

DA9061/2 Evaluation Board Ordering Information

DA9061/2 Evaluation Board Ordering Information

Table 1 provides an overview of the DA9061 and DA9062 evaluation kits. An evaluation kit consists of two boards (one motherboard and one daughterboard), a USB cable, and a USB memory stick containing product and application information. Daughterboards can also be purchased separately. Board schematics are included on the USB stick and can also be found on www.renesas.com.

DA9061/2 Evaluation Board Ordering Information

The DA9062-EVAL1 and DA9061-EVAL2 kits include a device soldered to the performance board. They are programmed to a known-good OTP configuration. These kits are most suitable for testing the PMIC performance. The included GUI software, [SmartCanvas™](#), features 'Power Commander Mode' which can be used to evaluate other OTP configurations with the same soldered device. The DA9062-EVAL1 and DA9061-EVAL2 kits should therefore be the default choice.

DA9062-EVAL3 and DA9061-EVAL4 are *only for evaluation of the PMIC digital and for OTP programming activities*. The sockets in these two kits are not suited to evaluations such as applying regulator loads. DA9062-EVAL3 and DA9061-EVAL4 kits include a socket board *instead of* the performance board.

The 232-01-B motherboard is optimized for DA9061/2, but it can also be used with DA9063 daughterboards.

Revision History

Revision	Date	Description
1.2	21-Feb-2022	Rebranded file with new logo, copyright and disclaimer
1.1	13-Jul-2017	Removed 'Company Confidential' from Page 2.
1.0	22-Mar-2017	Initial version
