The Renesas RX100 Series encompasses the RX Family's entry-level 32-bit MCUs, extending the advanced RX architecture to the lowest possible power and cost points. This series is a great fit for those who need a balance of the widest set of peripherals, highest performance, and optimal system cost. The RX100 Series delivers the market's first 32-bit MCUs to feature True Low Power and cutting-edge peripherals like capacitive touch and LCD drive capability, as well as fast wake-up, zero wait-state flash, DSP capabilities, and multiple safety functions. The RX100 Series is comprised of the only entry-level 32-bit MCUs that offer integrated USB 2.0 host, device, and OTG support.

Designed to support a broad range of applications, the RX100 Series provides a combination of ultra-low power consumption, on-chip connectivity, an extensive DSP library, and superior performance at an attractive price ideally suited for 32-bit embedded applications. It consumes only 350 nA in sleep mode and snaps into full operation in just 4.8 μ s. Flash memory size ranges from 8 KB to 512 KB and compact, low pin-count packages are available ranging from 36 to 100 pins.

RX FAMILY PERFORMANCE AND POWER ADVANTAGES

The RX Family contains three series of 32-bit MCUs that are optimized for a vast range of application requirements. The RX100, RX200, and RX600/RX700 Series are CPU and peripheral compatible and share the same software tools and ecosystem.

MCUs in the top-level RX600/RX700 Series are ideal for systems that require high-performance, excellent connectivity, LCD drive, and motor control capability. By contrast, devices in the RX200 and RX100 Series are optimized for ultra-low power, portable applications, safety functionality, and integrated analog interfaces.

RX100 – TRUE LOW POWER WITHOUT COMPROMISING PERFORMANCE

RX100 MCUs are great design choices for embedded systems that must minimize power consumption by running in sleep mode whenever possible, yet must wake-up quickly whenever there is a need to perform computing or control tasks. Renesas' True Low Power capability offers designers the lowest possible power consumption across the entire temperature and voltage range, including all peripherals and Flash memory, while also providing maximum flexibility with multiple operational and sleep modes. Four different power-saving modes are available: Run, Sleep, Deep Sleep, and Software Standby. Wake-up time in low-power mode ranges from less than 1 μ s to 4.8 μ s.

Run Mode	ICLK Frequency	Internal Voltage Regulator Mode
High Speed	8 MHz - 32 MHz	High Power
Middle Speed	1 MHz - 8 MHz	Middle Power
Low Speed	32 kHz - 1 MHz	Low Power

RX130	–	–	✓	–
RX113	✓	✓	✓	✓
RX111	✓	–	–	–
RX110	–	–	–	–

Peripherals that aren't required can be completely shut down in every mode. A flexible clock system allows peripherals to use a clock frequency from the one driving the CPU to achieve the lowest possible level of power consumption.

In run modes, the RX100 MCUs' three different operating modes can be applied according to the demands of the application at any point in time: high speed, middle speed, and low speed.

Computing Capabilities for Application Performance

The RX100 core features 1.56 DMIPS/MHz and 3.08 CoreMark/MHz performance and achieves 50 DMIPS at 32 MHz.

Low Power Consumption, Fast Wake-up

Software standby achieves a power consumption of only 350 nA, with a 4.8 μ s wake-up time. Applications requiring a shorter wake-up can utilize the Sleep and Deep-Sleep modes that reduce the delay to just 1 μ s.

RX100 SERIES SAFETY FEATURES

RX100 MCUs provide six modular hardware subsystems that help products meet safety standards. Clock Accuracy Control checks that the clock frequency is within a predefined range. Oscillation Stop Detection switches the chip's main clock to an alternative source if the primary one fails. Data Operation Circuit continuously performs a SRAM failure test independent of the CPU. The Independent Watchdog Timer (I-WDT) uses a reliable internal clock source.

FEATURES ENABLING LOW POWER CONSUMPTION AND DESIGN FLEXIBILITY

Event Link Controller

The Event Link Controller (ELC) is an innovative way to reduce CPU load by directly routing interrupt event signals from one peripheral or module to the other. As a result, power consumption, interrupt latency, and program size are minimized.

Multifunction Pin Controller

The Multifunction Pin Controller (MPC) allows peripheral input and output signals to be remapped to alternate ports, offering more design layout flexibility. In this example, the ports of the IRQ0 and timer have been moved to a different location of the MCU.

