

Smart Configurator for RX Plug-in in e2 studio 2023-04

Smart Configurator for RX V2.17.0

Release Note

Introduction

Thank you for using the Smart Configurator for RX.

This document describes the restrictions and points for caution. Read this document before using the product.

Contents

1.	Introduction.....	3
1.1	System requirements.....	3
1.1.1	Windows PC.....	3
1.1.2	Linux PC.....	3
1.1.3	Development Environments.....	3
2.	Support List.....	4
2.1	Support Devices List.....	4
2.2	Support Components List.....	10
2.3	New support.....	16
2.3.1	BSP (Board Support Package) revision update.....	16
2.3.2	New support for RX23E-B and RX26T group.....	16
2.3.3	Multiple configurations are allowed to be removed at one time.....	16
2.3.4	New sections are added while using Standalone Smart Configurator with CS+.....	16
2.3.5	GPT channels are configurable in the Motor component.....	17
2.3.6	New support for user code protection feature in Standalone Smart Configurator.....	17
3.	Changes.....	18
3.1	Correction of issues/limitations.....	18
3.1.1	Fixed the "Out of range for memory type" build error when using Data Transfer Controller component on EWRX IAR tool chain.....	20
3.1.2	Fixed the display issue for the unused items in the "Show View" dialog.....	20
3.1.3	Fixed the wrong generated code issue for the default value of PDR register when using Port component.....	20
3.1.4	Fixed the wrong code order issue for the buffer registers when using Motor component.....	20
3.1.5	Fixed the generated code sequence issue when Comparator uses the DA output as reference voltage.....	21
3.1.6	Fixed the pin assignment issue when a "Version up" operation is performed for "r_usb_basic" FIT component.....	21
3.1.7	Fixed the macro value issue for BSP_CFG_CPLUSPLUS when creating Smart Configurator C++ project.....	21
3.1.8	Fixed the missing code issue for AN117 to AN119 when using S12AD Continuous Scan Mode component.....	21

3.1.9	Fixed the pin macro value update issue when using “r_qspi_rx” FIT component.....	21
3.1.10	Fixed the missing pin function issue for the 64 pin LFQFP packages of RX24T	21
3.1.11	Fixed the display area setting items disable issue when using LCD Controller component.....	21
3.2	Specification changes	22
3.2.1	ELC linkage configuration for Motor has been moved from ELC component to Motor component....	23
3.2.2	Linker script file address type update for BSP sections	23
4.	List of RENESAS TOOL NEWS AND TECHNICAL UPDATE	24
5.	Points for Limitation	29
5.1	List of Limitation.....	29
5.2	Details of Limitation	30
5.2.1	Note on the general I/O port direction issue on MCU package view when using Port Component....	30
5.2.2	Note on the resource tree in the FIT component GUI configuration	30
5.2.3	Note on address bus when using external bus	31
5.2.4	Note on Overlaps build error when using Data Transfer Controller component on EWRX IAR tool chain	31
5.2.5	Note on the GUI display issue when using Port Output Enable (POE) component.....	32
6.	Points for Caution	33
6.1	List of Caution.....	33
6.2	Details of Caution	35
6.2.1	Note on configuring GPT interrupts.....	35
6.2.2	Note on using only reception in SCI Clock Synchronous Mode.....	36
6.2.3	Note on using high transfer speed in SCIF Synchronous Mode	36
6.2.4	Note on device change functionality	37
6.2.5	Note on using Smart Configurator for GCC project in e2 studio 7.4.0	37
6.2.6	Note on using Data Transfer Controller	37
6.2.7	Note on Ports setting when using S12AD components	37
6.2.8	Note on section build warning when using FIT components.....	37
6.2.9	Note on C++ project support in CS+	38
6.2.10	Note on Installation directory.....	39
6.2.11	Note on the build error of existing RTOS C++ project.....	39
6.2.12	Note on the output of high impedance issue for TXDn pin	39
6.2.13	Note on the include path update issue when renaming the component’s configuration name.....	40
6.2.14	Note on accessing “Release Notes” and “Tool News” URL from the help menu.....	42
6.2.15	Note on the IPCF file naming change for IAR project	42
6.2.16	Note on using user code protection feature	42
	Revision History	43

1. Introduction

Smart Configurator is a utility for combining software to meet your needs. It supports the following three functions related to the embedding of Renesas drivers in your systems: importing middleware, generating driver code, and setting pins.

Smart Configurator for RX V2.17.0 is equivalent to Smart Configurator for RX plug-in in e² studio 2023-04.

1.1 System requirements

The operating environment is as follows.

1.1.1 Windows PC

- System: x64/x86 based processor
 - Windows® 11
 - Windows® 10 (64-bit version)
 - Windows® 8.1 (64-bit version)
- Memory capacity: We recommend 4 GB or more
- Capacity of hard disk: At least 300 MB of free space.
- Display: Graphics resolution should be at least 1024 x 768, and the mode should display at least 65,536 colors.
- Processor: 1 GHz or higher (must support hyper-threading, multi-core CPUs)

1.1.2 Linux PC

Only Smart Configurator for RX plug-in in e² studio 2023-04 is supported on Linux OS.

- System: x64 based processor, 2 GHz or faster (with multicore CPUs)
 - Ubuntu 22.04 LTS Desktop (64-bit version)
 - Ubuntu 20.04 LTS Desktop (64-bit version)
- Memory capacity: We recommend 2 GB or more.
- Capacity of hard disk: At least 2 GB of free space.

1.1.3 Development Environments

- Renesas electronics Compiler for RX [CC-RX] V3.01.00 or later
- GCC for Renesas 4.8.4.201902 or later
- IAR Embedded Workbench 4.12.1 or later

2. Support List

2.1 Support Devices List

Below is a list of devices supported by the Smart Configurator for RX V2.17.0.

