- **Target board**

RZ/Five reference board

- RZ/Five Evaluation board Kit (smarc-rzfive) (*)
 - RZ/Five SMARC Module Board (P/N: RTK9743F01C01000BE)
 - RZ SMARC Series Carrier Board (P/N: RTK97X4XXB00000BE)

(*) “RZ/Five Evaluation board Kit” includes the RZ/Five SMARC Module Board and the RZ SMARC Series Carrier Board.

The “Evaluation board Kit for RZ/Five MPU” will be called “RZ/Five Evaluation Kit” in the next section.

- **Build Environment**

Linux Host PC

OS: Ubuntu 20.04 LTS (64 bit OS must be used.)

20.04 inside a docker container also OK.

100GB free space on HDD or SSD is necessary.

- **Functions**

Linux VLP

- Linux Kernel
- Linux Drivers

- **File contents**

VLP/F is delivered by the files listed in the Table 1.

Table 1. RZ/Five Verified Linux Package**Basic packages**

File	Description
RTK0EF0045Z0025AZJ-v3.0.5-update1.zip (*1)	RZ/Five Verified Linux Package. This file includes the Yocto recipe packages and the necessary documents.
rzfive_vlp_v3.0.5.tar.gz (*1)	Yocto recipe packages
v3.0.5-to-v3.0.5update1.patch	Patch file to update VLP/Fv3.0.5 to VLP/Fv3.0.5-update1. See the "5. Note" section. This file is optional.
oss_pkg_rzfive_v3.0.5.7z (*1)	Open source software packages See the Note below before download
r01us0608ej0104-rz-five(Release Note).pdf	This document
r01us0618ej0101-rz-five(Linux Start-up Guide RZFive).pdf	Documents describing building instruction, booting method and the required settings of bootloader for RZ/Five.
oss_pkg_rzfive_v3.0.5.7z (*1)	Open source software packages See the Note below before download

(*1) These packages are provided "AS IS" with no warranty and the license which is described in the source code. Please check the contents of the license, then consider the applicability to the product carefully.

Note) Open source software packages contain all source codes of OSSs. These are the same versions of OSSs used when VLP/F was verified.
If you are just evaluating VLP/F and RZ/Five series, open source software packages are not mandatory to use. Usually, all the software can be built without using these files if your build machine is connected to the Internet.

Open source software packages are required for an "offline" environment. The word "offline" means an isolated environment which does not connect to any network. VLP/F can always build images in this "offline" environment by using these packages without affected from changes of original repositories of OSSs. Also, this "offline" environment always reproduces the same images as the images which were verified by Renesas. Note that if you build without using open source software packages, there are possibilities to use different source codes than Renesas used due to the implicit changes of the repositories of OSSs.

Additional packages

File	Description
RTK0EF0045Z9006AZJ-v3.0.3.zip	BSP Manual Set for RZ/G2L, RZ/G2LC, RZ/G2UL, RZ/Five and RZ/V2L.

Note) Detailed information regarding the configuration (Device tree) and usage of the device drivers contained in this VLP can be downloaded from Renesas.com. Please download the "BSP Manual Set".

4. Restrictions

None

5. Note

Apply the following patch if you build in the “online” environment. This step is required before executing the bitbake command. Please refer to the section below in the “Linux Start-up Guide” for more information.

2.1 Building images to run on the board:

- “Decompress OSS files to “build” directory (Optional)”
- “Start a build”

```
$ cd ~/rzfive_vlp_<package version>  
$ patch -p1 < v3.0.5-to-v3.0.5update1.patch
```

Note) If you build in the “online” environment, all source codes will be downloaded from the repositories of each OSS via the internet when running bitbake command.
