## Complete Signal Chain Solutions

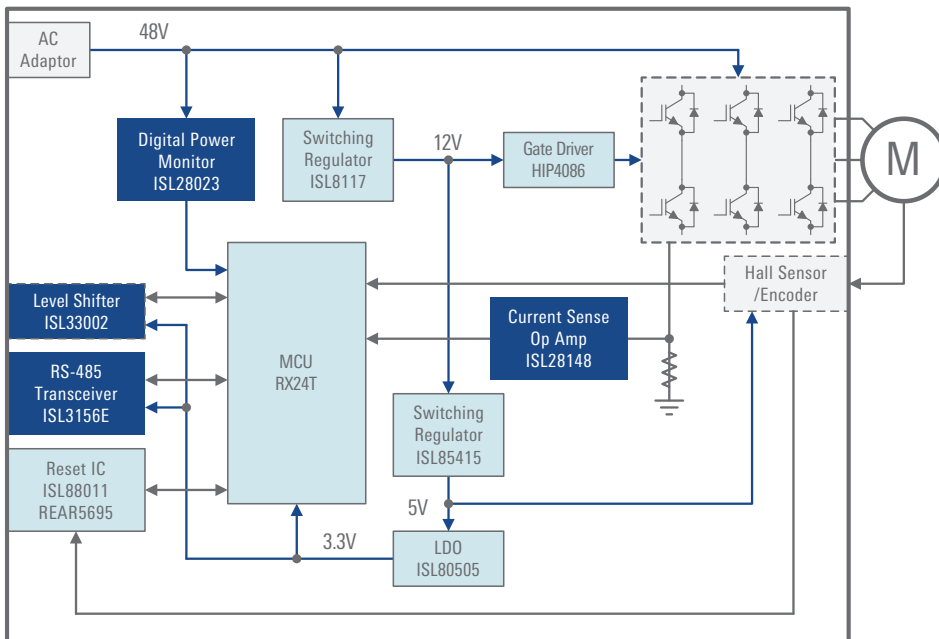

Renesas' broad precision analog portfolio provides a wide range of next-gen precision instrumentation, medical, communication, and industrial process control applications where innovation, reliability, and dependability is central to the analog designs

# WINNING COMBOS

## Renesas Industrial Signal Chain Solutions

Renesas offers dozens of Winning Combinations - expert designs showcasing Renesas' product portfolios of Embedded Processing, Analog, Power, and Connectivity. With these engineering-vetted designs, customers can take advantage of an elevated platform for their design ideas, accelerating their product development cycle and lowering their overall risk to bring their designs to market.

Featured Solution: 48V Position Control Solution

Solutions for BLDC motor applications have been increasing rapidly because of the demand for products that are smaller in size and provide high efficiency. The core of a BLDC motor design is a robust and reliable motor control circuit and a versatile MCU for a safe control algorithm. Key building blocks of a motor control circuit include a MOSFET driver, versatile MCU, voltage regulators, a cell balancer, and the battery charger. Analog Components highlighted in Blue.

### High Noise Immunity

The RAA78815x transceiver have Indutry's highest EFT Immunity and Output Drive.

### Ultra Low Supply Current

ISL3260xE Idle current is 9 times lower than that of low power transceiver ISL3172E.

### Space-Saving Small Package

Reduced package size enables smaller, more compact products.

## RS-485/RS-422 Transceivers

RS-485 is a multi-point interface bus, meaning multiple drivers and receivers can be connected to one bus. RS-485 uses differential signaling to achieve high noise immunity. Its common-mode voltage range reaches from -7V up to +12V.

RS-422 is a multi-drop interface bus, meaning only one driver but multiple receivers can connect to one bus. RS-422 also uses differential signaling. Its common-mode voltage range however is smaller and ranges from -7V up to +7V.

Note that RS-485 transceiver can be used in RS-422 networks but not vice versa. RS-422 devices cannot be used in RS-485 systems.

Renesas has a 50-year history in interface transceivers and we are still a market leader today. We have a full portfolio of RS-485/RS-422 transceivers suited to most design needs.

## Multi-Protocol Transceivers

Multi-Protocol transceivers support both RS-485 and RS-232 interface specifications. They can be used as compact interface solutions, or as interface bridges, converting signal from one standard to the other. Multi-Protocol transceivers are in single or dual port variants, where each port can be configured either as a full duplex RS-485 transceiver, or as a two-channel RS-232 transceiver.

## Unmatched Precision When Accuracy Matters

### Zero Drift Amplifiers (Low Voltage Precision Op Amps)

ISL28134, ISL28x33, ISL28x30

Chopper-stabilized amplifiers (Zero Drift Amplifiers) offer one of the best solutions, for achieving the lowest offset voltage and drift. These amplifiers achieve high DC precision through a continuously running calibration mechanism that is implemented on-chip.

