A Note on Using High-performance Embedded Workshop --With Searching More Than One File for a Character String--

Please take note of the following problem in using High-performance Embedded Workshop:

- With searching more than one file for a character string

High-performance Embedded Workshop is bundled with the compilers and other software products that it manages.

1. Product and Versions Concerned

All the versions of High-performance Embedded Workshop up to V.4.04.01

2. Description

If you search more than one file for a character string, the file name, line number, and others of the character string searched for may be displayed in white in the Output window, resulting in those being not legible.

When you continue searching for character strings after this problem has occurred, close High-performance Embedded Workshop once and then restart it.

To search more than one file for a character string

1. On the Edit menu, select Find In Files.
2. Enter or select the necessary item(s) in the Find In Files dialog box.

For further information, see the user's manual of High-performance Embedded Workshop.

3. Schedule of Fixing the Problem

We plan to fix this problem in the next release of the product.
