RL78/G1F

Timer Array Unit (Interval Timer) CC-RL

R01AN3872EJ0100
Rev. 1.00
June 14, 2017

Introduction

This application note describes the interval timer function of the timer array unit (TAU). This unit inverts the LED indication each time a timer interrupt occurs. Also, it changes the timer interrupt cycle time based on the number of times the switch is pressed.

Target Device

RL78/G1F

When applying the sample program covered in this application note to another microcomputer, modify the program according to the specifications for the target microcomputer and conduct an extensive evaluation of the modified program.

1. Specifications

This application note shows example settings for using timer interrupts (INTTM00) from the interval timer and interrupts (INTP1) generated on pin input edge detection. The TAU inverts the LED indication each time a timer interrupt (INTTM00) occurs. Also, this unit changes the timer interrupt (INTTM00) cycle time based on the number of times the switch (SW) is pressed.

Table 1.1 lists the peripheral functions to be used and their uses. Figure 1.1 shows the timer and its interrupt operation.

Table 1.1 Peripheral Functions to be Used and Their Uses

Peripheral Function	Use
Timer array unit (channel 0)	Time interval control for inversion of the P05 pin output (LED indication)
P05	Output port for LED indications
P52/INTP1	Switch input for changing the timer interrupt (INTTM00) cycle time

