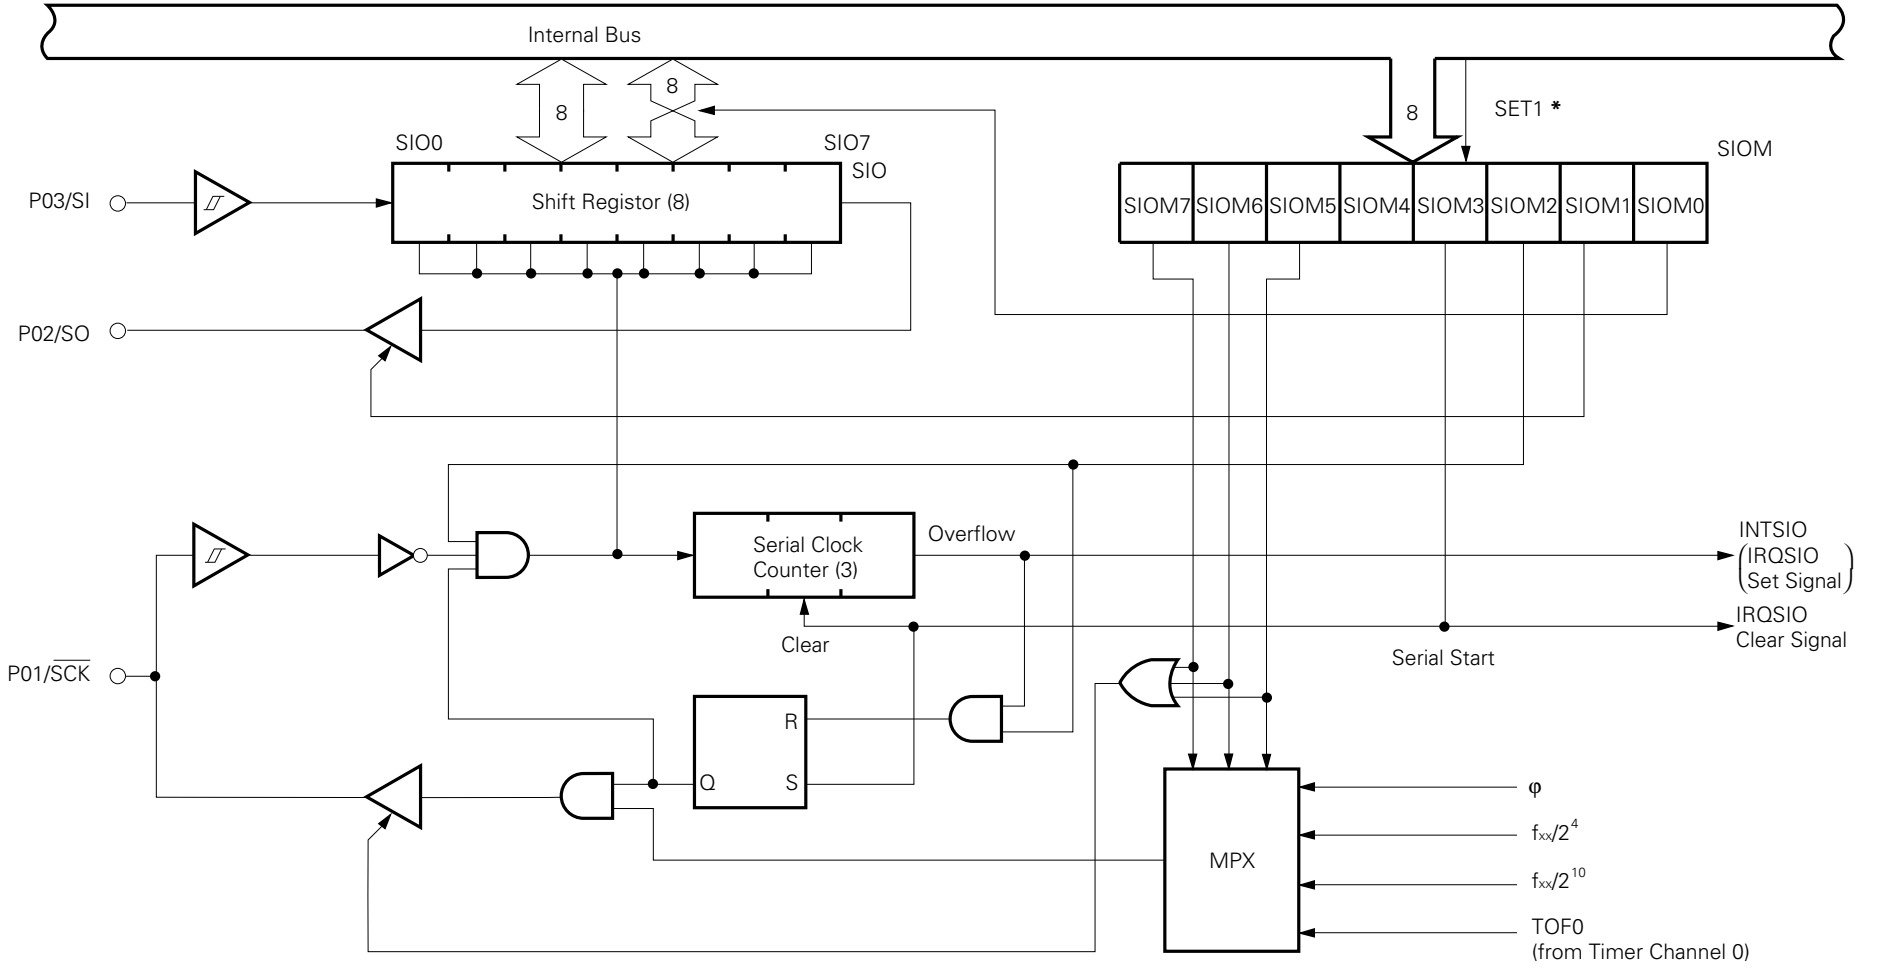

5.6 SERIAL INTERFACE

The serial interface has the following functions.