Table 2-1 Support Devices

Group (HW Manual number)	PIN	Device name
RX110 Group (R01UH0421EJ0120)	36pin	R5F5110HAxLM, R5F5110JAxLM, R5F51101AxLM, R5F51103AxLM
	40pin	R5F51101AxNF, R5F51103AxNF, R5F5110HAxNF, R5F5110JAxNF
	48pin	R5F51101AxNE, R5F51103AxNE, R5F51104AxNE, R5F51105AxNE, R5F5110JAxNE, R5F51101AxFL, R5F51103AxFL, R5F51104AxFL, R5F51105AxFL, R5F5110JAxFL
	64pin	R5F51101AxLF, R5F51103AxLF, R5F51104AxLF, R5F51105AxLF, R5F5110JAxLF, R5F51101AxFK, R5F51103AxFK, R5F51104AxFK, R5F51105AxFK, R5F5110JAxFK, R5F51101AxFM, R5F51103AxFM, R5F51104AxFM, R5F51105AxFM, R5F5110JAxFM
RX111 Group (R01UH0365EJ0130)	36pin	R5F51111AxLM, R5F51113AxLM, R5F5111JAxLM
	40pin	R5F51111AxNF, R5F51113AxNF, R5F5111JAxNF
	48pin	R5F51111AxFL, R5F51113AxFL, R5F51114AxFL, R5F51115AxFL, R5F51116AxFL, R5F51117AxFL, R5F51118AxFL, R5F5111JAxFL, R5F51111AxNE, R5F51113AxNE, R5F51114AxNE, R5F51115AxNE, R5F51116AxNE, R5F51117AxNE, R5F51118AxNE, R5F5111JAxNE
	64pin	R5F51111AxFM, R5F51113AxFM, R5F51114AxFM, R5F51115AxFM, R5F51116AxFM, R5F51117AxFM, R5F51118AxFM, R5F5111JAxFM, R5F51111AxFK, R5F51113AxFK, R5F51114AxFK, R5F51115AxFK, R5F51116AxFK, R5F51117AxFK, R5F51118AxFK, R5F5111JAxFK, R5F51111AxLF, R5F51113AxLF, R5F51114AxLF, R5F51115AxLF, R5F51116AxLF, R5F51117AxLF, R5F51118AxLF, R5F5111JAxLF
RX113 Group (R01UH0448EJ0110)	64pin	R5F51135AxFM, R5F51136AxFM, R5F51137AxFM, R5F51138AxFM
	100pin	R5F51135AxLJ, R5F51136AxLJ, R5F51137AxLJ, R5F51138AxLJ, R5F51135AxFP, R5F51136AxFP, R5F51137AxFP, R5F51138AxFP
RX130 Group (R01UH0560EJ0200)	48pin	R5F51303AxFL, R5F51305AxFL, R5F51303AxNE, R5F51305AxNE, R5F51306AxNE, R5F51306AxFL, R5F51307AxNE, R5F51307AxFL, R5F51308AxNE, R5F51308AxFL, R5F51306BxFL
	64pin	R5F51303AxFM, R5F51305AxFM, R5F51303AxFK, R5F51305AxFK, R5F51306AxFK, R5F51306AxFM, R5F51307AxFK, R5F51307AxFM, R5F51308AxFK, R5F51308AxFM R5F51308AxFK, R5F51308AxFM, R5F51306BxFK, R5F51306BxFM
	80pin	R5F51303AxFN, R5F51305AxFN, R5F51306AxFN, R5F51306BxFN
	100pin	R5F51305AxFP, R5F51306AxFP, R5F51307AxFP, R5F51308AxFP, R5F51305BxFP, R5F51306BxFP
RX13T Group (R01UH0822EJ0100)	32pin	R5F513T3AxFJ, R5F513T5AxFJ, R5F513T3AxNH, R5F513T5AxNH
	48pin	R5F513T5AxFL, R5F513T3AxFL, R5F513T5AxNE, R5F513T3AxNE
RX230 Group (R01UH0496EJ0110)	48pin	R5F52305AxNE, R5F52306AxNE, R5F52305AxFL, R5F52306AxFL
	64pin	R5F52305AxND, R5F52306AxND, R5F52305AxFM, R5F52306AxFM, R5F52305AxLF, R5F52306AxLF
	100pin	R5F52305AxLA, R5F52306AxLA, R5F52305AxFP, R5F52306AxFP

Table 2-2 Support Devices

Group (HW Manual number)	PIN	Device name
RX231 Group (R01UH0496EJ0110)	48pin	R5F52315AxNE, R5F52316AxNE, R5F52317AxNE, R5F52318AxNE, R5F52315CxNE, R5F52316CxNE, R5F52317BxNE, R5F52318BxNE, R5F52315AxFL, R5F52316AxFL, R5F52317AxFL, R5F52318AxFL, R5F52315CxFL, R5F52316CxFL, R5F52317BxFL, R5F52318BxFL
	64pin	R5F52315AxND, R5F52316AxND, R5F52317AxND, R5F52318AxND, R5F52315CxND, R5F52316CxND, R5F52317BxND, R5F52318BxND, R5F52315AxFM, R5F52316AxFM, R5F52317AxFM, R5F52318AxFM, R5F52315CxFM, R5F52316CxFM, R5F52317BxFM, R5F52318BxFM, R5F52315CxLF, R5F52316CxLF
	100pin	R5F52315AxLA, R5F52316AxLA, R5F52317AxLA, R5F52318AxLA, R5F52315CxLA, R5F52316CxLA, R5F52317BxLA, R5F52318BxLA, R5F52315AxFP, R5F52316AxFP, R5F52317AxFP, R5F52318AxFP, R5F52315CxFP, R5F52316CxFP, R5F52317BxFP, R5F52318BxFP
RX23E-A Group (R01UH0801EJ0100)	40pin	R5F523E5AxNF, R5F523E6AxNF, R5F523E5SxNF, R5F523E6SxNF
	48pin	R5F523E5AxFL, R5F523E6AxFL, R5F523E5SxFL, R5F523E6SxFL
RX23T Group (R01UH0520EJ0110)	48pin	R5F523T3AxFL, R5F523T5AxFL
	52pin	R5F523T5AxFD, R5F523T3AxFD
	64pin	R5F523T5AxFM, R5F523T3AxFM
RX23W Group (R01UH0823EJ0100)	56pin	R5F523W8BxNG, R5F523W8AxNG, R5F523W7BxNG, R5F523W7AxNG
	83pin	R5F523W8CxLN, R5F523W8DxLN
	85pin	R5F523W7AxBL, R5F523W8AxBL, R5F523W8BxBL, R5F523W7BxBL
RX24T Group (R01UH0576EJ0200)	64pin	R5F524TAAxFM, R5F524T8AxFM, R5F524TAAxFK, R5F524T8AxFK
	80pin	R5F524TAAxFF, R5F524T8AxFF, R5F524TAAxFN, R5F524T8AxFN
	100pin	R5F524TCxFP, R5F524T8AxFP, R5F524TBxFP, R5F524TEAxFP, R5F524TAAxFP
RX24U Group (R01UH0658EJ0100)	100pin	R5F524UEAxFP, R5F524UCxFP, R5F524UBxFP
	144pin	R5F524UEAxFB, R5F524UBxFB, R5F524UCxFB
RX64M Group (R01UH0377EJ0110)	100pin	R5F564MFCxFP, R5F564MFCxLJ, R5F564MFDxFP, R5F564MFDxLJ, R5F564MGCxFP, R5F564MGCxLJ, R5F564MGDxFP, R5F564MGDxLJ, R5F564MJCxFP, R5F564MJCxLJ, R5F564MJDxFP, R5F564MJDxLJ, R5F564MLCxFP, R5F564MLCxLJ, R5F564MLDxFP, R5F564MLDxLJ
	144/145pin	R5F564MFCxFB, R5F564MFCxLK, R5F564MFDxFB, R5F564MFDxLK, R5F564MGCxFB, R5F564MGCxLK, R5F564MGDxFB, R5F564MGDxLK, R5F564MJCxFB, R5F564MJCxLK, R5F564MJDxFB, R5F564MJDxLK, R5F564MLCxFB, R5F564MLCxLK, R5F564MLDxFB, R5F564MLDxLK
	176/177pin	R5F564MFDxFC, R5F564MFDxBG, R5F564MFDxLC, R5F564MFCxFC, R5F564MFCxBG, R5F564MFCxLC, R5F564MGDxFC, R5F564MGDxBG, R5F564MGDxLC, R5F564MGCxFC, R5F564MGCxBG, R5F564MGCxLC, R5F564MJDxFC, R5F564MJDxBG, R5F564MJDxLC, R5F564MJCxFC, R5F564MJCxBG, R5F564MJCxLC, R5F564MLDxFC, R5F564MLDxBG, R5F564MLDxLC, R5F564MLCxFC, R5F564MLCxBG, R5F564MLCxLC