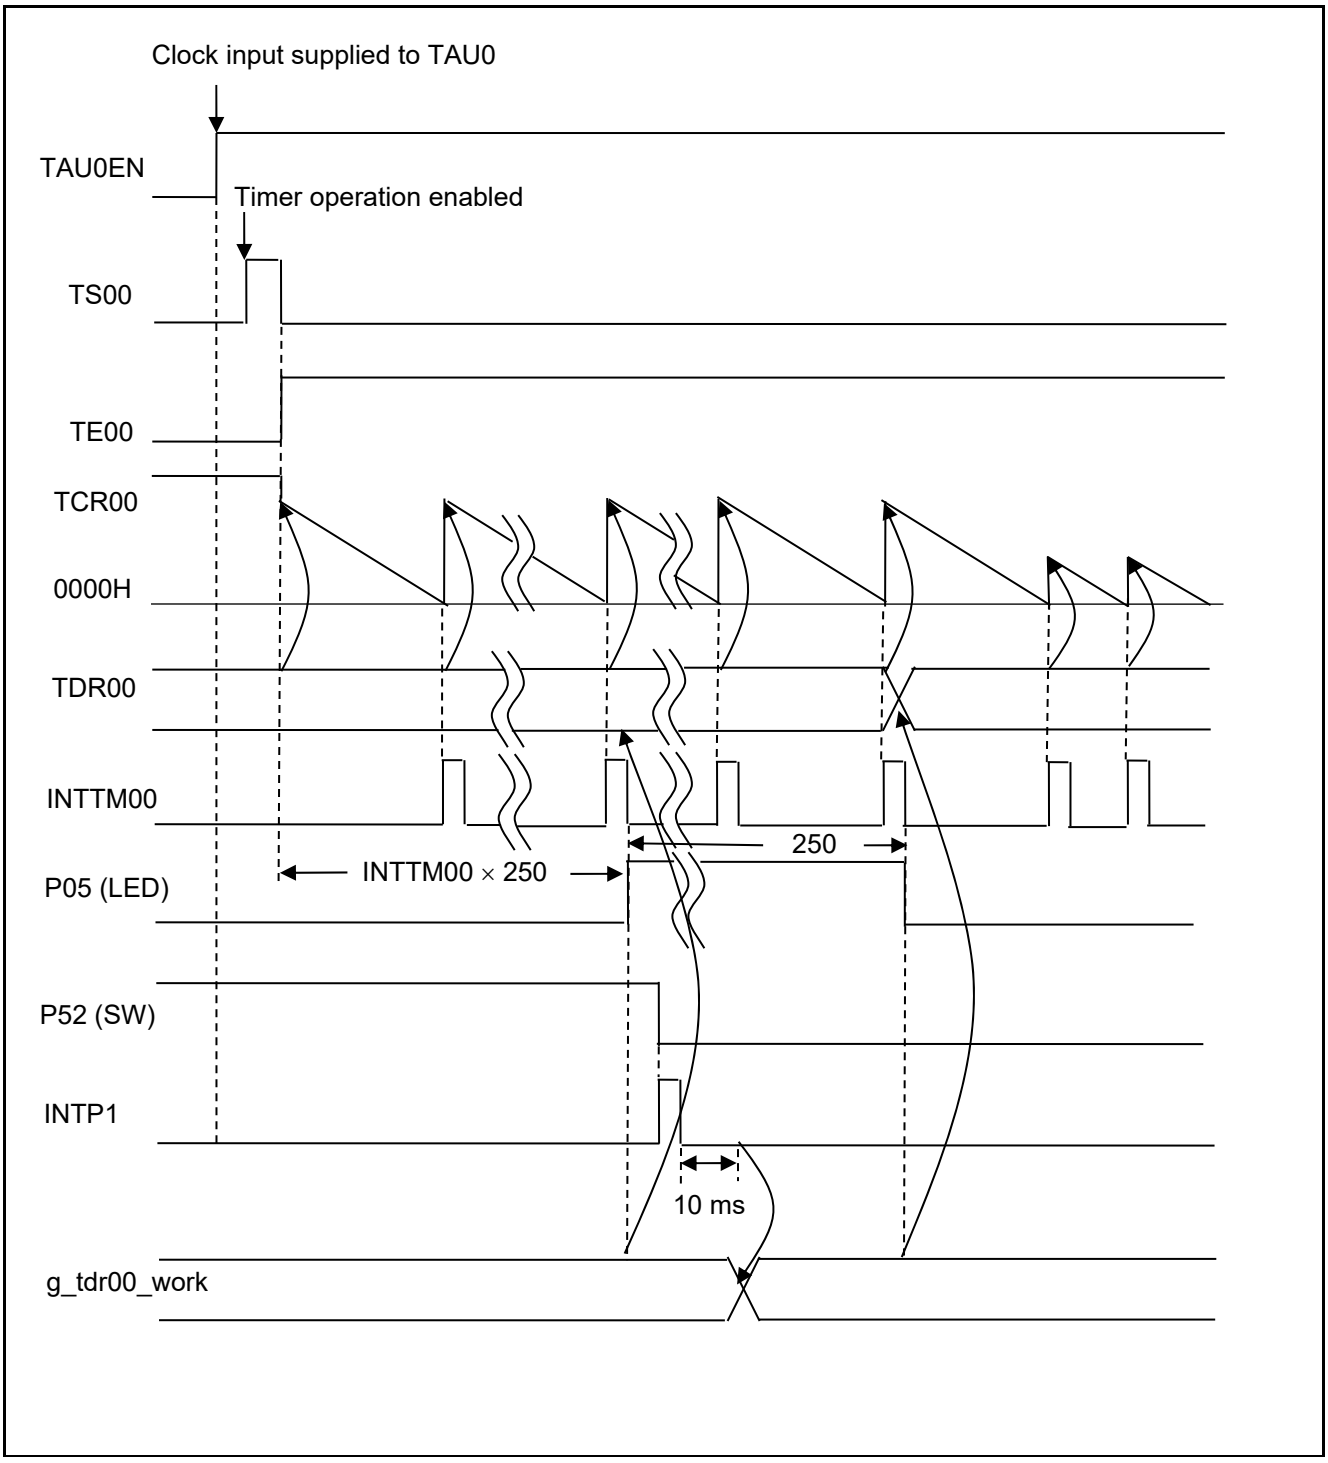

Figure 1.1 Overview of Timer Operation and Interrupts

2. Operation Check Conditions

The sample code contained in this application note has been checked under the conditions listed in the table below.

Table 2.1 Operation Check Conditions

Item	Description
Microcontroller used	RL78/G1F (R5F11BLE)
Operating frequency	• High-speed on-chip oscillator (HOCO) clock: 32 MHz • CPU/peripheral hardware clock: 32 MHz
Operating voltage	5.0V (can run on a voltage range of 2.9 V to 5.5 V.) LVD operation (V_{LVD}): Reset mode 2.81 V (2.76 V to 2.87 V)
Integrated development environment (CS+)	CS+ for CC V4.01.00 from Renesas Electronics Corp.
C compiler (CS+)	CC-RL V1.03.00 from Renesas Electronics Corp.
Integrated development environment (e^2 studio)	e^2 studio V5.2.0.020 from Renesas Electronics Corp.
C compiler (e^2 studio)	CC-RL V1.03.00 from Renesas Electronics Corp.

4. Description of the Hardware

4.1 Hardware Configuration Example

Figure 4.1 shows an example of hardware configuration that is used for this application note.