- Clock 8-bit transmission/reception operation (simultaneous transmission/reception)
- Clock 8-bit reception operation (SO output high impedance)
- Half-duplex asynchronous transfer (software control)
- LSB-first/MSB-first switchable

These functions facilitate serial bus data communications with other computers such as μ PD7500 series, 78K series, etc., or conjunction with a peripheral device.

Fig. 5-5 Serial Interface Block Diagram

* SET1 : instruction execution

5.7 PROGRAMMABLE THRESHOLD PORT (ANALOG INPUT PORT)

The μ PD75117H is provided with 4-bit analog input pins (PTH00 to PTH03) for which the threshold voltage can be changed. These pins have a configuration as shown in Fig. 5-6.

The threshold voltage (V_{REF}) can be selected in 16 ways ($V_{DD} \times \frac{0.5}{16} - V_{DD} \times \frac{15.5}{16}$) and analog signals can be directly input.

This port can also be used as a digital signal input port by selecting $V_{DD} \times \frac{7.5}{16}$ as V_{REF} .

Fig. 5-6 Programmable Threshold Port Block Diagram

5.8 BIT SEQUENTIAL BUFFER 16 BITS

Bit manipulation of the bit sequential buffer is the bit manipulation special data memory. Since, in particular, the bit manipulation can easily be performed by changing sequentially address and bit specification, it is convenient when processing data comprising a large number of bits bit-wise.

Fig. 5-7 Bit Sequential Buffer Format

Remarks In pmem. @L addressing, the specified bit moves according to the L register.

6. INTERRUPT FUNCTION

The μPD75117H has 7 interrupt sources. Multiple interrupts with priority is are also possible. Two test sources are also provided. The test sources are edge detection testable inputs.

