Subject: Micro Networks (MNC) Integration with IDT

Date: February 8, 2010

Integrated Device Technology, Inc. has recently integrated the products that were diversified from the sale of IDT's Micro Networks (MNC) to Spectrum Controls. This integration requires that we standardize some of the processes and documentation previously provided to our customers due to sales order and inventory system differences from our former subsidiary, MNC and IDT. These are immediate and necessary changes to allow for a continuous operation.

1. Barcode Label - Datecode

The labels printed for these products must use the IDT barcoding system. The last character of the five digit datecode YYDDD (Julian calendar format) must be truncated to YYDD.

During this transition period, customer may receive shipments using the IDT barcode label system (truncated digit) and the former MNC labels.

IDT is in the process of evaluating the Julian calendar style date code used by the former MNC products to convert to the IDT standard and typical industry standard convention of year and workweek - YYWW. This change, as it may apply, will be sent in the form of a Product Change Notice (PCN).

2. Orderable Part Number - for Tape & Reel packing

Tape & reel (T/R) packing was previously defined on the purchase order. Now all parts can be ordered in T/R by just adding the suffix "T". However, the orderable part number on five products (in T/R) must be changed due to system limitations. Because of an 18 characters limit, the last character of the part number will be replaced with "T" to indicate T/R packing. Refer below for the list of products with their new orderable part numbers in T/R.

Standard Orderable Part

M2006-02A-622.0800

M2006-02A-644.5313

M2006-02A-666.5143

M2006-02A-669.3266

M2006-02A-693.4830

Orderable Part # for Tape & Reel

M2006-02A-622.080T

M2006-02A-644.531T

M2006-02A-666.514T

M2006-02A-669.326T

M2006-02A-693.483T
