

A Unique Coax Cable Driver Circuit with Common Mode Noise Cancellation

A coaxial cable carries signal through a central wire covered by a dielectric and an outer ground shield. Sometimes with long cables, the actual value of ground is not 0.000V at both ends of the cable. This common mode voltage (CMV) between the source and the load causes interference with the video signal. The CMV is typically compensated or cancelled at the receive end of the cable; however, sometimes the receive end is inaccessible. Figure 1 shows a unique cable driver circuit that rejects CMV at the source end of the cable.

The coax cable in Figure 1 is driven by a source amplifier (Amp 2) configured with a gain of two (by R_F and R_G). To minimize reflections and provide matching, a back termination resistor (R_B) is placed between the source and the coaxial cable. The cable's load end is also terminated with a resistor R_L equal to the impedance of the cable. This termination resistor is located between the output of the cable and the local ground (here called "point A"). The ground reference at point A differs in potential from the ground reference at the source. This difference is represented by the voltage source, CMV.

The rest of the components in Figure 1 perform the common-mode feedback compensation. First, R_S is placed between the source ("point B") side of the coaxial cable and the ground on that side—here assumed to be the true ground reference. As long as the impedance of the ground shield of the cable is low, the common-mode voltage difference between the source and load grounds now appears across R_S . Amp 1 with a gain ($A_V = -1$) then inverts the common-mode signal and feeds it back as a reference to the source amplifier.

This feedback effectively adds the common-mode voltage difference onto the signal at the source. Then, the output signal will be:

$$V_{OUT+} = V_{SIGNAL} + V_{CM}$$

$$V_{OUT-} = V_{CM}$$

$$V_{OUT_DIFF} = V_{SIGNAL} \tag{EQ. 1}$$

Hence, only the signal is seen on the coax cable output.

While the termination resistance applies voltage division to the signal, it does not divide the common-mode voltage. Therefore, the accuracy of this method is determined by the quality of the gain resistors. Resistors with 1% tolerance are recommended. An example of the improvement provided by this circuit is shown comparing Figure 2 and Figure 3. Figure 2 is an example signal with a sinusoidal common-mode voltage. Figure 3 shows that same signal with the use of the common-mode feedback in Figure 1.

Longer cables are more susceptible to common-mode issues. Cables of 1000 feet will have a typical shield resistance of 0.5Ω to 1.5Ω. With a cable to source ground resistor of 75Ω, the CMV error will be about 16mV per volt of CMV. The load termination will divide this error in two so the CMV error at the load is approximately 8mV per one volt of CMV. The maximum CMV that can be rejected is 2.4V_{PEAK} with ±5V amps for AC-coupled video and 2V_{PEAK} for DC-coupled video. The value of R_S sets the trade-offs of the system. A lower value for R_S will allow for a greater range of common-mode compensation through voltage division at the cable input. Conversely, R_S must be large enough to provide an adequate voltage to Amp 1. For additional CMV range, ±12V amps, like ISL55002, provide approximately 9V_{PEAK} CMV rejection.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.
Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