Table 6-1 Interrupt Sources

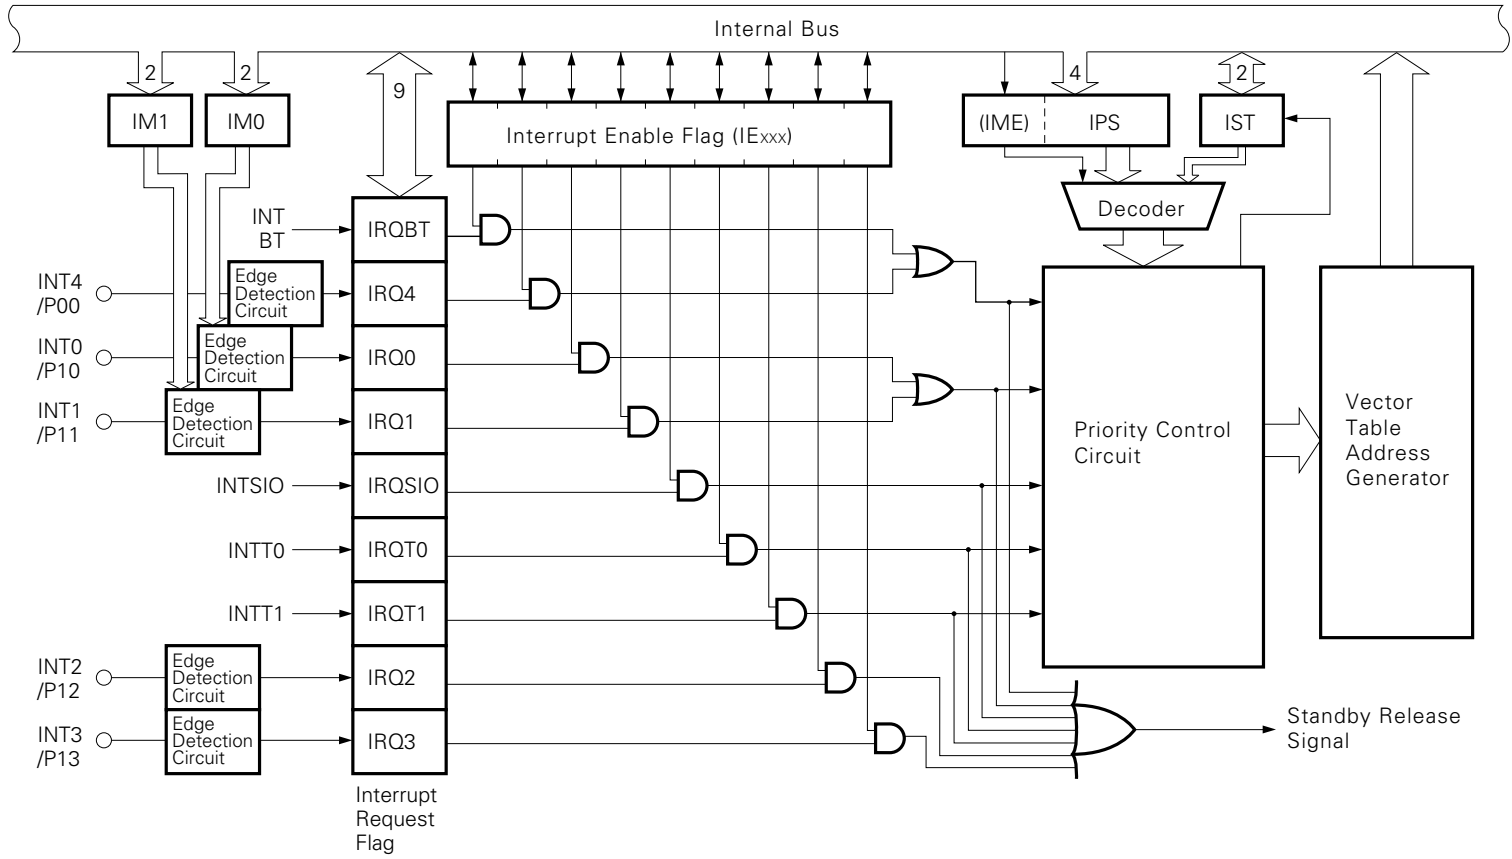

Interrupt Source		Internal/External	Interrupt Order*1	Vector Interrupt Request Signal (Vector Table Address)
INTBT	(standard time interval signal from basic interval timer)	Internal	1	VRQ1 (0002H)
INT4	(both rising edge and falling edge detection)	External		
INT0	(rising edge and falling edge detection selection)	External	2	VRQ2 (0004H)
INT1		External		
INTSIO (serial data transfer end signal)		Internal	3	VRQ3 (0006H)
INTT0	(match signal from timer/event counter# 0 or T10 input edge detection)	Internal/external	4	VRQ4 (0008H)
INTT1	(match signal from timer/event counter# 1 or T11 input edge detection)	Internal/external	5	VRQ5 (000AH)
INT2*2 (rising edge detection)		External	Testable input signal (Set IRQ2 and IRQ3)	
INT3*2 (rising edge detection)				

- * 1. The interrupt order is the priority order when multiple interrupt requests are generated simultaneously.
- 2. INT2 and INT3 are of test sources . These are affected by interrupt enable flags in the same way as interrupt sources, but do not generate vector interrupts.

The μPD75117H interrupt control circuit has the following functions:

- Hardware control vector interrupt function that can control interrupt acceptance by interrupt enable flag (IExxx) and interrupt master enable flag (IME).
- Arbitrary setting of interrupt start address.
- Multiple interruption function by which priority can be specified using the interrupt priority selection register (IPS).
- Interrupt request flag (IRQxxx) test function (interrupt generation confirmation by software possible).
- Standby mode release (selection of interrupt that releases the standby mode by interrupt enable flag possible).

Fig. 6-1 Interrupt Control Circuit Block Diagram

7. STANDBY FUNCTION

To reduce the power consumption during program wait, the μPD75117H has two standby modes (STOP mode and HALT mode).

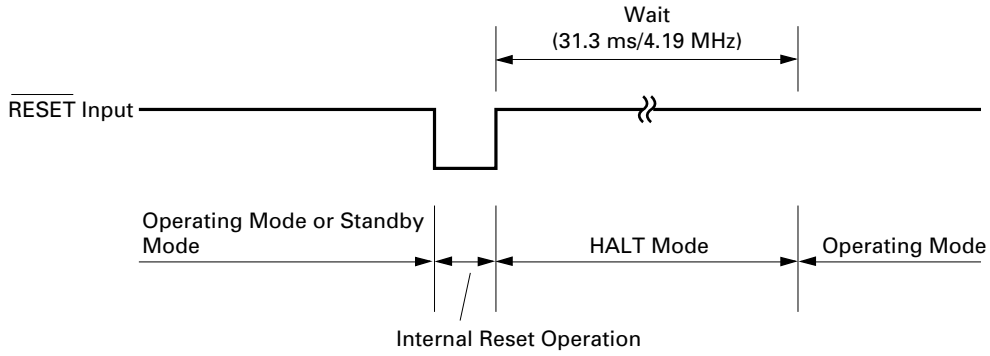

Table 7-1 Standby Mode Setting and Operation Status

		STOP Mode	HALT Mode
Setting instruction		STOP instruction	HALT instruction
Operation Status	Clock generator	System clock oscillation stopped	Only CPU clock Φ stopped
	Basic interval timer	Operation stopped	Operable (IRQBT set at reference time intervals)
	Serial interface	Operation possible only when the external \overline{SCK} input and TO0 output (when timer/event counter 0 is external TIO input) are selected as a serial clock	Operation possible if a clock other than Φ is specified as a serial clock
	Timer/event counter	Operable only when TIn pin input specified as count clock	Operation possible
	Clock output circuit	Operation stopped	Except CPU clock Φ , output possible.
	External interrupt	Operation of INT0 to INT4 possible	
	CPU	Operation stopped	Operation stopped
Release signal		Interrupt request signal from operable hardware enabled by interrupt enable flag, or \overline{RESET} input	

8. RESET FUNCTION

The reset operation timing is shown in Fig. 8-1.

Fig. 8-1 Reset Operation by $\overline{\text{RESET}}$ Input

The state of hardware after reset operation is as shown in Table 8-1.

