

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

Phase-out/Discontinued

4 BIT SINGLE-CHIP MICROCOMPUTER

The μPD75P068 is produced by replacing the internal mask ROM of the μPD75068 with a one-time PROM in which data can be written once.

The following user's manual describes the details of the functions of the μPD75P068. Be sure to read it before designing an application system.

μPD75068 User's Manual: IEU-1366

FEATURES

- Compatible with the μPD75068
 - Can be replaced with the μPD75068 containing mask ROM on a full-production basis.
- Internal one-time PROM: 8064 words × 8 bits
- Internal RAM: 512 words × 4 bits
- Internal pull-up resistors can be specified with software: Ports 0 to 3 and 6
- N-ch open-drain input-output: Ports 4 and 5
- Can operate at low voltage: $V_{DD} = 2.7$ to 6.0 V

ORDERING INFORMATION

Part number	Package	Quality grade
μPD75P068CU	42-pin plastic shrink DIP (600 mil)	Standard
μPD75P068GB-3B4	44-pin plastic QFP (Square 10 mm)	Standard

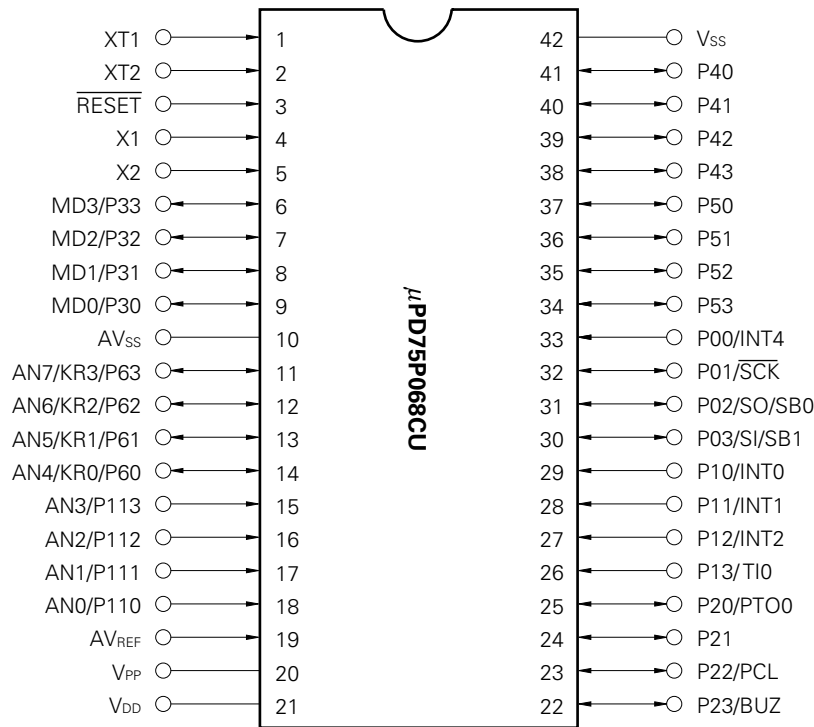

Caution The μPD75P068 is not provided with mask-selected pull-up resistors.

Please refer to "Quality Grades on NEC Semiconductor Devices" (Document number IEI-1209) published by NEC Corporation to know the specification of quality grade on the devices and its recommended applications.

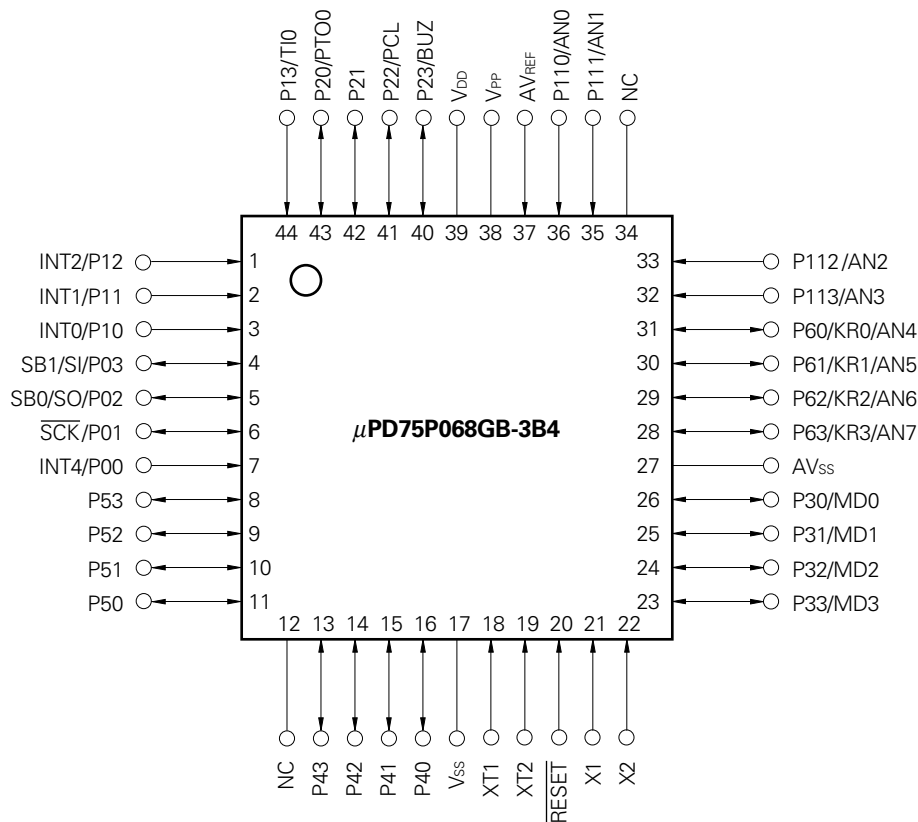

The information in this document is subject to change without notice.

