

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

4-BIT SINGLE-CHIP MICROCONTROLLER

DESCRIPTION

The μ PD753036 is one of the 75XL series 4-bit single-chip microcontroller chips and has a data processing capability comparable to that of an 8-bit microcontroller.

It has an on-chip LCD controller/driver with a larger ROM capacity and extended CPU functions compared with the conventional μ PD75336, and can provide high-speed operation at a low supply voltage of 1.8 V. It can be supplied in a small plastic TQFP package (12 × 12 mm) and is suitable for small sets using LCD panels.

★ A stricter quality assurance program applies the μ PD753036(A) compared to the μ PD753036 (standard model). (In terms of NEC Electronics' quality grading, this is a "special" grade product.)

For details of functions refer to the following User's Manual.

μ PD753036 User's Manual: U10201E

FEATURES

- Low voltage operation $V_{DD} = 1.8$ to 5.5 V
 - Can be driven by two 1.5 V batteries
- On-chip memory
 - Program memory (ROM): 16384 × 8 bits
 - Data memory (RAM): 768 × 4 bits
- Capable of high-speed operation and variable instruction execution time for power saving
 - 0.95, 1.91, 3.81, 15.3 μ s (@ 4.19 MHz)
 - 0.67, 1.33, 2.67, 10.7 μ s (@ 6.0 MHz)
 - 122 μ s (@ 32.768 kHz)
- Internal programmable LCD controller/driver
- Internal A/D converter which can be operated at a low voltage
 - 8-bit resolution × 8 channels (successive approximation type)
- Small plastic TQFP (12 × 12 mm)
 - Suitable for small sets such as cameras
- One-time PROM: μ PD75P3036

APPLICATION

Radio transmitter/receiver, compact disc player, rice cooker, home bakery, etc.

Unless otherwise specified, the μ PD753036 is treated as the representative model throughout this document.

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.

Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.

ORDERING INFORMATION

	Part number	Package	Quality grade
	μPD753036GC-xxx-3B9	80-pin plastic QFP (14 × 14 mm, 0.65 mm pitch)	Standard
★	μPD753036GC-xxx-3B9-A	80-pin plastic QFP (14 × 14 mm, 0.65 mm pitch)	Standard
	μPD753036GK-xxx-BE9	80-pin plastic TQFP (fine pitch) (12 × 12 mm, 0.5 mm pitch)	Standard
★	μPD753036GK-xxx-BE9-A	80-pin plastic TQFP (fine pitch) (12 × 12 mm, 0.5 mm pitch)	Standard
★	μPD753036GC(A)-xxx-3B9	80-pin plastic QFP (14 × 14 mm, 0.65 mm pitch)	Special

- Remarks**
1. Products with "-A" at the end of the part number are lead-free products.
 2. xxx indicates ROM code suffix.

Please refer to "Quality Grades on NEC Semiconductor Devices" (Document No. C11531E) published by NEC Electronics Corporation to know the specification of quality grade on the devices and its recommended applications.

Functional Outline

Parameter		Function	
Minimum instruction execution time		<ul style="list-style-type: none"> • 0.95, 1.91, 3.81, 15.3 μs (main system clock: @4.19 MHz operation) • 0.67, 1.33, 2.67, 10.7 μs (main system clock: @6.0 MHz operation) • 122 μs (subsystem clock: @32.768 kHz operation) 	
On-chip memory		ROM	16384 × 8 bits
		RAM	768 × 4 bits
General purpose register		<ul style="list-style-type: none"> • 4-bit operation: 8 × 4 banks • 8-bit operation: 4 × 4 banks 	
Input/output port	CMOS input	8	On-chip pull-up resistors can be specified by using software: 27
	CMOS input/output	20	
	Bit port output	8	Also used for segment pins
	N-ch open-drain input/output pins	8	On-chip pull-up resistors can be specified by using mask option 13 V withstand voltage
	Total	44	
LCD controller/driver		<ul style="list-style-type: none"> • Segment selection: 12/16/20 segments (can be changed to bit port output in unit of 4; max. 8) • Display mode selection: Static 1/2 duty (1/2 bias) 1/3 duty (1/2 bias) 1/3 duty (1/3 bias) 1/4 duty (1/3 bias) <p>On-chip split resistor for LCD drive can be specified by using mask option</p>	
Timer		5 channels <ul style="list-style-type: none"> • 8-bit timer/event counter: 3 channels (16-bit timer/event counter, career generator, timer with gate) • Basic interval/watchdog timer: 1 channel • Watch timer: 1 channel 	
Serial interface		<ul style="list-style-type: none"> • 3-wire serial I/O mode ... MSB or LSB can be selected for transferring first bit • 2-wire serial I/O mode • SBI mode 	
A/D converter		8-bit resolution × 8 channels (1.8 V ≤ AVREF ≤ VDD)	
Bit sequential buffer (BSB)		16 bits	
Clock output (PCL)		<ul style="list-style-type: none"> • φ, 524, 262, 65.5 kHz (main system clock: @4.19 MHz operation) • φ, 750, 375, 93.8 kHz (main system clock: @6.0 MHz operation) 	
Buzzer output (BUZ)		<ul style="list-style-type: none"> • 2, 4, 32 kHz (main system clock: @4.19 MHz operation or subsystem clock: @32.768 kHz operation) • 2.93, 5.86, 46.9 kHz (main system clock: @6.0 MHz operation) 	
Vectored interrupts		External: 3, Internal: 5	
Test input		External: 1, Internal: 1	
System clock oscillator		<ul style="list-style-type: none"> • Ceramic or crystal oscillator for main system clock oscillation • Crystal oscillator for subsystem clock oscillation 	
Standby function		STOP/HALT mode	
Power supply voltage		VDD = 1.8 to 5.5 V	
Package		<ul style="list-style-type: none"> • 80-pin plastic QFP (14 × 14 mm, 0.65 mm pitch) • 80-pin plastic TQFP (fine pitch) (12 × 12 mm, 0.5 mm pitch)

3. PIN FUNCTION

3.1 Port Pins (1/2)

Pin Name	Input/Output	Alternate Function	Function	8-bit Access	State after Reset	I/O Circuit Type ^{Note 1}
P00	Input	INT4	4-bit input port (PORT0). For P01 to P03, connections of on-chip pull-up resistors can be specified by software in 3-bit units.	No	Input	ⓑ
P01		$\overline{\text{SCK}}$				ⓕ-A
P02		SO/SB0				ⓕ-B
P03		SI/SB1				Ⓜ-C
P10	Input	INT0	4-bit input port (PORT1) Connections of on-chip pull-up resistors can be specified by software in 4-bit units. P10/INT0 can select noise eliminating circuit.	No	Input	ⓑ-C
P11		INT1				
P12		INT2				
P13		T10				
P20	Input/Output	PTO0	4-bit input/output port (PORT2) Connections of on-chip pull-up resistors can be specified by software in 4-bit units.	No	Input	E-B
P21		PTO1				
P22		PCL/PTO2				
P23		BUZ				
P30	Input/Output	LCDCL	Programmable 4-bit input/output port (PORT3). This port can be specified input/output in bit units. Connections of on-chip pull-up resistor can be specified by software in 4-bit units.	No	Input	E-B
P31		SYNC				
P32		–				
P33		–				
P40-P43 ^{Note 2}	Input/Output	–	N-ch open-drain 4-bit input/output port (PORT4). A pull-up resistor can be contained bit-wise (mask option). In the open-drain mode, withstands up to 13 V.	Yes	High level (when pull-up resistors are contained) or high impedance	M-D
P50-P53 ^{Note 2}		–				

- Notes**
1. Circled characters indicate the Schmitt-trigger input.
 2. If on-chip pull-up resistors are not specified by mask option (when used as N-ch open-drain input port), low level input leakage current increases when input or bit manipulation instruction is executed.

3.1 Port Pins (2/2)

Pin Name	Input/Output	Alternate Function	Function	8-bit Access	State after Reset	I/O Circuit Type ^{Note 1}	
P60	Input/Output	KR0	Programmable 4-bit input/output port (PORT6). This port can be specified for input/output bit-wise. Connections of on-chip pull-up resistors can be specified by software in 4-bit units.	Yes	Input	ⓕ-A	
P61		KR1					
P62		KR2					
P63		KR3					
P70	Input/Output	KR4	4-bit input/output port (PORT7). Connections of on-chip pull-up resistors can be specified by software in 4-bit units.		Input	ⓕ-A	
P71		KR5					
P72		KR6					
P73		KR7					
P80	Input/Output	TI1	4-bit input/output port (PORT8). Connections of on-chip pull-up resistors can be specified by software in 4-bit units.	No	Input	ⓔ-E	
P81		TI2					
P82		AN6				Y-B	
P83		AN7					
BP0	Output	S24	1-bit output port (BIT PORT) Also used for segment output pins.		No	Note 2	H-A
BP1		S25					
BP2		S26					
BP3		S27					
BP4	Output	S28					
BP5		S29					
BP6		S30					
BP7		S31					

Notes 1. Circled characters indicate the Schmitt-trigger input.

2. BP0 through BP7 select V_{LC1} as an input source.

However, the output levels change depending on the external circuit of BP0 through BP7 and V_{LC1} .

Example Because BP0 through BP7 are mutually connected inside the μPD753036, the output levels of BP0 through BP7 are determined by R_1 , R_2 , and R_3 .

3.2 Non-Port Pins (1/2)

Pin Name	Input/Output	Alternate Function	Function	State after Reset	I/O Circuit Type ^{Note 1}
TI0	Input	P13	Inputs external event pulses to the timer/event counter.	Input	Ⓟ-C
TI1		P80			Ⓧ-E
TI2		P81			
PTO0	Output	P20	Timer/event counter output	Input	E-B
PTO1		P21			
PTO2		P22	Clock output		
PCL					
BUZ	P23	Optional frequency output (for buzzer output or system clock trimming)			
SCK	Input/Output	P01	Serial clock input/output	Input	Ⓧ-A
SO/SB0		P02	Serial data output Serial data bus input/output		Ⓧ-B
SI/SB1		P03	Serial data input Serial data bus input/output		Ⓜ-C
INT4	Input	P00	Edge detection vectored interrupt input (both rising edge and falling edge detection)	Input	Ⓟ
INT0	Input	P10	Edge detection vectored interrupt input (detection edge can be selected) INT0/P10 can select noise eliminator.	Input	Ⓟ-C
INT1		P11			
INT2	Input	P12	Edge-detection-testable input	Input	Ⓧ-C
AN0-AN5	Input	–	Analog signal input for A/D converter	Input	Y
AN6		P82			Y-B
AN7		P83			
AV _{REF}	–	–	A/D converter reference voltage input	–	Z-N
AV _{SS}	–	–	A/D converter reference GND	–	Z-N
KR0-KR3	Input	P60-P63	Falling edge detection testable input	Input	Ⓧ-A
KR4-KR7	Input	P70-P73	Falling edge detection testable input	Input	Ⓧ-A
S12-S23	Output	–	Segment signal output	Note 2	G-A
S24-S31	Output	BP0-BP7	Segment signal output	Note 2	H-A
COM0-COM3	Output	–	Common signal output	Note 2	G-B
V _{LC0} -V _{LC2}	–	–	LCD drive power On-chip split resistor is enable (mask option).	–	–
BIAS	Output	–	Output for external split resistor disconnect	Note 3	–

- Notes 1.** Circled characters indicate the Schmitt trigger input.
- 2.** Each display output selects the following V_{LCX} as input source.
S12-S31: V_{LC1}, COM0-COM2: V_{LC2}, COM3: V_{LC0}.
- 3.** When a split resistor is contained Low level
When no split resistor is containedHigh-impedance

3.2 Non-Port Pins (2/2)

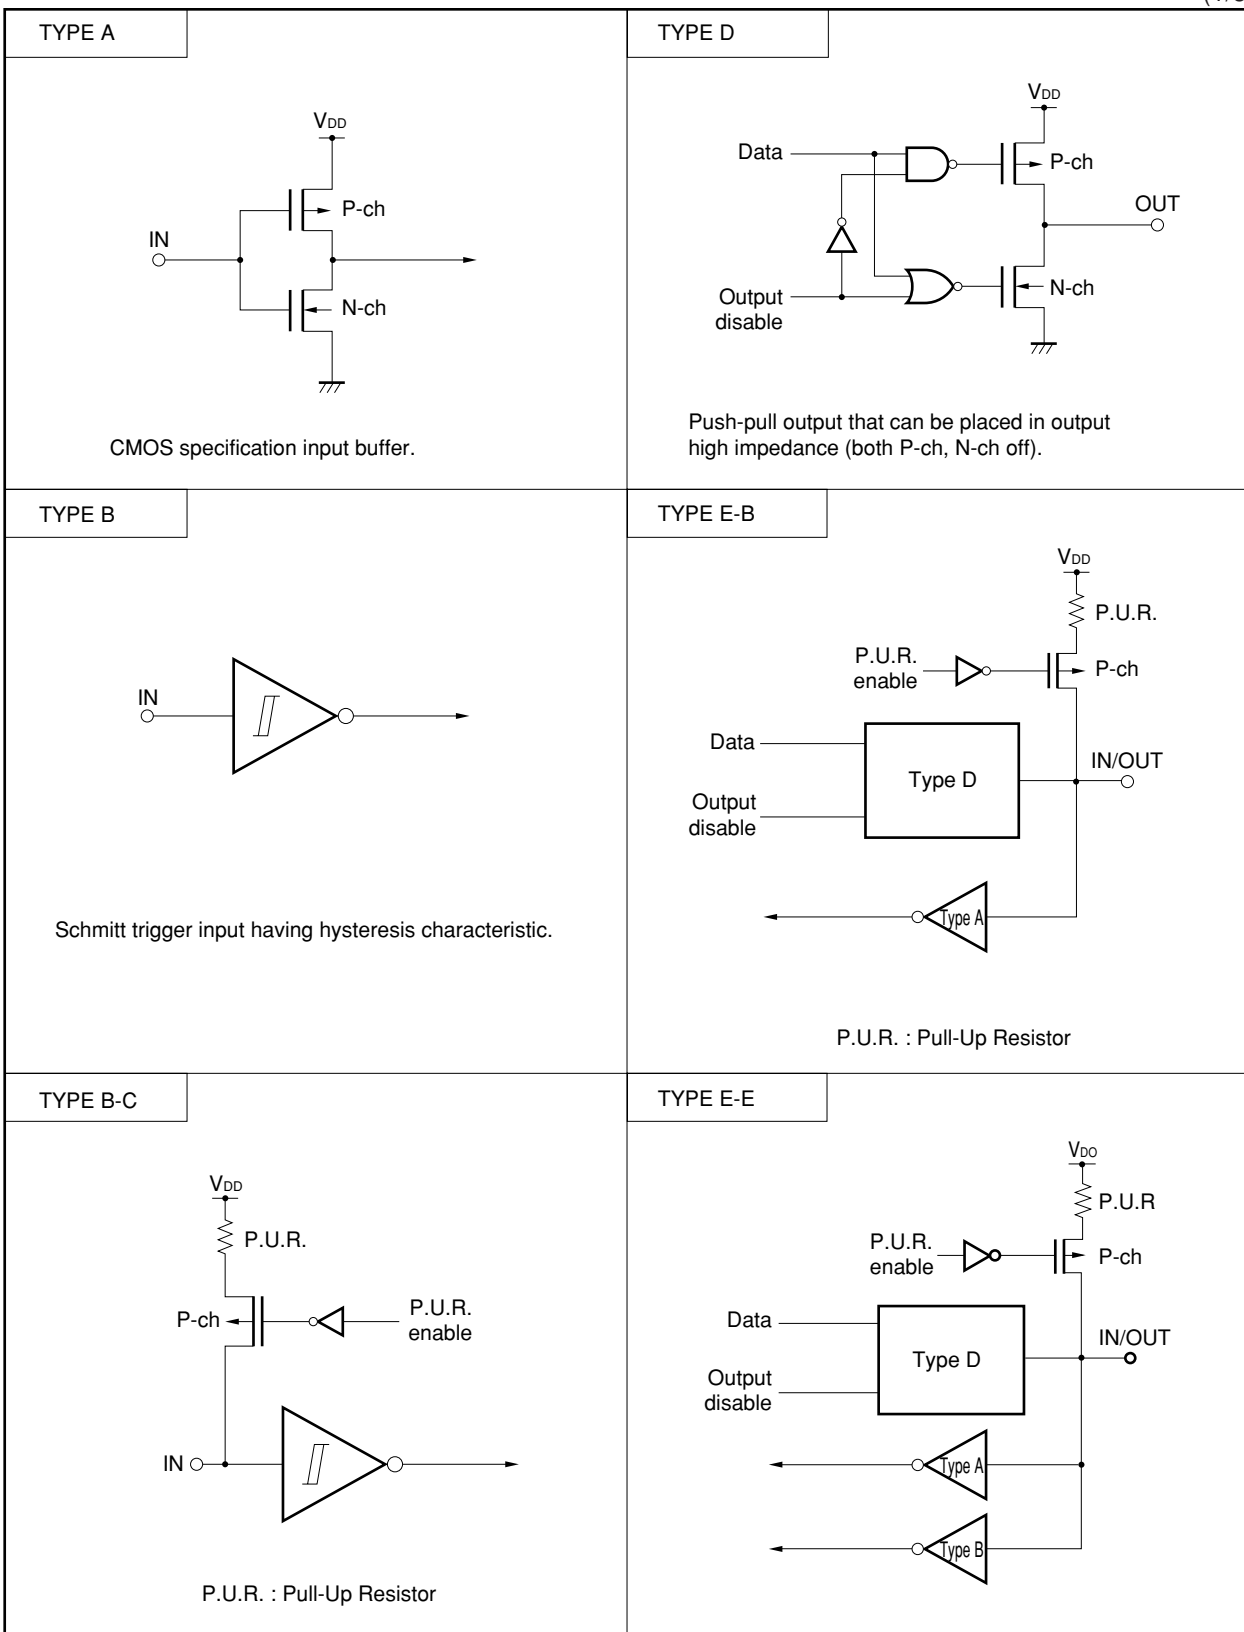

Pin Name	Input/Output	Alternate Function	Function	State after Reset	I/O Circuit Type ^{Note 1}
LCDCL ^{Note 2}	Output	P30	Clock output for externally expanded driver	Input	E-B
SYNC ^{Note 2}	Output	P31	Clock output for externally expanded driver sync	Input	E-B
X1	Input	–	Crystal/ceramic connection pin for the main system clock oscillator. When inputting the external clock, input the external clock to pin X1, and the reverse phase of the external clock to pin X2.	–	–
X2	–				
XT1	Input	–	Crystal connection pin for the subsystem clock oscillator. When the external clock is used, input the external clock to pin XT1 and the reverse phase of the external clock to pin XT2. Pin XT1 can be used as a 1-bit input (test) pin.	–	–
XT2	–				
$\overline{\text{RESET}}$	Input	–	System reset input (low level active)	–	ⓑ
IC	–	–	Internally connected. Connect directly to V _{DD} .	–	–
V _{DD}	–	–	Positive power supply	–	–
V _{SS}	–	–	GND	–	–

