Functions

Refer to [USB \(r_usb_basic\)](#) for the common API (r_usb_basic) to be called from the application.

Detailed Description

Overview

The `r_usb_hcdc` module, when used in combination with the `r_usb_basic` module, operates as a USB Host Communications Device Class (HCDC) driver. The HCDC conforms to the PSTN device subclass abstract control model of the USB Communications Device Class (CDC) specification and enables communication with a CDC peripheral device.

Features

The `r_usb_hcdc` module has the following key features:

- Checks for connected devices
- Implementation of communication line settings
- Acquisition of the communication line state
- Data transfer to and from a CDC peripheral device

Configuration

Build Time Configurations for `r_usb_hcdc`

The following build time configurations are defined in `fsp_cfg/r_usb_hcdc_cfg.h`:

Configuration	Options	Default	Description
Target Peripheral Device Class ID	<ul style="list-style-type: none"> • CDC class supported device • Vendor class device 	CDC class supported device	Specify the device class ID of the CDC device to be connected.
Bulk Input Transfer Pipe	<ul style="list-style-type: none"> • USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5 	USB PIPE1	Select the USB pipe to use for bulk input transfers.
Bulk Output Transfer Pipe	<ul style="list-style-type: none"> • USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5 	USB PIPE2	Select the USB pipe to use for bulk output transfers.
Interrupt In Pipe	<ul style="list-style-type: none"> • USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9 	USB PIPE6	Select the USB pipe to use for interrupts.

Configurations for Connectivity > USB HCDC (`r_usb_hcdc`)

This module can be added to the Stacks tab via New Stack > Connectivity > USB HCDC (`r_usb_hcdc`).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	<code>g_hcdc0</code>	Module name.

Note

Refer to the [USB \(r_usb_basic\)](#) module for hardware configuration options.

Clock Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Pin Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Usage Notes

Communications Device Class (CDC), PSTN and ACM

This software conforms to the Abstract Control Model (ACM) subclass of the Communications Device Class specification as defined in the "USB Communications Class Subclass Specification for PSTN Devices", Revision 1.2. The Abstract Control Model subclass is a technology that bridges the gap between USB devices and earlier modems (employing RS-232C connections) enabling use of application programs designed for older modems.

Basic Functions

The main functions of HCDC are the following:

- Verify connected devices
- Make communication line settings
- Acquire the communication line state
- Transfer data to and from the CDC peripheral device

Abstract Control Model Class Requests - Host to Device

This driver supports the following class requests:

Request	Code	Description
SendEncapsulatedCommand	0x00	Transmits an AT command as defined by the protocol used by the device (normally 0 for USB).
GetEncapsulatedResponse	0x01	Requests a response to a command transmitted by SendEncapsulatedCommand.
SetCommFeature	0x02	Enables or disables features such as device-specific 2-byte code and country setting.
GetCommFeature	0x03	Acquires the enabled/disabled state of features such as device-specific 2-byte code and country setting.
ClearCommFeature	0x04	Restores the default enabled/disabled settings of

			features such as device-specific 2-byte code and country setting.
SetLineCoding	0x20		Makes communication line settings (communication speed, data length, parity bit, and stop bit length).
GetLineCoding	0x21		Acquires the communication line setting state.
SetControlLineState	0x22		Makes communication line control signal (RTS, DTR) settings.
SendBreak	0x23		Transmits a break signal.

Note

For more information about Abstract Control Model requests, refer to Table 11 "Requests - Abstract Control Model" in the "USB Communications Class Subclass Specification for PSTN Devices", Revision 1.2.

The expected data format for each command is shown below followed by dependent structures.

bmRequestType	bRequest	wValue	wIndex	wLength	Data
0x21	SEND_ENCAPSULATED_COMMAND (0x00)	0x0000	0x0000	Data length	usb_hcdc_encapsulated_t
0x21	GET_ENCAPSULATED_RESPONSE (0x01)	0x0000	0x0000	Data length	usb_hcdc_encapsulated_t
0x21	SET_COMM_FEATURE (0x02)	usb_hcdc_feature_selector_t	0x0000	Data length	usb_hcdc_comfeature_t
0x21	GET_COMM_FEATURE (0x03)	usb_hcdc_feature_selector_t	0x0000	Data length	usb_hcdc_comfeature_t
0x21	CLEAR_COMM_FEATURE (0x04)	usb_hcdc_feature_selector_t	0x0000	Data length	None
0x21	SET_LINE_CODING (0x20)	0x0000	0x0000	0x0000	usb_hcdc_linecoding_t
0xA1	GET_LINE_CODING (0x21)	0x0000	0x0000	0x0007	usb_hcdc_linecoding_t
0x21	SET_CONTROL_LINE_STATE (0x22)	usb_hcdc_control_linestate_t	0x0000	0x0000	None
0x21	SEND_BREAK (0x23)	usb_hcdc_breakduration_t	0x0000	0x0000	None

ACM Notifications from Device to Host

The following class notifications are supported:

Notification	Code	Description
RESPONSE_AVAILABLE	0x01	Response to GET_ENCAPSULATED_RESPONSE
SERIAL_STATE	0x20	Notification of serial line state

The data types returned are as follows:

bmRequestType	bRequest	wValue	wIndex	wLength	Data
0xA1	RESPONSE_AVAILABLE (0x01)	0x0000	0x0000	0x0000	None
0xA1	SERIAL_STATE (0x20)	0x0000	0x0000	0x0002	usb_hcdc_serialstate_t

Note

The host is notified with SERIAL_STATE whenever a change in the UART port state is detected.

Limitations

This driver is subject to the following limitations:

- Suspend is not supported when a data transfer is in progress. Confirm that data transfer has completed before executing suspend.
- Use of compound USB devices with CDC class support is not supported.
- This module must be incorporated into a project using r_usb_basic and does not provide any public APIs.
- This driver does not support Low-speed.
- This driver does not support simultaneous operation with the other device class.

Examples

USB HCDL Loopback Example

The main functions of the HCDL loopback example are as follows:

1. Virtual UART control settings are configured by transmitting the class request SET_LINE_CODING to the CDC device.
2. Sends receive (Bulk In transfer) requests to a CDC peripheral device and receives data.
3. Loops received data back to the peripheral by means of Bulk Out transfers.

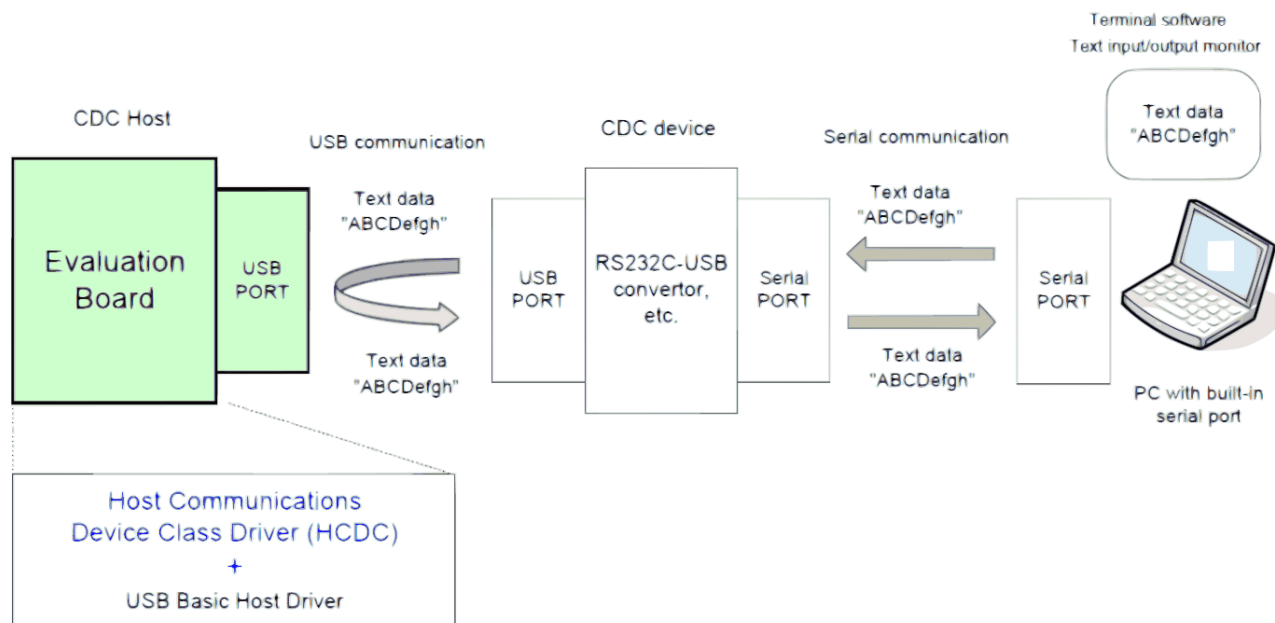

Figure 183: Data Transfer (Loopback)

The main loop performs loopback processing in which data received from a CDC peripheral device is transmitted unaltered back to the peripheral.

4.2.65 USB Host Human Interface Device Class Driver (r_usb_hhid)

Modules

Functions

`fsp_err_t` [R_USB_HHID_TypeGet](#) (`usb_ctrl_t` *const p_api_ctrl, `uint8_t` *p_type, `uint8_t` device_address)

Get HID protocol.(USB Mouse/USB Keyboard/Other Type.) [More...](#)

`fsp_err_t` [R_USB_HHID_MaxPacketSizeGet](#) (`usb_ctrl_t` *const p_api_ctrl, `uint16_t` *p_size, `uint8_t` direction, `uint8_t` device_address)

Obtains max packet size for the connected HID device. The max packet size is set to the area. Set the direction (USB_HID_IN/USB_HID_OUT). [More...](#)

Detailed Description

This module provides a USB Host Human Interface Device Class Driver (HHID). It implements the [USB HHID Interface](#).

Overview

The `r_usb_hhid` module combines with the `r_usb_basic` module to provide a USB Host Human Interface Device Class (HHID) driver. The HHID driver conforms to the USB Human Interface Device class specifications and implements communication with a HID device.

Features

The `r_usb_hhid` module has the following key features:

- Data communication with a connected HID device (USB mouse, keyboard etc.)
- Issuing of HID class requests to a connected HID device
- Supports Interrupt OUT transfer

Configuration

Build Time Configurations for r_usb_hhid

The following build time configurations are defined in fsp_cfg/r_usb_hhid_cfg.h:

Configuration	Options	Default	Description
Interrupt In Pipe	<ul style="list-style-type: none"> • USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9 	USB PIPE6	Select the pipe number to use for input interrupt events.
Interrupt Out Pipe	<ul style="list-style-type: none"> • USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9 	USB PIPE9	Select the pipe number to use for output interrupt events.

Configurations for Connectivity > USB HHID (r_usb_hhid)

This module can be added to the Stacks tab via New Stack > Connectivity > USB HHID (r_usb_hhid). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_hhid0	Module name.

Clock Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Pin Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Usage Notes

Note

This driver is not guaranteed to provide USB HID operation in all scenarios. The developer must verify correct operation when connected to the targeted USB peripherals.

Class Requests

The class requests supported by this driver are shown below:

Request	Code	Description
USB_GET_REPORT	0x01	Receives a report from the HID device.

USB_SET_REPORT	0x09	Sends a report to the HID device.
USB_GET_IDLE	0x02	Receives a duration (time) from the HID device.
USB_SET_IDLE	0x0A	Sends a duration (time) to the HID device.
USB_GET_PROTOCOL	0x03	Reads a protocol from the HID device.
USB_SET_PROTOCOL	0x0B	Sends a protocol to the HID device.
USB_GET_REPORT_DESCRIPTOR	0x06	Requests a report descriptor.
USB_GET_HID_DESCRIPTOR	0x06	Requests a HID descriptor.

Data Format

The boot protocol data format of data received from the keyboard or mouse through interrupt-IN transfers is shown below:

offset	Keyboard (8 Bytes)	Mouse (3 Bytes)
0 (Top Byte)	Modifier keys	b0 : Button 1 b1 : Button 2 b2 : Button 3 b3-b7 : Reserved
+1	Reserved	X displacement
+2	Keycode 1	Y displacement
+3	Keycode 2	-
+4	Keycode 3	-
+5	Keycode 4	-
+6	Keycode 5	-
+7	Keycode 6	-

Limitations

- The HID driver does not analyze the report descriptor. This driver determines the report format from the interface protocol.
- This driver does not support DMA transfers.
- This driver does not support High-speed.
- The transfer rates of Full-speed and Low-speed are the same when the max packet sizes of Full-speed and Low-speed are the same.
- This driver does not support simultaneous operation with the other device class.

Examples

USB HHID Example

The main functions of the application are as follows:

1. Performs enumeration and initialization of HID devices.
2. Transfers data to and from a connected HID device (mouse or keyboard). Data received from the device is read and discarded.
3. When an RTOS is used, the USB driver calls the callback (`usb_apl_callback`) in order to pass events to the main loop through a queue.

Figure 184: Example Operating Environment

Application Processing (for RTOS)

The main loop performs processing to receive data from the HID device as part of the main routine. An overview of the processing performed by the loop is shown below.

1. When a USB-related event has completed, the USB driver calls the callback function (`usb_apl_callback`). In the callback function (`usb_apl_callback`), the application task (APL) is notified of the USB completion event using the real-time OS functionality.
2. In APL, information regarding the USB completion event was notified from the callback function is retrieved using the real-time OS functionality.
3. If the USB completion event (the event member of the `usb_ctrl_t` structure) retrieved in step 2 above is `USB_STATUS_CONFIGURED`, APL sends the class request (`SET_PROTOCOL`) to the HID device.
4. If the USB completion event (the event member of the `usb_ctrl_t` structure) retrieved in step 2 above is `USB_STATUS_REQUEST_COMPLETE`, APL performs a data reception request to receive data transmitted from the HID device by calling the `R_USB_Read` function.
5. The above processing is repeated.

Figure 185: Main Loop (Normal mode)

Application Processing (for Non-OS)

The main loop performs processing to receive data from the HID device as part of the main routine. An overview of the processing of the main loop is presented below.

1. When the R_USB_GetEvent function is called after an HID device attaches to the USB host and enumeration completes, USB_STATUS_CONFIGURED is set as the return value. When the APL confirms USB_STATUS_CONFIGURED, it calls the R_USB_Write function to request transmission of data to the HID device.
2. When the R_USB_GetEvent function is called after sending of class request SET_PROTOCOL to the HID device has completed, USB_STATUS_REQUEST_COMPLETE is set as the return value. When the APL confirms USB_STATUS_REQUEST_COMPLETE, it calls the R_USB_Read function to make a data receive request for data sent by the HID device.
3. When the R_USB_GetEvent function is called after reception of data from the HID device has completed, USB_STATUS_READ_COMPLETE is set as the return value. When the APL confirms USB_STATUS_READ_COMPLETE, it calls the R_USB_Read function to make a data receive request for data sent by the HID device.
4. The processing in step 3, above, is repeated.

Function Documentation

◆ R_USB_HHID_TypeGet()

```
fsp_err_t R_USB_HHID_TypeGet ( usb_ctrl_t *const p_api_ctrl, uint8_t * p_type, uint8_t device_address )
```

Get HID protocol.(USB Mouse/USB Keyboard/Other Type.)

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter Null pointer error.
FSP_ERR_USB_PARAMETER	Parameter error.

◆ R_USB_HHID_MaxPacketSizeGet()

```
fsp_err_t R_USB_HHID_MaxPacketSizeGet ( usb_ctrl_t *const p_api_ctrl, uint16_t * p_size, uint8_t direction, uint8_t device_address )
```

Obtains max packet size for the connected HID device. The max packet size is set to the area. Set the direction (USB_HID_IN/USB_HID_OUT).

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter Null pointer error.
FSP_ERR_USB_PARAMETER	Parameter error.

4.2.66 USB Host Mass Storage Class Driver (r_usb_hmsc)

Modules

Functions

```
fsp_err_t R_USB_HMSC_StorageCommand (usb_ctrl_t *const p_api_ctrl, uint8_t
```

Detailed Description

This module provides a USB Host Mass Storage Class (HMSC) driver. It implements the [USB HMSC Interface](#).

Overview

The r_usb_hmsc module, when used in combination with the r_usb_basic module, operates as a USB Host Mass Storage Class (HMSC) driver. It is built on the USB Mass Storage Class Bulk-Only Transport (BOT) protocol. It is possible to communicate with BOT-compatible USB storage devices by combining this module with a file system and storage device driver.

Note

This module should be used in combination with the FreeRTOS+FAT File System.

Features

The r_usb_hmsc module has the following key features:

- Checking of connected USB storage devices to determine whether or not operation is supported

- Storage command communication using the BOT protocol
- Support for SFF-8070i (ATAPI) USB mass storage subclass
- Sharing of a single pipe for IN/OUT directions or multiple devices
- Supports up to 4 connected USB storage devices

Class Requests

The class requests supported by this driver are shown below.

Request	Description
GetMaxLun	Gets the maximum number of units that are supported.
MassStorageReset	Cancels a protocol error.

Storage Commands

This driver supports the following storage commands:

- TEST_UNIT_READY
- MODE_SELECT10
- MODE_SENSE10
- PREVENT_ALLOW
- READ_FORMAT_CAPACITY
- READ10
- WRITE10

Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Clock Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Pin Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Usage Notes

Warning

Due to the wide variety of USB mass storage device implementations, this driver is not guaranteed to work with all devices. When implementing the driver it is important to verify correct operation with the mass storage devices that the end user is expected to use.

Multi Port

This driver supports simultaneous operation with Peripheral Communication Device Class(PCDC). If the user are using MCU that supports 2 USB modules, such as RA6M3, the user can run HMSC on one USB module and PCDC on the other. This driver does not support simultaneous operation using device classes other than PCDC.

For Bare Metal

1. To use FreeRTOS+FAT without FreeRTOS, copy FreeRTOSConfigMinimal.h to one of your project's include paths and rename it FreeRTOSConfig.h.
2. In RA configurator, enter the appropriate values in the Main stack size and Heap size fields. The figure below is an example of the RA6M3-EK board.

RA Common	
Main stack size (bytes)	0x800
Heap size (bytes)	0x800
MCU Vcc (mV)	3300
Parameter checking	Disabled
Assert Failures	Return FSP_ERR_ASSERTION
Error Log	No Error Log
Soft Reset	Disabled
Main Oscillator Populated	Populated
PFS Protect	Enabled
C Runtime Initialization	Enabled
Main Oscillator Clock Source	Crystal or Resonator
Subclock Populated	Populated
Subclock Drive (Drive capac	Standard/Normal mode
Subclock Stabilization Time	1000

Figure 187: BSP Setting

1. In the Bare Metal version, specify "NULL" in the Callback item.

The screenshot shows the RA configurator interface. On the left, there are three components: 'FreeRTOS+FAT', 'FreeRTOS+FAT Port for RA', and 'g_rm_block_media0 Block Media Implementation on rm_block_media_usb'. On the right, the 'API Info' panel is open, showing the 'Module FreeRTOS+FAT Port for RA' settings. The 'Callback' field is highlighted with a red box and contains the value 'NULL'.

API Info	
Common	Default (BSP)
Parameter Checking	Default (BSP)
Module FreeRTOS+FAT Port for RA	
Name	g_rm_freertos_plus_fat0
Total Number of Sectors	31293440
Sector Size (bytes)	512
Cache Size (bytes)	1024
Partition Number	0
Callback	NULL

Figure 188: For Bare Metal Setting

Limitations

1. Some MSC devices may be unable to connect because they are not recognized as storage devices.
2. MSC devices that return values of 1 or higher in response to the GetMaxLun command (mass storage class command) are not supported.
3. A maximum of 4 USB storage devices can be connected.
4. Only USB storage devices with a sector size of 512 bytes can be connected.
5. A device that does not respond to the READ_CAPACITY command operates as a device with a sector size of 512 bytes.
6. The continuous transfer mode cannot be used when using DMA.
7. This module must be incorporated into a project using r_usb_basic and does not provide any public APIs.
8. This driver does not support Low-speed.

Examples

USB HMSC Example

Example Operating Environment

The following shows an example operating environment for the HMSC.

Refer to the associated instruction manuals for details on setting up the evaluation board and using the emulator, etc.

Figure 189: Example Operating Environment

Application Specifications

The main functions of the application are as follows:

1. Performs enumeration and drive recognition processing on MSC devices.
2. After the above processing finishes, the application writes the file to the MSC device once.
3. After writing the above file, the APL repeatedly reads the file. It continues to read the file repeatedly until the switch is pressed again.

Application Processing (for RTOS)

This application has two tasks. An overview of the processing in these two tasks is provided below.

usb_apl_task

1. After start up, MCU pin setting, USB controller initialization, and application program initialization are performed.
2. The MSC device is attached to the kit. When enumeration and drive recognition processing have completed, the USB driver calls the callback function (usb_apl_callback). In the callback function (usb_apl_callback), the application task is notified of the USB completion event using the FreeRTOS functionality.
3. In the application task, information regarding the USB completion event about which notification was received from the callback function is retrieved using the real-time OS

functionality.

4. If the USB completion event (the event member of the `usb_ctrl_t` structure) retrieved in step 2 above is `USB_STS_CONFIGURED` then, based on the USB completion event, the MSC device is mounted and the file is written to the MSC device.
5. If the USB completion event (the event member of the `usb_ctrl_t` structure) retrieved in step 2 above is `USB_STS_DETACH`, the application initializes the variables for state management.

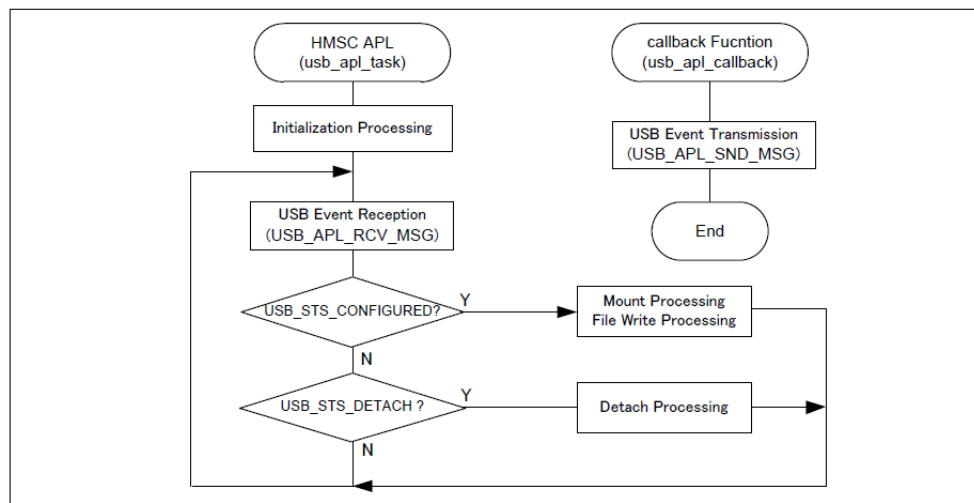

Figure 190: `usb_apl_task`

file_read_task

Of the application tasks `usb_apl_task` and `file_read_task`, `file_read_task` is processed while `usb_apl_task` is in the wait state. This task performs file read processing on the file that was written to the MSC device.

Example Code

```

Function Documentation

◆ R_USB_HMSC_StorageCommand()

`fsp_err_t R_USB_HMSC_StorageCommand (usb_ctrl_t *const p_api_ctrl, uint8_t * buf, uint8_t command, uint8_t destination)`

Processing for MassStorage(ATAPI) command.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter Null pointer error.
FSP_ERR_USB_PARAMETER	Parameter error.

◆ **R_USB_HMSC_DriveNumberGet()**

```
fsp_err_t R_USB_HMSC_DriveNumberGet ( usb_ctrl_t *const p_api_ctrl, uint8_t * p_drive, uint8_t destination )
```

Get number of Storage drive.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter Null pointer error.
FSP_ERR_USB_PARAMETER	Parameter error.

◆ **R_USB_HMSC_SemaphoreGet()**

```
fsp_err_t R_USB_HMSC_SemaphoreGet ( void )
```

Get a semaphore. (RTOS only)

If this function is called in the OS less execution environment, a failure is returned.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.

◆ **R_USB_HMSC_SemaphoreRelease()**

```
fsp_err_t R_USB_HMSC_SemaphoreRelease ( void )
```

Release a semaphore. (RTOS only)

If this function is called in the OS less execution environment, a failure is returned.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.

◆ R_USB_HMSC_StorageReadSector()

```
fsp_err_t R_USB_HMSC_StorageReadSector ( uint16_t drive_number, uint8_t *const buff, uint32_t
sector_number, uint16_t sector_count )
```

Read sector information.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter Null pointer error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

The address specified in the argument *buff* must be 4-byte aligned.

◆ R_USB_HMSC_StorageWriteSector()

```
fsp_err_t R_USB_HMSC_StorageWriteSector ( uint16_t drive_number, uint8_t const *const buff,
uint32_t sector_number, uint16_t sector_count )
```

Write sector information.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter Null pointer error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

The address specified in the argument *buff* must be 4-byte aligned.

4.2.67 USB Host Vendor Class (r_usb_hvnd)**Modules****Functions**

Refer to [USB \(r_usb_basic\)](#) for the common API (r_usb_basic) to be called from the application.

Overview

USB Host Vendor class works by combining r_usb_basic module.

How to Configuration

The following shows FSP configuration procedure for USB Host Vendor class.

- Select [New Stack]->[Middleware]->[USB]->[USB Host Vendor class driver on r_usb_hvnd].

Figure 191: Select USB Host Vendor Class

- The following is displayed when selecting [USB Host Vendor class driver on r_usb_hvnd]. The user does not specify USB pipe number in Vendor class.

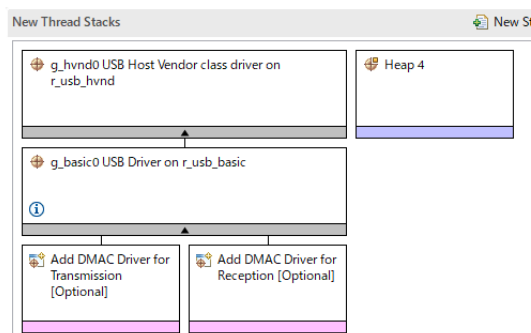

Figure 192: USB Host Vendor Class Stack

API

Use the following APIs in Host Vendor class application program.

- For Data Transfer
Use the following APIs for data transfer for Bulk transfer or Interrupt transfer.

1. R_USB_PipeRead()
2. R_USB_PipeWrite()

3. R_USB_PipeStop()

- For Control Transfer
Use the following API for the class request processing.

1. R_USB_HostControlTransfer()

- For USB Pipe Information
The USB driver allocates USB PIPE by analyzing the descriptor of USB device in Vendor class. Use the following APIs to get the allocated USB pipe information.

1. R_USB_UsedPipesGet()

2. R_USB_PipeInfoGet()

USB PIPE Allocation

The USB driver allocates USB PIPE by analyzing the descriptor of USB device in Vendor class. The USB PIPE related to the Endpoint Descriptor are allocated in order from USB PIPE1 according to the description order of the Endpoint Descriptor.

Examples

This application program processes the following after the enumeration completes with USB device.

1. Getting USB Pipe Information
2. Vendor Class Request Processing
3. Loopback processing of bulk transfer and interrupt transfer.

```

/*****
**
* Macro definitions
*****

4.2.68 USB Peripheral Communications Device Class (r_usb_pcdc)

Modules

This module provides a USB Peripheral Communications Device Class Driver (PCDC). It implements the [USB PCDC Interface](#).

Functions

Refer to [USB \(r_usb_basic\)](#) for the common API (r_usb_basic) to be called from the application.

Detailed Description

Overview

The r_usb_pcdc module combines with the r_usb_basic module to provide a USB Peripheral Communications Device Class (PCDC) driver. The PCDC driver conforms to Abstract Control Model of the USB Communications Device Class (CDC) specification and enables communication with a CDC host device.

Features

The r_usb_pcdc module has the following key features:

- Data transfer to and from a USB host
- Response to CDC class requests
- Supports CDC notifications

Configuration

Build Time Configurations for r_usb_pcdc

The following build time configurations are defined in fsp_cfg/r_usb_pcdc_cfg.h:

Configuration	Options	Default	Description
Bulk In Pipe	<ul style="list-style-type: none"> • USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5 	USB PIPE1	Select the USB pipe to use for bulk input transfers.
Bulk Out Pipe	<ul style="list-style-type: none"> • USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5 	USB PIPE2	Select the USB pipe to use for bulk output transfers.
Interrupt Out Pipe	<ul style="list-style-type: none"> • USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9 	USB PIPE6	Select the USB pipe to use for interrupts.

Configurations for Connectivity > USB PCDC (r_usb_pcdc)

This module can be added to the Stacks tab via New Stack > Connectivity > USB PCDC (r_usb_pcdc).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_pcdc0	Module name.

Note

Refer to the [USB \(r_usb_basic\)](#) module for hardware configuration options.

Clock Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Pin Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Usage Notes

Abstract Control Model Overview

The Abstract Control Model subclass of CDC is a technology that bridges the gap between USB

devices and earlier modems (employing RS-232C connections), enabling use of application programs designed for older modems.

Class Requests (Host to Peripheral)

This driver notifies the application when receiving the following class requests:

Request	Code	Description
SetLineCoding	0x20	Sets communication line settings (bitrate, data length, parity, and stop bit length)
GetLineCoding	0x21	Acquires the communication line setting state
SetControlLineState	0x22	Set communication line control signals (RTS, DTR)

Note

For details concerning the Abstract Control Model requests, refer to Table 11 "Requests - Abstract Control Model" in the "USB Communications Class Subclass Specification for PSTN Devices", Revision 1.2.

Data Format of Class Requests

The data format of supported class requests is described below:

bmRequestType	bRequest	wValue	wIndex	wLength	Data
0x21	SET_LINE_CODING (0x20)	0x0000	0x0000	0x0007	usb_pcdc_linecoding_t
0xA1	GET_LINE_CODING (0x21)	0x0000	0x0000	0x0007	usb_pcdc_linecoding_t
0x21	SET_CONTROL_LINE_STATE (0x22)	usb_pcdc_ctrllinestate_t	0x0000	0x0000	None

Class Notifications (Peripheral to Host)

The following class notifications are supported:

Notification	Code	Description
SERIAL_STATE	0x20	Notification of serial line state

The data types returned are as follows:

bmRequestType	bRequest	wValue	wIndex	wLength	Data
0xA1	SERIAL_STATE (0x20)	0x0000	0x0000	0x0002	usb_serial_state_bitmap_t

Note

The host is notified with `SERIAL_STATE` whenever a change in the UART port state is detected. This driver will automatically detect overrun, parity and framing errors. A state notification is performed when a transition from normal to error state is detected.

Virtual COM-port Usage

When connected to a PC the CDC device can be used as a virtual COM port. After enumeration, the CDC class requests `GetLineCoding` and `SetControlLineState` are executed by the target, and the CDC device is registered in Windows Device Manager as a virtual COM device.

Registering the CDC device as a virtual COM-port in Windows Device Manager enables data communication with the CDC device via a terminal app such as `PuTTY`. When changing settings of the serial port in the terminal application, the UART setting is propagated to the firmware via the class request `SetLineCoding`.

Data input (or file transmission) from the terminal app window is transmitted to the board using endpoint 2 (EP2); data from the board side is transmitted to the PC using EP1.

When the last packet of data received is the maximum packet size, and the terminal determines that there is continuous data, the received data may not be displayed in the terminal. If the received data is smaller than the maximum packet size, the data received up to that point is displayed in the terminal.

Multi Port

This driver supports simultaneous operation with Host Mass Storage Class(HMSC). If the user are using MCU that supports 2 USB modules, such as RA6M3, the user can run PCDC on one USB module and HMSC on the other. This driver does not support simultaneous operation using device classes other than HMSC.

Limitations

- This module must be incorporated into a project using `r_usb_basic` and does not provide any public APIs.
- This driver does not support Low-speed.