Table 2-3 Support Devices

Group (HW Manual number)	PIN	Device name
RX65N Group (R01UH0590EJ0210)	100pin	R5F565N9AxLJ, R5F565N9BxLJ, R5F565N9ExLJ, R5F565N9FxLJ, R5F565N7AxLJ, R5F565N7BxLJ, R5F565N7ExLJ, R5F565N7FxLJ, R5F565N4AxLJ, R5F565N4BxLJ, R5F565N4ExLJ, R5F565N4FxLJ, R5F565N9AxFP, R5F565N9BxFP, R5F565N9ExFP, R5F565N9FxFP, R5F565N7AxFP, R5F565N7BxFP, R5F565N7ExFP, R5F565N7FxFP, R5F565N4AxFP, R5F565N4BxFP, R5F565N4ExFP, R5F565N4FxFP, R5F565NCHxLJ, R5F565NCDxLJ, R5F565NEHxLJ, R5F565NEDxLJ, R5F565NCHxFP, R5F565NCDxFP, R5F565NEHxFP, R5F565NEDxFP
	144/145 pin	R5F565N9AxFB, R5F565N9BxFB, R5F565N9ExFB, R5F565N9FxFB, R5F565N7AxFB, R5F565N7BxFB, R5F565N7ExFB, R5F565N7FxFB, R5F565N4AxFB, R5F565N4BxFB, R5F565N4ExFB, R5F565N4FxFB, R5F565NCHxFB, R5F565NCDxFB, R5F565NEHxFB, R5F565NEDxFB, R5F565N9AxLK, R5F565N9BxLK, R5F565N9ExLK, R5F565N9FxLK, R5F565N7AxLK, R5F565N7BxLK, R5F565N7ExLK, R5F565N7FxLK, R5F565N4AxLK, R5F565N4BxLK, R5F565N4ExLK, R5F565N4FxLK, R5F565NCHxLK, R5F565NCDxLK, R5F565NEHxLK, R5F565NEDxLK
	176/177 pin	R5F565NCHxBG, R5F565NCDxBG, R5F565NEHxBG, R5F565NEDxBG, R5F565NCHxFC, R5F565NCDxFC, R5F565NEHxFC, R5F565NEDxFC, R5F565NCHxLC, R5F565NCDxLC, R5F565NEHxLC, R5F565NEDxLC
RX651 Group (R01UH0590EJ0210)	64pin	R5F5651CHxFM, R5F56514FxFM, R5F5651EHxFM, R5F5651CDxFM, R5F56514FxBP, R5F56514BxFM, R5F56519FxBP, R5F5651CDxBP, R5F5651EDxBP, R5F5651EDxFM, R5F56517BxBP, R5F5651EHxBP, R5F56519BxBP, R5F56517FxBP, R5F5651CHxBP, R5F56519FxFM, R5F56517BxFM, R5F56514BxBP, R5F56519BxFM, R5F56517FxFM
	100pin	R5F56519AxLJ, R5F56519BxLJ, R5F56519ExLJ, R5F56519FxLJ, R5F56517AxLJ, R5F56517BxLJ, R5F56517ExLJ, R5F56517FxLJ, R5F56514AxLJ, R5F56514BxLJ, R5F56514ExLJ, R5F56514FxLJ, R5F56519AxFP, R5F56519BxFP, R5F56519ExFP, R5F56519FxFP, R5F56517AxFP, R5F56517BxFP, R5F56517ExFP, R5F56517FxFP, R5F56514AxFP, R5F56514BxFP, R5F56514ExFP, R5F56514FxFP
	144/145 pin	R5F56519AxFB, R5F56519BxFB, R5F56519ExFB, R5F56519FxFB, R5F56517AxFB, R5F56517BxFB, R5F56517ExFB, R5F56517FxFB, R5F56514AxFB, R5F56514BxFB, R5F56514ExFB, R5F56514FxFB, R5F5651CDxFB, R5F5651CHxFB, R5F5651EDxFB, R5F5651EHxFB, R5F56519AxLK, R5F56519BxLK, R5F56519ExLK, R5F56519FxLK, R5F56517AxLK, R5F56517BxLK, R5F56517ExLK, R5F56517FxLK, R5F56514AxLK, R5F56514BxLK, R5F56514ExLK, R5F56514FxLK, R5F5651CDxLK, R5F5651CHxLK, R5F5651EDxLK, R5F5651EHxLK
	176/177 pin	R5F5651CDxBG, R5F5651CDxFC, R5F5651CHxBG, R5F5651CHxFC, R5F5651EDxBG, R5F5651EDxFC, R5F5651EHxBG, R5F5651EHxFC, R5F5651CDxLC, R5F5651CHxLC, R5F5651EDxLC, R5F5651EHxLC
RX66N Group (R01UH0825EJ0100)	100pin	R5F566NNDxFP, R5F566NNHxFP, R5F566NDDxFP, R5F566NDHxFP
	144pin	R5F566NNDxFB, R5F566NNHxFB, R5F566NDDxFB, R5F566NDHxFB

2.3 New support

2.3.1 BSP (Board Support Package) revision update

From Smart Configurator for RX V2.17.0, BSP rev7.40 is supported and will be added as default BSP when creating Smart Configurator project.

2.3.2 New support for RX23E-B and RX26T group

From Smart Configurator for RX V2.17.0, RX23E-B and RX26T group have been supported. Regarding to the supported device list, please refer to **Table 2-6**; and for the supported components with these two device groups, please refer to **Table 2-7**, **Table 2-8** and **Table 2-9**.

2.3.3 Multiple configurations are allowed to be removed at one time

From Smart Configurator for RX V2.17.0, multiple component configurations can be chosen from Component tree for removal. User can use "Ctrl +" to select multiple component configurations and then click the "Remove" button (as shown in Figure 2-1) to delete all these configurations at one time.

