## Product Qualification Report TP65H300G4JSGB

1. Purpose: The purpose of this specification is to document the Qualification Report for TP65H300G4JSGB

## 2. Scope

- a. The products listed in section 1 are fully qualified and released to production.
- Qualification test results on these products may reference existing qualification results of similar products per the use of generic data as defined in section 2.2 of AEC-Q101 Rev D1
- c. Each of the referenced part numbers share the same major assembly process and material elements as defined in Stress Test qualification for Automotive Grade Semiconductors, AEC-Q101 and are considered to be part of the same qualification family.

## 3. Qualification Process

- a. All Fab Lots were processed separately with a discrete amount of time between lots. All lots were assembled using the same Assembly House, on the same assembly line. All lots undergo Final Test using the documented test flow and are screened against documented test limits as appropriate to their part number. All processes and test conditions are documented and maintained under revision control as part of the Transphorm Quality Management System.
- b. Documented process and test conditions that are used for qualification of products are designated "Process of Record". Changes to the Process of Record are managed through the Process/Product Change Notification Procedure, which is part of the Transphorm Quality Management System.
- 4. ESD Results: 3 parts pass for each test
  - a. Standard Used: ANSI/ESDA/JEDEC JS-001-2017

ESD TEST	RATING
CDM	≥ 2000V / C7
HBM	± 200V / 0

# 5. Reliability Testing

a. Failed devices are analyzed for root cause and correction. Only a representative sample needs to be analyzed, though some level of analysis will be applied to every failed part. Acceptable root cause and corrective action and successful demonstration of corrective and preventative actions will constitute successful qualification of a device. The part and/or qualification family can be qualified as long as containment of any problems is demonstrated until corrective and/or preventative actions are in place.

# Product Qualification Report TP65H300G4JSGB

### 6. Electrical Test Parameters

a. Components submitted for qualification testing must meet all datasheet parameters before and after stress testing

Parameter	Symbol	Conditions	LSL	USL	Unit
Drain to source leakage	I <sub>DSS</sub>	V <sub>DS</sub> = 650V		12	μA
current		$V_{GS} = 0V$			
		T <sub>J</sub> =25°C			
Gate to Source Forward	I <sub>GSS</sub>	V <sub>GS</sub> =10V		100	nA
Leakage Current					
Drain source on resistance	R <sub>DS</sub>	V <sub>GS</sub> = 6V		312	mΩ
		I <sub>D</sub> =6.5A			
		T <sub>J</sub> = 25°C			
Gate Threshold Voltage	V <sub>GS(th)</sub>	V <sub>DS</sub> =V <sub>GS</sub>	2.0	2.8	V
		ID=0.5mA			

7. Electrical Reliability Qualification Test Results

TEST	SYMBOL	CONDITIONS	SAMPLE	RESULT
Moisture/Reflow	MSL-3	MSL-3	9 lots	0 Fails
Sensitivity		Pb-free	25 units per lot	PASS
		$T_C=260^{\circ}C$	225 total parts	
High Temperature	HTRB	T <sub>J</sub> =150°C	3 lots	0 Fails
Reverse Bias		$V_{\rm DS} = 520 V$	77 parts per lot	PASS
		1000 HRS	231 total parts	
Highly	HAST	130°C,85% RH	3 lots	0 Fails
Accelerated Temp		33.3 PSI	77 parts per lot	PASS
and Humidity Test	.0	Bias = 100V	231 total parts	
	14.0	96 HRS		
		MSL pre-con		
Temperature Cycle	TC	-40°C / 125°C	3 lots	0 Fails
		2 Cycles / HR	77 parts per lot	PASS
		1000 Cycles	231 total parts	
		MSL pre-con		
Power Cycle	PC	25°C / 125°C	3 lots	0 Fails
		$\Delta T = 100$ °C	77 parts per lot	PASS
		7500 Cycles	231 total parts	
High Temperature	HTGB	150°C	3 lots	0 Fails
Gate bias		1000 HRS	77 parts per lot	PASS
		V <sub>GSS</sub> =10V	231 total parts	
Unbiased Highly	UHAST	130C, 85%RH,	3 lots	0 Fails
Accelerated Temp		33.3 PSI,96 Hrs	77 parts per lot	PASS
and Humidity Test		MSL pre-con	231 total parts	

Parts for Power Cycle will be mounted to printed circuit board.