Examples

USB PCDC Loopback Example

The main functions of the PCDC loopback example are as follows:

1. Receives virtual UART configuration data from the host terminal
2. Loops all other received data back to the host terminal

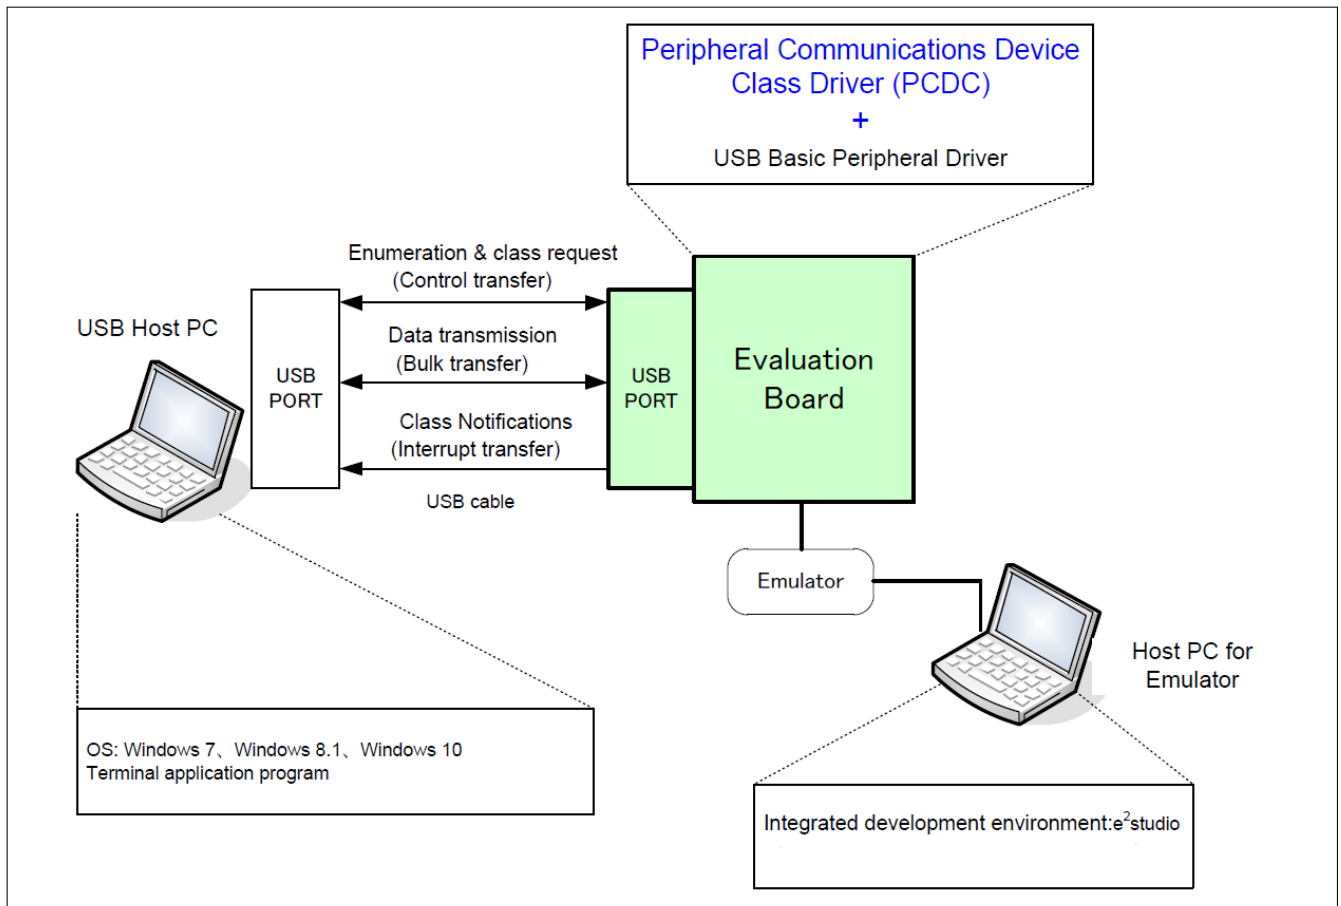

Figure 193: Example Operating Environment

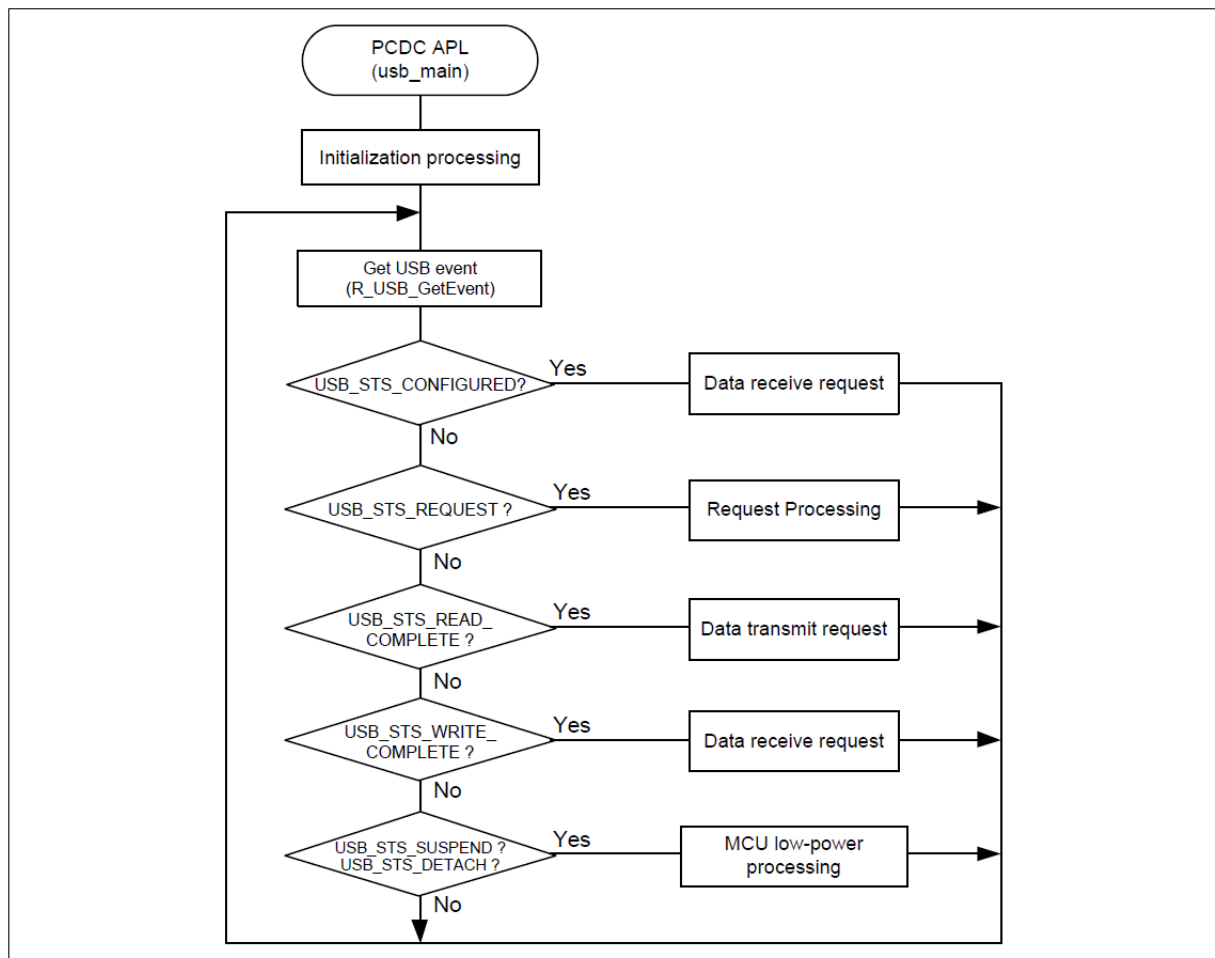

Figure 194: Main Loop processing (Echo mode)

```

void usb_basic_example (void)
{
    usb_event_info_t event_info;
    usb_status_t event;
    g_usb_on_usb.open(&g_basic0_ctrl, &g_basic0_cfg);
    while (1)
    {
        /* Get USB event data */
        g_usb_on_usb.eventGet(&event_info, &event);
        /* Handle the received event (if any) */
        switch (event)
        {
            case USB_STATUS_CONFIGURED:

```

```
case USB_STATUS_WRITE_COMPLETE:
/* Initialization complete; get data from host */
    g_usb_on_usb.read(&g_basic0_ctrl, g_buf, DATA_LEN, USB_CLASS_PCDC);
break;
case USB_STATUS_READ_COMPLETE:
/* Loop back received data to host */
    g_usb_on_usb.write(&g_basic0_ctrl, g_buf, event_info.data_size,
USB_CLASS_PCDC);
break;
case USB_STATUS_REQUEST: /* Receive Class Request */
if (USB_PCDC_SET_LINE_CODING == (event_info.setup.request_type & USB_BREQUEST))
    {
/* Configure virtual UART settings */
    g_usb_on_usb.periControlDataGet(&g_basic0_ctrl, (uint8_t *)
&g_line_coding, LINE_CODING_LENGTH);
    }
else if (USB_PCDC_GET_LINE_CODING == (event_info.setup.request_type & USB_BREQUEST))
    {
/* Send virtual UART settings back to host */
    g_usb_on_usb.periControlDataSet(&g_basic0_ctrl, (uint8_t *)
&g_line_coding, LINE_CODING_LENGTH);
    }
else
    {
/* ACK all other status requests */
    g_usb_on_usb.periControlStatusSet(&g_basic0_ctrl,
USB_SETUP_STATUS_ACK);
    }
break;
case USB_STATUS_SUSPEND:
case USB_STATUS_DETACH:
break;
default:
break;
```

Descriptor

A template for PCDC descriptors can be found in `ra/fsp/src/r_usb_pcdc/r_usb_pcdc_descriptor.c.template`. Also, please be sure to use your vendor ID.

4.2.69 USB Peripheral Human Interface Device Class (r_usb_phid)

Modules

This module is USB Peripheral Human Interface Device Class Driver (PHID). It implements the [USB PHID Interface](#).

Functions

Refer to [USB \(r_usb_basic\)](#) for the common API (`r_usb_basic`) to be called from the application.

Detailed Description

Overview

The `r_usb_phid` module combines with the `r_usb_basic` module to provide a USB Peripheral Human Interface Device Class (PHID) driver. The PHID driver conforms to the USB Human Interface Device class specifications and implements communication with a HID host.

Features

The `r_usb_phid` module has the following functions:

- Data transfer to and from a USB host
- Response to HID class requests
- Response to function references from the HID host

Note

This driver is not guaranteed to provide USB HID operation in all scenarios. The developer must verify correct operation when connected to the targeted USB hosts.

Configuration

Build Time Configurations for r_usb_phid

The following build time configurations are defined in fsp_cfg/r_usb_phid_cfg.h:

Configuration	Options	Default	Description
Interrupt In Pipe	<ul style="list-style-type: none"> • USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9 	USB PIPE6	Select the pipe number for input interrupt events.
Interrupt Out Pipe	<ul style="list-style-type: none"> • USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9 	USB PIPE7	Select the pipe number for output interrupt events.

Configurations for Connectivity > USB PHID (r_usb_phid)

This module can be added to the Stacks tab via New Stack > Connectivity > USB PHID (r_usb_phid).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_phid0	Module name.

Clock Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Pin Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Usage Notes

Class Requests (Host to Peripheral)

This driver notifies the application when receiving the following class requests:

Request	Code	Description
Get_Report	0x01	Receives a report from the HID host
Set_Report	0x09	Sends a report to the HID host
Get_Idle	0x02	Receives a duration (time) from the HID host
Set_Idle	0x0A	Sends a duration (time) to the HID host
Get_Protocol	0x03	Reads a protocol from the HID host
Set_Protocol	0x0B	Sends a protocol to the HID host
Get_Descriptor	0x06	Transmits a report or HID

descriptor

The data format of supported class requests is described below:

bmRequestType	bRequest	wValue	wIndex	wLength	Data
0xA1	GET_REPORT (0x01)	ReportType & ReportID	Interface	ReportLength	Report
0x21	SET_REPORT (0x09)	ReportType & ReportID	Interface	ReportLength	Report
0xA1	GET_IDLE (0x02)	0 & ReportID	Interface	1	Idle rate
0x21	SET_IDLE (0x0A)	Duration & ReportID	Interface	0	Idle rate
0xA1	GET_PROTOCOL (0x03)	0	Interface	0	0 (Boot) or 1 (Report)
0x21	SET_PROTOCOL (0x0B)	0 (Boot) or 1 (Report)	Interface	0	Not applicable

Limitations

- This driver does not support USB Hi-speed mode.
- This driver does not support USB Low-speed mode.
- This driver does not support DMA transfers.
- This driver does not support simultaneous operation with USB Host device class.

Examples

Descriptors

A template for PHID descriptors can be found in ra/fsp/src/r_usb_phid. Be sure to replace the vendor ID with your own.

Keyboard templates should be referred to r_usb_phid_descriptor_keyboard.c.template.

Mouse templates should be referred to r_usb_phid_descriptor_mouse.c.template.

4.2.70 USB Peripheral Mass Storage Class (r_usb_pmesc)

Modules

This module provides a USB Peripheral Mass Storage Class (PMSC) driver. It implements the [USB PMSC Interface](#).

Functions

Refer to [USB \(r_usb_basic\)](#) for the common API (r_usb_basic) to be called from the application.

Detailed Description

Overview

The r_usb_pmsc module combines with the r_usb_basic module to provide USB Peripheral It operates as a Mass Storage class driver (hereinafter referred to as PMSC).

The USB peripheral mass storage class driver (PMSC) comprises a USB mass storage class bulk-only transport (BOT) protocol.

When combined with a USB peripheral control driver and media driver, it enables communication with a USB host as a BOT-compatible storage device.

Features

The r_usb_pmsc module has the following key features:

- Storage command control using the BOT protocol
- Supports SFF-8070i (ATAPI)
- Response to mass storage device class requests from a USB host

Configuration

Build Time Configurations for r_usb_pmsc

The following build time configurations are defined in fsp_cfg/r_usb_pmsc_cfg.h:

Configuration	Options	Default	Description
Bulk Input Transfer Pipe	<ul style="list-style-type: none"> • USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5 	USB PIPE1	Select the USB pipe to use for bulk input transfers.
Bulk Output Transfer Pipe	<ul style="list-style-type: none"> • USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5 	USB PIPE2	Select the USB pipe to use for bulk output transfers.
Vendor Information	Vendor Information must be 8 bytes long; pad with spaces if shorter.	Vendor	Specify the vendor information field (part of the Inquiry command response).
Product Information	Product Information must be 16 bytes long; pad with spaces if shorter.	Mass Storage	Specify the product information field (part of the Inquiry command response).
Product Revision Level	Product Revision Level	1.00	Specify the product

	must be 4 bytes long; pad with spaces if shorter.		revision level field (part of the Inquiry command response).
Sector size	<ul style="list-style-type: none"> • 512 • 4096 	512	Specifies the sector size.
Number of Transfer Sectors	Please enter a number between 1 and 255.	8	Specify the maximum sector size to request with one data transfer.

Configurations for Connectivity > USB PMSC (r_usb_pmsc)

This module can be added to the Stacks tab via New Stack > Connectivity > USB PMSC (r_usb_pmsc).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_pmsc0	Module name.

Refer to the [USB \(r_usb_basic\)](#) module for hardware configuration options.

Clock Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Pin Configuration

Refer to the [USB \(r_usb_basic\)](#) module.

Usage Notes

Class Requests

The class requests supported by this driver are shown below.

Request	Code	Description
Bulk-Only Mass Storage Reset	0xFF	Resets the connection interface to the mass storage device.
Get Max Logical Unit Number	0xFE	Reports the logical numbers supported by the device.

Storage Commands

This driver supports the following storage commands.

Command	Code	Description
TEST_UNIT_READY	0x00	Checks the state of the peripheral device.
REQUEST_SENSE	0x03	Gets the error information of the previous storage command

INQUIRY	0x12	execution result.
READ_FORMAT_CAPACITY	0x23	Gets the formattable capacity.
READ_CAPACITY	0x25	Gets the capacity information of the logical unit.
READ10	0x28	Reads data.
WRITE10	0x1A	Writes data.
MODE_SENSE10	0x5A	Gets the parameters of the logical unit.

Note

A *STALL* or *FAIL* error is sent to the host upon receipt of any command not listed in the above table.

BOT Protocol Overview

BOT (USB MSC Bulk-Only Transport) is a transfer protocol that encapsulates command, data, and status (results of commands) using only two endpoints (one bulk in and one bulk out). The ATAPI storage commands and the response status are embedded in a Command Block Wrapper (CBW) and a Command Status Wrapper (CSW). The below image shows an overview of how the BOT protocol progresses with command and status data flowing between USB host and peripheral.

Figure 198: BOT protocol Overview

Block Media Interface

PMSC implements a block media interface to enable access to higher-level modules. If the block media interface supports multiple media, users can select any media to access.

Note

When the user develops the storage media driver, be sure to define the instance named "g_rm_block_media0".

Limitations

1. The driver always returns 0 in response to the GetMaxLun command.
2. The driver supports a sector size of 512 bytes only.
3. The only media currently supported by the block media interface is an SD card. The card must be inserted before initializing the driver.
4. When using DMA for Hi-Speed transfers continuous transfer mode must not be used in the USB Basic driver.
5. The storage area must be formatted before use.
6. When using the SD/MMC Block Media Implementation (rm_block_media_sdmmc), "Card Detection" must be set to "Not Used" in the SD/MMC Host Interface (r_sdhi) settings.
7. The driver does not support Low-speed.
8. This driver does not support simultaneous operation with USB Host device class.

Examples

USB PMSC Example

In this example, when the evaluation board is connected to the host PC it is recognized as a removable disk and reading/writing files is possible. The FAT type is either FAT12, FAT16, or FAT32 depending on the size of the media used.

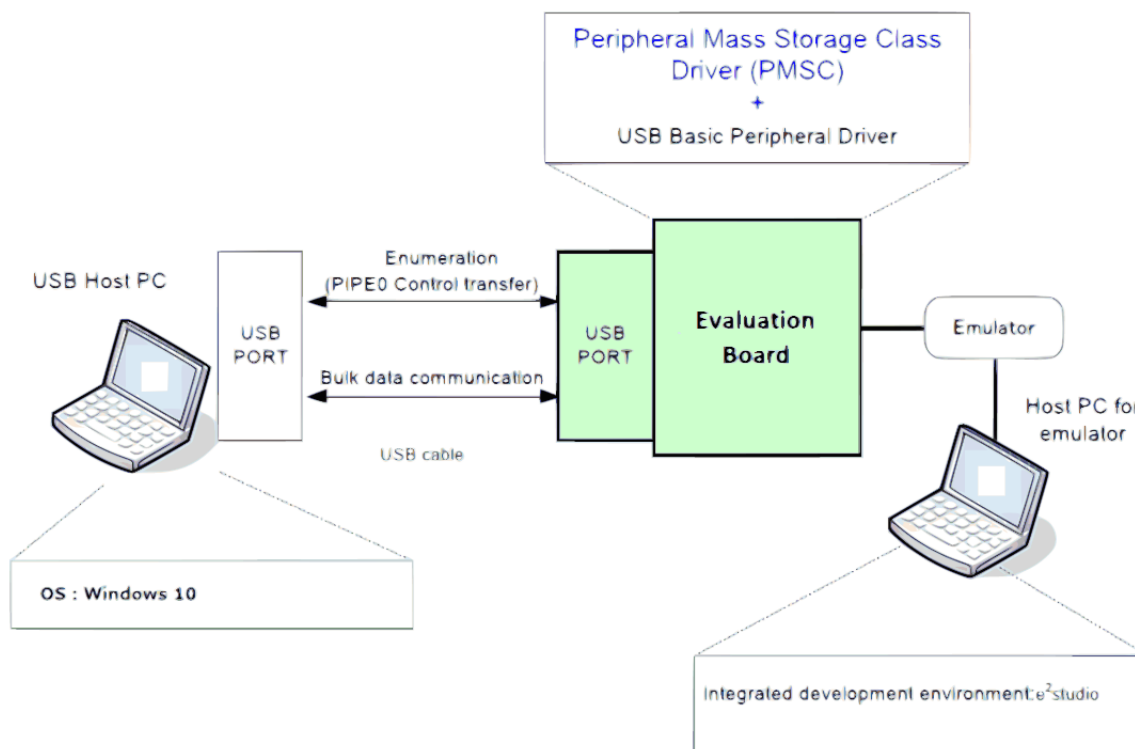

Figure 199: Example Operating Environment

```

void usb_pmsc_example (void)
{
    usb_event_info_t usb_event;
#if (BSP_CFG_RTOS == 2)
    usb_event_info_t * p_mess;
#else
    usb_status_t event;
#endif
    g_usb_on_usb.open(&g_basic0_ctrl, &g_basic0_cfg);
    /* Loop back between PC(TerminalSoft) and USB MCU */
    while (1)
    {
#if (BSP_CFG_RTOS == 2)
        USB_APL_RCV_MSG(USB_APL_MBX, (usb_msg_t **) &p_mess);
        usb_event = *p_mess;
        /* Analyzing the received message */
        switch (usb_event.event)
#else /* (BSP_CFG_RTOS == 2) */

```

```
    g_usb_on_usb.eventGet (&usb_event, &event);
    switch (event)
#endif /* (BSP_CFG_RTOS == 2) */
    {
    case USB_STATUS_CONFIGURED:
        {
        break;
        }
    case USB_STATUS_SUSPEND:
    case USB_STATUS_DETACH:
        {
#if USB_SUPPORT_LPW == USB_APL_ENABLE
// @@ low_power_mcu();
#endif /* USB_SUPPORT_LPW == USB_APL_ENABLE */
        break;
        }
    default:
        {
        break;
        }
    }
} /* End of function usb_main() */
```

Descriptor

A template for PMSC descriptors can be found in `ra/fsp/src/r_usb_pmsc/r_usb_pmsc_descriptor.c.template`. Also, please be sure to use your vendor ID.

4.2.71 USB Peripheral Vendor Class (r_usb_pvnd)

Modules

Functions

Refer to [USB \(r_usb_basic\)](#) for the common API (r_usb_basic) to be called from the application.

Overview

USB Peripheral Vendor class works by combining r_usb_basic module.

How to Configuration

The following shows FSP configuration procedure for USB Peripheral Vendor class.

- Select [New Stack]->[Middleware]->[USB]->[USB Peripheral Vendor class driver on r_usb_pvnd].

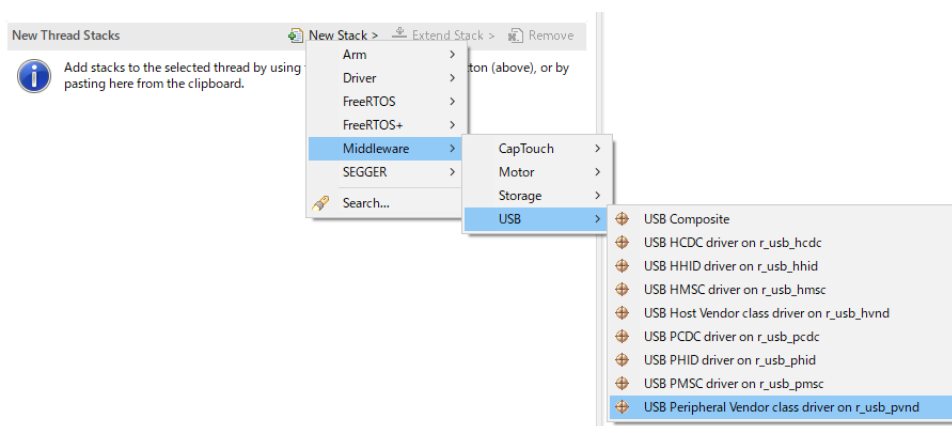

Figure 200: Select USB Peripheral Vendor Class

- The following is displayed when selecting [USB Peripheral Vendor class driver on r_usb_pvnd]. The user does not specify USB pipe number in Vendor class.

Figure 201: USB Peripheral Vendor Class Stack

API

Use the following APIs in Peripheral Vendor class application program.

- For Data Transfer
Use the following APIs for data transfer for Bulk transfer or Interrupt transfer.

1. R_USB_PipeRead()
2. R_USB_PipeWrite()
3. R_USB_PipeStop()

- For Control Transfer
Use the following API for the class request processing.

1. R_USB_PeriControlDataGet()
2. R_USB_PeriControlDataSet()
3. R_USB_PeriControlStatusSet()

- For USB Pipe Information
The USB driver allocates USB PIPE by analyzing the descriptor of USB device in Vendor class. Use the following APIs to get the allocated USB pipe information.

1. R_USB_UsedPipesGet()
2. R_USB_PipeInfoGet()

USB PIPE Allocation

The USB driver allocates USB PIPE by analyzing the descriptor of USB device in Vendor class. The USB PIPE related to the Endpoint Descriptor are allocated in order from USB PIPE1 according to the description order of the Endpoint Descriptor.

Limitations

This Peripheral Vendor class can not be included in composite device.

Descriptor

Template for Vendor class descriptor can be found in ra/fsp/src/r_usb_pvnd folder. Also, please be sure to use your vendor ID.

Examples

This application program processes the following after the enumeration completes with USB device.

1. Getting USB Pipe Information
2. Vendor Class Request Processing
3. Loopback processing of bulk transfer and interrupt transfer.

```

/*****

Detailed Description

Driver for the WDT peripheral on RA MCUs. This module implements the [WDT Interface](#).

Overview

The watchdog timer is used to recover from unexpected errors in an application. The watchdog timer must be refreshed periodically in the permitted count window by the application. If the count is allowed to underflow or refresh occurs outside of the valid refresh period, the WDT resets the device or generates an NMI.

Figure 202: Watchdog Timer Operation Example

Features

The WDT HAL module has the following key features:

- When the WDT underflows or is refreshed outside of the permitted refresh window, one of the following events can occur:
 - Resetting of the device
 - Generation of an NMI
- The WDT has two supported modes:
 - In auto start mode, the WDT begins counting at reset.
 - In register start mode, the WDT can be started from the application.

Selecting a Watchdog

RA MCUs have two watchdog peripherals: the watchdog timer (WDT) and the independent watchdog timer (IWDT). When selecting between them, consider these factors:

	WDT	IWDT
Start Mode	The WDT can be started from the application (register start mode) or configured by hardware to start automatically (auto start mode).	The IWDT can only be configured by hardware to start automatically.
Clock Source	The WDT runs off a peripheral clock.	The IWDT has its own clock source which improves safety.

Configuration

When using register start mode, configure the watchdog timer on the Stacks tab.

Note

When using auto start mode, configurations on the **Stacks** tab are ignored. Configure the watchdog using the **OFS** settings on the **BSP** tab.

Build Time Configurations for r_wdt

The following build time configurations are defined in fsp_cfg/r_wdt_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> Default (BSP) Enabled Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.
Register Start NMI Support	<ul style="list-style-type: none"> Enabled Disabled 	Disabled	If enabled, code for NMI support in register start mode is included in the build.

Configurations for Monitoring > Watchdog (r_wdt)

This module can be added to the Stacks tab via New Stack > Monitoring > Watchdog (r_wdt). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_wdt0	Module name.
Timeout	<ul style="list-style-type: none"> 1,024 Cycles 4,096 Cycles 8,192 Cycles 16,384 Cycles 	16,384 Cycles	Select the watchdog timeout in cycles.
Clock Division Ratio	<ul style="list-style-type: none"> PCLK/4 PCLK/64 PCLK/128 PCLK/512 PCLK/2048 PCLK/8192 	PCLK/8192	Select the watchdog clock divisor.
Window Start Position	<ul style="list-style-type: none"> 100% (Window Position Not Specified) 75% 50% 25% 	100% (Window Position Not Specified)	Select the allowed watchdog refresh start point.
Window End Position	<ul style="list-style-type: none"> 0% (Window Position Not Specified) 	0% (Window Position Not Specified)	Select the allowed watchdog refresh end

	Specified)		point.
	<ul style="list-style-type: none"> • 25% • 50% • 75% 		
Reset Control	<ul style="list-style-type: none"> • Reset Output • NMI Generated 	Reset Output	Select what happens when the watchdog timer expires.
Stop Control	<ul style="list-style-type: none"> • WDT Count Enabled in Low Power Mode • WDT Count Disabled in Low Power Mode 	WDT Count Disabled in Low Power Mode	Select the watchdog state in low power mode.
NMI Callback	Name must be a valid C symbol	NULL	A user callback function must be provided if the WDT is configured to generate an NMI when the timer underflows or a refresh error occurs. If this callback function is provided, it will be called from the NMI handler each time the watchdog triggers.

Clock Configuration

The WDT clock is based on the PCLKB frequency. You can set the PCLKB frequency using the **Clocks** tab of the RA Configuration editor or by using the CGC Interface at run-time. The maximum timeout period with PCLKB running at 60 MHz is approximately 2.2 seconds.

Pin Configuration

This module does not use I/O pins.

Usage Notes

NMI Interrupt

The watchdog timer uses the NMI, which is enabled by default. No special configuration is required. When the NMI is triggered, the callback function registered during open is called.

Note

When using the WDT in software start mode with NMI and the timer underflows, the WDT status must be reset by calling [R_WDT_StatusClear](#) before restarting the timer via [R_WDT_Refresh](#).

Period Calculation

The WDT operates from PCLKB. With a PCLKB of 60 MHz, the maximum time from the last refresh to device reset or NMI generation will be just over 2.2 seconds as detailed below.

$$PCLKB = 60 \text{ MHz}$$

Clock division ratio = PCLKB / 8192
Timeout period = 16384 cycles
WDT clock frequency = 60 MHz / 8192 = 7.324 kHz
Cycle time = 1 / 7.324 kHz = 136.53 us
Timeout = 136.53 us x 16384 cycles = 2.23 seconds

Limitations

Developers should be aware of the following limitations when using the WDT:

- When using a J-Link debugger the WDT counter does not count and therefore will not reset the device or generate an NMI. To enable the watchdog to count and generate a reset or NMI while debugging, add this line of code in the application:

```
/* (Optional) Enable the WDT to count and generate NMI or reset when the
 * debugger is connected. */
R_DEBUG->DBGSTOPCR_b.DBGSTOP_WDT = 0;
```

- If the WDT is configured to stop the counter in low power mode, then your application must restart the watchdog by calling `R_WDT_Refresh()` after the MCU wakes from low power mode.

Examples

WDT Basic Example

This is a basic example of minimal use of the WDT in an application.

```
void wdt_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;

    /* In auto start mode, the WDT starts counting immediately when the MCU is powered
    on. */

    /* Initializes the module. */
    err = R_WDT_Open(&g_wdt0_ctrl, &g_wdt0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* In register start mode, start the watchdog by calling R_WDT_Refresh. */
    err = R_WDT_Refresh(&g_wdt0_ctrl);
    assert(FSP_SUCCESS == err);

    while (true)
    {
        /* Application work here. */
    }
}
```

```
/* Refresh before the counter underflows to prevent reset or NMI. */
    err = R_WDT_Refresh(&g_wdt0_ctrl);
    assert(FSP_SUCCESS == err);
}
}
```

WDT Advanced Example

This example demonstrates using a start window and gives an example callback to handle an NMI generated by an underflow or refresh error.

