## R7F0C809

4-Digit 8-Segment LED Display with Key Read

## Introduction

This application note describes a method of using the high-current pin to control 4-digit 8-segment LED with reading the key code by A/D converter of R7F0C809 microcontroller.

## Target Device

- R7F0C809

When applying the sample program covered in this application note to another microcomputer with the same SFR (Special Function Register), modify the program according to the specifications for the target microcomputer and conduct an extensive evaluation of the modified program.

## 1. Specifications

This application note introduces the way of controlling 4-digit 8-segment LED display with Timer Array Unit (TAU) and high current pin according to the input of A/D key board. The scanning period of LED depends on the interval of TAU0 Channel 0 . Timing of 1 second is achieved with TAU Channel 1.

Table 1.1 lists the peripheral functions and their applications.

Table 1.1 Peripheral Functions and Their Applications

| Peripheral Function |  |
| :--- | :--- |
| P02~P05 | Control the COM pins of LED |
| P06~P07, P10~P15 | Control the SEG pins of LED |
| P16 | Set the initial status of A/D keyboard input |
| TAU0 Chanel 0 | Control the scanning period of LED |
| TAU0 Chanel 1 | Control the interval of updating LED |
| A/D converter | Identify the key pressed by sampling the voltage on A/D input pin |

## 2. Operating Conditions

The sample code contained in this application note has been tested under the conditions below.

Table 2.1 Operation Confirmation Conditions

| Item | Contents |
| :--- | :--- |
| MCU used | R7F0C809 |
| Operating frequency | •High-speed on-chip oscillator clock (fнoco): 20 MHz (typ.) <br> $\bullet$ CPU/peripheral hardware clock (fčk): 20 MHz |
| Operating voltage | 5.0 V (operation enabled from 4.5 to 5.5 V) <br> SPOR detection operation (Vspor):rising edge 4.28V(typ.), falling edge <br> 4.00 V (min.) |
| Integrated development <br> environment | Renesas Electronics Corporation <br> CubeSuite+ V2.01.00 |
| C compiler | Renesas Electronics Corporation <br> CA78K0R V1.60 |

## 3. Related Application Note

The application notes that are related to this application note are listed below for reference.

- R7F0C809 6-Digit 8-Segment LED Display (R01AN2005E) Application Note
- R7F0C809Key Matrix Input and 4-Digit 8-Segment LED Display (R01AN2006E) Application Note

## 4. Description of the Hardware

### 4.1 Hardware Configuration Example

Figure 4.1 shows an example of hardware configuration that is used for this application note.

Figure 4.1 Hardware Configuration

Notes: 1. The purpose of this circuit is only to provide the connection outline and the circuit is simplified accordingly. When designing and implementing an actual circuit, provide proper pin treatment and make sure that the hardware's electrical specifications are met (connect the input-only ports separately to VdD or Vss via a resistor).
2. VDD must be held at not lower than the reset release voltage ( $\mathrm{V}_{\text {SPor }}$ ) that is specified as SPOR.

Table 4.1 lists the keys used and LED display contents.

Table 4.1 Keys Used and LED Display Contents

| Key Name | Function | Description |
| :--- | :--- | :--- |
| K1 | Set the tens place <br> of minutes | The counting time can be set by K1~K4 and displayed on LED. <br> Tens places of minutes and seconds can be set from 0 to 5. <br> Units places of minutes and seconds can be set from 0 to 9. <br> Attention: Setting of K1 to K4 is ineffective when counting is started or <br> paused. |
| K2 | Set the units place <br> of minutes | Set the tens place <br> of seconds |
| K3 | Set the units place <br> of seconds | Start function key |
| K4 | After counting value is set, once start key is pressed, the down-counting <br> with 1 second as unit is started until the counting value is down to 0. <br> After the counting is finished, all the LEDs are turned off. |  |
| K15 | Pause / Stop <br> function key | After down-counting is started, the first pressing of K16 pauses the <br> present counting operation and the counting value is maintained. A <br> second pressing of K16 stops the current counting and the counting <br> value is cleared. All the LEDs are turned off to indicate the stop of <br> counting. |
| Other Keys | Reserved | Please append functions according to application requirements. |

### 4.2 List of Pins to be Used

Table 4.2 lists the pins to be used and their function.

