Notes on Using IE-780948-NS-EM4

1. Product History

No.	Bugs and Changes/Additions to Specification	Control Code ^{Note}	
		A	B
1	(About the time of the starting of the debugger(ID78K0-NS)) When Port4n (n:0 to 7) pin is in the condition of Low level , the debugger(ID78K0-NS) doesn't start normally. -The avoidance plan: Only when starting the ebugger(ID78K0-NS), make Port4n the condition of the high level voltage.	√	-

√: Applicable, -: Not applicable

Note The “control code” is the second digit from the left in the 10-digit serial number in the warranty supplied with the in-circuit emulator you purchased (if it has not been upgraded). If the in-circuit emulator has been upgraded, a label indicating the new version is attached to the in-circuit emulator and the x in V-UP LEVEL x on this label indicates the control code.