PIN CONFIGURATION (TOP VIEW)

- 42-pin plastic shrink DIP

1. PIN FUNCTIONS

1.1 PORT PINS

Pin	Input/output	Shared pin	Function	8 bit I/O	When reset	I/O circuit type ^{Note 1}
P00	Input	INT4	4-bit input port (PORT0). For P01-P03, pull-up resistors can be provided by software in units of 3 bits.	×	Input	ⓑ
P01	I/O	SCK				ⓕ-A
P02	I/O	SO/SB0				ⓕ-B
P03	I/O	SI/SB1				Ⓜ-C
P10	Input	INT0	4-bit input port (PORT1). Pull-up resistors can be provided by software in units of 4 bits.	×	Input	ⓑ-C
P11		INT1				
P12		INT2				
P13		TI0				
P20	I/O	PTO0	4-bit I/O port (PORT2). Pull-up resistors can be provided by software in units of 4 bits.	×	Input	E-B
P21		—				
P22		PCL				
P23		BUZ				
P30 ^{Note 2}	I/O	MD0	Programmable 4-bit I/O port (PORT3). I/O can be specified bit by bit. Pull-up resistors can be provided by software in units of 4 bits.	×	Input	E-B
P31 ^{Note 2}		MD1				
P32 ^{Note 2}		MD2				
P33 ^{Note 2}		MD3				
P40-P43 ^{Note 2}	I/O	—	N-ch open-drain 4-bit I/O port (PORT4). Withstand voltage of 10 V Data input-output (low-order 4 bits) when writing to and verifying program memory (PROM)	○	High Impedance	M-A
P50-P53 ^{Note 2}	I/O	—				
P60	I/O	KR0/AN4	Programmable 4-bit I/O port (PORT6). Pull-up resistors can be provided by software in units of 4 bits.	×	Input	Ⓨ-D
P61		KR1/AN5				
P62		KR2/AN6				
P63		KR3/AN7				
P110	Input	AN0	4-bit input port (PORT11)	×	Input	Y-A
P111		AN1				
P112		AN2				
P113		AN3				

Notes 1. The circle (○) indicates the Schmitt trigger input.

2. Can directly drive the LED.

1.2 NON-PORT PINS

Pin	Input/output	Shared pin	Function	When reset	I/O circuit type ^{Note 1}	
TI0	Input	P13	Input for receiving external event pulse signal for timer/event counter	Input	(B)-C	
PTO0	I/O	P20	Timer/event counter output	Input	E-B	
PCL	I/O	P22	Clock output	Input	E-B	
BUZ	I/O	P23	Output for arbitrary frequency output (for buzzer output or system clock trimming)	Input	E-B	
SCK	I/O	P01	Serial clock I/O	Input	(F)-A	
SO/SB0	I/O	P02	Serial data output Serial bus I/O	Input	(F)-B	
SI/SB1	I/O	P03	Serial data input Serial bus I/O	Input	(M)-C	
INT4	Input	P00	Edge detection vectored interrupt input (either rising edge or falling edge detection)	Input	(B)	
INT0	Input	P10	Edge detection vectored interrupt input (detection edge selectable)	Input	(B)-C	
INT1		P11				
INT2	Input	P12	Edge detection testable input (rising edge detection)	Input	(B)-C	
KR0-KR3	I/O	P60-P63/ AN4-AN7	Parallel falling edge detection testable input	Input	(Y)-D	
AN0-AN3	Input	P110-P113	For A/D converter only	8-bit analog input	Y-A	
AN4-AN7	I/O	P60-P63/ KR0-KR3			(Y)-D	
AV _{REF}	Input	—			Reference voltage input	Z
AV _{SS}	—	—			GND potential	Z
X1, X2	Input	—	Crystal/ceramic connection for main system clock generation. When external clock signal is used, it is applied to X1, and its reverse phase signal is applied to X2.	—	—	
XT1, XT2	Input	—	Crystal connection for subsystem clock generation. When external clock signal is used, it is applied to XT1, and its reverse phase signal is applied to XT2. XT1 can be used as a 1-bit input (test).	—	—	
RESET	Input	—	System reset input	—	(B)	
MD0-MD3	I/O	P30-P33	Mode selection when writing to or verifying program memory (PROM)	Input	E-B	
V _{PP} ^{Note 2}	—	—	Programming voltage application when writing to or verifying program memory (PROM) Directly connected to V _{DD} during normal operation. +12.5 V is applied when data is written in PROM or when the PROM is verified.	—	—	
V _{DD}	—	—	Main power supply	—	—	
V _{SS}	—	—	GND potential	—	—	

Notes 1. The circle (○) indicates the Schmitt trigger input.

2. Unless the V_{PP} pin is directly connected to the V_{DD} pin during normal operation, the μPD75P068 does not operate normally.