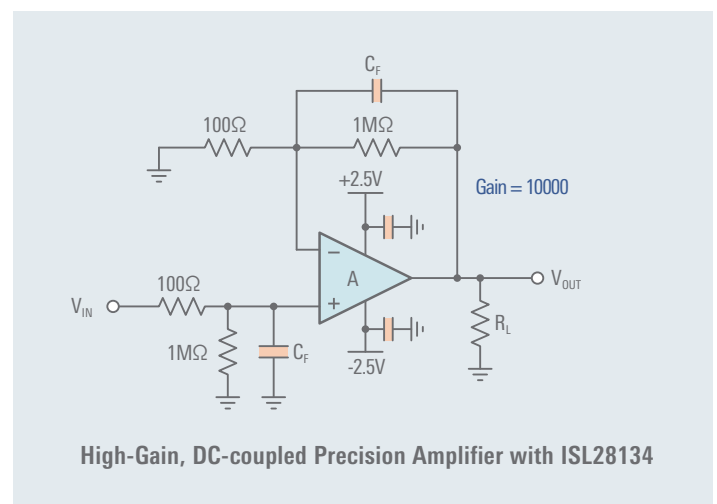

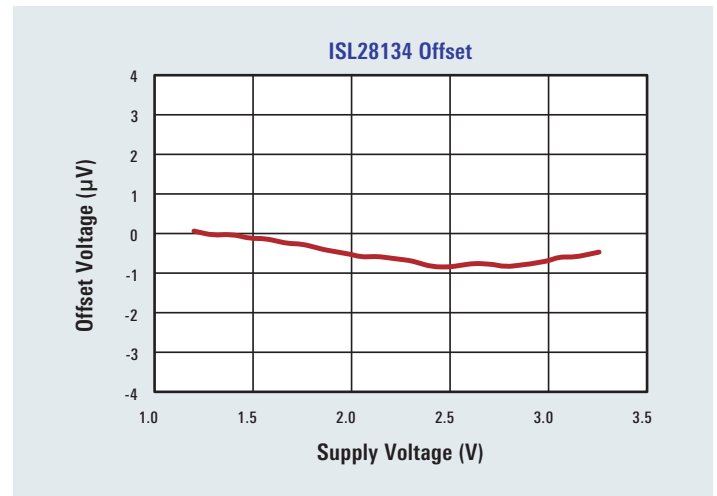

#### Key Features ISL28134

- Low offset voltage over supply range (typically  $< 0.2\mu\text{V}$ )
- Low offset voltage over temperature (typically  $< 0.5\text{nV}/^\circ\text{C}$ )
- No 1/f noise
- Low wideband noise (typically  $8\text{nV}/\sqrt{\text{Hz}}$ )
- Very high open loop gain (174dB)
- Wide Bandwidth (3.5MHz)
- Packages: Standard SOIC-8 and Tiny SOT-23-5 (2.9mm x 2.8mm)

#### Applications

High-Precision Signal Conditioners

- High-Gain Amplifiers
- Current Sensing
- Temperature Measurements
- Weight Scales
- Instrumentation
- Medical Equipment

### High-Voltage Precision Op-Amps

Our high-voltage precision amplifiers feature low noise, high slew rate, and very low offset voltage, making them the ideal choice for applications where precision and low noise are important, such as precision medical and analytical instrumentation, sensor conditioning, precision power supply controls, industrial controls, and photodiode amplifiers. All devices operate over the extended temperature range from -40°C to +125°C.

### General Purpose Op-Amps

All general-purpose op-amps feature ground sensing capability. Most op-amps, however, possess rail-to-rail capability to enhance the dynamic input and output signal range and thus, signal integrity. Amongst these amplifiers, the ultra-low power op-amp, ISL28194, has a supply current of only 330nA, which makes it ideal for battery-powered applications.

## Amplifiers

# CURRENT SENSING

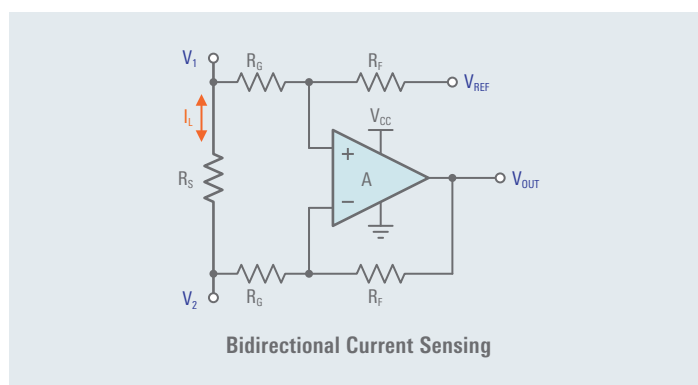

Current sensing is a fundamental requirement in a wide range of electronic applications. Measuring current drop across a sense resistor is the most commonly used method due to being low cost, having high measurement accuracy, allowing a large measurable current range, and being capable to measure DC and AC currents.

