

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

DISCLAIMER

The related documents in this customer notification may include preliminary versions. However, preliminary versions may not have been marked as such.

The information in this customer notification is current as of its date of publication. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC's data sheets or data books, etc., for the most up-to-date specifications of NEC PRODUCT(S). Not all PRODUCT(S) and/or types are available in every country. Please check with an NEC sales representative for availability and additional information.

No part of this customer notification may be copied or reproduced in any form or by any means without prior written consent of NEC. NEC assumes no responsibility for any errors that may appear in this customer notification. NEC does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC PRODUCT(S) listed in this customer notification or any other liability arising from the use of such PRODUCT(S).

No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC or others. Descriptions of circuits, software and other related information in this customer notification are provided for illustrative purposes of PRODUCT(S) operation and/or application examples only. The incorporation of these circuits, software and information in the design of customer's equipment shall be done under the full responsibility of customer. NEC assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.

While wherever feasible, NEC endeavors to enhance the quality, reliability and safe operation of PRODUCT(S) the customer agree and acknowledge that the possibility of defects and/or erroneous thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects and/or errors in PRODUCT(S) the customer must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.

The customer agrees to indemnify NEC against and hold NEC harmless from any and all consequences of any and all claims, suits, actions or demands asserted against NEC made by a third party for damages caused by one or more of the items listed in the enclosed table of content of this customer notification for PRODUCT(S) supplied after the date of publication.

Applicable Law:

The law of the Federal Republic of Germany applies to all information provided by NEC to the Customer under this Operating Precaution document without the possibility of recourse to the Conflicts Law or the law of 5th July 1989 relating to the UN Convention on Contracts for the International Sale of Goods (the Vienna CISG agreement).

Düsseldorf is the court of jurisdiction for all legal disputes arising directly or indirectly from this information. NEC is also entitled to make a claim against the Customer at his general court of jurisdiction.

If the supplied goods/information are subject to German, European and/or North American export controls, the Customer shall comply with the relevant export control regulations in the event that the goods are exported and/or re-exported. If deliveries are exported without payment of duty at the request of the Customer, the Customer accepts liability for any subsequent customs administration claims with respect to NEC.

Notes: (1) "**NEC**" as used in this statement means NEC Corporation and also includes its direct or indirect owned or controlled subsidiaries.

(2) "**PRODUCT(S)**" means 'NEC semiconductor products' (*NEC semiconductor products* means any semiconductor product developed or manufactured by or for NEC) and/or 'TOOLS' (*TOOLS* means 'hardware and/or software development tools' for NEC semiconductor products' developed, manufactured and supplied by 'NEC' and/or 'hardware and/or software development tools' supplied by NEC but developed and/or manufactured by independent 3rd Party vendors worldwide as their own product or on contract from NEC)

IE-789234-NS-EM1

(A) Table of Operating Precautions

No.	Outline	Control Code ^{Note}	IE-789234-NS-EM1			
			A	B	C	
1	Restriction on oscillation stabilization time (Technical Limitation)		X	X	X	
2	Target device not supported (Technical Limitation)		X	✓	✓	
3	General cautions (Technical Limitation)		X	X	X	
4	AD Converter (Technical Limitation)		X	X	✓	
5	P121/X1 pin function (Technical Limitation)		X	X	✓	
6	Hang up after stop execution (Technical Limitation)		X	X	✓	

✓ : Not applicable

X : Applicable

- : Specification is not supported

Note: The control code is the **second letter** from the left of the 10 digit serial number (version that have not been upgraded).
For upgraded versions, an upgrade label is affixed to the product. The version-up level on this sticker corresponds to the actual control code (i.e. the X in the V-UP LEVEL X indicates the control code X).