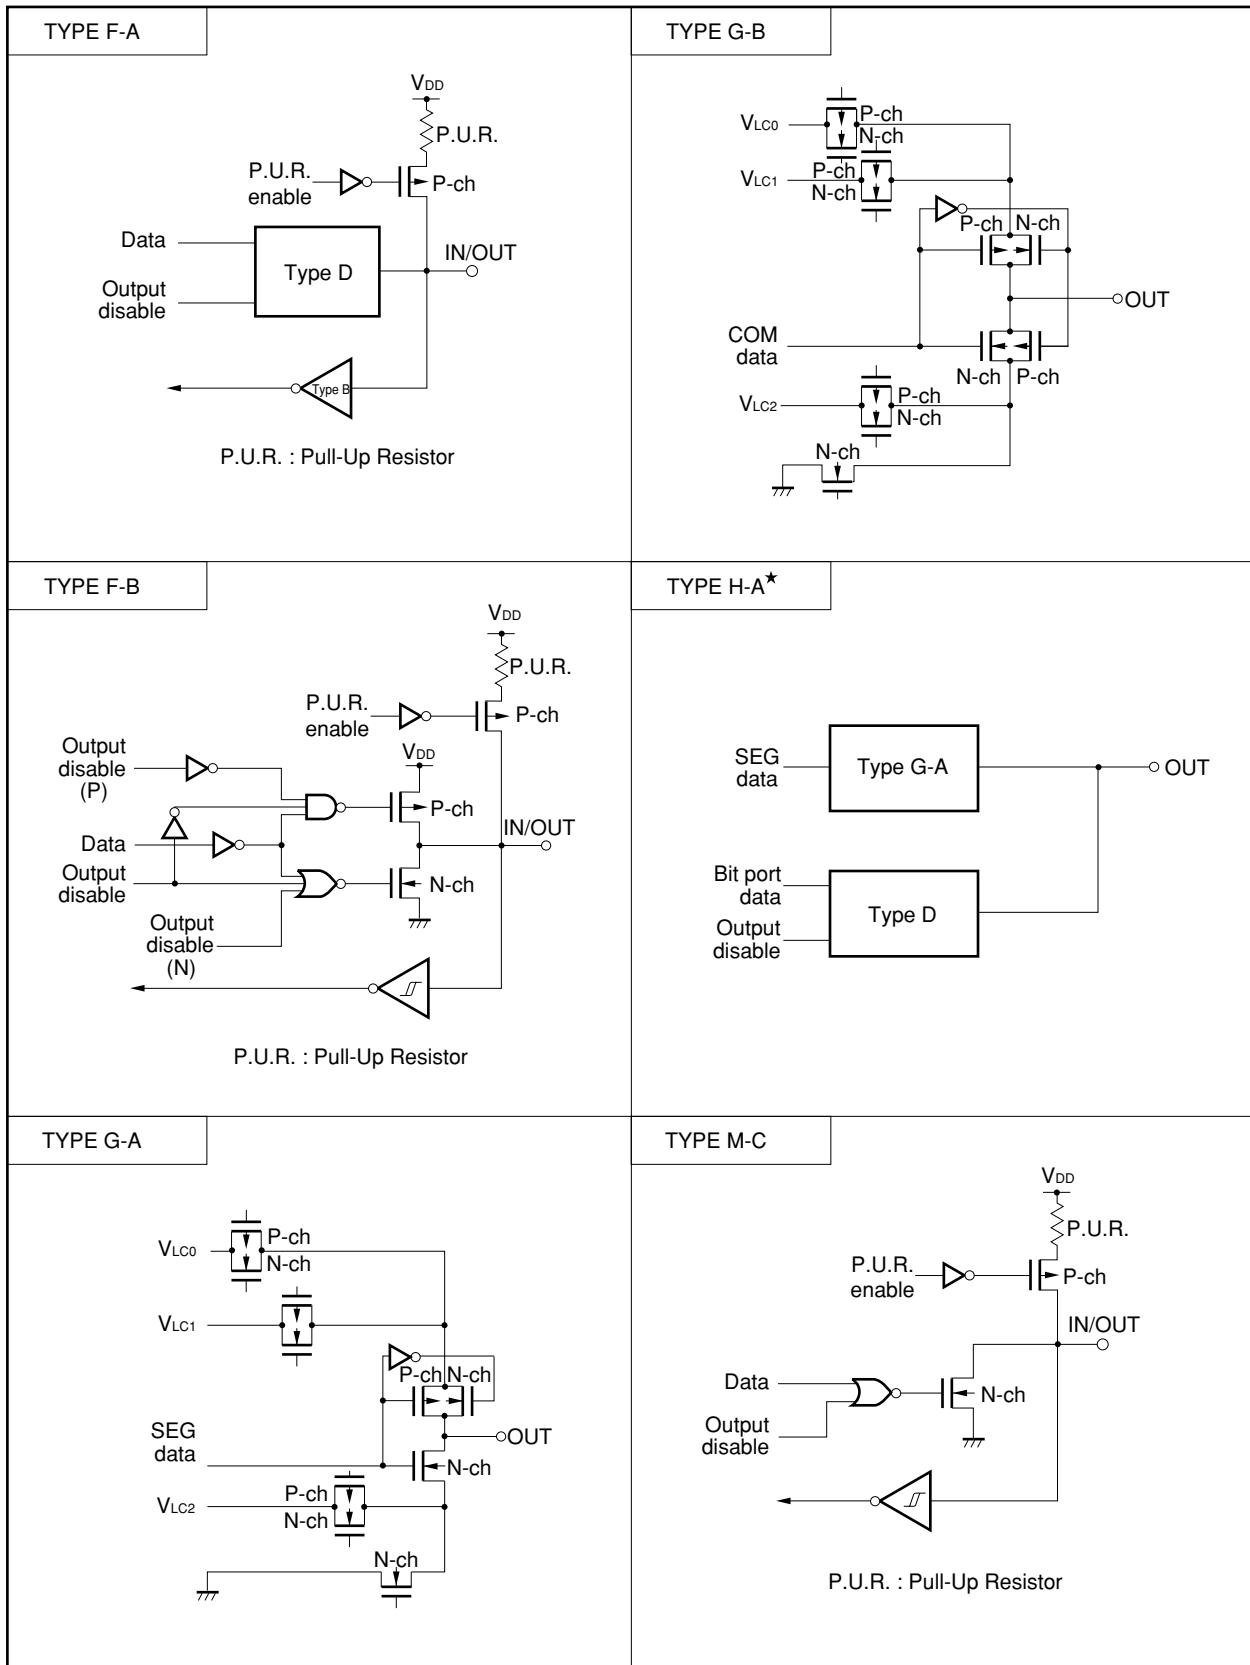

- Notes**
1. Circled characters indicate the Schmitt-trigger input.
 2. These pins are provided for future system expansion. At present, these pins are used only as pins P30 and P31.

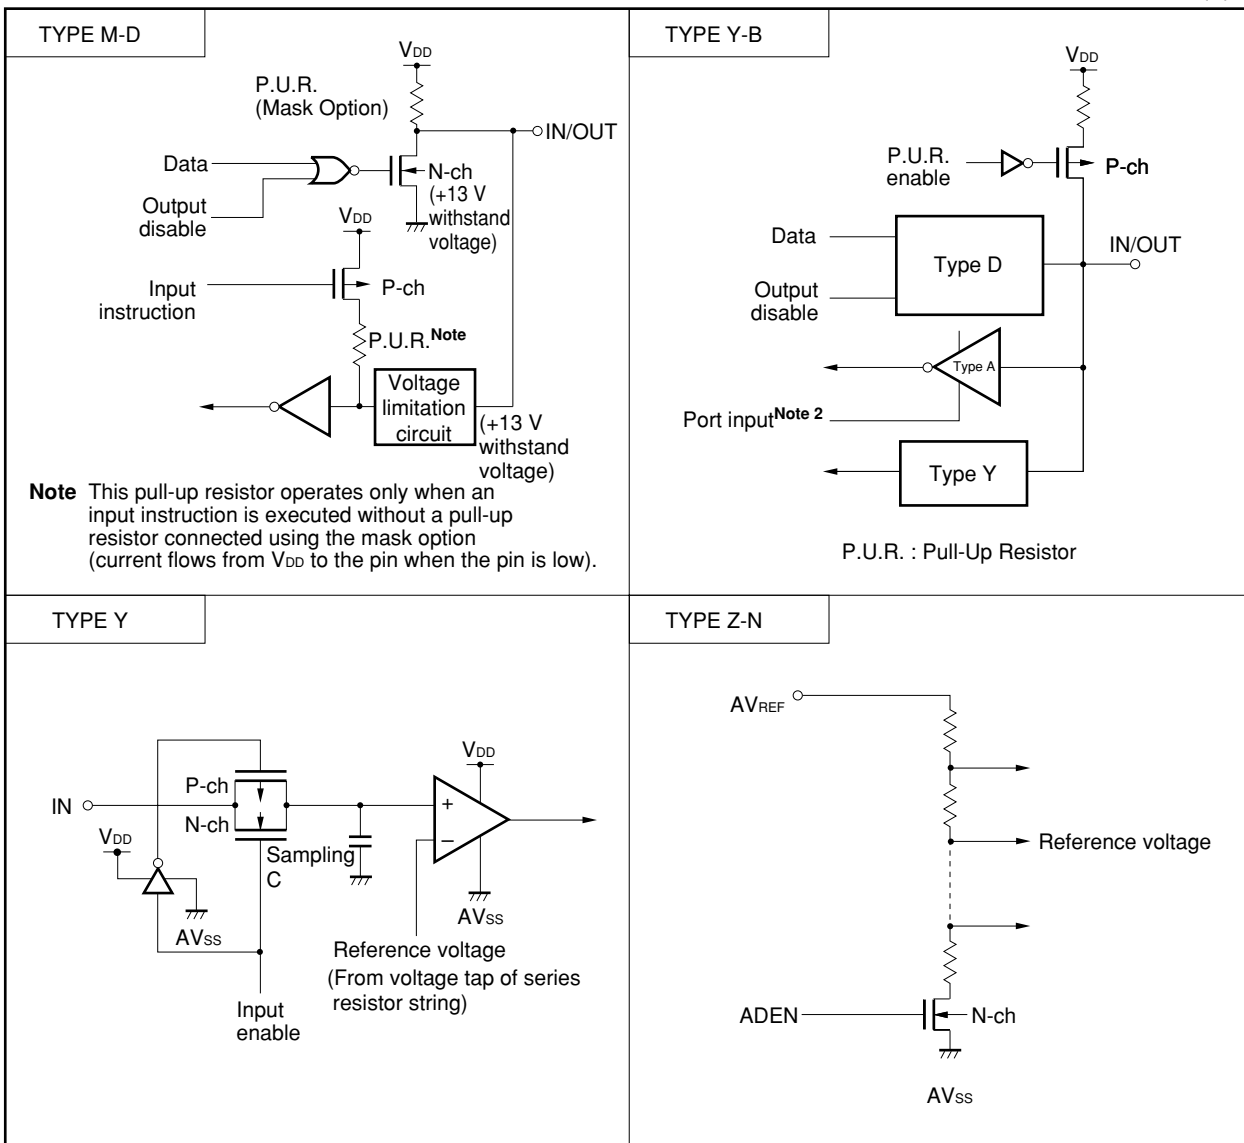

3.3 Pin Input/Output Circuits

The μ PD753036 pin input/output circuits are shown schematically.

(1/3)

3.4 Recommended Connections for Unused Pins

Table 3-1. List of Recommended Connections for Unused Pins

Pin	Recommended Connection	
P00/INT4	Connect to V _{SS} or V _{DD}	
P01/ $\overline{\text{SCK}}$	Connect to V _{SS} or V _{DD} individually via resistor	
P02/SO/SB0		
P03/SI/SB1	Connect to V _{SS}	
P10/INT0-P12/INT2	Connect to V _{SS} or V _{DD}	
P13/TI0		
P20/PTO0	Input: Individually connect to V _{SS} or V _{DD} via resistor Output: Leave unconnected	
P21/PTO1		
P22/PCL/PTO2		
P23/BUZ		
P30/LCDCL		
P31/SYNC		
P32		
P33		
P40-P43		Input: Connect to V _{SS} .
P50-P53		Output: Connect to V _{SS} . (Do not connect a pull-up resistor using the mask option.)
P60/KR0-P63/KR3		Input: Individually connect to V _{SS} or V _{DD} via resistor Output: Leave unconnected
P70/KR4-P73/KR7		
P80/TI1, P81/TI2		
P82/AN6, P83/AN7		
S12-S23	Leave unconnected	
S24/BP0-S31/BP7		
COM0-COM3		
V _{LC0} -V _{LC2}	Connect to V _{SS}	
BIAS	Only if all of V _{LC0} -V _{LC2} are unused, connect to V _{SS} . In other cases, no connection required.	
XT1 ^{Note}	Connect to V _{SS}	
XT2 ^{Note}	Leave unconnected	
AN0-AN5	Connect to V _{SS} or V _{DD}	
AV _{REF}	Connect to V _{SS}	
AV _{SS}		
IC	Connect to V _{DD} directly	

Note When the subsystem clock is not used, set SOS. 0 to 1 (so as not to use the internal feedback resistor).

4. SWITCHING FUNCTION BETWEEN Mk I MODE AND Mk II MODE

4.1 Difference between Mk I and Mk II

The CPU of μPD753036 has the following two modes: Mk I and Mk II, either of which can be selected. The mode can be switched by the bit 3 of the Stack Bank Select register (SBS).

- Mk I mode: Upward compatible with μPD75336.
Can be used in the 75XL CPU with a ROM capacity of up to 16K bytes.
- Mk II mode: Incompatible with μPD75336.
Can be used in all the 75XL CPU's including those products whose ROM capacity is more than 16 Kbytes.

Table 4-1. Differences between Mk I Mode and Mk II Mode

	Mk I Mode	Mk II Mode
Program memory (bytes)	16384	
Number of stack bytes for subroutine instructions	2 bytes	3 bytes
BRA !addr1 instruction CALLA !addr1 instruction	Not available	Available
CALL !addr instruction	3-machine cycles	4-machine cycles
CALLF !faddr instruction	2-machine cycles	3-machine cycles

Caution Mk II supports a program area exceeding 16K bytes in the 75X and 75XL series. Therefore, this mode is useful for enhancing software compatibility with products exceeding 16K bytes.

When Mk II mode is selected, the number of stack bytes used can be increased by 1 byte per stack compared with Mk I mode. When the CALL !addr instruction and CALLF !faddr instruction are used, the number of machine cycles becomes greater by 1. Therefore, use Mk I mode if the RAM efficiency and processing capability is more important than software compatibility.

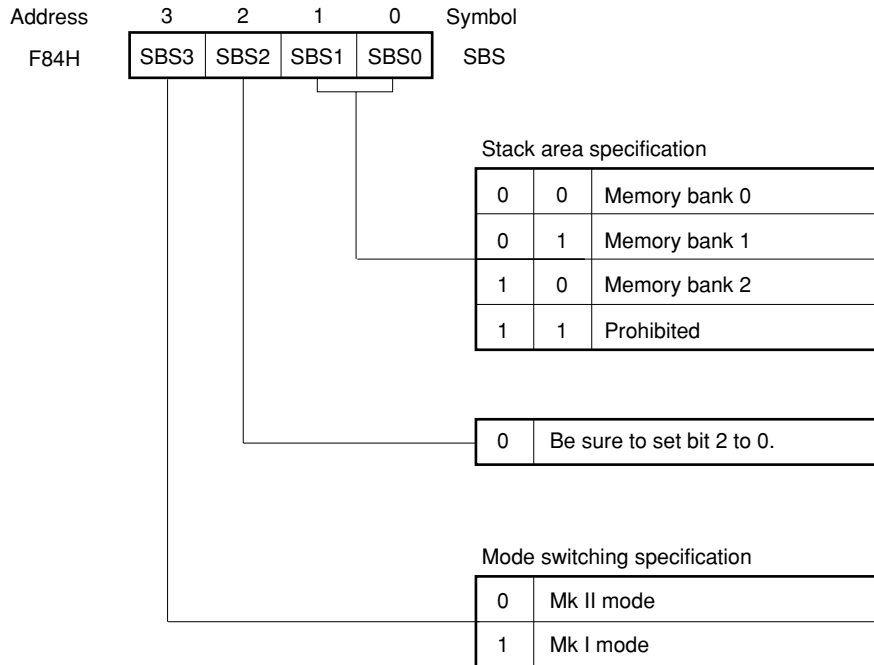

4.2 Setting Method of Stack Bank Select Register (SBS)

Switching between the Mk I mode and Mk II mode can be done by the SBS. Figure 4-1 shows the format. The SBS is set by a 4-bit memory manipulation instruction.

When using the Mk I mode, the SBS must be initialized to 10××B ^{Note} at the beginning of a program. When using the Mk II mode, it must be initialized to 00××B ^{Note}.

Note The desired numbers must be set in the ×× positions.

Figure 4-1. Stack Bank Select Register Format

Caution Since SBS. 3 is set to “1” after a RESET signal is generated, the CPU operates in the Mk I mode. When executing an instruction in the Mk II mode, set SBS. 3 to “0” to select the Mk II mode.