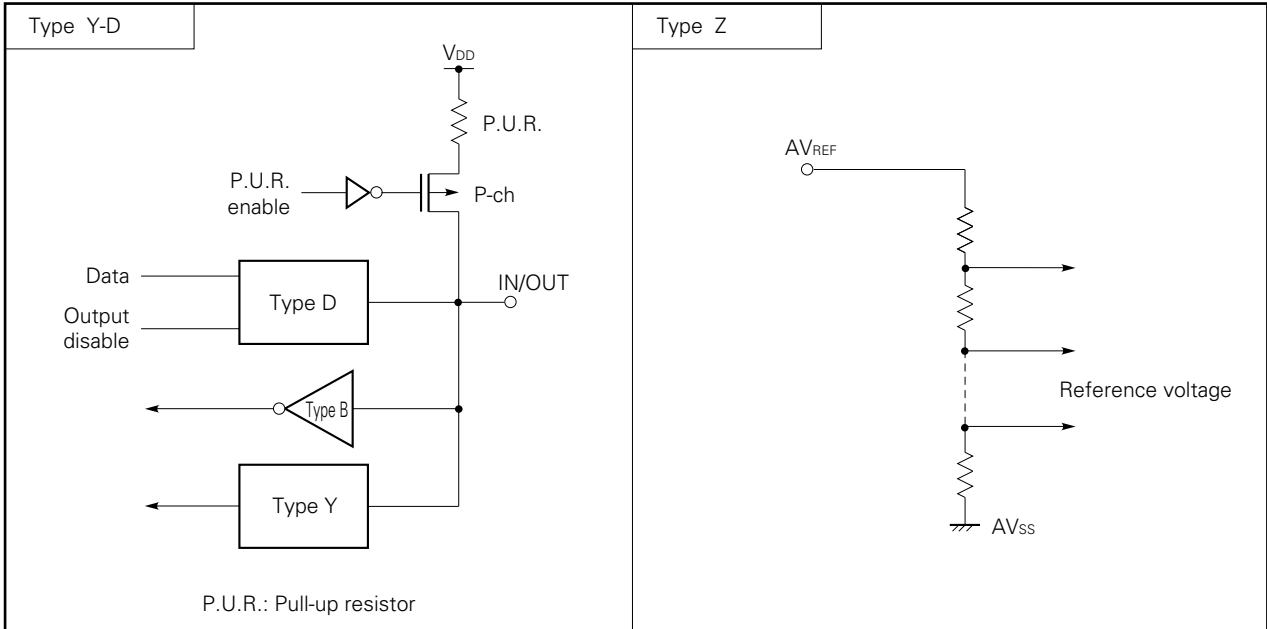

1.3 PIN INPUT/OUTPUT CIRCUITS

The input/output circuit of each μ PD75P068 pin is shown below in a simplified manner.

(1/3)

2. DIFFERENCE BETWEEN THE μPD75P068 AND μPD75068

The μPD75P068 is produced by replacing the internal mask ROM (program memory) of the μPD75068 with a one-time PROM in which data can be written once. Both have the same CPU function and internal hardware. Table 2-1 shows the difference between the μPD75P068 and μPD75068.

For details of the CPU function and internal hardware, refer to the individual references for the μPD75068.

Table 2-1 Difference between the μPD75P068 and μPD75068

Item		μPD75P068 (One-time PROM product)	μPD75068 (Mask ROM product)
Program memory		<ul style="list-style-type: none"> • 0000H to 1F7FH • 8064 words × 8 bits 	
Pull-up resistor	Ports 0 to 3 and 6	Can be specified with software.	
	Ports 4 and 5	None	Mask option
XT1 feedback resistor		Contained	Mask option
Operating supply voltage range		2.7 to 6.0 V	
Pin function	Pins 6 to 9 of SDIP Pins 23 to 26 of QFP	P30/MD0 to P33/MD3	P30 to P33
	Pin 20 of SDIP Pin 38 of QFP	V _{PP}	IC
Electrical characteristics		They differ in consumption current. For details, refer to the corresponding items in each data sheet.	
Others		Since they differ in circuit scale and mask layout, they differ in noise immunity and noise radiation.	

Caution The PROM and mask ROM products differ in noise immunity and noise radiation. Use not ES products but CS products (mask ROM products) to evaluate them thoroughly when considering the change from the PROM products to the mask ROM products during processes from preproduction to volume production.

3. WRITING TO AND VERIFYING PROM (PROGRAM MEMORY)

The program memory in the μPD75P068 is a one-time PROM which consists of 8064 words × 8 bits. Writing to and verifying the contents of the one-time PROM is accomplished using the pins shown in the table below. Note that address inputs are not used; instead, the address is updated using the clock input from the X1 pin.

Pin name	Function
V _{PP}	Voltage is applied to this pin when writing to the program memory or verifying its contents (normally V _{DD} electric potential).
X1, X2	Address update clock inputs used when writing to the program memory or verifying its contents. The X2 pin is used to input the inverted signal of the X1 pin input.
MD0 to MD3 (P30 to P33)	Operation mode selection pins used when writing to the program memory or verifying its contents.
P40 to P43 (low-order four bits) P50 to P53 (high-order four bits)	I/O pins for 8-bit data used when writing to the program memory or verifying its contents.
V _{DD}	Power voltage is applied to this pin. During normal operation, 2.7 to 6.0 V should be applied; 6 V should be applied when writing to the program memory or verifying its contents.

Caution Since the μPD75P068CU/GB does not have an erasure window, the contents of the memory can not be erased with ultraviolet radiation.

3.1 OPERATING MODES WHEN WRITING TO AND VERIFYING THE PROGRAM MEMORY

If +6 V is applied to the V_{DD} pin and +12.5 V is applied to the V_{PP} pin, the μPD75P068 enters program memory write/verify mode. The specific operating mode is then selected by setting the MD0 through MD3 pins as listed below. The remaining pins are all connected to V_{SS} via pull-down resistors.