```
#define WDT_TIMEOUT_COUNTS (16384U)
#define WDT_MAX_COUNTER (WDT_TIMEOUT_COUNTS - 1U)
#define WDT_START_WINDOW_75 ((WDT_MAX_COUNTER * 3) / 4)
/* Example callback called when a watchdog NMI occurs. */
void wdt_callback (wdt_callback_args_t * p_args)
{
    FSP_PARAMETER_NOT_USED(p_args);
    fsp_err_t err = FSP_SUCCESS;
    /* (Optional) Determine the source of the NMI. */
    wdt_status_t status = WDT_STATUS_NO_ERROR;
    err = R_WDT_StatusGet(&g_wdt0_ctrl, &status);
    assert(FSP_SUCCESS == err);
    /* (Optional) Log source of NMI and any other debug information. */
    /* (Optional) Clear the error flags. */
    err = R_WDT_StatusClear(&g_wdt0_ctrl, status);
    assert(FSP_SUCCESS == err);
    /* (Register start mode) In register start mode, call R_WDT_Refresh() to
    * continue using the watchdog after an error. */
    err = R_WDT_Refresh(&g_wdt0_ctrl);
    assert(FSP_SUCCESS == err);
    /* (Optional) Issue a software reset to reset the MCU. */
    __NVIC_SystemReset();
}
void wdt_advanced_example (void)
```

```
{
    fsp_err_t err = FSP_SUCCESS;

    /* (Optional) Enable the WDT to count and generate NMI or reset when the
     * debugger is connected. */
    R_DEBUG->DBGSTOPCR_b.DBGSTOP_WDT = 0;

    /* (Optional) Check if the WDTRF flag is set to know if the system is
     * recovering from a WDT reset. */
    if (R_SYSTEM->RSTSR1_b.WDTRF)
    {
        /* Clear the flag. */
        R_SYSTEM->RSTSR1 = 0U;
    }

    /* Open the module. */
    err = R_WDT_Open(&g_wdt0_ctrl, &g_wdt0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Initialize other application code. */
    /* (Register start mode) Call R_WDT_Refresh() to start the WDT in register
     * start mode. Do not call R_WDT_Refresh() in auto start mode unless the
     * counter is in the acceptable refresh window. */
    err = R_WDT_Refresh(&g_wdt0_ctrl);
    assert(FSP_SUCCESS == err);

    while (true)
    {
        /* Application work here. */
        /* (Optional) If there is a chance the application takes less time than
         * the start window, verify the WDT counter is past the start window
         * before refreshing the WDT. */
        uint32_t wdt_counter = 0U;

    do
        {
            /* Read the current WDT counter value. */
            err = R_WDT_CounterGet(&g_wdt0_ctrl, &wdt_counter);
            assert(FSP_SUCCESS == err);
```

```

    } while (wdt_counter >= WDT_START_WINDOW_75);

/* Refresh before the counter underflows to prevent reset or NMI. */
err = R_WDT_Refresh(&g_wdt0_ctrl);
assert(FSP_SUCCESS == err);
}
}

```

Data Structures

struct [wdt_instance_ctrl_t](#)

Data Structure Documentation

◆ wdt_instance_ctrl_t

struct wdt_instance_ctrl_t

WDT private control block. DO NOT MODIFY. Initialization occurs when [R_WDT_Open\(\)](#) is called.

Function Documentation

◆ R_WDT_Refresh()

[fsp_err_t](#) R_WDT_Refresh ([wdt_ctrl_t](#) *const p_ctrl)

Refresh the watchdog timer. Implements [wdt_api_t::refresh](#).

In addition to refreshing the watchdog counter this function can be used to start the counter in register start mode.

Example:

```

/* Refresh before the counter underflows to prevent reset or NMI. */
err = R_WDT_Refresh(&g_wdt0_ctrl);
assert(FSP_SUCCESS == err);

```

Return values

FSP_SUCCESS	WDT successfully refreshed.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Instance control block is not initialized.

Note

This function only returns FSP_SUCCESS. If the refresh fails due to being performed outside of the permitted refresh period the device will either reset or trigger an NMI ISR to run.

◆ **R_WDT_Open()**

```
fsp_err_t R_WDT_Open ( wdt_ctrl_t *const p_ctrl, wdt_cfg_t const *const p_cfg )
```

Configure the WDT in register start mode. In auto-start_mode the NMI callback can be registered. Implements `wdt_api_t::open`.

This function should only be called once as WDT configuration registers can only be written to once so subsequent calls will have no effect.

Example:

```
/* Initializes the module. */
err = R_WDT_Open(&g_wdt0_ctrl, &g_wdt0_cfg);
```

Return values

FSP_SUCCESS	WDT successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_STATE	The security state of the NMI and the module do not match.

Note

In auto start mode the only valid configuration option is for registering the callback for the NMI ISR if NMI output has been selected.

◆ **R_WDT_StatusClear()**

```
fsp_err_t R_WDT_StatusClear ( wdt_ctrl_t *const p_ctrl, const wdt_status_t status )
```

Clear the WDT status and error flags. Implements `wdt_api_t::statusClear`.

Example:

```
/* (Optional) Clear the error flags. */
err = R_WDT_StatusClear(&g_wdt0_ctrl, status);
assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	WDT flag(s) successfully cleared.
FSP_ERR_ASSERTION	Null pointer as a parameter.
FSP_ERR_NOT_OPEN	Instance control block is not initialized.
FSP_ERR_UNSUPPORTED	This function is only valid if the watchdog generates an NMI when an error occurs.

Note

When the WDT is configured to output a reset on underflow or refresh error reading the status and error flags serves no purpose as they will always indicate that no underflow has occurred and there is no refresh error. Reading the status and error flags is only valid when interrupt request output is enabled.

◆ **R_WDT_StatusGet()**

```
fsp_err_t R_WDT_StatusGet ( wdt_ctrl_t*const p_ctrl, wdt_status_t*const p_status )
```

Read the WDT status flags. Implements `wdt_api_t::statusGet`.

Indicates both status and error conditions.

Example:

```
/* (Optional) Determine the source of the NMI. */
wdt_status_t status = WDT_STATUS_NO_ERROR;

err = R_WDT_StatusGet(&g_wdt0_ctrl, &status);

assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	WDT status successfully read.
FSP_ERR_ASSERTION	Null pointer as a parameter.
FSP_ERR_NOT_OPEN	Instance control block is not initialized.
FSP_ERR_UNSUPPORTED	This function is only valid if the watchdog generates an NMI when an error occurs.

Note

When the WDT is configured to output a reset on underflow or refresh error reading the status and error flags serves no purpose as they will always indicate that no underflow has occurred and there is no refresh error. Reading the status and error flags is only valid when interrupt request output is enabled.

◆ **R_WDT_CounterGet()**

```
fsp_err_t R_WDT_CounterGet ( wdt_ctrl_t*const p_ctrl, uint32_t*const p_count )
```

Read the current count value of the WDT. Implements `wdt_api_t::counterGet`.

Example:

```
/* Read the current WDT counter value. */

err = R_WDT_CounterGet(&g_wdt0_ctrl, &wdt_counter);

assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	WDT current count successfully read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Instance control block is not initialized.

◆ **R_WDT_TimeoutGet()**

```
fsp_err_t R_WDT_TimeoutGet ( wdt_ctrl_t *const p_ctrl, wdt_timeout_values_t *const p_timeout )
```

Read timeout information for the watchdog timer. Implements `wdt_api_t::timeoutGet`.

Return values

FSP_SUCCESS	WDT timeout information retrieved successfully.
FSP_ERR_ASSERTION	Null Pointer.
FSP_ERR_NOT_OPEN	Instance control block is not initialized.

◆ **R_WDT_CallbackSet()**

```
fsp_err_t R_WDT_CallbackSet ( wdt_ctrl_t *const p_ctrl, void(*)(wdt_callback_args_t *) p_callback, void const *const p_context, wdt_callback_args_t *const p_callback_memory )
```

Updates the user callback and has option of providing memory for callback structure. Implements `wdt_api_t::callbackSet`

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	<code>p_callback</code> is non-secure and <code>p_callback_memory</code> is either secure or NULL.

4.2.73 ADPCM Decoder (rm_adpcm_decoder)

Modules

Functions

```
fsp_err_t RM_ADPCM_DECODER_Open (adpcm_decoder_ctrl_t *p_ctrl, adpcm_decoder_cfg_t const *const p_cfg)
```

```
fsp_err_t RM_ADPCM_DECODER_Decode (adpcm_decoder_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t src_len_bytes)
```

```
fsp_err_t RM_ADPCM_DECODER_Reset (adpcm_decoder_ctrl_t *p_ctrl)
```

```
fsp_err_t RM_ADPCM_DECODER_Close (adpcm_decoder_ctrl_t *p_ctrl)
```

Detailed Description

Middleware to implement the ADPCM Audio Decoder. This module implements the [ADPCM Decoder Interface](#).

Overview

Features

The ADPCM Audio Decoder has the following key features:

- Decodes 4-bit ADPCM input to 16-bit PCM output

Configuration

Build Time Configurations for rm_adpcm_decoder

The following build time configurations are defined in fsp_cfg/rm_adpcm_decoder_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Audio > ADPCM Decoder (rm_adpcm_decoder)

This module can be added to the Stacks tab via New Stack > Audio > ADPCM Decoder (rm_adpcm_decoder).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_adpcm_decoder0	Module name.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Examples

Basic Example

This is a basic example of minimal use of the ADPCM Audio Decoder implementation in an application.

```

void rm_adpcm_decoder_example ()
{
    /* Open the ADPCM audio decoder instance. */
    fsp_err_t err = RM_ADPCM_DECODER_Open(&g_adpcmdec_ctrl, &g_adpcmdec_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Decode the data */
    err = RM_ADPCM_DECODER_Decode(&g_adpcmdec_ctrl, g_adpcm_stream1, g_pcm_stream,
ADPCM_BUFFER_SIZE_BYTES);
    assert(FSP_SUCCESS == err);
    /* Reset the ADPCM audio decoder instance before decoding a new stream. */
    err = RM_ADPCM_DECODER_Reset(&g_adpcmdec_ctrl);
    assert(FSP_SUCCESS == err);
    /* Decode the first chunk of ADPCM data */
    err = RM_ADPCM_DECODER_Decode(&g_adpcmdec_ctrl, g_adpcm_stream2, g_pcm_stream,
(ADPCM_BUFFER_SIZE_BYTES/2));
    assert(FSP_SUCCESS == err);
    /* Decode the second chunk of ADPCM data */
    err = RM_ADPCM_DECODER_Decode(&g_adpcmdec_ctrl,
&g_adpcm_stream2[ADPCM_BUFFER_SIZE_BYTES/2],
                                g_pcm_stream, (ADPCM_BUFFER_SIZE_BYTES/2));
    assert(FSP_SUCCESS == err);
}

```

Data Structures

```
struct adpcm_decoder_instance_ctrl_t
```

Data Structure Documentation

◆ adpcm_decoder_instance_ctrl_t

```
struct adpcm_decoder_instance_ctrl_t
```

RM_ADPCM_DECODER instance control block. DO NOT INITIALIZE. Initialized in [adpcm_decoder_api_t::open\(\)](#).

Function Documentation

◆ **RM_ADPCM_DECODER_Open()**

```
fsp_err_t RM_ADPCM_DECODER_Open ( adpcm_decoder_ctrl_t * p_ctrl, adpcm_decoder_cfg_t const *const p_cfg )
```

Initializes ADPCM audio decoder device.

Implements `adpcm_decoder_api_t::open()`.

Return values

FSP_SUCCESS	Module is ready for use.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_ALREADY_OPEN	The instance control structure has already been opened.

◆ **RM_ADPCM_DECODER_Decode()**

```
fsp_err_t RM_ADPCM_DECODER_Decode ( adpcm_decoder_ctrl_t *const p_ctrl, void const * p_src, void * p_dest, uint32_t src_len_bytes )
```

Decodes 4bit ADPCM data to 16bit PCM data. It reads ADPCM data from area pointed by inputAddr pointer, decodes the number of samples specified and stores the decoded data in buffer pointed with outputAddr pointer.

Implements `adpcm_decoder_api_t::decode()`.

Return values

FSP_SUCCESS	Decode operation successfully completed.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ **RM_ADPCM_DECODER_Reset()**

```
fsp_err_t RM_ADPCM_DECODER_Reset ( adpcm_decoder_ctrl_t * p_ctrl)
```

This function resets the ADPCM decoder device.

Implements `adpcm_decoder_api_t::reset()`.

Return values

FSP_SUCCESS	Module closed.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ RM_ADPCM_DECODER_Close()

```
fsp_err_t RM_ADPCM_DECODER_Close ( adpcm_decoder_ctrl_t * p_ctrl)
```

This function closes the ADPCM decoder device.

Implements `adpcm_decoder_api_t::close()`.

Return values

FSP_SUCCESS	Module closed.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

4.2.74 Audio Playback with PWM (rm_audio_playback_pwm)

p_api_ctrl)
```

Detailed Description

Driver for the Audio Playback middleware on RA MCUs. This module implements the [AUDIO PLAYBACK Interface](#).

Overview**Features**

The Audio Playback with PWM middleware is used to play audio streams at user selected playback rate using Pulse Width Modulation hardware on GPT or AGT timers. This module can play the 16 bit

uncompressed, unsigned PCM audio stream when AGT is selected as PWM interface and can play 32 bit uncompressed, unsigned PCM audio stream when GPT is used as PWM interface. The application code is expected to convert the signed PCM data to unsigned PCM data and scale it with the playback rate before starting the playback.

Configuration

Build Time Configurations for rm_audio_playback_pwm

The following build time configurations are defined in fsp_cfg/rm_audio_playback_pwm_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> Default (BSP) Enabled Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.
DMAC Support	<ul style="list-style-type: none"> Enabled Disabled 	Disabled	Select if DMAC will be used.

Configurations for Audio > Audio Playback PWM (rm_audio_playback_pwm)

This module can be added to the Stacks tab via New Stack > Audio > Audio Playback PWM (rm_audio_playback_pwm).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_rm_audio_playback0	Module name.
General > Playback Speed (Hz)	Manual Entry	44100	Enter playback sample rate in Hz.
Interrupts > Callback	Name must be a valid C symbol	g_rm_audio_playback0_callback	A user callback function. If this callback function is provided, it is called from the interrupt service routine (ISR) each time the playback completes.
PWM Output Pin	<ul style="list-style-type: none"> Pin A Pin B 	Pin A	Select which timer output pin should be used for audio output.

Clock Configuration

The Audio Playback with PWM module does not require a specific clock configuration.

Pin Configuration

Configure the PWM output pins for selected PWM HAL layer peripheral (AGT/GPT). One of the following pins needs to be selected and enabled as PWM output for selected channel n,

If GPT is used as PWM interface,

- GTIOCA_n
- GTIOCB_n

If AGT is used as PWM interface,

- AGTOA_n
- AGTOB_n

Usage Notes

DMAC/DTC Integration

DMAC/DTC is used as a lower level transfer instance with this module and is operated in Normal mode to transfer 16 bit or 32 bit data from the audio stream buffer to the PWM peripheral AGT or GPT respectively. Destination address for transfer instance needs to be the Duty Cycle setting register GTCCR for GPT as PWM driver or AGTMA/AGTCMB in case of AGT as PWM driver. The Audio Playback with PWM module internally configures 'Transfer Size' as 2 Bytes if AGT is used for PWM generation, otherwise it configures 'Transfer Size' as 4 Bytes if GPT is used for PWM generation.

Examples

Basic Example

This is a basic example of minimal use of the RM_AUDIO_PLAYBACK_PWM in an application. This example shows how this driver can be used for playing a 16 bit uncompressed PCM audio from a single input buffer.

```
int16_t play_buffer[AUDIO_EXAMPLE_LENGTH];
uint32_t g_audio_callback_counter = 0;
void g_audio_example_counter_callback (audio_playback_callback_args_t * p_args)
{
    if (AUDIO_PLAYBACK_EVENT_PLAYBACK_COMPLETE == (p_args->event))
    {
        g_audio_callback_counter++;
    }
}
void basic_example (void)
{
    fsp_err_t err;
    /* Initialize the Audio Playback module for playing an audio stream. */
    err = RM_AUDIO_PLAYBACK_PWM_Open(&g_audio_playback_pwm_ctrl,
&g_audio_playback_pwm_cfg);
```

```
/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);

/* Set the 16 Bit PCM audio stream to play next */
err = RM_AUDIO_PLAYBACK_PWM_Play(&g_audio_playback_pwm_ctrl, play_buffer,
AUDIO_EXAMPLE_LENGTH);

/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);

/* Start to the play the selected audio stream*/
err = RM_AUDIO_PLAYBACK_PWM_Start(&g_audio_playback_pwm_ctrl);

/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);

/* Wait till the playback is completed */
while (g_audio_callback_counter == 0)
{
    ;
}

/* Stop playing. */
err = RM_AUDIO_PLAYBACK_PWM_Stop(&g_audio_playback_pwm_ctrl);

/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);
}
```

Streaming Example

This is an example of using Audio Playback module to play audio stream. This application uses a double buffer to store PCM sine wave data. It starts playing in the main loop, then loads the next buffer if it is ready in the callback. If the next buffer is not ready, a flag is set in the callback so the application knows to restart playing in the main loop. This example also demonstrates conversion of signed PCM format data to unsigned PWM format data along with scaling the data samples for optimum PWM wave generation.

```
#define AUDIO_PLAYBACK_PWM_STREAMING_EXAMPLE_AUDIO_SAMPLING_FREQUENCY_HZ (22050U)
#define AUDIO_PLAYBACK_PWM_STREAMING_EXAMPLE_PERIOD_VALUE_AT_22050HZ (0x11B7U)
#define AUDIO_PLAYBACK_PWM_STREAMING_EXAMPLE_SAMPLES_PER_CHUNK (1024U)
#define AUDIO_PLAYBACK_PWM_STREAMING_EXAMPLE_TONE_FREQUENCY_HZ (800U)
#define AUDIO_PLAYBACK_PWM_EXAMPLE_SAMPLES_TO_TRANSFER (1024U)
#define AUDIO_PLAYBACK_PWM_EXAMPLE_CONVERT_TO_PWM_SAMPLES (32768U)
```

```
#define AUDIO_PLAYBACK_PWM_STREAMING_EXAMPLE_DATA_BIT_SIZE (16U)

int16_t      g_stream_src[2][AUDIO_PLAYBACK_PWM_EXAMPLE_SAMPLES_TO_TRANSFER];
q15_t       g_pwm_sample[2][AUDIO_PLAYBACK_PWM_EXAMPLE_SAMPLES_TO_TRANSFER];

```

Data Structures

```
struct audio_playback_pwm_instance_ctrl_t
```

Data Structure Documentation

◆ audio_playback_pwm_instance_ctrl_t

```
struct audio_playback_pwm_instance_ctrl_t
```

AUDIO_PLAYBACK_PWM instance control block. DO NOT MODIFY. Initialization occurs when [RM_AUDIO_PLAYBACK_PWM_Open\(\)](#) is called.

Data Fields

void(*	p_callback)(audio_playback_callback_args_t *p_args)
void *	p_context
audio_playback_cfg_t const *	p_cfg
	Pointer to the configuration structure.
uint32_t	open
	Used by driver to check if the control structure is valid.
timer_instance_t const *	p_lower_lvl_timer
	Timer API used to generate sampling frequency and GPT/AGT API used to access PWM hardware.
transfer_instance_t const *	p_lower_lvl_transfer
	Transfer API used to transfer data each sampling frequency.

Field Documentation

◆ p_callback

```
void(* audio_playback_pwm_instance_ctrl_t::p_callback) (audio_playback_callback_args_t *p_args)
```

Callback called when play is complete.

◆ p_context

```
void* audio_playback_pwm_instance_ctrl_t::p_context
```

Placeholder for user data. Passed to the user callback in [audio_playback_callback_args_t](#).

Function Documentation**◆ RM_AUDIO_PLAYBACK_PWM_Open()**

```
fsp_err_t RM_AUDIO_PLAYBACK_PWM_Open ( audio_playback_ctrl_t *const p_api_ctrl,
audio_playback_cfg_t const *const p_cfg )
```

Opens and configures the Audio Playback with PWM driver. Sets playback speed and transfer rate to read the audio buffer.

Example:

```
/* Initialize the Audio Playback module for playing an audio stream. */
err = RM_AUDIO_PLAYBACK_PWM_Open(&g_audio_playback_pwm_ctrl,
&g_audio_playback_pwm_cfg);
```

Return values

FSP_SUCCESS	Audio Playback module successfully configured.
FSP_ERR_ALREADY_OPEN	Module already open.
FSP_ERR_ASSERTION	One or more pointers point to NULL or callback is NULL.

◆ RM_AUDIO_PLAYBACK_PWM_Start()

```
fsp_err_t RM_AUDIO_PLAYBACK_PWM_Start ( audio_playback_ctrl_t *const p_api_ctrl)
```

Start the PWM HAL driver (AGT or GPT) and timer HAL (AGT or GPT) drivers.

- Example:

```
/* Start to the play the selected audio stream*/
err = RM_AUDIO_PLAYBACK_PWM_Start(&g_audio_playback_pwm_ctrl);
/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Audio playback hardware started successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Driver not open. This function calls <ul style="list-style-type: none"> • timer_api_t::start

◆ RM_AUDIO_PLAYBACK_PWM_Stop()

```
fsp_err_t RM_AUDIO_PLAYBACK_PWM_Stop ( audio_playback_ctrl_t *const p_api_ctrl)
```

Stop the PWM HAL driver (AGT or GPT) and timer HAL driver (AGT or GPT).

- Example:

```
/* Stop playing. */
err = RM_AUDIO_PLAYBACK_PWM_Stop(&g_audio_playback_pwm_ctrl);
/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Audio playback hardware stopped successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Driver not open. This function calls <ul style="list-style-type: none"> • timer_api_t::stop

◆ RM_AUDIO_PLAYBACK_PWM_Play()

```
fsp_err_t RM_AUDIO_PLAYBACK_PWM_Play ( audio_playback_ctrl_t *const p_api_ctrl, void const *const p_buffer, uint32_t length )
```

Play a single audio buffer by input samples to the PWM HAL (AGT or GPT) at the sampling frequency configured by the timer.

- Example:

```
/* Set the 16 Bit PCM audio stream to play next */
err = RM_AUDIO_PLAYBACK_PWM_Play(&g_audio_playback_pwm_ctrl, play_buffer,
AUDIO_EXAMPLE_LENGTH);
/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Buffer playback began successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl or p_buffer is NULL or buffer length is greater than 0x10000.
FSP_ERR_NOT_OPEN	Driver not open.. This function calls <ul style="list-style-type: none"> • transfer_api_t::reset

◆ RM_AUDIO_PLAYBACK_PWM_Close()

```
fsp_err_t RM_AUDIO_PLAYBACK_PWM_Close ( audio_playback_ctrl_t *const p_api_ctrl)
```

Closes the module driver. Enables module stop mode.

Return values

FSP_SUCCESS	Module successfully closed.
FSP_ERR_NOT_OPEN	Driver not open.
FSP_ERR_ASSERTION	Pointer pointing to NULL.

Note

This function will close all the lower level HAL drivers as well.

4.2.75 AWS PKCS11 PAL (rm_aws_pkcs11_pal)

Modules

PKCS#11 PAL layer implementation for use by FreeRTOS TLS.

Overview

Note

The PKCS#11 PAL Interface does not provide any interfaces to the user. Consult the AWS documentation for more info: <https://docs.aws.amazon.com/freertos/latest/portingguide/afr-porting-pkcs.html>.

Configuration

There is no user configuration for this module

Data Flash Usage

The current implementation utilizes 16K of Data flash of which 8K is used for storage and the other 8K is used for backup.

Usage Notes

Limitations

- Interrupts are disabled while write or erase operations are being performed.
- Credentials are stored on data flash with no tamper protection other than SHA256 for integrity.
- Credential access is not limited in any way. The credential access and tamper issues can be resolved by updating the implementation to use code flash instead of data flash and using the Secure MPU to control access to it.

4.2.76 AWS PKCS11 PAL LITTLEFS (rm_aws_pkcs11_pal_littlefs)

[Modules](#)

PKCS#11 PAL LittleFS layer implementation for use by FreeRTOS TLS.

Overview

Note

The PKCS#11 PAL LittleFS Interface does not provide any interfaces to the user. Consult the AWS documentation for more info: <https://docs.aws.amazon.com/freertos/latest/portingguide/afr-porting-pkcs.html>.

Configuration

There is no user configuration for this module

Usage Notes

The current implementation utilizes [LittleFS Flash Port \(rm_littlefs_flash\)](#) for storage.

Limitations

- Credential access is not limited in any way.

Detailed Description

Middleware for the Bluetooth peripheral on RA MCUs. This module implements the [BLE ABS Interface](#).

Overview

This module provides BLE GAP functionality that complies with the Bluetooth Core Specification version 5.0 specified by the Bluetooth SIG. This module is configured via the [QE for BLE](#). QE for BLE provides standard services defined by standardization organization and custom services defined by user. [Bluetooth LE Profile API Document User's Manual](#) describes the APIs for standard services.

Features

The Bluetooth Low Energy Abstraction module supports the following features:

- following GAP Role support
 - Central: The device that sends a connection request to the Peripheral device.
 - Peripheral: The device that accepts a connection request from Central and establishes a connection.
 - Observer : The device that scans for advertising.
 - Broadcaster : The device that sends advertising.
- LE 2M PHY
 - BLE communication is supported on the 2 Msym/s PHY.
- LE Coded PHY -Supports BLE communication on the Coded PHY. This enables communication over longer distances than 1M PHY and 2M PHY.
- LE Advertising Extensions
 - Up to four independent adverts can be executed simultaneously.
 - The size of Advertising Data/Scan Response Data has been expanded to a maximum of 1650 bytes.
 - Periodic Advertising is available.

- LE Channel Selection Algorithm #2
 - With the hopping channel selection algorithm added in Version 5.0, the machine that selects the channel It is possible.
- High Duty Cycle Non-Connectable Advertising
 - The ability to support non-connectable advertising with a minimum interval of up to 20 msec.
- LE Secure Connections
 - Elliptic curve Diffie-Hellman key sharing (ECDH) for pairing with passive eavesdropping support.
- Link Layer privacy
 - This feature avoids being tracked by other BLE devices by periodically changing the Bluetooth device address.
- Link Layer Extended Scanner Filter policies
 - Scan Filter support for Resolvable private addresses.
- LE Data Packet Length Extension
 - This function expands the packet size of BLE data communications. It is possible to scale up to 251 bytes.
- LE L2CAP Connection Oriented Channel Support
 - The ability to support communication using the L2CAP credit based flow control channel.
- Low Duty Cycle Directed Advertising
 - The ability to support the advertising of the Low Duty Cycle for reconnecting to a known device.
- LE Link Layer Topology
 - It supports both Master and Slave roles and can operate as Master when connected to one remote device and as Slave when connected to another remote device.
- LE Ping
 - This function checks whether the link is maintained or not by requesting the transmission of packets containing MIC after link encryption.

BLE Library Configuration

There are three types of BLE Protocol Stacks, and the functions provided are different depending on the type of BLE Protocol Stack you select.

BLE library feature	Extended	Balance	Compact
GAP Role	Central Peripheral Observer Broadcaster	Central Peripheral Observer Broadcaster	Peripheral Broadcaster
LE 2M PHY	Yes	Yes	No
LE Coded PHY	Yes	Yes	No
LE Advertising Extensions	Yes	No	No
LE Channel Selection Algorithm #2	Yes	Yes	No
High Duty Cycle Non-Connectable Advertising	Yes	Yes	Yes
LE Secure Connections	Yes	Yes	Yes
Link Layer privacy	Yes	Yes	Yes

Link Layer Extended Scanner Filter policies	Yes	Yes	No
LE Data Packet Length Extension	Yes	Yes	Yes
LE L2CAP Connection Oriented Channel Support	Yes	No	No
Low Duty Cycle Directed Advertising	Yes	Yes	Yes
LE Link Layer Topology	Yes	Yes	No
LE Ping	Yes	Yes	Yes
32-bit UUID Support in LE	Yes	Yes	Yes

Target Devices

The Bluetooth Low Energy Abstraction module supports the following devices.

- RA4W1

Configuration

Build Time Configurations for rm_ble_abs

The following build time configurations are defined in fsp_cfg/rm_ble_abs_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enable • Disable 	Default (BSP)	Specify whether to include code for API parameter checking. Valid settings include.
Debug Public Address	Must be a valid device address	FF:FF:FF:50:90:74	Public Address of firmware initial value.
Debug Random Address	Must be a valid device address	FF:FF:FF:FF:FF:FF	Random Address of firmware initial value.
Maximum number of connections	Value must be an integer between 1 and 7	7	Maximum number of connections.
Maximum connection data length	Value must be an integer between 27 and 251	251	Maximum connection data length.
Maximum advertising data length	Value must be an integer between 31 and 1650	1650	Maximum advertising data length.
Maximum advertising set number	Value must be an integer between 1 and	4	Maximum advertising set number.

	4		
Maximum periodic sync set number.	Value must be an integer between 1 and 2	2	Maximum periodic sync set number.
Store Security Data	<ul style="list-style-type: none"> • Disable • Enable 	Disable	Store Security Data in DataFlash.
Data Flash Block for Security Data	Value must be an integer between 0 and 7	0	Data Flash Block for Security Data Management.
Remote Device Bonding Number	Value must be an integer between 1 and 7	7	Number of remote device bonding information.
Connection Event Start Notify	<ul style="list-style-type: none"> • Disable • Enable 	Disable	Set Connection event start notify enable/disable.

RF Deep Sleep Wakeup Notify	<ul style="list-style-type: none"> • Disable • Enable 	Disable	Set RF_DEEP_SLEEP wakeup notify enable/disable.
Bluetooth dedicated clock	Value must be an integer between 0 and 15	6	Load capacitance adjustment.

DC-DC converter	<ul style="list-style-type: none"> • Disable • Enable 	Disable	Set DC-DC converter for RF part.
Slow Clock Source	<ul style="list-style-type: none"> • Use RF_LOCO • Use External 32.768kHz 	Use RF_LOCO	Set slow clock source for RF part.
MCU CLKOUT Port	<ul style="list-style-type: none"> • P109 • P205 	P109	When BLE_ABS_CFG_RF_EXTERNAL_32K_ENABLE = 1, Set port of MCU CLKOUT.
MCU CLKOUT Frequency Output	<ul style="list-style-type: none"> • MCU CLKOUT frequency 32.768kHz • MCU CLKOUT frequency 16.384kHz 	MCU CLKOUT frequency 32.768kHz	When BLE_ABS_CFG_RF_EXTERNAL_32K_ENABLE = 1, set frequency output from CLKOUT of MCU part.
Sleep Clock Accuracy(SCA)	Value must be an integer between 0 and 500	250	When BLE_ABS_CFG_RF_EXTERNAL_32K_ENABLE = 1, set Sleep Clock Accuracy(SCA) for RF slow clock.
Transmission Power Maximum Value	<ul style="list-style-type: none"> • max +0dBm • max +4dBm 	max +4dBm	Set transmission power maximum value.
Transmission Power Default Value	<ul style="list-style-type: none"> • High 0dBm(Transmission Power Maximum Value = +0dBm) / +4dBm(Transmission Power Maximum Value = +4dBm) • Mid 0dBm(Transmission Power Maximum Value = +0dBm) / 0dBm(Transmission Power Maximum Value = +4dBm) • Low -18dBm(Transmission Power Maximum Value = +0dBm) / -20dBm(Transmission Power Maximum Value = +4dBm) 	High 0dBm(Transmission Power Maximum Value = +0dBm) / +4dBm(Transmission Power Maximum Value = +4dBm)	Set default transmit power. Default transmit power is dependent on the configuration of Maximum transmission power(BLE_ABS_CFG_RF_DEF_TX_POW).
CLKOUT_RF Output	<ul style="list-style-type: none"> • No output • 4MHz output • 2MHz output 	No output	Set CLKOUT_RF output setting.

	<ul style="list-style-type: none"> • 1MHz output 		
RF_DEEP_SLEEP Transition	<ul style="list-style-type: none"> • Disable • Enable 	Enable	Set RF_DEEP_SLEEP transition.
MCU Main Clock Frequency	Value must be an integer between 1000 and 20000	8000	Set MCU Main Clock Frequency (kHz). Set clock source according to your board environment. HOCO: don't care. / Main Clock: 1000 to 20000 kHz / PLL Circuit: 4000 to 12500 kHz
Code Flash(ROM) Device Data Block	Value must be an integer between -1 and 255	255	Device specific data block on Code Flash (ROM).
Device Specific Data Flash Block	Value must be an integer between -1 and 7	-1	Device specific data block on E2 Data Flash.
MTU Size Configured	Value must be an integer between 23 and 247	247	MTU Size configured by GATT MTU exchange procedure.
Timer Slot Maximum Number	Value must be an integer between 1 and 10	10	The maximum number of timer slot.