ADVANCED CAPACITIVE TOUCH TECHNOLOGY

The usability and quality of a human machine interface (HMI) – the medium through which a human interacts with a machine – is critical for the success of today's IoT platforms. Effective use of capacitive touch technology provides an intuitive interface and dramatically alters the end user experience. Renesas' latest generation of capacitive touch technology has been optimized for a wide range of HMI applications by providing extremely high resistance to environmental factors, allowing for operation in dusty or wet conditions, with gloved hands, and even through wood panels.

The Renesas RX130 and RX113 Series of microcontrollers incorporate a patented hardware peripheral block designed to measure small variations in electrical capacitance independent of the main CPU operation. This feature has been optimized to detect the presence of human touch typically used in touch interface applications. This proprietary intellectual property means that Renesas RX MCUs offer developers the latest in HMI technology for industrial, building automation, home appliance, and more.

Key Features and Benefits

- **High Sensitivity:** Touch detection through 10 mm in user interface panels – not only for glass and acrylic, but can also support non-traditional applications like wood or through the air
- **High Noise Tolerance:** World-class IEC 61000 4-3/4-6 level 3 compliance, hardware-assisted rejection of electrical noise, and adaptation to environmental changes
- **Water Resistance:** Operation with no errors when panels are wet
- **Hardware-Assisted Rejection:** Handles electrical noise and can adapt to environmental changes
- **Autonomous Operation:** Enables ultra-low power touch detection for portable devices
- **Channel Flexibility:** Up to 36 touch channels supporting buttons, wheels, or sliders
- **Sensing Methodologies:** Supports both self-capacitance and mutual-capacitance applications
- **Automatic Tuning Mechanism:** Supports cap touch sensitivity adjustment for applications using different materials, overlays, curved surfaces, or air gaps
- **Easy-to-Use Development Tools:** PC-based GUI tool for system configuration and development
- **Single-Chip Cap Touch Designs:** With 512 KB of Flash, many applications can implement the user interface and the cap touch sensing with a single MCU device
- **Package Options:** 48-, 64-, 80-, and 100-pin packages

USB CONNECTIVITY OF RX100 MCUS

Devices in the RX100 Series incorporate a USB 2.0 Host/Function controller and an OTG communication peripheral. Operating as a host, the controller provides full-speed and low-speed data transfers. It also supports battery charging and complies with the battery charging application specification, rev 1.2. (Not available on RX110 Group.)

LCD DRIVE SUPPORT

Need LCD support for your design? The RX113 Group's advanced peripheral set offers the latest in LCD drive and control capability. Designed for maximum flexibility, the RX113 provides user-selectable liquid crystal waveform, while the LCD driver voltage reference can easily switch between capacitor split method, external resistance method, or internal voltage boosting method. This allows users to maximize drive capability, operating current, or drive voltage depending on application requirements.

- Supports capacitor split method, internal voltage boost method, and resistance division method
- Supports waveform types A and B
- Supports LCD contrast adjustment
- Supports LCD blinking
- Complies with USB Battery Charging Specification 1.2

ACCELERATE YOUR DESIGN WITH RX100 DSP CAPABILITIES

The Renesas RX100 MCU Series provides a clear advantage over competitive solutions by delivering critical DSP functionality not found in other entry-level 32-bit MCUs. Unlike competitive M0/M0+ families, the RX CPU core provides a hardware-based divide capability – offering a huge improvement in design efficiency and performance compared to software-based implementations.

The RX CPU core also contains important DSP-enabling features like a 5-stage pipeline and 32-bit barrel shifter – capabilities not available in M0/M0+ solutions. Renesas makes it easy to develop your DSP application code by providing an extensive, scalable DSP instruction set that has been designed to maximize the superior performance of the RX CPU core. The state-of-the art DSP capabilities offered in the RX100 Series make it the obvious choice for low-cost, low-power signal processing applications.

FIRMWARE INTEGRATION TECHNOLOGY (FIT)

Firmware Integration Technology (FIT) is a global set of Renesas standards enabling creation of high-quality, easy-to-use, interoperable firmware that addresses customer needs.

FIT is a set of rules and guidelines to help produce better code and better projects – faster and easier.

