

Preliminary for Use with Evaluation Kit

User Manual DA7280 Daughterboard 359-06-X UM-HA-003

Abstract

This document describes the functionality of DA7280 haptic driver daughterboard. This board can be used standalone or attached to a DA728X motherboard for evaluation.

3 Introduction

This document describes the use and connections of 359-06-X DA7280 daughterboard to allow evaluation of the DA7280 device. A layout is shown in Figure 1 and details of all jumper connections are listed in Table 1.

4 359-06-X PCB Layout and Connections

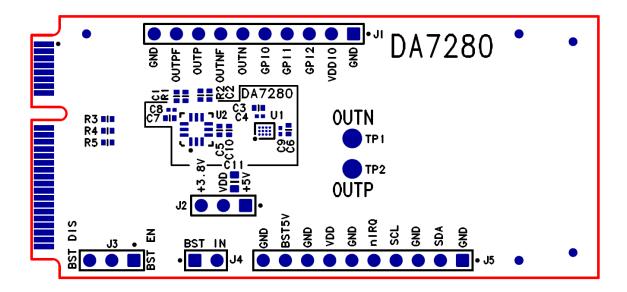

Figure 1: 359-06-X PCB

Table 1: Jumper Connections and Descriptions

Jumper/ Test Point	Pin/Connection	Description
	GND	Ground connection
	VDDIO	VDDIO supply for digital logic Supply range = 1.35 V to 5.5 V, 1.8 V typical
	GPI2	General purpose input pin 2
	GPI1	General purpose input pin 1
	GPI0	General purpose input pin 0
	OUTN	Negative output for LRA connection - TP1 can also be used
J1	OUTNF	Filtered version of negative output Bandwidth limited to 3.38 kHz for output waveform analysis via an oscilloscope
	OUTP	Positive output for LRA connection - TP2 can also be used
	OUTPF	Filtered version of positive output Bandwidth limited to 3.38 kHz for output waveform analysis via an oscilloscope
	GND	Ground connection
J2	SHORT 1 to 2 (default)	Selects VDD supply to device to be from the boost output at 5 V
	SHORT 2 to 3	Selects VDD supply to device to be from J5-VDD or J4-pin 2
J3	SHORT 1 to 2 (default)	Selects on board boost DCDC to be enabled
	SHORT 2 to 3	Selects on board boost DCDC to be disabled
	SHORT (default)	Selects on board boost DCDC input supply to be driven from main motherboard (3V8) when the daughter board is inserted
J4	OPEN	Removes power to the on-board DCDC from motherboard Pin 1 can be used for direct supply of the DCDC if standalone operation is required
	GND	Ground connection
	SDA	I2C Data line, pullup (R3) fitted with a 2K2 resistor as default
	GND	Ground connection
	SCL	I2C Clock line, pullup (R4) fitted with a 2K2 resistor as default
	nIRQ	Interrupt request output, 5K6 (R5) pullup fitted, driven low when IRQ triggered
J5	GND	Ground connection
	VDD	VDD supply line to device Supply range = 2.8 V to 5.5 V input
	GND	Ground connection
	BST5V	On board DCDC output voltage for monitoring, set to 5V as default
	GND	Ground connection

Jumper/ Test Point	Pin/Connection	Description
TP1	TP1	Test point for OUTN
TP2	TP2	Test point for OUTP