Table 8-1 Status of Each Hardware after Resetting (1/2)

Hardware		$\overline{\text{RESET}}$ Input in Standby Mode	$\overline{\text{RESET}}$ Input during Operation
Program counter (PC)		Low-order 6 bits of program memory address 0000H are set in PC ₁₃ to PC ₈ and the contents of address 0001H are set in PC ₇ to PC ₀ . PC ₁₄ *1 is set to 0.	Low-order 6 bits of program memory address 0000H are set in PC ₁₃ to PC ₈ and the contents of address 0001H are set in PC ₇ to PC ₀ . PC ₁₄ *1 is set to 0.
PSW	Carry flag (CY)	Held	Undefined
	Skip flag (SK0 to SK2)	0	0
	Interrupt status flag (IST0, IST1)	0	0
	Bank enable flag (MBE, RBE)	Sets program memory address 000H bit 6 and bit 7 to RBE and MBE, respectively.	Sets program memory address 000H bit 6 and bit 7 to RBE and MBE, respectively.
Stack pointer (SP)		Undefined	Undefined
Stack bank selection register (SBS) *1		Undefined	Undefined
Data memory (RAM)		Held *2	Undefined
General register (X, A, H, L, D, E, B, C)		Held	Undefined
Bank selection register (MBS, RBS)		0, 0	0, 0
Basic interval timer	Counter (BT)	Undefined	Undefined
	Mode register (BTM)	0	0
Timer/event counter (n = 0, 1)	Counter (Tn)	0	0
	Modulo register (TMODn)	FFH	FFH
	Mode register (TMn)	0	0
	TOEn, TOFn	0, 0	0, 0
Serial interface	Shift register (SIO)	Held	Undefined
	Mode register (SIOM)	0	0
Clock generator, clock output circuit	Processor clock control register (PCC)	0	0
	Clock output mode register (CLOM)	0	0

* 1. Compatible with the μPD75117H only.
 2. Data of data memory addresses 0F8H to 0FDH becomes undefined by $\overline{\text{RESET}}$ input.

Table 8-1 Status of Each Hardware after Resetting (2/2)

Hardware		$\overline{\text{RESET}}$ Input in Standby Mode	$\overline{\text{RESET}}$ Input during Operation
★ Interrupt function	Interrupt request flag (IRQxxx)	IRQ1,IRQ2, IRQ4	Undefined
		Other than above	0
	Interrupt enable flag (IExxx)		0
	Priority selection register (IPS)		0
	INT0, INT1 mode registers (IM0, IM1)		0, 0
Digital port	Output buffer		OFF
	Output latch		Clear (0)
	I/O mode register (PMGA, PMGB, PMGC)		0
Analog port	PTH00 to PTH03 input latch		Undefined
	Mode register (PTHM)		0
Bit sequential buffer (BSB0 to BSB3)		0	0

9. INSTRUCTION SET

(1) Operand identifier and description

The operand is described in the operand field of each instruction in accordance with the description for the operand identifier of the instruction. (For details, refer to **RA75X Assembler Package User's Manual Language Volume (EEU-730)**.) When there are multiple elements in the description, one of the elements is selected. Upper case letters and symbols (+,-) are keywords and are described unchanged.

Various register or flag symbols can be used as a label instead of mem, fmem, pmem, bit, etc. (For details, refer to **μPD75117H User's Manual (IEU-799)**.) However, there are restrictions on the labels for which fmem and pmem can be used.

Identifier	Description	
reg	X, A, B, C, D, E, H, L	
reg1	X, B, C, D, E, H, L	
rp	XA, BC, DE, HL	
rp1	BC, DE, HL	
rp2	BC, DE	
rp'	XA, BC, DE, HL, XA', BC', DE', HL'	
rp'1	BC, DE, HL, XA', BC', DE', HL'	
rpa	HL, HL+, HL-, DE, DL	
rpa1	DE, DL	
n4	4-bit immediate data or label	
n8	8-bit immediate data or label	
mem	8-bit immediate data or label*	
bit	2-bit immediate data or label	
fmem	FB0H to FBFH, FF0H to FFFH immediate data or label	
pmem	FC0H to FFFH immediate data or label	
addr	μPD75116H	0000H to 3F7FH immediate data or label
	μPD75117H	0000H to 3FFFH immediate data or label
addr1	0000H to 5F7FH immediate data or label	
caddr	12-bit immediate data or label	
faddr	11-bit immediate data or label	
taddr	20H to 7FH immediate data (however, bit0 = 0) or label	
PORTn	PORT 0 to PORT 9, PORT12 to PORT14	
IExxx	IEBT, IESIO, IET0, IET1, IE0 to IE4	
RBn	RB0 to RB3	
MBn	MB0, MB1, MB2, MB15	

* In the case of the 8-bit data processing, an even address only can be described for mem.

(2) Operation description legend

A	: A register; 4-bit accumulator
B	: B register
C	: C register
D	: D register
E	: E register
H	: H register
L	: L register
X	: X register
XA	: Register pair (XA); 8-bit accumulator
BC	: Register pair (BC)
DE	: Register pair (DE)
HL	: Register pair (HL)
XA'	: Extension register pair (XA')
BC'	: Extension register pair (BC')
DE'	: Extension register pair (DE')
HL'	: Extension register pair (HL')
PC	: Program counter
SP	: Stack pointer
CY	: Carry flag; bit accumulator
PSW	: Program status word
MBE	: Memory bank enable flag
RBE	: Register bank enable flag
PORTn	: Portn (n = 0 to 9, 12 to 14)
IME	: Interrupt master enable flag
IPS	: Interrupt priority selection register
IE _{xxx}	: Interrupt enable flag
RBS	: Register bank selection register
MBS	: Memory bank selection register
PCC	: Processor clock control register
.	: Address, bit delimiter
(xx)	: Contents addressed by xx
xxH	: Hexadecimal data

