## A Note on Using High-performance Embedded Workshop --With Adding Files to a Project--

Please take note of the following problem in using High-performance Embedded Workshop:

- With adding files to a project

High-performance Embedded Workshop is bundled with the compilers and other software products that it manages.

---

### 1. Product and Versions Concerned

All the versions of High-performance Embedded Workshop up to V.4.04.01

### 2. Description

When any files are selected out of a list in the Add files to project 'project name' dialog box to add them to a project, it cannot be added with an error message being displayed if the file name contains more than 50 characters.

To open the Add files to project 'project name' dialog box

- On the Project menu, select Add Files.

For further information, see the user's manual of High-performance Embedded Workshop.

### 3. Workaround

When the name of a file contains more than 50 characters, add the file to a project as follows:

- Drag and drop the file to be added from Windows(R) Explorer onto the icon of the project in the Workspace window of High-performance Embedded Workshop.

## 4. Schedule of Fixing the Problem

We plan to fix this problem in the next release of the product.