Table 4.2 Pins to be Used and Their Function

| Pin Name | I/O | Description |
| :--- | :--- | :--- |
| P02 | Output | Control COM_1 |
| P03 | Output | Control COM_2 |
| P04 | Output | Control COM_3 |
| P05 | Output | Control COM_4 |
| P06 | Output | Control SEG_dp |
| P07 | Output | Control SEG_g |
| P10 | Output | Control SEG_f |
| P11 | Output | Control SEG_e |
| P12 | Output | Control SEG_d |
| P13 | Output | Control SEG_c |
| P14 | Output | Control SEG_b |
| P15 | Output | Control SEG_a |
| P16/ANI7 | Analog Input | Input pin of scanning key |

## 5. Description of the Software

### 5.1 Operation Overview

This application introduces the way of using P-ch/N-ch open-drain high current port to control LED and identifying the external input key with A/D converter.

### 5.1.1 Display control for 4-Digit 8-Segment LED

4-Digit 8-segment LED is connected in common anode way. The content displayed depends on the key status. All the control ports of LED are accessed by I/O port of MCU (in high current mode).

Display mode of LED:
Dynamic scanning: Frequency of cyclical scanning the 4-digit LED is 60 Hz .
The period of scanning is: $1 / 60 \mathrm{~Hz} / 4 \approx 4.17 \mathrm{~ms}$.

### 5.1.2 Sampling control for A/D key input

Key code is identified by sampling voltage value divided by external resistors using A/D converter.

Figure 5.1 shows an example of A/D key input hardware configuration.

Figure 5.1 A/D Key Input Hardware Configuration

The way of A/D key sampling is shown below.
(1)Multiple pins are connected to the $\mathrm{A} / \mathrm{D}$ input port. The key pressed is reflected in the voltage obtained by external divider resistors. The key code of each key is mapped to the unique voltage range on $\mathrm{A} / \mathrm{D}$ input port.
(2)The interval of $\mathrm{A} / \mathrm{D}$ sampling (A/D conversion of the analog input pin - ANIx) is the same as that of LED scanning that is 4.17 ms .
(3)Sample the voltage of analog input pin 6 times, get the average value after removing the maximum and minimum data. If the average values are equal twice, the key input is confirmed. As a result, $4.17 \times 6 \times 2 \approx 50 \mathrm{~ms}$ is necessary for confirming the key pressed.

Table 5.1 lists the values and key codes for key determination.
Table 5.1 Values and Key Codes for Key Determination

| Key pressed | None | K16 | K15 | K14 | K13 | K12 | K11 | K10 | K9 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Theoretical value of A/D sample <br> voltage | OV | 0.29 V | 0.59 V | 0.88 V | 1.41 V | 1.47 V | 1.76 V | 2.06 V | 2.35 V |
| Theoretical value of A/D converter <br> result | 0 | 60 | 120 | 181 | 241 | 301 | 361 | 421 | 481 |
| Area of A/D value corresponding to <br> key | $0 \sim$ <br> 29 | $30 \sim$ <br> 89 | $90 \sim$ <br> 149 | $150 \sim$ <br> 210 | $211 \sim$ <br> 270 | $271 \sim$ <br> 330 | $331 \sim$ <br> 390 | $391 \sim$ <br> 450 | $451 \sim$ <br> 510 |

| Key code | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | - |

Note: $\mathrm{V}_{\mathrm{DD}}=5 \mathrm{~V}$

### 5.1.3 Timing

Figure 5.2 shows the timing of LED display and A/D key input sample.

