

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

4-BIT SINGLE-CHIP MICROCONTROLLER

The μ PD754304 is one of the "75XL Series" 4-bit single-chip microcontrollers with data processing capability comparable to that of 8-bit microcontrollers. The μ PD754303(A) has a higher reliability than the μ PD754304.

The microcontrollers in the 75XL Series have expanded CPU functions than those of the 75X Series and can operate at a voltage of as low as 1.8 V; therefore, they are ideal for battery-driven application systems.

As the one-time PROM version of the μ PD754304, the μ PD75P4308 is ideal for evaluation of a system under development or for small-scale production of application systems.

Detailed information about functions can be found in the following document. Be sure to read the following document before designing.

μ PD754304 User's Manual: U10123E

FEATURES

- Low-voltage operation: $V_{DD} = 1.8$ to 5.5 V
- Internal memory
 - Program memory (ROM):
 - 2048 \times 8 bits (μ PD754302, 754302(A))
 - 4096 \times 8 bits (μ PD754304, 754304(A))
 - Data memory (RAM): 256 \times 4 bits
- Variable instruction execution time effective for high-speed operation and power saving
 - 0.95, 1.91, 3.81, or 15.3 μ s (at 4.19 MHz)
 - 0.67, 1.33, 2.67, or 10.7 μ s (at 6.0 MHz)
- Internal serial interface (1 channel)
- Powerful timer function (3 channels)
- Inherits instruction set of existing 75X Series for easy replacement

APPLICATIONS

- μ PD754302, 754302(A)
Cordless telephones, TVs, VCRs, audio systems, household appliances, office machines, etc.
- ★ • μ PD754304, 754304(A)
Automotive appliance, etc.
- ★ The μ PD754302 and 754304 differ from the μ PD754302(A) and 754304(A) only in terms of their quality grade. Unless otherwise specified, the μ PD754304 is treated as a representative model in this Data Sheet. For the models other than the μ PD754304, μ PD754304 can be read as the other model name. If different descriptions are made for the μ PD754302 and 754304, the (A) models correspond as follows:
 μ PD754302 \rightarrow μ PD754302(A), μ PD754304 \rightarrow μ PD754304(A)

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.
Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.

ORDERING INFORMATION

	Parts Number	Package	Quality Grade
	μPD754302GS-xxx	36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)	Standard
★	μPD754302GS-xxx-A	36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)	Standard
	μPD754304GS-xxx	36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)	Standard
★	μPD754304GS-xxx-A	36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)	Standard
★	μPD754302GS(A)-xxx	36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)	Special
★	μPD754304GS(A)-xxx	36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)	Special

- Remarks** 1. Products with “-A” at the end of the part number are lead-free products.
 2. xxx indicates ROM code suffix.

Please refer to "Quality Grades on NEC Semiconductor Devices" (Document No. C11531E) published by NEC Electronics Corporation to know the specification of quality grade on the devices and its recommended applications.

2. BLOCK DIAGRAM

- Notes** 1. The μPD754302 and μPD754304 program counters are 11 and 12 bits, respectively.
 2. The ROM capacity of the μPD754302 is 2048 × 8 bits, and that of the μPD754304 is 4096 × 8 bits.

3. PIN FUNCTION

3.1 Port Pins

Pin Name	Input/Output	Alternate Function	Function	8-bit I/O	After Reset	I/O Circuit TYPE Note 1
P00	Input	INT4	4-bit input port (PORT0).	×	Input	ⓑ
P01	Input/Output	SCK	For P01 to P03, on-chip pull-up resistors can be specified by software in 3-bit units.			ⓕ-A
P02	Input/Output	SO/SB0				ⓕ-B
P03	Input	SI				ⓑ-C
P10	Input	INT0	4-bit input port (PORT1).	×	Input	ⓑ-C
P11		INT1	On-chip pull-up resistors can be specified by software in 4-bit units.			
P12		INT2	Noise elimination circuit can be selected			
P13		Ti0/Ti1	(Only P10/INT0)			
P20	Input/Output	PTO0	4-bit input/output port (PORT2).	×	Input	E-B
P21		PTO1	On-chip pull-up resistors can be specified by software in 4-bit units.			
P22		PCL				
P23		–				
P30	Input/Output	–	Programmable 4-bit input/output port (PORT3).	×	Input	E-B
P31		–	This port can be specified for input/output bit-wise. On-chip pull-up resistor can be specified by software in 4-bit units.			
P32		–				
P33		–				
P50-P53 Note 2	Input/Output	–	N-ch open-drain 4-bit input/output port (PORT5). A pull-up resistor can be contained bit-wise (mask option). Withstand voltage is 13 V in open-drain mode.	×	High level (when pull-up resistors are provided) or high-impedance	M-D
P60	Input/Output	KR0	Programmable 4-bit input/output port (PORT6).	√	Input	ⓕ-A
P61		KR1	This port can be specified for input/output bit-wise. On-chip pull-up resistors can be specified by software in 4-bit units.			
P62		KR2				
P63		KR3				
P70	Input/Output	KR4	4-bit input/output port (PORT7).		Input	ⓕ-A
P71		KR5	On-chip pull-up resistors can be specified by software in 4-bit units.			
P72		KR6				
P73		KR7				
P80	Input/Output	–	2-bit input/output port (PORT8).	×	Input	E-B
P81		–	On-chip pull-up resistors can be specified by software in 2-bit units.			

- Notes**
1. Circled characters indicate the Schmitt-trigger input.
 2. If on-chip pull-up resistors are not specified by mask option (when used as N-ch open-drain input port), low level input leakage current increases when input or bit manipulation instruction is executed.

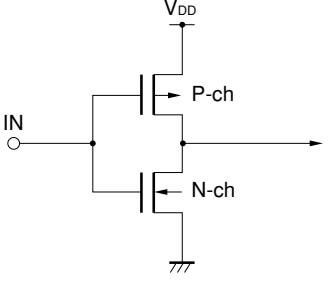

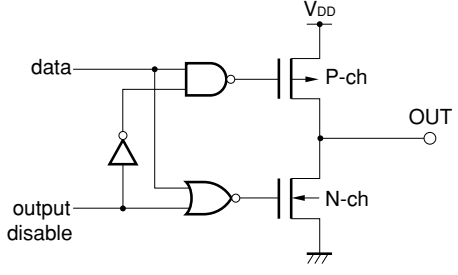

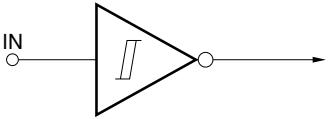

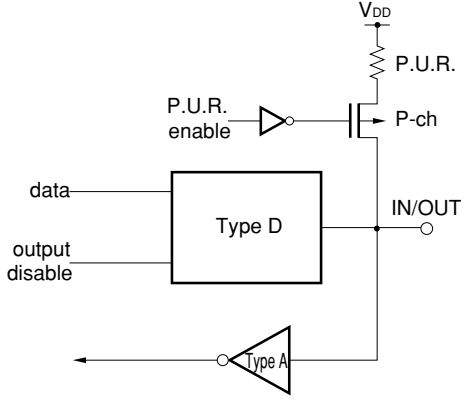

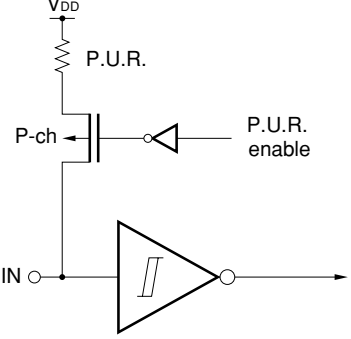

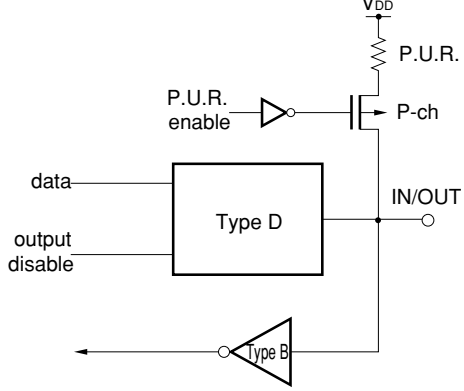

3.2 Non-port Pins

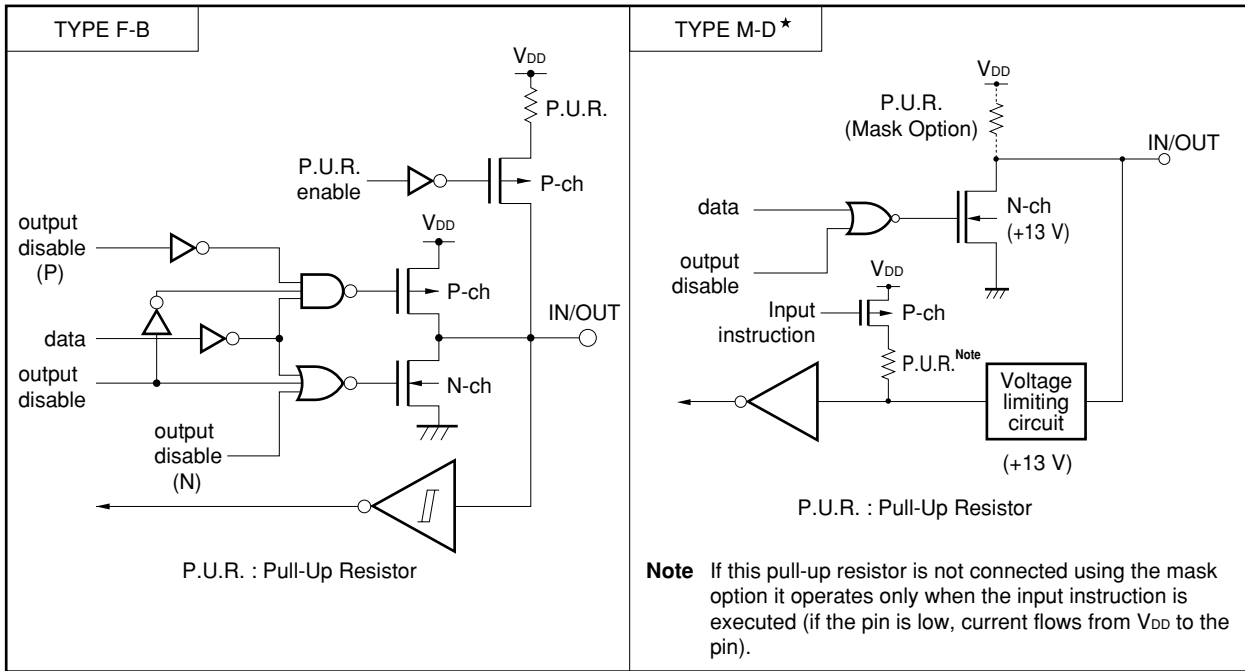

Pin Name	Input/Output	Alternate Function	Function	After Reset	I/O Circuit TYPE <small>Note</small>	
TI0/TI1	Input	P13	Inputs external event pulses to the timer/event counter.	Input	ⓑ-C	
PTO0	Output	P20	Timer/event counter output	Input	E-B	
PTO1		P21				
PCL		P22	Clock output			
SCK	Input/Output	P01	Serial clock input/output	Input	ⓕ-A	
SO/SB0		P02	Serial data output Serial data bus input/output		ⓕ-B	
SI	Input	P03	Serial data input		ⓑ-C	
INT4	Input	P00	Edge detection vectored interrupt input (both rising edge and falling edge detection)	Input	ⓑ	
INT0	Input	P10	Edge detection vectored interrupt input (detection edge can be selected). INT0/P10 can select a noise elimination circuit.	Asynchronous with noise elimination circuit can be selected	Input	ⓑ-C
INT1		P11	Asynchronous			
INT2	Input	P12	Edge detection testable input (rising edge detection)	Asynchronous	Input	ⓑ-C
KR0-KR3	Input	P60-P63	Testable input (falling edge detection)	Input	ⓕ-A	
KR4-KR7		P70-P73				
X1	Input	-	Crystal/ceramic connection pin for the system clock oscillator. When inputting the external clock, input the external clock to pin X1, and the inverted phase of the external clock to pin X2.	-	-	
X2	-					
RESET	Input	-	System reset input (low-level active)	-	ⓑ	
IC	-	-	Internally connected. Connect directly to V _{DD} .	-	-	
V _{DD}	-	-	Positive power supply	-	-	
V _{SS}	-	-	Ground potential	-	-	

Note Circled characters indicate the Schmitt-trigger input.