(3) Description of addressing area field symbols

*1	MB = MBE • MBS (MBS = 0, 1, 2, 15)	Data memory addressing
*2	MB = 0	
*3	MBE = 0 : MB = 0 (00H to 7FH) MB = 15 (80H to FFH) MBE = 0 : MB = MBS (MBS = 0, 1, 2, 15)	
*4	MB = 15, fmem = FB0H to FBFH, FF0H to FFFH	
*5	MB = 15, pmem = FC0H to FFFH	
*6	addr = 0000H to 3F7FH (μPD75116H) 0000H to 3FFFH (μPD75117H)	Program memory addressing
*7	• μPD75116H addr = (Current PC) -15 to (Current PC) -1, (Current PC) + 2 to (Current PC) + 16	
	• μPD75117H addr1 = (Current PC) -15 to (Current PC) -1, (Current PC) + 2 to (Current PC) + 16	
*8	caddr = 0000H to 0FFFH (PC _{13,12} = 00B : μPD75116H) = 0000H to 0FFFH (PC _{14,13,12} = 000B : μPD75117H)	
	= 1000H to 1FFFH (PC _{13,12} = 01B : μPD75116H)	
	= 1000H to 1FFFH (PC _{14,13,12} = 001B : μPD75117H)	
	= 2000H to 2FFFH (PC _{13,12} = 10B : μPD75116H)	
	= 2000H to 2FFFH (PC _{14,13,12} = 010B : μPD75117H)	
	= 3000H to 3F7FH (PC _{13,12} = 11B : μPD75116H)	
	= 3000H to 3FFFH (PC _{14,13,12} = 011B : μPD75117H)	
	= 4000H to 4FFFH (PC _{14,13,12} = 100B : μPD75117H)	
	= 5000H to 5F7FH (PC _{14,13,12} = 101B : μPD75117H)	
*9	faddr = 0000H to 07FFH	
*10	taddr = 0020H to 007FH	
*11	addr1 = 0000H to 5F7FH (: μPD75117H only)	

- Remarks**
1. MB indicates the accessible memory bank.
 2. For *2, MB = 0 without regard to MBE and MBS.
 3. For *4 and *5, MB = 15 without regard to MBE and MBS.
 4. *6 to *10 indicate the addressable area.

(4) Explanation of machine cycle field

S shows the number of machine cycles required when skip is performed by an instruction with skip. The value of S changes as follows:

- No skip S = 0
- When instruction to be skipped is 1-byte or 2-byte instruction S = 1
- When instruction to be skipped is 3-byte instruction S = 2
 (BR !addr, BRA !addr1*, CALL !addr, CALLA !addr1* instructions)

* This instruction is valid for the μPD75117H only.

Note One machine cycle is required to skip a GETI instruction.

One machine cycle is equivalent to one cycle (= tcy) of the CPU clock Φ . Three times can be selected by PCC setting.

Instruction Group	Mnemonic	Operands	Bytes	Machine Cycles	Operation	Addressing Area	Skip Condition
Transfer	MOV	A, #n4	1	1	$A \leftarrow n4$		Stack A

10.2 DISPLAY PAGER

11. MASK OPTION SELECTION

The μ PD75117H has the following mask option.

Pin Function	Mask Option
P12 to P14	<ul style="list-style-type: none">• Pull-up resistor (can be specified bit-wise.)• No pull-up resistor (can be specified bit-wise.)

★ 12. ELECTRICAL SPECIFICATIONS

ABSOLUTE MAXIMUM RATINGS (Ta = 25 °C)

PARAMETER	SYMBOL	TEST CONDITIONS		RATING	UNIT
Supply voltage	V _{DD}			-0.3 to +7.0	V
Input voltage	V _{I1}	Except ports 12, 13 and 14		-0.3 to V _{DD} +0.3	V
	V _{I2} *1	Ports 12 to 14	Internal pull-up resistor	-0.3 to V _{DD} +0.3	V
			Open-drain	-0.3 to +7.3	V
Output voltage	V _O			-0.3 to V _{DD} +0.3	V
Output current high	I _{OH}	One pin		-15	mA
		All pins		-30	mA
Output current low	I _{OL} *2	One pin	Peak value	30	mA
			Effective value	15	mA
		Total of ports 0, 2, 12 to 14	Peak value	100	mA
			Effective value	60	mA
		Total of ports 3 to 9	Peak value	100	mA
			Effective value	60	mA
Operating temperature	T _{opt}			-40 to +60	°C
Storage temperature	T _{stg}			-65 to +150	°C

- * 1. When a voltage exceeding 6V is applied to ports 12, 13 and 14, the power supply impedance (pull-up resistor) should be 50KΩ or more.
- 2. Effective value should be calculated: [Effective value] = [Peak value] × √duty

Note Product quality may suffer if the absolute maximum rating is exceeded for even a single parameter or even momentarily.

The absolute maximum ratings are rated values at which the product is on the verge of suffering physical damage, and therefore the product must be used under conditions which ensure that the absolute maximum ratings are not exceeded.

