A Note on Using High-performance Embedded Workshop V.4.05.00 or Later

Please take note of the following problem in using High-performance Embedded Workshop V.4.05.00 or later:

- With running High-performance Embedded Workshop V.4.05.00 or later on Windows Vista by user rights
-

1. Description

Even if your High-performance Embedded Workshop and all the software-development tools managed by it are compatible with Windows Vista, the OS may requests you to be logged on as a member of the Administrators group; that is, you cannot run them on the OS by user rights.

This problem arises when you are logged on as a member of the Administrators group and make the settings for running High-performance Embedded Workshop V.4.04.01 or earlier on Windows Vista by using the Compatibility tab, and afterward you update the IDE to the one compatible with Windows Vista (High-performance Embedded Workshop V.4.05.00 or later).

For the settings by using the Compatibility tab, see RENESAS TOOL NEWS Document No. 070201/tn6 on the Web page at:

<http://tool-support.renesas.com/eng/toolnews/070201/tn6.htm>

NOTICE:

High-performance Embedded Workshop can run on Windows Vista by user rights when the following are both satisfied:

- (1) The IDE is compatible with Windows Vista; that is, its version is V.4.05.00 or later.
- (2) All the software-development tools managed by the IDE are also compatible with Windows Vista.

Otherwise, you must be logged on as a member of the Administrators group to run the IDE on Windows Vista as well as installing any software-development tool.

We have already informed you of these. For details see Section 2 of RENESAS TOOL NEWS Document No. 080701/tn7 on the Web page at <http://tool-support.renesas.com/eng/toolnews/080701/tn7.htm>

For the compatibility of your software-development tools with Windows Vista, go to:

http://tool-support.renesas.com/eng/toolnews/p_tool.htm#environment

2. Workarounds

To avoid the problem, use either of the following ways:

- (1) Re-setting items in the Compatibility tab of the program's Properties dialog box
 - a. Right-click the shortcut of High-performance Embedded Workshop to open the Properties dialog box.
 - b. In the Compatibility tab, clear the following two check boxes:
 - Run This Program in Compatibility Mode
 - Run the Program as an Administration
- (2) Using the program's Compatibility wizard
 - a. On Windows' Start menu, click Control Panel, Programs, and " Use an older Program with this version of Windows" to open the program's Compatibility wizard; then click Next.
 - b. In the window that appears, check the I want to choose from a list of programs check box and select High-performance Embedded Workshop in the list; then click Next.
 - c. In the window for selecting the program's Compatibility mode, select "Do not apply a compatibility mode"; then click Next.
 - d. In the window that appears, clear the Run the Program as an Administration check box.
 - e. Click Next to continue the wizard, and try starting High-performance Embedded Workshop.
 - f. If the IDE starts successfully, select the Yes, set this program to always use these compatibility settings check box, click Next, and then press Finish to close the Compatibility wizard.