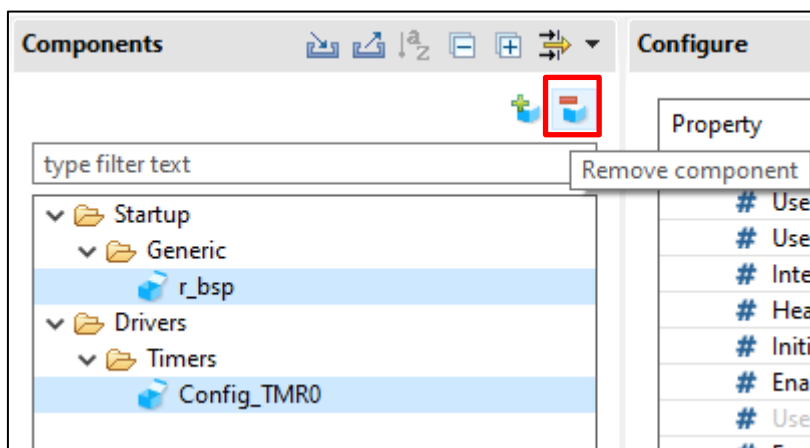

Figure 2-1 New feature for the multiple configurations can be removed at one time

2.3.4 New sections are added while using Standalone Smart Configurator with CS+

From Smart Configurator for RX V2.17.0, the following sections for CS+ will be automatically added into builder setting when BSP v7.21 and above is used:

- (1) Add BEXRAM and REXRAM to "Section Settings" at 0x00800000
- (2) Add DEXRAM=REXRAM to "ROM to RAM mapped section"

With this improvement, there is no need for manual steps to add these settings when using Standalone Smart Configurator with CS+ projects.

2.3.5 GPT channels are configurable in the Motor component

From Smart Configurator for RX V2.17.0, GPT channels with triangle mode 1 are configurable from Motor Component for RX72M; and GPT channels with complementary mode 2 are configurable from Motor Component for RX26T.

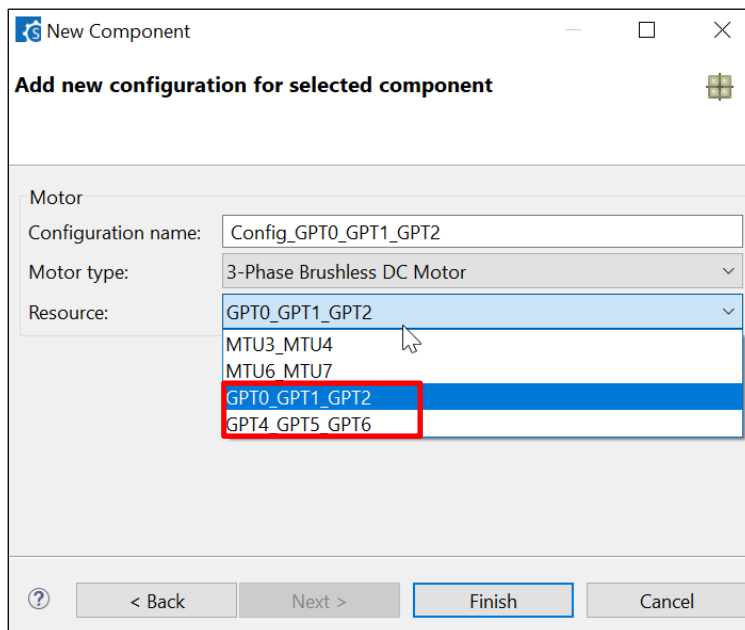

Figure 2-2 GPT channel selection while add Motor component for RX26T

2.3.6 New support for user code protection feature in Standalone Smart Configurator

From Smart Configurator for RX V2.17.0, user code protection feature will be supported by the Standalone Smart Configurator.

Please refer to the User's guide in the URL below for the details of the user code protection feature.

3. Changes

This chapter describes changes to the Smart Configurator for RX V2.17.0.

3.1 Correction of issues/limitations

Table 3-1 List of Correction of issues/limitations (RX100, RX200 Family) ✓: Applicable, -: Not Applicable

No	Description	RX110	RX111	RX113	RX130	RX13T	RX140	RX230, RX231	RX23E-A	RX23E-B	RX23T	RX23W	RX24T, RX24U	RX26T	Remarks
1	Fixed the "Out of range for memory type" build error when using Data Transfer Controller component on EWRX IAR tool chain	-	-	-	-	-	-	-	-	-	-	-	-	-	
2	Fixed the display issue for the unused items in the "Show View" dialog	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	
3	Fixed the wrong generated code issue for the default value of PDR register when using Port component	-	-	-	-	-	✓	-	-	-	-	-	-	-	
4	Fixed the wrong code order issue for buffer registers when using Motor component	-	-	-	-	✓	-	-	-	-	-	-	✓	-	
5	Fixed the generated code sequence issue when Comparator uses the DA output as reference voltage	-	-	-	-	✓	-	-	-	-	✓	-	✓	-	
6	Fixed the pin assignment issue when a "Version up" operation is performed for "r_usb_basic" FIT component	✓	✓	✓	✓	✓	✓	✓	✓	✓	-	✓	✓	-	
7	Fixed the macro value issue for BSP_CFG_CPLUSPLUS when creating Smart Configurator C++ project	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	
8	Fixed the missing code issue for AN117 to AN119 when using S12AD Continuous Scan Mode component	-	-	-	-	-	-	-	-	-	-	-	-	-	
9	Fixed the pin macro value update issue when using "r_qspi_rx" FIT component	-	-	-	-	-	-	-	-	-	-	-	-	-	
10	Fixed the missing pin function issue for the 64 pin LFQFP packages of RX24T	-	-	-	-	-	-	-	-	-	-	-	✓	-	
11	Fixed the display area setting items disable issue when using LCD component	-	-	✓	-	-	-	-	-	-	-	-	-	-	

Table 3-2 List of Correction of issues/limitations (RX600, RX700 Family) ✓ : Applicable, -: Not Applicable

No	Description	RX64M	RX65N, RX651	RX66N	RX66T	RX660	RX671	RX71M	RX72M	RX72N	RX72T	Remarks
1	Fixed the "Out of range for memory type" build error when using Data Transfer Controller component on EWRX IAR tool chain	-	-	✓	-	-	-	-	✓	✓	-	
2	Fixed the display issue for the unused items in the "Show View" dialog	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	
3	Fixed the wrong generated code issue for the default value of PDR register when using Port component	-	-	-	-	✓	-	-	-	-	-	
4	Fixed the wrong code order issue for buffer registers when using Motor component	-	-	-	✓	-	-	-	✓	-	✓	
5	Fixed the generated code sequence issue when Comparator uses the DA output as reference voltage	-	-	-	✓	-	-	-	-	-	✓	
6	Fixed the pin assignment issue when a "Version up" operation is performed for "r_usb_basic" FIT component	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	
7	Fixed the macro value issue for BSP_CFG_CPLUSPLUS when creating Smart Configurator C++ project	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	
8	Fixed the missing code issue for AN117 to AN119 when using S12AD Continuous Scan Mode component	-	✓	-	-	-	-	-	-	-	-	
9	Fixed the pin macro value update issue when using "r_qspi_rx" FIT component	-	✓	-	-	-	-	-	-	-	-	
10	Fixed the missing pin function issue for the 64 pin LFQFP packages of RX24T	-	-	-	-	-	-	-	-	-	-	
11	Fixed the display area setting items disable issue when using LCD component	-	-	-	-	-	-	-	-	-	-	