### Discrete Solution

## Precision Op Amps for Current Sensing

A basic current sense amplifier is an op-amp configured as a difference amplifier. The diff-amp rejects the common mode voltage present at the points  $V_1$  and  $V_2$  and amplifies only the voltage difference across the sense resistor by the circuit gain. A separate reference voltage sets the midpoint of the output voltage around which the amplified input voltage swings. Substituting the voltage difference with the load current times the sense resistance and solving for the load current gives:

$$I_L = (V_O - V_{REF}) / (R_S \cdot G)$$

## Most Common Discrete Solutions

Type	Part Number	TCV <sub>os</sub>	V <sub>os</sub> Max @ 25°C	Notes
Low Noise	ISL28290	–	700µV	Low cost (low side)
Low Drift	ISL28x30	150nV/°C	40µV	Good – still low cost
Zero Drift	ISL28x33	75nV/°C	8µV	Great
Zero Drift	ISL28134	15nV/°C	2.5µV	World Class
Standard CMOS	ISL28113 ISL28114	2µV/°C	5mV	
Standard CMOS	READ2302 READ2303 READ2304	–	6mV	
Standard Bipolar	REAC1251	1µV/°C	1mV	
Autotrim	SLG47004V	12.6µV/C (not trimmed) 5µV/C (trimmed)	243µV	Additional analog switches and digital macrocells

## Generic versus High-Precision Solution

Using a low offset voltage op amp in the sensing circuit allows for a much lower sense resistor and less wasted power.

### Example: 20mA Resolution, 5A Full Current

Solution	V <sub>os</sub>	R <sub>s</sub>	R <sub>s</sub> Power Loss	Benefits
Generic	500µV	25mΩ	625mW	–
ISL28x30	40µV	2mΩ	50mW	92% Power Savings
ISL28134	2.5µV	125µΩ	3mW	99.5% Power Savings

Integrated Solution

## The Simplest Type of Current Sense Amplifiers

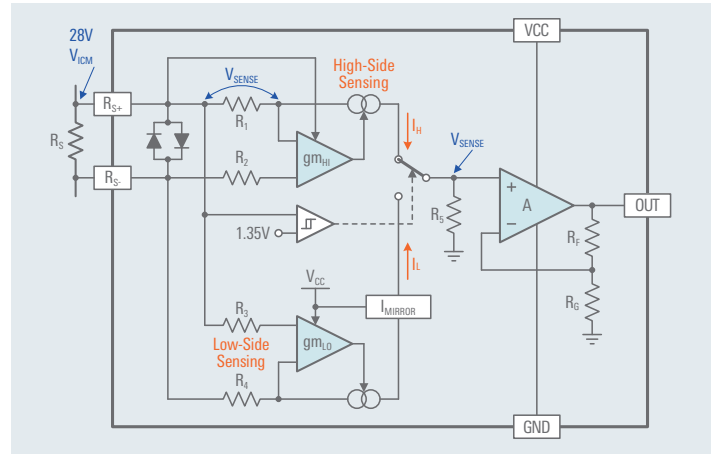

The ISL28005 and ISL28006 are ground sensing current sense amplifiers that amplify milli-volt current signals developed across sub-1Ω sense resistors. The simplest type of current sense amplifiers use single-stage op amp circuits that take their power from the same voltage source that generates the current to be measured.

### Micropower, Current Sense Amplifier with Voltage Output

#### ISL28005/6

- High or low side unidirectional current sense
- Low power consumption, 50μA (typ)
- TIA Architecture:
  - Input Sense voltage converted to current
  - Current fed into 5V TIA for ADC drive
  - Constant 100kHz BW across gain
- Internal fixed gain for high accuracy and low TCV<sub>0s</sub>