Operating mode specification						Operating mode
V _{PP}	V _{DD}	MD0	MD1	MD2	MD3	
+12.5 V	+6 V	H	L	H	L	Program memory address clear mode
		L	H	H	H	Write mode
		L	L	H	H	Verify mode
		H	×	H	H	Program inhibit mode

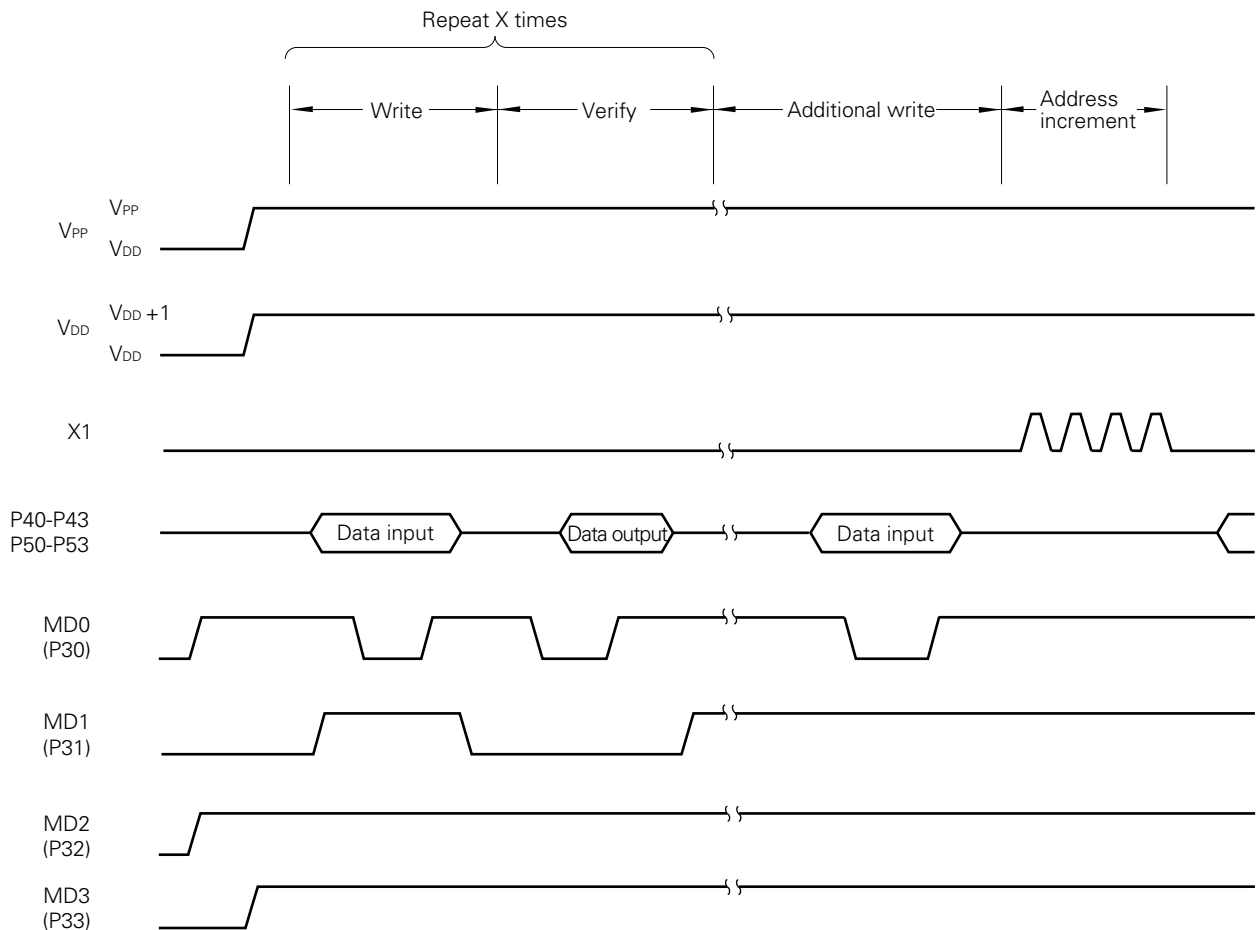

× indicates L or H.

3.2 WRITING TO THE PROGRAM MEMORY

The procedure for writing to program memory is described below; high-speed write is possible.

- (1) Connect all unused pins to V_{SS} through resistors. Apply a low-level signal to the X1 pin.
- (2) Apply 5 V to V_{DD} and V_{PP} pins.
- (3) Wait 10 μs.
- (4) Select program memory address clear mode.
- (5) Apply +6 V to V_{DD} and +12.5 V to V_{PP}.
- (6) Select program inhibit mode.
- (7) Select write mode for 1 ms duration and write data.
- (8) Select program inhibit mode.
- (9) Select verify mode. If write is successful, proceed to step (10). If write fails, repeat steps (7) to (9).
- (10) Perform additional write for (Number (X) of repetitions of steps (7) to (9)) × 1 ms duration.
- (11) Select program inhibit mode.
- (12) Increment the program memory address by inputting four pulses on the X1 pin.
- (13) Repeat steps (7) to (12) until the last address is reached.
- (14) Select program memory address clear mode.
- (15) Apply 5 V to V_{DD} and V_{PP} pins.
- (16) Turn the power off.

The timing for steps (2) to (12) is shown below.

3.3 READING THE PROGRAM MEMORY

The procedure for reading the contents of program memory is described below. The read is performed in the verify mode.

- (1) Connect all unused pins to V_{SS} through resistors. Apply a low-level signal to the X1 pin.
- (2) Apply 5 V to V_{DD} and V_{PP} pins.
- (3) Wait 10 μs.
- (4) Select program memory address clear mode.
- (5) Apply +6 V to V_{DD} and +12.5 V to V_{PP}.
- (6) Select program inhibit mode.
- (7) Select verify mode. Data is output sequentially one address at a time for each cycle of four clock pulses appearing on the X1 pin.
- (8) Select program inhibit mode.
- (9) Select program memory address clear mode.
- (10) Apply 5 V to V_{DD} and V_{PP} pins.
- (11) Turn the power off.