Configurations for Networking > BLE Abstraction (rm_ble_abs)

This module can be added to the Stacks tab via New Stack > Networking > BLE Abstraction (rm_ble_abs).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_ble_abs0	Module name.
General > Gap callback	Name must be a valid C symbol	gap_cb	A user callback function must be provided if the BLE_ABS is configured to generate a GAP. If QE is used, set to NULL.
General > Vendor specific callback	Name must be a valid C symbol	vs_cb	A user callback function must be provided if the BLE_ABS is configured to generate a Vendor Specific. If QE is used, set to NULL.
General > GATT server	Name must be a valid	gs_abs_gatts_cb_param	Set GATT server

callback parameter	C symbol		callback parameter. If QE is used, set to NULL.
General > GATT server callback number	Must be a valid number	2	The number of GATT Server callback functions.
General > GATT client callback parameter	Name must be a valid C symbol	gs_abs_gattc_cb_param	Set GATT client callback parameter. If QE is used, set to NULL.
General > GATT client callback number	Must be a valid number	2	The number of GATT Server callback functions.
Security > Pairing parameters	Name must be a valid C symbol	gs_abs_pairing_param	Set pairing parameters.
Security > IO capabilities of local device.	<ul style="list-style-type: none"> • BLE_GAP_IOCAP_DISPLAY_ONLY • BLE_GAP_IOCAP_DISPLAY_YESNO • BLE_GAP_IOCAP_KEYBOARD_ONLY • BLE_GAP_IOCAP_NOINPUT_NOOUTPUT • BLE_GAP_IOCAP_KEYBOARD_DISPLAY 	BLE_GAP_IOCAP_NOINPUT_NOOUTPUT	Select IO capabilities of local device.
Security > MITM protection policy.	<ul style="list-style-type: none"> • BLE_GAP_SEC_MITM_BEST_EFFORT • BLE_GAP_SEC_MITM_STRICT 	BLE_GAP_SEC_MITM_BEST_EFFORT	Select MITM protection policy.
Security > Determine whether to accept only Secure Connections or not.	<ul style="list-style-type: none"> • BLE_GAP_SC_BEST_EFFORT • BLE_GAP_SC_STRICT 	BLE_GAP_SC_BEST_EFFORT	Select determine whether to accept only Secure Connections or not.
Security > Type of keys to be distributed from local device.	<ul style="list-style-type: none"> • BLE_GAP_KEY_DIST_ENCKEY • BLE_GAP_KEY_DIST_IDKEY • BLE_GAP_KEY_DIST_SIGNKEY 		Select type of keys to be distributed from local device.
Security > Type of keys which local device requests a remote device to distribute.	<ul style="list-style-type: none"> • BLE_GAP_KEY_DIST_ENCKEY • BLE_GAP_KEY_DIST_IDKEY • BLE_GAP_KEY_DIST_SIGNKEY 		Set type of keys which local device requests a remote device to distribute.

IST_SIGNKEY

Security > Maximum LTK size.	Valid range is 7 - 16	16	Set Maximum LTK size.
Interrupts > Callback provided when an ISR occurs	Name must be a valid C symbol	NULL	Callback provided when BLE ABS ISR occurs

Clock Configuration*Note*

System clock (ICLK): 8 MHz or more

Peripheral module clock A (PCLKA): 8MHz or more

The BLE Protocol Stack is optimized for ICLK and PCLKA frequencies of 32 MHz.

It is recommended that the clock be set so that the ICLK and PCLKA frequencies are 32MHz in order to get the best performance from the BLE.

Pin Configuration

This module does not use I/O pins.

Usage Notes**Limitations**

Developers should be aware of the following limitations when using the BLE_ABS:

Examples**BLE_ABS Basic Example**

This is a basic example of minimal use of the BLE_ABS in an application.

```
#define BLE_ABS_EVENT_FLAG_STACK_ON (0x01 << 0)

◆ ble_abs_instance_ctrl_t

struct ble_abs_instance_ctrl_t		
BLE ABS private control block. DO NOT MODIFY. Initialization occurs when <code>RM_BLE_ABS_Open()</code> is called.		
Data Fields		
uint32_t	open	Indicates whether the <code>open()</code> API has been successfully called.
void const *	p_context	Placeholder for user data. Passed to the user callback in <code>ble_abs_callback_args_t</code> .
<code>ble_gap_application_callback_t</code>	abs_gap_callback	GAP callback function.
<code>ble_vendor_specific_application_callback_t</code>	abs_vendor_specific_callback	Vendor specific callback function.
<code>ble_abs_delete_bond_application_callback_t</code>	abs_delete_bond_callback	Delete bond information callback function.
uint32_t	connection_timer_handle	Cancel a request for connection timer.
uint32_t	advertising_timer_handle	Advertising timer for legacy advertising.
uint32_t	scan_timer_handle	Scan interval timer.
<code>abs_advertising_parameter_t</code>	advertising_sets[<code>BLE_MAX_NO_OF_ADV_SETS_SUPPORTED</code>]	Advertising set information.
<code>abs_scan_parameter_t</code>	abs_scan	Scan information.
<code>st_ble_dev_addr_t</code>	loc_bd_addr	Local device address.
uint8_t	privacy_mode	Privacy mode.
uint32_t	set_privacy_status	Local privacy status.
<code>ble_abs_timer_t</code>	timer[<code>BLE_ABS_CFG_TIMER_NUMBER_OF_SLOT</code>]	
uint8_t	local_irk[<code>BLE_GAP_IRK_SIZE</code>]	
<code>ble_abs_identity_address_info_t</code>	identity_address_info	
uint32_t	current_timeout_ms	Current timeout.
uint32_t	elapsed_timeout_ms	Elapsed timeout.
<code>ble_abs_cfg_t</code> const *	p_cfg	Pointer to the BLE ABS configuration block.

◆ st_ble_rf_notify_t

struct st_ble_rf_notify_t		

This structure is RF event notify management.

Data Fields		
uint32_t	enable	Set enable/disable of each RF event notification. Bit0 Notify Connection event start(0:Disable/1:Enable) Bit1 Notify Advertising event start(0:Disable/1:Enable) Bit2 Notify Scanning event start(0:Disable/1:Enable) Bit3 Notify Initiating event start(0:Disable/1:Enable) Bit4 Notify Connection event close(0:Disable/1:Enable) Bit5 Notify Advertising event close(0:Disable/1:Enable) Bit6 Notify Scanning event close(0:Disable/1:Enable) Bit7 Notify Initiating event close(0:Disable/1:Enable) Bit8 Notify RF_DEEP_SLEEP event start(0:Disable/1:Enable) Bit9 Notify RF_DEEP_SLEEP event close(0:Disable/1:Enable) Other Bit: Reserved for future use.
ble_rf_notify_cb_t	start_cb	Set callback function pointer for RF event start.
ble_rf_notify_cb_t	close_cb	Set callback function pointer for RF event close.
ble_rf_notify_cb_t	dsleep_cb	Set callback function pointer for RF_DEEP_SLEEP.

Typedef Documentation

◆ [ble_abs_timer_cb_t](#)

```
typedef void(* ble_abs_timer_cb_t) (uint32_t timer_hdl)
```

The timer callback invoked when the timer expired.

◆ ble_mcu_clock_change_cb_t

ble_mcu_clock_change_cb_t		
ble_mcu_clock_change_cb_t is the callback function type to use CLKOUT_RF as the MCU main clock source.		
Parameters		
	none	
Returns		
	none	

◆ ble_rf_notify_cb_t

ble_rf_notify_cb_t		
ble_rf_notify_cb_t is the RF event notify callback function type.		
Parameters		
[in]	uint32_t	The information of RF event notification.
Returns		
	none	

Enumeration Type Documentation

◆ e_ble_timer_type_t

enum e_ble_timer_type_t	
The timer type.	
Enumerator	
BLE_TIMER_ONE_SHOT	One shot timer type
BLE_TIMER_PERIODIC	Periodic timer type

Function Documentation

◆ **RM_BLE_ABS_Open()**

```
fsp_err_t RM_BLE_ABS_Open ( ble_abs_ctrl_t *const p_ctrl, ble_abs_cfg_t const *const p_cfg )
```

Host stack is initialized with this function. Before using All the R_BLE APIs, it's necessary to call this function. A callback functions are registered with this function. In order to receive the GAP, GATT, Vendor specific event, it's necessary to register a callback function. The result of this API call is notified in BLE_GAP_EVENT_STACK_ON event. Implements `ble_abs_api_t::open`.

Example:

```
/* Open the module. */
err = RM_BLE_ABS_Open(&g_ble_abs0_ctrl, &g_ble_abs0_cfg);
```

Return values

FSP_SUCCESS	Channel opened successfully.
FSP_ERR_ASSERTION	Null pointer presented.
FSP_ERR_INVALID_CHANNEL	The channel number is invalid.
FSP_ERR_ALREADY_OPEN	Requested channel is already open in a different configuration.
FSP_ERR_INVALID_ARGUMENT	Invalid input parameter.

Host stack is initialized with this function. Before using All the R_BLE APIs, it's necessary to call this function. A callback functions are registered with this function. In order to receive the GAP, GATT, Vendor specific event, it's necessary to register a callback function. The result of this API call is notified in BLE_GAP_EVENT_STACK_ON event. Implements `ble_abs_api_t::open`.

Example:

```
/* Open the module. */
err = RM_BLE_ABS_Open(&g_ble_abs0_ctrl, &g_ble_abs0_cfg);
```

Return values

FSP_SUCCESS	Channel opened successfully.
FSP_ERR_ASSERTION	Null pointer presented.
FSP_ERR_ALREADY_OPEN	Requested channel is already open in a different configuration.
FSP_ERR_INVALID_ARGUMENT	Invalid input parameter.
FSP_ERR_INVALID_MODE	Invalid mode during open call

◆ **RM_BLE_ABS_Close()**

```
fsp_err_t RM_BLE_ABS_Close ( ble_abs_ctrl_t *const p_ctrl)
```

Close the BLE channel. Implements `ble_abs_api_t::close`.

Example:

```
/* Close BLE driver */
err = RM_BLE_ABS_Close(&g_ble_abs0_ctrl);
```

Return values

FSP_SUCCESS	Channel closed successfully.
FSP_ERR_ASSERTION	Null pointer presented.
FSP_ERR_NOT_OPEN	Control block not open.

Example:

```
/* Close BLE driver */
err = RM_BLE_ABS_Close(&g_ble_abs0_ctrl);
```

Return values

FSP_SUCCESS	Channel closed successfully.
FSP_ERR_ASSERTION	Null pointer presented.
FSP_ERR_NOT_OPEN	Control block not open.

◆ **RM_BLE_ABS_Reset()**

```
fsp_err_t RM_BLE_ABS_Reset ( ble_abs_ctrl_t *const p_ctrl, ble_event_cb_t init_callback )
```

BLE is reset with this function. The process is carried out in the following order. [R_BLE_Close\(\)](#) -> [R_BLE_GAP_Terminate\(\)](#) -> [R_BLE_Open\(\)](#) -> [R_BLE_SetEvent\(\)](#). The `init_cb` callback initializes the others (Host Stack, timer, etc...). Implements [ble_abs_api_t::reset](#).

Return values

FSP_SUCCESS	Channel closed successfully.
FSP_ERR_ASSERTION	Null pointer presented.
FSP_ERR_NOT_OPEN	Control block not open.

This function is not implemented. To perform this function call [R_BLE_Close](#) followed by [R_BLE_Open](#). Implements [ble_abs_api_t::reset](#).

Return values

FSP_ERR_UNSUPPORTED	Function is not supported
---------------------	---------------------------

◆ **RM_BLE_ABS_StartLegacyAdvertising()**

```
fsp_err_t RM_BLE_ABS_StartLegacyAdvertising ( ble_abs_ctrl_t *const p_ctrl,
ble_abs_legacy_advertising_parameter_t const *const p_advertising_parameter )
```

Start Legacy Advertising after setting advertising parameters, advertising data and scan response data. The legacy advertising uses the advertising set whose advertising handle is 0. The advertising type is connectable and scannable(ADV_IND). The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Implements [ble_abs_api_t::startLegacyAdvertising](#)

Example:

```
/* Start advertising. */
err = RM_BLE_ABS_StartLegacyAdvertising(&g_ble_abs0_ctrl,
&legacy_advertising_parameter);
```

Return values

FSP_SUCCESS	Operation succeeded
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_STATE	Host stack hasn't been initialized.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.

FSP_ERR_INVALID_ARGUMENT

The advertising parameter is out of range.

Start Legacy Advertising after setting advertising parameters, advertising data and scan response data. The legacy advertising uses the advertising set whose advertising handle is 0. The advertising type is connectable and scannable(ADV_IND). The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Implements [ble_abs_api_t::startLegacyAdvertising](#)

Example:

```
/* Start advertising. */
err = RM_BLE_ABS_StartLegacyAdvertising(&g_ble_abs0_ctrl,
&legacy_advertising_parameter);
```

Return values

FSP_SUCCESS	Operation succeeded
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_STATE	Host stack hasn't been initialized.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_INVALID_ARGUMENT	The advertising parameter is out of range.

◆ RM_BLE_ABS_StartExtendedAdvertising()

```
fsp_err_t RM_BLE_ABS_StartExtendedAdvertising ( ble_abs_ctrl_t *const p_ctrl,
ble_abs_extend_advertising_parameter_t const *const p_advertising_parameter )
```

Start Extended Advertising after setting advertising parameters, advertising data. The extended advertising uses the advertising set whose advertising handle is 1. The advertising type is connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Implements [ble_abs_api_t::startExtendedAdvertising](#)

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_INVALID_STATE	Host stack hasn't been initialized.
FSP_ERR_INVALID_ARGUMENT	The advertising parameter is out of range.
FSP_ERR_UNSUPPORTED	Subordinate modules do not support this feature.

Start Extended Advertising after setting advertising parameters, advertising data. The extended advertising uses the advertising set whose advertising handle is 1. The advertising type is connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Implements [ble_abs_api_t::startExtendedAdvertising](#)

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_UNSUPPORTED	Subordinate modules do not support this feature.

◆ RM_BLE_ABS_StartNonConnectableAdvertising()

```
fsp_err_t RM_BLE_ABS_StartNonConnectableAdvertising ( ble_abs_ctrl_t *const p_ctrl,
ble_abs_non_connectable_advertising_parameter_t const *const p_advertising_parameter )
```

Start Non-Connectable Advertising after setting advertising parameters, advertising data. The non-connectable advertising uses the advertising set whose advertising handle is 2. The advertising type is non-connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Secondary Advertising Max Skip is 0. Implements [ble_abs_api_t::startNonConnectableAdvertising](#).

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_INVALID_STATE	Host stack hasn't been initialized.
FSP_ERR_INVALID_ARGUMENT	The advertising parameter is out of range.

Start Non-Connectable Advertising after setting advertising parameters, advertising data. The non-connectable advertising uses the advertising set whose advertising handle is 2. The advertising type is non-connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Secondary Advertising Max Skip is 0. Implements [ble_abs_api_t::startNonConnectableAdvertising](#).

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_UNSUPPORTED	Feature not yet supported.

◆ RM_BLE_ABS_StartPeriodicAdvertising()

```
fsp_err_t RM_BLE_ABS_StartPeriodicAdvertising ( ble_abs_ctrl_t *const p_ctrl,
ble_abs_periodic_advertising_parameter_t const *const p_advertising_parameter )
```

Start Periodic Advertising after setting advertising parameters, periodic advertising parameters, advertising data and periodic advertising data. The periodic advertising uses the advertising set whose advertising handle is 3. The advertising type is non-connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Secondary Advertising Max Skip is 0. Implements [ble_abs_api_t::startPeriodicAdvertising](#)

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_INVALID_ARGUMENT	The advertising parameter is out of range.
FSP_ERR_UNSUPPORTED	This feature is not supported in this configuration.

Start Periodic Advertising after setting advertising parameters, periodic advertising parameters, advertising data and periodic advertising data. The periodic advertising uses the advertising set whose advertising handle is 3. The advertising type is non-connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Secondary Advertising Max Skip is 0. Implements [ble_abs_api_t::startPeriodicAdvertising](#)

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_UNSUPPORTED	Subordinate modules do not support this feature.

◆ RM_BLE_ABS_StartScanning()

```
fsp_err_t RM_BLE_ABS_StartScanning ( ble_abs_ctrl_t *const p_ctrl, ble_abs_scan_parameter_t
const *const p_scan_parameter )
```

Start scanning after setting scan parameters. The scanner address type is Public Identity Address. Fast scan is followed by slow scan. The end of fast scan or slow scan is notified with BLE_GAP_EVENT_SCAN_TO event. If fast_period is 0, only slow scan is carried out. If scan_period is 0, slow scan continues. Implements `ble_abs_api_t::startScanning`.

Example:

```
/* Start scanning. */
err = RM_BLE_ABS_StartScanning(&g_ble_abs0_ctrl, &scan_parameter);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_scan_parameter is specified as NULL.
FSP_ERR_INVALID_ARGUMENT	The scan parameter is out of range.
FSP_ERR_IN_USE	This API is called in scanning.
FSP_ERR_BLE_ABS_NOT_FOUND	Usable timer slot not found.
FSP_ERR_UNSUPPORTED	This feature is not supported in this configuration.

Start scanning after setting scan parameters. The scanner address type is Public Identity Address. Fast scan is followed by slow scan. The end of fast scan or slow scan is notified with BLE_GAP_EVENT_SCAN_TO event. If fast_period is 0, only slow scan is carried out. If scan_period is 0, slow scan continues. Implements `ble_abs_api_t::startScanning`.

Example:

```
/* Start scanning. */
err = RM_BLE_ABS_StartScanning(&g_ble_abs0_ctrl, &scan_parameter);
```

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_scan_parameter is specified as NULL.
FSP_ERR_UNSUPPORTED	Function is not supported

◆ RM_BLE_ABS_CreateConnection()

```
fsp_err_t RM_BLE_ABS_CreateConnection ( ble_abs_ctrl_t *const p_ctrl,
ble_abs_connection_parameter_t const *const p_connection_parameter )
```

Request create connection. The initiator address type is Public Identity Address. The scan interval is 60ms and the scan window is 30ms in case of 1M PHY or 2M PHY. The scan interval is 180ms and the scan window is 90ms in case of coded PHY. The Minimum CE Length and the Maximum CE Length are 0xFFFF. When the request for a connection has been received by the Controller, BLE_GAP_EVENT_CREATE_CONN_COMP event is notified. When a link has been established, BLE_GAP_EVENT_CONN_IND event is notified. Implements [ble_abs_api_t::createConnection](#).

Example:

```
/* Create connection with remote device. */
err = RM_BLE_ABS_CreateConnection(&g_ble_abs0_ctrl, &g_connection_parameter);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_connection_parameter is specified as NULL.
FSP_ERR_INVALID_ARGUMENT	The create connection parameter is out of range.
FSP_ERR_IN_USE	This API is called while creating a link by previous API call.
FSP_ERR_BLE_ABS_NOT_FOUND	Couldn't find a valid timer.
FSP_ERR_UNSUPPORTED	This feature is not supported in this configuration.

Request create connection. The initiator address type is Public Identity Address. The scan interval is 60ms and the scan window is 30ms in case of 1M PHY or 2M PHY. The scan interval is 180ms and the scan window is 90ms in case of coded PHY. The Minimum CE Length and the Maximum CE Length are 0xFFFF. When the request for a connection has been received by the Controller, BLE_GAP_EVENT_CREATE_CONN_COMP event is notified. When a link has been established, BLE_GAP_EVENT_CONN_IND event is notified. Implements [ble_abs_api_t::createConnection](#).

Example:

```
/* Create connection with remote device. */
err = RM_BLE_ABS_CreateConnection(&g_ble_abs0_ctrl, &g_connection_parameter);
```

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_connection_parameter is specified as

	NULL.
FSP_ERR_INVALID_ARGUMENT	The create connection parameter is out of range.
FSP_ERR_UNSUPPORTED	Function is not supported

◆ RM_BLE_ABS_SetLocalPrivacy()

```
fsp_err_t RM_BLE_ABS_SetLocalPrivacy ( ble_abs_ctrl_t *const p_ctrl, uint8_t const *const p_lc_irk,
uint8_t privacy_mode )
```

Generate a IRK, add it to the resolving list, set privacy mode and enable RPA function. Register vendor specific callback function, if IRK is generated by this function. After configuring local device privacy, BLE_GAP_ADDR_RPA_ID_PUBLIC is specified as own device address in the advertising/scan/create connection API. Implements [ble_abs_api_t::setLocalPrivacy](#)

Example:

```
/* Set local privacy. */
err = RM_BLE_ABS_SetLocalPrivacy(&g_ble_abs0_ctrl, p_local_irk, privacy_mode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_ARGUMENT	The privacy_mode parameter is out of range.

Generate a IRK, add it to the resolving list, set privacy mode and enable RPA function. Register vendor specific callback function, if IRK is generated by this function. After configuring local device privacy, BLE_GAP_ADDR_RPA_ID_PUBLIC is specified as own device address in the advertising/scan/create connection API. Implements [ble_abs_api_t::setLocalPrivacy](#)

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_ARGUMENT	The privacy_mode parameter is out of range.
FSP_ERR_UNSUPPORTED	Function is not supported

◆ RM_BLE_ABS_StartAuthentication()

```
fsp_err_t RM_BLE_ABS_StartAuthentication ( ble_abs_ctrl_t *const p_ctrl, uint16_t
connection_handle )
```

Start pairing or encryption. If pairing has been done, start encryption. The pairing parameters are configured by [RM_BLE_ABS_Open\(\)](#) or [R_BLE_GAP_SetPairingParams\(\)](#). If the pairing parameters are configure by [RM_BLE_ABS_Open\(\)](#),

- bonding policy is that bonding information is stored.
- Key press notification is not supported. Implements [ble_abs_api_t::startAuthentication](#).

Example:

```
/* Start authentication with remote device. */
err = RM_BLE_ABS_StartAuthentication(&g_ble_abs0_ctrl, g_connection_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl or connection_handle are specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_ARGUMENT	The connection handle parameter is out of range.

Start pairing or encryption. If pairing has been done, start encryption. The pairing parameters are configured by [RM_BLE_ABS_Open\(\)](#) or [R_BLE_GAP_SetPairingParams\(\)](#). If the pairing parameters are configure by [RM_BLE_ABS_Open\(\)](#),

- bonding policy is that bonding information is stored.
- Key press notification is not supported. Implements [ble_abs_api_t::startAuthentication](#).

Example:

```
/* Start authentication with remote device. */
err = RM_BLE_ABS_StartAuthentication(&g_ble_abs0_ctrl, g_connection_handle);
```

Return values

FSP_ERR_ASSERTION	p_instance_ctrl or connection_handle are specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_UNSUPPORTED	Function is not supported

◆ RM_BLE_ABS_DeleteBondInformation()

```
fsp_err_t RM_BLE_ABS_DeleteBondInformation ( ble_abs_ctrl_t *const p_ctrl,
ble_abs_bond_information_parameter_t const *const p_bond_information_parameter )
```

Delete bonding information from BLE stack and storage. Implements [ble_abs_api_t::deleteBondInformation](#).

Example:

```
/* Delete bonding information. */
err = RM_BLE_ABS_DeleteBondInformation(&g_ble_abs0_ctrl,
&g_bond_information_parameter);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_instance_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_bond_information_parameter is NULL.
FSP_ERR_NOT_OPEN	Control block not open.

Delete bonding information from BLE stack and storage. Implements [ble_abs_api_t::deleteBondInformation](#).

Example:

```
/* Delete bonding information. */
err = RM_BLE_ABS_DeleteBondInformation(&g_ble_abs0_ctrl,
&g_bond_information_parameter);
```

Return values

FSP_SUCCESS	Operation was successful
FSP_ERR_ASSERTION	The parameter p_instance_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_bond_information_parameter is NULL.
FSP_ERR_NOT_OPEN	Control block not open.

◆ RM_BLE_ABS_ImportKeyInformation()

```
fsp_err_t RM_BLE_ABS_ImportKeyInformation ( ble_abs_ctrl_t *const p_ctrl, ble_device_address_t *
p_local_identity_address, uint8_t * p_local_irk, uint8_t * p_local_csrk )
```

Import key information to BLE stack and storage. Implements `ble_abs_api_t::importKeyInformation`.

Example:

```
/* Import local key information. */
err = RM_BLE_ABS_ImportKeyInformation(&g_ble_abs0_ctrl, &local_identity_address,
local_irk, local_csrk);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_instance_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_local_identity_address, p_local_irk or p_local_csrk is NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_HW_CONDITION	Failure to access internal storage.
FSP_ERR_UNSUPPORTED	Not supported in this configuration.

◆ RM_BLE_ABS_ExportKeyInformation()

```
fsp_err_t RM_BLE_ABS_ExportKeyInformation ( ble_abs_ctrl_t *const p_ctrl, ble_device_address_t *
p_local_identity_address, uint8_t * p_local_irk, uint8_t * p_local_csrk )
```

Export key information to BLE stack and storage. Implements `ble_abs_api_t::exportKeyInformation`.

Example:

```
/* Export local key information. */
err = RM_BLE_ABS_ExportKeyInformation(&g_ble_abs0_ctrl, &local_identity_address,
local_irk, local_csrk);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_instance_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_local_identity_address, p_local_irk or p_local_csrk is NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_BUFFER_EMPTY	Dynamic memory allocation failed.
FSP_ERR_OUT_OF_MEMORY	Failure to access internal storage.
FSP_ERR_NOT_INITIALIZED	Not initialized internal storage.
FSP_ERR_UNSUPPORTED	Not supported in this configuration.

4.2.78 Bluetooth Low Energy Abstraction with RYZ012 (rm_ble_abs_spp)

Modules

Middleware for the Bluetooth peripheral on RA MCUs. This module implements the [BLE ABS Interface](#).

Overview

This module provides BLE GAP functionality that complies with the Bluetooth Core Specification version 5.0 specified by the Bluetooth SIG. This module is configured via the [QE for BLE](#). QE for BLE provides standard and custom services defined by the user.

The module supports the Renesas Electronics RYZ012 Bluetooth® Low Energy 5 Module. The connection to the host is done through connecting the module to a PMOD on the development board. The `rm_ble_abs_spp` driver interfaces with the RYZ012 module over UART.

Features

The Bluetooth Low Energy Abstraction module with SPP supports the following features:

- Common functionality
 - Open/Close the BLE protocol stack.
 - Setting Transmit Power Level.
- The following GAP Role support
 - Peripheral: The device that accepts a connection request from Central and establishes a connection.
- GAP functionality
 - Initialize the Host stack.
 - Setting address.
 - Start/Stop Advertising.
 - Connect/Disconnect a link.
- GATT Common functionality
 - Get MTU Size.
- GATT Server functionality
 - Initialization of GATT Server.
 - Loading of Profile definition.
 - Notification of characteristics modification.
 - Read/Write of GATT Profile from host.

Target Devices

The Bluetooth Low Energy Abstraction module supports the following devices.

- RA6 line of devices using a PMOD connector for the RYZ012 module
- RA4 Line of devices using a PMOD connector for the RYZ012 module

Configuration

Build Time Configurations for rm_ble_abs_spp

The following build time configurations are defined in fsp_cfg/rm_ble_abs_spp_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enable • Disable 	Default (BSP)	Specify whether to include code for API parameter checking.
Reset Port	Refer to the RA Configuration tool for available options.	03	Specify the module reset pin port for the MCU.
Reset Pin	Refer to the RA Configuration tool for available options.	10	Specify the module reset pin for the MCU.
UART/SPI Select Port (PB5)	Refer to the RA Configuration tool for available options.	03	Specify the module PB5 port for the MCU.
UART/SPI Select Pin (PB5)	Refer to the RA Configuration tool for available options.	11	Specify the module PB5 pin for the MCU.

Transmit Power Level (in dBm)	Refer to the RA Configuration tool for available options.	4.57	Specify the module transmit power in dBm.
-------------------------------	---	------	---

Configurations for Networking > SPP BLE Abstraction (rm_ble_abs_spp)

This module can be added to the Stacks tab via New Stack > Networking > SPP BLE Abstraction (rm_ble_abs_spp).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_ble_abs0	Module name.
General > GAP callback	Name must be a valid C symbol	gap_cb	If QE is used, set to NULL.
General > Vendor specific callback	Name must be a valid C symbol	vs_cb	If QE is used, set to NULL.
General > GATT server callback parameter	Name must be a valid C symbol	gs_abs_gatts_cb_param	If QE is used, set to NULL.
General > GATT server callback number	Must be a valid number	2	The number of GATT Server callback functions.
General > GATT client callback parameter	Name must be a valid C symbol	gs_abs_gattc_cb_param	Set GATT client callback parameter. If QE is used, set to NULL.
General > GATT client callback number	Must be a valid number	2	The number of GATT Server callback functions.

Pin Configuration

Refer to [Serial Communications Interface \(SCI\) UART \(r_sci_uart\)](#). [R_SCI_UART_Open\(\)](#) is called by [Bluetooth Low Energy Abstraction with RYZ012 \(rm_ble_abs_spp\)](#)

GPIO pins used by the BLE driver to control RYZ012:

- Reset Pin : Active low reset line for RYZ012 module
- UART/SPI Select Pin : Allows selection between UART or SPI from module communication. UART is selected with output low and SPI with output high.

Usage Notes

Limitations

Developers should be aware of the following limitations when using the BLE_ABS:

Currently supported rm_ble_abs_spp interface functions:

- RM_BLE_ABS_Open
- RM_BLE_ABS_Close

- RM_BLE_ABS_StartLegacyAdvertising

Currently supported r_ble_spp_api interface functions:

- R_BLE_Open
- R_BLE_Close
- R_BLE_SetEvent
- R_BLE_GAP_Init
- R_BLE_GAP_StopAdv
- R_BLE_GAP_SetAdvSresData
- R_BLE_GAP_StartAdv
- R_BLE_GAP_SetAdvParam
- R_BLE_GATT_GetMtu
- R_BLE_GATTS_SetDbInst
- R_BLE_GATTS_Init
- R_BLE_GATTS_GetAttr
- R_BLE_GATTS_SetAttr
- R_BLE_GATTS_Notification
- R_BLE_GATTS_Indication
- R_BLE_GATTS_RegisterCb
- R_BLE_GATTC_Init
- R_BLE_GATTC_RegisterCb
- R_BLE_VS_SetBdAddr
- R_BLE_VS_SetTxPower

Currently supported callback events:

- BLE_GAP_EVENT_CONN_IND
- BLE_GAP_EVENT_DISCONN_IND
- BLE_GAP_EVENT_ADV_ON
- BLE_GAP_EVENT_ADV_OFF
- BLE_GATTC_EVENT_CONN_IND
- BLE_GATTS_EVENT_CONN_IND
- BLE_GATTC_EVENT_DISCONN_IND
- BLE_GATTS_EVENT_DISCONN_IND
- BLE_GATTS_EVENT_WRITE_RSP_COMP

Transmit Power

Specific Operational Use Conditions for RYZ012 BLE module:

Please consult the laws and regulations of the region(s) in which the device will be used to verify the information below before using this device.

North America (FCC) The module must not be operated at power levels above 10.0 dBm. Host devices that need higher output power may not be marketed without prior re-certification.

Europe (RED) The module must not be operated at power levels above 8.4 dBm. Host devices that need higher output power may not be marketed in regions covered by RED regulation without prior re-certification.

Japan (MIC) The module must be operated at power level 4.5 dBm. Host devices that need to change output power may not be marketed without prior re-certification.