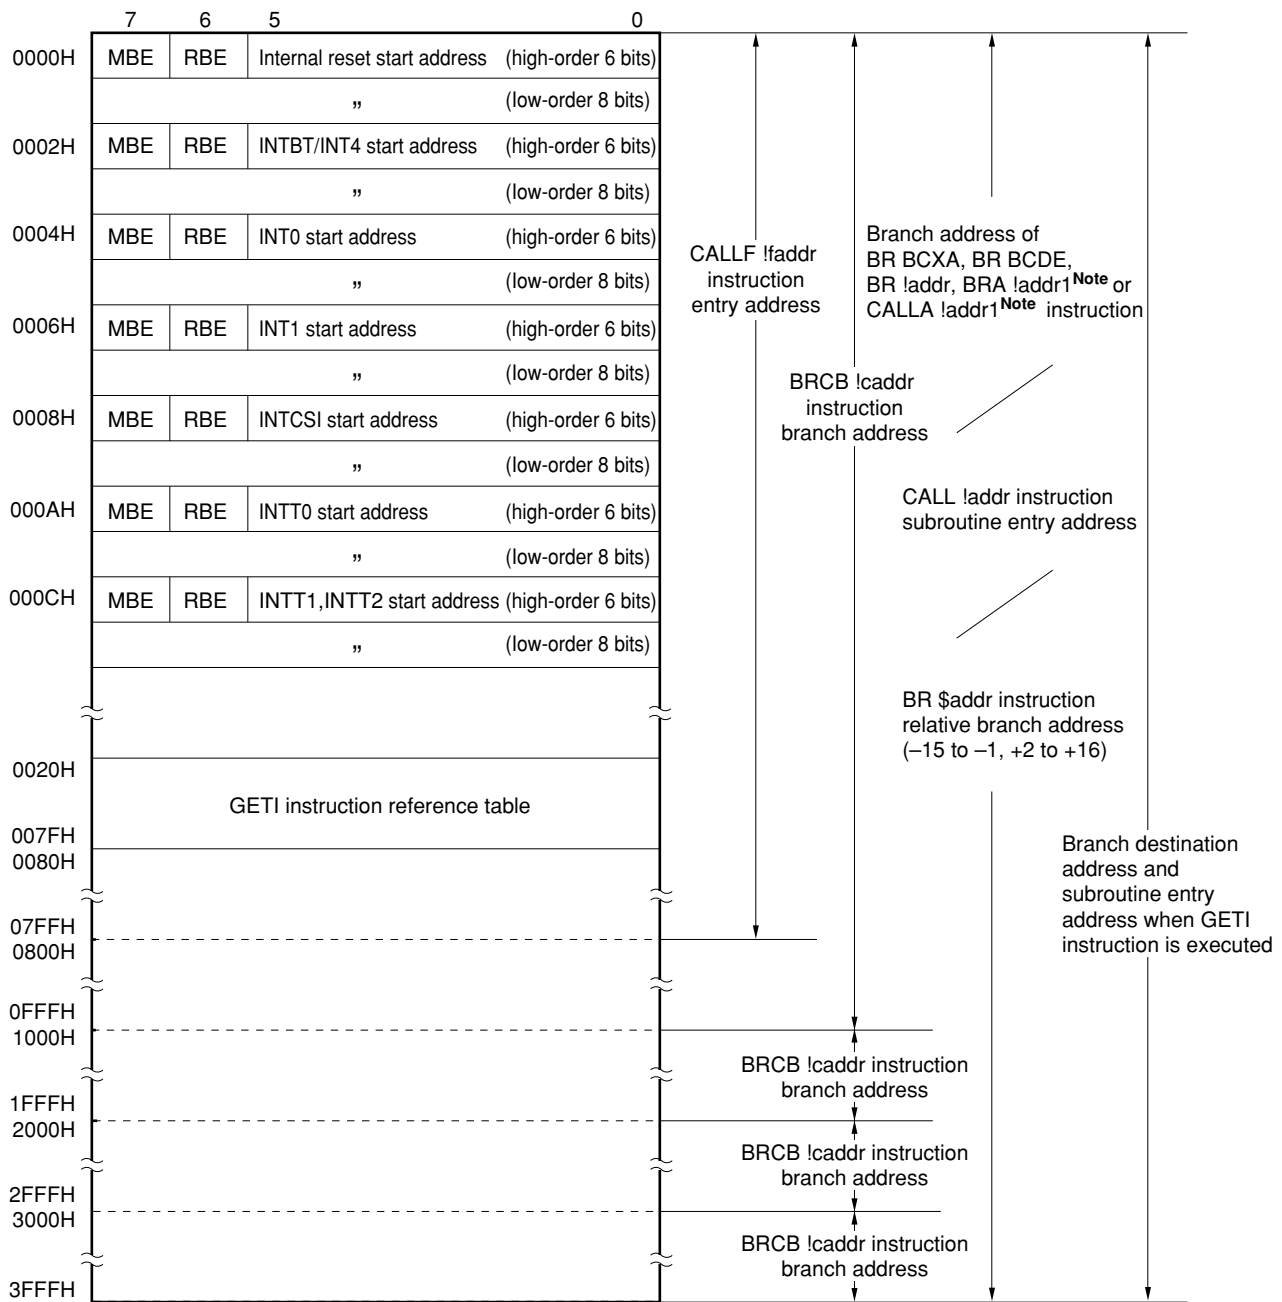

5. MEMORY CONFIGURATION

- Program memory (ROM) 16384 \times 8 bits
 - Addresses 0000H and 0001H
Vector table wherein the program start address and the values set for the RBE and MBE at the time a $\overline{\text{RESET}}$ signal is generated are written. Reset and start are possible at an arbitrary address.
 - Addresses 0002H-000DH
Vector table wherein the program start address and values set for the RBE and MBE by the vectored interrupts are written. Interrupt execution can start at an arbitrary address.
 - Addresses 0020H-007FH
Table area referenced by the GETI instruction **Note**.

Note The GETI instruction realizes a 1-byte instruction on behalf of an arbitrary 2-byte instruction, 3-byte instruction, or two 1-byte instructions. It is used to decrease the program steps.

- Data memory (RAM)
 - Data area ... 768 words \times 4 bits (000H-2FFH)
 - Peripheral hardware area ... 128 words \times 4 bits (F80H-FFFH)

Figure 5-1. Program Memory Map

Note Can be performed only in the Mk II mode.

Remark In addition to the above, a branch can be taken to the address indicated by changing only the low-order 8 bits of PC by executing the BR PCDE, BR PCXA instruction.

Figure 5-2. Data Memory Map

Note For stack area, one memory bank can be selected among memory bank 0-2.

6. PERIPHERAL HARDWARE FUNCTIONS

6.1 Digital I/O Port

The following four types of I/O ports are available:

- CMOS input (PORT0 and 1) : 8 pins
 - CMOS I/O (PORT2, 3, 6, 7, and 8) : 20 pins
 - N-ch open-drain I/O (PORT4 and 5) : 8 pins
 - Bit port output (BP0 through BP7) : 8 pins
-
- Total : 44 pins

Table 6-1. Types and Features of Digital Ports

Port Name	Function	Operation & Features		Remarks
PORT0	4-bit input	When using serial interface function, the dual function pin can function as the output port depending on the operation mode.		Also used as the INT4, SCK, SO/SB0, SI/SB1 pins.
PORT1		4-bit input port		Also used as the INT0-INT2 and TI0 pins.
PORT2	4-bit I/O	Can be set to input mode or output mode in 4-bit units.		Also used as the PTO0-PTO2, PCL, BUZ pins.
PORT3		Can be set to input mode or output mode in 1-bit units.		Also used as the LCDCL, SYNC pins.
PORT4	4-bit I/O (N-channel open-drain, 13 V withstand voltage)	Can be set to input mode or output mode in 4-bit units.	Ports 4 and 5 are paired and data can be input/output in 8-bit units.	On-chip pull-up resistor can be specified bit-wise by mask option.
PORT5				
PORT6	4-bit I/O	Can be set to input mode or output mode in 1-bit units.	Ports 6 and 7 are paired and data can be input/output in 8-bit units.	Also used as the KR0-KR3 pins.
PORT7		Can be set to input mode or output mode in 4-bit units.		Also used as the KR4-KR7 pins.
PORT8		Can be set to input mode or output mode in 4-bit units		Also used as the TI1, TI2, AN6, AN7 pins.
BP0-BP7	1-bit output	Outputs data bit-wise. Can be switched to LCD drive segment output S24-S31 by software.		—

6.2 Clock Generator

The clock generator provides the clock signals to the CPU and peripheral hardware and its configuration is shown in Figure 6-1.

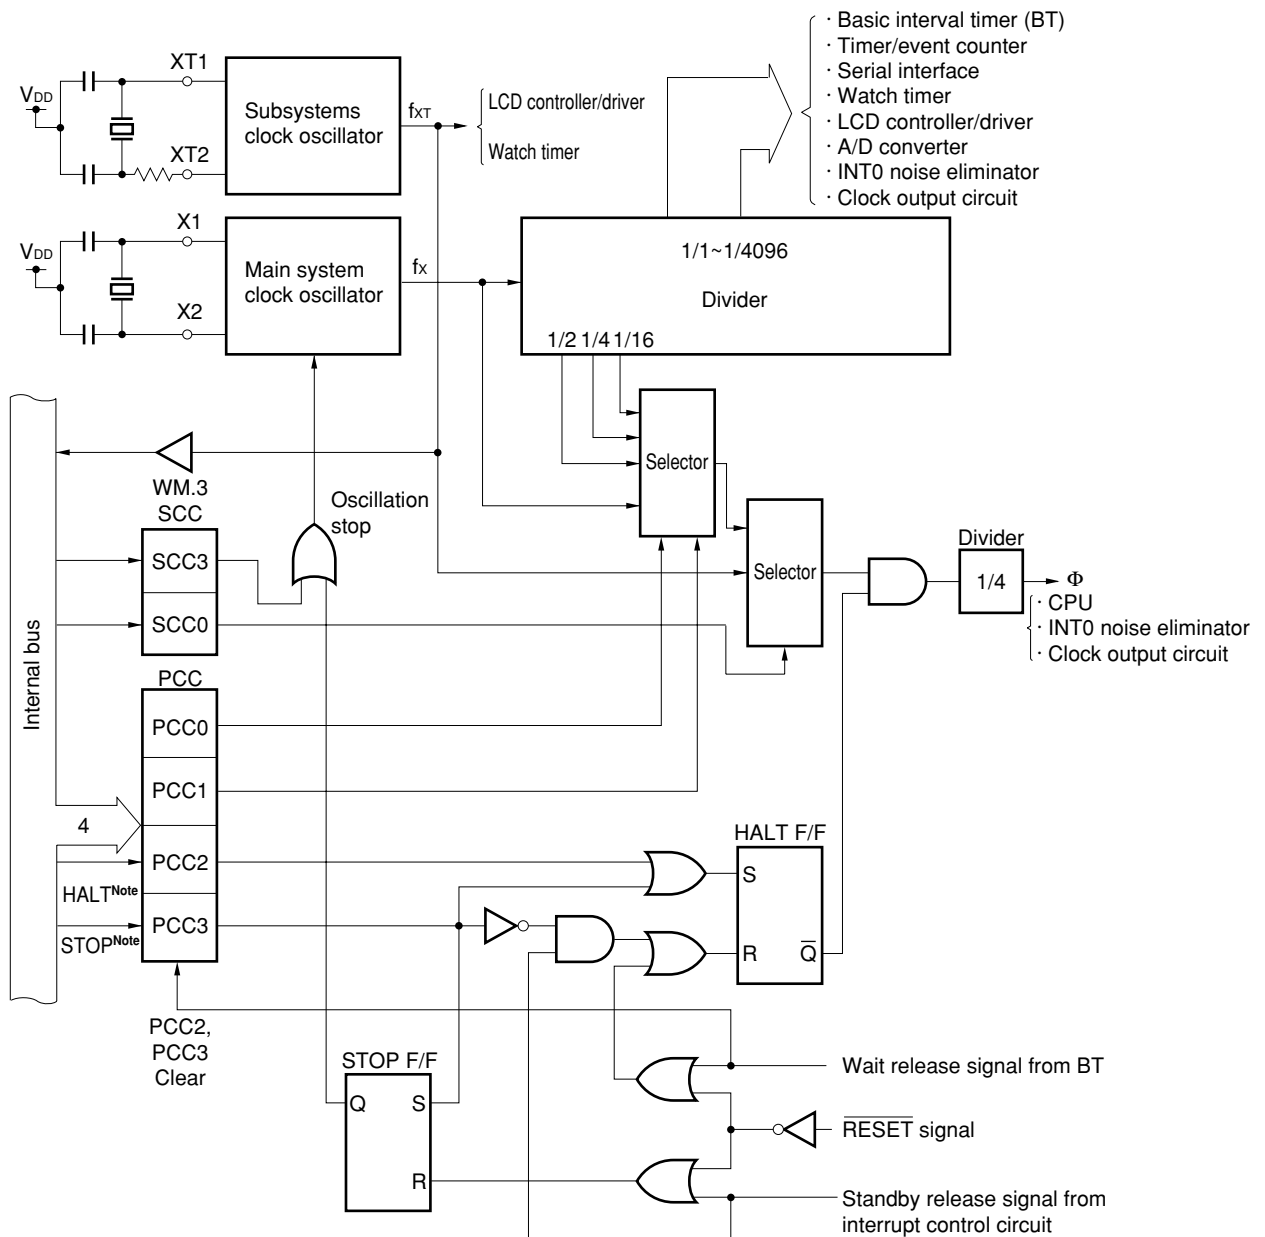

The operation of the clock generation circuit is determined by the processor clock control register (PCC) and system clock control register (SCC).

Two types of system clocks are available: main system clock and subsystem clock.

Furthermore, the instruction execution time can be changed.

- 0.95, 1.91, 3.81, 15.3 μs (main system clock: at 4.19 MHz operation)
- 0.67, 1.33, 2.67, 10.7 μs (main system clock: at 6.0 MHz operation)
- 122 μs (subsystem clock: at 32.768 kHz operation)

Figure 6-1. Clock Generator Block Diagram

Note Instruction execution

- Remarks**
1. f_x = Main system clock frequency
 2. f_{xT} = Subsystem clock frequency
 3. Φ = CPU clock
 4. PCC: Processor Clock Control Register
 5. SCC: System Clock Control Register
 6. One Clock cycle (t_{CY}) of the CPU clock equal to one machine cycle of the instruction.

6.3 Subsystem Clock Oscillator Control Functions

The μPD753036 subsystem clock oscillator has the following two control functions.

- Selects by software whether an on-chip feedback resistor is to be used or not^{Note}.
- Reduces current consumption by decreasing the drive current of the on-chip inverter when the supply voltage is high ($V_{DD} \geq 2.7$ V).

Note When the subsystem clock is not used, set SOS.0 to 1 (so as not to use the internal feedback resistor), connect the XT1 pin to V_{SS}, and open the XT2 pin to lower the supply current that is consumed in the subsystem clock oscillator.

The above functions can be used by switching the bits 0 and 1 of the sub-oscillator control register (SOS). (Refer to **Figure 6-2**.)

Figure 6-2. Subsystem Clock Oscillator

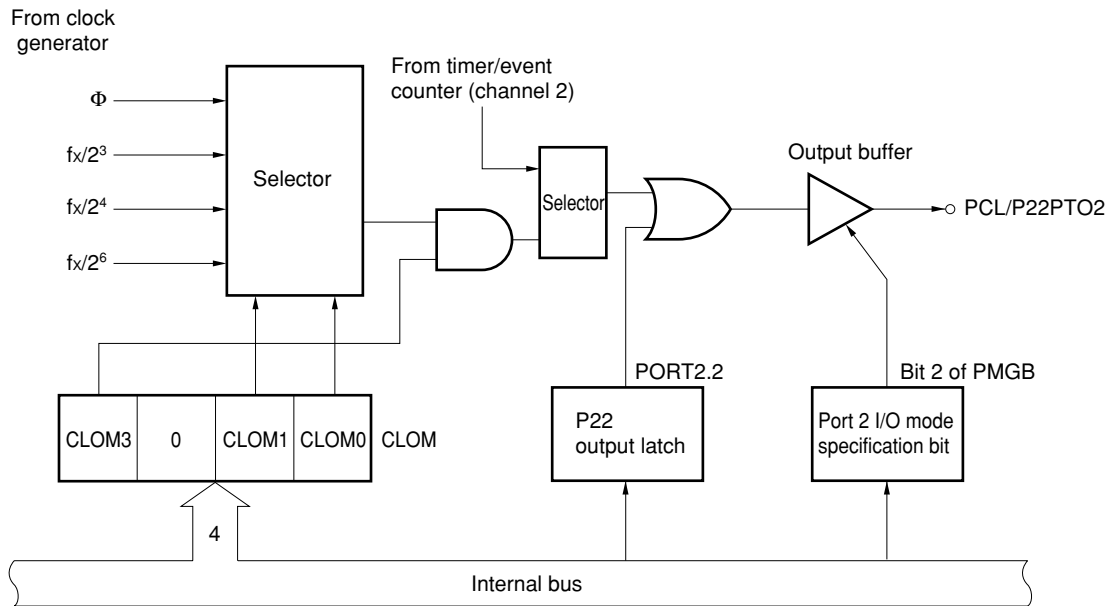

6.4 Clock Output Circuit

The clock output circuit is provided to output the clock pulses from the P22/PCL/PTO2 pin, and used to apply to the remote control waveform outputs and to supply clock pulses to the peripheral LSIs.