3.1.1 Fixed the “Out of range for memory type” build error when using Data Transfer Controller component on EWRX IAR tool chain

When using Data Transfer Controller component with Standalone Smart Configurator using EWRX IAR tool chain, “Out of range of memory type” build error will occur when build the generated project files. This issue has been fixed from SC for RX V2.17.0

3.1.2 Fixed the display issue for the unused items in the "Show View" dialog

When opening the "Show View" dialog in Standalone Smart Configurator, some unused items as below will be displayed in the list, this issue has been fixed from SC for RX V2.17.0

- Bookmarks
- Markers
- Navigator (Deprecated)
- Problems
- Progress
- Tasks
- Welcome
- Cheat Sheets

3.1.3 Fixed the wrong generated code issue for the default value of PDR register when using Port component

When using PORT component in the following device and pin packages, the default value of the PDR register that mentioned in the table below are not generated as expected. This issue has been fixed from SC for RX V2.17.0

Table 3-3 List of the generated PDR default value in PORT component

Device	Pin package	Port number	Wrong PDR default value	Correct PDR default value
RX140	80 pin	PORTJ	0x3E or _3E_PORTJ_DEFAULT	0x3D or _3D_PORTJ_DEFAULT
	48 pin	PORTE	0xF0 or _F0_PORTE_DEFAULT	0xE1 or _E1_PORTE_DEFAULT
	32 pin	PORTE	0xF0 or _F0_PORTE_DEFAULT	0xE1 or _E1_PORTE_DEFAULT
RX660	80 pin	PORT3	0x04 or _04_PORT3_DEFAULT	0x08 or _08_PORT3_DEFAULT
		PORT5	0xC0 or _C0_PORT5_DEFAULT	0xCF or _CF_PORT5_DEFAULT

3.1.4 Fixed the wrong code order issue for the buffer registers when using Motor component

When using Motor component and updating the duty for PWM signals, the generated codes order for the buffer registers was wrong, MTU4.TGRD (MTU7.TGRD) code was not generated at last, which disabled the data transfer between the data buffer register and temporary register. This issue has been fixed from SC for RX V2.17.0

3.1.5 Fixed the generated code sequence issue when Comparator uses the DA output as reference voltage

When using Comparator component and DA component together, then configuring the DA output as the reference voltage for Comparator, the operation enable code for Comparator will always be set before the DA start enable code which doesn't fulfill this use case expectation (Start the DA first, then enable Comparator operation). This issue has been fixed from SC for RX V2.17.0

3.1.6 Fixed the pin assignment issue when a "Version up" operation is performed for "r_usb_basic" FIT component

When performing a "Version up" operation to FIT component "r_usb_basic", the pin assignment will return to its default setting instead of keeping the same assignment before the "Version up" operation. This issue has been fixed from SC for RX V2.17.0

3.1.7 Fixed the macro value issue for BSP_CFG_CPLUSPLUS when creating Smart Configurator C++ project

When creating Smart Configurator with C++ project, the BSP_CFG_CPLUSPLUS macro value is not set to 1 automatically after code generation. This issue has been fixed by SC for RX V2.17.0

3.1.8 Fixed the missing code issue for AN117 to AN119 when using S12AD Continuous Scan Mode component

When using S12AD Continuous Scan Mode component and configuring the AN117 to AN119 for S12AD1 on the GUI, there are no codes generated for register ADANSA1, ADADS1 and ADSSTRL after code generation. This issue has been fixed by SC for RX V2.17.0

3.1.9 Fixed the pin macro value update issue when using "r_qspi_rx" FIT component

When using "r_qspi_rx" FIT component and making the pin assignments, the pin related macro values in the "r_qspi_smstr_rx_pin_config.h" are not updated accordingly after code generation. This issue has been fixed by SC for RX V2.17.0

3.1.10 Fixed the missing pin function issue for the 64 pin LFQFP packages of RX24T

When configuring the pin functions for the 64 pin LFQFP packages for RX24T, the IRQ3 is not available for selection with PD5 while SSLA0 and IRQ5 are not available for selection with PD6. This issue has been fixed by SC for RX V2.17.0

3.1.11 Fixed the display area setting items disable issue when using LCD Controller component

When using the LCD Controller component and configuring the display mode setting to be "static", the display area setting items (B-pattern area data and Blink display) will be disabled for selection which is unexpected. This issue has been fixed by SC for RX V2.17.0

3.2 Specification changes

Table 3-4 List of Specification changes (RX100, RX200 family)

○: Applicable, /: Not Applicable

No	Description	RX110	RX111	RX113	RX130	RX13T	RX140	RX230, RX231	RX23E-A	RX23E-B	RX23T	RX23W	RX24T, RX24U	RX26T	Remarks
1	ELC linkage configuration for Motor has been moved from ELC component to Motor component	-	-	-	-	✓	-	-	-	-	✓	-	✓	✓	
2	Linker script file address type update for BSP sections	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	

Table 3-5 List of Specification changes (RX600, RX700 family)

○: Applicable, /: Not Applicable

No	Description	RX64M	RX65N, RX651	RX66N	RX66T	RX660	RX671	RX71M	RX72M	RX72N	RX72T	Remarks
1	ELC linkage configuration for Motor has been moved from ELC component to Motor component	-	-	-	✓	-	-	-	✓	-	✓	
2	Linker script file address type update for BSP sections	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	

3.2.1 ELC linkage configuration for Motor has been moved from ELC component to Motor component

From Smart Configurator for RX V2.17.0, the ELC linkage configuration for Motor has been moved from ELC component to Motor component itself for better user experience.

In Smart Configurator for RX V2.16.0 and version before, to configure ELC linkage of Motor configuration, e.g., the linkage between GPT and S12AD, user needs to add ELC component and configure the linkage setting there, but from Smart Configurator for RX V2.17.0, these configurations have been moved from ELC component to Motor component itself for better user experience. Meanwhile, the ELC linkages for all other component's configurations are kept in ELC component.

3.2.2 Linker script file address type update for BSP sections

From Smart Configurator RX V2.17.0, the address type for BSP section "r_bsp_istack" and "r_bsp_ustack" in the "linker_script.ld" file for Smart Configurator GCC project are changed from "BLOCK" to "ALIGN" due to the Linker script file parser update.