Figure 5.2 LED Display and A/D Key Input Sample

### 5.1.4 Operation Outline

(1) Initialize PORT

- Configure the ports for LED display as digital I/O ports and that for $\mathrm{A} / \mathrm{D}$ key input sample as analog port.
- Configure the ports for SEG end of LED as N-ch open-drain and those for COM end as P-ch open-drain.
- Configure the initial status of LED as none display mode in which both SEG and COM ends are set to invalid level.
- Configure the A/D key input port as input pin.
(2) Initialize TAU
- Configure the TAU in interval timer mode.
- Configure the interval of TAU0 channel 0 is 4.7 ms .
- Configure the interval of TAU0 channel 1 is 100 ms .
- Enable the interrupt of channel 1 (INTTM01).
(3) Initialize A/D converter
- Configure conversion clock of $\mathrm{A} / \mathrm{D}$ as $\mathrm{fcle}^{2} / 8$.
- Configure the resolution of $\mathrm{A} / \mathrm{D}$ conversion as 10-bit.
- Configure the target of A/D conversion as ANI7.
(4) Initialize variables.
- Initialize the flag of 1 second being up.
- Initialize the operating status flag of LED.
(5) Start the counting of TAU0 channel 0 .
(6) Wait for the interrupt flag of TAU0 channel 0 (TMIF00) to become 1.
(7) Clear the interrupt flag after interrupt flag of TAU0 channel 0 is set to 1 .
(8) Process the LED display.
- Update the LED display content according to the array of LED display.
- If the flag of 1 second timing up is 1 , then update the array of LED display.
(9) Process the key sample.
- Obtain the current $A / D$ value. After 6 times of sampling, calculate the average value of $A / D$ conversion.
- Confirm the current key code.
- Key process according to the key code.
(10)Return to step (6).

### 5.2 List of Option Byte Settings

Table 5.2 summarizes the settings of the option bytes.
Table 5.2 Option Byte Settings

| Address | Value | Description |
| :--- | :--- | :--- |
| 000 C 0 H | 11101110 B | Watchdog timer operation is stopped. <br> (Count is stopped after reset.) |
| 000 C 1 H | 11110011 B | SPOR detection voltage: <br> rising edge 4.28V(typ.), falling edge 4.00V(min.) <br> P125/KR1/RESET pin: RESET input |
| 000 C 2 H | 11111001 B | HOCO: 20 MHz |
| 000 C 3 H | 10000101 B | On-chip debugging is enabled. |

### 5.3 List of Constants

Table 5.3 lists the constants that are used in this sample code.

Table 5.3 Constants that are Used in this Sample Code

| Constant | Value | Description |
| :---: | :---: | :---: |
| SEG A | 0xdf | Set low level to SEG_a |
| SEG B | 0xef | Set low level to SEG_b |
| SEG_C | 0xf7 | Set low level to SEG_c |
| SEG_D | 0xfb | Set low level to SEG_d |
| SEG_E | 0xfd | Set low level to SEG_e |
| SEG_F | 0xfe | Set low level to SEG_f |
| SEG_G | 0x7f | Set low level to SEG_g |
| SEG_DOT | Oxbf | Set low level to SEG_dp |
| $\begin{aligned} & \text { uint16_t } \\ & \text { ad_key_data[17] } \end{aligned}$ | $\begin{aligned} & 992,932,872,812,752,692,632,571,511,451,391,331, \\ & 271,211,150,90,30 \end{aligned}$ | The boundary value of voltage on ANI7 pin when one of K16~K1 is pressed or none of them is pressed |
| uint8_t <br> c_SEG_DataP0[10] | 0xff, 0xff, 0xff\&SEG_G, 0xff\&SEG_G, 0xff\&SEG_G, 0xff\&SEG_G, 0xff\&SEG_G, 0xff, 0xff\&SEG_G, 0xff\&SEG_G | The value of P07~P06 when ' 0 ' to ' 9 ' is displayed on LED |
| $\begin{aligned} & \text { uint8_t } \\ & \text { c_SEG_DataP1[10] } \end{aligned}$ | 0xff\&SEG_A\&SEG_B\&SEG_C\&SEG_D\&SEG_E\&SEG_F, 0xff\&SEG_B\&SEG_C, <br> 0xff\&SEG_A\&SEG_B\&SEG_D\&SEG_E, <br> 0xff\&SEG_A\&SEG_B\&SEG_C\&SEG_D, <br> 0xff\&SEG_B\&SEG_C\&SEG_F, <br> 0xff\&SEG_A\&SEG_C\&SEG_D\&SEG_F, 0xff\&SEG_A\&SEG_C\&SEG_D\&SEG_E\&SEG_F, 0xff\&SEG_A\&SEG_B\&SEG_C\&SEG_F, 0xff\&SEG_A\&SEG_B\&SEG_C\&SEG_D\&SEG_E\&SEG_F, 0xff\&SEG_A\&SEG_B\&SEG_C\&SEG_D\&SEG_F | The value of P15~P10 when ' 0 ' to ' 9 ' is displayed on LED |