- Clock output (PCL): Φ , 524, 262, 65.5 kHz (main system clock: at 4.19 MHz operation)
 Φ , 750, 375, 93.8 kHz (main system clock: at 6.0 MHz operation)

Figure 6-3. Clock Output Circuit Block Diagram

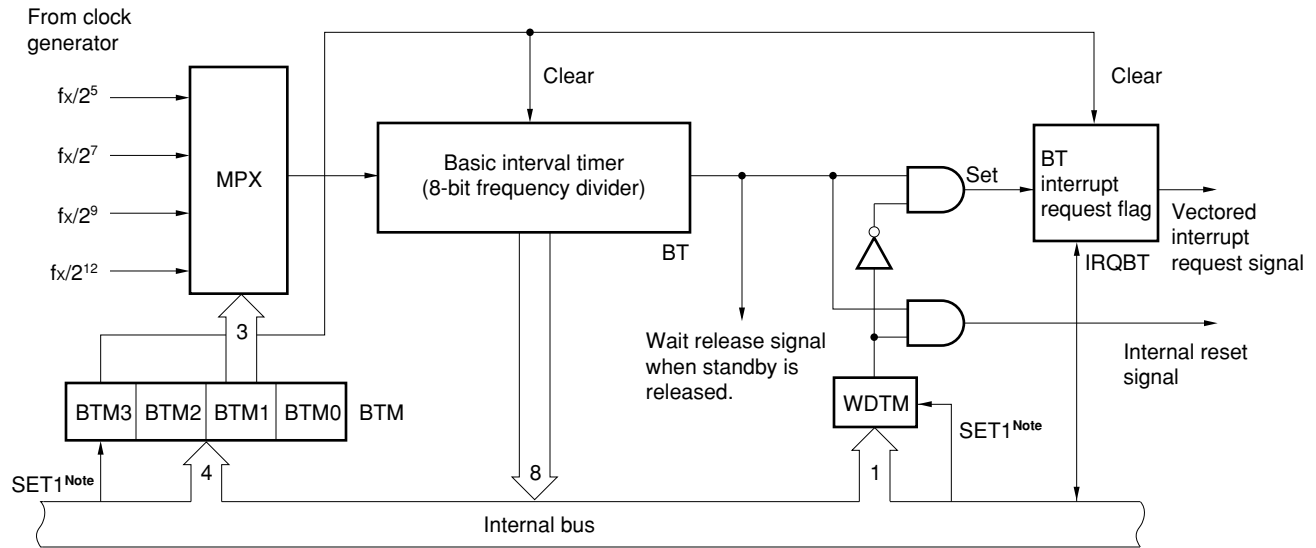

Remark Special care has been taken in designing the chip so that small-width pulses may not be output when switching clock output enable/disable.

6.5 Basic Interval Timer/Watchdog Timer

The basic interval timer/watchdog timer has the following functions.

- Interval timer operation to generate a reference time interrupt
- Watchdog timer operation to detect a runaway of program and reset the CPU
- Selects and counts the wait time when the standby mode is released
- Reads the contents of counting

Figure 6-4 Basic Interval Timer/Watchdog Timer Block Diagram

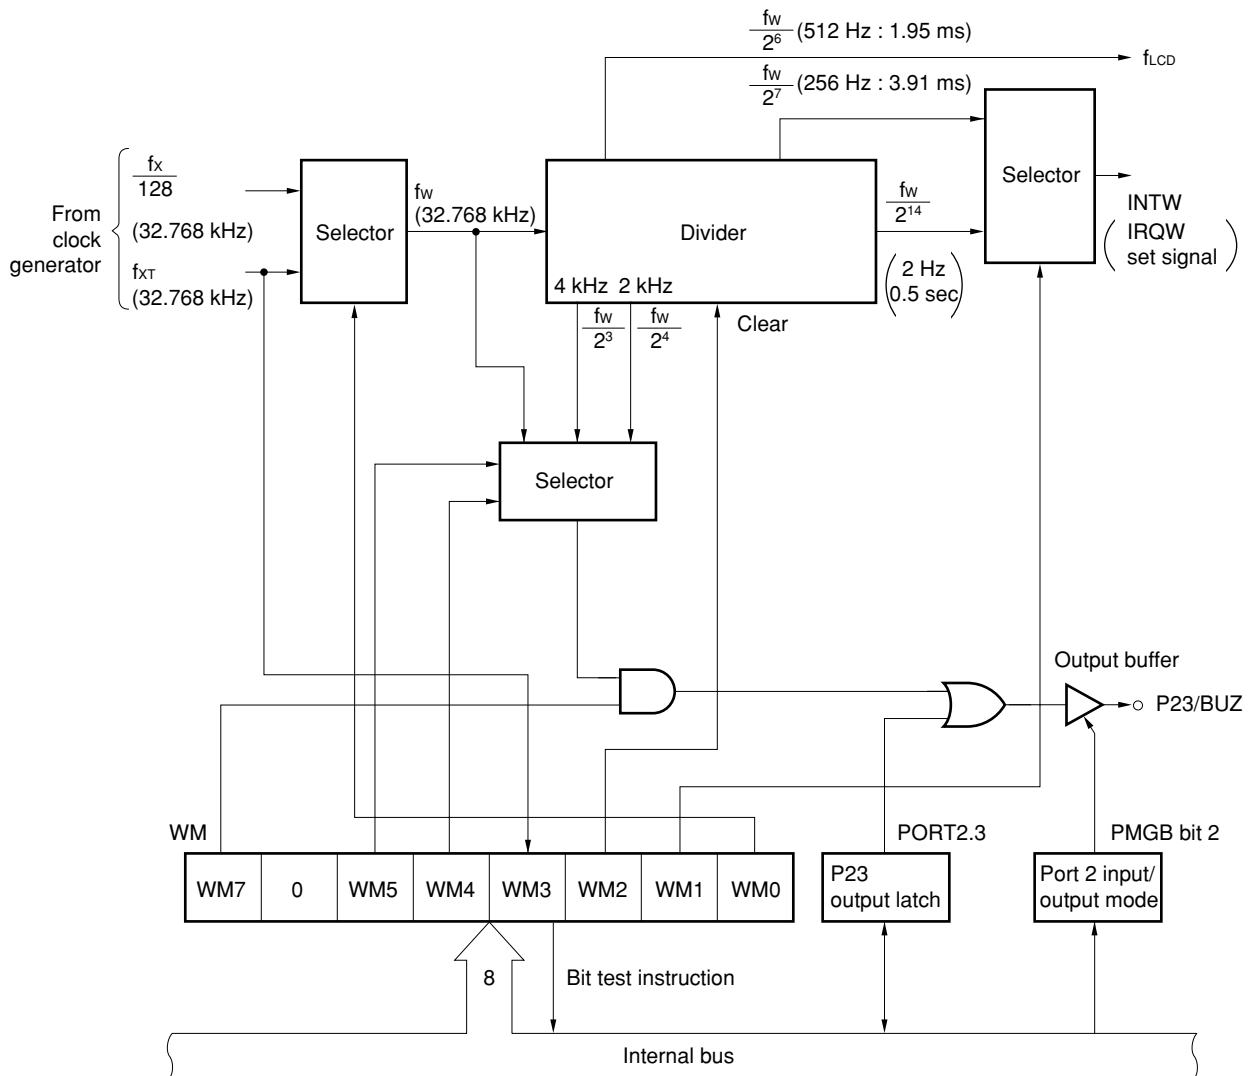

Note Instruction execution

6.6 Watch Timer

The μPD753036 has one channel of watch timer. The functions of the watch timer are as follows:

- ★ • Sets the test flag (IRQM) with 0.5 sec interval. The standby mode can be released by the IRQM.
- 0.5 sec interval can be created by both the main system clock (4.19 MHz) and subsystem clock (32.768 kHz).
- Convenient for program debugging and checking as interval becomes 128 times shorter (3.91 ms) with the fast feed mode.
- Outputs the frequencies (2.048, 4.096, 32.768 kHz) to the BUZ pin (P23), usable for buzzer and trimming of system clock frequencies.
- Clears the frequency divider to make the clock start with zero seconds.

Figure 6-5. Watch Timer Block Diagram

★ The values enclosed in parentheses are applied when $f_x = 4.19 \text{ MHz}$ and $f_{xT} = 32.768 \text{ kHz}$.

6.7 Timer/Event Counter

The μPD753036 has three channels of timer/event counters. The configuration is shown in Figures 6-6 through 6-8. The functions of the timer/event counter are as follows:

- Programmable interval timer operation
- Square wave output of any frequency to the PTO_n pin. (n = 0-2)
- Event counter operation
- Divides the frequency of signal input via the TIn pin to 1-Nth of the original signal and outputs the divided frequency to the PTO_n pin (frequency division operation).
- Supplies the serial shift clock to the serial interface circuit.
- Reads the counting value.

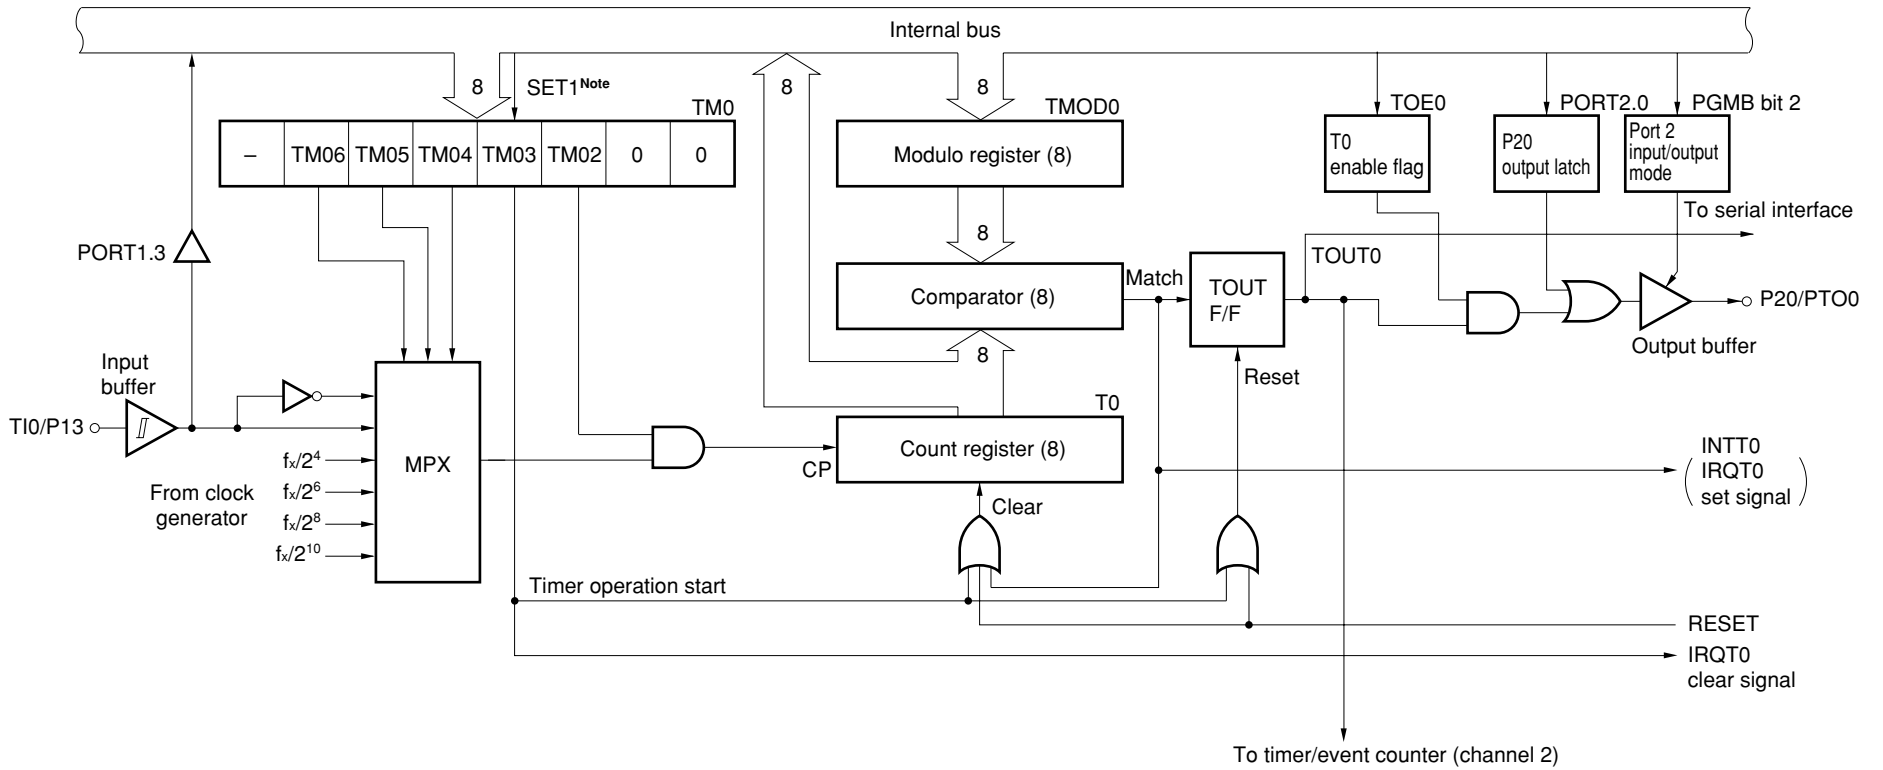

The timer/event counter operates in the following four modes as set by the mode register.

Table 6-2. Operation Modes of Timer/Event Counter

Mode	Channel	Channel 0	Channel 1	Channel 2
	8-bit timer/event counter mode		Yes	Yes
Gate control function		No ^{Note}	No	Yes
PWM pulse generator mode		No	No	Yes
16-bit timer/event counter mode		No	Yes	
Gate control function		No ^{Note}	Yes	
Carrier generator mode		No	Yes	

Note Used for gate control signal generation

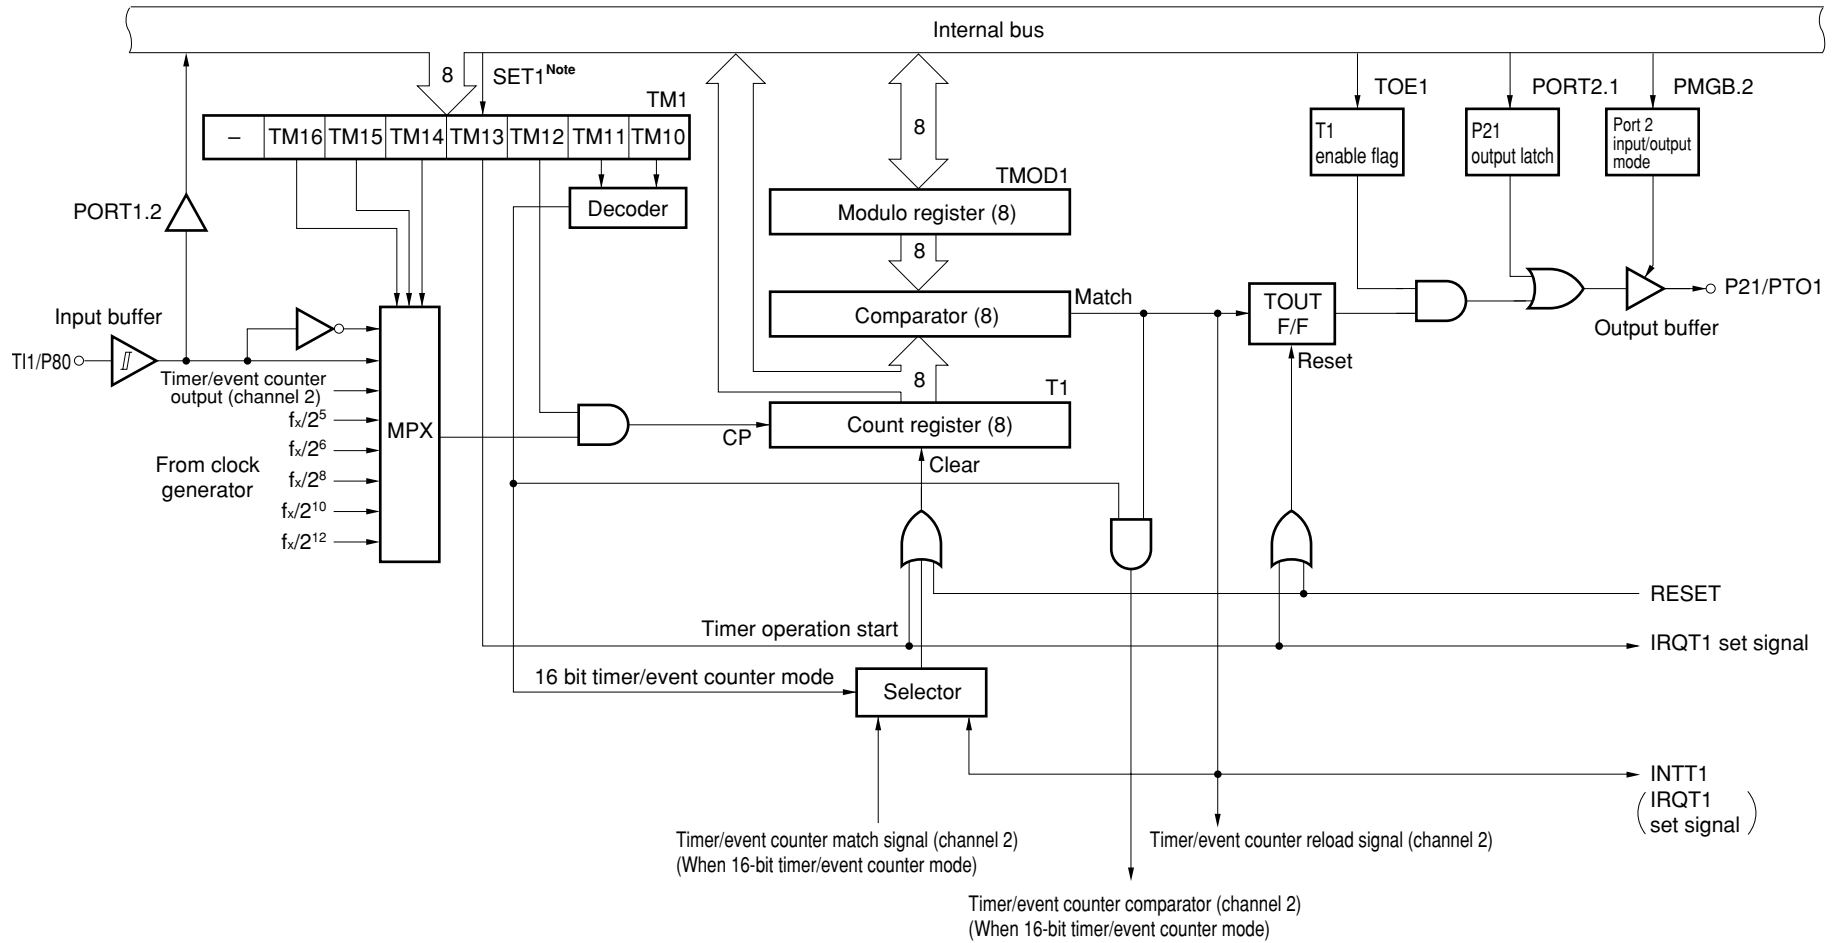

Figure 6-6. Timer/Event Counter Block Diagram (channel 0)