The timing for steps (2) to (9) is shown below.

4. SCREENING ONE-TIME PROM PRODUCTS

★

NEC cannot execute a complete test of one-time PROM products (μ PD75P068CU and μ PD75P068GB-3B4) due to their structure before shipment. It is recommended that you screen (verify) PROM products after writing necessary data into them and storing them at 125 °C for 24 hours.

NEC offers a charged service called QTOP microcomputer service. This service includes writing to one-time PROM, marking, screening, and verification.

Ask your sales representative for details.

5. ELECTRICAL CHARACTERISTICS

ABSOLUTE MAXIMUM RATINGS (T_a = 25 °C)

Parameter	Symbol	Conditions		Rated value	Unit
Supply voltage	V _{DD}			-0.3 to +7.0	V
Supply voltage	V _{PP}			-0.3 to +13.5	V
Input voltage	V _{I1}	Ports other than ports 4 and 5		-0.3 to V _{DD} + 0.3	V
	V _{I2}	Ports 4 and 5	N-ch open drain	-0.3 to +11	V
Output voltage	V _O			-0.3 to V _{DD} + 0.3	V
High-level output current	I _{OH}	1 pin		-10	mA
		All pins		-30	mA
Low-level output current	I _{OL} ^{Note}	1 pin of ports 0, 3, 4, and 5	Peak value	30	mA
			rms	15	mA
		1 pin of ports 2 and 6	Peak value	20	mA
			rms	5	mA
		Total of all pins of ports 0, 3, 4, and 5	Peak value	160	mA
			rms	120	mA
		Total of all pins of ports 2, and 6	Peak value	30	mA
			rms	20	mA
Operating temperature	T _{opt}			-40 to +85	°C
Storage temperature	T _{stg}			-65 to +150	°C

Note Calculate rms with [rms] = [peak value] × √duty.

Caution Absolute maximum ratings are rated values beyond which some physical damages may be caused to the product; if any of the parameters in the table above exceeds its rated value even for a moment, the quality of the product may deteriorate. Be sure to use the product within the rated values.

CAPACITANCE (T_a = 25 °C, V_{DD} = 0 V)

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
Input capacitance	C _i	f = 1 MHz			15	pF
Output capacitance	C _o	0 V for pins other than pins to be measured			15	pF
I/O capacitance	C _{io}				15	pF

CHARACTERISTICS OF THE MAIN SYSTEM CLOCK OSCILLATOR ($T_a = -40$ to $+85$ °C, $V_{DD} = 2.7$ to 6.0 V)

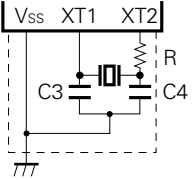

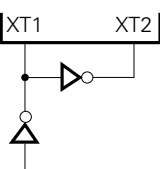

Resonator	Recommended constant	Parameter	Conditions	Min.	Typ.	Max.	Unit
Ceramic resonator		Oscillator frequency (f_x) Note 1		1.0		5.0 ^{Note 3}	MHz
		Oscillation settling time Note 2				4	ms
Crystal		Oscillator frequency (f_x) Note 1		1.0	4.19	5.0 ^{Note 3}	MHz
		Oscillation settling time Note 2	$V_{DD} = 4.5$ to 6.0 V			10	ms
						30	ms
External clock		X1 input frequency (f_x) Note 1		1.0		5.0 ^{Note 3}	MHz
		X1 input high/low level width (t_{xH} , t_{xL})		100		500	ns

- Notes**
- The oscillator frequency and input frequency indicate only the oscillator characteristics. See the item of AC characteristics for the instruction execution time.
 - The oscillation settling time means the time required for the oscillation to settle after V_{DD} is reaches the minimum voltage in the oscillation voltage range.
 - When $4.19 \text{ MHz} < f_x \leq 5.0 \text{ MHz}$, do not select PCC = 0011 as the instruction execution time. When PCC = 0011, one machine cycle falls short of $0.95 \mu\text{s}$, the minimum value for the standard.

Caution When the main system clock oscillator is used, conform to the following guidelines when wiring at the portions surrounded by dotted lines in the figures above to eliminate the influence of the wiring capacity.

- The wiring must be as short as possible.
- Other signal lines must not run in these areas.
- Any line carrying a high fluctuating current must be kept away as far as possible.
- The grounding point of the capacitor of the oscillator must have the same potential as that of V_{DD} . It must not be grounded to ground patterns carrying a large current.
- No signal must be taken from the oscillator.

CHARACTERISTICS OF THE SUBSYSTEM CLOCK OSCILLATOR ($T_a = -40$ to $+85$ °C, $V_{DD} = 2.7$ to 6.0 V)

Resonator	Recommended constant	Parameter	Conditions	Min.	Typ.	Max.	Unit
Crystal		Oscillator frequency (f_{XT}) Note 1		32	32.768	35	kHz
		Oscillation settling time Note 2	$V_{DD} = 4.5$ to 6.0 V		1.0	2	s
							10
External clock		XT1 input frequency (f_{XT}) Note 1		32		100	kHz
		XT1 input high/low level width (t_{XTH} , t_{XTL})		5		15	μs

- Notes 1.** The oscillator frequency and input frequency indicate only the oscillator characteristics. See the item of AC characteristics for the instruction execution time.
- 2.** The oscillation settling time means the time required for the oscillation to settle after V_{DD} reaches the minimum voltage in the oscillation voltage range.

Caution When the subsystem clock oscillator is used, conform to the following guidelines when wiring at the portions surrounded by dotted lines in the figures above to eliminate the influence of the wiring capacity.

