
[New release]

Compiler Package Upgrade License

Outline

We are releasing licenses for upgrading Standard editions to Professional editions of the following compiler packages from Renesas. Note that these licenses are not available as floating licenses.

- RH850 Family C Compiler (CC-RH: V1.03.00 and later versions)
- RX Family C/C++ Compiler (CC-RX: V2.04.00 and later versions)
- RL78 Family C Compiler (CC-RL: V1.01.00 and later versions)

1. Features

The licenses for Renesas compilers (CC-RH, CC-RX, and CC-RL) are divided into those for the Standard and Professional editions. The Standard editions support a C-language specification which complies with the ANSI standard, and also provides the essential features needed to write embedded programs. In addition to the features of the Standard editions, the Professional editions have additional features to improve the efficiency of development by our customers. These include features for analysis and for specific types of application.

Refer to the URL below for an overview of the Renesas Flash Programmer.

https://www.renesas.com/compiler_licenses

The upgrade licenses are used for upgrading from the Standard to the Professional editions.

The features of the Professional editions become available on registering the license key of the upgrading license while the license of the Standard edition is registered with the license manager.

Note again that we do not offer upgrade licenses as floating licenses.

Also note the upgrade is only from the Standard to the Professional edition of a given product: that is, the upgrades are not cross-product.

For example, a license for the Standard edition of CC-RH is only upgradable to one for the Professional edition of CC-RH.

2. Ordering

When ordering, please contact your local Renesas Electronics marketing office or distributor.