The current default level used in the E2 Studio Configurator is 4.5 dBm for the transmit power level.

Examples

BLE_ABS_SPP Basic Example

This is a basic example of minimal use of the BLE_ABS_SPP in an application.

```
/* The callback is called when peripheral event occurs. */
void gap_peripheral_cb (uint16_t type, ble_status_t result, st_ble_evt_data_t *
p_data)
{
    FSP_PARAMETER_NOT_USED(result);
    FSP_PARAMETER_NOT_USED(p_data);
    switch (type)
    {
    case BLE_GAP_EVENT_STACK_ON:
        {
            g_ble_event_flag = g_ble_event_flag | BLE_ABS_EVENT_FLAG_STACK_ON;
            break;
        }
    case BLE_GAP_EVENT_ADV_ON:
        {
            st_ble_gap_adv_set_evt_t * p_gap_adv_set_evt_param = (st_ble_gap_adv_set_evt_t *)
p_data->p_param;

            g_advertising_handle = p_gap_adv_set_evt_param->adv_hdl;
            g_ble_event_flag |= BLE_ABS_EVENT_FLAG_ADV_ON;

            break;
        }
    case BLE_GAP_EVENT_ADV_OFF:
        {
            g_ble_event_flag |= BLE_ABS_EVENT_FLAG_ADV_OFF;

            break;
        }
    case BLE_GAP_EVENT_CONN_IND:
        {
            g_ble_event_flag |= BLE_ABS_EVENT_FLAG_CONN_IND;
        }
    }
}
```

```
break;
    }
    {
/* Do nothing. */
break;
    }
default:
break;
    }
}
```

```
#define BLE_ABS_EVENT_FLAG_STACK_ON (0x01 << 0)

Detailed Description

Middleware to implement the block media interface on SD cards. This module implements the [Block Media Interface](#).

Overview

Features

The SD/MMC implementation of the block media interface has the following key features:

- Reading, writing, and erasing data from an SD card
- Callback called when card insertion or removal is detected
- Provides media information such as sector size and total number of sectors.

Configuration

Build Time Configurations for rm_block_media_sdmmc

The following build time configurations are defined in driver/rm_block_media_sdmmc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Storage > Block Media SD/MMC (rm_block_media_sdmmc)

This module can be added to the Stacks tab via New Stack > Storage > Block Media SD/MMC (rm_block_media_sdmmc). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_block_media0	Module name.
Callback	Name must be a valid C symbol	NULL	A user callback function can be provided. If this callback function is provided, it will be called when a card is inserted or removed.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Examples

Basic Example

This is a basic example of minimal use of the SD/MMC block media implementation in an application.

```
#define RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE (512)
uint8_t g_dest[RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint8_t g_src[RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint32_t g_transfer_complete = 0;
void rm_block_media_sdmmc_basic_example (void)
{
    /* Initialize g_src to known data */
    for (uint32_t i = 0; i < RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE; i++)
    {
```

```
    g_src[i] = (uint8_t) ('A' + (i % 26));
}

/* Open the RM_BLOCK_MEDIA_SDMMC driver. */
fsp_err_t err = RM_BLOCK_MEDIA_SDMMC_Open(&g_rm_block_media0_ctrl,
&g_rm_block_media0_cfg);

/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);

/* A device shall be ready to accept the first command within 1ms from detecting VDD
min. Reference section 6.4.1.1
* "Power Up Time of Card" in the SD Physical Layer Simplified Specification Version
6.00. */
R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);

/* Initialize the SD card. This should not be done until the card is plugged in for
SD devices. */
err = RM_BLOCK_MEDIA_SDMMC_MediaInit(&g_rm_block_media0_ctrl);
assert(FSP_SUCCESS == err);

/* Write a block of data to sector 3 of an SD card. */
err = RM_BLOCK_MEDIA_SDMMC_Write(&g_rm_block_media0_ctrl, g_src, 3, 1);
assert(FSP_SUCCESS == err);

/* Read a block of data from sector 3 of an SD card. */
err = RM_BLOCK_MEDIA_SDMMC_Read(&g_rm_block_media0_ctrl, g_dest, 3, 1);
assert(FSP_SUCCESS == err);
}
```

Function Documentation

◆ **RM_BLOCK_MEDIA_SDMMC_Open()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_Open ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_cfg_t const *const p_cfg )
```

Opens the module.

Implements `rm_block_media_api_t::open()`.

Return values

FSP_SUCCESS	Module is available and is now open.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_ALREADY_OPEN	Module has already been opened with this instance of the control structure.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `sdmmc_api_t::open`

◆ **RM_BLOCK_MEDIA_SDMMC_MediaInit()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_MediaInit ( rm_block_media_ctrl_t *const p_ctrl)
```

Initializes the SD or eMMC device. This procedure requires several sequential commands. This function blocks until all identification and configuration commands are complete.

Implements `rm_block_media_api_t::mediaInit()`.

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `sdmmc_api_t::mediaInit`

◆ **RM_BLOCK_MEDIA_SDMMC_Read()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_Read ( rm_block_media_ctrl_t *const p_ctrl, uint8_t *const
p_dest_address, uint32_t const block_address, uint32_t const num_blocks )
```

Reads data from an SD or eMMC device. Up to 0x10000 sectors can be read at a time. Implements [rm_block_media_api_t::read\(\)](#).

Return values

FSP_SUCCESS	Data read successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- [sdmmc_api_t::read](#)

◆ **RM_BLOCK_MEDIA_SDMMC_Write()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_Write ( rm_block_media_ctrl_t *const p_ctrl, uint8_t const
*const p_src_address, uint32_t const block_address, uint32_t const num_blocks )
```

Writes data to an SD or eMMC device. Up to 0x10000 sectors can be written at a time. Implements [rm_block_media_api_t::write\(\)](#).

Return values

FSP_SUCCESS	Write finished successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- [sdmmc_api_t::write](#)

◆ **RM_BLOCK_MEDIA_SDMMC_Erase()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_Erase ( rm_block_media_ctrl_t *const p_ctrl, uint32_t const
block_address, uint32_t const num_blocks )
```

Erases sectors of an SD card or eMMC device. Implements `rm_block_media_api_t::erase()`.

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `sdmmc_api_t::erase`
- `sdmmc_api_t::statusGet`

◆ **RM_BLOCK_MEDIA_SDMMC_CallbackSet()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_CallbackSet ( rm_block_media_ctrl_t *const p_ctrl,
void(*) (rm_block_media_callback_args_t *) p_callback, void const *const p_context,
rm_block_media_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `rm_block_media_api_t::callbackSet`.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	<code>p_callback</code> is non-secure and <code>p_callback_memory</code> is either secure or NULL.

◆ **RM_BLOCK_MEDIA_SDMMC_StatusGet()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_StatusGet ( rm_block_media_ctrl_t *const p_api_ctrl,
rm_block_media_status_t *const p_status )
```

Provides driver status. Implements `rm_block_media_api_t::statusGet()`.

Return values

FSP_SUCCESS	Status stored in p_status.
FSP_ERR_ASSERTION	NULL pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_BLOCK_MEDIA_SDMMC_InfoGet()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_InfoGet ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_info_t *const p_info )
```

Retrieves module information. Implements `rm_block_media_api_t::infoGet()`.

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

◆ **RM_BLOCK_MEDIA_SDMMC_Close()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_Close ( rm_block_media_ctrl_t *const p_ctrl)
```

Closes an open SD/MMC device. Implements `rm_block_media_api_t::close()`.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.80 SPI Block Media Implementation (rm_block_media_spi)

Modules

Functions

fsp_err_t	RM_BLOCK_MEDIA_SPI_Open (rm_block_media_ctrl_t *const p_ctrl, rm_block_media_cfg_t const *const p_cfg)
fsp_err_t	RM_BLOCK_MEDIA_SPI_InfoGet (rm_block_media_ctrl_t *const p_ctrl, rm_block_media_info_t *const p_info)
fsp_err_t	RM_BLOCK_MEDIA_SPI_MediaInit (rm_block_media_ctrl_t *const p_ctrl)
fsp_err_t	RM_BLOCK_MEDIA_SPI_Read (rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const start_block, uint32_t const num_blocks)
fsp_err_t	RM_BLOCK_MEDIA_SPI_StatusGet (rm_block_media_ctrl_t *const p_ctrl, rm_block_media_status_t *const p_status)
fsp_err_t	RM_BLOCK_MEDIA_SPI_Write (rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const start_block, uint32_t const num_blocks)
fsp_err_t	RM_BLOCK_MEDIA_SPI_CallbackSet (rm_block_media_ctrl_t *const p_ctrl, void(*p_callback)(rm_block_media_callback_args_t *), void const *const p_context, rm_block_media_callback_args_t *const p_callback_memory)
fsp_err_t	RM_BLOCK_MEDIA_SPI_Close (rm_block_media_ctrl_t *const p_ctrl)
fsp_err_t	RM_BLOCK_MEDIA_SPI_Erase (rm_block_media_ctrl_t *const p_ctrl, uint32_t const start_block, uint32_t const num_blocks)

Detailed Description

Middleware to implement the block media interface on SPI flash memory. This module implements the [Block Media Interface](#).

Overview

Features

The SPI implementation of the block media interface has the following key features:

- Reading, writing, and erasing data from SPI flash memory
- Provides media information such as sector size and total number of sectors.

Note

By default, Block Media SPI Read, Write, and Erase are blocking operations. Non-blocking operation may be achieved by yielding control within the optional callback function.

Configuration

Build Time Configurations for rm_block_media_spi

The following build time configurations are defined in driver/rm_block_media_spi_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected, code for parameter checking is included in the build

Configurations for Storage > Block Media SPI Flash (rm_block_media_spi)

This module can be added to the Stacks tab via New Stack > Storage > Block Media SPI Flash (rm_block_media_spi).

Configuration	Options	Default	Description
Module Instance Name	Name must be a valid C symbol	g_rm_block_media0	Module name
Block size (bytes)	Manual Entry	4096	Specify the size of a block in bytes.
Block count	Minimum block count is 1, maximum is defined by hardware and software design.	8192	Number of blocks available for use by this driver instance.
Base Address	Manual Entry	0	Base address offset (bytes) for instance memory region.
Callback Function	Name must be a valid C symbol	NULL	A user callback function can be provided. If this callback is provided, it will be called after the completion of Read, Write, and Erase operations, or anytime these functions are waiting on hardware.
[DEPRECATED] Callback Context	Name must be a valid C symbol	NULL	A user specified context that will be provided back to the user when a callback occurs.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Limitations

Developers should be aware of the following limitations when using RM_BLOCK_MEDIA_SPI:

- Getting and setting Block Protection or Advanced Sector Protection modes is not supported.
- Addressing QSPI memory address ranges greater than 64 MB (one bank) is not supported.

Examples

Basic Example

This is a basic example of minimal use of the SPI block media implementation in an application.

```
#define RM_BLOCK_MEDIA_SPI_BLOCK_SIZE (256U)

uint8_t g_dest[RM_BLOCK_MEDIA_SPI_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint8_t g_src[RM_BLOCK_MEDIA_SPI_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
void rm_block_media_spi_basic_example (void)
{
    /* Initialize g_src to known data */
    for (uint32_t i = 0; i < RM_BLOCK_MEDIA_SPI_BLOCK_SIZE; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }

    /* Open the RM_BLOCK_MEDIA_SPI driver. */
    fsp_err_t err = RM_BLOCK_MEDIA_SPI_Open(&g_rm_block_media0_ctrl,
    &g_rm_block_media0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Initialize the SPI flash memory. */
    err = RM_BLOCK_MEDIA_SPI_MediaInit(&g_rm_block_media0_ctrl);
    assert(FSP_SUCCESS == err);

    /* Write a block of data to block 3 of the SPI flash memory. */
    err = RM_BLOCK_MEDIA_SPI_Write(&g_rm_block_media0_ctrl, g_src, 3, 1);
    assert(FSP_SUCCESS == err);

    /* Read a block of data from block 3 of the SPI flash memory. */
    err = RM_BLOCK_MEDIA_SPI_Read(&g_rm_block_media0_ctrl, g_dest, 3, 1);
    assert(FSP_SUCCESS == err);
}
```

```
}
```

Non-Blocking Example

This is a basic example of using the optional SPI callback to impliment non-blocking operation.

```
#define RM_BLOCK_MEDIA_EXAMPLE_DEVICE_BLOCK_COUNT 0x1000
void rm_block_media_spi_non_blocking_example (void)
{
    /* Initialize g_src to known data */
    for (uint32_t i = 0; i < RM_BLOCK_MEDIA_SPI_BLOCK_SIZE; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }

    /* Open the RM_BLOCK_MEDIA_SPI driver. This enables the card detection interrupt. */
    fsp_err_t err = RM_BLOCK_MEDIA_SPI_Open(&g_rm_block_media0_ctrl,
&g_rm_block_media0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Initialize the Block Media SPI driver. */
    err = RM_BLOCK_MEDIA_SPI_MediaInit(&g_rm_block_media0_ctrl);
    assert(FSP_SUCCESS == err);

    /* Erase a large quantity of data from SPI Flash Memory */
    err = RM_BLOCK_MEDIA_SPI_Erase(&g_rm_block_media0_ctrl, 0,
RM_BLOCK_MEDIA_EXAMPLE_DEVICE_BLOCK_COUNT);
    assert(FSP_SUCCESS == err);
}

/* The optional callback is invoked for Read, Write, and Erase operations, whenever
the operation completes or has
* been blocked by the lower level SPI driver busy indication.
*/
void rm_block_media_spi_example_callback (rm_block_media_callback_args_t * p_args)
{
    if (RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE == p_args->event)
    {
```

```
/* TODO: Process operation complete. */
}
else if (RM_BLOCK_MEDIA_EVENT_POLL_STATUS == p_args->event)
{
    rm_block_media_status_t status;
    rm_block_media_ctrl_t * p_ctrl = (rm_block_media_ctrl_t *) p_args->p_context;
    fsp_err_t err = RM_BLOCK_MEDIA_SPI_StatusGet(p_ctrl, &status);
    assert(FSP_SUCCESS == err);
    if (true == status.busy)
    {
        /* Run waiting tasks */
        vTaskSuspend(xTaskGetCurrentTaskHandle());
    }
}
else
{
    assert(RM_BLOCK_MEDIA_EVENT_ERROR == p_args->event);
    /* TODO: Process Read, Write, or Erase error. */
}
}
```

Function Documentation

◆ **RM_BLOCK_MEDIA_SPI_Open()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Open ( rm_block_media_ctrl_t *const p_ctrl, rm_block_media_cfg_t
const *const p_cfg )
```

Parameter checking and Acquires mutex, then handles driver initialization at the HAL SPI layer and marking the open flag in control block.

Implements `rm_block_media_api_t::open`.

Return values

FSP_SUCCESS	Block media for SPI framework is successfully opened.
FSP_ERR_ASSERTION	One of the input parameters or their data references may be null.
FSP_ERR_ALREADY_OPEN	The channel specified has already been opened. See HAL driver for other possible causes.

Returns

See [Common Error Codes](#) or HAL driver for other possible return codes or causes. This function calls

- `spi_flash_api_t::open`

◆ **RM_BLOCK_MEDIA_SPI_InfoGet()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_InfoGet ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_info_t *const p_info )
```

Retrieves module information.

Implements `rm_block_media_api_t::infoGet`.

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

◆ **RM_BLOCK_MEDIA_SPI_MediaInit()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_MediaInit ( rm_block_media_ctrl_t *const p_ctrl)
```

Initializes the Block Media SPI Flash device.

Implements `rm_block_media_api_t::mediaInit`.

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_BLOCK_MEDIA_SPI_Read()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Read ( rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest,
uint32_t const start_block, uint32_t const num_blocks )
```

Reads a number of blocks from spi flash memory. By default, this is a function is blocking. Non-blocking operation may be achieved by yielding control within the optional callback function.

Implements `rm_block_media_api_t::read`.

Return values

FSP_SUCCESS	SPI data read successfully
FSP_ERR_ASSERTION	p_ctrl or p_dest is NULL, or num_blocks is zero
FSP_ERR_NOT_OPEN	Block Media SPI module is not yet open
FSP_ERR_INVALID_ADDRESS	Invalid address range for read operation
FSP_ERR_NOT_INITIALIZED	Block Media SPI module is not yet initialized

◆ **RM_BLOCK_MEDIA_SPI_StatusGet()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_StatusGet ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_status_t *const p_status )
```

Provides driver status.

Implements `rm_block_media_api_t::statusGet`.

Return values

FSP_SUCCESS	Status stored in p_status.
FSP_ERR_ASSERTION	NULL pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Returns

See [Common Error Codes](#) or HAL driver for other possible return codes or causes. This function calls

- `spi_flash_api_t::statusGet`

◆ **RM_BLOCK_MEDIA_SPI_Write()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Write ( rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const
p_src, uint32_t const start_block, uint32_t const num_blocks )
```

Writes provided data to a number of blocks of spi flash memory. By default, this is a function is blocking. Non-blocking operation may be achieved by yielding control within the optional callback function.

Implements `rm_block_media_api_t::write`.

Return values

FSP_SUCCESS	Flash write finished successfully.
FSP_ERR_ASSERTION	p_ctrl or p_src is NULL. Or num_blocks is zero.
FSP_ERR_NOT_OPEN	Block media SPI Framework module is not yet initialized.
FSP_ERR_INVALID_ADDRESS	Invalid address range
FSP_ERR_NOT_INITIALIZED	Block Media SPI module is not yet initialized

Returns

See [Common Error Codes](#) or HAL driver for other possible return codes or causes. This function calls

- `spi_flash_api_t::write`

◆ **RM_BLOCK_MEDIA_SPI_CallbackSet()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_CallbackSet ( rm_block_media_ctrl_t *const p_ctrl,
void(*) (rm_block_media_callback_args_t *) p_callback, void const *const p_context,
rm_block_media_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. API not supported.

Implements `rm_block_media_api_t::callbackSet`.

Return values

FSP_ERR_UNSUPPORTED	API not supported by RM_BLOCK_MEDIA_SPI.
---------------------	--

◆ **RM_BLOCK_MEDIA_SPI_Close()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Close ( rm_block_media_ctrl_t *const p_ctrl)
```

Closes the Block Media SPI device. Implements `rm_block_media_api_t::close`.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	One of the following parameters may be null: <code>p_ctrl</code> .
FSP_ERR_NOT_OPEN	Block media SPI Framework module is not yet initialized.

Returns

See [Common Error Codes](#) or HAL driver for other possible return codes or causes. This function calls

- `spi_flash_api_t::close`

◆ RM_BLOCK_MEDIA_SPI_Erase()

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Erase ( rm_block_media_ctrl_t *const p_ctrl, uint32_t const
start_block, uint32_t const num_blocks )
```

This function erases blocks of the SPI device. By default, this is a function is blocking. Non-blocking operation may be achieved by yielding control within the optional callback function.

Implements `rm_block_media_api_t::erase`.

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.
FSP_ERR_INVALID_ADDRESS	Invalid address range

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `spi_flash_api_t::erase`
- `spi_flash_api_t::statusGet`

4.2.81 USB HMSC Block Media Implementation (rm_block_media_usb)

Modules

Functions

```

```

```
fsp_err_t RM_BLOCK_MEDIA_USB_Close (rm_block_media_ctrl_t *const p_ctrl)
```

Detailed Description

Middleware to implement the block media interface on USB mass storage devices. This module implements the [Block Media Interface](#).

Overview

Features

The USB implementation of the block media interface has the following key features:

- Reading, writing, and erasing data from a USB mass storage device
- Callback called when device insertion or removal is detected
- Provides media information such as sector size and total number of sectors.

Configuration

Build Time Configurations for rm_block_media_usb

The following build time configurations are defined in driver/rm_block_media_usb_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Storage > Block Media USB (rm_block_media_usb)

This module can be added to the Stacks tab via New Stack > Storage > Block Media USB (rm_block_media_usb).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_block_media0	Module name.
Callback	Name must be a valid C symbol	NULL	A user callback function can be provided. If this

callback function is provided, it will be called when a device is attached or removed.

A user context can be provided. If this context is provided, it will be passed to callback function when a device is attached or removed.

Pointer to user context Name must be a valid C symbol NULL

Note

RM_BLOCK_MEDIA_USB_MediaInit function must be called after receiving the insert event notification.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Examples

Basic Example

This is a basic example of minimal use of the USB mass storage block media implementation in an application.

```
#define RM_BLOCK_MEDIA_USB_BLOCK_SIZE (512)
volatile bool g_usb_inserted = false;
uint8_t      g_dest[RM_BLOCK_MEDIA_USB_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint8_t      g_src[RM_BLOCK_MEDIA_USB_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
void rm_block_media_usb_basic_example (void)
{
    /* Initialize g_src to known data */
    for (uint32_t i = 0; i < RM_BLOCK_MEDIA_USB_BLOCK_SIZE; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }
    /* Open the RM_BLOCK_MEDIA_USB driver. */
    fsp_err_t err = RM_BLOCK_MEDIA_USB_Open(&g_rm_block_media0_ctrl,
&g_rm_block_media0_cfg);
    /* Handle any errors. This function should be defined by the user. */
}
```

```
    assert(FSP_SUCCESS == err);
while (!g_usb_inserted)
    {
    /* Wait for a card insertion interrupt. */
    }

    /* Initialize the mass storage device. This should not be done until the device is
plugged in and initialized. */
    err = RM_BLOCK_MEDIA_USB_MediaInit(&g_rm_block_media0_ctrl);
    assert(FSP_SUCCESS == err);

    /* Write a block of data to sector 3 of an USB mass storage device. */
    err = RM_BLOCK_MEDIA_USB_Write(&g_rm_block_media0_ctrl, g_src, 3, 1);
    assert(FSP_SUCCESS == err);

    /* Read a block of data from sector 3 of an USB mass storage device. */
    err = RM_BLOCK_MEDIA_USB_Read(&g_rm_block_media0_ctrl, g_dest, 3, 1);
    assert(FSP_SUCCESS == err);
}
```

Device Insertion

This is an example of using a callback to determine when a mass storage device is plugged in and enumerated.

```
/* The callback is called when a media insertion event occurs. */
void rm_block_media_usb_media_insertion_example_callback
(rm_block_media_callback_args_t * p_args)
{
    if (RM_BLOCK_MEDIA_EVENT_MEDIA_INSERTED == p_args->event)
        {
            g_usb_inserted = true;
        }

    if (RM_BLOCK_MEDIA_EVENT_MEDIA_REMOVED == p_args->event)
        {
            g_usb_inserted = false;
        }
}
```

Function Documentation

◆ RM_BLOCK_MEDIA_USB_Open()

```
fsp_err_t RM_BLOCK_MEDIA_USB_Open ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_cfg_t const *const p_cfg )
```

Opens the module.

Implements `rm_block_media_api_t::open()`.

Return values

FSP_SUCCESS	Module is available and is now open.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_ALREADY_OPEN	Module has already been opened with this instance of the control structure.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ RM_BLOCK_MEDIA_USB_MediaInit()

```
fsp_err_t RM_BLOCK_MEDIA_USB_MediaInit ( rm_block_media_ctrl_t *const p_ctrl)
```

Initializes the USB device.

Implements `rm_block_media_api_t::mediaInit()`.

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_BLOCK_MEDIA_USB_Read()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_Read ( rm_block_media_ctrl_t *const p_ctrl, uint8_t *const
p_dest_address, uint32_t const block_address, uint32_t const num_blocks )
```

Reads data from an USB device. Implements `rm_block_media_api_t::read()`.

This function blocks until the data is read into the destination buffer.

Return values

FSP_SUCCESS	Data read successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.
FSP_ERR_USB_FAILED	The message could not received completed successfully.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ **RM_BLOCK_MEDIA_USB_Write()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_Write ( rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const
p_src_address, uint32_t const block_address, uint32_t const num_blocks )
```

Writes data to an USB device. Implements `rm_block_media_api_t::write()`.

This function blocks until the write operation completes.

Return values

FSP_SUCCESS	Write finished successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.
FSP_ERR_USB_FAILED	The message could not received completed successfully.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ **RM_BLOCK_MEDIA_USB_Erase()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_Erase ( rm_block_media_ctrl_t *const p_ctrl, uint32_t const
block_address, uint32_t const num_blocks )
```

Erases sectors of an USB device. Implements `rm_block_media_api_t::erase()`.

This function blocks until erase is complete.

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ **RM_BLOCK_MEDIA_USB_CallbackSet()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_CallbackSet ( rm_block_media_ctrl_t *const p_ctrl,
void(*) (rm_block_media_callback_args_t *) p_callback, void const *const p_context,
rm_block_media_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `rm_block_media_api_t::callbackSet`.

Note

This function is currently unsupported for Block Media over USB.

Return values

FSP_ERR_UNSUPPORTED	CallbackSet is not currently supported for Block Media over USB.
---------------------	--

◆ **RM_BLOCK_MEDIA_USB_StatusGet()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_StatusGet ( rm_block_media_ctrl_t *const p_api_ctrl,
rm_block_media_status_t *const p_status )
```

Provides driver status. Implements `rm_block_media_api_t::statusGet()`.

Return values

FSP_SUCCESS	Status stored in p_status.
FSP_ERR_ASSERTION	NULL pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ **RM_BLOCK_MEDIA_USB_InfoGet()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_InfoGet ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_info_t *const p_info )
```

Retrieves module information. Implements `rm_block_media_api_t::infoGet()`.

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

◆ **RM_BLOCK_MEDIA_USB_Close()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_Close ( rm_block_media_ctrl_t *const p_ctrl)
```

Closes an open USB device. Implements `rm_block_media_api_t::close()`.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.82 User Block Media Implementation (rm_block_media_user)

Modules

Middleware that implements a block media interface on the media of your choice. This module implements the [Block Media Interface](#).

Overview

Features

This module is for using Block media with user-selected media.

Configuration

Block Media User has no output config settings.

The user is required to create the config settings etc. in the application.

The figure below is an example of the config definition when the user media in USB PMSC is RAM.

```
const rm_block_media_api_t g_rm_block_media_on_user_media =
{
    .open      = RM_BLOCK_MEDIA_RAM_Open,
    .mediaInit = RM_BLOCK_MEDIA_RAM_MediaInit,
    .read      = RM_BLOCK_MEDIA_RAM_Read,
    .write     = RM_BLOCK_MEDIA_RAM_Write,
    .erase     = RM_BLOCK_MEDIA_RAM_Erase,
    .infoGet   = RM_BLOCK_MEDIA_RAM_InfoGet,
    .statusGet = RM_BLOCK_MEDIA_RAM_StatusGet,
    .close     = RM_BLOCK_MEDIA_RAM_Close,
};

extern void r_usb_pmsc_block_media_event_callback(rm_block_media_callback_args_t *
p_args);

const rm_block_media_cfg_t g_rm_block_media0_cfg =
{.p_extend = NULL, .p_callback = r_usb_pmsc_block_media_event_callback, .p_context =
NULL, };

rm_block_media_instance_t g_rm_block_media0 =
{.p_api = &g_rm_block_media_on_user_media, .p_ctrl = NULL, .p_cfg =
&g_rm_block_media0_cfg, };
```

Note

If you use `block_media_user`, you need to create a function that matches the media you are using. In the above example, this is the function with `RM_BLOCK_MEDIA_`. Register the created function in `rm_block_media_api_t`. The registered `rm_block_media_api_t` is registered in `p_api`, which is a member of `rm_block_media_instance_t`.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Examples**Basic Example**

Please refer to [USB Peripheral Mass Storage Class \(r_usb_pmssc\)](#) for the PMSC application given as an example.

4.2.83 I2C Communicatons Middleware (rm_comms_i2c)**Modules****Functions**

`fsp_err_t` [RM_COMMS_I2C_Open](#) (`rm_comms_ctrl_t *const p_api_ctrl, rm_comms_cfg_t const *const p_cfg`)

Opens and configures the Communications Middle module. Implements `rm_comms_api_t::open`. [More...](#)

`fsp_err_t` [RM_COMMS_I2C_Close](#) (`rm_comms_ctrl_t *const p_api_ctrl`)

Disables specified Communications Middle module. Implements `rm_comms_api_t::close`. [More...](#)

`fsp_err_t` [RM_COMMS_I2C_Read](#) (`rm_comms_ctrl_t *const p_api_ctrl, uint8_t *const p_dest, uint32_t const bytes`)

Performs a read from the I2C device. Implements `rm_comms_api_t::read`. [More...](#)

`fsp_err_t` [RM_COMMS_I2C_Write](#) (`rm_comms_ctrl_t *const p_api_ctrl, uint8_t *const p_src, uint32_t const bytes`)

Performs a write from the I2C device. Implements [rm_comms_api_t::write](#). [More...](#)

`fsp_err_t` [RM_COMMS_I2C_WriteRead](#) (`rm_comms_ctrl_t *const p_api_ctrl, rm_comms_write_read_params_t const write_read_params`)

Performs a write to, then a read from the I2C device. Implements [rm_comms_api_t::writeRead](#). [More...](#)

`void` [rm_comms_i2c_callback](#) (`i2c_master_callback_args_t *p_args`)

Common callback function called in the I2C driver callback function.

Detailed Description

Middleware to implement the I2C communications interface. This module implements the [Communications Middleware Interface](#).

Overview

Features

The implementation of the I2C communications interface has the following key features:

- Reading data from, writing data to I2C bus
- Writes to I2C bus, then reads with restart
- A single I2C bus used by multiple I2C devices

Configuration

Build Time Configurations for `rm_comms_i2c`

The following build time configurations are defined in `fsp_cfg/rm_comms_i2c_cfg.h`:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Connectivity > I2C Shared Bus (`rm_comms_i2c`)

This module can be added to the Stacks tab via New Stack > Connectivity > I2C Shared Bus (`rm_comms_i2c`).

Configuration	Options	Default	Description
Name	Manual Entry	<code>g_comms_i2c_bus0</code>	Module name.
Bus Timeout	Value must be a non-	<code>0xFFFFFFFF</code>	Set timeout for locking

	negative integer		bus in using RTOS.
Semaphore for Blocking	<ul style="list-style-type: none"> • Unuse • Use 	Unuse	Set Semaphore for blocking in using RTOS.
Recursive Mutex for Bus	<ul style="list-style-type: none"> • Unuse • Use 	Unuse	Set Mutex for locking bus in using RTOS.

Configurations for Connectivity > I2C Communication Device (rm_comms_i2c)

This module can be added to the Stacks tab via New Stack > Connectivity > I2C Communication Device (rm_comms_i2c).

Configuration	Options	Default	Description
Name	Manual Entry	g_comms_i2c_device0	Module name.
Semaphore Timeout	Value must be a non-negative integer	0xFFFFFFFF	Set timeout for blocking in using RTOS.
Slave Address	Value must be non-negative	0x00	Specify the slave address.
Address Mode	<ul style="list-style-type: none"> • 7-Bit • 10-Bit 	7-Bit	Select the I2C address mode.
Callback	Name must be a valid C symbol	comms_i2c_callback	A user callback function can be provided.

Pin Configuration

This module uses SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The I2C communications interface expects a bus instance to be opened before opening any specific I2C comms device. The communications interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate [I2C Master Interface](#) open call.

Examples

Basic Example

This is a basic example of minimal use of I2C communications implementation in an application.