FIT provides:

- Common file and directory structure
- Common documentation practices
- Easy insertion into customer's project
- Ability to integrate multiple modules
- Simple configuration
- Strong foundation to build code
- Common platform for installation of modules

FIT Enables Portability:

- API-based implementation
- User application can move to another MCU easily

GET UP AND RUNNING WITH THE RX ECOSYSTEM

Renesas makes it easy to launch new system designs. Our comprehensive hardware and software tools – including very low cost and free products – help swiftly advance the product development process from concept stage to final RX-based design.

Renesas Customizable Software Library

Applilet is a support tool that makes it easy to generate code optimized for an RX100 MCU. It functions through a simple GUI windows application or via an e² studio plug-in. This tool generates customizable device drivers that compile and work right out of the box.

e² studio – the Eclipse-based Integrated Development Environment (IDE)

The Renesas e² studio IDE is a complete development and debug environment based on the popular Eclipse platform and the associated C/C++ Development Tooling (CDT) project.

Basic Features		Advanced Debug Features	
– Connect / Disconnect	– Variable and Expression views	– Renesas Debug view with Call Stack	– Real-time Expression view
– Run / Stop (Resume / Suspend)	– Register view	– I/O Registers view	– Real-time Memory view
– Software breakpoints	– Basic Memory view	– Trace view	– Real-time Chart view
– Source step / disassembly step	– Endian selection	– Eventpoints view

RX100 Renesas Starter Kits (RSK)

These complete RX100-based hardware/software platforms for in-depth application design include the E1 Debugger, e² studio, demonstration firmware, and a trial version of the Renesas RX compiler.

Complete Debugging, Emulation, and Programming

On-chip debugging of an RX-based application is performed via a debug connection to the target and USB connection to the Windows-based IDE. The Renesas E1 and E2 debuggers offer thorough CPU control and visibility. The E2 is more economical than the E1 and is suitable for work across the whole range from hobbyist projects and education to professional development.

RX130 Target Board

Target Board for RX family provides an entry point to evaluation, prototyping, and developing for the RX MCU family. It incorporates an emulator circuit so you can use it for your own application design without the need for further tool investments.

Processors and Power/Analog

Complete System Solutions at Your Fingertips

In today's fast paced technology environment, designers need to be innovative without compromising time to market. Thinking at the system level is crucial to being able to address design challenges upfront. By offering quality solutions for the two most critical parts of your design, processors and power, Renesas accelerates your development and enables differentiation, while bringing predictability to your application. Whatever your product field – automotive, industrial, home electronics, office automation or information communication technology – Renesas is the partner you can rely on from design to production.

A top-to-bottom, front-to-back product offering will help speed design and bring quality, compatibility, and predictability to your applications.

POWERING AN MCU

Buck-Boost Converter

ISL9120, ISL91107, ISL91128

- Current Range: 400mA – 2.4A
- Low $I_q \sim 20\mu A$
- Input Voltage: 0.6V – 5.5V
- Output Voltage: 2.5V – 5.25V

Buck Converters

ISL9103/A, ISL9107/A, ISL9307

- Current Range: 500mA – 1.5A
- Low $I_q \sim 17\mu A$
- Input Voltage: 2.7V – 6V
- Output Voltage: 0.8V – V_{IN}

Boost Converters

ISL9111, ISL9113, ISL91133

- Current Range: 400mA – 2.3A
- Low $I_q \sim 20\mu A$
- Input Voltage: 0.6V – 5.4V
- Output Voltage: 2.5V – 5.25V

Linear Regulators

ISL9007, ISL9021A, ISL9016

- Current Range: 150mA – 400mA
- Low $I_q \sim 25\mu A$
- Input Voltage: 1.5V – 6.5V
- Output Voltage: 0.9V – 3.3V

Bi-Directional Buck-Boost Conv

ISL95338

- Current Range: <10A
- V_{IN} : 3.2V – 23.5V; V_{OUT} : 2.4V – 20V

Battery Chargers

ISL6294, ISL9230, ISL9220

- Dual power source (USB & Wireless Charging + Power Path)
- Current Range: 300mA – 1.5A
- 30V Input Compliant

COMPLETE SIGNAL CHAIN SOLUTIONS

Renesas' broad precision analog portfolio provides a wide range of next-gen precision instrumentation, medical, communication and industrial process control applications where innovation, reliability and dependability is central to the analog designs.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
 2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
 3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
 4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
 5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.
Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
 6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
 7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
 9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
 10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
 11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