### 5.4 List of Variables

Table 5.4 lists the variables that are used in this sample code.

Table 5.4 Variables that are Used in this Sample Code

| Type | Variable | Description | Function Used |
| :--- | :--- | :--- | :--- |
| uint8_t | g_COM_Data[4] | Control data for COM end of LED | Minute10_Add() <br> Minute1_Add() <br> Second10_Add() <br> Second1_Add() <br> Start() <br> Pause_Stop() |
| uint16_t | g_SEG_Data[4] | Control data for SEG end of <br> LED(0~9 is allowed to be set) |  |
|  |  |  | LED_Display() <br> LED_Refresh() |
| uint8_t | g_AD_Key_Code | Present key code input | AD_Key_In() <br> Key_Process() |
| uint8_t | g_AD_Fix | Present A/D value calculated | AD_In() <br> AD_Key_In() |
| uint16_t | g_Flag_AD_Fix | Complete flag of A/D value <br> calculation | TAU0_Channel1_Interrupt() <br> Pause_Stop() |
| uint8_t | g_Flag1s | Flag of 1 second timing up | AD_Key_In() |
| boolean |  | Variable_Init() <br> LED_Handle() <br> TAU0_Channel1_Interrupt() |  |
| boolean | The union of LED display status | Variable_Init() <br> Key_Process() |  |
| st_sp_flag_union | g_StSpFlag | Start() <br> Pause_Stop() <br> LED_Refresh() |  |
| static uint8_t | s_COM | Count value of LED display | LED_Display() |

### 5.5 List of Functions

Table 5.5 lists the functions that are used in this sample code.

Table 5.5 Functions that are Used in This Sample Code

| Function |  |
| :--- | :--- |
| main() | Main processing |
| System_Init() | System initialization |
| PORT_Init() | Port initialization |
| TAU_Init() | TAU initialization |
| AD_Init() | A/D initialization |
| TAU0_Channel1_Interrupt() | Interrupt process of TAU0 channel 1 |
| LED_Handle() | Handle LED |
| LED_Display() | Handle LED display |
| LED_Refresh() | Handle update of LED display array |
| Key_Handle() | Key handle |
| AD_In() | Start A/D conversion, calculate A/D value |
| AD_Key_In() | Identify the input key code |
| Key_Process() | Key process |
| Minute10_Add() | Tens place of minutes setting |
| Minute1_Add() | Units place of minutes setting |
| Second10_Add() | Tens place of seconds setting |
| Second1_Add() | Units place of seconds setting |
| Start() | Process of Start key |
| Pause_Stop() | Process of Pause/Stop key |

