

ISL71444M

19MHz 40V Quad Rail-to-Rail Input-Output, Low-Power Operational Amplifier

FN8892
Rev.2.00
Aug 16, 2019

The [ISL71444M](#) features four radiation tolerant, low-power amplifiers optimized to provide maximum dynamic range. These op amps feature a unique combination of rail-to-rail operation on the input and output as well as a slew enhanced front-end that provides ultra fast slew rates positively proportional to a given step size. They also offer low-power, low-offset voltage, and low temperature drift, making the ISL71444M ideal for applications requiring both high DC accuracy and AC performance.

Features

- Passes NASA Low Outgassing specifications
- Unity gain stable with wide gain-bandwidth product: 19MHz
- Wide single and dual supply range: 2.7V to 40V maximum
- Low input offset voltage: 400µV
- Low current consumption (per amplifier): 1.1mA, typical
- High large signal slew rate: 60V/µs
- Operating temperature range: -55°C to +125°C
- 14 Ld TSSOP with NiPdAu lead finish
- Characterized radiation level
 - Low Dose Rate (<10mrad(Si)): 30krad(Si)
 - Single Event Effects (LET): 43 MeV•cm²/mg

Applications

- Low Earth Orbit (LEO) applications
- High altitude avionics
- Precision instruments
- Data acquisition
- Power supply control

1. Overview

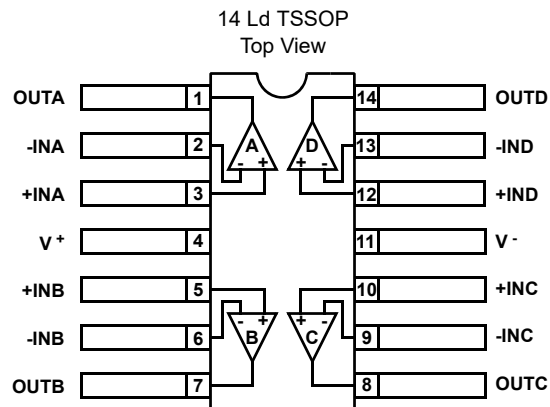

1.1 Ordering Information

Part Number (Notes 2, 3)	Part Marking	Temp Range (°C)	Tape and Reel (Units)	Package (RoHS Compliant)	Pkg. Dwg. #
ISL71444MVZ	71444 MVZ	-55 to +125	-	14 Ld TSSOP	M14.173
ISL71444MVZ-T (Note 1)	71444 MVZ	-55 to +125	2.5k	14 Ld TSSOP	M14.173
ISL71444MVZ-T7A (Note 1)	71444 MVZ	-55 to +125	250	14 Ld TSSOP	M14.173
ISL71444MEVAL1Z	Evaluation Board				

Notes:

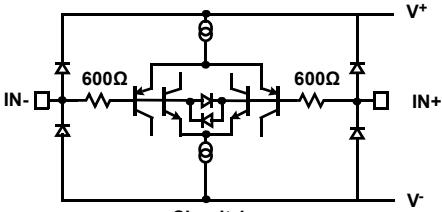

- See [TB347](#) for details about reel specifications.
- These Pb-free plastic packaged products employ special Pb-free material sets; molding compounds/die attach materials and NiPdAu-Ag plate - e4 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
- For Moisture Sensitivity Level (MSL), see the [ISL71444M](#) device page. For more information about MSL, see [TB363](#).

1.2 Pin Configuration

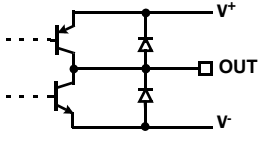

1.3 Pin Descriptions

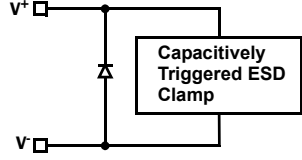

Pin Number	Pin Name	Equivalent ESD Circuit	Description
1	OUTA	Circuit 2	Amplifier A output
2	-INA	Circuit 1	Amplifier A inverting input
3	+INA	Circuit 1	Amplifier A non-inverting input
4	V ⁺	Circuit 3	Positive power supply
5	+INB	Circuit 1	Amplifier B non-inverting input
6	-INB	Circuit 1	Amplifier B inverting input
7	OUTB	Circuit 2	Amplifier B output
8	OUTC	Circuit 2	Amplifier C output
9	-INC	Circuit 1	Amplifier C inverting input
10	+INC	Circuit 1	Amplifier C non-inverting input
11	V ⁻	Circuit 3	Negative power supply
12	+IND	Circuit 1	Amplifier D non-inverting input
13	-IND	Circuit 1	Amplifier D inverting input