- The wiring must be as short as possible.
- Other signal lines must not run in these areas.
- Any line carrying a high fluctuating current must be kept away as far as possible.
- The grounding point of the capacitor of the oscillator must have the same potential as that of V_{SS} . It must not be grounded to ground patterns carrying a large current.
- No signal must be taken from the oscillator.

When the subsystem clock is used, pay special attention to its wiring; the subsystem clock oscillator has low amplification to minimize current consumption and is more likely to malfunction due to noise than the main system clock oscillator.

RECOMMENDED CAPACITORS IN THE OSCILLATION CIRCUIT

★

Main system clock: Ceramic resonator ($T_a = -20$ to $+80^\circ\text{C}$)

Manufacturer	Part number	Frequency (MHz)	Recommended constant		Oscillation voltage range

	I_{DD4}		HALT mode	$V_{DD} = 3.0$ V ± 10 %	5	15	μA
	I_{DD5}	XT1 = 0 V	$V_{DD} = 5.0$ V ± 10 %		0.5	20	μA
$V_{DD} =$				0.1	10	μA	
		3.0 V ± 10 %	$T_a = 25$ °C	0.1	5	μA	

- Notes**
1. This current excludes the current which flows through the built-in pull-up resistors.
 2. This value applies also when the subsystem clock oscillates.
 3. Value when the processor clock control register (PCC) is set to 0011 and the μPD75036 is operated in the high-speed mode
 4. Value when the PCC is set to 0000 and the μPD75036 is operated in the low-speed mode
 5. This value applies when the system clock control register (SCC) is set to 1001 to stop the main system clock pulse and to start the subsystem clock pulse.

AC CHARACTERISTICS ($T_a = -40$ to $+85$ °C, $V_{DD} = 2.0$ to 6.0 V)

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit	
CPU clock cycle time (minimum instruction execution time = 1 machine cycle) Note 1	t_{CY}	Operated by main system clock pulse	$V_{DD} = 4.5$ to 6.0 V	0.95		64	μs
				3.8		64	μs
		Operated by subsystem clock pulse	114	122	125	μs	
TIO input frequency	f_{TI}	$V_{DD} = 4.5$ to 6.0 V	0		1	MHz	
			0		275	kHz	
TIO input high/low level width	t_{TIH} , t_{TIL}	$V_{DD} = 4.5$ to 6.0 V	0.48			μs	
			1.8			μs	
Interrupt input high/low level width	t_{INTH} , t_{INTL}	INT0	Note 2			μs	
		INT1, INT2, and INT4	10			μs	
		KR0 to KR3	10			μs	
\overline{RESET} low level width	t_{RSL}		10			μs	

Notes 1. The cycle time of the CPU clock (Φ) depends on the connected resonator frequency, the system clock control register (SCC), and the processor clock control register (PCC).

The figure on the right side shows the cycle time t_{CY} characteristics for the supply voltage V_{DD} during main system clock operation.

2. This value becomes $2t_{CY}$ or $128/f_x$ according to the setting of the interrupt mode register (IM0).

SERIAL TRANSFER OPERATION

Two-wire and three-wire serial I/O modes ($\overline{\text{SCK}}$... Internal clock output):

Parameter	Symbol	Conditions		Min.	Typ.	Max.	Unit
$\overline{\text{SCK}}$ cycle time	t _{KCY1}	V _{DD} = 4.5 to 6.0 V		1600			ns
				3800			ns
$\overline{\text{SCK}}$ high/low level width	t _{KL1}	V _{DD} = 4.5 to 6.0 V		t _{KCY1} /2 - 50			ns
	t _{KH1}			t _{KCY1} /2 - 150			ns
SI setup time (referred to $\overline{\text{SCK}}\uparrow$)	t _{SIK1}			150			ns
SI hold time (referred to $\overline{\text{SCK}}\uparrow$)	t _{KSI1}			400			ns
Delay time from $\overline{\text{SCK}}\downarrow$ to SO output	t _{KSO1}	R _L = 1 kΩ, C _L = 100 pF ^{Note}	V _{DD} = 4.5 to 6.0 V	0		250	ns
				0		1000	ns

Two-wire and three-wire serial I/O modes ($\overline{\text{SCK}}$... External clock input):

Parameter	Symbol	Conditions		Min.	Typ.	Max.	Unit
$\overline{\text{SCK}}$ cycle time	t _{KCY2}	V _{DD} = 4.5 to 6.0 V		800			ns
				3200			ns
$\overline{\text{SCK}}$ high/low level width	t _{KL2}	V _{DD} = 4.5 to 6.0 V		400			ns
	t _{KH2}			1600			ns
SI setup time (referred to $\overline{\text{SCK}}\uparrow$)	t _{SIK2}			100			ns
SI hold time (referred to $\overline{\text{SCK}}\uparrow$)	t _{KSI2}			400			ns
Delay time from $\overline{\text{SCK}}\downarrow$ to SO output	t _{KSO2}	R _L = 1 kΩ, C _L = 100 pF ^{Note}	V _{DD} = 4.5 to 6.0 V	0		300	ns
				0		1000	ns

Note R_L and C_L are the resistance and capacitance of the SO output line load respectively.