```
void rm_comms_i2c_basic_example (void)
```

```
{
    fsp_err_t err = FSP_SUCCESS;

    /* Open the I2C bus if it is not already open. */
    rm_comms_i2c_bus_extended_cfg_t * p_extend =
(rm_comms_i2c_bus_extended_cfg_t *) g_comms_i2c_cfg.p_extend;
    i2c_master_instance_t * p_driver_instance = (i2c_master_instance_t *)
p_extend->p_driver_instance;

    p_driver_instance->p_api->open(p_driver_instance->p_ctrl,
p_driver_instance->p_cfg);
#ifdef BSP_CFG_RTOS
    /* Create a semaphore for blocking if a semaphore is not NULL */
    if (NULL != p_extend->p_blocking_semaphore)
    {
#ifdef BSP_CFG_RTOS == 1 // AzureOS
        tx_semaphore_create(p_extend->p_blocking_semaphore->p_semaphore_handle,
            p_extend->p_blocking_semaphore->p_semaphore_name,
            (ULONG) 0);
#elif BSP_CFG_RTOS == 2 // FreeRTOS
        *(p_extend->p_blocking_semaphore->p_semaphore_handle) =
            xSemaphoreCreateCountingStatic((UBaseType_t) 1,
                (UBaseType_t) 0,
p_extend->p_blocking_semaphore->p_semaphore_memory);
#endif
    }
    /* Create a recursive mutex for bus lock if a recursive mutex is not NULL */
    if (NULL != p_extend->p_bus_recursive_mutex)
    {
#ifdef BSP_CFG_RTOS == 1 // AzureOS
        tx_mutex_create(p_extend->p_bus_recursive_mutex->p_mutex_handle,
            p_extend->p_bus_recursive_mutex->p_mutex_name,
            TX_INHERIT);
#elif BSP_CFG_RTOS == 2 // FreeRTOS
        *(p_extend->p_bus_recursive_mutex->p_mutex_handle) =
```

```

        xSemaphoreCreateRecursiveMutexStatic(p_extend->p_bus_recursive_mutex->p_m
utex_memory);
    #endif
    }
#endif

    err = RM_COMMS_I2C_Open(&g_comms_i2c_ctrl, &g_comms_i2c_cfg);
/* Handle any errors. This function should be defined by the user. */
    handle_error(err);

    while (true)
    {
        g_flag = 0;
/* Send data to an I2C device. */
        RM_COMMS_I2C_Write(&g_comms_i2c_ctrl, &write_data, 1);
        while (0 == g_flag)
        {
/* Wait callback */
        }
        g_flag = 0;
/* Receive data from an I2C device. */
        RM_COMMS_I2C_Read(&g_comms_i2c_ctrl, &read_data, 1);
        while (0 == g_flag)
        {
/* Wait callback */
        }
    }
}

```

Data Structures

struct [rm_comms_i2c_instance_ctrl_t](#)

Data Structure Documentation

◆ [rm_comms_i2c_instance_ctrl_t](#)

struct [rm_comms_i2c_instance_ctrl_t](#)

Communications middleware control structure.

Data Fields

<code>rm_comms_cfg_t const *</code>	<code>p_cfg</code>
	middleware configuration.
<code>rm_comms_i2c_bus_extended_cfg_t *</code>	<code>p_bus</code>
	Bus using this device;
<code>void *</code>	<code>p_lower_level_cfg</code>
	Used to reconfigure I2C driver.
<code>uint32_t</code>	<code>open</code>
	Open flag.
<code>uint32_t</code>	<code>transfer_data_bytes</code>
	Size of transfer data.
<code>uint8_t *</code>	<code>p_transfer_data</code>
	Pointer to transfer data buffer.
<code>void const *</code>	<code>p_context</code>
	Pointer to the user-provided context.

Function Documentation

◆ **RM_COMMS_I2C_Open()**

```
fsp_err_t RM_COMMS_I2C_Open ( rm_comms_ctrl_t *const p_api_ctrl, rm_comms_cfg_t const
*const p_cfg )
```

Opens and configures the Communications Middle module. Implements `rm_comms_api_t::open`.

Example:

```
err = RM_COMMS_I2C_Open(&g_comms_i2c_ctrl, &g_comms_i2c_cfg);
```

Return values

FSP_SUCCESS	Communications Middle module successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_COMMS_BUS_NOT_OPEN	I2C driver is not open.

◆ **RM_COMMS_I2C_Close()**

```
fsp_err_t RM_COMMS_I2C_Close ( rm_comms_ctrl_t *const p_api_ctrl)
```

Disables specified Communications Middle module. Implements `rm_comms_api_t::close`.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_COMMS_I2C_Read()**

```
fsp_err_t RM_COMMS_I2C_Read ( rm_comms_ctrl_t *const p_api_ctrl, uint8_t *const p_dest,
uint32_t const bytes )
```

Performs a read from the I2C device. Implements `rm_comms_api_t::read`.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_COMMS_I2C_Write()

```
fsp_err_t RM_COMMS_I2C_Write ( rm_comms_ctrl_t *const p_api_ctrl, uint8_t *const p_src, uint32_t
const bytes )
```

Performs a write from the I2C device. Implements `rm_comms_api_t::write`.

Return values

FSP_SUCCESS	Successfully writing data .
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_COMMS_I2C_WriteRead()

```
fsp_err_t RM_COMMS_I2C_WriteRead ( rm_comms_ctrl_t *const p_api_ctrl,
rm_comms_write_read_params_t const write_read_params )
```

Performs a write to, then a read from the I2C device. Implements `rm_comms_api_t::writeRead`.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.84 SEGGER emWin Port (rm_emwin_port)

Modules

SEGGER emWin port for RA MCUs.

Overview

The SEGGER emWin RA Port module provides the configuration and hardware acceleration support necessary for use of emWin on RA products. The port provides full integration with the graphics peripherals (GLCDC, DRW and JPEG) as well as FreeRTOS.

Figure 203: SEGGER emWin FSP Port Block Diagram

Note

This port layer primarily enables hardware acceleration and background handling of many display operations and does not contain code intended to be directly called by the user. Please consult the SEGGER emWin User Guide (UM03001) for details on how to use emWin in your project.

Hardware Acceleration

The following functions are currently performed with hardware acceleration:

- DRW Engine (r_drw)
 - Drawing bitmaps (ARGB8888 and RGB565)
 - 4bpp font rendering
 - Rectangle fill
 - Line and shape drawing
 - Anti-aliased operations
 - Circle stroke and fill
 - Polygon stroke and fill
 - Lines and arcs
- JPEG Codec (r_jpeg)
 - JPEG decoding
- Graphics LCD Controller (r_glcdc)
 - Brightness, contrast and gamma correction
 - Pixel format conversion (framebuffer to LCD)

Configuration**Build Time Configurations for rm_emwin_port**

The following build time configurations are defined in fsp_cfg/rm_emwin_port_cfg.h:

Configuration	Options	Default	Description
Memory Allocation > GUI Heap Size	Value must be a non-negative integer	32768	Set the size of the heap to be allocated for use exclusively by emWin.
Memory Allocation > Section for GUI Heap	Manual Entry	.noinit	Specify the section in which to allocate the GUI heap. When Arm Compiler 6 is used to

place this memory in on-chip SRAM, the section name must be .bss or start with .bss. to avoid consuming unnecessary ROM space.

Set the maximum number of available display layers in emWin.

This setting is not related to GLCDC Layer 1 or 2.

Set the size of the conversion buffer for anti-aliased font glyphs. This should be set to the size (in bytes) of the largest AA character to be rendered.

Enable or disable multithreading support.

If multithreading support is enabled this configuration specifies the number of different tasks that can call emWin functions.

Enable or disable touch panel support.

Enable or disable support for mouse input.

Enable or disable support for memory devices, which allow the user to allocate their own memory in the GUI heap.

Enable or disable support for displaying rotated text.

Enable or disable the emWin Window Manager (WM).

Enable or disable

Memory Allocation > Maximum Layers	Value must be a non-negative integer	16
Memory Allocation > AA Font Conversion Buffer Size	Value must be a non-negative integer	400
Configuration > Multi-thread Support	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled
Configuration > Number of emWin-supported threads	Manual Entry	5
Configuration > Touch Panel Support	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled
Configuration > Mouse Support	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled
Configuration > Memory Devices	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled
Configuration > Text Rotation	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled
Configuration > Window Manager	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled
Configuration >	<ul style="list-style-type: none"> • Enabled 	Disabled

Bidirectional Text	<ul style="list-style-type: none"> • Disabled 		support for bidirectional text (such as Arabic or Hebrew).
Configuration > Debug Logging Level	<ul style="list-style-type: none"> • None (0) • Parameter checking only (1) • All checks enabled (2) • Log errors (3) • Log warnings (4) • Log all messages (5) 	All checks enabled (2)	Set the debug logging level.
LCD Settings > Wait for Vertical Sync	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled	<p>When enabled emWin will wait for a vertical sync event each time the display is updated. If an RTOS is used the thread will yield; otherwise each frame will block until Vsync.</p> <p>WARNING: Disabling vertical sync will result in tearing. It is recommended to always leave this setting Enabled if an RTOS is used.</p>
JPEG Decoding > General > Input Alignment	<ul style="list-style-type: none"> • 8-byte aligned (faster) • Unaligned (slower) 	8-byte aligned (faster)	<p>Setting this option to 8-bit alignment can allow the hardware JPEG Codec to directly read JPEG data. This speeds up JPEG decoding operations and reduces RAM overhead, but all JPEG images must reside on an 8-byte boundary.</p> <p>When this option is enabled the input buffer is not allocated.</p>
JPEG Decoding > General > Double-Buffer Output	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Enable this option to configure JPEG decoding operations to use a double-buffered output pipeline. This allows the JPEG to be rendered to the display

at the same time as decoding at the cost of additional RAM usage.

Enabling this option automatically allocates double the output buffer size.

Set the timeout for JPEG decoding operations (in RTOS ticks) in the event of a decode error.

Set the size of the JPEG decode input buffer (in bytes). This buffer is used to ensure 8-byte alignment of input data. Specifying a size smaller than the size of the JPEG to decode will use additional interrupts to stream data in during the decoding process.

Set the size of the JPEG decode output buffer (in bytes). An output buffer smaller than the size of a decoded image will use additional interrupts to stream the data into a framebuffer.

Unless you are sure of the subsampling used in and the size of the input JPEG images it is recommended to allocate at least 16 framebuffer lines of memory.

Specify the section in which to allocate the JPEG work buffers. When Arm Compiler 6 is used to place this memory in on-chip SRAM, the section name must be `.bss` or start with `.bss.` to avoid

JPEG Decoding >
General > Error
Timeout

Value must be a non-negative integer

50

JPEG Decoding >
Buffers > Input Buffer
Size

Value must be a non-negative integer

0x1000

JPEG Decoding >
Buffers > Output Buffer
Size

Value must be a non-negative integer

0x3C00

JPEG Decoding >
Buffers > Section for
Buffers

Manual Entry

.noinit

consuming unnecessary ROM space.

Hardware Configuration

No clocks or pins are directly required by this module. Please consult the submodules' documentation for their requirements.

Usage Notes

Getting Started

To get started with emWin in an RA project the following must be performed:

1. Open the RA Configuration editor for your project
2. Add emWin to your project in the Stacks view by clicking **New Stack -> SEGGER -> SEGGER emWin**
3. Ensure the configuration options for emWin are set as necessary for your application
4. Set the properties for the GLCDC module to match the timing and memory requirements of your display panel
5. Set the JPEG decode color depth to the desired value (if applicable)
6. Ensure interrupts on all modules are enabled:
 - GLCDC Vertical Position (Vpos) Interrupt
 - DRW Interrupt (if applicable)
 - JPEG Encode/Decode and Data Transfer Interrupts (if applicable)
7. Confirm stack and heap are configured as needed
 - When starting development a minimum stack of 0x1000 (4K) and heap of 0x4000 (16K) are recommended until actual usage can be characterized
8. Click Generate Project Content to save and commit configuration changes

At this point the project is now ready to build with emWin. Please refer to the SEGGER emWin User Guide (UM03001) as well as demo and sample code for details on how to create a GUI application.

Using Hardware Acceleration

In most cases there is no need to perform additional configuration to ensure the DRW Engine is used. However, there are some guidelines that should be followed depending on the item in question:

- Bitmaps:
 - ARGB8888, RGB888 and RGB565 bitmaps require no additional settings.
- Anti-aliased shapes:
 - Anti-aliased lines, circles, polygons, polygon outlines and arcs are rendered with the DRW Engine.
- Anti-aliased (4bpp) fonts:
 - Set the text mode to GUI_TM_TRANS or create the relevant widget with WM_CF_HASTRANS set.
 - Ensure the "AA Font Conversion Buffer Size" configuration option is set to a size equal to or greater than the size (in bytes) of the largest glyph.
- 8bpp palletized images:
 - When creating these images ensure transparency is not enabled as the SEGGER method for this is not compatible with the DRW Engine.
- RLE-encoded images:
 - Hardware acceleration is not available for SEGGER's RLE format.
- JPEG images:

- Align any user-declared JPEG data to an 8-byte boundary. If 8-byte alignment cannot be guaranteed disable the **JPEG Decoding -> General -> Input Alignment** option in the RA Configuration.

Multi-thread Support

When the "Multi-thread Support" configuration is enabled, emWin can be called from multiple threads. This comes with advantages and disadvantages:

Advantages:

- High flexibility in development of applications
- Threads can pend and post on emWin events

Disadvantages:

- Slightly higher RAM/ROM use
- Large GUI projects can become difficult to debug

Note

Multi-thread support is independent of RTOS support. RTOS support is managed internally and cannot be manually configured.

Limitations

Developers should be aware of the following limitations when using SEGGER emWin with FSP:

- Hardware acceleration is not available when using color modes lower than 16 bits.
- Hardware acceleration is not available for SEGGER's RLE image format.
- Rotated screen modes are not supported.

Examples

Basic Example

This is a basic example demonstrating a very simple emWin application. The screen is cleared to white and "Hello World!" is printed in the center.

Note

emWin manages the GLCDC, DRW and JPEG Codec submodules internally; they do not need to be opened directly.

```
#include "DIALOG.h"

#define COLOR_WHITE 0x00FFFFFFU
#define COLOR_BLACK 0x00000000U
#define GUI_DRAW_DELAY 100

static void _cbMain (WM_MESSAGE * pMsg)
{
    GUI_RECT Rect;

    switch (pMsg->MsgId)
```

```
{
case WM_CREATE:
    {
break;
    }
case WM_PAINT:
    {
/* Clear background to white */
        GUI_SetBkColor(COLOR_WHITE);
        GUI_Clear();
/* Draw "Hello World!" in black in the center */
        WM_GetClientRect(&Rect);
        GUI_SetColor(COLOR_BLACK);
        GUI_DispStringInRect("Hello World!", &Rect, GUI_TA_VCENTER |
GUI_TA_HCENTER);
break;
    }
default:
    {
        WM_DefaultProc(pMsg);
break;
    }
}
}

void emWinTask (void)
{
    int32_t xSize;
    int32_t ySize;
/* Initialize emWin */
    GUI_Init();
/* Get screen dimensions */
    xSize = LCD_GetXSize();
    ySize = LCD_GetYSize();
/* Create main window */
```

```
WM_CreateWindowAsChild(0, 0, xSize, ySize, WM_HBKWIN, WM_CF_SHOW, _cbMain, 0);  
/* Enter main drawing loop */  
while (1)  
{  
    GUI_Delay(GUI_DRAW_DELAY);  
}  
}
```

Note

For further example code please consult SEGGER emWin documentation, which can be downloaded [here](#), as well as the Quick Start Guide and example project(s) provided with your Evaluation Kit (if applicable).

4.2.85 Azure RTOS FileX Block Media I/O Driver (rm_filex_block_media)

Modules

Functions

`fsp_err_t` [RM_FILEX_BLOCK_MEDIA_Open](#) (`rm_filex_block_media_ctrl_t *const p_ctrl, rm_filex_block_media_cfg_t const *const p_cfg`)

`fsp_err_t` [RM_FILEX_BLOCK_MEDIA_Close](#) (`rm_filex_block_media_ctrl_t *const p_ctrl`)

`void` [RM_FILEX_BLOCK_MEDIA_BlockDriver](#) (`FX_MEDIA *p_fx_media`)
Access Block Media device functions open, close, read, write and control. [More...](#)

Detailed Description

Middleware for the Azure RTOS FileX File System control using Block Media on RA MCUs.

Overview

This module provides the hardware port layer for FileX file system. After initializing this module, refer to the FileX API reference to use the file system: <https://docs.microsoft.com/en-us/azure/rtos/filex/>

Features

The FileX Block Media module supports the following features:

- Callbacks for insertion and removal for removable devices.

- ThreadX is typically required for FileX. To use FileX without ThreadX `FX_STANDALONE_ENABLE` must be defined.
- Unless `FX_SINGLE_THREAD` or `FX_STANDALONE_ENABLE` are defined, all FileX operations are thread safe.

Configuration

Build Time Configurations for `rm_filex_block_media`

The following build time configurations are defined in `fsp_cfg/middleware/rm_filex_block_media_cfg.h`:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	Selects if code for parameter checking is to be included in the build.

Configurations for Storage > FileX I/O (`rm_filex_block_media`)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	<code>g_rm_filex_block_media_0</code>	Module name.
Callback	Name must be a valid C symbol	<code>g_rm_filex_block_media_0_callback</code>	A user callback function can be provided. If this callback function is provided, it will be called when media is inserted or removed. It will also be called during operations by the lower level block media as a way for the user to provide their desired waiting functionality.
Partition Number	<ul style="list-style-type: none"> • 0 • 1 • 2 • 3 	0	The partition to use for partitioned media. This partition will only be used if a Master Boot Record with partition table exists at block 0 of the media, otherwise the FileX FAT boot record should exist or be formatted to block 0.

Build Time Configurations for `fx`

The following build time configurations are defined in `fsp_cfg/azure/fx/fx_user.h`:

Configuration	Options	Default	Description
Common > Max Long Name Len	Value must be greater than or equal to 13 and less than or equal to 256, or empty		Specifies the maximum file name size for FileX. If left blank the default value is 256. Legal values range between 13 and 256.
Common > Max Last Name Len	Value must be greater than or equal to 13 and less than or equal to 256, or empty		This value defines the maximum file name length, which includes full path name. If left blank the default value is 256. Legal values range between 13 and 256.
Common > Max Sector Cache	Value must be greater than 0 or empty		Specifies the maximum number of logical sectors that can be cached by FileX. The actual number of sectors that can be cached is lesser of this constant and how many sectors can fit in the amount of memory supplied at <code>fx_media_open</code> . The default value if left blank is 256. All values must be a power of 2.
Common > Fat Map Size	Value must be greater than 0 or empty		Specifies the number of sectors that can be represented in the FAT update map. The default value if left blank is 256. Larger values help reduce unneeded updates of secondary FAT sectors.
Common > Max Fat Cache	Value must be greater than 0 or empty		Specifies the number of entries in the internal FAT cache. The default value if left blank is 16. All values must be a power of 2.
Threading > Update Rate (Seconds)	Value must be greater than 0 or empty		Specifies rate at which system time in FileX is adjusted. Default value if left blank is 10, specifying that the FileX system time is

updated every 10 seconds.

Threading > No Timer	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	Eliminates the ThreadX timer setup to update the FileX system time and date. Doing so causes default time and date to be placed on all file operations.
Threading > Single Thread	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	Eliminates ThreadX protection logic from the FileX source. It should be used if FileX is being used only from one thread.
Threading > Standalone	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	Enables FileX to be used in standalone mode (without Azure RTOS).
Extra Features > Don't Update Open Files	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, FileX does not update already opened files.
Extra Features > Media Search Cache	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	When disabled, the file search cache optimization is disabled.
Extra Features > Direct Data Read Cache Fill	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	When disabled, the direct read sector update of cache is disabled.
Extra Features > Media Statistics	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	When disabled, gathering of media statistics is disabled.
Extra Features > Single Open Legacy	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, legacy single open logic for the same file is enabled.
Extra Features > Rename Path Inherit	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, renaming inherits path information.
Extra Features > No Local Path	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, removes local path logic from FileX, resulting in smaller code size.
Extra Features > 64-bit LBA	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, 64-bits sector addresses are used in I/O driver.

Extra Features > Cache	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables the cache, default is enabled.
Extra Features > File Close	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables file close, default is enabled.
Extra Features > Fast Close	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables fast open, default is enabled.
Extra Features > Force Memory Operation	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables force memory operation, default is enabled.
Extra Features > Build Options	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables build options, default is enabled.
Extra Features > One Line Function	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables one line function, default is enabled.
Extra Features > FAT Entry Refresh	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables FAT entry refresh, default is enabled.
Extra Features > Consecutive Detect	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables consecutive detect, default is enabled.
Extra Features > Enable exFAT	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	Enables exFAT support in FileX.
Fault Tolerant > Fault Tolerant Service	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, enables the FileX Fault Tolerant Module. Enabling Fault Tolerant automatically defines the symbol <code>FX_FAULT_TOLERANT</code> and <code>FX_FAULT_TOLERA NT_DATA</code> .
Fault Tolerant > Fault Tolerant Data	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, FileX immediately passes all file data write requests to the media's driver. This potentially decreases performance, but helps limit lost file data. Note that enabling this feature does not automatically enable FileX Fault Tolerant Module, which should

be enabled separately.

When enabled, FileX immediately passes write requests of all system sectors (boot, FAT, and directory sectors) to the media's driver. This potentially decreases performance, but helps limit corruption to lost clusters. Note that enabling this feature does not automatically enable FileX Fault Tolerant Module, which should be enabled separately.

Defines byte offset in the boot sector where the cluster for the fault tolerant log is. By default if left blank this value is 116. This field takes 4 bytes. Bytes 116 through 119 are chosen because they are marked as reserved by FAT 12/16/32/exFAT specification.

Fault Tolerant > Fault Tolerant

- Enabled
- Disabled (default)

Disabled (default)

Fault Tolerant > Fault Tolerant Boot Index

Value must be greater than or equal to 116 and less than or equal to 119

Error Checking

- Enabled (default)
- Disabled

Enabled (default)

Configurations for Storage > Azure RTOS FileX on Block Media

This module can be added to the Stacks tab via New Stack > Storage > Azure RTOS FileX on Block Media.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_fx_media0	Symbol used for media_ptr parameter in FileX APIs
Volume Name	Name must be a valid C symbol	Volume 1	Volume name string, which is a maximum of 11 characters.
Number of FATs	Number of FATs must be an integer greater than 0	1	Number of FATs in the media. The minimal value is 1 for the primary FAT. Values

greater than 1 result in additional FAT copies being maintained at run-time.

Directory Entries	Number of Directory Entries must be an integer greater than 0	256	Number of directory entries in the root directory.
Hidden Sectors	Number of Hidden Sectors must be an integer	0	Number of sectors hidden before this media's boot sector. If using media formatted with multiple partitions this number should correspond to the starting block number for the desired partition.
Total Sectors	Total Sectors must be an integer greater than 0	3751936	Total number of sectors in the media. When using a Renesas provided block media implementation, total sectors can be fetched by the infoGet from the block media API. Any removable media must be inserted and initialized first to retrieve this info.
Bytes per Sector	Bytes per Sector must be multiple of 32	512	Number of bytes per sector, which is typically 512. FileX requires this to be a multiple of 32. When using a Renesas provided block media implementation, bytes per sector can be fetched by the infoGet from the block media API. Any removable media must be inserted and initialized first to retrieve this info.
Sectors per Cluster	Sectors per Cluster must be an integer greater than 0	1	Number of sectors in each cluster. The cluster is the minimum allocation unit in a FAT file system.
Volume Serial Number (exFAT only)	Volume Serial Number must be an integer	12345	Serial number to be used for this volume.

	greater than 0		exFAT only.
Boundary Unit (exFAT only)	Boundary unit must be an integer greater than 0	128	Physical data area alignment size, in number of sectors. exFAT only.
Working media memory size	Memory size must be an integer greater than or equal to the size of one sector	512	Memory allocated for file system. Memory size must be an integer greater than or equal to the size of one sector.

Usage Notes

Pending during Read/Write

The FileX Block Media driver provides a number of events in the user callback to handle waiting or pending while it is doing blocking operations. The events received in the callback will differ depending on the lower level block media driver in use.

If the lower level block media driver is `rm_block_media_spi` (SPI blocks on read/write operations):

- The user will receive `RM_BLOCK_MEDIA_EVENT_POLL_STATUS` in the user callback while the lower level driver is polling for the read/write operation to be complete. The user can choose to do a thread sleep or software delay upon receiving this event in the callback.
- Once the operation is complete no other callbacks will be received.

If the lower level block media driver is `rm_block_media_sdmmc` (SDMMC is interrupt based, the FileX Block Media driver will still block while waiting for interrupts from SDMMC):

- The user will receive `RM_BLOCK_MEDIA_EVENT_WAIT` in the user callback when the FileX Block Media driver begins waiting for an interrupt event from SDMMC. This is sent from a thread context. The user can choose to pend on a semaphore, sleep the thread, or do a software delay upon receiving this event in the callback. The FileX Block Media driver thread will block until an interrupt is received.
- Once an SDMMC interrupt is received the user will receive `RM_BLOCK_MEDIA_EVENT_WAIT_END` in the user callback. This is sent from an interrupt context. The user can choose to give a semaphore on this event or do nothing.
- If SDMMC is busy on a long erase after receiving the interrupt the FileX Block Media driver will send `RM_BLOCK_MEDIA_EVENT_POLL_STATUS` to the user callback and proceed to do a blocking poll on SDMMC status. The user can choose to do a thread sleep or software delay upon receiving this event in the callback. This event will not be received by the user on typical operations by FileX.

Partitioned Media

When using `fx_format` to format a partition the number of hidden sectors should match the starting block number of the partition and the total number of sectors should be equal to the number of sectors in the partition.

Unused User Callback Events

Certain events are defined in `rm_block_media_event_t` but not returned by the FileX Block Media user

callback:

- **RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE:** This event is handled internally and operation success is indicated by FileX API calls returning **FX_SUCCESS**.
- **RM_BLOCK_MEDIA_EVENT_ERROR:** This event is handled internally and operation failure will be indicated by an error return code from FileX API calls.

Examples

Basic Example

This is a basic example of FileX Block Media in an application.

```
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME "TEST_FILE.txt"
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_BUFFER_SIZE_BYTES (10240)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_PARTITION_NUMBER (0)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_BLOCK_SIZE (512)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_DIRECTORY_ENTRIES (128)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_FATS (1)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_HIDDEN_SECTORS (0)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_TOTAL_SECTORS (1073741824)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTOR_SIZE (512)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_CLUSTER (1)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_HEADS (1)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_TRACK (1)

extern rm_filex_block_media_instance_t g_filex_block_media0;
extern rm_filex_block_media_instance_ctrl_t g_filex_block_media0_ctrl;
extern rm_filex_block_media_cfg_t g_filex_block_media0_cfg;

extern FX_MEDIA g_fx_media0;
extern uint8_t g_fx_media0_memory[RM_FILEX_BLOCK_MEDIA_EXAMPLE_BLOCK_SIZE];
extern uint8_t g_file_data[RM_FILEX_BLOCK_MEDIA_EXAMPLE_BUFFER_SIZE_BYTES];
extern uint8_t g_read_buffer[RM_FILEX_BLOCK_MEDIA_EXAMPLE_BUFFER_SIZE_BYTES];

void rm_filex_block_media_example (void)
{
    /* Open media driver.*/
    fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
&g_filex_block_media0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
}
```

```
/* Initialize FileX */
    fx_system_initialize();

/* Open the media. If the media is removable, it must be inserted before calling
 * fx_media_open. This assumes the disk is already partitioned and formatted. */
    UINT fx_err = fx_media_open(&g_fx_media0,
    "filex_example_media",
    RM_FILEX_BLOCK_MEDIA_BlockDriver,
                                &g_filex_block_media0,
                                g_fx_media0_memory,
    sizeof(g_fx_media0_memory));
    handle_fx_error(fx_err);

/* Create a file */
    fx_err = fx_file_create(&g_fx_media0, RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME);
    handle_fx_error(fx_err);

/* Open source file for writing. */
    FX_FILE sourceFile;
    fx_err = fx_file_open(&g_fx_media0, &sourceFile,
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME, FX_OPEN_FOR_WRITE);
    handle_fx_error(fx_err);

/* Write file data. */
    fx_err = fx_file_write(&sourceFile, g_file_data, sizeof(g_file_data));
    handle_fx_error(fx_err);

/* Close the file. */
    fx_err = fx_file_close(&sourceFile);
    handle_fx_error(fx_err);

/* Open the source file in read mode. */
    fx_err = fx_file_open(&g_fx_media0, &sourceFile,
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME, FX_OPEN_FOR_READ);
    handle_fx_error(fx_err);

/* Read file data. */
    ULONG actual_size_read;
    fx_err = fx_file_read(&sourceFile, g_read_buffer, sizeof(g_file_data),
    &actual_size_read);
    handle_fx_error(fx_err);
```

```

    assert(sizeof(g_file_data) == actual_size_read);
/* Close the file. */
    fx_err = fx_file_close(&sourceFile);
    handle_fx_error(fx_err);
/* Verify the file data read matches the file written. */
    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));
/* Close the Media */
    fx_err = fx_media_close(&g_fx_media0);
    handle_fx_error(fx_err);
}

```

Format Example

This shows how to partition and format a disk if it is not already partitioned and formatted.

```

void rm_filex_block_media_format_example (void)
{
    /* Open media driver.*/
    fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
&g_filex_block_media0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Format the media */
    UINT fx_err =
fx_media_format(&g_fx_media0, // Pointer to
FileX media control block.
    RM_FILEX_BLOCK_MEDIA_BlockDriver, // Driver entry
    &g_filex_block_media0, // Pointer to Block Media
Driver
    g_fx_media0_memory, // Media buffer pointer
    sizeof(g_fx_media0_memory), // Media buffer size
    "EXAMPLE_VOLUME", // Volume Name
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_FATS,
// Number of FATs
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_DIRECTORY_ENTRIES,

```

```

// Directory Entries

                                RM_FILEX_BLOCK_MEDIA_EXAMPLE_HIDDEN_SECTORS,

// Hidden sectors

RM_FILEX_BLOCK_MEDIA_EXAMPLE_TOTAL_SECTORS,          // Total sectors

                                RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTOR_SIZE,

// Sector size

RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_CLUSTER,    // Sectors per cluster

                                RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_HEADS,

// Heads

                                RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_TRACK);

// Sectors per track

    handle_fx_error(fx_err);
}

```

Callback Pend Example

This shows how to use the I/O driver callback with ThreadX in order to wait/pend for operations to complete.

```

TX_SEMAPHORE g_operation_wait_semaphore;

/* Callback called by FileX block media I/O driver needs to pend on operation. */
void rm_filex_block_media_test_callback_pend (rm_filex_block_media_callback_args_t *
p_args)
{
    if (p_args->event & RM_BLOCK_MEDIA_EVENT_WAIT)
    {
        /* Interrupt has not happened for operation, get semaphore to wait for it. This will
be called from the FileX I/O driver thread. */
        tx_semaphore_get(&g_operation_wait_semaphore, TX_WAIT_FOREVER);
    }

    if (p_args->event & RM_BLOCK_MEDIA_EVENT_WAIT_END)
    {
        /* Interrupt has occurred for operation, post semaphore so that wait will end. This

```

```
will be called from an interrupt context. */
    tx_semaphore_put(&g_operation_wait_semaphore);
}
if (p_args->event & RM_BLOCK_MEDIA_EVENT_POLL_STATUS)
{
    /* Interrupt has been received from block media device but operation is still
ongoing. The FileX I/O driver will wait on the driver busy status.
    * This event can be used to put the thread to sleep while waiting. This will be
called from the FileX I/O driver thread. */
    tx_thread_sleep(1);
}
}
void rm_filex_block_media_callback_pend_example (void)
{
    /* Create semaphore for driver use */
    tx_semaphore_create(&g_operation_wait_semaphore, "operation_wait_semaphore", 0);
    /* Open media driver.*/
    fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
&g_filex_block_media0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Format the media */
    UINT fx_err =
fx_media_format(&g_fx_media0, // Pointer to
FileX media control block.
    RM_FILEX_BLOCK_MEDIA_BlockDriver, // Driver entry
    &g_filex_block_media0, // Pointer to Block Media
Driver
    g_fx_media0_memory, // Media buffer pointer
    sizeof(g_fx_media0_memory), // Media buffer size
    "EXAMPLE_VOLUME", // Volume Name
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_FATS,
// Number of FATs
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_DIRECTORY_ENTRIES,
```

```
// Directory Entries
RM_FILEX_BLOCK_MEDIA_EXAMPLE_HIDDEN_SECTORS,
// Hidden sectors
RM_FILEX_BLOCK_MEDIA_EXAMPLE_TOTAL_SECTORS, // Total sectors
RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTOR_SIZE,
// Sector size
RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_CLUSTER, // Sectors per cluster
RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_HEADS,
// Heads
RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_TRACK);
// Sectors per track
handle_fx_error(fx_err);
}
```

Media Insertion Example

This shows how to use the callback to wait for media insertion.