2. Specifications

2.1 Absolute Maximum Ratings

Parameter	Minimum	Maximum	Unit
Maximum Supply Voltage		42	V
Maximum Differential Input Current		20	mA
Maximum Differential Input Voltage	42 or $V^- - 0.5$	$V^+ + 0.5$	V
Min/Max Input Voltage	42 or $V^- - 0.5$	$V^+ + 0.5$	V
Max/Min Input Current for Input Voltage $>V^+$ or $<V^-$		± 20	mA
ESD Rating		Value	Unit
Human Body Model (Tested per JS-001-2014)		7	kV
Machine Model (Tested per JESD22-A115C)		400	V
Charged Device Model (Tested per JS-002-2014)		2	kV
Latch-Up (Tested per JESD78E; Class 2, Level A), at +125°C		100	mA

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

2.2 Outgas Testing

Specification (Tested per ASTM E 595, 1.5)	Value	Unit
Total Mass Lost (Note 4)	0.06	%
Collected Volatile Condensable Material (Note 4)	<0.01	%
Water Vapor Recovered	0.03	%

Note:

4. Outgassing results meet NASA requirements of Total Mass Lost <1% and Collected Volatile Condensable Material of <0.1%.

2.3 Thermal Information

Thermal Resistance (Typical)	θ_{JA} (°C/W)	θ_{JC} (°C/W)
14 Ld TSSOP Package (Notes 5, 6)	92	30

Notes:

5. θ_{JA} is measured in free air with the component mounted on a high-effective thermal conductivity test board. See [TB379](#).

6. For θ_{JC} , the "case temp" location is the top center.

Parameter	Minimum	Maximum	Unit
Storage Temperature Range	-65	+150	°C
Pb-Free Reflow Profile	see TB493		

2.4 Recommended Operation Conditions

Parameter	Minimum	Maximum	Unit
Ambient Operating Temperature Range	-55	+125	°C
Maximum Operating Junction Temperature		+150	°C
Single Supply Voltage	3 $\pm 10\%$	36 $\pm 10\%$	V
Split Rail Supply Voltage	$\pm 1.5 \pm 10\%$	$\pm 18 \pm 10\%$	V

4. Applications Information

4.1 Functional Description

The ISL71444M contains four high-speed and low-power op amps designed to take advantage of its full dynamic input and output voltage range with rail-to-rail operation. By offering low power, low offset voltage, and low temperature drift coupled with its high bandwidth and enhanced slew rates upwards of 50V/ μ s, these op amps are ideal for applications requiring both high DC accuracy and AC performance. The ISL71444M is manufactured with the Renesas PR40 silicon-on-insulator process, which makes this device immune to single event latch-up and provides excellent radiation tolerance. This makes it the ideal choice for high reliability applications in harsh radiation-prone environments.

4.2 Operating Voltage Range

This device is designed to operate with a split supply rail from $\pm 1.35\text{V}$ to $\pm 20\text{V}$ or a single supply rail from 2.7V to 40V. The ISL71444M is fully characterized in production for supply rails of 5V ($\pm 2.5\text{V}$) and 36V ($\pm 18\text{V}$). The power supply rejection ratio is typically 120dB across the full operating voltage range. The worst case common-mode rejection ratio across temperature is within 1.5V to 2V of each rail. When VCM is inside that range, the CMRR performance is typically >110dB with a $\pm 18\text{V}$ supply. The minimum CMRR performance across the -55°C to $+125^\circ\text{C}$ temperature range and radiation is >70dB across the full common-mode input range for power supply voltages from $\pm 2.5\text{V}$ (5V) to $\pm 18\text{V}$ (36V).

4.3 Input Performance

The slew enhanced front-end is a block that is placed in parallel with the main input stage and functions based on the input differential.