### 5.6 Function Specifications

This section describes the specifications for the functions that are used in the sample code.
[Function Name] main

| Synopsis | Main processing |
| :--- | :--- |
| Header | userdefine.h <br> tau.h <br> ad.h <br> led.h |
|  | key.h |
| Declaration | void main(void) |
| Explanation | Perform main processing. |
| Arguments | None |
| Return value | None |
| Remarks | None |

[Function Name] System_Init

| Synopsis <br> Header | System initialization <br> userdefine.h <br> tau.h |
| :--- | :--- |
|  | ad.h |
| led.h |  |
|  | key.h |
| Declaration | void System_Init(void) |
| Explanation | Perform initialization to PORT, TAU and A/D converter, enable interrupt. |
| Arguments | None |
| Return value | None |
| Remarks | None |

[Function Name] PORT_Init

| Synopsis | Port initialization <br> Header <br> userdefine.h <br> tau.h <br> ad.h <br> led.h |
| :--- | :--- |
|  | key.h |
|  | void Port_Init(void) |
| Declaration | Perform port initialization. |
| Explanation | None |
| Arguments | None |
| Return value | None |

[Function Name] TAU_Init

| Synopsis | TAU initialization |
| :--- | :--- |
| Header | userdefine.h <br> tau.h |
| Declaration | void TAU_Init(void) |
| Explanation | Perform TAU initialization. |
| Arguments | None |
| Return value | None |
| Remarks | None |

| [Function Name] AD_Init |  |
| :--- | :--- |
| Synopsis | A/D initialization |
| Header | userdefine.h |
|  | ad.h |
| Declaration | void AD_Init(void) |
| Explanation | Perform A/D initialization. |
| Arguments | None |
| Return value | None |
| Remarks | None |

[Function Name] TAU0_Channel1_Interrupt

| Synopsis <br> Header | Interrupt process of TAUO channel 1 <br> userdefine.h <br> tau.h |
| :--- | :--- |
| Declaration interrupt void TAU0_Channel1_Interrupt(void) <br> Explanation Interrupt occurs once per 100ms. The counter of 100ms is increased by 1 every time <br> interrupt occurs and when the counter equals to 10, the flag of 1 second is set to 1. <br> Arguments None <br> Return value None <br> Remarks None |  |

[Function Name] LED_Handle

| Synopsis | Handle LED |
| :--- | :--- |
| Header | userdefine.h |
|  | led.h |
| Declaration | void LED_Handle(void) |
| Explanation | Call the LED_Display function and the LED_Refresh function. |
| Arguments | None |
| Return value | None |
| Remarks | None |

| [Function Name] LED_Display |  |
| :--- | :--- |
| Synopsis | Handle LED display |
| Header | userdefine.h |
|  | led.h |
| Declaration | void LED_Display(void) |
| Explanation | Update the display of 1-digit according to the current digit bit value. |
| Arguments | None |
| Return value | None |
| Remarks | None |

| [Function Name] LED_Refresh |  |
| :--- | :--- |
| Synopsis | Handle update of LED display array |
| Header | userdefine.h <br> led.h |
| Declaration void LED_Refresh(void) <br> Explanation In down-counting mode, update the display array every second. <br> Arguments None <br> Return value None <br> Remarks None |  |

[Function Name] Key_Handle

| Synopsis | Key handle <br> userdefine.h <br> Header |
| :--- | :--- |
| key.h |  |$\quad$| Declaration | void Key_Handle(void) |
| :--- | :--- |
| Explanation | Start A/D conversion. Then confirm the conversion result, and process the input key. |
| Arguments | None |
| Return value | None |
| Remarks | None |

[Function Name] AD_In

| Synopsis | Start A/D conversion, calculate A/D value |
| :---: | :---: |
| Header | userdefine.h |
|  | key.h |
| Declaration | void AD_In(void) |
| Explanation | Start A/D conversion and obtain the present A/D value by averaging the 4 samples with removing the maximum and minimum value. |
| Arguments | None |
| Return value | None |
| Remarks | None |

| [Function Name] AD_Key_In |  |
| :--- | :--- |
| Synopsis | Identify the input key code <br> Header <br> userdefine.h <br> key.h |
| Declaration void $A D \_K e y \_I n(v o i d) ~$ <br> Explanation Identify the key pressed according to the present A/D value. If present pressed key is <br>  the same as last pressed key, this key is identified. <br> Arguments None <br> Return value None <br> Remarks None |  |