(B) Description of Operating Precautions

No. 1	Restriction on oscillation stabilization time (Technical Limitation)																											
	<p><u>Details</u></p> <p>When the IE-789234-NS-EM1 is used in combination with the IE-78K0S-NS, the emulator may not be activated depending on the combination of the oscillation stabilization time and frequency of the clock supplied to X1 set by the option byte, as shown below.</p> <p>This restriction does not apply when using the IE-789234-NS-EM1 in combination with the IE-78K0S-NS-A.</p> <table><tr><th colspan="2">Option Byte Setting</th><th rowspan="3">Oscillation Stabilization Time</th><th rowspan="3">Frequency of clock supplied to X1</th><th rowspan="3">Result</th></tr><tr><th>SW3-7</th><th>SW3-6</th></tr><tr><th>DEFOSTS1</th><th>DEFOSTS0</th></tr><tr><td>0</td><td>0</td><td>$2^{10}/f_x$</td><td>500KHz to 10MHz</td><td rowspan="2">OK</td></tr><tr><td>0</td><td>1</td><td>$2^{12}/f_x$</td><td>500KHz to 10MHz</td></tr><tr><td>1</td><td>0</td><td>$2^{15}/f_x$</td><td>500KHz to 10MHz</td><td rowspan="2">May not be activated when the frequency is lower than 1MHz</td></tr><tr><td>1</td><td>1</td><td>$2^{17}/f_x$</td><td>500KHz to 10MHz</td></tr></table> <p><u>Workaround</u></p> <ul style="list-style-type: none">Supply a 1 MHz or higher clock to X1 when the oscillation stabilization time is set to $2^{15}/f_x$ (DEFOSTS1: 1 and DEFOSTS0: 0)Supply a 2 MHz or higher clock to X1 when the oscillation stabilization time is set to $2^{17}/f_x$ (DEFOSTS1: 1 and DEFOSTS0: 1)	Option Byte Setting		Oscillation Stabilization Time	Frequency of clock supplied to X1	Result	SW3-7	SW3-6	DEFOSTS1	DEFOSTS0	0	0	$2^{10}/f_x$	500KHz to 10MHz	OK	0	1	$2^{12}/f_x$	500KHz to 10MHz	1	0	$2^{15}/f_x$	500KHz to 10MHz	May not be activated when the frequency is lower than 1MHz	1	1	$2^{17}/f_x$	500KHz to 10MHz
Option Byte Setting		Oscillation Stabilization Time	Frequency of clock supplied to X1				Result																					
SW3-7	SW3-6																											
DEFOSTS1	DEFOSTS0																											
0	0	$2^{10}/f_x$	500KHz to 10MHz	OK																								
0	1	$2^{12}/f_x$	500KHz to 10MHz																									
1	0	$2^{15}/f_x$	500KHz to 10MHz	May not be activated when the frequency is lower than 1MHz																								
1	1	$2^{17}/f_x$	500KHz to 10MHz																									
No. 2	Target device not supported (Technical Limitation)																											
	<p><u>Details</u></p> <p>The IE-789234-NS-EM1 does not support the devices shown below.</p> <ul style="list-style-type: none">78K0S/KY1+: uPD 78F9210, 78F9211, 78F921278K0S/KB1+: uPD 78F9232, 78F9234 <p>It only supports 78K0S/KA1+: uPD 78F9221, 78F9222</p>																											
No. 3a	General cautions Option byte (Technical Limitation)																											
	<p><u>Details</u></p> <p>Since the IE-789234-NS-EM1 sets the option byte using SW3, the value set to address 80H is not reflected in the debugger.</p>																											

No. 3b	General caution Port registers (Technical Limitation)
	<u>Details</u> Some bits of the port registers that are fixed to 0 can be overwritten by program. However, writing is not possible on the SFR window.
No. 3c	General cautions AD converter (Technical Limitation)
	<u>Details</u> AD conversion can be started without waiting for 1us or longer even if bit 0 (ADCE) of the AD conversion mode register (ADM) is set to 1.
No. 3d	General cautions Reset flag register (RESF) (Technical Limitation)
	<u>Details</u> Bit 4 (WDTRF) and bit 0 (LVIRF) of the reset control flag register (RSEF) cannot be initialized by the reset button of the debugger or reset button (SW2) of the IE-78K0S-NS and IE-78K0S-NS-A. Input a reset from the target side, re-apply power to the emulator or press SW4 on the IE-789234-NS-EM1 to clear the reset control flag register (RESF).
No. 3e	General cautions Self programming (Technical Limitation)
	<u>Details</u> The IE-789234-NS-EM1 does not support the self programming function of the flash memory.
No. 3f	General cautions HALT mode (Technical Limitation)
	<u>Details</u> When HALT mode is released by an interrupt, the program is restored two or three clocks earlier than the target device.
No. 3g	General cautions Low-voltage detection level (Technical Limitation)
	<u>Details</u> An error of several mV occurs in the IE-789234-NS-EM1 compared to the target device.

