Note on Using Renesas-Made Emulators --Problem with Using Emulators Connected to Windows 7-Installed PCs--

When using a Renesas-made emulator that is connected to a Windows 7-installed PC, take note of the problem described below.

1. Emulators Concerned

```
Product type    Type names
------------------------------
E1           R0E000010KCE00
E20          R0E000200KCT00
E8a          R0E00008AKCE00
E10A-USB        HS0005KCU01H, HS0005KCU02H, HS0005KCU04H, and
             HS0005KCU14H
E30A         R0E00030AKCT00
E100         R0E001000EMU00
E200F         R0E0200F1EMU00
```

Note that these emulators are also involved in the problem described below when they are used as flash programmers.

For the compatibility of the software products used together with the above emulators with Windows 7, see the following Web page:
http://tool-support.renesas.com/autoupdate/support/eng/windows/index.html

2. Problem

If you are using any of the above emulators connected to
a Windows 7-installed PC, and the PC enters the sleep
or the hibernation mode, communications between the emulator and
the PC are broken down, and the emulator cannot operate.

3. Workaround

Configure power options of Windows 7 so that your PC can enter neither
sleep nor hibernation.