OPERATING VOLTAGE RANGE

PARAMETER	TEST CONDITIONS	MIN.	MAX.	UNIT
CPU		- 40	+ 60	°C
Programmable threshold port (comparator input)		- 10	+ 60	°C
Other hardware		- 40	+ 60	°C

CAPACITANCE (Ta = 25 °C, VDD = 0 V)

PARAMETER	SYMBOL	TEST CONDITIONS	MIN.	TYP.	MAX.	UNIT
Input capacitance	C _{IN}	f = 1 MHz Unmeasured pins returned to 0 V			15	pF
Output capacitance	C _{OUT}				15	pF
Input/output capacitance	C _{IO}				15	pF

OSCILLATION CIRCUIT CHARACTERISTICS (Ta = -40 to +60 °C, VDD = 1.8 to 5.5 V)

RESONATOR	RECOMMENDED CONSTANT	PARAMETER	TEST CONDITIONS	MIN.	TYP.	MAX.	UNIT
*1 Ceramic resonator		Oscillator frequency (f _{xx}) *2		2.0		5.0 *4	MHz
		Oscillation stabilization time *3	After V _{DD} reaches MIN. of oscillation voltage range			4	ms
*1 Crystal resonator		Oscillator frequency (f _{xx}) *2		2.0	4.19	5.0 *4	MHz
		Oscillation stabilization time *3	V _{DD} = 4.5 to 5.5 V			10 30	ms ms
*5 External clock		X1 input frequency (f _x) *2	V _{DD} = 2.7 to 5.5 V	2.0		5.0 *4	MHz
		X1 input high-/low-level width (t _{xH} , t _{xL})		100		250	ns

* 1. When using in V_{DD} < 2.7 V, the X2 pin oscillation waveform duty should be set within the range between 40% and 60%.

$$\text{Duty} = \frac{t_{xL} \text{ (or } t_{xH})}{t_{xL} + t_{xH}} \times 100$$

- Oscillator frequency and X1 input frequency indicate oscillation circuit characteristics only. See AC CHARACTERISTICS for instruction execution time.
- The oscillation stabilization time is the time required for oscillation to stabilize after V_{DD} reaches MIN. of oscillation voltage range or the STOP mode is released.
- When the oscillator frequency is 4.19 MHz < f_{xx} ≤ 5.0 MHz, PCC = 0011 should not be selected as the instruction execution time. If PCC = 0011 is selected, one machine cycle is less than 0.95 μs and the rated MIN. value of 0.95 μs is not observed.
- The external clock cannot be used in V_{DD} < 2.7 V.

Note When the clock oscillator is used, the following should be noted concerning wiring in the area in the figure enclosed by a dotted line to prevent the influence of wiring capacitance, etc.

- The wiring should be kept as short as possible.
- No other signal lines should be crossed.
- Keep away from lines carrying a high fluctuating current.
- The oscillator capacitor grounding point should always be at the same potential as V_{ss}. Do not connect to a ground pattern carrying a high current.
- A signal should be not taken from the oscillator.

RECOMMENDED OSCILLATION CIRCUIT CONSTANT

PTH input voltage	V _{IPTH}			0		V _{DD}	V
Comparator circuit current consumption		PTHM7 set to "1"	VDD = 5.0 V		0.7		mA
			VDD = 3.0 V		0.3		mA
			VDD = 2.0 V		0.1		mA

- * The comparator cannot operate in the range of Ta = -40 to -10 °C. It must be used within the range of Ta = -10 to +60 °C.

AC CHARACTERISTICS (Ta = -40 to +60 °C, VDD = 1.8 to 5.5 V)

PARAMETER	SYMBOL	TEST CONDITIONS	MIN.	TYP.	MAX.	UNIT		
CPU clock cycle time* (Minimum instruction execution time = 1 machine cycle)	t _{cy}	V _{DD} = 2.7 to 5.5 V	0.95		16	μs		
			1.91		16	μs		
T10, T11 input frequency	f _{T1}	V _{DD} = 2.7 to 5.5 V	0		1	MHz		
			0		275	kHz		
T10, T11 input high/low-level width	t _{T1H}	V _{DD} = 2.7 to 5.5 V	0.48			μs		
	t _{T1L}		1.8			μs		
SCK cycle time	t _{KCY}	V _{DD} = 4.5 to 5.5 V	Input	0.8			μs	
			Output	0.95			μs	
			Input	3.2				μs
			Output	3.8				μs
SCK high/low-level width	t _{KH}	V _{DD} = 4.5 to 5.5 V	Input	0.4			μs	
			Output	t _{KCY} /2 - 50			ns	
	t _{KL}		Input	1.6			μs	
			Output	t _{KCY} /2 - 150			ns	
SI setup time (to SCK↑)	t _{SIK}		100			ns		
SI hold time (from SCK↑)	t _{KSI}		400			ns		
SO output delay time from SCK↓	t _{KSO}	V _{DD} = 4.5 to 5.5 V	0		300	ns		
			0		1000	ns		
INT0 to INT4 high/low-level width	t _{INTH} , t _{INTL}		5			μs		
RESET low-level width	t _{RSL}		5			μs		

* The CPU clock (Φ) cycle time is determined by the oscillator frequency of the connected resonator and the setting of the processor clock control register (PCC). The graph on the right shows the characteristic for cycle time t_{CY} supply current V_{DD} during system clock operation.