No. 3h	General cautions AD converter characteristics (Technical Limitation)
	<p><u>Details</u></p> <p>The characteristics of the AD converter of the IE-789234-NS-EM1 differ from those of the target device because a probe is connected between the IE-789234-NS-EM1 and the target system.</p>
No. 3i	General cautions 8-bit timer H1 (Technical Limitation)
	<p><u>Details</u></p> <p>When the low speed ring osc. is selected as the 8-bit timer count clock, the timer does not stop while the program is stopped even if "Break" is selected for "Peripheral Break" in the configuration dialog box of the debugger.</p>
No. 3j	General cautions RESET pin (Technical Limitation)
	<p><u>Details</u></p> <p>Since the RESET pin alternately functions as P34, it is connected to a protective resistor (pull-down) inside the emulator. Consequently, the RESET pin is always low level.</p> <p>Normally a reset does not occur because "Mask: RESET" is set in the configuration dialog box. But if the "Mask: RESET" setting is canceled, a reset is always applied, which causes the debugger to hang up. When inputting an external reset from the RESET pin, first pull the reset pin up and cancel the "Mask:RESET" setting in the configuration box.</p>
No. 4	AD Converter (Technical Limitation)
	<p><u>Details</u></p> <p>The A/D function may not operate if any of the following operations is performed while the use environment temperature is low.</p> <ul style="list-style-type: none"> • Changing the settings of analog input channel specification register (ADS) during A/D conversion • Changing the settings of A/D converter mode register (ADM) during A/D conversion <p><u>Workaround</u></p> <p>Stop the A/D converter operation (ADCS = 0) then change the settings of ADS or ADM.</p>
No. 5	P121/X1 pin function (Technical Limitation)

Details

When the P121/X1 pin is used as an external clock input pin, the P121/X1 pin does not function as the I/O port. However, it functions as an output port if bit 1 of port mode register 12 (PM12) is set to select output mode.

Workaround

When using the P121/X1 pin as an external clock input pin, do not set bit 1 of PM12 to select output mode.

No. 6	Hang up after stop execution (Technical Limitation)
-------	--

Details

Regarding the standby release conditions after a STOP instruction is executed, if an arbitrary interrupt mask flag is cleared to 0 while an interrupt enable flag is 0 (by executing the DI instruction), an interrupt is generated (interrupt request flag = 1), then the STOP instruction is executed, the standby state is not released and the debugger hangs up. Moreover, the standby state is not released even if a standby release signal is generated due to another interrupt request, and the debugger hangs up.

Example 1 A standby release signal is generated due to INTP0 immediately before executing a STOP instruction while interrupts are disabled

- DI ; Disables interrupts
- SET1 PIF0 ; Sets INTP0 interrupt request flag
- CLR1 PMK0 ; Clears masking of INTP0 interrupt
- SET1 P2.0 ; Sets port 20 to "1"
- STOP ; Enters STOP mode
- CLR1 P2.0 ; Clears port 20 to "0" (not executed)

The same situation occurs when a standby release signal is generated while interrupts are enabled and an instruction that holds interrupt requests pending is executed immediately before a STOP instruction.

Example 2 A standby release signal is generated due to INTP0 immediately before executing a STOP instruction while interrupts are enabled

- EI ; Enables interrupts
- SET1 P2.0 ; Sets port 20 to "1"
- SET1 PIF0 ; Sets interrupt request flag
- CLR1 PMK0 ; Executes an instruction that holds interrupt requests pending
; immediately before executing a STOP instruction
- STOP ; Enters STOP mode
- CLR1 P2.0 ; Clears port 20 to "0" (not executed)

Remark Instructions that hold interrupt requests pending

- Instructions that perform writing to the interrupt request flag register (IF0 or IF1)
- Instructions that perform writing to the interrupt mask flag register (MK0 or MK1)

Workaround

Be sure to set the interrupt enable flag to 1 (EI instruction) before executing a STOP instruction. Moreover, do not execute an instruction that holds interrupt requests pending immediately before executing the STOP instruction.

Example Execute an EI instruction immediately before executing the STOP instruction

- DI ; Disables interrupts
- SET1 PIF0 ; Sets INTP0 interrupt request flag
- CLR1 PMK0 ; Clears masking of INTP0 interrupt
- SET1 P2.0 ; Sets port 20 to "1"
- EI ; Enables interrupts
- STOP ; Enters STOP mode
- CLR1 P2.0 ; Clears port 20 to "0" (executed)

Remark In the case that an interrupt occurs immediately before a STOP instruction, the interrupt request flag is cleared before executing the STOP instruction. To release the STOP mode, therefore, another interrupt must be generated.