Note Instruction execution

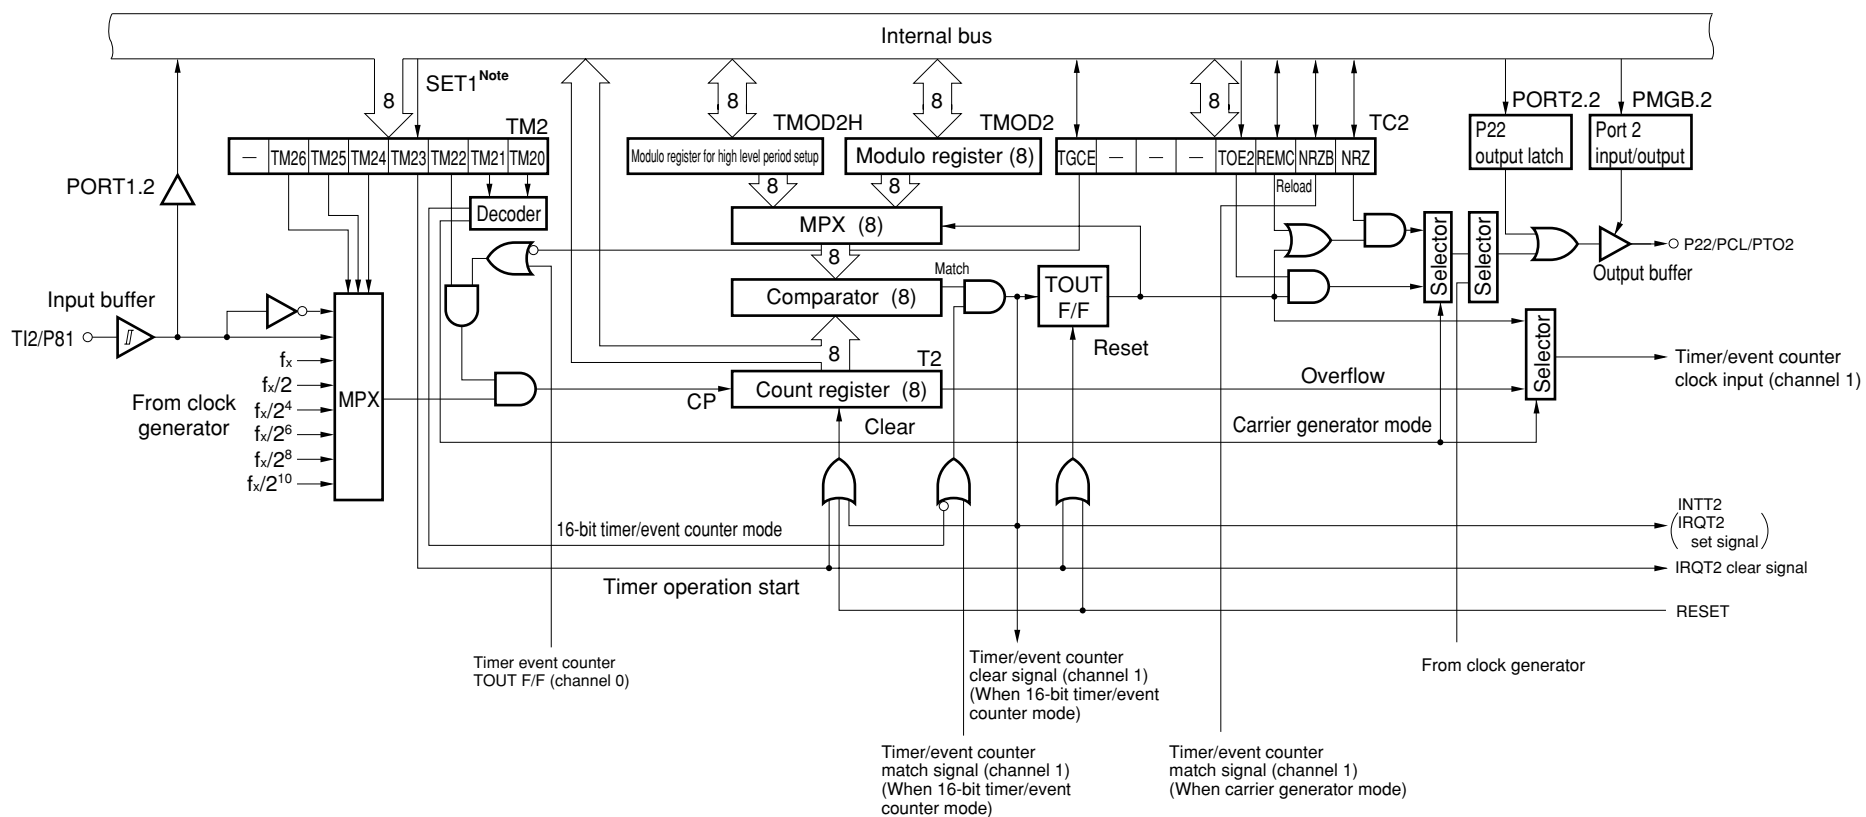

Caution When setting TM0, be sure to set bits 0 and 1 to 0.

Figure 6-7. Timer/Event Counter Block Diagram (channel 1)

Note Instruction execution

Figure 6-8. Timer/Event Counter Block Diagram (channel 2)

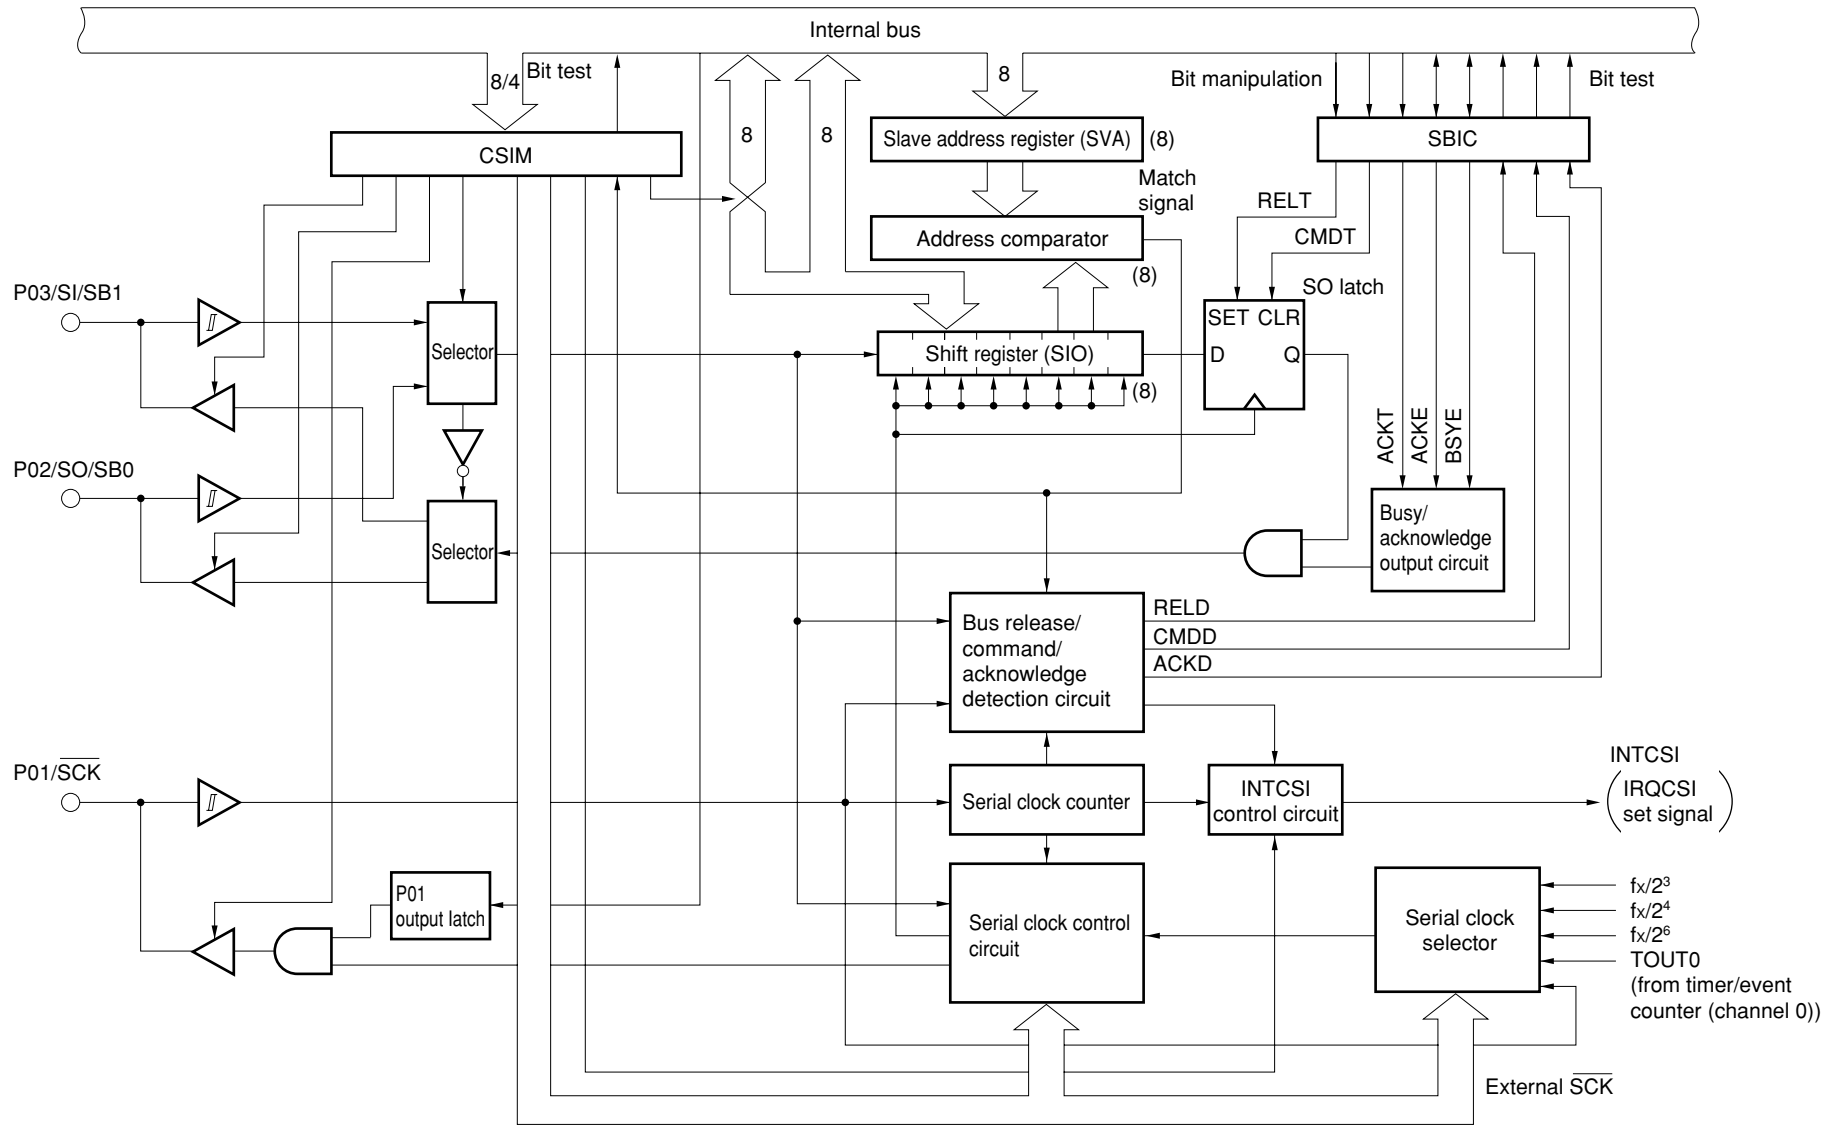

Note Instruction execution

6.8 Serial Interface

The μ PD753036 incorporates a clock-synchronous 8-bit serial interface and can be used in the following four modes.

- Operation stop mode
- 3-wire serial I/O mode
- 2-wire serial I/O mode
- SBI mode

Figure 6-9. Serial Interface Block Diagram

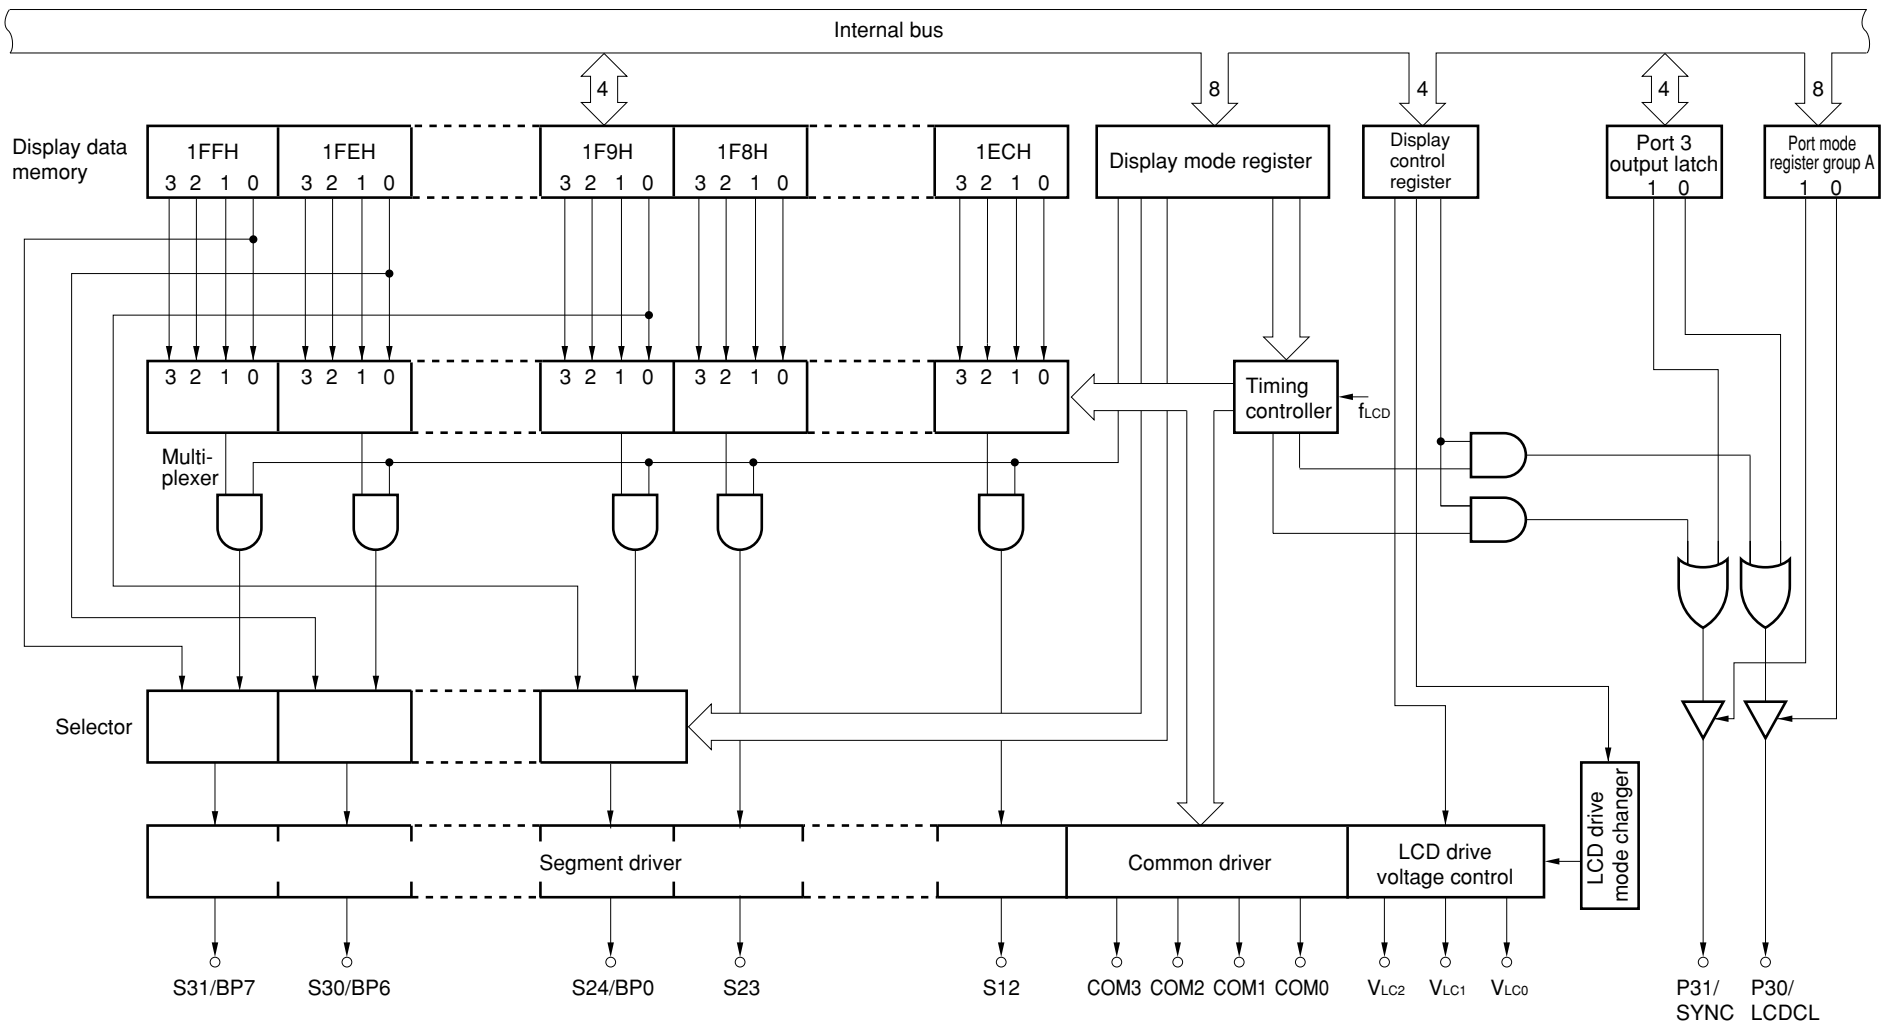

6.9 LCD Controller/Driver

The μ PD753036 incorporates a display controller which generates segment and common signals according to the display data memory contents and incorporates segment and common drivers which can drive the panel directly.