SBI mode ($\overline{\text{SCK}}$... Internal clock output (master)):

Parameter	Symbol	Conditions		Min.	Typ.	Max.	Unit
SCK cycle time	t _{KCY3}	V _{DD} = 4.5 to 6.0 V		1600			ns
				3800			ns
SCK high/low level width	t _{KL3}	V _{DD} = 4.5 to 6.0 V		t _{KCY3} /2 - 50			ns
	t _{KH3}			t _{KCY3} /2 - 150			ns
SB0/SB1 setup time (referred to SCK↑)	t _{SIK3}			150			ns
SB0/SB1 hold time (referred to $\overline{\text{SCK}}$ ↑)	t _{KSI3}			t _{KCY3} /2			ns
Delay time from SCK↓ to SB0/SB1 output	t _{KSO3}	R _L = 1 kΩ, C _L = 100 pF ^{Note}	V _{DD} = 4.5 to 6.0 V	0		250	ns
				0		1000	ns
From $\overline{\text{SCK}}$ ↑ to SB0/SB1↓	t _{KSB}			t _{KCY3}			ns
From SB0/SB1↓ to $\overline{\text{SCK}}$	t _{SBK}			t _{KCY3}			ns
SB0/SB1 low level width	t _{SBL}			t _{KCY3}			ns
SB0/SB1 high level width	t _{SBH}			t _{KCY3}			ns

SBI mode ($\overline{\text{SCK}}$... External clock input (slave)):

Parameter	Symbol	Conditions		Min.	Typ.	Max.	Unit
SCK cycle time	t _{KCY4}	V _{DD} = 4.5 to 6.0 V		800			ns
				3200			ns
SCK high/low level width	t _{KL4}	V _{DD} = 4.5 to 6.0 V		400			ns
	t _{KH4}			1600			ns
SB0/SB1 setup time (referred to SCK↑)	t _{SIK4}			100			ns
SB0/SB1 hold time (referred to SCK↑)	t _{KSI4}			t _{KCY4} /2			ns
Delay time from SCK↓ to SB0/SB1 output	t _{KSO4}	R _L = 1 kΩ, C _L = 100 pF ^{Note}	V _{DD} = 4.5 to 6.0 V	0		300	ns
				0		1000	ns
From $\overline{\text{SCK}}$ ↑ to SB0/SB1↓	t _{KSB}			t _{KCY4}			ns
From SB0/SB1↓ to $\overline{\text{SCK}}$ ↓	t _{SBK}			t _{KCY4}			ns
SB0/SB1 low level width	t _{SBL}			t _{KCY4}			ns
SB0/SB1 high level width	t _{SBH}			t _{KCY4}			ns

Note R_L and C_L are the resistance and capacitance of the SB0/SB1 output line load respectively.

A/D CONVERTER ($T_a = -40$ to $+85$ °C, $V_{DD} = 2.7$ to 6.0 V, $AV_{SS} = V_{SS} = 0$ V)

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit	
Resolution			8	8	8	bit	
Absolute accuracy ^{Note 1}		$2.5\text{ V} \leq AV_{REF} \leq V_{DD}$ ^{Note 2}	$-10 \leq T_a \leq +85^\circ\text{C}$			± 1.5	LSB
			$-40 \leq T_a < -10^\circ\text{C}$			± 2.0	LSB
Conversion time ^{Note 3}	t_{CONV}				$168/f_x$	μs	
Sampling time ^{Note 4}	t_{SAMP}				$44/f_x$	μs	
Reference input voltage	AV_{REF}		2.5		V_{DD}	V	
Analog input voltage	V_{IAN}		AV_{SS}		AV_{REF}	V	
Analog input impedance	R_{AN}			1000		MΩ	
AV_{REF} current	I_{REF}			0.7	2.0	mA	

Notes 1. Absolute accuracy excluding quantization error ($\pm 1/2$ LSB)

2. $2.5\text{ V} \leq AV_{REF} \leq V_{DD}$

ADM1 is set to 0 or 1 depending on the A/D converter reference voltage (AV_{REF}) as follows:

When $0.6V_{DD} \leq AV_{REF} \leq 0.65V_{DD}$, ADM1 can be set to either 0 or 1.

- 3.** Time from the execution of a conversion start instruction till the end of conversion (EOC = 1) ($40.1\ \mu\text{s}$: $f_x = 4.19\ \text{MHz}$)
- 4.** Time from the execution of a conversion start instruction till the end of sampling ($10.5\ \mu\text{s}$: $f_x = 4.19\ \text{MHz}$)

DATA HOLD CHARACTERISTICS BY LOW SUPPLY VOLTAGE IN DATA MEMORY STOP MODE

(T_a = -40 to +85 °C)

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
Data hold supply voltage	V _{DDDR}		2.0		6.0	V
Data hold supply current ^{Note 1}	I _{DDDR}	V _{DDDR} = 2.0 V		0.1	10	μA
Release signal setting time	t _{SREL}		0			μs
Oscillation settling time ^{Note 2}	t _{WAIT}	Release by $\overline{\text{RESET}}$		2 ¹⁷ /f _x		ms
		Release by interrupt request		Note 3		ms

- Notes 1.** Excluding the current which flows through the built-in pull-up resistors
- 2.** CPU operation stop time for preventing unstable operation at the beginning of oscillation
- 3.** This value depends on the settings of the basic interval timer mode register (BTM) shown below.

BTM3	BTM2	BTM1	BTM0	Wait time (Values at f _x = 4.19 MHz in parentheses)
—	0	0	0	2 ²⁰ /f _x (approx. 250 ms)
—	0	1	1	2 ¹⁷ /f _x (approx. 31.3 ms)
—	1	0	1	2 ¹⁵ /f _x (approx. 7.82 ms)
—	1	1	1	2 ¹³ /f _x (approx. 1.95 ms)

Data Hold Timing (STOP Mode Release by $\overline{\text{RESET}}$)

Data Hold Timing (Standby Release Signal: STOP Mode Release by Interrupt Signal)

8. RECOMMENDED SOLDERING CONDITIONS ★

The conditions listed below shall be met when soldering the μPD75P068.

