A Note on Using
the E8 Emulator Software V.2.01 Release 00

Please take note of the following problem in using the emulator software for the E8 on-chip debugging emulator:

- On loading user programs onto the emulator

1. **Description**

   Consider the case where the M16C/Tiny, M16C/62P E8 emulator debugger V.1.00.00, which is included in the E8 emulator software V.2.01 Release 00, is used for debugging user programs.
   If a user program is loaded onto the emulator, an error may arise depending on target MCUs.

2. **Condition**

   This problem occurs if any program written in the ROM area from FE000h to FEFFFh is loaded onto the emulator with any of the following MCUs being targeted for debugging:

   M30280FA, M30281FA, M30290FA, M30290FC, M30291FA, and M30291FC

3. **Solution**

   This problem has already been resolved in the E8 emulator software V.2.02 Release 00. So please download this from **HERE** and update yours to it.