```
volatile uint32_t g_rm_filex_block_media_insertion_events = 0;
volatile uint32_t g_rm_filex_block_media_removal_events = 0;
/* Callback called by media driver when a removable device is inserted or removed. */
void rm_filex_block_media_test_callback (rm_filex_block_media_callback_args_t *
p_args)
{
    if (p_args->event & RM_BLOCK_MEDIA_EVENT_MEDIA_INSERTED)
    {
        g_rm_filex_block_media_insertion_events++;
    }
    if (p_args->event & RM_BLOCK_MEDIA_EVENT_MEDIA_REMOVED)
    {
        g_rm_filex_block_media_removal_events++;
    }
}
```

```
void rm_filex_block_media_media_insertion_example (void)
{
    /* Open media driver.*/
    fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
&g_filex_block_media0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Wait for media insertion. */
    while (0U == g_rm_filex_block_media_insertion_events)
    {
        /* Wait for media insertion. */
    }
    /* Open the media. If the media is removable, it must be inserted before calling
    * fx_media_open. This assumes the disk is already partitioned and formatted. */
    UINT fx_err = fx_media_open(&g_fx_media0,
"filex_example_media",
RM_FILEX_BLOCK_MEDIA_BlockDriver,
                                &g_filex_block_media0,
                                g_fx_media0_memory,
                                sizeof(g_fx_media0_memory));
    handle_fx_error(fx_err);
}
```

Using FileX with Custom Block Media Implementations

When using a Custom Block Media implementation with `rm_filex_block_media` the custom implementation must call `rm_filex_block_media_memory_callback` upon the completion of a read/write operation. This callback should be called with an event of `RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE` and `p_context` of `rm_filex_block_media_instance_ctrl_t*`. The following example shows how this should be done in the context of a demo RAM block media read function.

```
#define EXAMPLE_BLOCK_MEDIA_RAM_START_ADDR (0x20004AFE)
#define EXAMPLE_BLOCK_MEDIA_RAM_BLOCK_SIZE_BYTES (512)
/* Example implementation of rm_block_media_api_t::read(), user should define custom
block media RAM implementation. */
fsp_err_t RM_BLOCK_MEDIA_CUSTOM_RAM_Read (rm_block_media_ctrl_t * const p_ctrl,
```

```

uint8_t * const
    p_dest_address,
uint32_t const
block_address,
uint32_t const    num_blocks)
{
    FSP_PARAMETER_NOT_USED(p_ctrl);
    memcpy(p_dest_address,
        (void *) (EXAMPLE_BLOCK_MEDIA_RAM_START_ADDR + (block_address *
EXAMPLE_BLOCK_MEDIA_RAM_BLOCK_SIZE_BYTES)),
        (EXAMPLE_BLOCK_MEDIA_RAM_BLOCK_SIZE_BYTES * num_blocks));
    /* Notify FileX port of operation complete through calling the callback, this is
required for custom block media/FileX port integration */
    rm_block_media_callback_args_t args;
    args.event    = RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE;
    args.p_context = (void *) &g_filex_block_media0_ctrl;
    rm_filex_block_media_memory_callback(&args);
    return FSP_SUCCESS;
}

```

Data Structures

```
struct  rm_filex_block_media_instance_ctrl_t
```

Data Structure Documentation

◆ rm_filex_block_media_instance_ctrl_t

```
struct rm_filex_block_media_instance_ctrl_t
```

Common macro for FSP header files. There is also a corresponding FSP_FOOTER macro at the end of this file. FileX block media private control block. DO NOT MODIFY. Initialization occurs when RM_FILEX_BLOCK_MEDIA_Open is called.

Function Documentation

◆ RM_FILEX_BLOCK_MEDIA_Open()

```
fsp_err_t RM_FILEX_BLOCK_MEDIA_Open ( rm_filex_block_media_ctrl_t *const p_ctrl,
rm_filex_block_media_cfg_t const *const p_cfg )
```

The file system relies on the media to be formatted prior to creating directories and files. The sector size and sector count will change depending on the media type and size.

The File Allocation Table (FAT) starts after the reserved sectors in the media. The FAT area is basically an array of 12-bit, 16-bit, or 32-bit entries that determine if that cluster is allocated or part of a chain of clusters comprising a subdirectory or a file. The size of each FAT entry is determined by the number of clusters that need to be represented. If the number of clusters (derived from the total sectors divided by the sectors per cluster) is less than 4,086, 12-bit FAT entries are used. If the total number of clusters is greater than 4,086 and less than or equal to 65,525, 16-bit FAT entries are used. Otherwise, if the total number of clusters is greater than 65,525, 32-bit FAT entries are used. Initializes callback and configuration for FileX Block Media interface. Call this before calling any FileX functions.

Implements `rm_filex_block_media_api_t::open()`.

Return values

FSP_SUCCESS	Success.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_ALREADY_OPEN	Module is already open.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ RM_FILEX_BLOCK_MEDIA_Close()

```
fsp_err_t RM_FILEX_BLOCK_MEDIA_Close ( rm_filex_block_media_ctrl_t *const p_ctrl)
```

Closes media device.

Implements `rm_filex_block_media_api_t::close()`.

Return values

FSP_SUCCESS	Media device closed.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_NOT_OPEN	Module not open.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ RM_FILEX_BLOCK_MEDIA_BlockDriver()

```
void RM_FILEX_BLOCK_MEDIA_BlockDriver ( FX_MEDIA * p_fx_media)
```

Access Block Media device functions open, close, read, write and control.

The RM_FILEX_BLOCK_MEDIA_BlockDriver function is called from the FileX file system driver and issues requests to a Block Media device through the FSP Block Media Interface. Uses block media driver for accesses.

Parameters

[in,out]	p_fx_media	FileX media control block. All information about each open media device are maintained in the FX_MEDIA data type. The I/O driver communicates the success or failure of the request through the fx_media_driver_status member of FX_MEDIA (p_fx_media->fx_media_driver_status). Possible values are documented in the FileX User Guide.
----------	------------	---

Return values

None	
------	--

Returns

Nothing, but updates FileX media control block.

4.2.86 Azure RTOS FileX LevelX I/O Driver (rm_filex_levelx_nor)**Modules****Functions**

```
void RM_FILEX_LEVELX_NOR_DeviceDriver (FX_MEDIA *p_fx_media)
```

Access LevelX NOR device functions open, close, read, write and control. [More...](#)

Detailed Description

Middleware for the Azure RTOS FileX File System control using LevelX NOR on RA MCUs.

Overview

This module provides the hardware port layer for FileX file system. After initializing this module, refer to the FileX API reference to use the file system: <https://docs.microsoft.com/en-us/azure/rtos/filex/>

Features

The FileX LevelX NOR module supports the following features:

- ThreadX is typically required for FileX. To use FileX without ThreadX `FX_STANDALONE_ENABLE` must be defined.
- Unless `FX_SINGLE_THREAD` or `FX_STANDALONE_ENABLE` are defined, all FileX operations are thread safe.

Configuration

Build Time Configurations for `rm_filex_levelx_nor`

The following build time configurations are defined in `fsp_cfg/middleware/rm_filex_levelx_nor_cfg.h`:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	Selects if code for parameter checking is to be included in the build.

Configurations for Storage > FileX I/O (`rm_filex_levelx_nor`)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	<code>g_rm_filex_levelx_nor0</code>	Module name.
Callback	Name must be a valid C symbol	<code>g_rm_filex_levelx_nor_0_callback</code>	A user callback function can be provided. If this callback function is provided, it will be called during operations by the lower level block media as a way for the user to provide their desired waiting functionality.
LevelX NOR Name (String)	Manual Entry	<code>g_rm_filex_levelx_nor_0</code>	String name to be input into LevelX API.

Build Time Configurations for `fx`

The following build time configurations are defined in `fsp_cfg/azure/fx/fx_user.h`:

Configuration	Options	Default	Description
Common > Max Long Name Len	Value must be greater than or equal to 13 and less than or equal to		Specifies the maximum file name size for FileX. If left blank the default

	256, or empty		value is 256. Legal values range between 13 and 256.
Common > Max Last Name Len	Value must be greater than or equal to 13 and less than or equal to 256, or empty		This value defines the maximum file name length, which includes full path name. If left blank the default value is 256. Legal values range between 13 and 256.
Common > Max Sector Cache	Value must be greater than 0 or empty		Specifies the maximum number of logical sectors that can be cached by FileX. The actual number of sectors that can be cached is lesser of this constant and how many sectors can fit in the amount of memory supplied at <code>fx_media_open</code> . The default value if left blank is 256. All values must be a power of 2.
Common > Fat Map Size	Value must be greater than 0 or empty		Specifies the number of sectors that can be represented in the FAT update map. The default value if left blank is 256. Larger values help reduce unneeded updates of secondary FAT sectors.
Common > Max Fat Cache	Value must be greater than 0 or empty		Specifies the number of entries in the internal FAT cache. The default value if left blank is 16. All values must be a power of 2.
Threading > Update Rate (Seconds)	Value must be greater than 0 or empty		Specifies rate at which system time in FileX is adjusted. Default value if left blank is 10, specifying that the FileX system time is updated every 10 seconds.
Threading > No Timer	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled (default)	Eliminates the ThreadX timer setup to update

	(default)		the FileX system time and date. Doing so causes default time and date to be placed on all file operations.
Threading > Single Thread	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	Eliminates ThreadX protection logic from the FileX source. It should be used if FileX is being used only from one thread.
Threading > Standalone	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	Enables FileX to be used in standalone mode (without Azure RTOS).
Extra Features > Don't Update Open Files	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, FileX does not update already opened files.
Extra Features > Media Search Cache	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	When disabled, the file search cache optimization is disabled.
Extra Features > Direct Data Read Cache Fill	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	When disabled, the direct read sector update of cache is disabled.
Extra Features > Media Statistics	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	When disabled, gathering of media statistics is disabled.
Extra Features > Single Open Legacy	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, legacy single open logic for the same file is enabled.
Extra Features > Rename Path Inherit	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, renaming inherits path information.
Extra Features > No Local Path	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, removes local path logic from FileX, resulting in smaller code size.
Extra Features > 64-bit LBA	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, 64-bits sector addresses are used in I/O driver.
Extra Features > Cache	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables the cache, default is enabled.

Extra Features > File Close	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables file close, default is enabled.
Extra Features > Fast Close	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables fast open, default is enabled.
Extra Features > Force Memory Operation	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables force memory operation, default is enabled.
Extra Features > Build Options	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables build options, default is enabled.
Extra Features > One Line Function	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables one line function, default is enabled.
Extra Features > FAT Entry Refresh	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables FAT entry refresh, default is enabled.
Extra Features > Consecutive Detect	<ul style="list-style-type: none"> • Enabled (default) • Disabled 	Enabled (default)	Enables or disables consecutive detect, default is enabled.
Extra Features > Enable exFAT	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	Enables exFAT support in FileX.
Fault Tolerant > Fault Tolerant Service	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, enables the FileX Fault Tolerant Module. Enabling Fault Tolerant automatically defines the symbol <code>FX_FAULT_TOLERANT</code> and <code>FX_FAULT_TOLERANT_DATA</code> .
Fault Tolerant > Fault Tolerant Data	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, FileX immediately passes all file data write requests to the media's driver. This potentially decreases performance, but helps limit lost file data. Note that enabling this feature does not automatically enable FileX Fault Tolerant Module, which should be enabled separately.
Fault Tolerant > Fault Tolerant	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled (default)	When enabled, FileX immediately passes

(default)

write requests of all system sectors (boot, FAT, and directory sectors) to the media's driver. This potentially decreases performance, but helps limit corruption to lost clusters. Note that enabling this feature does not automatically enable FileX Fault Tolerant Module, which should be enabled separately.

Defines byte offset in the boot sector where the cluster for the fault tolerant log is. By default if left blank this value is 116. This field takes 4 bytes. Bytes 116 through 119 are chosen because they are marked as reserved by FAT 12/16/32/exFAT specification.

Fault Tolerant > Fault Tolerant Boot Index

Value must be greater than or equal to 116 and less than or equal to 119

Error Checking

- Enabled (default)
- Disabled

Enabled (default)

Configurations for Storage > Azure RTOS FileX on LevelX NOR

This module can be added to the Stacks tab via New Stack > Storage > Azure RTOS FileX on LevelX NOR.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_fx_media0	Symbol used for media_ptr parameter in FileX APIs
Volume Name	Name must be a valid C symbol	Volume 1	Volume name string, which is a maximum of 11 characters.
Number of FATs	Number of FATs must be an integer greater than 0	1	Number of FATs in the media. The minimal value is 1 for the primary FAT. Values greater than 1 result in additional FAT copies being maintained at run-time.

Directory Entries	Number of Directory Entries must be an integer greater than 0	256	Number of directory entries in the root directory.
Hidden Sectors	Number of Hidden Sectors must be an integer	0	Number of sectors hidden before this media's boot sector. If using media formatted with multiple partitions this number should correspond to the starting block number for the desired partition.
Total Sectors	Total Sectors must be an integer greater than 0	3751936	Total number of sectors in the media. When using a Renesas provided block media implementation, total sectors can be fetched by the infoGet from the block media API. Any removable media must be inserted and initialized first to retrieve this info.
Sectors per Cluster	Sectors per Cluster must be an integer greater than 0	1	Number of sectors in each cluster. The cluster is the minimum allocation unit in a FAT file system.
Volume Serial Number (exFAT only)	Volume Serial Number must be an integer greater than 0	12345	Serial number to be used for this volume. exFAT only.
Boundary Unit (exFAT only)	Boundary unit must be an integer greater than 0	128	Physical data area alignment size, in number of sectors. exFAT only.
Working media memory size	Memory size must be an integer greater than or equal to the size of one sector	512	Memory allocated for file system. Memory size must be an integer greater than or equal to the size of one sector.

Usage Notes

Pending during Write/Erase

If the underlying LevelX NOR driver performs a blocking operation that requires waiting to complete (such as a long write/erase on NOR SPI), a callback can be provided to provide a way to wait with an

OS-specific thread wait. This callback will also pass up block erase events.

Partitioned Media

Partitioned media is not supported directly by the FileX LevelX NOR port.

Examples

Basic Example

This is a basic example of FileX Block Media in an application.

```
#define RM_FILEX_LEVELX_NOR_EXAMPLE_FILE_NAME "TEST_FILE.txt"
#define RM_FILEX_LEVELX_NOR_EXAMPLE_BUFFER_SIZE_BYTES (10240)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_PARTITION_NUMBER (0)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_BLOCK_SIZE (512)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_DIRECTORY_ENTRIES (128)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_FATS (1)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_HIDDEN_SECTORS (0)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_TOTAL_SECTORS (512)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SECTOR_SIZE (512)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_CLUSTER (1)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_HEADS (1)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_TRACK (1)
extern rm_filex_levelx_nor_instance_t g_filex_levelx_nor0;
extern rm_filex_levelx_nor_instance_ctrl_t g_filex_levelx_nor0_ctrl;
extern rm_filex_levelx_nor_cfg_t g_filex_levelx_nor0_cfg;
extern FX_MEDIA g_fx_media0;
extern uint8_t g_fx_media0_memory[RM_FILEX_LEVELX_NOR_EXAMPLE_BLOCK_SIZE];
extern uint8_t g_file_data[RM_FILEX_LEVELX_NOR_EXAMPLE_BUFFER_SIZE_BYTES];
extern uint8_t g_read_buffer[RM_FILEX_LEVELX_NOR_EXAMPLE_BUFFER_SIZE_BYTES];
void rm_filex_levelx_nor_example (void)
{
    /* Initialize FileX */
    fx_system_initialize();

    /* Initialize LevelX */
    lx_nor_flash_initialize();

    /* Open the media. This assumes the flash is already formatted. */
}
```

```
    UINT fx_err = fx_media_open(&g_fx_media0,
    "filex_example_media",
    RM_FILEX_LEVELX_NOR_DeviceDriver,
                                &g_filex_levelx_nor0,
                                g_fx_media0_memory,
    sizeof(g_fx_media0_memory));
    handle_fx_error(fx_err);
    /* Create a file */
    fx_err = fx_file_create(&g_fx_media0, RM_FILEX_LEVELX_NOR_EXAMPLE_FILE_NAME);
    handle_fx_error(fx_err);
    /* Open source file for writing. */
    FX_FILE sourceFile;
    fx_err = fx_file_open(&g_fx_media0, &sourceFile,
    RM_FILEX_LEVELX_NOR_EXAMPLE_FILE_NAME, FX_OPEN_FOR_WRITE);
    handle_fx_error(fx_err);
    /* Write file data. */
    fx_err = fx_file_write(&sourceFile, g_file_data, sizeof(g_file_data));
    handle_fx_error(fx_err);
    /* Close the file. */
    fx_err = fx_file_close(&sourceFile);
    handle_fx_error(fx_err);
    /* Open the source file in read mode. */
    fx_err = fx_file_open(&g_fx_media0, &sourceFile,
    RM_FILEX_LEVELX_NOR_EXAMPLE_FILE_NAME, FX_OPEN_FOR_READ);
    handle_fx_error(fx_err);
    /* Read file data. */
    ULONG actual_size_read;
    fx_err = fx_file_read(&sourceFile, g_read_buffer, sizeof(g_file_data),
    &actual_size_read);
    handle_fx_error(fx_err);
    assert(sizeof(g_file_data) == actual_size_read);
    /* Close the file. */
    fx_err = fx_file_close(&sourceFile);
    handle_fx_error(fx_err);
```

```
/* Verify the file data read matches the file written. */
    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));
/* Close the Media */
    fx_err = fx_media_close(&g_fx_media0);
    handle_fx_error(fx_err);
}
```

Format Example

This shows how to partition and format a disk if it is not already partitioned and formatted.

```
extern rm_levelx_nor_spi_cfg_t g_levelx_nor_spi0_cfg;
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SPI_SECTOR_SIZE (4096)
void rm_filex_levelx_nor_format_example (void)
{
    spi_flash_instance_t * p_spi_flash_instance = (spi_flash_instance_t *)
g_levelx_nor_spi0_cfg.p_lower_lvl;
    spi_flash_status_t    status;
    /* Erase flash prior to usage */
    fsp_err_t err = p_spi_flash_instance->p_api->open(p_spi_flash_instance->p_ctrl,
p_spi_flash_instance->p_cfg);
    assert(FSP_SUCCESS == err);
    for (uint32_t i = g_levelx_nor_spi0_cfg.address_offset;
        i < g_levelx_nor_spi0_cfg.size;
        i += RM_FILEX_LEVELX_NOR_EXAMPLE_SPI_SECTOR_SIZE)
    {
        err = p_spi_flash_instance->p_api->erase(p_spi_flash_instance->p_ctrl,
                                                (uint8_t *)
g_levelx_nor_spi0_cfg.base_address + i,
RM_FILEX_LEVELX_NOR_EXAMPLE_SPI_SECTOR_SIZE);
        assert(FSP_SUCCESS == err);
        status.write_in_progress = true;
        while (status.write_in_progress)
        {
```

```

        err =
p_spi_flash_instance->p_api->statusGet(p_spi_flash_instance->p_ctrl, &status);
        assert(FSP_SUCCESS == err);
    }
}

err = p_spi_flash_instance->p_api->close(p_spi_flash_instance->p_ctrl);
assert(FSP_SUCCESS == err);
/* Format the media */
UINT fx_err = fx_media_format(&g_fx_media0,
// Pointer to FileX media control block.
RM_FILEX_LEVELX_NOR_DeviceDriver,           // Driver entry
                                           &g_filex_levelx_nor0, // Pointer to Block Media
Driver
                                           g_fx_media0_memory, // Media buffer pointer
sizeof(g_fx_media0_memory),                // Media buffer size
"EXAMPLE_VOLUME",                          // Volume Name
                                           RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_FATS,
// Number of FATs
                                           RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_DIRECTORY_ENTRIES,
// Directory Entries
                                           RM_FILEX_LEVELX_NOR_EXAMPLE_HIDDEN_SECTORS,
// Hidden sectors
RM_FILEX_LEVELX_NOR_EXAMPLE_TOTAL_SECTORS, // Total sectors
                                           RM_FILEX_LEVELX_NOR_EXAMPLE_SECTOR_SIZE,
// Sector size
RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_CLUSTER, // Sectors per cluster
                                           RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_HEADS,
// Heads
                                           RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_TRACK);
// Sectors per track
    handle_fx_error(fx_err);
}

```

Callback Wait Example

This shows how to use the I/O driver callback with ThreadX in order to wait for operations to complete.

```
/* Callback called by FileX block media I/O driver needs to wait on operation. */
void rm_filex_levelx_nor_test_callback_wait (rm_filex_levelx_nor_callback_args_t *
p_args)
{
    if (p_args->event & RM_FILEX_LEVELX_NOR_EVENT_BUSY)
    {
        /* Put the thread to sleep while waiting for operation to complete. */
        tx_thread_sleep(1);
    }
}

void rm_filex_levelx_nor_callback_wait_example (void)
{
    /* Format the media */
    UINT fx_err = fx_media_format(&g_fx_media0,
// Pointer to FileX media control block.
    RM_FILEX_LEVELX_NOR_DeviceDriver, // Driver entry
    &g_filex_levelx_nor0, // Pointer to Block Media
Driver
    g_fx_media0_memory, // Media buffer pointer
    sizeof(g_fx_media0_memory), // Media buffer size
    "EXAMPLE_VOLUME", // Volume Name
    RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_FATS,
// Number of FATs
    RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_DIRECTORY_ENTRIES,
// Directory Entries
    RM_FILEX_LEVELX_NOR_EXAMPLE_HIDDEN_SECTORS,
// Hidden sectors
    RM_FILEX_LEVELX_NOR_EXAMPLE_TOTAL_SECTORS, // Total sectors
```

```

RM_FILEX_LEVELX_NOR_EXAMPLE_SECTOR_SIZE,

// Sector size

RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_CLUSTER, // Sectors per cluster

RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_HEADS,

// Heads

RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_TRACK);

// Sectors per track

handle_fx_error(fx_err);
}

```

Data Structure Documentation

◆ [rm_filex_levelx_nor_callback_args_t](#)

struct rm_filex_levelx_nor_callback_args_t		
Callback function parameter data		
Data Fields		
rm_filex_levelx_nor_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data.

◆ [rm_filex_levelx_nor_cfg_t](#)

struct rm_filex_levelx_nor_cfg_t		
FileX LevelX configuration		
Data Fields		
UINT(*)	nor_driver_initialize	(LX_NOR_FLASH *)

	Pointer to the initialization function.
LX_NOR_FLASH *	p_nor_flash
	NOR Flash instance.
CHAR *	p_nor_flash_name
	NOR Flash instance name.
fsp_err_t (*	close)()
	Pointer to underlying driver close.
void(*	p_callback)(rm_filex_levelx_nor_callback_args_t *p_args)
	Pointer to callback function.
void const *	p_context
	Placeholder for user data.

◆ [rm_filex_levelx_nor_instance_ctrl_t](#)

struct rm_filex_levelx_nor_instance_ctrl_t		
FileX block media private control block. DO NOT MODIFY. Initialization occurs when RM_FILEX_LEVELX_NOR_Open is called.		
Data Fields		
rm_filex_levelx_nor_cfg_t const *	p_cfg	Pointer to instance configuration.

◆ [rm_filex_levelx_nor_instance_t](#)

struct rm_filex_levelx_nor_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
rm_filex_levelx_nor_instance_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_filex_levelx_nor_cfg_t *const	p_cfg	Pointer to the configuration

	structure for this instance.

Enumeration Type Documentation

◆ rm_filex_levelx_nor_event_t

enum <code>rm_filex_levelx_nor_event_t</code>	
Common macro for FSP header files. There is also a corresponding <code>FSP_FOOTER</code> macro at the end of this file. Options for the callback events.	
Enumerator	
<code>RM_FILEX_LEVELX_NOR_EVENT_BUSY</code>	Pending operation, user can define their own wait functionality.

Function Documentation

◆ RM_FILEX_LEVELX_NOR_DeviceDriver()

void <code>RM_FILEX_LEVELX_NOR_DeviceDriver (FX_MEDIA * p_fx_media)</code>		
Access LevelX NOR device functions open, close, read, write and control.		
The <code>RM_FILEX_LEVELX_NOR_DeviceDriver</code> function is called from the FileX file system driver and issues requests to a LevelX NOR device through the LevelX API.		
Parameters		
[in,out]	<code>p_fx_media</code>	FileX media control block. All information about each open media device are maintained in the <code>FX_MEDIA</code> data type. The I/O driver communicates the success or failure of the request through the <code>fx_media_driver_status</code> member of <code>FX_MEDIA</code> (<code>p_fx_media->fx_media_driver_status</code>). Possible values are documented in the FileX User Guide.
Return values		
None		
Returns		
Nothing, but updates FileX media control block.

fsp_err_t	RM_FREERTOS_PLUS_FAT_Close (rm_freertos_plus_fat_ctrl_t *const p_ctrl)

Detailed Description

Middleware for the FAT File System control on RA MCUs.

Overview

This module provides the hardware port layer for FreeRTOS+FAT file system. After initializing this module, refer to the FreeRTOS+FAT API reference to use the file system:
https://www.freertos.org/FreeRTOS-Plus/FreeRTOS_Plus_FAT/index.html

Features

The FreeRTOS+FAT port module supports the following features:

- Callbacks for insertion and removal for removable devices.
- Helper function to initialize FF_Disk_t
- Blocking read and write port functions that use FreeRTOS task notification to pend if FreeRTOS is used
- FreeRTOS is optional

Configuration

Build Time Configurations for rm_freertos_plus_fat

The following build time configurations are defined in fsp_cfg/middleware/rm_freertos_plus_fat_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Storage > FreeRTOS+FAT Port for RA (rm_freertos_plus_fat)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_freertos_plus_fat 0	Module name.
Total Number of Sectors	Must be a non-negative integer	31293440	Enter the total number of sectors on the device. If this is not known, update <code>rm_freertos_plus_fat_disk_cfg_t::num_blocks</code> after calling RM_FREERTOS_PLUS_FAT_MediaInit() .
Sector Size (bytes)	Must be a power of 2 multiple of 512	512	Select the sector size. Must match the underlying media sector size and at least 512. If this is not known, update <code>rm_freertos_plus_fat_disk_cfg_t::num_blocks</code> after calling RM_FREERTOS_PLUS_FAT_MediaInit() .
Cache Size (bytes)	Must be a power of 2 multiple of 512	1024	Select the cache size. Must be a multiple of the sector size and at least 2 times the sector size.
Partition Number	Must be a non-negative integer	0	Select the partition number for this disk.
Callback	Name must be a valid C symbol	NULL	A user callback function can be provided. If this callback function is provided, it will be called when a card is inserted or removed.

Usage Notes

Pending during Read/Write

If the underlying driver supports non-blocking operations, the FreeRTOS+FAT port pends the active

FreeRTOS task during read and write operations so other tasks can run in the background.

If FreeRTOS is not used, the FreeRTOS+FAT port spins in a while loop waiting for read and write operations to complete.

FreeRTOS+FAT without FreeRTOS

To use FreeRTOS+FAT without FreeRTOS, copy FreeRTOSConfigMinimal.h to one of your project's include paths and rename it FreeRTOSConfig.h.

Also, update the Malloc function to malloc and the Free function to free in the Common configurations.

Examples

Basic Example

This is a basic example of FreeRTOS+FAT in an application.

```
#define RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME "TEST_FILE.txt"
#define RM_FREERTOS_PLUS_FAT_EXAMPLE_BUFFER_SIZE_BYTES (10240)
#define RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER (0)
extern rm_freertos_plus_fat_instance_ctrl_t g_freertos_plus_fat0_ctrl;
extern const rm_freertos_plus_fat_cfg_t g_freertos_plus_fat0_cfg;
extern rm_freertos_plus_fat_disk_cfg_t g_rm_freertos_plus_fat_disk_cfg;
extern uint8_t g_file_data[RM_FREERTOS_PLUS_FAT_EXAMPLE_BUFFER_SIZE_BYTES];
extern uint8_t g_read_buffer[RM_FREERTOS_PLUS_FAT_EXAMPLE_BUFFER_SIZE_BYTES];
void rm_freertos_plus_fat_example (void)
{
    /* Open media driver.*/
    fsp_err_t err = RM_FREERTOS_PLUS_FAT_Open(&g_freertos_plus_fat0_ctrl,
&g_freertos_plus_fat0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Initialize the media and the disk. If the media is removable, it must be inserted
before calling
    * RM_FREERTOS_PLUS_FAT_MediaInit. */
    err = RM_FREERTOS_PLUS_FAT_MediaInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg.device);

    assert(FSP_SUCCESS == err);

    /* Initialize one disk for each partition used in the application. */
```

```
    FF_Disk_t disk;

    err = RM_FREERTOS_PLUS_FAT_DiskInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg, &disk);

    assert(FSP_SUCCESS == err);

    /* Mount each disk. This assumes the disk is already partitioned and formatted. */
    FF_Error_t ff_err = FF_Mount(&disk,
RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER);

    handle_ff_error(ff_err);

    /* Add the disk to the file system. */
    FF_FS_Add("/", &disk);

    /* Open a source file for writing. */
    FF_FILE * pxSourceFile = ff_fopen((const char *)
RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME, "w");

    assert(NULL != pxSourceFile);

    /* Write file data. */
    size_t size_return = ff_fwrite(g_file_data, sizeof(g_file_data), 1, pxSourceFile);
    assert(1 == size_return);

    /* Close the file. */
    int close_err = ff_fclose(pxSourceFile);
    assert(0 == close_err);

    /* Open the source file in read mode. */
    pxSourceFile = ff_fopen((const char *) RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME,
"r");

    assert(NULL != pxSourceFile);

    /* Read file data. */
    size_return = ff_fread(g_read_buffer, sizeof(g_file_data), 1, pxSourceFile);
    assert(1 == size_return);

    /* Close the file. */
    close_err = ff_fclose(pxSourceFile);
    assert(0 == close_err);

    /* Verify the file data read matches the file written. */
    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));
}
```

Format Example

This shows how to partition and format a disk if it is not already partitioned and formatted.

```
void rm_freertos_plus_fat_format_example (void)
{
    /* Open media driver.*/
    fsp_err_t err = RM_FREERTOS_PLUS_FAT_Open(&g_freertos_plus_fat0_ctrl,
&g_freertos_plus_fat0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Initialize the media and the disk. If the media is removable, it must be inserted
before calling
    * RM_FREERTOS_PLUS_FAT_MediaInit. */
    err = RM_FREERTOS_PLUS_FAT_MediaInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg.device);
    assert(FSP_SUCCESS == err);

    /* Initialize one disk for each partition used in the application. */
    FF_Disk_t disk;
    err = RM_FREERTOS_PLUS_FAT_DiskInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg, &disk);
    assert(FSP_SUCCESS == err);

    /* Try to mount the disk. If the disk is not formatted, mount will fail. */
    FF_Error_t ff_err = FF_Mount(&disk,
RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER);
    if (FF_isERR((uint32_t) ff_err))
    {
        /* The disk is likely not formatted. Partition and format the disk, then mount
again. */
        FF_PartitionParameters_t partition_params;
        partition_params.ulSectorCount =
g_rm_freertos_plus_fat_disk_cfg.device.sector_count;
        partition_params.ulHiddenSectors = 1;
        partition_params.ulInterSpace = 0;
        memset(partition_params.xSizes, 0, sizeof(partition_params.xSizes));
        partition_params.xSizes[RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER] =
```

```
        (BaseType_t) partition_params.ulSectorCount - 1;
    partition_params.xPrimaryCount = 1;
    partition_params.eSizeType     = eSizeIsSectors;
    ff_err = FF_Partition(&disk, &partition_params);
    handle_ff_error(ff_err);
    ff_err = FF_Format(&disk, RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER,
pdFALSE, pdFALSE);
    handle_ff_error(ff_err);
    ff_err = FF_Mount(&disk, RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER);
    handle_ff_error(ff_err);
}
}
```

Media Insertion Example

This shows how to use the callback to wait for media insertion.