The μ PD753036 LCD controller/driver functions are as follows:

- Display data memory is read automatically by DMA operation and segment and common signals are generated.
- Display mode can be selected from among the following five:
 - (1) Static
 - (2) 1/2 duty (time multiplexing by 2), 1/2 bias
 - (3) 1/3 duty (time multiplexing by 3), 1/2 bias
 - (4) 1/3 duty (time multiplexing by 3), 1/3 bias
 - (5) 1/4 duty (time multiplexing by 4), 1/3 bias
- A frame frequency can be selected from among four in each display mode.
- A maximum of 20 segment signal output pins (S12-S31) and four common signal bit port output (COM0-COM3).
- The segment signal output pins (S24-S27 and S28-S31) can be changed to the bit port output in 4-pin units.
- Split-resistor can be incorporated to supply LCD drive power. (Mask option)
 - Various bias methods and LCD drive voltages can be applicable.
 - When display is off, current flow to the split resistor is cut.
- Display data memory not used for display can be used for normal data memory.
- It can also operate by using the subsystem clock.

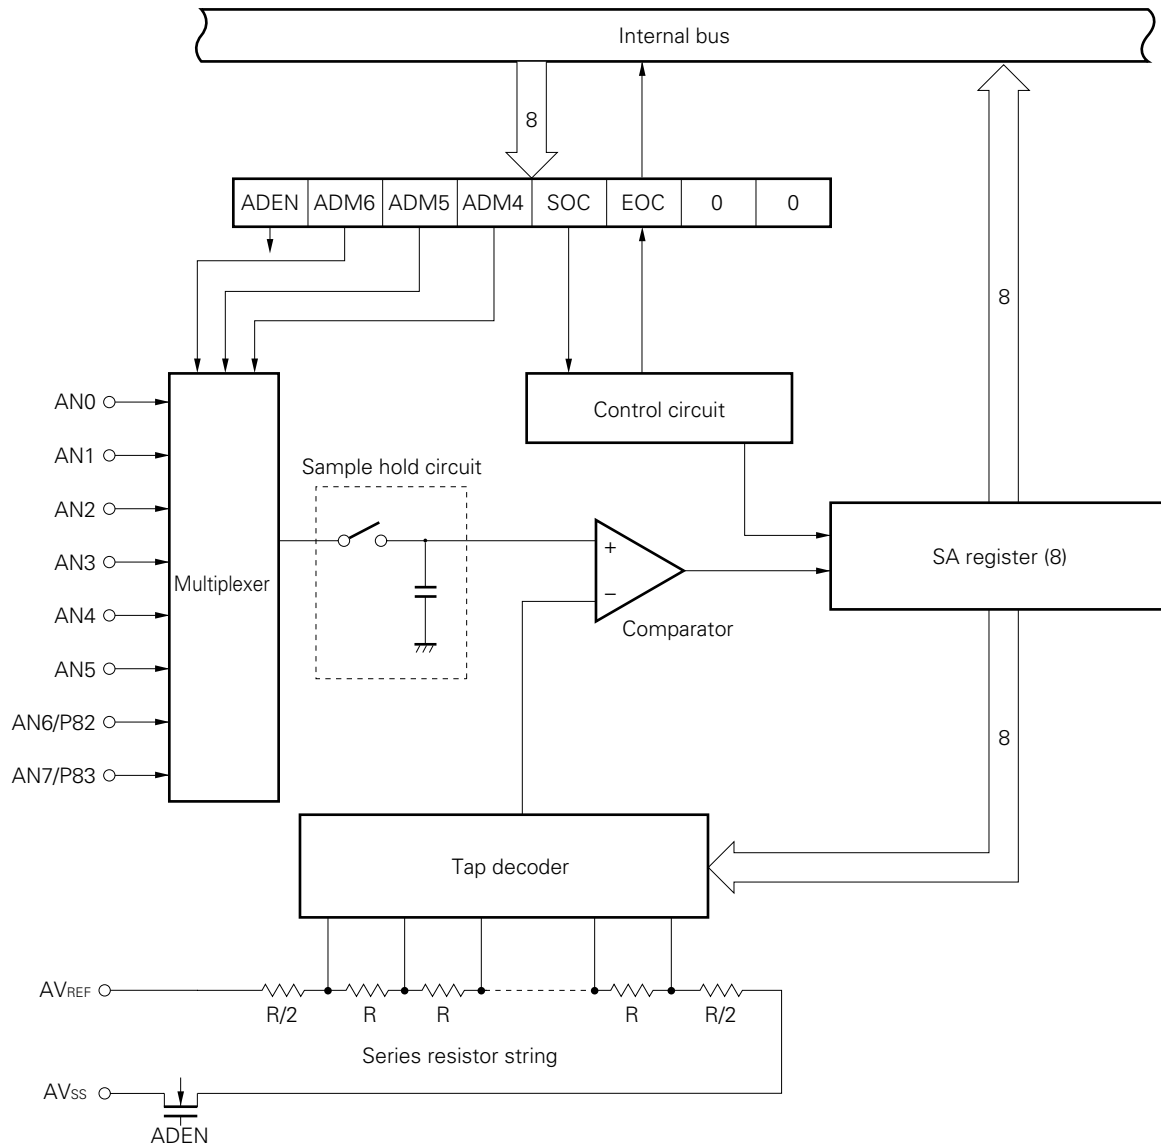

Figure 6-10. LCD Controller/Driver Block Diagram

6.10 A/D Converter

μ PD753036 incorporates an 8-bit resolution A/D converter with an analog input (AN0-AN7). It uses the successive approximation method.

Figure 6-11. A/D Converter Block Diagram

6.11 Bit Sequential Buffer 16 Bits

The bit sequential buffer (BSB) is a special data memory for bit manipulation and the bit manipulation can be easily performed by changing the address specification and bit specification in sequence, therefore it is useful when processing a long data bit-wise.

Figure 6-12. Bit Sequential Buffer Format

- Remarks 1. In the pmem.@L addressing, the specified bit moves corresponding to the L register.
- 2. In the pmem.@L addressing, the BSB can be manipulated regardless of MBE/MBS specification.

7. INTERRUPT FUNCTION AND TEST FUNCTION

The μ PD753036 has eight interrupt sources and two test sources. Of the test sources, INT2 has two types of edge-detected testable inputs.

The interrupt control circuit of the μ PD753036 has the following functions:

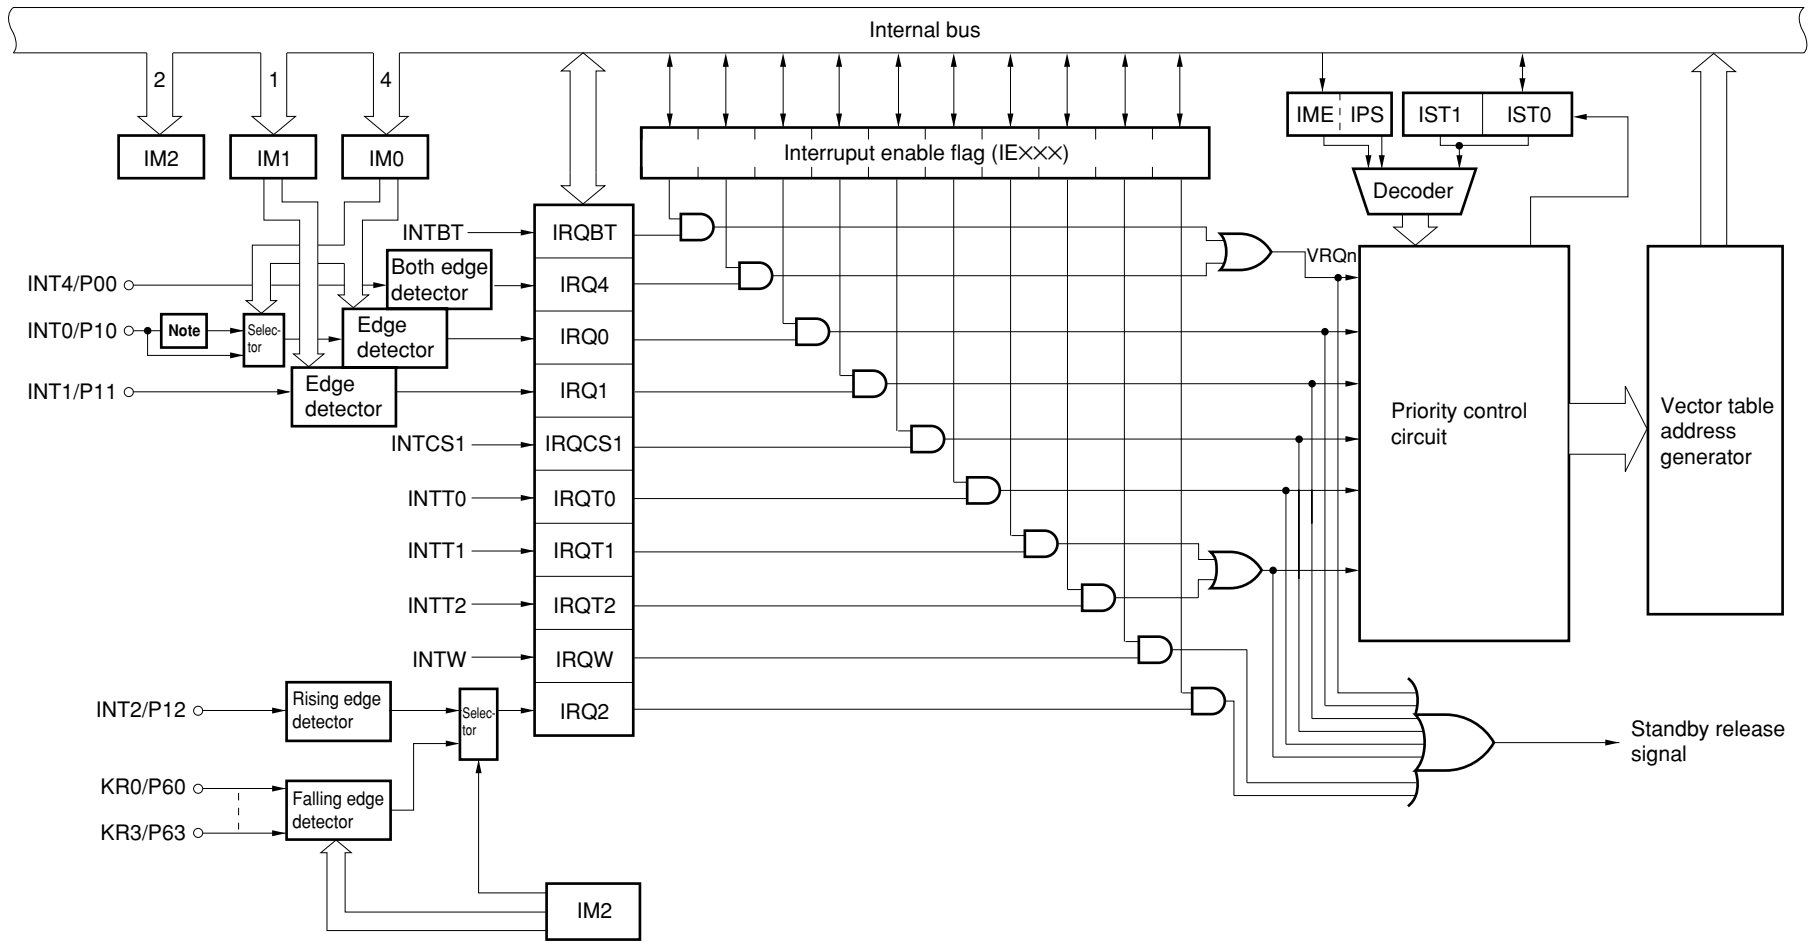

(1) Interrupt function

- Vectored interrupt function for hardware control, enabling/disabling the interrupt acceptance by the interrupt enable flag (IE $\times\times\times$) and interrupt master enable flag (IME).
- Can set any interrupt start address.
- Nesting wherein the order of priority can be specified by the interrupt priority select register (IPS).
- Test function of interrupt request flag (IRQ $\times\times\times$). An interrupt generated can be checked by software.
- Release the standby mode. A release interrupt can be selected by the interrupt enable flag.

(2) Test function

- Test request flag (IRQ $\times\times\times$) generation can be checked by software.
- Release the standby mode. The test source to be released can be selected by the test enable

Figure 7-1. Interrupt Control Circuit Block Diagram

Note Noise eliminator (Standby release is disable when noise eliminator is selected.)

8. STANDBY FUNCTION

In order to save power consumption while a program is in a standby mode, two types of standby modes (STOP mode and HALT mode) are provided for the μPD753036.

Table 8-1. Operation Status in Standby Mode

		STOP Mode	HALT Mode
Set instruction		STOP instruction	HALT instruction
System clock when set		Settable only when the main system clock is used.	Settable both by the main system clock and subsystem clock.
Operation status	Clock generator	The main system clock stops oscillation.	Only the CPU Φ halts (oscillation continues).
	Basic interval timer	Operation stops	Operation. (The IRQBT is set in the reference interval) Note 1 .
	Serial interface	Operable only when an external \overline{SCK} input is selected as the serial clock.	Operable Note 1
	Timer/event counter	Operable only when a signal input to the T10-T12 pins is specified as the count clock.	Operable Note 1
	Watch timer	Operable when f_{XT} is selected as the count clock.	Operable
	LCD driver controller	Operable only when f_{XT} is selected as the LCDCL.	Operable
	External interrupt	The INT1, 2, and 4 are operable. Only the INT0 is not operated. Note 2	
	CPU	The operation stops.	
Release signal		<ul style="list-style-type: none"> • Interrupt request signal sent from the operable hardware enabled by the interrupt enable flag. • Test request signal sent from the test source enabled by the test enable flag • RESET signal 	

- Notes**
1. Cannot operate only when the main system clock stops.
 2. Can operate only when the noise eliminator is not used ($IM02 = 1$) by bit 2 of the edge detection mode register(IM0).

9. RESET FUNCTION

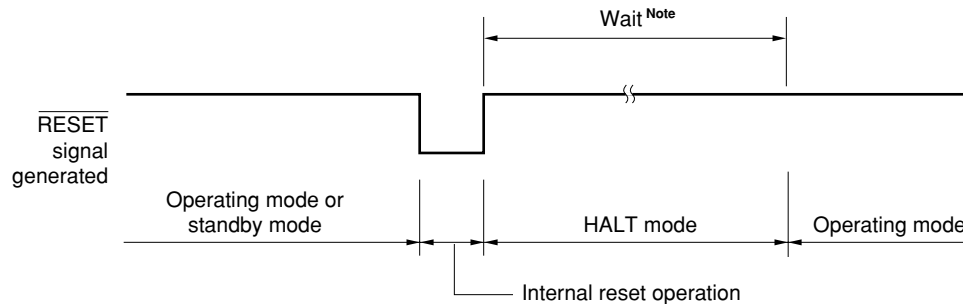

There are two reset inputs: external $\overline{\text{RESET}}$ signal and reset signal sent from the basic interval timer/watchdog timer. When either one of the reset signals are input, an internal reset signal is generated. Figure 9-1 shows the circuit diagram of the above two inputs.

Figure 9-1. Configuration of Reset Function

By the $\overline{\text{RESET}}$ signal generation, each device is initialized as listed in Table 9-1. Figure 9-2 shows the timing chart of the reset operation.

Figure 9-2. Reset Operation by $\overline{\text{RESET}}$ Signal Generation

Note The following two times can be selected by the mask option.
 $2^{17}/f_x$ (21.8 ms : at 6.0 MHz operation, 31.3 ms : at 4.19 MHz operation)
 $2^{15}/f_x$ (5.46 ms : at 6.0 MHz operation, 7.81 ms : at 4.19 MHz operation)

Table 9-1. Status of Each Device After Reset (1/2)

Hardware		RESET Signal Generation in the Standby Mode	RESET Signal Generation in Operation
Program counter (PC)		Sets the low-order 6 bits of program memory's address 0000H to the PC13-PC8 and the contents of address 0001H to the PC7-PC0.	Sets the low-order 6 bits of program memory's address 0000H to the PC13-PC8 and the contents of address 0001H to the PC7-PC0.
PSW	Carry flag (CY)	Held	Undefined
	Skip flag (SK0-SK2)	0	0
	Interrupt status flag (IST0, 1)	0	0
	Bank enable flag (MBE, RBE)	Sets the bit 6 of program memory's address 0000H to the RBE and bit 7 to the MBE.	Sets the bit 6 of program memory's address 0000H to the RBE and bit 7 to the MBE.
Stack pointer (SP)		Undefined	Undefined
Stack bank select register (SBS)		1000B	1000B
Data memory (RAM)		Held	Undefined
General-purpose register (X, A, H, L, D, E, B, C)		Held	Undefined
Bank select register (MBS, RBS)		0, 0	0, 0
Basic interval timer/watchdog timer	Counter (BT)	Undefined	Undefined
	Mode register (BTM)	0	0
	Watchdog timer enable flag (WDTM)	0	0

	Pull-up resistor setting register (POGA, POGB)	0	0
Bit sequential buffer (BSB0-BSB3)		Held	Undefined

10. MASK OPTION

The μ PD753036 has the following mask options.