4. List of RENESAS TOOL NEWS AND TECHNICAL UPDATE

Below is a list of notifications delivered by RENESAS TOOL NEWS and TECHNICAL UPDATE.

Issue date	Document No.	Description	Applicable MCUs	Fixed version
Sep. 1, 2017	R20TS0198	1. When using the I2C bus interface in slave mode https://www.renesas.com/document/tnn/notes-e-studio-smart-configurator-plug-smart-configurator-rx	RX130, RX64M, RX651, RX65N	V1.3.0

5.2 Details of Limitation

5.2.1 Note on the general I/O port direction issue on MCU package view when using Port Component

When adding two configurations for Port component and set different direction for the same port pin in these two configurations, e.g. set P14 as output in 1st configuration while P14 as input in the 2nd configuration, after that remove the 2nd configuration, but now the P14 direction is marked as 'I' on the MCU package view for 1st configuration.

5.2.2 Note on the resource tree in the FIT component GUI configuration

When configuring the FIT component, the resource tree is still visible even there is no pins under it, for such case it will be hidden from next release.

Property	Value

Figure 5-1 Resource tree without any pin in FIT component GUI

5.2.3 Note on address bus when using external bus

When using Address/Data multiplexed bus in external bus, disable all unnecessary address output pin settings.

Figure 5-2 “Address output pin setting” value should be disabled

5.2.4 Note on Overlaps build error when using Data Transfer Controller component on EWRX IAR tool chain

When using Data Transfer Controller component in Smart Configurator project that is using EWRX IAR tool chain, the following Overlaps build error might occur.

Figure 5-3 Build error when using Data Transfer Controller component

To solve the build error, please reconfigure the value of DTC vector base address in Smart Configurator GUI into the value that is out of the range value mentioned inside the build error message and smaller than the default value of DTC vector base address in 1-Kbyte units.

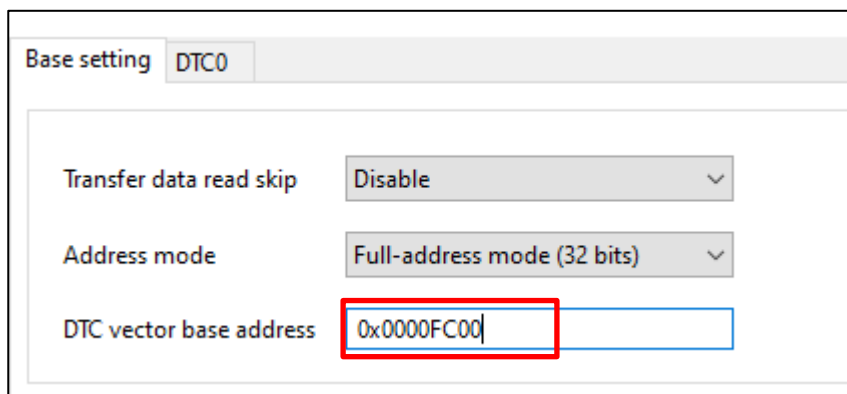

The following is an example on how to reconfigure the value of DTC vector base address of Data Transfer Controller component in RX671 device

- 1) Add Data Transfer Controller in Smart Configurator and generate code with default settings.
- 2) Import the project to IAR Workbench and build.
- 3) The following error is generated out when build the project in IAR Workbench.

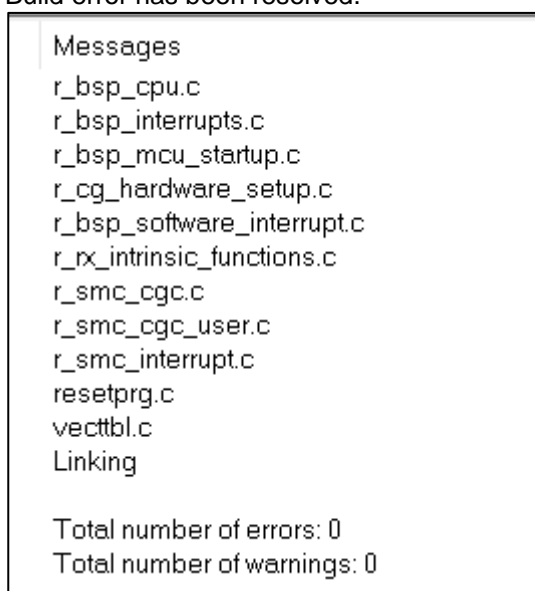

- 4) From the error message, the invalid range [0x1'fc68-0x1'ffff] will be shown at the console. Moreover, the valid input value of DTC vector base address must also be smaller than the default value.

- 5) Configure the value of DTC vector base address into “0x0000FC00”

- 6) Generate code and rebuild the project in IAR Workbench.
- 7) Build error has been resolved.

5.2.5 Note on the GUI display issue when using Port Output Enable (POE) component

After adding the Port Output Enable (POE) component from the “Component” page, its GUI configuration may not be displayed in the Smart Configurator.

To resolve this display issue, please follow the steps below.

- 1) Save the project.
- 2) Restarts the Smart Configurator.
(Restarts the e² studio if you are using e² studio IDE)
- 3) Load the previous *.scfg file.
(If you are using e² studio IDE, there is no need to load the *.scfg file)
- 4) Click the “Clocks” page.^[1]
- 5) Click the “Components” page and confirm that the POE’s GUI configuration is displayed.

Note 1: Do not click on the “Components” page before clicking on the “Clocks” page.

6. Points for Caution

This section describes points for caution regarding the Smart Configurator for RX V2.17.0. Regarding to FIT component driver caution, please refer to its document generated out after code generation.

6.1 List of Caution

6.2 Details of Caution

6.2.1 Note on configuring GPT interrupts

The GPT interrupts are not specified as the Software Configurable Interrupt in the initial state even after the GPT interrupts are configured by GPT component. To specify GPT interrupts as Software Configurable Interrupt source, release unused Software Configurable interrupt source on the Interrupt sheet and allocate GPT interrupts instead.

Figure 6-1 GPT interrupt vector number assignment

6.2.2 Note on using only reception in SCI Clock Synchronous Mode

In SCI Clock Synchronous Mode using internal clock, if only reception is enabled in high communication speed, extra clocks are generated even though reception has been completed. This is due to the delay in disabling RE to stop the clock after the desired number of data is received. To prevent this issue, select Transmission/Reception work mode when using Smart Configurator. Use “R_<Configuration Name>_Serial_Send_Receive” function instead of “R_<Configuration Name>_Serial_Receive”. The same number of data for tx_num and rx_num should be specified. Disable TXDn pin in Smart Configurator Pins page and send dummy data if transmission is not required. There will be warnings when TXDn pin is disabled. These warnings can be ignored as TXDn pin is not intended to be used originally.