3.3 Pin Input/Output Circuits

The μ PD754304 pin input/output circuits are shown schematically.

<p>TYPE A</p>  <p>CMOS specification input buffer.</p>	<p>TYPE D</p>  <p>Push-pull output that can be placed in output high-impedance (both P-ch, N-ch off).</p>
<p>TYPE B</p>  <p>Schmitt trigger input having hysteresis characteristic.</p>	<p>TYPE E-B</p>  <p>P.U.R. : Pull-Up Resistor</p>
<p>TYPE B-C</p>  <p>P.U.R. : Pull-Up Resistor</p>	<p>TYPE F-A</p>  <p>P.U.R. : Pull-Up Resistor</p>

3.4 Recommended Connections for Unused Pins

Table 3-1. List of Recommended Connections for Unused Pins

Pin	Recommended Connection
★ P00/INT4	Connect to V _{SS} or V _{DD}
P01/ $\overline{\text{SCK}}$	Connect to V _{SS} or V _{DD} through the resistor individually
P02/SO/SB0	
P03/SI	Connect to V _{SS}
★ P10/INT0-P12/INT2	Connect to V _{SS} or V _{DD}
★ P13/TI0/TI1	
P20/PTO0	Input state : Connect to V _{SS} or V _{DD} through the resistor individually
P21/PTO1	
P22/PCL	Output state : Leave open
P23	
P30-P33	
★ P50-P53	Input state : Connect to V _{SS} Output state : Connect to V _{SS} (Pull-up resistor by mask option should not be connected)
P60/KR0-P63/KR3	Input state : Connect to V _{SS} or V _{DD} through the resistor individually
P70/KR4-P73/KR7	
P80, P81	Output state : Leave open
IC	Connect to V _{DD} directly

4. SWITCHING FUNCTION BETWEEN Mk I MODE AND Mk II MODE

4.1 Difference between Mk I and Mk II Modes

The CPU of μPD754304 has the following two modes: Mk I and Mk II, either of which can be selected. The mode can be switched by the bit 3 of the stack bank select register (SBS).

- Mk I mode: Can be used in the 75XL CPU with a ROM capacity of up to 16K bytes.
- Mk II mode: Can be used in all the 75XL CPU's including those products whose ROM capacity is more than 16K bytes.

Table 4-1. Differences between Mk I Mode and Mk II Mode

	Mk I mode	Mk II mode
Number of stack bytes for subroutine instructions	2 bytes	3 bytes
BRA !addr1 instruction CALLA !addr1 instruction	Not available	Available
CALL !addr instruction	3 machine cycles	4 machine cycles
CALLF !faddr instruction	2 machine cycles	3 machine cycles

★ **Caution** The Mk II mode supports a program area exceeding 16K bytes in the 75X and 75XL series. This mode can improve software compatibility with products with a program area of more than 16K bytes. When Mk II mode is selected, the number of stack bytes when a subroutine call instruction is executed is greater by 1 byte per stack compared with the Mk I mode. When the CALL !addr or CALLF !faddr instruction is used, one more machine cycle is required. To emphasize the efficiency of the RAM and processing speed rather than software compatibility, therefore, use the Mk I mode.

4.2 Setting Method of Stack Bank Select Register (SBS)

Switching between the Mk I mode and Mk II mode can be done by the SBS. Figure 4-1 shows the format. The SBS is set by a 4-bit memory manipulation instruction.

When using the Mk I mode, the SBS must be initialized to 1000B at the beginning of a program. When using the Mk II mode, it must be initialized to 0000B.

Figure 4-1. Stack Bank Select Register Format

Caution Since SBS. 3 is set to “1” after a RESET signal is generated, the CPU operates in the Mk I mode. When executing an instruction in the Mk II mode, set SBS. 3 to “0” to select the Mk II mode.

5. MEMORY CONFIGURATION

- **Program Memory (ROM)** 2048 × 8 bits (μ PD754302)
.... 4096 × 8 bits (μ PD754304)

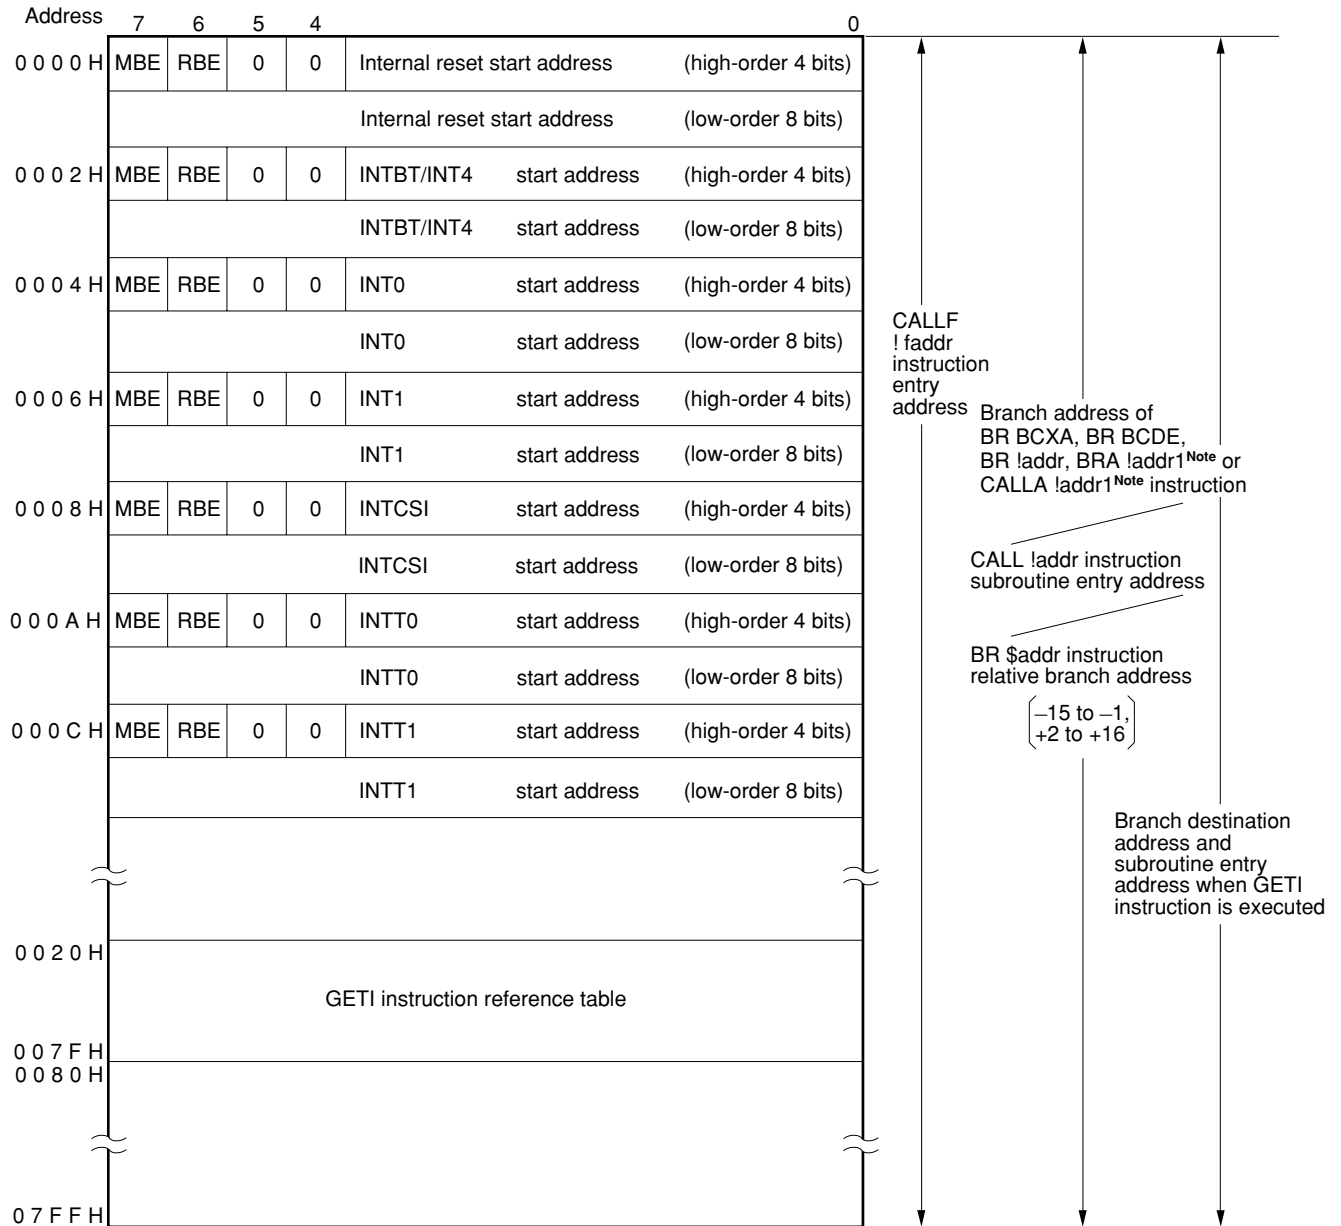

- Addresses 0000H and 0001H
Vector table wherein the program start address and the values set for the RBE and MBE at the time a $\overline{\text{RESET}}$ signal is generated are written. Reset and start are possible at an arbitrary address.
- Addresses 0002H-000DH
Vector table wherein the program start address and values set for the RBE and MBE by the vectored interrupts are written. Interrupt execution can be started at an arbitrary address.
- Addresses 0020H-007FH
Table area referenced by the GETI instruction ^{Note}.

Note The GETI instruction realizes a 1-byte instruction on behalf of an arbitrary 2-byte instruction, 3-byte instruction, or two 1-byte instructions. It is used to decrease the program steps.