4.4 Input ESD Diode Protection

The input terminals (IN+ and IN-) have internal ESD protection diodes to the positive and negative supply rails, series-connected 600 Ω current limiting resistors, and an anti-parallel diode pair across the inputs.

Figure 50. Input ESD Diode Current Limiting, Unity Gain

4.5 Output Short-Circuit Current Limiting

The output current limit has a worst case minimum limit of $\pm 8\text{mA}$ but may reach as high as $\pm 100\text{mA}$. The op amp can withstand a short-circuit to either rail for a short duration ($<1\text{s}$) as long as the maximum operating junction temperature is not violated. This applies to only one amplifier at a given time. Continued use of the device in these conditions may degrade the long-term reliability of the part and is not recommended. [Figure 20 on page 11](#) shows the typical short-circuit currents that can be expected. The ISL71444M's current limiting circuitry automatically lowers the current limit of the device if short-circuit conditions carry on for extended periods of time. This protects the device from malfunction; however, extended operation in this mode degrades the output rail-to-rail performance by increasing the V_{OH}/V_{OL} levels.

4.6 Output Phase Reversal

Output phase reversal is a change of polarity in the amplifier transfer function when the input voltage exceeds the supply voltage. The ISL71444M is immune to output phase reversal, even when the input voltage is 1V beyond the supplies. This is illustrated in [Figure 49 on page 16](#).

4.7 Power Dissipation

It is possible to exceed the +150°C maximum junction temperatures under certain load and power supply conditions. It is therefore important to calculate the maximum junction temperature (T_{JMAX}) for all applications to determine if power supply voltages or load conditions need to be modified to remain in the safe operating area. These parameters are related using [Equation 1](#):

$$(EQ. 1) \quad T_{JMAX} = T_{AMAX} + \theta_{JA} \times PD_{MAXTOTAL}$$

where:

- $PD_{MAXTOTAL}$ is the sum of the maximum power dissipation of each amplifier in the package (PD_{MAX})
- PD_{MAX} for each amplifier can be calculated using [Equation 2](#):

$$(EQ. 2) \quad PD_{MAX} = V_S \times I_{qMAX} + (V_S - V_{OUTMAX}) \times \frac{V_{OUTMAX}}{R_L}$$

where:

- T_{AMAX} = Maximum ambient temperature
- θ_{JA} = Thermal resistance of the package
- PD_{MAX} = Maximum power dissipation of one amplifier
- V_S = Total supply voltage
- I_{qMAX} = Maximum quiescent supply current of one amplifier
- V_{OUTMAX} = Maximum output voltage swing of the application

4.8 Slew Rate Enhancement

The ISL71444M has slew enhanced front-end that increases the drive on the output transistors proportional to the differential voltage across the inputs. This increase in output drive shows up as an increased transient current on top of the op amp's steady-state supply current. If the voltage differential between the inputs remains constant, as in comparator applications, the added drive current to the output transistors becomes steady-state and increases the DC power supply current of the IC. For this reason, Renesas recommends not using the ISL71444M in a comparator configuration.

4.9 Unused Channel Configuration

If the application does not require the use of all four op amps, you must configure the unused channels to prevent it from oscillating. Any unused channels oscillate if the input and output pins are floating. This results in higher than expected supply currents and possible noise injection into any of the active channels being used. The proper way to prevent oscillation is to short the output to the inverting input and tie the positive input to a known voltage, such as mid-supply.

When the V^- supply is less than or equal to $-1.0V$, configure your op amp as in [Figure 51](#), otherwise follow the configuration shown in [Figure 52](#). The resistors in [Figure 52](#) are of equal value and high resistance ($\geq 10k\Omega$) to minimize current draw, while keeping the positive input at mid-supply. All unused op amps can have their inputs tied to the same resistor divider to minimize the number of components.

Tying the positive input to ground in [Figure 52](#) (where $V^- = GND$) produces a voltage differential across the inputs as the inverting input is at the V_{OL} of the op amp and the positive input is at GND , thereby increasing the steady-state supply current. While this does not damage the op amp, the increased supply current can result in additional unnecessary power dissipation.

