

IDT 5V Wireless Power Transmitter IC

FEATURES

- Conforms with WPC Specification version 1.1
- Operates from 5V ($\pm 5\%$) supplies
- Multi-mode (multi-protocol) capability with dynamic switching
- Uses Full-Bridge Inverter for optimal coil drive (integrated half-bridge plus external half-bridge)
- Demodulates and Decodes communication packets from WPC-compliant Receivers
- Implements closed-loop power transfer control
- Optional 2-way communication security and encryption to 64-bit
- Master/Slave I²C Interface
- Compact 6mm x 6mm 48-lead TQFN package

SAFETY FEATURES

- Over-Current and Over-Temperature Protection
- Programmable Foreign Object Detection (FOD)
- Power Good and Fault Condition Detection with LED Indicator outputs

TARGET WIRELESS POWER APPS

- Charging mats or pads
- Public Facilities – Shops, Libraries, Airports, Schools
- Office Furniture
- Personal Computer Docks
- Portable Instruments
- Medical Devices

VALUE ADDED BEYOND WPC “Qi”

- Delivers industry-leading power to receiver (5W to WPC-compliant receivers, more when using IDTP9020 Receiver)
- Optional, proprietary Back-Channel Communication provides additional levels of encryption and security
- Manages Power Transfer Fault conditions automatically and controls Status indicator LEDs

The IDTP9035 is a highly-integrated WPC-compliant wireless power transmitter IC for power transmitter design A5 and A11. The device operates with a 5V ($\pm 5\%$) adaptor, and utilizes an external half-bridge in addition to its integrated half-bridge inverter to provide a highly-integrated 5V transmitter solution for A5/A11 applications. The device controls the transferred power by modulating the switching frequency of the full-bridge inverter from 110kHz to 205kHz at a fixed 50% duty cycle specified by the WPC specification for an A5/A11 transmitter. It contains logic circuits required to demodulate and decode WPC-compliant message packets sent by the mobile device to adjust the transferred power.

Utilizing the IDTP9020 WPC-compliant Receiver, power transfer greater than 5W can be achieved. In addition to implementing the WPC-specified device identification communication sequence, the IDTP9035 features a proprietary back-channel communication mode compatible with other IDT Wireless Power products which provides additional secure authentication capabilities.

EVALUATION BOARD

DISCLAIMER Integrated Device Technology, Inc. (IDT) and its subsidiaries reserve the right to modify the products and/or specifications described herein at any time and at IDT's sole discretion.