- **Data Memory (RAM)**
 - Data area 256 words × 4 bits (000H-0FFH)
 - Peripheral hardware area 128 words × 4 bits (F80H-FFFH)

Figure 5-1. Program Memory Map (1/2)

(a) μPD754302

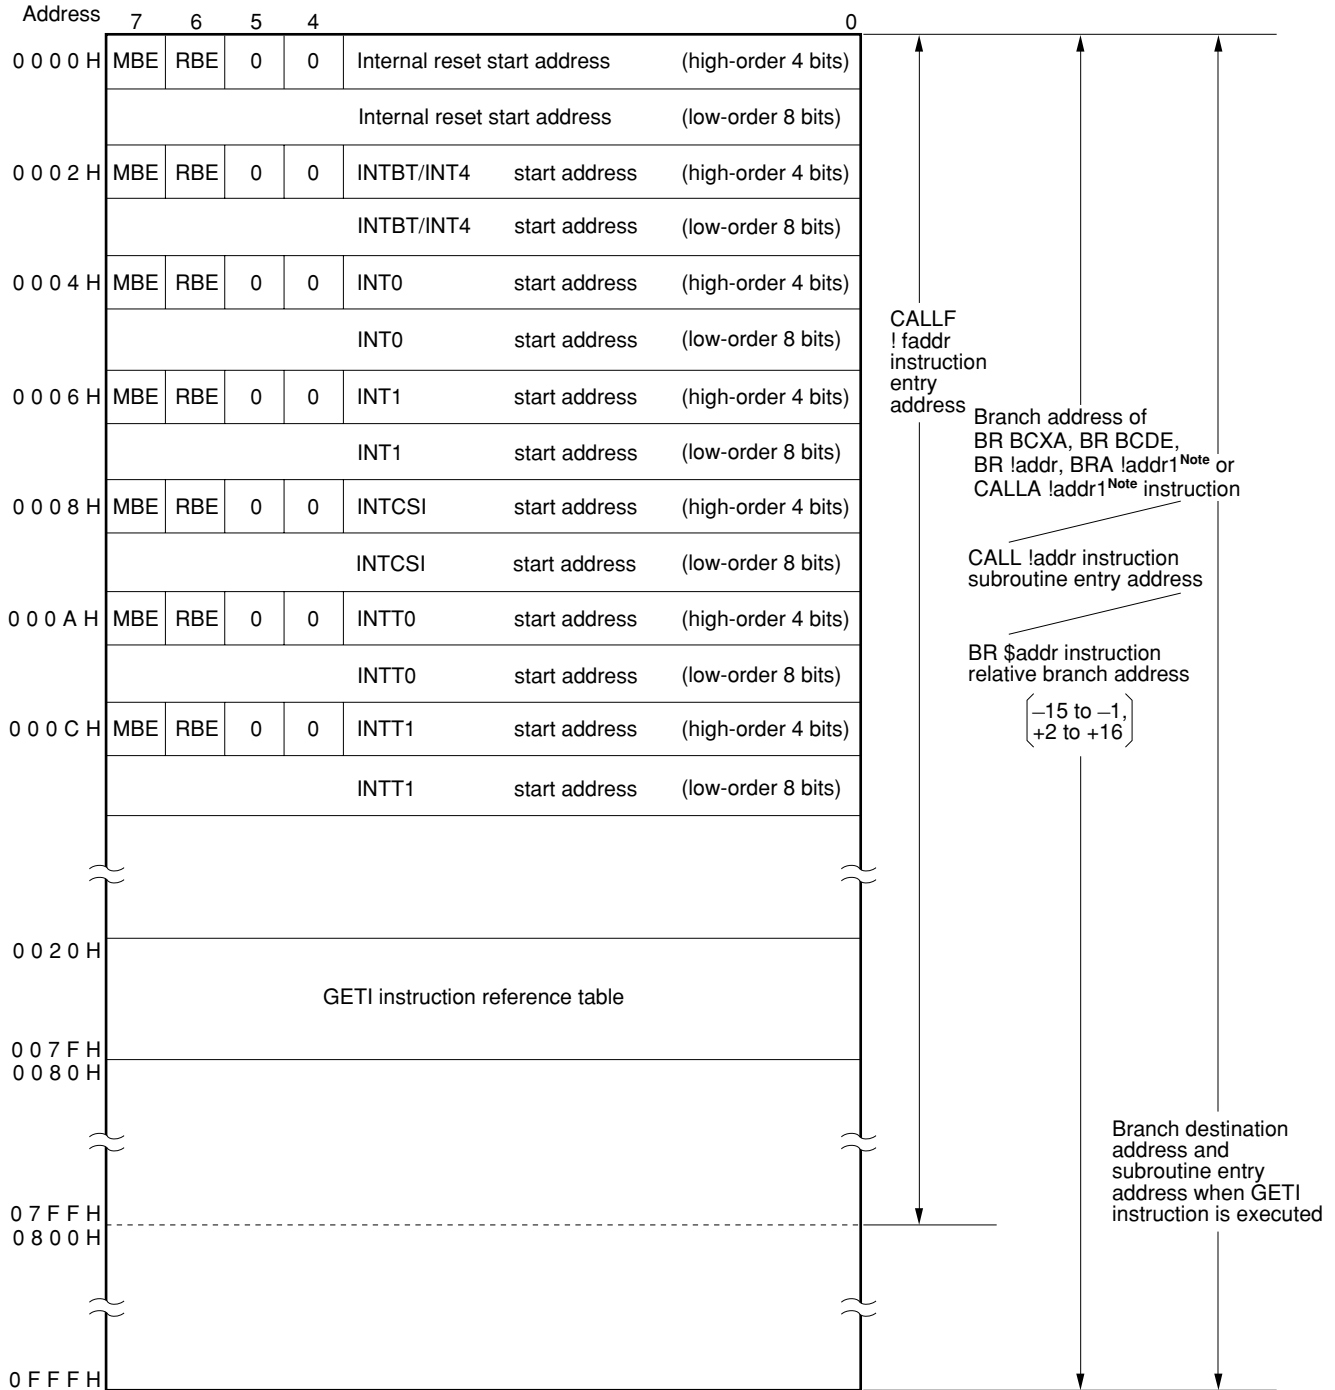

★ **Note** Can be used in the Mk II mode only.

Remark In addition to the above, a branch can be taken to the address indicated by changing only the low-order eight bits of PC by executing the BR PCDE or BR PCXA instruction.

Figure 5-1. Program Memory Map (2/2)

(b) μPD754304

★ **Note** Can be used in the Mk II mode only.

Remark In addition to the above, a branch can be taken to the address indicated by changing only the low-order eight bits of PC by executing the BR PCDE or BR PCXA instruction.

Figure 5-2. Data Memory Map

6. PERIPHERAL HARDWARE FUNCTIONS

6.1 Digital Input Ports

The following three types of I/O ports are provided.

- CMOS input (Ports 0, 1) : 8
- CMOS I/O (Ports 2, 3, 6 to 8) : 18
- N-ch open-drain I/O (Port 5) : 4

Total 30

Table 6-1. Types and Features of Digital Ports

Port Name	Function	Operation, Features		Remark
PORT0	4-bit input	When serial interface function is used, multiplexed pin has output function depending on operation mode.		Multiplexed with INT4, $\overline{\text{SCK}}$, SO/SB0, and SI pins
PORT1		Input port.		Multiplexed with INT0 through INT2 and TI0/TI1 pins.
PORT2	4-bit I/O	Can be set in input or output mode in 4-bit units.		Multiplexed with PTO0, PTO1, and PCL pins.
PORT3		Can be set in input or output mode in 1-bit units.		
PORT5		4-bit I/O (N-ch open-drain, 13 V)	Can be set in input or output mode in 4-bit units. Pull-up resistor can be connected in 1-bit units by mask option.	
PORT6	4-bit I/O	Can be set in input or output mode in 1-bit units.	Ports 6 and 7 are used in pairs and can input or output data in 8-bit units.	Multiplexed with KR0 through KR3 pins.
PORT7		Can be set in input or output mode in 4-bit units.		Multiplexed with KR4 through KR7 pins.
PORT8	2-bit I/O	Can be set in input or output mode in 2-bit units.		—

6.2 Clock Generator

• Clock generator configuration

The clock generator provides the clock signals to the CPU and peripheral hardware and its configuration is shown in Figure 6-1.

The operation of the clock generator is set with the processor clock control register (PCC).

The instruction execution time can be changed.

- 0.95, 1.91, 3.81, 15.3 μ s (system clock operating at 4.19 MHz)
- 0.67, 1.33, 2.67, 10.7 μ s (system clock operating at 6.0 MHz)

Figure 6-1. Clock Generator Block Diagram

Note Instruction execution

- Remarks**
1. f_x = System clock frequency
 2. Φ = CPU clock
 3. PCC: Processor Clock Control Register
 4. One clock cycle (t_{CY}) of the CPU clock is equal to one machine cycle of the instruction.

6.3 Clock Output Circuit

The clock output circuit outputs clock pulses from the P22/PCL pin, and is used to apply for remote controller waveform output or to supply clock pulse peripheral LSIs.

- Clock output (PCL) : Φ , 524, 262, 65.5 kHz (during 4.19-MHz operation)
 Φ , 750, 375, 93.8 kHz (during 6.0-MHz operation)

Figure 6-2. Clock Output Circuit Block Diagram

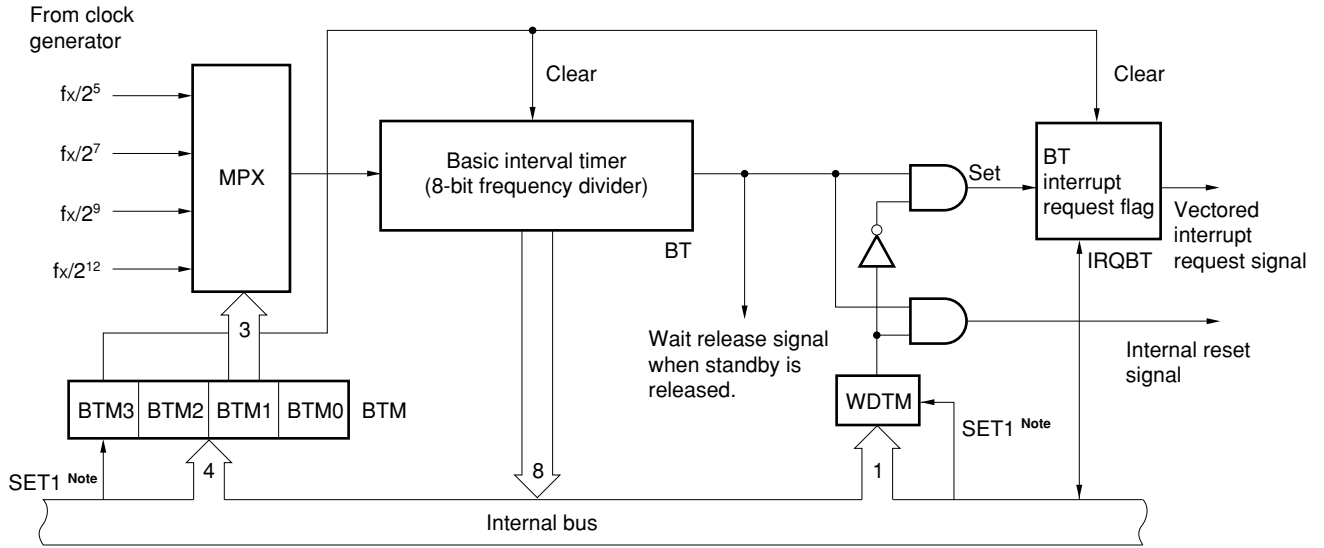

Remark Special care has been taken in designing the chip so that small-width pulses may not be output when switching clock output enable/disable.

6.4 Basic Interval Timer/Watchdog Timer

The basic interval timer/watchdog timer has the following functions.

- Interval timer operation to generate a reference time interrupt
- Watchdog timer operation to detect a runaway of program and reset the CPU
- Selects and counts the wait time when the standby mode is released
- Reads the contents of counting

Figure 6-3. Basic Interval Timer/Watchdog Timer Block Diagram

Note Instruction execution

6.5 Timer/Event Counter

The μPD754304 has two channels of timer/event counters. Its configuration is shown in Figures 6-4 and 6-5.

The timer/event counter has the following functions.

- Programmable interval timer operation
- Square wave output of any frequency to the PTO_n pin (n = 0, 1)
- Event counter operation
- Divides the frequency of signal input via the TIn pin to 1-Nth of the original signal and outputs the divided frequency to the PTO_n pin (frequency divider operation).
- Supplies the shift clock to the serial interface circuit.
- Reads the count value.

The timer/event counter operates in the following two modes as set by the mode register.