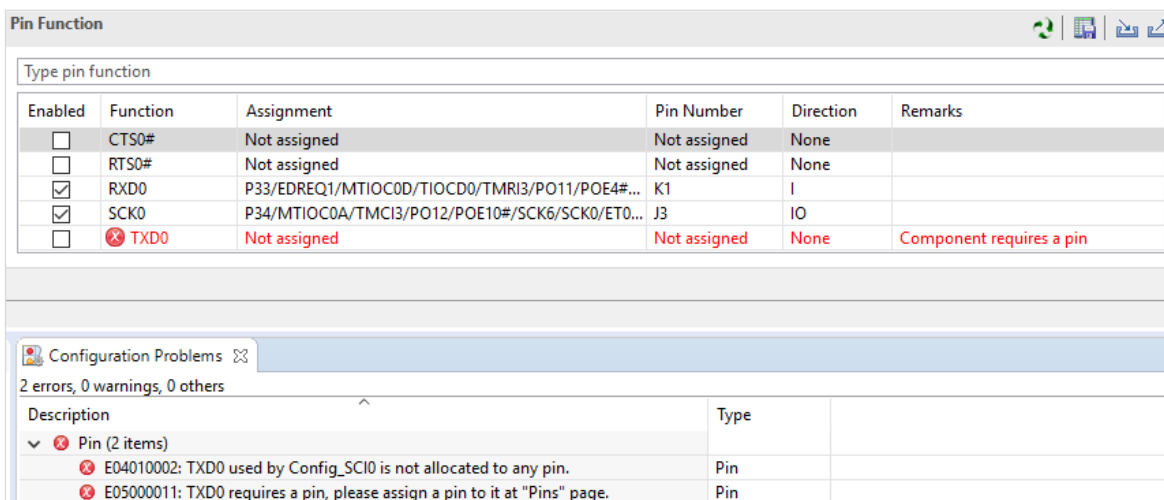

Figure 6-2 Ignore warnings when TXDn pin is disabled (Example with TXD0)

6.2.3 Note on using high transfer speed in SCIF Synchronous Mode

If the number of reception data specified for the API (R_<Configuration Name>_Serial_Receive or R_<Configuration Name>_Serial_Send_Receive) and reception FIFO threshold specified on GUI do not satisfy the formula below:

$$(\text{Reception Data Size}) = n * (\text{Reception FIFO threshold}) \quad (n=1,2,3,\dots)$$

extra clock generation may occur after the desired number of data is received in high communication speed when using internal clock.

To prevent this issue, specify the reception data size and reception FIFO threshold that satisfy the formula.

6.2.4 Note on device change functionality

Save project settings before performing change device operation. After change device, perform these operations:

1. Visual check on Components window and Configuration Problems window. Resolve errors and conflicts if there is any.
2. Check each component and convert settings.
3. Re-generate codes.

6.2.5 Note on using Smart Configurator for GCC project in e2 studio 7.4.0

When using default options to create new "GCC for Renesas RX Executable Project" with Smart Configurator in e2 studio 7.4.0, build error occurs.

```
C:\example\src\smc_gen\r_bsp\mcu/all/r_bsp_common.h:55:24:
fatal error: stdbool.h: No such file or directory
```

As workaround, use e2 studio 7.5.0 to create new "GCC for Renesas RX Executable Project" with Smart Configurator.

6.2.6 Note on using Data Transfer Controller

Smart Configurator does not support sequence transfer, write-back skip, write-skip disable and displacement addition features.

6.2.7 Note on Ports setting when using S12AD components

Some pins cannot be configured as output pins when S12AD components (Single Scan Mode, Continuous Scan Mode and Group Scan Mode) are used. For more information, refer to User's Manual: Hardware of the affected groups, "12-Bit A/D Converter" chapter, "Pin Setting When Using the 12-bit A/D Converter" usage note. From SC for RX 2.4.0, this note has been highlighted on the top GUI of S12AD components.

Device groups	Port pins
RX110, RX113	P40 to P44, P46
RX113	P40 to P44, P46 P90 to P92
RX130, RX140, RX23W	P40 to P47
RX64M, RX651, RX65N, RX66N, RX71M, RX72M, RX72N	P00 to P02, P03, P05, P07 P40 to P47 P90 to P93 PD0 to PD7 PE0 to PE7
RX671	P00 to P02, P03, P05, P07 P40 to P47 P90 PD0 to PD7 PE0, PE1

6.2.8 Note on section build warning when using FIT components

When using FIT components (e.g. r_ether_rx) with section settings, these section settings will be added automatically into IDE C/C++ builder setting, but these section settings will not automatically removed from the C/C++ builder setting when these FIT components are deleted from SC, thus there are build warnings for not finding section declaration when execute build operation after these FIT components are removed, please ignore these build warnings.

6.2.9 Note on C++ project support in CS+

When using Smart Configurator for C++ project application in CS+, please be noted to manually prepare the following content in the main.cpp generated out by these IDEs to make it work properly with Smart Configurator source codes.

- CS+: please manually add the following highlighted one line of code into main.cpp

```
#ifndef __cplusplus
//#include <ios> // Remove the comment when you use ios
//_SINT ios_base::Init::init_cnt; // Remove the comment when you use ios
#endif

void main(void);
#ifdef __cplusplus
extern "C" {
#include "r_smc_entry.h"
void abort(void);
}
#endif

void main(void)
{
}

#ifdef __cplusplus
void abort(void)
{
}
#endif
```

6.2.10 Note on Installation directory

When installing Smart Configurator, you may get an error message "The specified path is too long" if the installation file path is longer than the maximum length permitted by Windows. The suggested way is to re-install the CS+ into its default path (C:\Program Files (x86)\Renesas Electronics\ or a folder whose paths' length is less than 83 characters, then install Smart Configurator again.

6.2.11 Note on the build error of existing RTOS C++ project

When building existing RTOS C++ CCRX project (FreeRTOS & Azure RTOS) in e² studio, there will be a build error saying "E0562310: Undefined external symbol "_abort" referenced in "error"" in the output console, these existing projects were created by Smart Configurator for RX V2.12.0 and before version while BSP version was updated to V7.00. To resolve this build error, please add the "abort" function manually into main program file.

e.g. Add the "abort" function for FreeRTOS C++ CCRX project

```
#include "FreeRTOS.h"
#include "task.h"

void main_task(void *pvParameters)
{
    /* Create all other application tasks here */

    while(1);

    vTaskDelete(NULL);
}

void abort (void)
{
}
```

6.2.12 Note on the output of high impedance issue for TXDn pin

When using the serial components, the SCR.TE bit is set to 1 after changing the pin function to TXDn which will cause the output of TXDn pin becomes high impedance. To fix this issue, SCI/SCIF Asynchronous Mode component has followed the UM suggestion (set the TE bit to 1 before changing the pin function to "TXDn". Change the pin function to "general-purpose I/O port, output" before setting the TE bit to 0) and updated the generated codes from Smart Configurator for RX V2.14.0. For the other serial components as below, the generated codes are not updated to follow the UM suggestion because the high impedance time is quite short, there is no impact to these modes' communications.

