A Note on Using Integrated Development Environment High-performance Embedded Workshop

Please take note of the following problem in using the High-performance Embedded Workshop, an integrated development environment.

- On using the Import Makefile function
-

1. Versions Concerned

- (1) High-performance Embedded Workshop Version 3.01 (release 1) bundled with the M3T-NC30WA V.5.20 Release 1
- (2) High-performance Embedded Workshop Version 3.01 (release 1) bundled with the M3T-NC30WA (Free version for R8C/Tiny only)

2. Description

The High-performance Embedded Workshop is unsuccessfully terminated when you use the High-performance Embedded Workshop in combination with the M3T-NC30WA V.5.20 Release1 and create a new High-performance Embedded Workshop work space in the following steps:

- (1) A <makefile> file is selected in the Makefile Path text box using the Import Makefile function of the New Project Work Space dialog box.
- (2) Then the Start button is clicked.

3. Workaround

Don't click the Start button.

When a <makefile> file is selected in the Makefile Path text box, the High-performance Embedded Workshop immediately starts analyzing the makefile information. So you need not click the Start button.

4. **Schedule of Fixing the Problem**

We plan to fix this problem in our next release of the product.