Table 6-2. Operation Modes of Timer/Event Counter

Mode	Channel	
	Channel 0	Channel 1
8-bit timer/event counter mode	√	√
16-bit timer/event counter mode	√	

Figure 6-4. Timer/Event Counter (Channel 0) Block Diagram

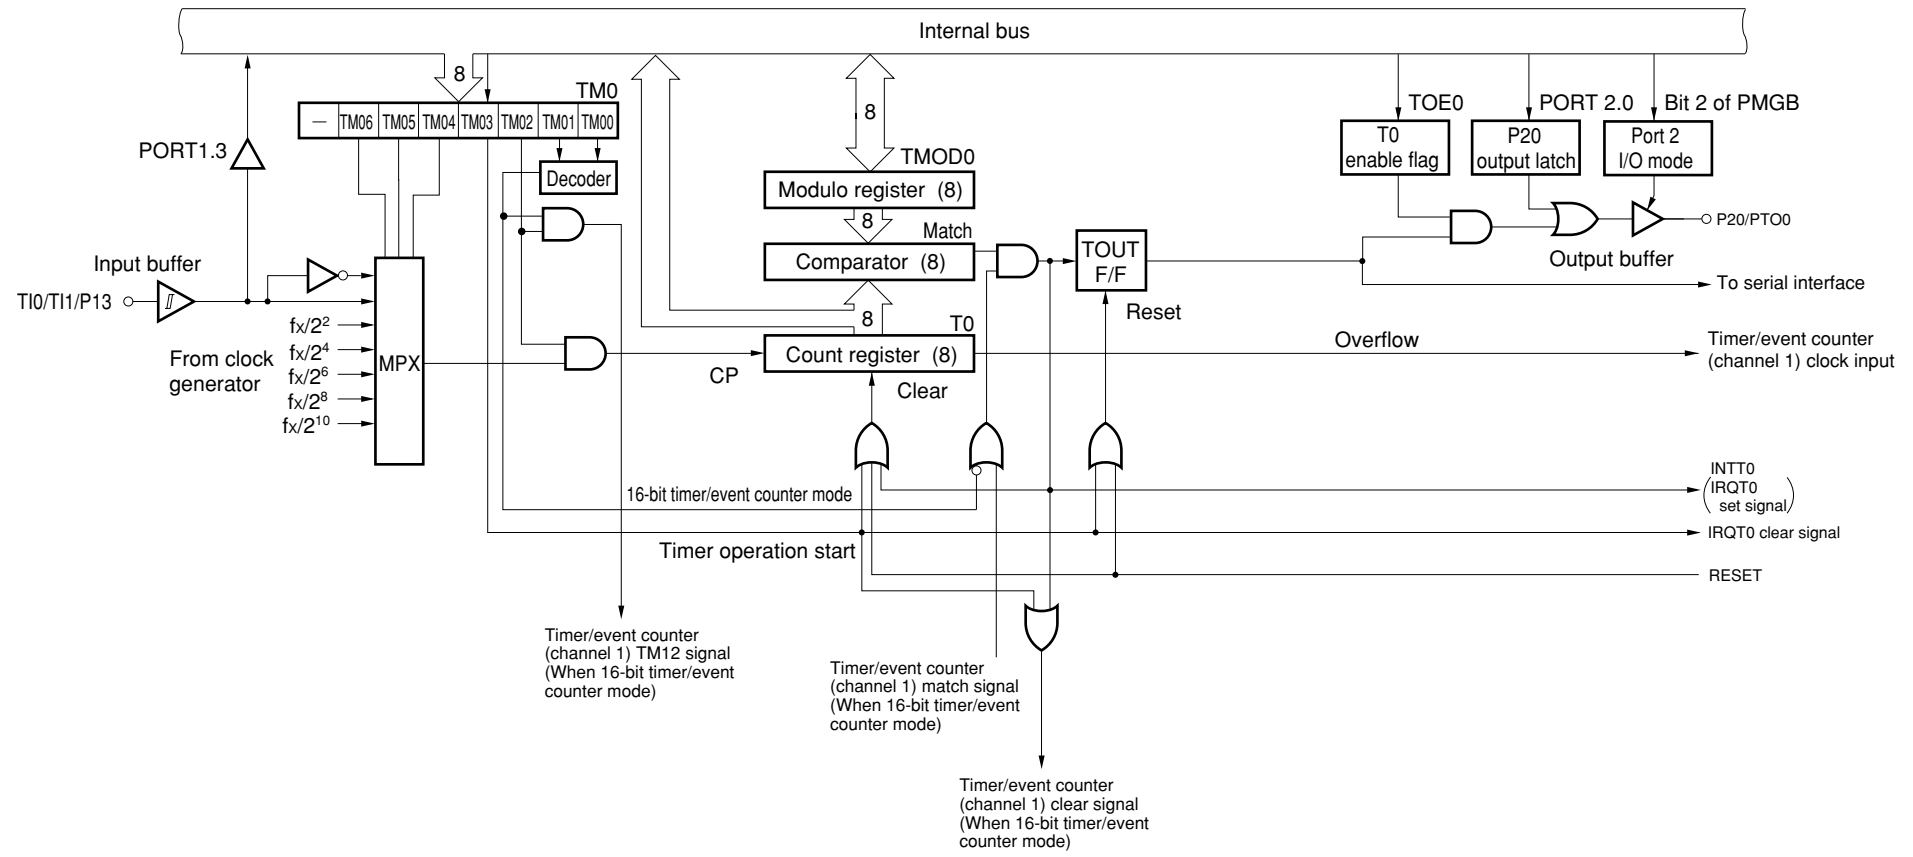

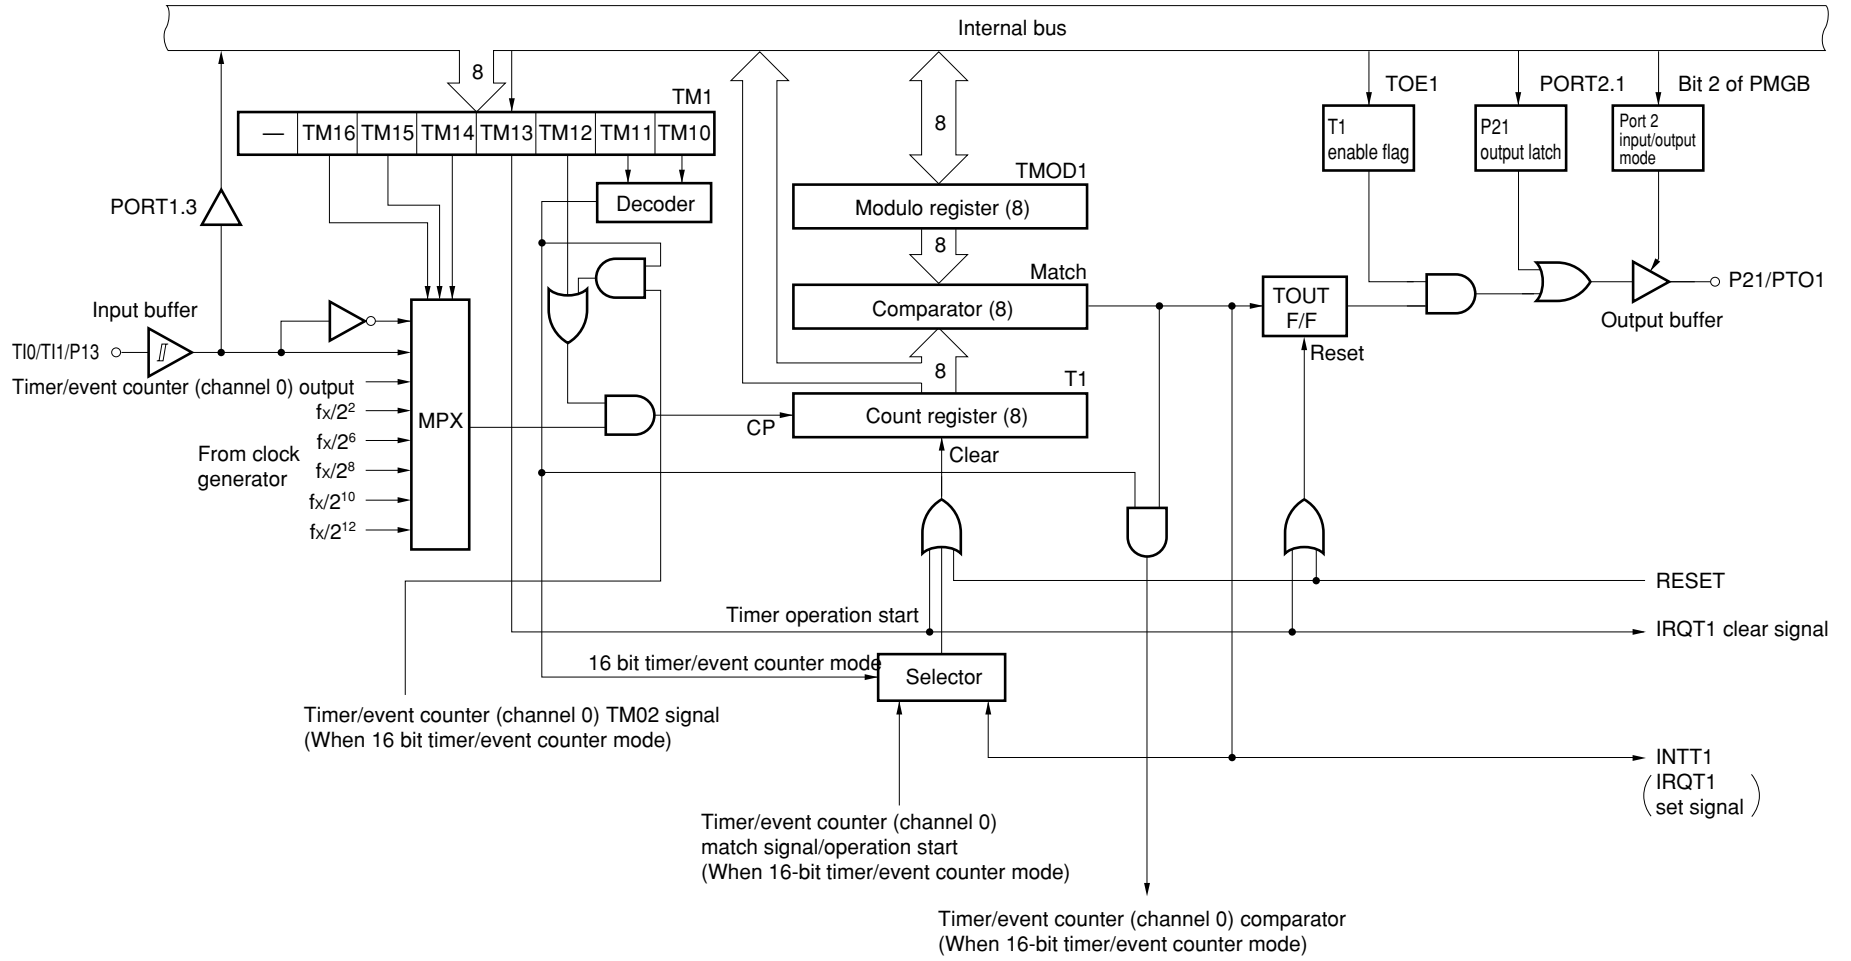

Figure 6-5. Timer/Event Counter (Channel 1) Block Diagram

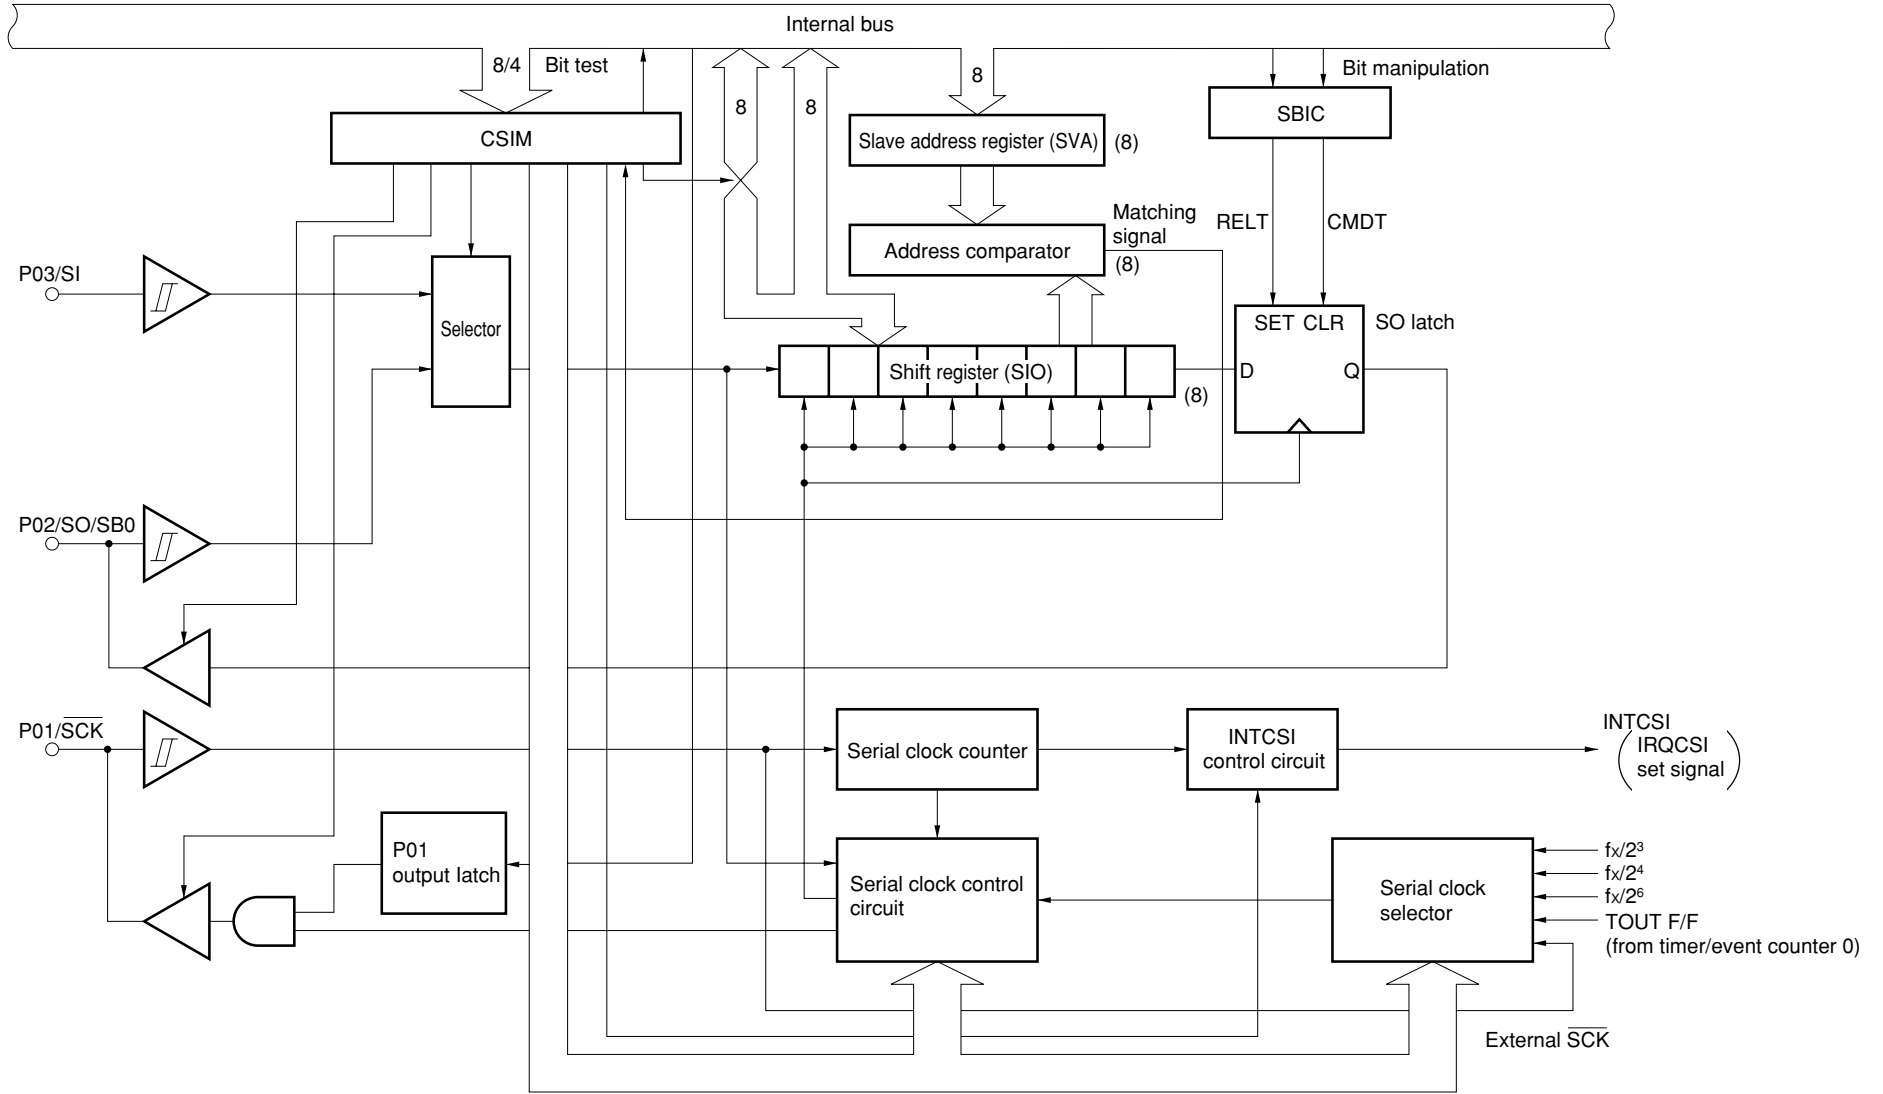

6.6 Serial Interface

The μ PD754304 incorporates the clocked 8-bit serial interface, and the following three modes are provided.

- Operation stop mode
- 3-wire serial I/O mode
- 2-wire serial I/O mode

Figure 6-6. Serial Interface Block Diagram

6.7 Bit Sequential Buffer 16 Bits

The bit sequential buffer (BSB) is a special data memory for bit manipulation and the bit manipulation can be easily performed by changing the address specification and bit specification in sequence, therefore it is useful when processing a long data bit-wise.

The data memory is composed of 16 bits and the pmem.@L addressing of a bit manipulation instruction is possible. The bit can be specified indirectly by the L register. In this case, processing can be done by moving the specified bit in sequence by incrementing and decrementing the L register in the program loop.