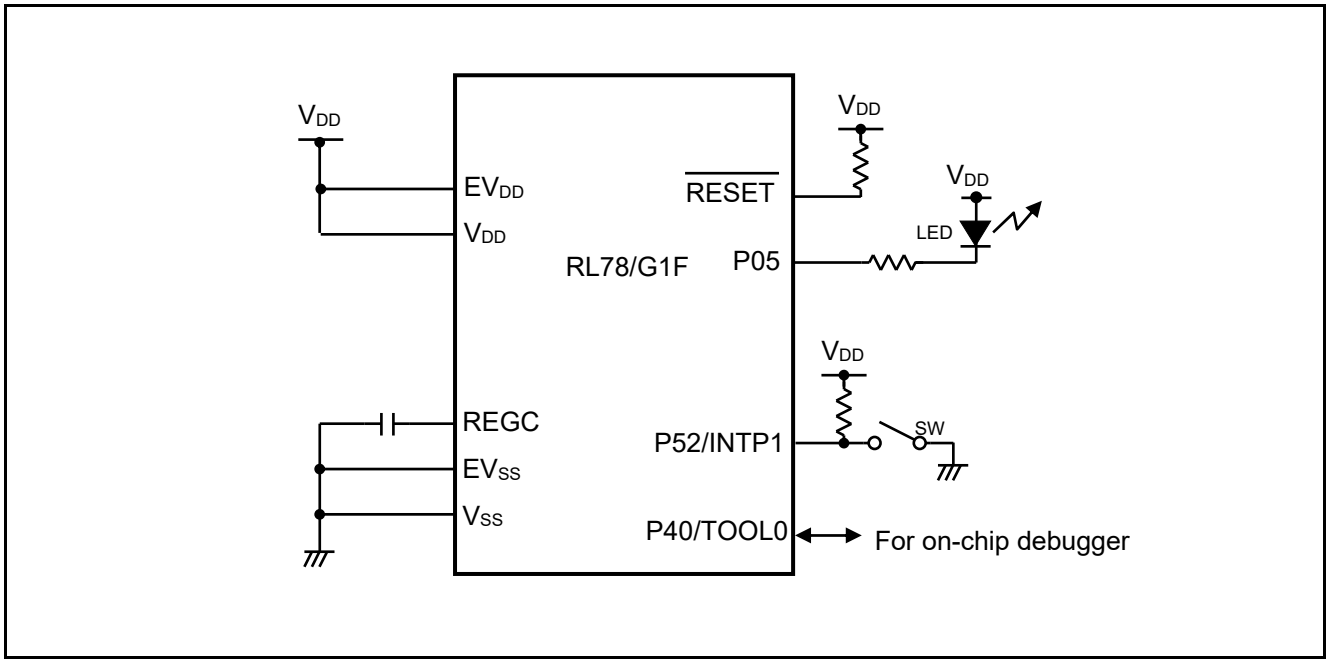

Figure 4.1 Hardware Configuration

Cautions: 1. The purpose of this circuit is only to provide the connection outline and the circuit is simplified accordingly. When designing and implementing an actual circuit, provide proper pin treatment and make sure that the hardware's electrical specifications are met (connect the input-only ports separately to V_{DD} or V_{SS} via a resistor).

2. Connect any pins whose name begins with EV_{SS} to V_{SS} and any pins whose name begins with EV_{DD} to V_{DD}, respectively.
3. V_{DD} must be held at not lower than the reset release voltage (V_{LVD}) that is specified as LVD.

4.2 List of Pins to be Used

Table 4.1 lists the pins to be used and their functions.

Table 4.1 Pins to be Used and Their Functions

Pin Name	I/O	Description
P05	Output	Output port for LED indications
P52/INTP1	Input	Switch (SW) input pin (external interrupt request input pin)

5. Description of the Software

5.1 Operation Outline

This application note describes how to set up the interval timer function of TAU0.

This setup is followed by operation for counting the number of timer interrupts (INTTM00) generated by the interval timer. Each time the count reaches 250, the LED indication is inverted. The timer interrupt (INTTM00) cycle time is changed according to the number of times the switch is pressed. The LED on/off cycle time is changed as follows.

500 ms → 250 ms → 125 ms → 62.5 ms → 500 ms → …

(1) Initialize the TAU.
- Use the interval timer mode as the timer operation mode.
- Initialize timer data register 00 (TDR00) to 2 ms.
- Set the timer output enable register to disable operation.
- Use timer interrupts (INTTM00) from timer channel 0.

(2) Initialize the external edge detection interrupt.
- Select a falling edge as the valid edge for INTP1.
- Use INTP1 interrupts.