Digital Power Monitors

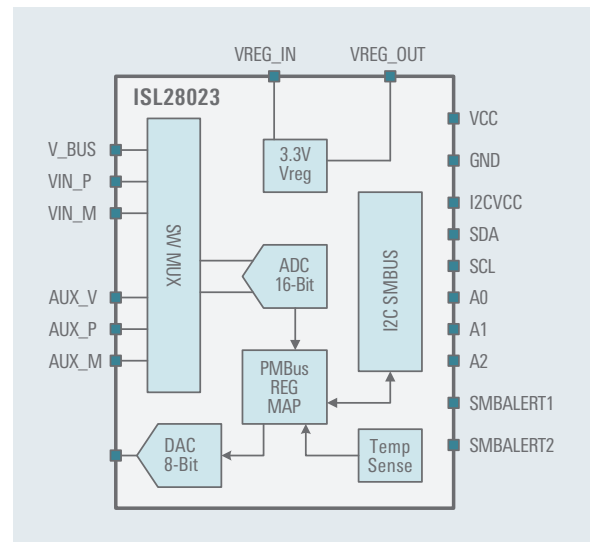

## High Voltage Precision Sensing for Current, Voltage, and Power

### Integrated Analog Front End for High Voltage Monitoring and Bi-directional Current Sensing

#### ISL28022/23/25

The ISL28022/23/25 digital power monitors are high-side and low-side digital current sense and voltage monitors with serial interface. The "digital power monitor", or DPM, allows monitoring of power supplies, RF systems, and other high voltage applications.

- Input Common mode up to 60V
- High accuracy – 0.05% error (ISL28023)
- User defined alerts – OV, UV, OC
- Additional features (margin DAC, voltage regulator, internal temp sensor, auxiliary channel)

# DIGITAL POTENTIOMETERS PORTFOLIO

Digital potentiometers replace mechanical potentiometers and trim resistors in applications where digital control allows microprocessor interfacing and extended functionality. Compared to mechanical potentiometers, electronic potentiometers are more accurate, easier to adjust, and they reduce manufacturing complexity. Renesas offers the widest selection of low-to-high resolution digital potentiometers (DCPs) in single, dual and quad configurations that are accurate, easy to adjust and reduce manufacturing complexity.

# VOLTAGE REFERENCES

Renesas offers a wide range of precision voltage references in both FGA™ and Bandgap technology

## Accurate and Stable Voltage Reference with Floating Gate Analog Technology (FGA™)

Renesas' revolutionary Floating Gate Analog (FGA™) voltage reference circuits are not dependent on the voltage produced by a silicon junction. FGA technology produces extraordinarily accurate and stable reference voltages by storing a precise charge on a floating gate cell that is essentially unaffected by external influences such as variation in temperature, input voltage, and time.

The floating gate voltage is buffered with a high-quality CMOS amplifier as shown in the simplified diagram in Figure 1.

## Ultra-Low Power, General Purpose Voltage Reference

### ISL21080

The ISL21080 analog voltage references feature low supply voltage operation at ultra-low 310nA typical. Additionally, the ISL21080 family features ensured initial accuracy as low as  $\pm 0.2\%$  and 50ppm/°C temperature coefficient.

These references are ideal for general purpose portable applications to extend battery life at lower cost. The ISL21080 is provided in the industry standard 3 Ld SOT-23 pinout.

- Supply current: 310nA typ
- Reference output voltage options:
  - 0.9V, 1.024V, 1.25V, 1.5V, 2.048V, 2.5V, 3.0V, 3.3V, 4.096V
- Output voltage noise: 30 $\mu$ V<sub>P-P</sub> typ
- Temperature Range: -45°C to +85°C
- Tempco: 50ppm/°C max
- Output current capability:  $\pm 7$ mA
- Package: 3 Ld SOT-23