Figure 6-7. Bit Sequential Buffer Format

- Remarks 1.** In the pmem.@L addressing, the specified bit moves corresponding to the L register.
- 2.** In the pmem.@L addressing, the BSB can be manipulated regardless of MBE/MSB specification.

7. INTERRUPT FUNCTION AND TEST FUNCTION

The μ PD754304 has seven kinds of interrupt sources and one kind of test source. Two types of edge detection testable inputs are provided for INT2 of the test source.

The interrupt control circuit of the μ PD754304 has the following functions.

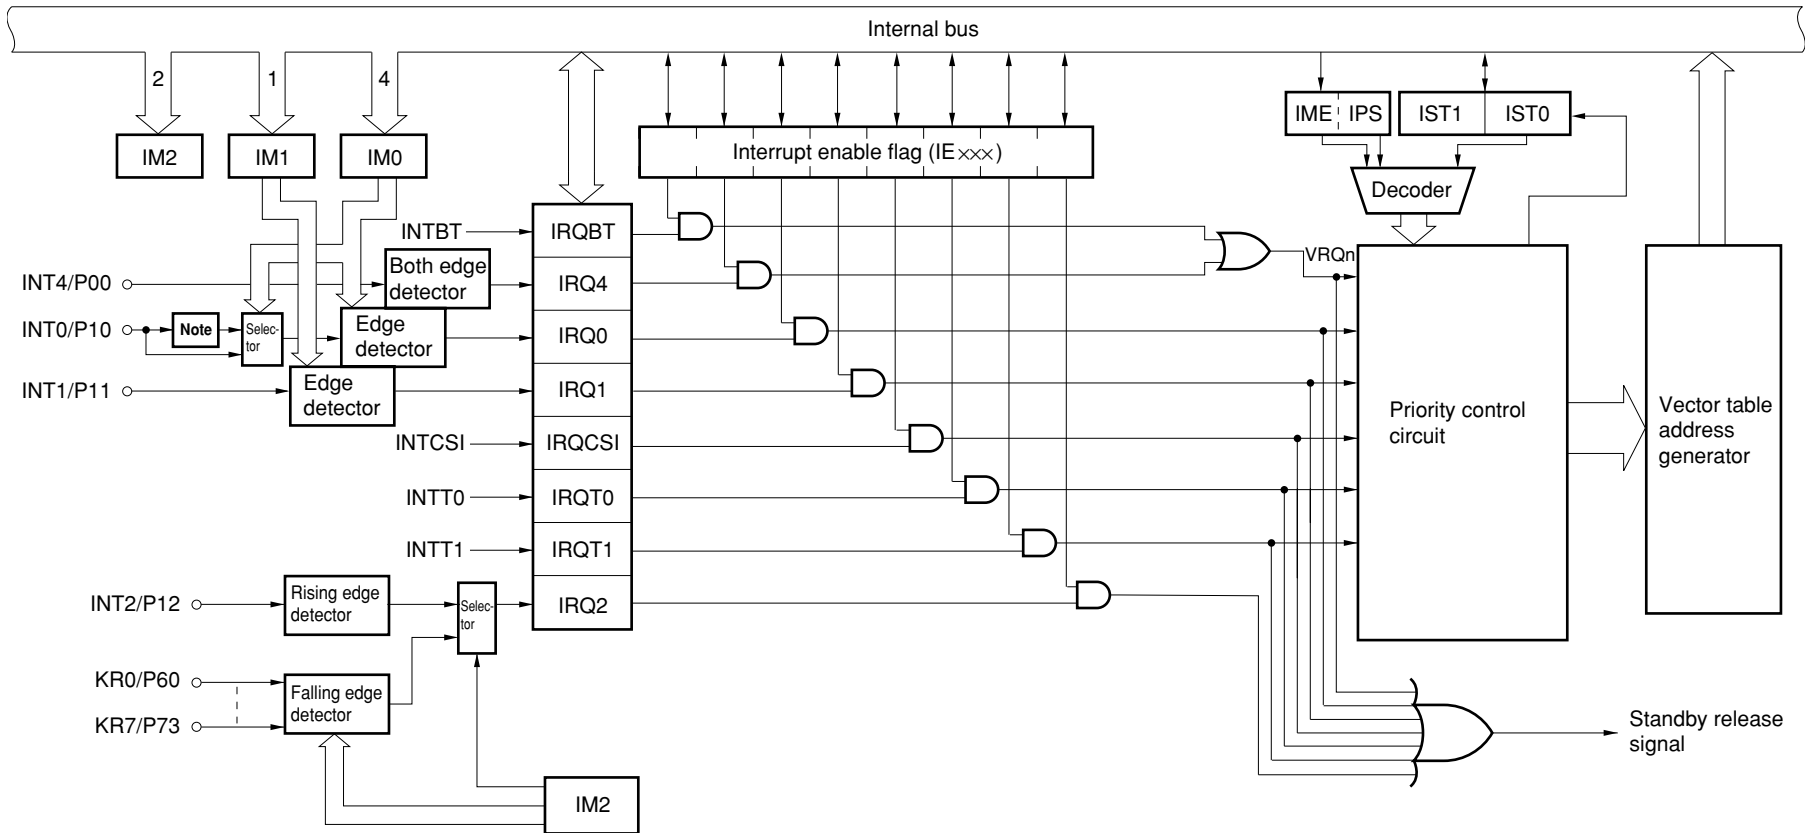

(1) Interrupt function

- Vectored interrupt function for hardware control, enabling/disabling the interrupt acceptance by the interrupt enable flag (IE_{xxx}) and interrupt master enable flag (IME).
- Can set any interrupt start address.
- Multiple interrupts wherein the order of priority can be specified by the interrupt priority select register (IPS).
- Test function of interrupt request flag (IRQ_{xxx}). An interrupt generated can be checked by software.
- Release the standby mode. A release interrupt can be selected by the interrupt enable flag.