[Function Name] Key_Process

| Synopsis | Key process <br> userdefine.h <br> Header |
| :--- | :--- |
| key.h |  |$\quad$| Declaration | void Key_Process(void) |
| :--- | :--- |
| Explanation | If key input changes, process according to the new input key. |
| Arguments | None |
| Return value | None |
| Remarks | None |

[Function Name] Minute10_Add

| Synopsis | Tens place of minutes setting <br> userdefine.h <br> Header |
| :--- | :--- |
|  | key.h |

[Function Name] Minute1_Add

| Synopsis | Units place of minutes setting <br> userdefine.h <br> Header |
| :--- | :--- |
| key.h |  |
| Declaration void Minute1_Add(void) <br> Arguments Set the units place of minutes. 0~9 is available. <br> Return value None <br> Remarks None | None |

[Function Name] Second10_Add

| Synopsis | Tens place of seconds setting <br> userdefine.h <br> Header |
| :--- | :--- |
| key.h |  |
| Declaration void Second10_Add(void) <br> Arguments Set the tens place of seconds. $0 \sim 5$ is available. <br> Return value None <br> Remarks None | None |

[Function Name] Second1_Add

| Synopsis | Units place of seconds setting. <br> userdefine.h <br> Header |
| :--- | :--- |
| key.h |  |
| Declaration | void Second1_Add(void) <br> Explanation |
| Set the units place of seconds. $0 \sim 9$ is available. <br> Return value | None |
| Remarks | None |

[Function Name] Start

| Synopsis | Process of Start key <br> Header <br> userdefine.h <br> key.h |
| :--- | :--- |
| Declaration | void Start(void) |
| Explanation | In down-counting mode, start the down counting by 1 second. |
| Arguments | None |
| Return value | None |
| Remarks | None |

[Function Name] Pause_Stop

| Synopsis | Process of Pause/Stop key <br> userdefine.h <br> Header |
| :--- | :--- |
| key.h |  |

## Revision History

|  |  | Description |  |
| :--- | :--- | :--- | :--- |
| Rev. | Date | Page | Summary |
| 1.00 | Sep. 30, 2014 | 51 | First edition issued |

## General Precautions in the Handling of MPU/MCU Products

The following usage notes are applicable to all MPU/MCU products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

1. Handling of Unused Pins

Handle unused pins in accordance with the directions given under Handling of Unused Pins in the manual.

- The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.

2. Processing at Power-on

The state of the product is undefined at the moment when power is supplied.

- The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied.
In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.

3. Prohibition of Access to Reserved Addresses

Access to reserved addresses is prohibited.

- The reserved addresses are provided for the possible future expansion of functions. Do not access these addresses; the correct operation of LSI is not guaranteed if they are accessed.

4. Clock Signals

After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.

- When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.

5. Differences between Products

Before changing from one product to another, i.e. to a product with a different part number, confirm that the change will not lead to problems.

- The characteristics of an MPU or MCU in the same group but having a different part number may differ in terms of the internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
3. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics product.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; and safety equipment etc.
Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (nuclear reactor control systems, military equipment etc.). You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application for which it is not intended. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.
6. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges
7. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You should not use Renesas Electronics products or technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. When exporting the Renesas Electronics products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, who distributes, disposes of, or otherwise places the product with a third party, to notify such third party in advance of the contents and conditions set forth in this document, Renesas Electronics assumes no responsibility for any losses incurred by you or third parties as a result of unauthorized use of Renesas Electronics products.
11. This document may not be reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries
(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.
(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
