

Y-ASK-RH850U2Bx

Configurator Software V.1.2.0

Starter Kit Configurator

This package includes the Y-ASK-RH850U2B configurator software and the firmware for the RL78 processor on the starter kit board.

The actual version for both, configurator software and firmware, is V.1.2.0.

The User's Manual for Y-ASK-RH850U2B includes information on the configurator usage and describes how to program RL78.

The User's Manual can be downloaded from the [Starter Kit homepage](#).

Note

RL78 needs only to be re-programmed if it has been erased completely or if the RL78 software is damaged for some reason.

Usually, it is NOT necessary to re-program RL78.

If the RL78 firmware will be updated, the configurator software will also be updated. And the updated configurator is able to re-program RL78. So, a manual re-programming of RL78 is not necessary.