(2) Test function

- Test request flag (IRQ_{xxx}) generation can be checked by software.
- Release the standby mode. The test source to be released can be selected by the test enable flag.

Figure 7-1. Interrupt Control Circuit Block Diagram

Note Noise eliminator (Standby release is disabled when noise eliminator is selected.)

8. STANDBY FUNCTION

In order to save dissipation power while a program is in a standby mode, two types of standby modes (STOP mode and HALT mode) are provided for the μ PD754304.

Table 8-1. Operation Status in Standby Mode

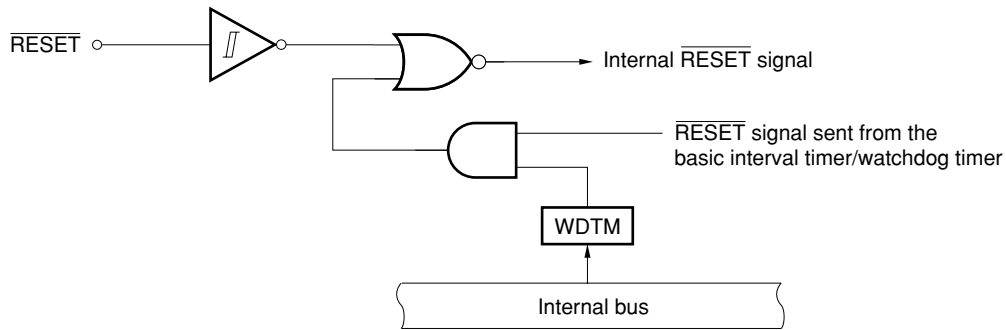

Item \ Mode		STOP mode	HALT mode
Set instruction		STOP instruction	HALT instruction
Operation status	Clock generator	The system clock stops oscillation.	Only the CPU clock Φ halts (oscillation continues).
	Basic interval timer/ Watchdog timer	Operation stops.	Operable (The IRQBT is set in the reference interval).
	Serial interface	Operable only when an external \overline{SCK} input is selected as the serial clock.	Operable
	Timer/event counter	Operable only when a signal input to the T10 and T11 pins are specified as the count clock.	Operable
	External interrupt	The INT1, 2, and 4 are operable. Only the INT0 is not operated ^{Note} .	
	CPU	The operation stops.	
Release signal		Interrupt request signal sent from the operable hardware enabled by the interrupt enable flag or \overline{RESET} signal input.	

Note Operable only when the noise eliminator is not used ($IM02 = 1$) by bit 2 of the edge detection mode register ($IM0$).

9. RESET FUNCTION

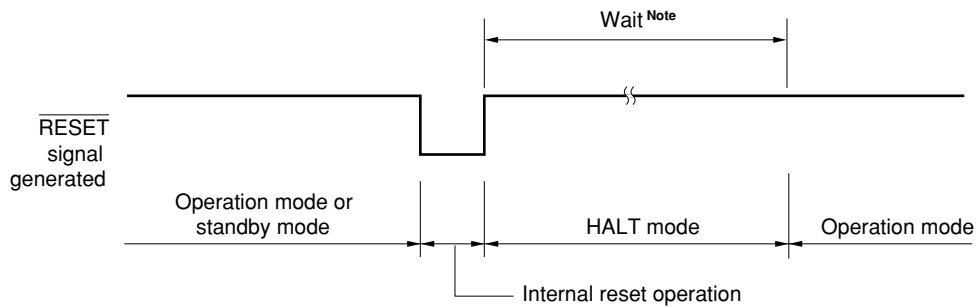

There are two reset inputs: external $\overline{\text{RESET}}$ signal and $\overline{\text{RESET}}$ signal sent from the basic interval timer/watchdog timer. When either one of the $\overline{\text{RESET}}$ signals are input, an internal $\overline{\text{RESET}}$ signal is generated. Figure 9-1 shows the circuit diagram of the above two inputs.

Figure 9-1. Configuration of Reset Function

Generation of the $\overline{\text{RESET}}$ signal initializes each hardware as listed in Table 9-1. Figure 9-2 shows the timing chart of the reset operation.

Figure 9-2. Reset Operation by $\overline{\text{RESET}}$ Signal Generation

Note The following two times can be selected by the mask option.

$2^{17}/f_x$ (21.8 ms : @ 6.0 MHz, 31.3 ms : @ 4.19 MHz)

$2^{15}/f_x$ (5.46 ms : @ 6.0 MHz, 7.81 ms : @ 4.19 MHz)

Table 9-1. Status of Each Hardware After Reset (1/2)

Hardware		RESET signal generation in the standby mode	RESET signal generation in operation
Program counter (PC)	μPD754302	Sets the low-order 3 bits of program memory's address 0000H to the PC10-PC8 and the contents of address 0001H to the PC7-PC0.	Sets the low-order 3 bits of program memory's address 0000H to the PC10-PC8 and the contents of address 0001H to the PC7-PC0.
	μPD754304	Sets the low-order 4 bits of program memory's address 0000H to the PC11-PC8 and the contents of address 0001H to the PC7-PC0.	Sets the low-order 4 bits of program memory's address 0000H to the PC11-PC8 and the contents of address 0001H to the PC7-PC0.
PSW	Carry flag (CY)	Held	Undefined
	Skip flag (SK0-SK2)	0	0
	Interrupt status flag (IST0, IST1)	0	0
	Bank enable flag (MBE, RBE)	Sets the bit 6 of program memory's address 0000H to the RBE and bit 7 to the MBE.	Sets the bit 6 of program memory's address 0000H to the RBE and bit 7 to the MBE.
Stack pointer (SP)		Undefined	Undefined
Stack bank select register (SBS)		1000B	1000B
Data memory (RAM)		Held	Undefined
General-purpose register (X, A, H, L, D, E, B, C)		Held	Undefined
Bank select register (MBS, RBS)		0, 0	0, 0
Basic interval timer/watchdog timer	Counter (BT)	Undefined	Undefined
	Mode register (BTM)	0	0
	Watchdog timer enable flag (WDTM)	0	0
Timer/event counter (T0)	Counter (T0)	0	0
	Modulo register (TMOD0)	FFH	FFH
	Mode register (TM0)	0	0
	TOE0, TOUT F/F	0, 0	0, 0
Timer/event counter (T1)	Counter (T1)	0	0
	Modulo register (TMOD1)	FFH	FFH
	Mode register (TM1)	0	0
	TOE1, TOUT F/F	0, 0	0, 0
Serial interface	Shift register (SIO)	Held	Undefined
	Operation mode register (CSIM)	0	0
	SBI control register (SBIC)	0	0
	Slave address register (SVA)	Held	Undefined
Clock generator, clock output circuit	Processor clock control register (PCC)	0	0
	Clock output mode register (CLOM)	0	0

Table 9-1. Status of Each Hardware After Reset (2/2)

Hardware		$\overline{\text{RESET}}$ signal generation in the standby mode	$\overline{\text{RESET}}$ signal generation in operation
Interrupt function	Interrupt request flag (IRQ _{xxx})	Reset (0)	Reset (0)
	Interrupt enable flag (IE _{xxx})	0	0
	Interrupt priority select register (IPS)	0	0
	INT0, 1, 2 mode registers (IM0, IM1, IM2)	0, 0, 0	0, 0, 0
Digital port	Output buffer	Off	Off
	Output latch	Cleared (0)	Cleared (0)
	I/O mode registers (PMGA, B, C)	0	0
	Pull-up resistor setting registers (POGA, B)	0	0
Bit sequential buffers (BSB0-BSB3)		Held	Undefined

★ 10. MASK OPTION

The μ PD754304 has the following mask options:

- **Mask option of P50 through P53**

Pull-up resistors can be connected to these pins.

- (1) Specify connection of a pull-up resistor in 1-bit units.
- (2) Do not specify connection of a pull-up resistor.

- **Standby function mask option**

The wait time when the $\overline{\text{RESET}}$ signal is input can be selected.

- (1) $2^{17}/f_x$ (21.8 ms: $f_x = 6.0$ MHz, 31.3 ms: $f_x = 4.19$ MHz)
- (2) $2^{15}/f_x$ (5.46 ms: $f_x = 6.0$ MHz, 7.81 ms: $f_x = 4.19$ MHz)

11. INSTRUCTION SETS

(1) Expression formats and description methods of operands

The operand is described in the operand column of each instruction in accordance with the description method for the operand expression format of the instruction. For details, refer to **RA75X ASSEMBLER PACKAGE USERS' MANUAL—LANGUAGE (EEU-1363)**. If there are several elements, one of them is selected. Capital letters and the + and – symbols are key words and are described as they are.

For immediate data, appropriate numbers and labels are described.

Instead of the labels such as mem, fmem, pmem, and bit, the symbols of the register flags can be described. However, there are restrictions in the labels that can be described for fmem and pmem.

For details, refer to the **μPD754304 USER'S MANUAL (U10123E)**.

Representation format	Description method
reg reg1	X, A, B, C, D, E, H, L X, B, C, D, E, H, L
rp rp1 rp2 rp' rp'1	XA, BC, DE, HL BC, DE, HL BC, DE XA, BC, DE, HL, XA', BC', DE', HL' BC, DE, HL, XA', BC', DE', HL'
rpa rpa1	HL, HL+, HL–, DE, DL DE, DL
n4 n8	4-bit immediate data or label 8-bit immediate data or label
mem bit	8-bit immediate data or label ^{Note} 2-bit immediate data or label
fmem pmem	FB0H-FBFH, FF0H-FFFH immediate data or label FC0H-FFFH immediate data or label
addr addr1 caddr faddr	0000H-07FFH immediate data or label (μPD754302) 0000H-0FFFH immediate data or label (μPD754304) 0000H-07FFH immediate data or label (μPD754302) 0000H-0FFFH immediate data or label (μPD754304) 12-bit immediate data or label 11-bit immediate data or label
taddr	20H-7FH immediate data (where bit 0 = 0) or label
PORTn IExxx RBn MBn	PORT0-PORT3, PORT5-PORT8 IEBT, IET0, IET1, IE0-IE2, IE4, IECSI RB0-RB3 MB0, MB15

Note mem can be only used for even address in 8-bit data processing.