(3) Execute a HALT instruction to wait for timer interrupts (INTTM00).

(4) After the HALT mode is cancelled by a timer interrupt (INTTM00), the number of INTTM00 interrupts generated is counted.

(5) When the timer interrupt count reaches 250, the LED indication is inverted. The value (g_tdr00_work) in RAM for the timer data register is set in the timer data register (TDR00).

(6) INTP1 interrupt processing changes the switch input count (INTP1 interrupt count) and g_tdr00_work value.

5.2 List of Option Byte Settings

Table 5.1 summarizes the settings of the option bytes.

Table 5.1 Option Byte Settings

Address	Value	Description
000C0H/010C0H	01101110B	Disables the watchdog timer. (Stops counting after the release from the reset state.)
000C1H/010C1H	01111111B	LVD reset mode, 2.81 V (2.76 V to 2.87 V)
000C2H/010C2H	11101000B	HS mode, HOCO: 32 MHz
000C3H/010C3H	10000100B	Enables the on-chip debugger.

5.3 List of Constants

Table 5.2 lists the constants that are used in this sample program.

Table 5.2 Constants for the Sample Program

Constant	Setting	Description
_02_INTP1_EDGE_FALLING_BOTH	02h	Selects a falling edge as the valid edge of INTP1.
g_tdr00_data[]	(64000-1) (32000-1) (16000-1) (8000-1)}	TDR00 settings by number of times the switch is pressed
g_10ms_count[]	(5+1) (10+1) (20+1) (40+1)	10 ms timer count values by number of times the switch is pressed

5.4 List of Variables

Table 5.3 lists the global variable that is used by this sample program.

Table 5.3 Global Variables for the Sample Program

Type	Variable Name	Contents	Function Used
__saddr uint8_t	g_sw_counter	Switch press count	r_intc1_interrupt() main() r_invert_led()
__saddr uint16_t	g_tdr00_work	Value which is set in TDR00 each time the timer interrupt count reaches 250.	r_intc1_interrupt() main() r_invert_led()
__saddr uint8_t	g_inttm00counter	The number of timer interrupt generation	main() r_invert_led()

5.5 List of Functions

Table 5.4 lists the functions that are used by this sample program.

Table 5.4 Functions

Function Name	Outline
R_TAU0_Channel0_Start	Starts operation of TAU0 channel 0.
r_tau0_channel0_interrupt	Processes timer interrupts on TAU0 channel 0.
r_invert_led()	Counts the number of INTTM00 interrupts generated. Inverts the LED indication each time the interrupt count reaches 250.
R_INTC1_Start	Enables INTP1 interrupts.
r_intc1_interrupt	Processes INTP1 interrupts.

5.6 Function Specifications

This section describes the specifications for the functions that are used in the sample code.

[Function Name] R_TAU0_Channel0_Start	
Synopsis	TAU0 channel 0 operation start
Header	r_cg_macrodriver.h r_cg_tau.h r_cg_userdefine.h
Declaration	void R_TAU0_Channel0_Start(void)
Explanation	This function unmasks TAU0 channel 0 interrupts and starts count operation.
Arguments	None
Return value	None
Remarks	None

[Function Name] r_tau0_channel0_interrupt	
Synopsis	TAU0 channel 0 timer interrupt processing
Header	r_cg_macrodriver.h r_cg_tau.h r_cg_userdefine.h
Declaration	static void __near r_tau0_channel0_interrupt(void)
Explanation	This function calls the function which will invert the LED indication.
Arguments	None
Return value	None
Remarks	None

[Function Name] r_invert_led	
Synopsis	LED indication inversion processing
Header	r_cg_macrodriver.h r_cg_cgc.h r_cg_port.h r_cg_intp.h r_cg_tau.h r_cg_userdefine.h
Declaration	void r_invert_led(void)
Explanation	This function counts 250 timer interrupts (INTTM00) and then inverts the LED indication (for port latch inversion). It also changes the TDR00 setting to the value specified with g_tdr00_work.
Arguments	None
Return value	None
Remarks	None

[Function Name] R_INTC1_Start	
Synopsis	INTP1 interrupt enable
Header	r_cg_intp.h
Declaration	void R_INTC1_Start(void)
Explanation	This function clears the interrupt request flag. It enables INTP1 interrupts and starts taking in the switch input.
Arguments	None
Return value	None
Remarks	None

[Function Name] r_intc1_interrupt	
Synopsis	INTP1 interrupt processing
Header	r_cg_macrodriver.h r_cg_intp.h r_cg_userdefine.h
Declaration	static void __near r_intc1_interrupt(void)
Explanation	This function processes INTP1 interrupts as they occur. It waits 10 ms and then scans P5.2 (SW input pin). When the switch is pressed, this function changes the g_tdr00_work value.
Arguments	None
Return value	None
Remarks	None

5.7 Flowcharts

Figure 5.1 shows the overall flow of the sample program described in this application note.