- P40-P43, P50-P53 mask options
On-chip pull-up resistors can be connected.
 - (1) On-chip pull-up resistors are specifiable bit-wise.
 - (2) On-chip pull-up resistors are not specifiable.

- V_{LC0} - V_{LC2} pin, BIAS pin mask option
On-chip dividing resistor for LCD drive can be connected.
 - (1) Dividing resistor is not connected.
 - (2) Four 10 k Ω (TYP.) dividing resistors are connected at the same time.
 - (3) Four 100 k Ω (TYP.) dividing resistors are connected at the same time.

- Standby function mask option
Wait times can be selected by a $\overline{\text{RESET}}$ signal.
 - (1) $2^{17}/f_x$ (21.8ms : at $f_x = 6.0$ MHz, 31.3ms : at $f_x = 4.19$ MHz)
 - (2) $2^{15}/f_x$ (5.46ms : at $f_x = 6.0$ MHz, 7.81ms : at $f_x = 4.19$ MHz)

- Subsystem clock mask option
Use of the internal feedback resistor can be selected.
 - (1) Internal feedback resistor can be used.
(Switched ON/OFF via software)
 - (2) Internal feedback resistor cannot be used.
(Switched out in hardware)

11. INSTRUCTION SETS

(1) Expression formats and specification methods of operands

The operand is written in the operand column of each instruction in accordance with the specification method for the operand expression format of the instruction. For details, refer to **RA75X Assembler Package User's Manual – Language (U12385E)**. If there are several elements, one of them is selected. Capital letters and the + and – symbols are key words and are written as they are.

For immediate data, appropriate numbers and labels are written.

Instead of the labels such as mem, fmem, pmem, and bit, the symbols of the registers can be specified. However, there are restrictions in the labels that can be written for fmem and pmem. For details, refer to **User's Manual**.

Representation format	Specification Method
reg reg1	X, A, B, C, D, E, H, L X, B, C, D, E, H, L
rp rp1 rp2 rp' rp'1	XA, BC, DE, HL BC, DE, HL BC, DE XA, BC, DE, HL, XA', BC', DE', HL' BC, DE, HL, XA', BC', DE', HL'
rpa rpa1	HL, HL+, HL–, DE, DL DE, DL
n4 n8	4-bit immediate data or label 8-bit immediate data or label
mem bit	8-bit immediate data or label Note 2-bit immediate data or label
fmem pmem	FB0H-FBFH, FF0H-FFFH immediate data or label FC0H-FFFH immediate data or label
addr addr1 caddr faddr	0000H-3FFFH immediate data or label 0000H-3FFFH immediate data or label (Mk II mode only) 12-bit immediate data or label 11-bit immediate data or label
taddr	20H-7FH immediate data (where bit 0 = 0) or label
PORTn IExxx RBn MBn	PORT0-PORT8 IEBT, IET0-IET2, IE0-IE2, IE4, IECSI, IEW RB0-RB3 MB0, MB1, MB2, MB15

Note mem can be only used even address in 8-bit data processing.

(2) Legend in explanation of operation

A	: A register, 4-bit accumulator
B	: B register
C	: C register
D	: D register
E	: E register
H	: H register
L	: L register
X	: X register
XA	: XA register pair; 8-bit accumulator
BC	: BC register pair
DE	: DE register pair
HL	: HL register pair
XA'	: XA' expanded register pair
BC'	: BC' expanded register pair
DE'	: DE' expanded register pair
HL'	: HL' expanded register pair
PC	: Program counter
SP	: Stack pointer
CY	: Carry flag, bit accumulator
PSW	: Program status word
MBE	: Memory bank enable flag
RBE	: Register bank enable flag
PORT _n	: Port n (n = 0-8)
IME	: Interrupt master enable flag
IPS	: Interrupt priority selection register
IE _{xxx}	: Interrupt enable flag
RBS	: Register bank selection register
MBS	: Memory bank selection register
PCC	: Processor clock control register
.	: Separation between address and bit
(xx)	: The contents addressed by xx
xxH	: Hexadecimal data

(3) Explanation of symbols under addressing area column

*1	MB = MBE•MBS (MBS = 0-2, 15)	
*2	MB = 0	
*3	MBE = 0 : MB = 0 (000H-07FH) MB = 15 (F80H-FFFH) MBE = 1 : MB = MBS (MBS = 0-2, 15)	
*4	MB = 15, fmem = FB0H-FBFH, FF0H-FFFH	
*5	MB = 15, pmem = FC0H-FFFH	
*6	addr = 0000H-3FFFH	
*7	addr, addr1 = (Current PC) – 15 to (Current PC) – 1 (Current PC) + 2 to (Current PC) + 16	
*8	caddr = 0000H-0FFFH (PC _{13,12} = 00B) or 1000H-1FFFH (PC _{13,12} = 01B) or 2000H-2FFFH (PC _{13,12} = 10B) or 3000H-3FFFH (PC _{13,12} = 11B)	
*9	faddr = 0000H-07FFH	
*10	taddr = 0020H-007FH	
*11	addr1 = 0000H-3FFFH	

- Remarks**
1. MB indicates memory bank that can be accessed.
 2. In *2, MB = 0 independently of how MBE and MBS are set.
 3. In *4 and *5, MB = 15 independently of how MBE and MBS are set.
 4. *6 to *11 indicate the areas that can be addressed.

(4) Explanation of number of machine cycles column

S denotes the number of machine cycles required by skip operation when a skip instruction is executed. The value of S varies as follows.

- When no skip is made: S = 0
- When the skipped instruction is a 1- or 2-byte instruction: S = 1
- When the skipped instruction is a 3-byte instruction^{Note}: S = 2

Note 3-byte instruction: BR !addr, BRA !addr1, CALL !addr or CALLA !addr1 instruction

Caution The GETI instruction is skipped in one machine cycle.

One machine cycle is equal to one cycle of CPU clock (= tcv); time can be selected from among four types by setting PCC.

Instruction Group	Mnemonic	Operand	Number of Bytes	Number of Machine Cycles	Operation	Addressing Area	Skip Condition
Transfer	MOV	A, #n4	1	1	A ← n4		String effect A
		reg1, #n4	2	2	reg1 ← n4

	3	• When instruction other than TBR and TCALL instructions (taddr) (taddr+1) instruction is executed		Depending on the reference instruction			

- Notes**
1. The shaded box is applicable only to the Mk II mode. The other area is applicable only to Mk I mode.
 2. The TBR and TCALL instructions are the table definition assembler pseudo instructions of the GETI instruction.

12. ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings (T_A = 25°C)

Parameter	Symbol	Conditions	Ratings	Unit	
Supply voltage	V _{DD}		-0.3 to +7.0	V	
Input voltage	V _{I1}	Other than ports 4, 5	-0.3 to V _{DD} + 0.3	V	
	V _{I2}	Ports 4, 5	Pull-up resistor provided	-0.3 to V _{DD} + 0.3	V
			N-ch open drain	-0.3 to +14	V
Output voltage	V _O		-0.3 to V _{DD} + 0.3	V	
High-level output current	I _{OH}	Per pin	-10	mA	
		Total of all pins	-30	mA	
Low-level output current	I _{OL}	Per pin	30	mA	
		Total of all pins	200	mA	
Ambient operating temperature	T _A		-40 to +85 ^{Note}	°C	
Storage temperature	T _{stg}		-65 to +150	°C	

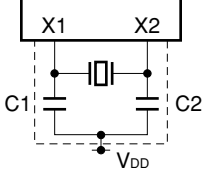

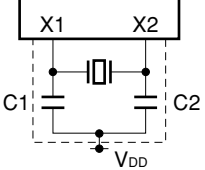

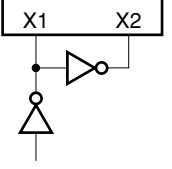

Note To drive LCD in the normal mode, T_A = -10 to +85°C

Caution Product quality may suffer if the absolute maximum rating is exceeded even momentarily for any parameter. That is, the absolute maximum ratings are rated values at which the product is on the verge of suffering physical damage, and therefore the product must be used under conditions that ensure that the absolute maximum ratings are not exceeded.

Capacitance (T_A = 25°C, V_{DD} = 0 V)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Input capacitance	C _{IN}	f = 1 MHz			15	pF
Output capacitance	C _{OUT}	Pins other than tested pins: 0 V			15	pF
I/O capacitance	C _{IO}				15	pF

Main System Clock Oscillator Characteristics (T_A = -40 to +85°C, V_{DD} = 1.8 to 5.5 V)

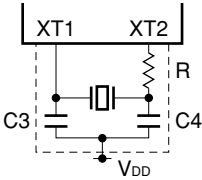

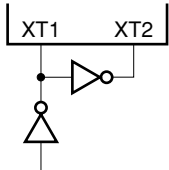

Oscillator	Recommended Circuit	Parameter	Conditions	MIN.	TYP.	MAX.	Unit
Ceramic oscillator		Oscillation frequency (f _x) ^{Note 1}		1.0		6.0 ^{Note 2}	MHz
		Oscillation stabilization time ^{Note 3}	After V _{DD} has reached MIN. value of oscillation voltage range			4	ms
Crystal resonator		Oscillation frequency (f _x) ^{Note 1}		1.0		6.0 ^{Note 2}	MHz
		Oscillation stabilization time ^{Note 3}	V _{DD} = 4.5 to 5.5 V			10	ms
						30	
External clock		X1 input frequency (f _x) ^{Note 1}		1.0		6.0 ^{Note 2}	MHz
		X1 input high-, low-level widths (t _{xH} , t _{xL})		83.3		500	ns

- Notes 1.** The oscillation frequency and X1 input frequency shown above indicate characteristics of the oscillator only. For the instruction execution time, refer to **AC Characteristics**.
- If the oscillation frequency is 4.19 MHz < f_x < 6.0 MHz at 1.8 V ≤ V_{DD} < 2.7 V, do not select the processor clock control register (PCC) = 0011. If PCC = 0011, one machine cycle is less than 0.95 μs, falling short of the rated value of 0.95 μs.
 - The oscillation stabilization time is the time required for oscillation to be stabilized after V_{DD} has been applied or STOP mode has been released.

Caution When using the main system clock oscillator, wire the portion enclosed in the dotted line in the above figure as follows to prevent adverse influences due to wiring capacitance:

- Keep the wiring length as short as possible.
- Do not cross the wiring with other signal lines.
- Do not route the wiring in the vicinity of a line through which a high alternating current flows.
- Always keep the ground point of the capacitor of the oscillator at the same potential as V_{DD}.
- Do not ground to a power supply pattern through which a high current flows.
- Do not extract signals from the oscillator.

Subsystem Clock Oscillator Characteristics (T_A = -40 to +85°C, V_{DD} = 1.8 to 5.5 V)

Oscillator	Recommended Circuit	Parameter	Conditions	MIN.	TYP.	MAX.	Unit
Crystal resonator		Oscillation frequency (f _{XT}) ^{Note 1}		32	32.768	35	kHz
		Oscillation stabilization time ^{Note 2}	V _{DD} = 4.5 to 5.5 V		1.0	2	s
External clock		XT1 input frequency (f _{XT}) ^{Note 1}		32		100	kHz
		XT1 input high-, low-level widths (t _{XTH} , t _{XTL})		5		15	μs

- Notes**
- The oscillation frequency shown above indicate characteristics of the oscillator only. For the instruction execution time, refer to **AC Characteristics**.
 - The oscillation stabilization time is the time required for oscillation to be stabilized after V_{DD} has been applied.

Caution When using the subsystem clock oscillator, wire the portion enclosed in the dotted line in the above figure as follows to prevent adverse influences due to wiring capacitance:

- Keep the wiring length as short as possible.
- Do not cross the wiring with other signal lines.
- Do not route the wiring in the vicinity of a line through which a high alternating current flows.
- Always keep the ground point of the capacitor of the oscillator at the same potential as V_{DD}.
- Do not ground to a power supply pattern through which a high current flows.
- Do not extract signals from the oscillator.

The subsystem clock oscillator has a low amplification factor to reduce current consumption and is more susceptible to noise than the main system clock oscillator. Therefore, exercise utmost care in wiring the subsystem clock oscillator.

Recommended Oscillator Constants

Ceramic resonator (T_A = -20 to +80°C)

	KBR-6.0MSB		33	33			-
	PBRC 6.00A						
PBRC 6.00B	-		-	Capacitor-contained model			

Note When using the CSB1000J (1.0 MHz) by Murata Mfg. Co., Ltd. as a ceramic resonator, a limiting resistor ($R_d = 2.2\text{ k}\Omega$) is necessary (refer to the figure below). The resistor is not necessary when using the other recommended resonators.

Caution The oscillator constants and oscillation voltage range indicate conditions for stable oscillation but do not guarantee accuracy of the oscillation frequency. If the application circuit requires accuracy of the oscillation frequency, it is necessary to set the oscillation frequency of the resonator in the application circuit. For this, it is necessary to directly contact the manufacturer of the resonator being used.

DC Characteristics (T_A = -40 to +85°C, V_{DD} = 1.8 to 5.5 V)

Parameter	Symbol	Conditions		MIN.	TYP.	MAX.	Unit

		V _{DD} = 3.0 V ±10%			0.02	5.0	μA		
		T _A = 25°C			0.02	3.0	μA		

- Notes**
- Clear VAC0 to 0 in the low-current mode and STOP mode. When VAC0 is set to 1, the current increases by about 1 μA.
 - Either R_{LCD1} or R_{LCD2} can be selected by mask option.
 - Voltage deviation is the difference between the ideal values (V_{LCDn}; n = 0, 1, 2) of the segment and common outputs and the output voltage.
 - The current flowing through the internal pull-up resistor and the LCD divider resistor is not included.
 - Including the case when the subsystem clock oscillates.
 - When the device operates in high-speed mode with the processor clock control register (PCC) set to 0011.
 - When the device operates in low-speed mode with PCC set to 0000.
 - When the device operates on the subsystem clock, with the system clock control register (SCC) set to 1001 and oscillation of the main system clock stopped.
 - When the sub-oscillator control register (SOS) is set to 0000.
 - When SOS is set to 0010.
 - When SOS is set to 00×1 and the sub-oscillator feedback resistor is not used (×: don't care).

AC Characteristics (T_A = -40 to +85°C, V_{DD} = 1.8 to 5.5 V)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit	
CPU clock cycle time ^{Note 1} (minimum instruction execution time = 1 machine cycle)	t _{cy}	Operates with main system clock	V _{DD} = 2.7 to 5.5 V	0.67		64	μs
				0.95		64	μs
		Operates with subsystem clock	114	122	125	μs	
TI0, TI1, TI2 input frequency	f _{TI}	V _{DD} = 2.7 to 5.5 V		0		1.0	MHz
				0		275	kHz
TI0, TI1, TI2 input high-, low-level widths	t _{TIH} , t _{TIL}	V _{DD} = 2.7 to 5.5 V		0.48			μs
				1.8			μs
Interrupt input high-, low-level widths	t _{INTH} , t _{INTL}	INT0	IM02 = 0	Note 2			μs
			IM02 = 1	10			μs
		INT1, 2, 4		10			μs
		KR0-KR7		10			μs
RESET low-level width	t _{RSL}		10			μs	

- Notes 1.** The cycle time (minimum instruction execution time) of the CPU clock (Φ) is determined by the oscillation frequency of the connected resonator (and external clock), the system clock control register (SCC), and processor clock control register (PCC). The figure on the right shows the supply voltage V_{DD} vs. cycle time t_{cy} characteristics when the device operates with the main system clock.
- 2.** 2t_{cy} or 128/f_x depending on the setting of the interrupt mode register (IM0).

Serial transfer operation

2-wire and 3-wire serial I/O modes ($\overline{\text{SCK}}$... internal clock output): ($T_A = -40$ to $+85^\circ\text{C}$, $V_{DD} = 1.8$ to 5.5 V)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
$\overline{\text{SCK}}$ cycle time	t_{KCY1}	$V_{DD} = 2.7$ to 5.5 V	1300			ns
			3800			ns
$\overline{\text{SCK}}$ high-, low-level widths	t_{KL1} , t_{KH1}	$V_{DD} = 2.7$ to 5.5 V	$t_{\text{KCY1}}/2-50$			ns
			$t_{\text{KCY1}}/2-150$			ns

			500			ns
SI ^{Note 1} hold time (vs. $\overline{\text{SCK}}$ ↑)	t_{KSI1}	$V_{DD} = 2.7$ to 5.5 V	400			ns
			600			ns
$\overline{\text{SCK}}$ ↓ → SO ^{Note 1} output delay time	t_{KSO1}	$R_L = 1$ kΩ ^{Note 2} $C_L = 100$ pF	$V_{DD} = 2.7$ to 5.5 V	0	250	ns
				0	1000	ns

- Notes**
1. Read as SB0 or SB1 when using the 2-wire serial I/O mode.
 2. R_L and C_L respectively indicate the load resistance and load capacitance of the SO output line.

2-wire and 3-wire serial I/O modes ($\overline{\text{SCK}}$... external clock input): ($T_A = -40$ to $+85^\circ\text{C}$, $V_{DD} = 1.8$ to 5.5 V)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
$\overline{\text{SCK}}$ cycle time	t_{KCY2}	$V_{DD} = 2.7$ to 5.5 V	800			ns
			3200			ns
$\overline{\text{SCK}}$ high-, low-level widths	t_{KL2} , t_{KH2}	$V_{DD} = 2.7$ to 5.5 V	400			ns
			1600			ns
SI ^{Note 1} setup time (vs. $\overline{\text{SCK}}$ ↑)	t_{SIK2}	$V_{DD} = 2.7$ to 5.5 V	100			ns
			150			ns
SI ^{Note 1} hold time (vs. $\overline{\text{SCK}}$ ↑)	t_{KSI2}	$V_{DD} = 2.7$ to 5.5 V	400			ns
			600			ns
$\overline{\text{SCK}}$ ↓ → SO ^{Note 1} output delay time	t_{KSO2}	$R_L = 1$ kΩ ^{Note 2} $C_L = 100$ pF	$V_{DD} = 2.7$ to 5.5 V	0	300	ns
				0	1000	ns

- Notes**
1. Read as SB0 or SB1 when using the 2-wire serial I/O mode.
 2. R_L and C_L respectively indicate the load resistance and load capacitance of the SO output line.