(2) Legend in explanation of operation

A	: A register; 4-bit accumulator
B	: B register
C	: C register
D	: D register
E	: E register
H	: H register
L	: L register
X	: X register
XA	: XA register pair; 8-bit accumulator
BC	: BC register pair
DE	: DE register pair
HL	: HL register pair
XA'	: XA' expanded register pair
BC'	: BC' expanded register pair
DE'	: DE' expanded register pair
HL'	: HL' expanded register pair
PC	: Program counter
SP	: Stack pointer
CY	: Carry flag; bit accumulator
PSW	: Program status word
MBE	: Memory bank enable flag
RBE	: Register bank enable flag
PORT _n	: Port n (n = 0-3, 5-8)
IME	: Interrupt master enable flag
IPS	: Interrupt priority select register
IE _{xxx}	: Interrupt enable flag
RBS	: Register bank select register
MBS	: Memory bank select register
PCC	: Processor clock control register
.	: Separation between address and bit
(xx)	: The contents addressed by xx
xxH	: Hexadecimal data

(3) Explanation of symbols under addressing area column

*1	MB = MBE•MBS (MBS = 0, 15)		Data memory addressing
*2	MB = 0		
*3	MBE = 0 : MB = 0 (000H-07FH) MB = 15 (F80H-FFFH) MBE = 1 : MB = MBS (MBS = 0, 15)		
*4	MB = 15, fmem = FB0H-FBFH, FF0H-FFFH		
*5	MB = 15, pmem = FC0H-FFFH		
*6	μPD754302	addr = 0000H-07FFH	Program memory addressing
	μPD754304	addr = 0000H-0FFFH	
*7	addr = (Current PC) – 15 to (Current PC) – 1 (Current PC) + 2 to (Current PC) + 16		
	addr1 = (Current PC) – 15 to (Current PC) – 1 (Current PC) + 2 to (Current PC) + 16		
*8	μPD754302	caddr = 0000H-07FFH	
	μPD754304	caddr = 0000H-0FFFH (PC ₁₂ = 0)	
*9	faddr = 0000H-07FFH		
*10	taddr = 0020H-007FH		
*11	μPD754302	addr1 = 0000H-07FFH	
	μPD754304	addr1 = 0000H-0FFFH	

- Remarks**
1. MB indicates memory bank that can be accessed.
 2. In *2, MB = 0 independently of how MBE and MBS are set.
 3. In *4 and *5, MB = 15 independently of how MBE and MBS are set.
 4. *6 to *11 indicate the areas that can be addressed.

(4) Explanation of number of machine cycles column

S denotes the number of machine cycles required by skip operation when a skip instruction is executed. The value of S varies as follows.

- When no skip is made: S = 0
- When the skipped instruction is a 1- or 2-byte instruction: S = 1
- When the skipped instruction is a 3-byte instruction ^{Note}: S = 2

Note 3-byte instruction: BR !addr, BRA !addr1, CALL !addr or CALLA !addr1 instruction

Caution The GETI instruction is skipped in one machine cycle.

One machine cycle is equal to one cycle of CPU clock (= tcy); time can be selected from among four types by setting PCC.

Instruction group	Mnemonic	Operand	Number of bytes	Number of machine cycles	Operation	Addressing area	Skip condition
Transfer	MOV	A, #n4	1	1	$A \leftarrow n4$		String effect A

12. ELECTRICAL SPECIFICATIONS

Absolute Maximum Ratings (T_A = 25 °C)

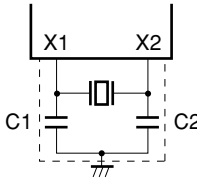

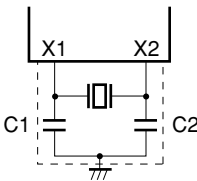

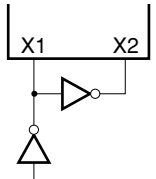

Parameter	Symbol	Test Conditions		Ratings	Unit
Supply voltage	V _{DD}			-0.3 to +7.0	V
Input voltage	V _{I1}	Except port 5		-0.3 to V _{DD} + 0.3	V
	V _{I2}	Port 5	Pull-up resistor incorporated	-0.3 to V _{DD} + 0.3	V
			N-ch open-drain	-0.3 to +14	V
Output voltage	V _O			-0.3 to V _{DD} + 0.3	V
Output current, high	I _{OH}	Per pin		-10	mA
		For all pins		-30	mA
Output current, low	I _{OL} Note	Per pin		30	mA
		For all pins		220	mA
Operating ambient temperature	T _A			-40 to +85	°C
Storage temperature	T _{stg}			-65 to +150	°C

Caution If any of the parameters exceeds the absolute maximum ratings, even momentarily, the quality of the product may be impaired. The absolute maximum ratings are values that may physically damage the products. Be sure to use the products within the ratings.

Capacitance (T_A = 25 °C, V_{DD} = 0 V)

Parameter	Symbol	Test Conditions	MIN.	TYP.	MAX.	Unit
Input capacitance	C _{IN}	f = 1 MHz			15	pF
Output capacitance	C _{OUT}	Unmeasured pins returned to 0 V			15	pF
I/O capacitance	C _{IO}				15	pF

System Clock Oscillator Characteristics (T_A = -40 to +85 °C, V_{DD} = 1.8 to 5.5 V)

Resonator	Recommended Constant	Parameter	Testing Conditions	MIN.	TYP.	MAX.	Unit
Ceramic resonator		Oscillation frequency (f _x) ^{Note1}		1.0		6.0 ^{Note2}	MHz
		Oscillation stabilization time ^{Note3}	After V _{DD} reaches MIN. value of oscillation voltage range			4	ms
Crystal resonator		Oscillation frequency(f _x) ^{Note1}		1.0		6.0 ^{Note2}	MHz
		Oscillation stabilization time ^{Note3}	V _{DD} = 4.5 to 5.5 V			10	ms
						30	ms
External clock		X1 input frequency (f _x) ^{Note1}		1.0		6.0 ^{Note2}	MHz
		X1 input high- and low-level widths (t _{xH} , t _{xL})		83.3		500	ns

- Notes**
- Only the oscillator characteristics are shown. For the instruction execution time, refer to **AC Characteristics**.
 - If the oscillation frequency is 4.19 MHz < f_x ≤ 6.0 MHz at 1.8 V ≤ V_{DD} < 2.7 V, set the processor control register (PCC) to a value other than 0011. If the PCC is set to 0011, the rated cycle time of 0.95 μs is not satisfied.
 - Oscillation stabilization time is a time required for oscillation to stabilize after application of V_{DD}, or after the STOP mode has been released.

Caution When using the oscillation circuit of the main system clock, wire the portion enclosed in dotted lines in the figures as follows to avoid adverse influences on the wiring capacitance:

- Keep the wire length as short as possible.
- Do not cross other signal lines.
- Do not route the wiring in the vicinity of lines through which a high fluctuating current flows.
- Always keep the ground point of the capacitor of the oscillation circuit as the same potential as V_{SS}.
- Do not connect the power source pattern through which a high current flows.
- Do not extract signals from the oscillation circuit.

	CCR4.19MC3	4.19					
	FCR4.19MC5						
	CCR6.0MC3	6.0					

Note If using Murata's CSB1000J (1.0 MHz) as the ceramic resonator, a limited resistor ($R_d = 5.6 \text{ k}\Omega$) is required (see figure below). If using any other recommended resonator, no limited resistor is needed.

Caution The oscillation circuit constants and oscillation voltage range indicate conditions for stable oscillation, but do not guarantee oscillation frequency accuracy. If oscillation frequency accuracy is required for actual circuits, it is necessary to adjust the oscillation frequency of the resonator in the circuit. Please inquire directly to the maker of the resonator for data as needed.

				V _{DD} = 3.0 V ± 10%			0.24	0.75	mA
	I _{DD1}	4.19 MHz Crystal resonator	V _{DD} = 5.0 V ± 10% ^{Note2}			1.20	3.50	mA	
			V _{DD} = 3.0 V ± 10% ^{Note3}			0.17	0.55	mA	
	I _{DD2}	C1 = C2 = 22 pF	HALT mode	V _{DD} = 5.0 V ± 10%			0.40	1.50	mA
				V _{DD} = 3.0 V ± 10%			0.13	0.50	mA
	I _{DD5}	STOP mode	V _{DD} = 5.0 V ± 10%			0.05	10.0	μA	
			V _{DD} = 3.0 V ± 10%			0.02	5.00	μA	
T _A = 25 °C				0.02	3.00	μA			

- Notes**
- Does not include current fed to on-chip pull-up resistor.
 - When processor clock control register (PCC) is set to 0011, during high-speed mode.
 - When PCC is set to 0000, during low-speed mode.

AC Characteristics ($T_A = -40$ to $+85$ °C, $V_{DD} = 1.8$ to 5.5 V)

Parameter	Symbol	Test Conditions		MIN.	TYP.	MAX.	Unit
CPU clock cycle time ^{Note1} (Minimum instruction execution time = 1 machine cycle)	t_{CY}	When system clock is used	$V_{DD} = 2.7$ to 5.5 V	0.67		64	μ s
				0.95		64	μ s
TI0, TI1 input frequency	f_{TI}	$V_{DD} = 2.7$ to 5.5 V		0		1	MHz
				0		275	kHz
TI0, TI1 input high- and low-level width	t_{TIH}, t_{TIL}	$V_{DD} = 2.7$ to 5.5 V		0.48			μ s
				1.8			μ s
Interrupt input high- and low-level width	t_{INTH}, t_{INTL}	INT0	IM02 = 0	Note 2			μ s
			IM02 = 1	10			μ s
		INT1, 2, 4		10			μ s
		KR0-7		10			μ s
RESET low-level width	t_{RSL}			10			μ s

- Notes 1.** The CPU clock (Φ) cycle time (minimum instruction execution time) is determined by the oscillation frequency of the connected resonator and the processor clock control register (PCC). The figure on the right shows the cycle time t_{CY} characteristics against the supply voltage V_{DD} when the system clock is used.
- 2.** $2t_{CY}$ or $128/f_x$ depending on the setting of the interrupt mode register (IM0).

Serial Transfer Operation

2-wire and 3-wire Serial I/O Mode ($\overline{\text{SCK}}$...Internal clock output) ($T_A = -40$ to $+85$ °C, $V_{DD} = 1.8$ to 5.5 V)

15. RECOMMENDED SOLDERING CONDITIONS

The μPD754302 and μPD754304 should be soldered and mounted under the following recommended conditions.

For technical information, see the following website.

Semiconductor Device Mount Manual (<http://www.necel.com/pkg/en/mount/index.html>)

Table 15-1. Surface Mounting Type Soldering Conditions

- (1) μPD754302GS-xxx: 36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)
- μPD754304GS-xxx: 36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)
- μPD754302GS(A)-xxx: 36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)
- μPD754304GS(A)-xxx: 36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 235°C, Time: 30 seconds max. (at 210°C or higher), Count: Twice or less	IR35-00-2
VPS	Package peak temperature: 215°C, Time: 40 seconds max. (at 200°C or higher), Count: Twice or less	VP15-00-2
Wave soldering	Solder bath temperature: 260°C max., Time: 10 seconds max., Count: Once Preheating temperature: 120°C max. (package surface temperature)	WS60-00-1
Partial heating	Pin temperature: 350°C max., Time: 3 seconds max. (per pin row)	–

Caution Do not use different soldering methods together (except for partial heating).

Remark For soldering methods and conditions other than those recommended above, contact an NEC Electronics sales representative.

- ★ (2) μPD754302GS-xxx-A: 36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)
- μPD754304GS-xxx-A: 36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 260°C, Time: 60 seconds max. (at 220°C or higher), Count: Three times or less, Exposure limit: 7 days ^{Note} (after that, prebake at 125°C for 20 to 72 hours)	IR60-207-3
Wave soldering	For details, contact an NEC Electronics sales representative.	–
Partial heating	Pin temperature: 350°C max., Time: 3 seconds max. (per pin row)	–

Note After opening the dry pack, store it at 25°C or less and 65% RH or less for the allowable storage period.