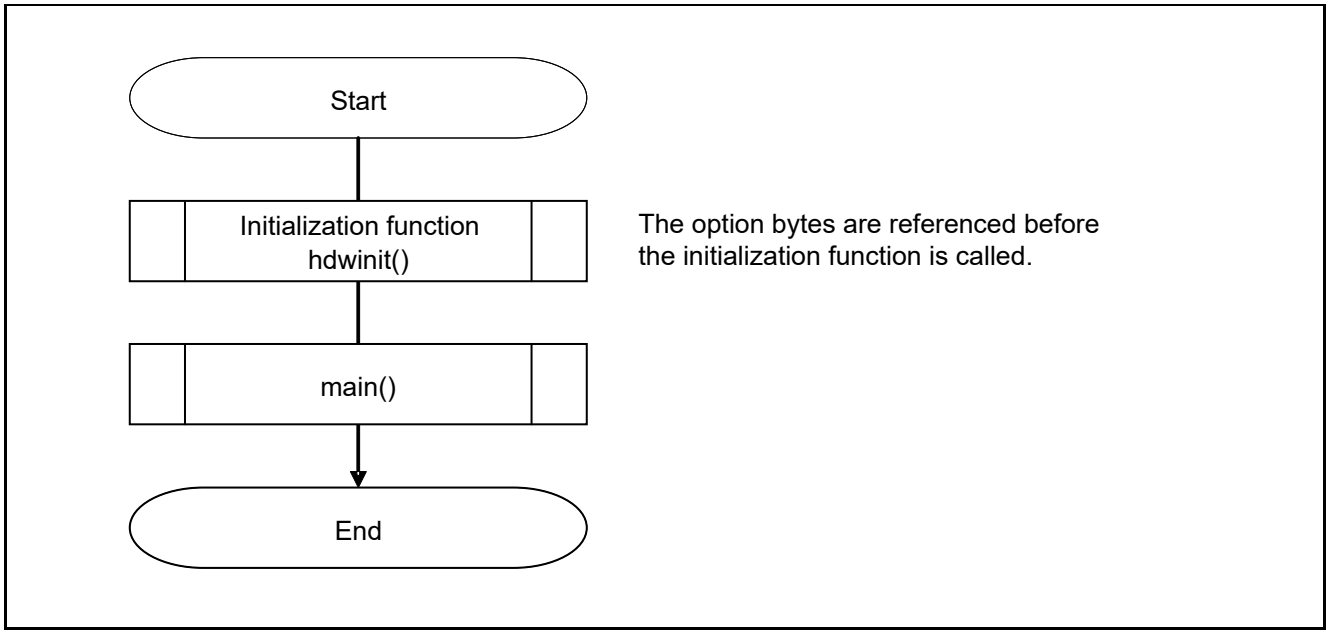

Figure 5.1 Overall Flow

Note: Startup routine is executed before and after the initialization function.

5.7.1 Initialization Function

Figure 5.2 shows the flowchart for the initialization function.