5. Radiation Tolerance

The ISL71444M is a radiation tolerant device for commercial space applications, Low Earth Orbit (LEO) applications, high altitude avionics, launch vehicles, and other harsh environments. This device's response to Total Ionizing Dose (TID) radiation effects and Single Event Effects (SEE) has been measured, characterized, and reported in the preceding sections. However, TID performance is not guaranteed through radiation acceptance testing, nor is the characterized SEE performance guaranteed.

5.1 Total Ionizing Dose (TID) Testing

5.1.1 Introduction

Total dose testing of the ISL71444MVZ-T proceeded in accordance with the guidelines of MIL-STD-883 Test Method 1019. The experimental matrix consisted of 18 samples irradiated under bias, as shown in [Table 1 on page 21](#), and 18 samples irradiated with all pins grounded (unbiased). Three control units were used. The bias configuration is shown in [Figure 53](#).

Notes:
V+ = +18V, V- = -18V

Figure 53. Irradiation Bias Configuration for the IS71444M

Samples of the ISL71444MVZ-T were drawn from fabrication lot X7J8AB and were packaged in the production 14 Ld plastic TSSOP, Package Outline Drawing (POD) M14.173. The samples were screened to datasheet limits at room temperature only, before irradiation.

Total dose irradiations were performed using a Hopewell Designs N40 panoramic vault-type low dose rate ⁶⁰Co irradiator located in the Renesas Palm Bay, Florida facility. The dose rate was 0.0089rad(Si)/s (8.9mrad(Si)/s). PbAl spectrum hardening filters were used to shield the test board and devices under test against low energy secondary gamma radiation.

Downpoints for the testing were 0krad(Si), 10krad(Si), 20krad(Si), and 30krad(Si). Following irradiation, the samples were subjected to a high temperature biased anneal for 168 hours at +100°C.

All electrical testing was performed outside the irradiator using production Automated Test Equipment (ATE) with data logging of all parameters at each downpoint. All downpoint electrical testing was performed at room temperature.

5.1.2 Results

Table 1 summarizes the attributes data. “Bin 1” indicates a device that passes all datasheet specification limits.

Table 1. ISL71444M Total Dose Test Attributes Data

Dose Rate (mrad(Si)/s)	Bias	Sample Size	Down Point	Bin 1	Rejects
8.75	Figure 53	18	Pre-rad	18	
			10krad(Si)	18	0
			20krad(Si)	18	0
			30krad(Si)	18	0
			Anneal	18	0
8.75	Grounded	18	Pre-rad	18	
			10krad(Si)	18	0
			20krad(Si)	18	0
			30krad(Si)	18	0
			Anneal	18	0

The plots in [Figure 54](#) through [58](#) show data for key parameters at all downpoints. The plots show the average as a function of total dose for each of the irradiation conditions; we chose to use the average because of the relatively large sample sizes. All parts showed excellent stability over irradiation.

[Table 2 on page 22](#) shows the average of other key parameters with respect to total dose in tabular form.

5.1.3 Conclusion

As shown in [Table 2](#) and the selected graphs ([Figures 54](#) through [58](#)), all parameters showed excellent stability over irradiation, with no observed bias sensitivity. For brevity, only the $\pm 18V$ results are shown; the $\pm 2.5V$ and $\pm 1.5V$ results were just as stable.

5.2 Single Event Effects Testing

5.2.1 Introduction

The intense heavy ion environment encountered in space applications can cause a variety of Single Event Effects (SEE). SEE can lead to system-level performance issues including disruption, degradation, and destruction. For predictable and reliable space system operation, individual electronic components should be characterized to determine their SEE response. The following is a summary of the ISL71444M SEE testing.

5.2.2 SEE Test Setup

Testing was performed at the Texas A&M University (TAMU) Cyclotron Institute heavy ion facility. This facility is coupled to a K500 super-conducting cyclotron, which is capable of generating a wide range of test particles with the various energy, flux, and fluence levels needed for advanced radiation testing.

The test circuit is a non-inverting configuration with a gain of 10. Digital multimeters were used to monitor the supply voltage (V_{+}/V_{-}), output voltage (V_{OUT}), and supply current (I_{+}/I_{-}). The outputs were monitored using four LeCroy 4-channel digital oscilloscopes to capture and store the signal waveforms. [Table 3](#) shows the scope configuration used during the testing.