Caution Do not use different soldering methods together (except for partial heating).

Remarks 1. Products with “-A” at the end of the part number are lead-free products.
2. For soldering methods and conditions other than those recommended above, contact an NEC Electronics sales representative.

APPENDIX A. COMPARISON OF FUNCTIONS AMONG μPD750004, 754304, AND 75P4308

Item		μPD750004	μPD754304	μPD75P4308
Program memory		Mask ROM 0000H-0FFFH (4096 × 8 bits)	Mask ROM 0000H-0FFFH (4096 × 8 bits)	One-time PROM 0000H-1FFFH (8192 × 8 bits)
Data memory		000H-1FFFH (512 × 4 bits)		
CPU		75XL CPU		
Instruction execution time	w/main system clock	<ul style="list-style-type: none"> • 0.67, 1.33, 2.67, or 10.7 μs (at 6.0 MHz) • 0.95, 1.91, 3.81, or 15.3 μs (at 4.19 MHz) 		
	w/subsystem clock	• 122 μs (at 32.768 kHz)	No subsystem clock	
I/O port	CMOS input	8 (of which 7 can be connected with on-chip pull-up resistor via software)		
	CMOS I/O	18 (on-chip pull-up resistor can be connected via software)		
	N-ch open-drain I/O (withstand 13 V)	8 (pull-up resistor can be connected by mask option)	4 (pull-up resistor can be connected by mask option)	4 (no mask option)
	Total	34	30 (no port 4 pins)	
Timer		4 channels <ul style="list-style-type: none"> • Basic interval timer/watchdog timer • 8-bit timer/event counter • 8-bit timer • Watch timer 	3 channels <ul style="list-style-type: none"> • Basic interval timer/watchdog timer • 8-bit timer/event counter 0 (fx/2² added) • 8-bit timer/event counter 1 (TI1, fx/2² added) (can be used as 16-bit timer/event counter) 	
Clock output (PCL)		<ul style="list-style-type: none"> • Φ, 524, 262, or 65.5 kHz (main system clock: 4.19 MHz) • Φ, 750, 375, or 93.8 kHz (main system clock: 6.0 MHz) 		
BUZ output		Provided	None	
Serial interface		3 modes are supported <ul style="list-style-type: none"> • 3-wire serial I/O mode ... MSB/LSB first selectable • 2-wire serial I/O mode • SBI mode 	2 modes are supported <ul style="list-style-type: none"> • 3-wire serial I/O mode ... MSB/LSB first selectable • 2-wire serial I/O mode 	
Watch mode register (WM)		Provided	None	
System clock control register (SCC)				
Suboscillation circuit control register (SOS)				
MBS register		MB0, 1	MB0 only	
Stack area (SBS1, 0)				

Item	μPD750004	μPD754304	μPD75P4308
TM0, 1 registers	Bits 0, 1, and 7 are fixed to 0	-	
Vectored interrupt	External: 3, internal: 4		
Test input	External: 1, internal: 1	External: 1	
Test enable flag (IEW)	Provided	None	
Test request flag (IRQW)			
Supply voltage	V _{DD} = 2.2 to 5.5 V	V _{DD} = 1.8 to 5.5 V	
Operating ambient temperature	T _A = -40 to +85 °C		
Package	<ul style="list-style-type: none"> • 42-pin plastic shrink DIP (600 mil) • 44-pin plastic QFP (10 × 10 mm) 	<ul style="list-style-type: none"> • 36-pin plastic shrink SOP (300 mil, 0.8-mm pitch) 	

APPENDIX B. DEVELOPMENT TOOLS

The following development tools are available for development of application systems using the μPD754304. In the 75XL Series, a common relocatable assembler is used in combination with a device file dedicated to each model.

Language processor

RA75X relocatable assembler	Host machine		Supply media		Order code (part number)
		OS			
PC-9800 series		MS-DOS™ (Ver. 3.30 to Ver. 6.2 Note)	3.5" 2HD	μS5A13RA75X	
			5" 2HD	μS5A10RA75X	
IBM PC/AT™ or compatible machine		Refer to "OS for IBM PC"	3.5" 2HC	μS7B13RA75X	
			5" 2HC	μS7B10RA75X	

Device file	Host machine		Supply media		Order code (part number)
		OS			
PC-9800 series		MS-DOS (Ver. 3.30 to Ver. 6.2 Note)	3.5" 2HD	μS5A13DF754304	
			5" 2HD	μS5A10DF754304	
IBM PC/AT or compatible machine		Refer to "OS for IBM PC"	3.5" 2HC	μS7B13DF754304	
			5" 2HC	μS7B10DF754304	

PROM writing tools

Hardware	PG-1500	The PG-1500 is a PROM programmer that can program PROM-contained single-chip microcontrollers in the standalone mode or under control of a host machine, when connected with an accessory board and an optional programmer adapter. It can also program representative PROMs including 256K-bit to 4M-bit models.				
	PA-75P4308GS	This is a PROM programmer adapter dedicated to the μPD75P4308GS and connected to the PG-1500.				
Software	PG-1500 controller	This connects the PG-1500 and a host machine with a serial or parallel interface to control the PG-1500 from the host machine.				
		Host machine		Supply media		Order code (part number)
			OS			
		PC-9800 series		MS-DOS (Ver. 3.30 to Ver. 6.2 Note)	3.5" 2HD	μS5A13PG1500
					5" 2HD	μS5A10PG1500
IBM PC/AT or compatible machine		Refer to "OS for IBM PC"	3.5" 2HD	μS7B13PG1500		
			5" 2HC	μS7B10PG1500		

Note Although Ver.5.00 and later have a task swap function, this function cannot be used with this software.

Remark The operation of the assembler, device file and PG-1500 controller is guaranteed only on the above host machine and OS.

Debugging tools

The in-circuit emulators (IE-75000-R and IE-75001-R) are available as the program debugging tool for the μPD754304.

The system configurations are described as follows.

Hardware	IE-75000-R ^{Note 1}	In-circuit emulator for debugging the hardware and software when developing the application systems that use the 75X series and 75XL series. When developing a μPD754304 subseries, the emulation board IE-75300-R-EM and emulation probe that are sold separately must be used with the IE-75000-R. By connecting with the host machine and the PROM programmer, efficient debugging can be made. It contains the emulation board IE-75000-R-EM which is connected.			
	IE-75001-R	In-circuit emulator for debugging the hardware and software when developing the application systems that use the 75X series and 75XL series. When developing a μPD754304 subseries, the emulation board IE-75300-R-EM and emulation probe which are sold separately must be used with the IE-75001-R. It can debug the system efficiently by connecting the host machine and PROM programmer.			
	IE-75300-R-EM	Emulation board for evaluating the application systems that use a μPD754304 subseries. It must be used with the IE-75000-R or IE-75001-R.			
	EP-754304GS-R	Emulation probe for the μPD754304GS. It must be connected to IE-75000-R (or IE-75001-R) and IE-75300-R-EM. It is supplied with the flexible board EV-9500GS-36 which facilitates connection to a target system.			
Software	IE control program	Connects the IE-75000-R or IE-75001-R to a host machine via RS-232-C and Centronix I/F and controls the IE-75000-R or IE-75001-R on a host machine.			
		Host machine	OS	Supply media	Order code (Part number)
		PC-9800 series	MS-DOS (Ver. 3.30 to Ver. 6.2 ^{Note 2})	3.5" 2HD	μS5A13IE75X
				5" 2HD	μS5A10IE75X
		IBM PC/AT or compatible machine	Refer to "OS for IBM PC"	3.5" 2HC	μS7B13IE75X
5" 2HC	μS7B10IE75X				

Notes 1. Maintenance parts

2. Although Ver.5.00 and later have a task swap function, this function cannot be used with this software.

Remark Operation of the IE control program is guaranteed only on the above host machines and OSs.

OS for IBM PC

The following IBM PC OS's are supported.

OS	Version
PC DOS™	Ver. 5.02 to Ver. 6.3 J6.1/V Note to J6.3/V Note
MS-DOS	Ver. 5.0 to Ver. 6.22 5.0/V Note to 6.2/V Note
IBM DOS™	J5.02/V Note

Note Only English version is supported.

Caution Ver. 5.0 and later have the task swap function, but this function cannot be used for this software.

APPENDIX C. RELATED DOCUMENTS

The related documents indicated in this publication may include preliminary versions. However, preliminary versions are not marked as such.

NOTES FOR CMOS DEVICES

① VOLTAGE APPLICATION WAVEFORM AT INPUT PIN

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (MAX) and V_{IH} (MIN) due to noise, etc., the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (MAX) and V_{IH} (MIN).

② HANDLING OF UNUSED INPUT PINS

Unconnected CMOS device inputs can be cause of malfunction. If an input pin is unconnected, it is possible that an internal input level may be generated due to noise, etc., causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND via a resistor if there is a possibility that it will be an output pin. All handling related to unused pins must be judged separately for each device and according to related specifications governing the device.

③ PRECAUTION AGAINST ESD

A strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it when it has occurred. Environmental control must be adequate. When it is dry, a humidifier should be used. It is recommended to avoid using insulators that easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors should be grounded. The operator should be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with mounted semiconductor devices.

④ STATUS BEFORE INITIALIZATION

Power-on does not necessarily define the initial status of a MOS device. Immediately after the power source is turned ON, devices with reset functions have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. A device is not initialized until the reset signal is received. A reset operation must be executed immediately after power-on for devices with reset functions.

⑤ POWER ON/OFF SEQUENCE

In the case of a device that uses different power supplies for the internal operation and external interface, as a rule, switch on the external power supply after switching on the internal power supply. When switching the power supply off, as a rule, switch off the external power supply and then the internal power supply. Use of the reverse power on/off sequences may result in the application of an overvoltage to the internal elements of the device, causing malfunction and degradation of internal elements due to the passage of an abnormal current.

The correct power on/off sequence must be judged separately for each device and according to related specifications governing the device.

⑥ INPUT OF SIGNAL DURING POWER OFF STATE

Do not input signals or an I/O pull-up power supply while the device is not powered. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Input of signals during the power off state must be judged separately for each device and according to related specifications governing the device.

Regional Information

Some information contained in this document may vary from country to country. Before using any NEC Electronics product in your application, please contact the NEC Electronics office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

Diversion contrary to the law of that country is prohibited.

• **The information in this document is current as of August, 2005. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC Electronics data sheets or data books, etc., for the most up-to-date specifications of NEC Electronics products. Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.**

- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics. NEC Electronics assumes no responsibility for any errors that may appear in this document.
- NEC Electronics does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC Electronics products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Electronics or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of a customer's equipment shall be done under the full responsibility of the customer. NEC Electronics assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC Electronics endeavors to enhance the quality, reliability and safety of NEC Electronics products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC Electronics products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.
- NEC Electronics products are classified into the following three quality grades: "Standard", "Special" and "Specific".

The "Specific" quality grade applies only to NEC Electronics products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of an NEC Electronics product depend on its quality grade, as indicated below. Customers must check the quality grade of each NEC Electronics product before using it in a particular application.

"Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots.

"Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support).

"Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC Electronics products is "Standard" unless otherwise expressly specified in NEC Electronics data sheets or data books, etc. If customers wish to use NEC Electronics products in applications not intended by NEC Electronics, they must contact an NEC Electronics sales representative in advance to determine NEC Electronics' willingness to support a given application.

(Note)

- (1) "NEC Electronics" as used in this statement means NEC Electronics Corporation and also includes its majority-owned subsidiaries.
- (2) "NEC Electronics products" means any product developed or manufactured by or for NEC Electronics (as defined above).