For details of the recommended soldering conditions, refer to our document "SMD Surface Mount Technology Manual" (IEI-1207).

Please consult with our sales offices in case any other soldering process is used, or in case soldering is done under different conditions.

Table 8-1 Soldering Conditions for Surface-Mount Devices

μPD75P068GB-3B4: 44-pin plastic QFP (10 × 10 mm)

Soldering process	Soldering conditions	Symbol
Infrared ray reflow	Peak package's surface temperature: 235 °C Reflow time: 30 seconds or less (at 210 °C or more) Maximum allowable number of reflow processes: 2 <Cautions> (1) Do not start reflow-soldering the device if its temperature is higher than the room temperature because of a previous reflow soldering. (2) Do not use water for flux cleaning before a second reflow soldering.	IR35-00-2
VPS	Peak package's surface temperature: 215 °C Reflow time: 40 seconds or less (at 200 °C or more) Maximum allowable number of reflow processes: 2 <Cautions> (1) Do not start reflow-soldering the device if its temperature is higher than the room temperature because of a previous reflow soldering. (2) Do not use water for flux cleaning before a second reflow soldering.	VP15-00-2
Wave soldering	Solder temperature: 260°C or less Flow time: 10 seconds or less Number of flow processes: 1 Preheating temperature: 120 max. (measured on the package surface)	WS60-00-1
Partial heating method	Terminal temperature: 300 °C or less Flow time: 3 seconds or less (for each side of device)	-

Caution Do not apply more than a single process at once, except for "Partial heating method."

Table 8-2 Soldering Conditions for Through Hole Mount Devices

μPD75P068CU: 42-pin plastic shrink DIP (600 mil)

Soldering process	Soldering conditions
Wave soldering (only for leads)	Solder temperature: 260 °C or less Flow time: 10 seconds or less
Partial heating method	Terminal temperature: 260 °C or less Flow time: 10 seconds or less

Caution In wave soldering, apply solder only to the lead section. Care must be taken that jet solder does not come in contact with the main body of the package.

Notice

Other versions of the products are available. For these versions, the recommended reflow soldering conditions have been mitigated as follows:
Higher peak temperature (235 °C), two-stage, and longer exposure limit.
Contact an NEC representative for details.

APPENDIX A DEVELOPMENT TOOLS

The following development tools are provided for developing systems including the μPD75P068:

Hardware	IE-75000-R ^{Note 1} IE-75001-R	In-circuit emulator for the 75X series
	IE-75000-R-EM ^{Note 2}	Emulation board for the IE-75000-R and IE-75001-R
	EP-75068CU-R	Emulation probe for the μPD75P068CU
	EP-75068GB-R EV-9200G-44	Emulation probe for the μPD75P068GB. A 44-pin conversion socket, the EV-9200G-64, is attached to the probe.
	PG-1500	PROM programmer
	PA-75P008CU	PROM programmer adapter for the μPD75P068CU/GB. Connected to the PG-1500.
Software	IE control program	Host machine <ul style="list-style-type: none"> • PC-9800 series (MS-DOS™ Ver. 3.30 to Ver. 5.00A^{Note 3}) • PC/AT™ series (PC DOS™ Ver. 3.10)
	PG-1500 controller	
	RA75X relocatable assembler	

Notes 1. Maintenance service only

2. Not contained in the IE-75001-R

3. MS-DOS versions 5.00 and 5.00A are provided with a task swap function. This function, however, cannot be used in these software.

Remark Refer to *75X Series Selection Guide (IF-1027)* for development tools manufactured by third parties.

[MEMO]

Cautions on CMOS Devices

① Countermeasures against static electricity for all MOSs

Caution When handling MOS devices, take care so that they are not electrostatically charged.

Strong static electricity may cause dielectric breakdown in gates. When transporting or storing MOS devices, use conductive trays, magazine cases, shock absorbers, or metal cases that NEC uses for packaging and shipping. Be sure to ground MOS devices during assembling. Do not allow MOS devices to stand on plastic plates or do not touch pins. Also handle boards on which MOS devices are mounted in the same way.

② CMOS-specific handling of unused input pins

Caution Hold CMOS devices at a fixed input level.

Unlike bipolar or NMOS devices, if a CMOS device is operated with no input, an intermediate-level input may be caused by noise. This allows current to flow in the CMOS device, resulting in a malfunction. Use a pull-up or pull-down resistor to hold a fixed input level. Since unused pins may function as output pins at unexpected times, each unused pin should be separately connected to the V_{DD} or GND pin through a resistor. If handling of unused pins is documented, follow the instructions in the document.

③ Statuses of all MOS devices at initialization

Caution The initial status of a MOS device is unpredictable when power is turned on.

Since characteristics of a MOS device are determined by the amount of ions implanted in molecules, the initial status cannot be determined in the manufacture process. NEC has no responsibility for the output statuses of pins, input and output settings, and the contents of registers at power on. However, NEC assures operation after reset and items for mode setting if they are defined.

When you turn on a device having a reset function, be sure to reset the device first.

[MEMO]

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document. NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

The devices listed in this document are not suitable for use in aerospace equipment, submarine cables, nuclear reactor control systems and life support systems. If customers intend to use NEC devices for above applications or they intend to use "Standard" quality grade NEC devices for applications not intended by NEC, please contact our sales people in advance.

Application examples recommended by NEC Corporation

Standard: Computer, Office equipment, Communication equipment, Test and Measurement equipment, Machine tools, Industrial robots, Audio and Visual equipment, Other consumer products, etc.

Special: Automotive and Transportation equipment, Traffic control systems, Antidisaster systems, Anticrime systems, etc.