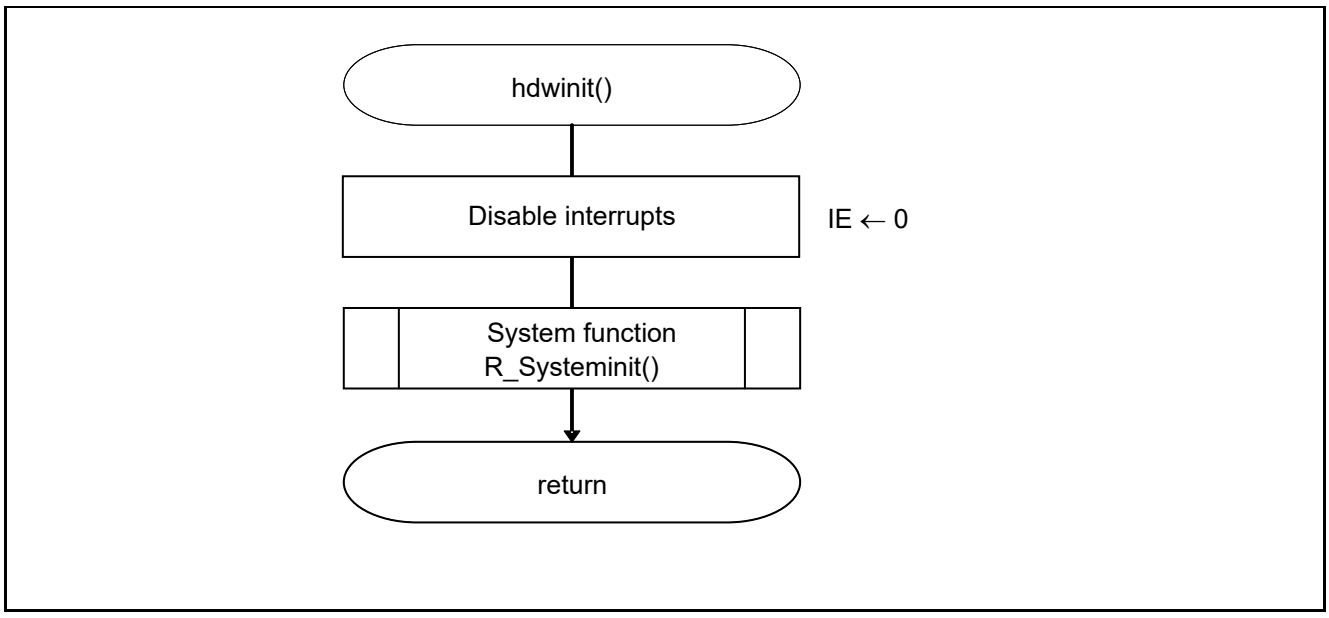

Figure 5.2 Initialization Function

5.7.2 System Function

Table 5.3 shows the flowchart for the system function.

REVISION HISTORY	RL78/G1F Timer Array Unit (Interval Timer) CC-RL

Rev.	Date	Description	
		Page	Summary
1.00	June 14, 2017	—	First edition issued

General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

1. Handling of Unused Pins

   Handle unused pins in accordance with the directions given under Handling of Unused Pins in the manual.

   ¾ The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.

2. Processing at Power-on

   The state of the product is undefined at the moment when power is supplied.

   ¾ The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied.
   In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed.
   In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.

3. Prohibition of Access to Reserved Addresses

   Access to reserved addresses is prohibited.

   ¾ The reserved addresses are provided for the possible future expansion of functions. Do not access these addresses; the correct operation of LSI is not guaranteed if they are accessed.

4. Clock Signals

   After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.

   ¾ When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.

5. Differences between Products

   Before changing from one product to another, i.e. to a product with a different part number, confirm that the change will not lead to problems.

   ¾ The characteristics of Microprocessing unit or Microcontroller unit products in the same group but having a different part number may differ in terms of the internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other disputes involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawing, chart, program, algorithm, application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics products.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

   "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.

   "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

   Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (space and undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.
6. When using the Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat radiation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions or failure or accident arising out of the use of Renesas Electronics products beyond such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please ensure to implement safety measures to guard them against the possibility of bodily injury, injury or damage caused by fire, and social damage in the event of failure or malfunction of Renesas Electronics products, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures by your own responsibility as warranty for your products/system. Because the evaluation of microcomputer software alone is very difficult and not practical, please evaluate the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please investigate applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive carefully and sufficiently and use Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall not use Renesas Electronics products or technologies for (1) any purpose relating to the development, design, manufacture, use, stockpiling, etc., of weapons of mass destruction, such as nuclear weapons, chemical weapons, or biological weapons, or missiles (including unmanned aerial vehicles (UAVs)) for delivering such weapons, (2) any purpose relating to the development, design, manufacture, or use of conventional weapons, or (3) any other purpose of disturbing international peace and security, and you shall not sell, export, lease, transfer, or release Renesas Electronics products or technologies to any third party whether directly or indirectly with knowledge or reason to know that the third party or any other party will engage in the activities described above. When exporting, selling, transferring, etc., Renesas Electronics products or technologies, you shall comply with any applicable export control laws and regulations promulgated and administered by the governments of the countries asserting jurisdiction over the parties or transactions.
10. Please acknowledge and agree that you shall bear all the losses and damages which are incurred from the misuse or violation of the terms and conditions described in this document, including this notice, and hold Renesas Electronics harmless, if such misuse or violation results from your resale or making Renesas Electronics products available any third party.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