Table 3. Oscilloscope Setup for SET Testing

Scope	CH 1	CH 2	CH 3	CH 4	Trigger
1	OUTA	OUTB	OUTC	OUTD	CH1, 1% of OUTA
2	OUTA	OUTB	OUTC	OUTD	CH2, 1% of OUTB
3	OUTA	OUTB	OUTC	OUTD	CH3, 1% of OUTC
4	OUTA	OUTB	OUTC	OUTD	CH4, 1% of OUTD

5.2.3 SEB/SEL Testing Results

A failure due to burnout was indicated by a permanent change to the part's supply current or output voltage after the beam was turned off. If the part's supply current or output voltage reverted back to its pre-exposure value after a power cycle, the event was deemed as latch-up. A failure for burnout was indicated by a $\pm 4\%$ delta (which would allow for measurement repeatability) in supply current or output voltage. The ISL71444M units did not exceed the aforementioned limits with $V_S = \pm 20V$ at an LET of $43MeV \cdot cm^2/mg$ and therefore are deemed as passing. The output voltage of the amplifiers had a 0% delta pre and post exposure for all channels and all parts and thus are not shown for brevity.

Table 4. SEB/SEL Results ($V_S = \pm 20V$, LET = $43MeV \cdot cm^2/mg$)

Unit	Temp (°C)	Supply Current Pre-Exposure		Supply Current Post-Exposure		SEB/L
		I+ (mA)	I- (mA)	I+ (mA)	I- (mA)	
1	+125	8.54	7.52	8.26	7.53	Pass
2	+125	9.18	8.44	9.15	8.41	Pass
3	+125	8.10	7.37	8.08	7.36	Pass
4	+125	8.07	7.34	8.06	7.33	Pass

5.2.4 Single Event Transient Testing

Single Event Transient (SET) testing was conducted in a gain of 10 non-inverting with a 0.1V input with a supply voltage of $\pm 1.35V$ and an input of 0.2V with supplies at $\pm 15.0V$.

The plots in [Figure 60](#) through [Figure 61](#) show the typical SET performance of the ISL71444M at $LET = 43MeV \cdot cm^2/mg$. Fluence was run at $2 \times 10^6/cm^2$.

Figure 60. SET Response with $V_S = \pm 1.35V$

Figure 61. SET Response with $V_S = \pm 15.0V$

With an $LET = 43MeV \cdot cm^2/mg$, all transients lasted no longer than $1\mu s$ regardless of supply voltage. Voltage deviations were predominantly negative-going down to $-1.35V$ with supplies at $\pm 1.35V$. With $\pm 15V$ supplies, the voltage deviations were both positive up to $+15V$ and negative down to approximately $-12V$.

6. Revision History

Rev.	Date	Description
2.00	Aug 16, 2019	Updated links throughout document. Added Slew Rate Enhancement section. Updated Unused Channel Configuration section. Updated disclaimer.
1.00	Apr 6, 2018	Added Features bullet on page 1. Added Section 2.2 Outgas Testing on page 5. Removed About Intersil section and added Renesas disclaimer.
0.00	Jun 6, 2017	Initial release

7. Package Outline Drawing

For the most recent package outline drawing, see [M14.173](#).

M14.173
 14 LD THIN SHRINK SMALL OUTLINE PACKAGE (TSSOP)
 Rev 3, 10/09

NOTES:

1. Dimension does not include mold flash, protrusions or gate burrs. Mold flash, protrusions or gate burrs shall not exceed 0.15 per side.
2. Dimension does not include interlead flash or protrusion. Interlead flash or protrusion shall not exceed 0.25 per side.
3. Dimensions are measured at datum plane H.
4. Dimensioning and tolerancing per ASME Y14.5M-1994.
5. Dimension does not include dambar protrusion. Allowable protrusion shall be 0.80mm total in excess of dimension at maximum material condition. Minimum space between protrusion and adjacent lead is 0.07mm.
6. Dimension in () are for reference only.
7. Conforms to JEDEC MO-153, variation AB-1.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
 2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
 3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
 4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
 5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
 6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
 7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
 9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
 10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
 11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
- (Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