AC Timing Test Point (Except ports 0, 1, TI0, TI1, X1, X2, RESET)

(1) $V_{DD} = 2.7$ to 5.5 V

(2) $V_{DD} = 1.8$ to 2.7 V

Clock Timing

(1) $V_{DD} = 2.7$ to 5.5 V

(2) $V_{DD} = 1.8$ to 2.7 V

T10,T11 Input Timing

Serial Transfer Timing

Interrupt Input Timing

RESET Input Timing

DATA MEMORY STOP MODE LOW SUPPLY VOLTAGE DATA RETENTION CHARACTERISTICS (Ta = -40 to +60 °C)

PARAMETER	SYMBOL	TEST CONDITIONS	MIN.	TYP.	MAX.	UNIT
Data retention supply voltage	V _{DDDR}		1.8		5.5	V
Data retention supply current*1	I _{DDDR}	V _{DDDR} = 2.0 V		0.05	10	μA
Release signal set time	t _{SREL}		0			μs
Oscillation stabilization wait time*2	t _{WAIT}	Release by $\overline{\text{RESET}}$		2 ¹⁷ /f _{xx}		ms
		Release by interrupt request		*3		ms

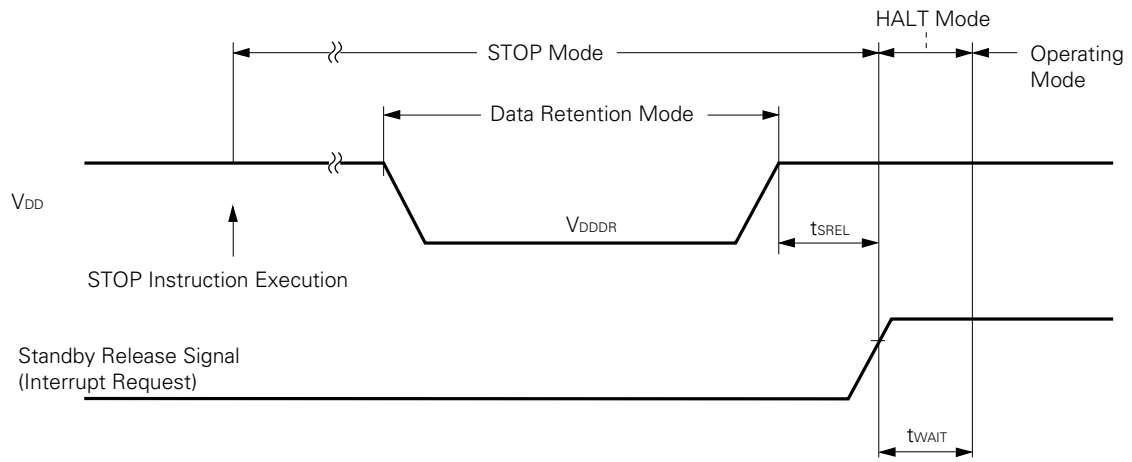

- * 1. Excluding current flowing in the internal pull-up resistors and comparator circuit.
- 2. The oscillation stabilization wait time is the time during which CPU operation is stopped to prevent unstable operation when oscillation is started.
- 3. Depends on the basic interval timer mode register (BTM) setting (see table below).

BTM3	BTM2	BTM1	BTM0	WAIT TIME (Figures in parentheses are for operation at f _{xx} = 4.19 MHz)
—	0	0	0	2 ²⁰ /f _{xx} (approx. 250 ms)
—	0	1	1	2 ¹⁷ /f _{xx} (approx. 31.3 ms)
—	1	0	1	2 ¹⁵ /f _{xx} (approx. 7.82 ms)
—	1	1	1	2 ¹³ /f _{xx} (approx. 1.95 ms)

Data Retention Timing (STOP mode release by $\overline{\text{RESET}}$)

Data Retention Timing (Standby release signal: STOP mode release by interrupt signal)

14. RECOMMENDED SOLDERING CONDITIONS

The μPD75117H should be soldered and mounted under the conditions recommended in the table below.

For details of recommended conditions, refer to **the information document "Semiconductor Device Mount Technology Manual" (IEI-1207)**.

For soldering methods and conditions other than those recommended below, contact our sales personnel.

Table 14-1 Surface Mount Type Soldering Conditions

(1) μPD75117HGC: 64-Pin Plastic QFP (□14 mm)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature : 230 °C, Duration : 30 sec. max. (at 210 °C or above), Number of times : twice <Points to note> Flux washing by the water after the first reflow should be avoided.	IR30-00-2
VPS	Package peak temperature : 215 °C, Duration : 40 sec. max. (at 200 °C or above), Number of times : twice <Points to note> Flux washing by the water after the first reflow should be avoided.	VP15-00-2
Wave soldering	Solder bath temperature : 260 °C max., Duration : 10 sec. max., Number of times : once, Preheating temperature : 120 °C max. (package surface temperature)	WX60-00-1
Pin part heating	Pin part temperature : 300 °C max., Duration : 3 sec. max. (per device side)	—

(2) μPD75117GK: 64-Pin Plastic QFP (□12 mm)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature : 230 °C, Duration : 30 sec. max. (at 210 °C or above), Number of times : twice, Time limit: 7 days* (thereafter 10 hours prebaking at 125°C required) <Points to note> Flux washing by the water after the first reflow should be avoided.	IR35-107-2
VPS	Package peak temperature : 215 °C, Duration : 40 sec. max. (at 200 °C or above), Number of times : twice, Time limit: 7 days* (thereafter 10 hours prebaking at 125°C required) <Points to note> Flux washing by the water after the first reflow should be avoided.	VP15-107-2
Pin part heating	Pin part temperature : 300 °C max., Duration : 3 sec. max. (per device side)	—

* For the storage period after dry-pack decapsulation storage conditions are max. 25 °C, 65 % RH.

Note Use of more than one soldering method should be avoided (except in the case of pin part heating).