SBI mode ($\overline{\text{SCK}}$... internal clock output (master)): ($T_A = -40$ to $+85^\circ\text{C}$, $V_{DD} = 1.8$ to 5.5 V)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
$\overline{\text{SCK}}$ cycle time	t_{KCY3}	$V_{DD} = 2.7$ to 5.5 V	1300			ns
			3800			ns
$\overline{\text{SCK}}$ high-, low-level widths	t_{KL3} ,	$V_{DD} = 2.7$ to 5.5 V	$t_{\text{KCY3}}/2-50$			ns
	t_{KH3}		$t_{\text{KCY3}}/2-150$			ns
SB0, 1 setup time (vs. $\overline{\text{SCK}}$ \uparrow)	t_{SIK3}	$V_{DD} = 2.7$ to 5.5 V	150			ns
			500			ns
SB0, 1 hold time (vs. $\overline{\text{SCK}}$ \uparrow)	t_{KSI3}		$t_{\text{KCY3}}/2$			ns
$\overline{\text{SCK}}$ \downarrow \rightarrow SB0, 1 output delay time	t_{KSO3}	$R_L = 1$ k Ω ^{Note} $C_L = 100$ pF	$V_{DD} = 2.7$ to 5.5 V	0	250	ns
				0	1000	ns
$\overline{\text{SCK}}$ \uparrow \rightarrow SB0, 1 \downarrow	t_{KSB}		t_{KCY3}			ns
SB0, 1 \downarrow \rightarrow $\overline{\text{SCK}}$ \downarrow	t_{SBK}		t_{KCY3}			ns
SB0, 1 low-level width	t_{SBL}		t_{KCY3}			ns
SB0, 1 high-level width	t_{SBH}		t_{KCY3}			ns

Note R_L and C_L respectively indicate the load resistance and load capacitance of the SB0 and 1 output lines.

SBI mode ($\overline{\text{SCK}}$... external clock input (slave)): ($T_A = -40$ to $+85^\circ\text{C}$, $V_{DD} = 1.8$ to 5.5 V)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
$\overline{\text{SCK}}$ cycle time	t_{KCY4}	$V_{DD} = 2.7$ to 5.5 V	800			ns
			3200			ns
$\overline{\text{SCK}}$ high-, low-level widths	t_{KL4} ,	$V_{DD} = 2.7$ to 5.5 V	400			ns
	t_{KH4}		1600			ns
SB0, 1 setup time (vs. $\overline{\text{SCK}}$ \uparrow)	t_{SIK4}	$V_{DD} = 2.7$ to 5.5 V	100			ns
			150			ns
SB0, 1 hold time (vs. $\overline{\text{SCK}}$ \uparrow)	t_{KSI4}		$t_{\text{KCY4}}/2$			ns
$\overline{\text{SCK}}$ \downarrow \rightarrow SB0, 1 output delay time	t_{KSO4}	$R_L = 1$ k Ω ^{Note} $C_L = 100$ pF	$V_{DD} = 2.7$ to 5.5 V	0	300	ns
				0	1000	ns
$\overline{\text{SCK}}$ \uparrow \rightarrow SB0, 1 \downarrow	t_{KSB}		t_{KCY4}			ns
SB0, 1 \downarrow \rightarrow $\overline{\text{SCK}}$ \downarrow	t_{SBK}		t_{KCY4}			ns
SB0, 1 low-level width	t_{SBL}		t_{KCY4}			ns
SB0, 1 high-level width	t_{SBH}		t_{KCY4}			ns

Note R_L and C_L respectively indicate the load resistance and load capacitance of the SB0 and 1 output lines.

A/D Converter Characteristics (TA = -40 to +85°C, VDD = 1.8 to 5.5 V, 1.8 V ≤ AVREF ≤ VDD, AVSS = VSS)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Resolution			8	8	8	bit
Absolute accuracy ^{Note 1}		VDD = AVREF	2.7 V ≤ VDD		1.5	LSB
			1.8 V ≤ VDD < 2.7 V		3	LSB
		VDD ≠ AVREF			3	LSB
Conversion time	tCONV	Note 2			168/fx	μs
Sampling time	tSAMP	Note 3			44/fx	μs
Analog input voltage	VIAN		AVSS		AVREF	V
Analog input impedance	RAN			1000		MΩ
AVREF current	IREF			0.25	2.0	mA

- Notes**
1. Absolute accuracy excluding quantization error ($\pm 1/2\text{LSB}$)
 2. Time until end of conversion (EOC = 1) after execution of conversion start instruction (40.1 μs: fx = 4.19 MHz).
 3. Time until end of sampling after execution of conversion start instruction (10.5 μs: fx = 4.19 MHz).

15. RECOMMENDED SOLDERING CONDITIONS

The μPD753036 should be soldered and mounted under the following recommended conditions.
For technical information, see the following website.

Semiconductor Device Mount Manual (<http://www.necel.com/pkg/en/mount/index.html>)

Table 15-1. Surface Mounting Type Soldering Conditions (1/2)

(1) μPD753036GC-xxx-3B9: 80-pin plastic QFP (14 × 14 mm, 0.65 mm pitch)

★ μPD753036GC(A)-xxx-3B9:80-pin plastic QFP (14 × 14 mm, 0.65 mm pitch)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 235°C, Time: 30 seconds max. (at 210°C or higher), Count: Three times or less	IR35-00-3
VPS	Package peak temperature: 215°C, Time: 40 seconds max. (at 200°C or higher), Count: Three times or less	VP15-00-3
Wave soldering	Solder bath temperature: 260°C max., Time: 10 seconds max., Count: Once Preheating temperature: 120°C max. (package surface temperature)	WS60-00-1
Partial heating	Pin temperature: 350°C max., Time: 3 seconds max. (per pin row)	–

Caution Do not use different soldering methods together (except for partial heating).

Remark For soldering methods and conditions other than those recommended above, contact an NEC Electronics sales representative.

★ (2) μPD753036GK-xxx-BE9:80-pin plastic TQFP (fine pitch) (12 × 12 mm, 0.5 mm pitch)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 235°C, Time: 30 seconds max. (at 210°C or higher), Count: Twice or less, Exposure limit: 7 days ^{Note} (after that, prebake at 125°C for 10 to 72 hours)	IR35-107-2
VPS	Package peak temperature: 215°C, Time: 40 seconds max. (at 200°C or higher), Count: Twice or less, Exposure limit: 7 days ^{Note} (after that, prebake at 125°C for 10 to 72 hours)	VP15-107-2
Partial heating	Pin temperature: 350°C max., Time: 3 seconds max. (per pin row)	–

Note After opening the dry pack, store it at 25°C or less and 65% RH or less for the allowable storage period.

Caution Do not use different soldering methods together (except for partial heating).

Remark For soldering methods and conditions other than those recommended above, contact an NEC Electronics sales representative.

Clock output (PCL)		<ul style="list-style-type: none"> • Φ, 524, 262, 65.5 kHz (Main system clock: at 4.19 MHz operation) 	<ul style="list-style-type: none"> • Φ, 524, 262, 65.5 kHz (Main system clock: at 4.19 MHz operation) • Φ, 750, 375, 93.8 kHz (Main system clock: at 6.0 MHz operation) 	
BUZ output (BUZ)		2, 4, 32 kHz (Main system clock: at 4.19 MHz operation, or subsystem clock: at 32.762 kHz operation)	<ul style="list-style-type: none"> • 2, 4, 32 kHz (Main system clock: during 4.19 MHz operation or subsystem clock: at 32.768 kHz operation) • 2.93, 5.86, 46.9 kHz (Main system clock: at 6.0 MHz operation) 	
Serial interface		3 modes are available <ul style="list-style-type: none"> • 3-wire serial I/O mode ... MSB/LSB can be selected for transfer first bit • 2-wire serial I/O mode • SBI mode 		
SOS register	Feedback resistor cut flag (SOS.0)	None	Contained	
	Sub-oscillator current cut flag (SOS.1)	None	Contained	
Register bank selection register (RBS)		Yes		
Standby release by INTO		No	Yes	
Vectored interrupt		External: 3, internal: 4	External: 3, internal: 5	
Operating supply voltage		V _{DD} = 2.7 to 6.0 V	V _{DD} = 1.8 to 5.5 V	
Operating ambient temperature		T _A = -40 to +85°C		
Package		<ul style="list-style-type: none"> • 80-pin plastic TQFP (fine pitch) (12 × 12 mm, 0.5 mm pitch) • 80-pin plastic QFP (14 × 14 mm, 0.65 mm pitch) 		

APPENDIX B. DEVELOPMENT TOOLS

The following development tools are provided for system development using the μPD753036.

In 75XL series, relocatable assemblers common to the entire series are used in combination with the device file for each product type.

Language processor

★ RA75X relocatable assembler	Host machine		OS	Distribution media	Part number (product name)
	PC-9800 series		MS-DOS™ (Ver. 3.30 to Ver. 6.2 <i>Note</i>)	3.5-inch 2HD	μS5A13RA75X
	IBM PC/AT™ compatible machines		Refer to "OS for IBM PC"	3.5-inch 2HC	μS7B13RA75X

★ Device file	Host machine		OS	Distribution media	Part number (product name)
	PC-9800 series		MS-DOS (Ver. 3.30 to Ver. 6.2 <i>Note</i>)	3.5-inch 2HD	μS5A13DF753036
	IBM PC/AT compatible machines		Refer to "OS for IBM PC"	3.5-inch 2HC	μS7B13DF753036

Note Ver.5.00 and the upper versions of Ver.5.00 have the task swap function, but it cannot be used for this software.

Remark The operation of the assembler and the device file is guaranteed only on the above host machines and OSs.

PROM write tools

Hardware	PG-1500	PG-1500 is a PROM programmer which enables you to program single chip microcontrollers containing PROM by stand-alone or host machine operation by connecting an attached board and optional programmer adapter to PG-1500. It also enables you to program typical PROM devices of 256 Kbits to 4 Mbits.			
	PA-75P328GC	PROM programmer adapter for the μPD75P3036GC. Connect the programmer adapter to PG-1500 for use.			
	PA-75P316GK	PROM programmer adapter for the μPD75P3036GK. Connect the programmer adapter to PG-1500 for use.			
	PA-75P3036KK-T	PROM programmer adapter for the μPD75P3036KK-T. Connect the programmer adapter to PG-1500 for use.			
Software	PG-1500 controller	PG-1500 and a host machine are connected by serial and parallel interfaces and PG-1500 is controlled on the host machine.			
		Host machine	OS	Distribution media	Part number (product name)
		PC-9800 series	MS-DOS (Ver. 3.30 to Ver. 6.2 ^{Note})	3.5-inch 2HD	μS5A13PG1500
		IBM PC/AT compatible machines	Refer to "OS for IBM PC"	3.5-inch 2HD	μS7B13PG1500

★

★

Note Ver.5.00 and the upper versions of Ver.5.00 have the task swap function, but it cannot be used for this software.

Remark The operation of the PG-1500 controller is guaranteed only on the above host machines and OSs.

Debugging tool

The in-circuit emulators (IE-75000-R and IE-75001-R) are available as the program debugging tool for the μPD753036.

The system configurations are described as follows.

Hardware	IE-75000-R ^{Note 1}	In-circuit emulator for debugging the hardware and software when developing the application systems that use the 75X series and 75XL series. When developing a μPD753036 subseries, the emulation board IE-75300-R-EM and emulation probe EP-75336GC-R or EP-75336GK-R that are sold separately must be used with the IE-75000-R. By connecting with the host machine and the PROM programmer, efficient debugging can be made. It contains the emulation board IE-75000-R-EM which is connected.			
	IE-75001-R	In-circuit emulator for debugging the hardware and software when developing the application systems that use the 75X series and 75XL series. When developing a μPD753036 sub-series, the emulation board IE-75300-R-EM and emulation probe EP-75336GC-R or EP-75336GK-R which are sold separately must be used with the IE-75001-R. It can debug the system efficiently by connecting the host machine and PROM programmer.			
	IE-75300-R-EM	Emulation board for evaluating the application systems that use the μPD753036 subseries. It must be used with the IE-75000-R or IE-75001-R.			
	EP-75336GC-R	Emulation probe for the μPD753036GC. It must be connected to IE-75000-R (or IE-75001-R) and IE-75300-R-EM. It is supplied with the 80-pin conversion socket EV-9200GC-80 which facilitates connection to a target system.			
	EV-9200GC-80				
Software	IE control program	Connects the IE-75000-R or IE-75001-R to a host machine via RS-232C and Centronics I/F and controls the above hardware on a host machine.			
		Host machine	OS	Distribution media	Part number (product name)
		PC-9800 series	MS-DOS (Ver. 3.30 to Ver. 6.2 ^{Note 3})	3.5-inch 2HD	μS5A13IE75X
				5-inch 2HD	μS5A10IE75X
		IBM PC/AT compatible machines	Refer to "OS for IBM PC"	3.5-inch 2HC	μS7B13IE75X
	5-inch 2HC			μS7B10IE75X	
	TGK-080SDW ^{Note 2}	Emulation probe for the μPD753036GK. It must be connected to the IE-75000-R (or IE-75001-R) and IE-75300-R-EM. It is supplied with the 80-pin conversion adapter TGK-080SDW which facilitates connection to a target system.			

Notes 1. Maintenance parts

★ **2.** This is a product of Tokyo Eletech Corp.

For further information, contact: Daimaru Kogyo, Ltd.

Tokyo Electronics Department (TEL +81-3-3820-7112)

Osaka Electronics 2nd Department (TEL +81-6-6244-6672)

3. Ver.5.00 and the upper versions of Ver.5.00 have the task swap function, but it cannot be used for this software.

Remarks 1. The operation of the IE control program is guaranteed only on the above host machines and OSs.

2. The μPD753036 subseries consists of the μPD753036 and 75P3036.

OS for IBM PC

The following IBM PC OS's are supported.

OS	Version
PC DOSTM	Ver. 5.02 to Ver. 6.3 J6.1/V ^{Note} to J6.3/V ^{Note}
MS-DOS	Ver. 5.0 to Ver. 6.22 5.0/V ^{Note} to 6.2/V ^{Note}
IBM DOS TM	J5.02/V ^{Note}

Note Only English version is supported.

Caution Ver.5.00 and the upper versions of Ver.5.0 have the task swap function, but it cannot be used for this software.

NOTES FOR CMOS DEVICES

① VOLTAGE APPLICATION WAVEFORM AT INPUT PIN

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (MAX) and V_{IH} (MIN) due to noise, etc., the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (MAX) and V_{IH} (MIN).

② HANDLING OF UNUSED INPUT PINS

Unconnected CMOS device inputs can be cause of malfunction. If an input pin is unconnected, it is possible that an internal input level may be generated due to noise, etc., causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND via a resistor if there is a possibility that it will be an output pin. All handling related to unused pins must be judged separately for each device and according to related specifications governing the device.

③ PRECAUTION AGAINST ESD

A strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it when it has occurred. Environmental control must be adequate. When it is dry, a humidifier should be used. It is recommended to avoid using insulators that easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors should be grounded. The operator should be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with mounted semiconductor devices.

④ STATUS BEFORE INITIALIZATION

Power-on does not necessarily define the initial status of a MOS device. Immediately after the power source is turned ON, devices with reset functions have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. A device is not initialized until the reset signal is received. A reset operation must be executed immediately after power-on for devices with reset functions.

⑤ POWER ON/OFF SEQUENCE

In the case of a device that uses different power supplies for the internal operation and external interface, as a rule, switch on the external power supply after switching on the internal power supply. When switching the power supply off, as a rule, switch off the external power supply and then the internal power supply. Use of the reverse power on/off sequences may result in the application of an overvoltage to the internal elements of the device, causing malfunction and degradation of internal elements due to the passage of an abnormal current.

The correct power on/off sequence must be judged separately for each device and according to related specifications governing the device.

⑥ INPUT OF SIGNAL DURING POWER OFF STATE

Do not input signals or an I/O pull-up power supply while the device is not powered. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Input of signals during the power off state must be judged separately for each device and according to related specifications governing the device.

Regional Information

Some information contained in this document may vary from country to country. Before using any NEC Electronics product in your application, please contact the NEC Electronics office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

MS-DOS is either a registered trademark or a trademark of Microsoft Corporation in the United States and/or other countries.

IBM DOS, PC/AT, and PC DOS are trademarks of IBM Corporation.

These commodities, technology or software, must be exported in accordance with the export administration regulations of the exporting country. Diversion contrary to the law of that country is prohibited.

• The information in this document is current as of August, 2005. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC Electronics data sheets or data books, etc., for the most up-to-date specifications of NEC Electronics products. Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.

- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics. NEC Electronics assumes no responsibility for any errors that may appear in this document.
- NEC Electronics does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC Electronics products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Electronics or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of a customer's equipment shall be done under the full responsibility of the customer. NEC Electronics assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC Electronics endeavors to enhance the quality, reliability and safety of NEC Electronics products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC Electronics products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.
- NEC Electronics products are classified into the following three quality grades: "Standard", "Special" and "Specific".

The "Specific" quality grade applies only to NEC Electronics products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of an NEC Electronics product depend on its quality grade, as indicated below. Customers must check the quality grade of each NEC Electronics product before using it in a particular application.

"Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots.

"Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support).

"Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC Electronics products is "Standard" unless otherwise expressly specified in NEC Electronics data sheets or data books, etc. If customers wish to use NEC Electronics products in applications not intended by NEC Electronics, they must contact an NEC Electronics sales representative in advance to determine NEC Electronics' willingness to support a given application.

(Note)

- (1) "NEC Electronics" as used in this statement means NEC Electronics Corporation and also includes its majority-owned subsidiaries.
- (2) "NEC Electronics products" means any product developed or manufactured by or for NEC Electronics (as defined above).