## Switches & Multiplexers

# ANALOG SWITCHES

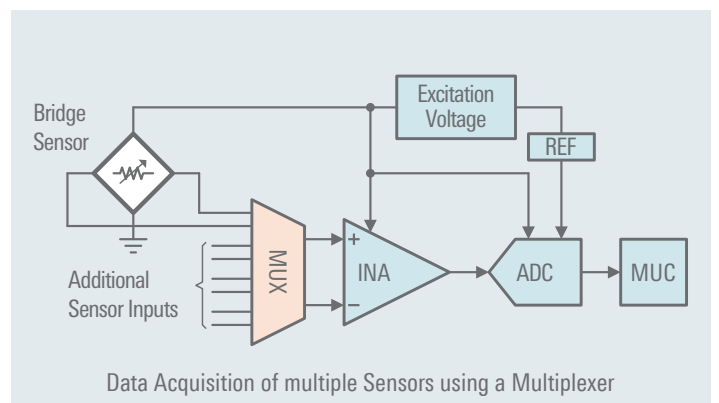

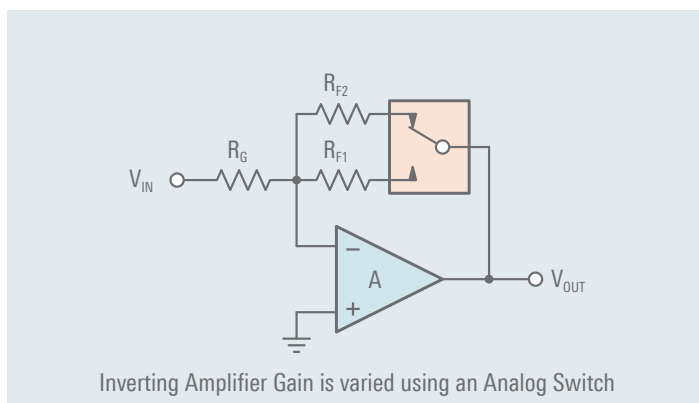

Renesas' broad portfolio of analog switches and multiplexers (MUX) provide excellent performance across a wide input voltage range. Products include 40V operation down to low voltage USB switching. The following figures and tables only show a fraction of the most commonly preferred analog switches and multiplexers. This portfolio includes single, dual and quad channels of single-pole single-throw and single-pole dual-throw switches, as well as single and dual dual-pole single-throw and dual-pole dual-throw switches, both available in normal-open (NO) and normal-closed (NC) configurations. For selective switching of multiple signal inputs, the input configurations of our multiplexers range from single and dual 4:1 and 8:1 and 16:1.

Data acquisition is the process of sampling signals that measure real-world physical conditions and converting the resulting samples into digital numeric values. Data acquisition circuitry includes sensors that convert physical parameters to electrical signals, signal conditioning circuitry, and analog to digital converters.

Data acquisition applications require analog switch and multiplexer products with low charge injection and parasitic capacitance to minimize switching errors and settling time in the input multiplexer and sample and hold circuits. Renesas offers high performance for these parameters, enabling high sampling rates and accuracy. In addition, Renesas also offers switches with low on-resistance that are suitable for mode switch, filtering, and programmable gain control applications.

# AnalogPAK™ SLG47004V

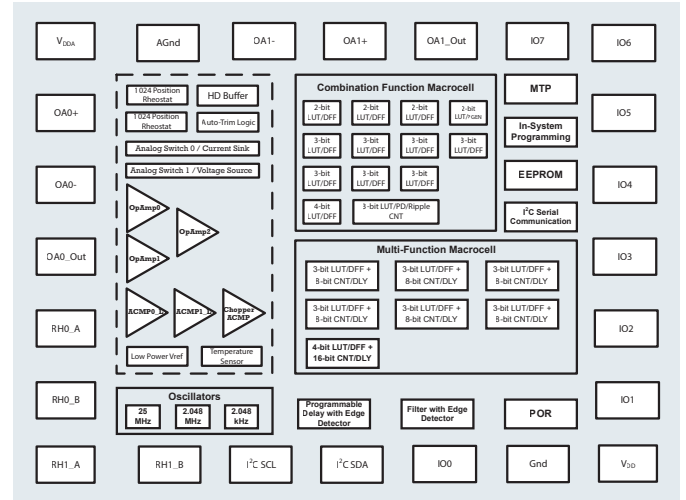

## Programmable Mixed-Signal Matrix with In-System Programmability and Analog Features

Low energy consumption, miniaturization and functional integration are the main trends in modern consumer electronics. AnalogPAK products perfectly accomplish these requirements.

AnalogPAK embedded high-performance analog blocks, such as operational amplifiers, can be configured and controlled by customer-defined logic functions to implement various Wake/Sleep scenarios as well as improve accuracy. All macrocells are packed in one IC to achieve a high integration level of common analog and digital components.

The SLG47004 builds upon the flexibility of the [GreenPAK™ | Renesas](#) traditional mixed-signal solution by integrating a mix of advanced analog features including op amps with programmable bandwidth, 10-bit digital rheostats, analog switches, and a chopper analog comparator. The unique Auto-Trim feature highlights the ability of this GreenPAK device to periodically tune its rheostat value to either compensate for system error sources or reconfigure circuit parameters.

The SLG47004 provides dynamic Power Down control for all analog and digital blocks to optimize power consumption performance. Common applications include sensor interfaces, ADC analog front-ends, configurable amplifiers, tunable filters, and a variety of other analog circuits. This multi-time programmable solution is built into a tiny 3mm x 3mm package.

- Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
  - Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
  - No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
  - You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
  - You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
  - Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.  
 "Standard": Computers; office equipment, communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.  
 "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.  
 Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
  - No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
  - When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
  - Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
  - Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
  - Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
  - It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
  - This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
  - Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.  
 (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