Product Name		μPD75104/106/108/112/116	μPD75104A/108A	μPD75108F/112F/116F
Item				
ROM (byte)		4K/6K/8K/12K/16K (Mask ROM)	4K/8K (Mask ROM)	8K/12K/16K (Mask ROM)
RAM (× 4 bits)		320/320/512/512/512	320/512	512
Instruction set		75X High-End		
I/O port	Total	58		
	CMOS input	10	10 (Pull-up resistor mask option : 4)	10
	CMOS input/output	32 (LED direct drive capability *2)	32 (Pull-up resistor mask option : 24, LED direct drive capability)	32 (LED direct drive capability *2)
	N-ch open-drain input/output	12 (LED direct drive capability *2)		
	Withstand voltage	+12 V		+10 V
	Pull-up resistor	Can be incorporated by mask option		
	Analog input	4 (4-bit precision)		
Power-on reset circuit	On-chip (Mask option)		None	
Power-on flag				
Operating voltage	2.7 to 6.0 V		2.7 to 5.0 V (Ta = -40 to +50 °C) 2.8 to 5.0 V	
Operating temperature range	-40 to +85 °C		-40 to +60 °C	
Minimum instruction execution time	0.95 μs (operating at 4.5 to 6.0 V) 3.8 μs (operating at 2.7 V)		0.95 μs (operating at 4.5 to 5.0 V) 1.91 μs (operating at 2.7V)	
Package	<ul style="list-style-type: none"> • 64-pin plastic shrink DIP (750 mil) • 64-pin plastic QFP (14 × 20 mm) 	<ul style="list-style-type: none"> • 64-pin plastic QFP (□14 mm) (Resin thick 2.55 mm) • 64-pin plastic QFP (□14 mm) (Resin thick 1.5 mm) 	<ul style="list-style-type: none"> • 64-pin plastic QFP (14 × 20 mm) 	

- * 1. 75X High-End can also be used by means of the 16K-byte mode/24K-byte mode switching function.
- 2. For details, refer to the electrical specifications in each data sheet.

μPD75116H/117H	μPD75P108B	μPD75P116	μPD75P117H
16K/24K (Mask ROM)	8K (One-time PROM, EPROM)	8K (One-time PROM)	24K (One-time PROM)
768	512		768
75X High-End/Extended High-End	75X High-End		75X Extended High-End*1
58			
10			
32 (LED direct drive capability *2)			
12 (LED direct drive capability *2)			
+6 V	+12 V		+6 V
Can be incorporated by mask option	None		
4 (4-bit precision)			
None			
1.8 to 5.5 V	2.7 to 6.0 V	5 V ±10 %	1.8 to 5.5 V
-40 to +60 °C	-40 to +85 °C		-40 to +60 °C
0.95 μs (operating at 2.7 V) 1.91 μs (operating at 1.8 V)	0.95 μs (operating at 4.5 to 6.0 V) 3.8 μs (operating at 2.7 V)	0.95 μs (operating at 4.75 to 5.5 V)	0.95 μs (operating at 2.7 V) 1.91 μs (operating at 1.8 V)
<ul style="list-style-type: none"> • 64-pin plastic QFP (□12 mm) • 64-pin plastic QFP (□14 mm) (Resin thick 2.55 mm)	<ul style="list-style-type: none"> • 64-pin plastic shrink DIP (750 mil) • 64-pin ceramic shrink DIP (750 mil) • 64-pin plastic QFP (14 × 20 mm) 	<ul style="list-style-type: none"> • 64-pin plastic shrink DIP (750 mil) • 64-pin plastic QFP (14 × 20 mm) 	<ul style="list-style-type: none"> • 64-pin plastic QFP (□12 mm) • 64-pin plastic QFP (□14 mm) (Resin thick 2.55 mm)

APPENDIX B. DEVELOPMENT TOOLS

The following development tools are available for system development using the μPD75116H/75117H.

Hardware	IE-75000-R*1 IE-75001-R	75X series in-circuit emulator
	IE-75000-R-EM*2	Emulation board for the IE-75000-R or IE-75001-R
	EP-75108AGC-R EV-9200G-64	Emulation probe for the μPD75116HGC/75117HGC. A 64-pin conversion socket (EV-9200G-64) is also provided.
	EP-75117GK-R EV-9500G-64	Emulation probe for the μPD75116HGK/75117HGK. A 64-pin conversion socket (EV-9500G-64) is also provided.
	PG-1500	PROM programmer
	PA-75P117GC	PROM programmer adapter for the μPD75P117HGC, connected to the PG-1500.
	PA-75P117GK	PROM programmer adapter for the μPD75P117HGK, connected to the PG-1500.
	Software	IE control program PG-1500 controller RA75X relocatable assembler

- * 1. Maintenance product
 2. Not incorporated in the IE-75001-R.
 3. A task swapping function is provided in Ver. 5.00/5.00A, but this function cannot be used with this software.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

The devices listed in this document are not suitable for use in aerospace equipment, submarine cables, nuclear reactor control systems and life support systems. If customers intend to use NEC devices for above applications or they intend to use "Standard" quality grade NEC devices for applications not intended by NEC, please contact our sales people in advance.

Application examples recommended by NEC Corporation

Standard: Computer, Office equipment, Communication equipment, Test and Measurement equipment, Machine tools, Industrial robots, Audio and Visual equipment, Other consumer products, etc.

Special: Automotive and Transportation equipment, Traffic control systems, Antidisaster systems, Anticrime systems, etc.