- SCI/SCIF Clock Synchronous Mode
- Smart Card Interface Mode
- SPI Clock Synchronous Mode (SCI channels)

6.2.13 Note on the include path update issue when renaming the component's configuration name

When renaming the added component's configuration in e² studio Smart Configurator project that has self-defined include path setting for any folder or file, include path setting for that folder or file will keep the old name setting after code generation. This will cause build error when compiling the newly generated codes so please manually update the include path.

The folder or file which has self-defined include path setting can be recognized by checking the overlay icon (📁) on that folder or file. Below is an example on how to handle the include path update after renaming Compare Match Timer component configuration.

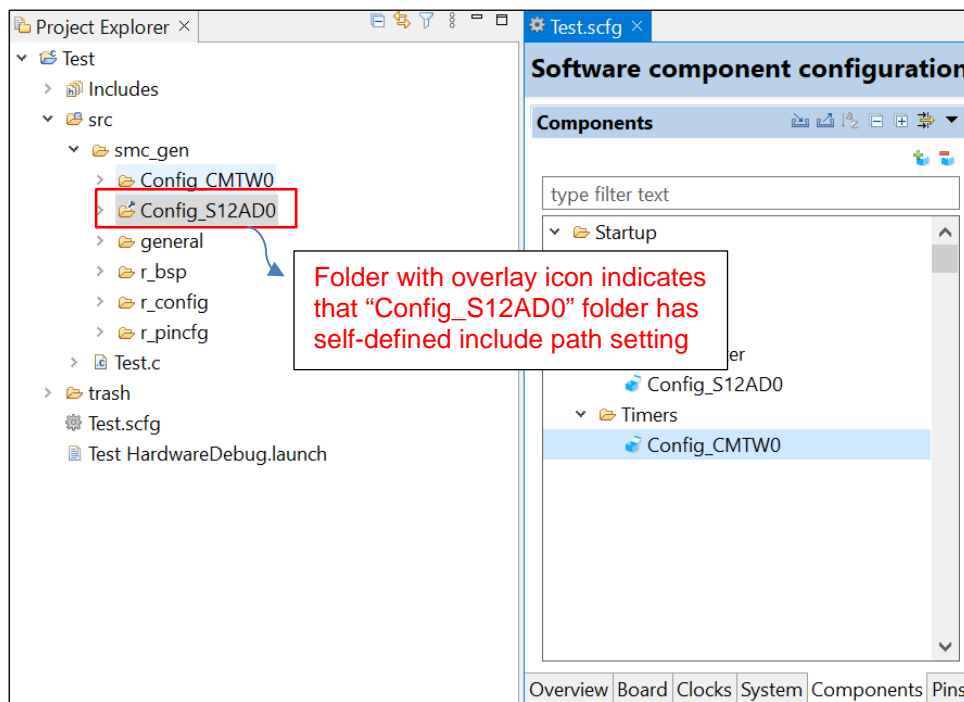

Figure 6-3 Compare Match Timer component configuration before renaming

Figure 6-4 The Compare Match Timer component configuration after renaming

Figure 6-5 Include path setting for the “Config_S12AD0” configuration

6.2.14 Note on accessing “Release Notes” and “Tool News” URL from the help menu

For Smart Configurator for RX V2.15.0 or before version, “Release Notes” and “Tools News” in the help menu cannot access the correct URL. This issue has been fixed from this version.

Please access the URL below directly for Smart Configurator for RX V2.15.0 or before version.

Release Notes: <https://www.renesas.com/rx-smart-configurator-release-note>

Tool News: <https://www.renesas.com/rx-smart-configurator-tn-notes>

Figure 6-6 "Release Notes" and "Tool News" in help menu

6.2.15 Note on the IPCF file naming change for IAR project

From Smart Configurator for RX V2.15.0 onwards, IPCF file name has been updated from “projectname.ipcf” to “buildinfo.ipcf”, thus for existing IAR project which is using “projectname.ipcf”, please register the new IPCF file “buildinfo.ipcf” file into IAR EWRX workbench via the “Add project connection” menu to restore the connection between Smart Configurator and IAR EWRX workbench, otherwise there is no update for the generated files in the IAR EWRX workbench when changing GUI setting in Smart Configurator and then generating codes.

6.2.16 Note on using user code protection feature

From Smart Configurator for RX V2.16.0 onwards, user code protection feature will be supported for all Code Generation components. Please use the following specific tags to add user code when using the user code protection feature. If the specific tags do not match exactly, inserted user code will not be protected after the code generation.

```
/* Start user code */
```

```
User code can be added between the specific tags
```

```
/* End user code */
```

The user code protection feature will only be supported on the files that are generated by the Code Generation component. Hence, the user code protection feature is not available for non-Code Generation components.

General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

1. Precaution against Electrostatic Discharge (ESD)

A strong electrical field, when exposed to a CMOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop the generation of static electricity as much as possible, and quickly dissipate it when it occurs. Environmental control must be adequate. When it is dry, a humidifier should be used. This is recommended to avoid using insulators that can easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors must be grounded. The operator must also be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions must be taken for printed circuit boards with mounted semiconductor devices.

2. Processing at power-on

The state of the product is undefined at the time when power is supplied. The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the time when power is supplied. In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the time when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the time when power is supplied until the power reaches the level at which resetting is specified.

3. Input of signal during power-off state

Do not input signals or an I/O pull-up power supply while the device is powered off. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Follow the guideline for input signal during power-off state as described in your product documentation.

4. Handling of unused pins

Handle unused pins in accordance with the directions given under handling of unused pins in the manual. The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of the LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible.

5. Clock signals

After applying a reset, only release the reset line after the operating clock signal becomes stable. When switching the clock signal during program execution, wait until the target clock signal is stabilized. When the clock signal is generated with an external resonator or from an external oscillator during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Additionally, when switching to a clock signal produced with an external resonator or by an external oscillator while program execution is in progress, wait until the target clock signal is stable.

6. Voltage application waveform at input pin

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (Max.) and V_{IH} (Min.) due to noise, for example, the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (Max.) and V_{IH} (Min.).

7. Prohibition of access to reserved addresses

Access to reserved addresses is prohibited. The reserved addresses are provided for possible future expansion of functions. Do not access these addresses as the correct operation of the LSI is not guaranteed.

8. Differences between products

Before changing from one product to another, for example to a product with a different part number, confirm that the change will not lead to problems. The characteristics of a microprocessing unit or microcontroller unit products in the same group but having a different part number might differ in terms of internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
5. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
6. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
7. No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
8. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
12. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
13. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
