Release of Floating Licenses for RH850 Family and RL78 Family Compiler Packages

We have released the following floating licenses for compiler packages by Renesas.

- RH850 Family C Compiler Package (with IDE) Professional edition V1
 - RH850 Family C Compiler Package (with IDE) Standard edition V1
 - RL78 Family C Compiler Package (with IDE) Professional edition V1
 - RL78 Family C Compiler Package (with IDE) Standard edition V1
 - RL78 Family C Compiler Package (without IDE) Professional edition V1
 - RL78 Family C Compiler Package (without IDE) Standard edition V1
-

1. Outline of the Product

Floating licenses have been newly added to the forms of licenses for compilers by Renesas.

A floating license for a compiler by Renesas involves managing the compiler license on a server in the customer's network environment, with a limited number of users at a time obtaining licenses from the server to run the compiler on client which are connected to the network.

2. Features

Since the license can be managed easily and flexibly in comparison with the existing license forms, the license can be used in a way that suits the organization involved in development. The number of licenses can be selected as 1, 5, 10, or 20.

- Usage on the server and client connected to the network

The licenses are managed by the server. When a user wants to run a compiler, the user requests a license from the server via a license manager. If a license is available, the client then obtains the license.

- Usage as an off-line license

The floating license can be used in an environment which is not connected to the network, with a client temporarily carrying the license.

Refer to the user's manuals from either of the Web pages below for details of the functionality and operating environments (including compiler versions) for floating licenses. The information will be available from December 7.