```
#if 2 == BSP_CFG_RTOS
static EventGroupHandle_t xUSBEventGroupHandle = NULL;
#else
volatile uint32_t g_rm_freertos_plus_fat_insertion_events = 0;
volatile uint32_t g_rm_freertos_plus_fat_removal_events = 0;
#endif

/* Callback called by media driver when a removable device is inserted or removed. */
void rm_freertos_plus_fat_test_callback (rm_freertos_plus_fat_callback_args_t *
p_args)
{
#if 2 == BSP_CFG_RTOS
    /* Post an event if FreeRTOS is available. */
    BaseType_t xHigherPriorityTaskWoken = pdFALSE;
    xEventGroupSetBitsFromISR(xUSBEventGroupHandle, p_args->event,
&xHigherPriorityTaskWoken);
    portYIELD_FROM_ISR(xHigherPriorityTaskWoken);
#else
    /* If FreeRTOS is not used, set a global flag. */

```

```
if (p_args->event & RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_INSERTED)
{
    g_rm_freertos_plus_fat_insertion_events++;
}
if (p_args->event & RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_REMOVED)
{
    g_rm_freertos_plus_fat_removal_events++;
}
#endif
}
void rm_freertos_plus_fat_media_insertion_example (void)
{
#if 2 == BSP_CFG_RTOS
    /* Create event flags if FreeRTOS is used. */
    xUSBEventGroupHandle = xEventGroupCreate();

int close_err = ff_fclose(pxSourceFile);
    assert(0 == close_err);
/* Open the source file in read mode. */
    pxSourceFile = ff_fopen((const char *) RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME,
"r");
    assert(NULL != pxSourceFile);
/* Read file data. */
    size_return = ff_fread(g_read_buffer, sizeof(g_file_data), 1, pxSourceFile);
    assert(1 == size_return);
/* Close the file. */
    close_err = ff_fclose(pxSourceFile);
    assert(0 == close_err);
/* Verify the file data read matches the file written. */
    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));
}
```

Data Structures

struct [rm_freertos_plus_fat_instance_ctrl_t](#)

Data Structure Documentation

◆ [rm_freertos_plus_fat_instance_ctrl_t](#)

struct [rm_freertos_plus_fat_instance_ctrl_t](#)

FreeRTOS plus FAT private control block. DO NOT MODIFY. Initialization occurs when `RM_FREERTOS_PLUS_FAT_Open` is called.

Function Documentation

◆ RM_FREERTOS_PLUS_FAT_Open()

```
fsp_err_t RM_FREERTOS_PLUS_FAT_Open ( rm_freertos_plus_fat_ctrl_t *const p_ctrl,
rm_freertos_plus_fat_cfg_t const *const p_cfg )
```

Initializes lower layer media device.

Implements `rm_freertos_plus_fat_api_t::open()`.

Return values

FSP_SUCCESS	Success.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_OUT_OF_MEMORY	Not enough memory to create semaphore.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `rm_block_media_api_t::open`

◆ RM_FREERTOS_PLUS_FAT_MediaInit()

```
fsp_err_t RM_FREERTOS_PLUS_FAT_MediaInit ( rm_freertos_plus_fat_ctrl_t *const p_ctrl,
rm_freertos_plus_fat_device_t *const p_device )
```

Initializes the media device. This function blocks until all identification and configuration commands are complete.

Implements `rm_freertos_plus_fat_api_t::mediaInit()`.

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module has not been initialized.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `rm_block_media_api_t::mediaInit`
- `rm_block_media_api_t::infoGet`

◆ **RM_FREERTOS_PLUS_FAT_DiskInit()**

```
fsp_err_t RM_FREERTOS_PLUS_FAT_DiskInit ( rm_freertos_plus_fat_ctrl_t *const p_ctrl,
rm_freertos_plus_fat_disk_cfg_t const *const p_disk_cfg, FF_Disk_t *const p_disk )
```

Initializes a FreeRTOS+FAT disk structure. This function calls FF_CreateIOManger.

Implements `rm_freertos_plus_fat_api_t::diskInit()`.

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module has not been initialized.
FSP_ERR_INTERNAL	Call to FF_CreateIOManger failed.

◆ **RM_FREERTOS_PLUS_FAT_DiskDeinit()**

```
fsp_err_t RM_FREERTOS_PLUS_FAT_DiskDeinit ( rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t
*const p_disk )
```

Deinitializes a FreeRTOS+FAT disk structure. This function calls FF_DeleteIOManger.

Implements `rm_freertos_plus_fat_api_t::diskDeinit()`.

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module has not been initialized.

◆ RM_FREERTOS_PLUS_FAT_InfoGet()

```
fsp_err_t RM_FREERTOS_PLUS_FAT_InfoGet ( rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t
*const p_disk, rm_freertos_plus_fat_info_t *const p_info )
```

Get partition information. This function can only be called after [rm_freertos_plus_fat_api_t::diskInit\(\)](#)

Implements [rm_freertos_plus_fat_api_t::infoGet\(\)](#).

Return values

FSP_SUCCESS	Information stored in p_info.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_NOT_OPEN	Module not open.
FSP_ERR_NOT_FOUND	The value of p_iomanager is NULL.

◆ RM_FREERTOS_PLUS_FAT_Close()

```
fsp_err_t RM_FREERTOS_PLUS_FAT_Close ( rm_freertos_plus_fat_ctrl_t *const p_ctrl)
```

Closes media device.

Implements [rm_freertos_plus_fat_api_t::close\(\)](#).

Return values

FSP_SUCCESS	Media device closed.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_NOT_OPEN	Module not open.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- [rm_block_media_api_t::close](#)

4.2.88 FreeRTOS Plus TCP (rm_freertos_plus_tcp)**Modules**

Middleware for using TCP on RA MCUs.

Overview

FreeRTOS Plus TCP is a TCP stack created for use with FreeRTOS.

This module provides the NetworkInterface required to use FreeRTOS Plus TCP with the [Ethernet \(r_ether\)](#) driver.

Please refer to the [FreeRTOS Plus TCP documentation](#) for further details.

Configuration

Build Time Configurations for FreeRTOS_Plus_TCP

The following build time configurations are defined in aws/FreeRTOSIPConfig.h:

Configuration	Options	Default	Description
Print debug messages	<ul style="list-style-type: none"> Disable Enable 	Disable	If ipconfigHAS_DEBUG_PRINTF is set to 1 then FreeRTOS_debug_printf should be defined to the function used to print out the debugging messages.
Print info messages	<ul style="list-style-type: none"> Disable Enable 	Disable	Set to 1 to print out non debugging messages, for example the output of the FreeRTOS_netstat() command, and ping replies. If ipconfigHAS_PRINTF is set to 1 then FreeRTOS_printf should be set to the function used to print out the messages.
Byte order of the target MCU	pdFREERTOS_LITTLE_ENDIAN	pdFREERTOS_LITTLE_ENDIAN	Define the byte order of the target MCU
IP/TCP/UDP checksums	<ul style="list-style-type: none"> Disable Enable 	Enable	If the network card/driver includes checksum offloading (IP/TCP/UDP checksums) then set ipconfigDRIVER_INCLUDED_RX_IP_CHECKSUM to 1 to prevent the software stack repeating the checksum calculations.
Receive Block Time	Value must be a non-negative integer	10000	Amount of time FreeRTOS_recv() will

			block for. The timeouts can be set per socket, using <code>setsockopt()</code> .
Send Block Time	Value must be a non-negative integer	10000	Amount of time <code>FreeRTOS_send()</code> will block for. The timeouts can be set per socket, using <code>setsockopt()</code> .
DNS caching	<ul style="list-style-type: none"> • Disable • Enable 	Enable	DNS caching
DNS Request Attempts	Value must be an integer	2	When a cache is present, <code>ipconfigDNS_REQUEST_ATTEMPTS</code> can be kept low and also DNS may use small timeouts.
IP stack task priority	Manual Entry	<code>configMAX_PRIORITIES - 2</code>	Set the priority of the task that executes the IP stack.
Stack size in words (not bytes)	Manual Entry	<code>configMINIMAL_STACK_SIZE * 5</code>	The size, in words (not bytes), of the stack allocated to the FreeRTOS+TCP stack.
Network Events call vApplicationIPNetworkEventHook	<ul style="list-style-type: none"> • Disable • Enable 	Enable	<code>vApplicationIPNetworkEventHook</code> is called when the network connects or disconnects.
Max UDP send block time	Manual Entry	<code>15000 / portTICK_PERIOD_MS</code>	Max UDP send block time
Use DHCP	<ul style="list-style-type: none"> • Disable • Enable 	Enable	If <code>ipconfigUSE_DHCP</code> is 1 then FreeRTOS+TCP will attempt to retrieve an IP address, netmask, DNS server address and gateway address from a DHCP server.
DHCP Register Hostname	<ul style="list-style-type: none"> • Disable • Enable 	Enable	Register hostname when using DHCP
DHCP Uses Unicast	<ul style="list-style-type: none"> • Disable • Enable 	Enable	DHCP uses unicast.
DHCP Send Discover After Auto IP	<ul style="list-style-type: none"> • Disable • Enable 	Disable	DHCP Send Discover After Auto IP
DHCP callback function	<ul style="list-style-type: none"> • Disable • Enable 	Disable	Provide an implementation of the DHCP callback function

Interval between transmissions	Manual Entry	120000 / portTICK_PERIOD_MS	(xApplicationDHCPHook) When ipconfigUSE_DHCP is set to 1, DHCP requests will be sent out at increasing time intervals until either a reply is received from a DHCP server and accepted, or the interval between transmissions reaches ipconfigMAXIMUM_DISCOVER_TX_PERIOD.
ARP Cache Entries	Value must be an integer	6	The maximum number of entries that can exist in the ARP table at any one time
ARP Request Retransmissions	Value must be an integer	5	ARP requests that do not result in an ARP response will be re-transmitted a maximum of ipconfigMAX_ARP_RETRANSMISSIONS times before the ARP request is aborted.
Maximum time before ARP table entry becomes stale	Value must be an integer	150	The maximum time between an entry in the ARP table being created or refreshed and the entry being removed because it is stale
Use string for IP Address	<ul style="list-style-type: none"> • Disable • Enable 	Enable	Take an IP in decimal dot format (for example, "192.168.0.1") as its parameter FreeRTOS_inet_addr_quick() takes an IP address as four separate numerical octets (for example, 192, 168, 0, 1) as its parameters
Total number of available network buffers	Value must be an integer	10	Define the total number of network buffer that are available to the IP stack
Set the maximum	Please enter a valid	ipconfigNUM_NETWORK	Set the maximum

number of events	function name without spaces or funny characters	<code>_BUFFER_DESCRIPTOR</code> + 5	number of events that can be queued for processing at any one time. The event queue must be a minimum of 5 greater than the total number of network buffers
Enable <code>FreeRTOS_sendto()</code> without calling <code>Bind</code>	<ul style="list-style-type: none"> • Enable • Disable 	Disable	Set to 1 then calling <code>FreeRTOS_sendto()</code> on a socket that has not yet been bound will result in the IP stack automatically binding the socket to a port number from the range <code>socketAUTO_PORT_ALL</code> <code>OCATION_START_NUMBER</code> to <code>0xffff</code> . If <code>ipconfigALLOW_SOCKET_SEND_WITHOUT_BIND</code> is set to 0 then calling <code>FreeRTOS_sendto()</code> on a socket that has not yet been bound will result in the send operation being aborted.
TTL values for UDP packets	Value must be an integer	128	Define the Time To Live (TTL) values used in outgoing UDP packets
TTL values for TCP packets	Value must be an integer	128	Defines the Time To Live (TTL) values used in outgoing TCP packets
Use TCP and all its features	<ul style="list-style-type: none"> • Disable • Enable 	Enable	Use TCP and all its features
Let TCP use windowing mechanism	<ul style="list-style-type: none"> • Disable • Enable 	Disable	Let TCP use windowing mechanism
Maximum number of bytes the payload of a network frame can contain	Value must be an integer	1500	Maximum number of bytes the payload of a network frame can contain
Basic DNS client or resolver	<ul style="list-style-type: none"> • Disable • Enable 	Enable	Set <code>ipconfigUSE_DNS</code> to 1 to include a basic DNS client/resolver. DNS is used through the <code>FreeRTOS_gethostbyname()</code> API function.
Reply to incoming ICMP	<ul style="list-style-type: none"> • Disable 	Enable	If <code>ipconfigREPLY_TO_IN</code>

echo (ping) requests	<ul style="list-style-type: none"> • Enable 		COMING_PINGS is set to 1 then the IP stack will generate replies to incoming ICMP echo (ping) requests.
FreeRTOS_SendPingRequest() is available	<ul style="list-style-type: none"> • Disable • Enable 	Disable	If ipconfigSUPPORT_OUTGOING_PINGS is set to 1 then the FreeRTOS_SendPingRequest() API function is available.
FreeRTOS_select() (and associated) API function is available	<ul style="list-style-type: none"> • Disable • Enable 	Disable	If ipconfigSUPPORT_SELECT_FUNCTION is set to 1 then the FreeRTOS_select() (and associated) API function is available
Filter out non Ethernet II frames.	<ul style="list-style-type: none"> • Disable • Enable 	Enable	If ipconfigFILTER_OUT_NON_ETHERNET_II_FRAMES is set to 1 then Ethernet frames that are not in Ethernet II format will be dropped. This option is included for potential future IP stack developments
Responsibility of the Ethernet interface to filter out packets	<ul style="list-style-type: none"> • Disable • Enable 	Disable	If ipconfigETHERNET_DRIVER_FILTERS_FRAME_TYPES is set to 1 then it is the responsibility of the Ethernet interface to filter out packets that are of no interest.
Send RST packets, when receive unknown packets.	<ul style="list-style-type: none"> • Disable • Enable 	Enable	TCP will not send RST packets in reply to TCP unknown or out-of-order packets
Block time to simulate MAC interrupts	Please enter a valid function name without spaces or funny characters	20 / portTICK_PERIOD_MS	The windows simulator cannot really simulate MAC interrupts, and needs to block occasionally to allow other tasks to run
Access 32-bit fields in the IP packets	Value must be an integer	2	To access 32-bit fields in the IP packets with 32-bit memory instructions, all packets will be stored 32-bit-aligned, plus 16-bits. This has to do with the contents of the IP-packets: all 32-bit

Size of the pool of TCP window descriptors	Value must be an integer	240	fields are 32-bit-aligned, plus 16-bit
Size of Rx buffer for TCP sockets	Value must be an integer	3000	Define the size of the pool of TCP window descriptors
Size of Tx buffer for TCP sockets	Value must be an integer	3000	Define the size of Rx buffer for TCP sockets
TCP keep-alive	<ul style="list-style-type: none"> • Disable • Enable 	Enable	Define the size of Tx buffer for TCP sockets
TCP keep-alive interval	Value must be an integer	120	TCP keep-alive is available or not
The socket semaphore to unblock the MQTT task (USER_SEMAPHORE)	<ul style="list-style-type: none"> • Disable • Enable 	Disable	TCP keep-alive interval in second
The socket semaphore to unblock the MQTT task (WAKE_CALLBACK)	<ul style="list-style-type: none"> • Disable • Enable 	Enable	The socket semaphore is used to unblock the MQTT task
The socket semaphore to unblock the MQTT task (USE_CALLBACKS)	<ul style="list-style-type: none"> • Disable • Enable 	Disable	The socket semaphore is used to unblock the MQTT task
The socket semaphore to unblock the MQTT task (TX_DRIVER)	<ul style="list-style-type: none"> • Disable • Enable 	Disable	The socket semaphore is used to unblock the MQTT task
The socket semaphore to unblock the MQTT task (RX_DRIVER)	<ul style="list-style-type: none"> • Disable • Enable 	Disable	The socket semaphore is used to unblock the MQTT task
Possible optimisation for expert users	<ul style="list-style-type: none"> • Disable • Enable 	Disable	The socket semaphore is used to unblock the MQTT task

Usage Notes

In order to use the NetworkInterface implementation provided by Renesas for RA devices:

- Configure an `r_ether` instance and provide a pointer to the instance of the NetworkInterface as follows:

```
/* Reference used by the NetworkInterface to access the ethernet instance. */
extern ether_instance_t const * gp_freertos_ether;
...
/* Make it reference the configured ether instance. */
ether_instance_t const * gp_freertos_ether = &g_ether_instance;
```

- Follow the TCP stack initialization procedure as described here: [FreeRTOS+TCP Networking Tutorial: Initializing the TCP/IP Stack](#)

Note

The MAC address passed to `FreeRTOS_IPInit` must match the MAC address configured in the `r_ether` instance. `g_ether_instance` must have `vEtherISRcallback` configured as the callback. The `xApplicationGetRandomNumber` and `ulApplicationGetNextSequenceNumber` functions should be implemented in systems using FreeRTOS Plus TCP without Secure Sockets. To connect to a server using an IP address the macro `ipconfigINCLUDE_FULL_INET_ADDR` must be set to 1.

Limitations

- Zero-copy is not currently supported by the NetworkInterface.

4.2.89 FreeRTOS Port (rm_freertos_port)

Modules

FreeRTOS port for RA MCUs.

Overview

Note

The FreeRTOS Port does not provide any interfaces to the user. Consult the FreeRTOS documentation at <https://www.freertos.org/Documentation> for further information.

Features

The RA FreeRTOS port supports the following features:

- Standard FreeRTOS configurations
- Hardware stack monitor

Configuration

Build Time Configurations for all

The following build time configurations are defined in aws/FreeRTOSConfig.h:

Configuration	Options	Default	Description
General > Custom FreeRTOSConfig.h	Manual Entry		Add a path to your custom FreeRTOSConfig.h file. It can be used to override some or all of the configurations defined here, and to define additional configurations.
General > Use Preemption	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled	Set to Enabled to use the preemptive RTOS scheduler, or Disabled to use the cooperative RTOS scheduler.
General > Use Port Optimised Task Selection	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	<p>Some FreeRTOS ports have two methods of selecting the next task to execute - a generic method, and a method that is specific to that port.</p> <p>The Generic method: Is used when Use Port Optimized Task Selection is set to 0, or when a port specific method is not implemented. Can be used with all FreeRTOS ports. Is completely written in C, making it less efficient than a port specific method. Does not impose a limit on the maximum number of available priorities.</p> <p>A port specific method: Is not available for all ports. Is used when Use Port Optimized Task</p>

Selection is Enabled. Relies on one or more architecture specific assembly instructions (typically a Count Leading Zeros [CLZ] or equivalent instruction) so can only be used with the architecture for which it was specifically written. Is more efficient than the generic method. Typically imposes a limit of 32 on the maximum number of available priorities.

Set Use Tickless Idle to Enabled to use the low power tickless mode, or Disabled to keep the tick interrupt running at all times. Low power tickless implementations are not provided for all FreeRTOS ports.

Enter the frequency in Hz at which the internal clock that drives the peripheral used to generate the tick interrupt will be executing - this is normally the same clock that drives the internal CPU clock. This value is required in order to correctly configure timer peripherals.

The frequency of the RTOS tick interrupt. The tick interrupt is used to measure time. Therefore a higher tick frequency means time can be measured to a higher resolution. However, a high tick frequency also means that the RTOS kernel will use more CPU time

General > Use Tickless Idle

- Enabled
- Disabled

Disabled

General > Cpu Clock Hz

Manual Entry

SystemCoreClock

General > Tick Rate Hz

Must be an integer and greater than 0 1000

so be less efficient. The RTOS demo applications all use a tick rate of 1000Hz. This is used to test the RTOS kernel and is higher than would normally be required.

More than one task can share the same priority. The RTOS scheduler will share processor time between tasks of the same priority by switching between the tasks during each RTOS tick. A high tick rate frequency will therefore also have the effect of reducing the 'time slice' given to each task.

The number of priorities available to the application tasks. Any number of tasks can share the same priority. Each available priority consumes RAM within the RTOS kernel so this value should not be set any higher than actually required by your application.

The size of the stack used by the idle task. Generally this should not be reduced from the value set in the FreeRTOSConfig.h file provided with the demo application for the port you are using. Like the stack size parameter to the xTaskCreate() and xTaskCreateStatic() functions, the stack size is specified in words, not bytes. If each item placed on

General > Max
Priorities

Must be an integer and
greater than 0 5

General > Minimal
Stack Size

Must be an integer and
greater than 0 128

the stack is 32-bits, then a stack size of 100 means 400 bytes (each 32-bit stack item consuming 4 bytes).

The maximum permissible length of the descriptive name given to a task when the task is created. The length is specified in the number of characters including the NULL termination byte.

Time is measured in 'ticks' - which is the number of times the tick interrupt has executed since the RTOS kernel was started. The tick count is held in a variable of type TickType_t. Defining configUSE_16_BIT_TICKS as 1 causes TickType_t to be defined (typedef'ed) as an unsigned 16bit type. Defining configUSE_16_BIT_TICKS as 0 causes TickType_t to be defined (typedef'ed) as an unsigned 32bit type.

Using a 16-bit type will greatly improve performance on 8- and 16-bit architectures, but limits the maximum specifiable time period to 65535 'ticks'. Therefore, assuming a tick frequency of 250Hz, the maximum time a task can delay or block when a 16bit counter is used is 262 seconds, compared to 17179869 seconds when using a 32-bit counter.

General > Max Task Name Len Must be an integer and greater than 0 16

General > Use 16-bit Ticks Disabled Disabled

General > Idle Should Yield

- Enabled
- Disabled

Enabled

This parameter controls the behaviour of tasks at the idle priority. It only has an effect if:

- The preemptive scheduler is being used.
- The application creates tasks that run at the idle priority.
- If Use Time Slicing is Enabled then tasks that share the same priority will time slice. If none of the tasks get preempted then it might be assumed that each task at a given priority will be allocated an equal amount of processing time - and if the priority is above the idle priority then this is indeed the case.
- When tasks share the idle priority the behaviour can be slightly different. If Idle Should Yield is Enabled then the idle task will yield immediately if any other task at the idle priority is ready to run. This ensures the minimum amount of time is spent in the idle task when application tasks are available for scheduling. This behaviour can however have undesirable effects (depending on the needs of your application) as depicted below:

The diagram above shows the execution pattern of four tasks that are all running at the idle priority. Tasks A, B and C are

application tasks. Task I is the idle task. A context switch occurs with regular period at times T0, T1, ..., T6. When the idle task yields task A starts to execute - but the idle task has already consumed some of the current time slice. This results in task I and task A effectively sharing the same time slice. The application tasks B and C therefore get more processing time than the application task A.

This situation can be avoided by:

If appropriate, using an idle hook in place of separate tasks at the idle priority.

Creating all application tasks at a priority greater than the idle priority.

Setting Idle Should Yield to Disabled.

Setting Idle Should Yield to Disabled prevents the idle task from yielding processing time until the end of its time slice. This ensure all tasks at the idle priority are allocated an equal amount of processing time (if none of the tasks get pre-empted) - but at the cost of a greater proportion of the total processing time being allocated to the idle task.

Setting Use Task Notifications to Enabled will include direct to

General > Use Task Notifications

- Enabled
 - Disabled
- Enabled

task notification functionality and its associated API in the build.
Setting Use Task Notifications to Disabled will exclude direct to task notification functionality and its associated API from the build.

Each task consumes 8 additional bytes of RAM when direct to task notifications are included in the build.

Set to Enabled to include mutex functionality in the build, or Disabled to omit mutex functionality from the build. Readers should familiarise themselves with the differences between mutexes and binary semaphores in relation to the FreeRTOS functionality.

Set to Enabled to include recursive mutex functionality in the build, or Disabled to omit recursive mutex functionality from the build.

Set to Enabled to include counting semaphore functionality in the build, or Disabled to omit counting semaphore functionality from the build.

The queue registry has two purposes, both of which are associated with RTOS kernel aware debugging:

General > Use Mutexes • Enabled Disabled
 • Disabled

General > Use Recursive Mutexes • Enabled Disabled
 • Disabled

General > Use Counting Semaphores • Enabled Enabled
 • Disabled

General > Queue Registry Size Must be an integer and greater than 0 10

It allows a textual name to be associated with a queue for easy queue identification within a debugging GUI.

It contains the information required by a debugger to locate each registered queue and semaphore.

The queue registry has no purpose unless you are using a RTOS kernel aware debugger. Registry Size defines the maximum number of queues and semaphores that can be registered. Only those queues and semaphores that you want to view using a RTOS kernel aware debugger need be registered. See the API reference documentation for `vQueueAddToRegistry()` and `vQueueUnregisterQueue()` for more information.

Set to Enabled to include queue set functionality (the ability to block, or pend, on multiple queues and semaphores), or Disabled to omit queue set functionality.

If Use Time Slicing is Enabled, FreeRTOS uses prioritised preemptive scheduling with time slicing. That means the RTOS scheduler will always run the highest priority task that is in the Ready state, and will switch between tasks of equal priority on

General > Use Queue Sets

- Enabled
- Disabled

Disabled

General > Use Time Slicing

- Enabled
- Disabled

Disabled

every RTOS tick interrupt. If Use Time Slicing is Disabled then the RTOS scheduler will still run the highest priority task that is in the Ready state, but will not switch between tasks of equal priority just because a tick interrupt has occurred.

If Use Newlib Reentrant is Enabled then a newlib reent structure will be allocated for each created task. Note Newlib support has been included by popular demand, but is not used by the FreeRTOS maintainers themselves. FreeRTOS is not responsible for resulting newlib operation. User must be familiar with newlib and must provide system-wide implementations of the necessary stubs. Be warned that (at the time of writing) the current newlib design implements a system-wide malloc() that must be provided with locks.

The FreeRTOS.h header file includes a set of #define macros that map the names of data types used in versions of FreeRTOS prior to version 8.0.0 to the names used in FreeRTOS version 8.0.0. The macros allow application code to update the version of FreeRTOS they are built against from a pre 8.0.0 version to a post 8.0.0 version without modification. Setting Enable Backward

General > Use Newlib
Reentrant

- Enabled
- Disabled

Disabled

General > Enable
Backward Compatibility

- Enabled
- Disabled

Disabled

Compatibility to Disabled in FreeRTOSConfig.h excludes the macros from the build, and in so doing allowing validation that no pre version 8.0.0 names are being used.

Sets the number of indexes in each task's thread local storage array.

Sets the type used to specify the stack depth in calls to xTaskCreate(), and various other places stack sizes are used (for example, when returning the stack high water mark). Older versions of FreeRTOS specified stack sizes using variables of type UBaseType_t, but that was found to be too restrictive on 8-bit microcontrollers. Stack Depth Type removes that restriction by enabling application developers to specify the type to use.

FreeRTOS Message buffers use variables of type Message Buffer Length Type to store the length of each message. If Message Buffer Length Type is not defined then it will default to size_t. If the messages stored in a message buffer will never be larger than 255 bytes then defining Message Buffer Length Type to uint8_t will save 3 bytes per message on a 32-bit microcontroller.

General > Num Thread Local Storage Pointers Must be an integer and greater than 0 5

General > Stack Depth Type Manual Entry uint32_t

General > Message Buffer Length Type Manual Entry size_t

Likewise if the messages stored in a message buffer will never be larger than 65535 bytes then defining Message Buffer Length Type to uint16_t will save 2 bytes per message on a 32-bit microcontroller.

The highest interrupt priority that can be used by any interrupt service routine that makes calls to interrupt safe FreeRTOS API functions. **DO NOT CALL INTERRUPT SAFE FREERTOS API FUNCTIONS FROM ANY INTERRUPT THAT HAS A HIGHER PRIORITY THAN THIS!** (higher priorities are lower numeric values)

Below is explanation for macros that are set based on this value from FreeRTOS website.

In the RA port, configKERNEL_INTERRUPT_PRIORITY is not used and the kernel runs at the lowest priority.

Note in the following discussion that only API functions that end in "FromISR" can be called from within an interrupt service routine.

configMAX_SYSCALL_INTERRUPT_PRIORITY sets the highest interrupt priority from which interrupt safe FreeRTOS API functions can be called.

General > Library Max MCU Specific Options
Syscall Interrupt
Priority

A full interrupt nesting model is achieved by setting `configMAX_SYSCALL_INTERRUPT_PRIORITY` above (that is, at a higher priority level) than `configKERNEL_INTERRUPT_PRIORITY`. This means the FreeRTOS kernel does not completely disable interrupts, even inside critical sections. Further, this is achieved without the disadvantages of a segmented kernel architecture.

Interrupts that do not call API functions can execute at priorities above `configMAX_SYSCALL_INTERRUPT_PRIORITY` and therefore never be delayed by the RTOS kernel execution.

A special note for ARM Cortex-M users: Please read the page dedicated to interrupt priority settings on ARM Cortex-M devices. As a minimum, remember that ARM Cortex-M cores use numerically low priority numbers to represent HIGH priority interrupts, which can seem counter-intuitive and is easy to forget! If you wish to assign an interrupt a low priority do NOT assign it a priority of 0 (or other low numeric value) as this can result in the interrupt actually having the highest priority in the system - and therefore potentially make your

system crash if this priority is above configMAX_SYSCALL_INTERRUPT_PRIORITY.

The lowest priority on a ARM Cortex-M core is in fact 255 - however different ARM Cortex-M vendors implement a different number of priority bits and supply library functions that expect priorities to be specified in different ways. For example, on the RA6M3 the lowest priority you can specify is 15 - and the highest priority you can specify is 0.

The semantics of the configASSERT() macro are the same as the standard C assert() macro. An assertion is triggered if the parameter passed into configASSERT() is zero. configASSERT() is called throughout the FreeRTOS source files to check how the application is using FreeRTOS. It is highly recommended to develop FreeRTOS applications with configASSERT() defined.

The example definition (shown at the top of the file and replicated below) calls vAssertCalled(), passing in the file name and line number of the triggering configASSERT() call (`__FILE__` and `__LINE__` are standard macros provided by most compilers). This is just

General > Assert

Manual Entry

assert(x)

for demonstration as `vAssertCalled()` is not a FreeRTOS function, `configASSERT()` can be defined to take whatever action the application writer deems appropriate.

It is normal to define `configASSERT()` in such a way that it will prevent the application from executing any further. This is for two reasons; stopping the application at the point of the assertion allows the cause of the assertion to be debugged, and executing past a triggered assertion will probably result in a crash anyway.

Note defining `configASSERT()` will increase both the application code size and execution time. When the application is stable the additional overhead can be removed by simply commenting out the `configASSERT()` definition in `FreeRTOSConfig.h`.

```
/* Define
configASSERT() to call
vAssertCalled() if the
assertion fails. The
assertion
has failed if the value
of the parameter
passed into
configASSERT() equals
zero. */
#define configASSERT(
( x ) ) if( ( x ) == 0 )
vAssertCalled( __FILE__,
__LINE__ )
If running FreeRTOS
```

under the control of a debugger, then `configASSERT()` can be defined to just disable interrupts and sit in a loop, as demonstrated below. That will have the effect of stopping the code on the line that failed the assert test - pausing the debugger will then immediately take you to the offending line so you can see why it failed.

```
/* Define
configASSERT() to
disable interrupts and
sit in a loop. */
#define configASSERT(
(x)) if( (x) == 0 ) { t
askDISABLE_INTERRUPTS(); for( ;; ); }
```

Include Application Defined Privileged Functions is only used by FreeRTOS MPU. If Include Application Defined Privileged Functions is Enabled then the application writer must provide a header file called "application_defined_privileged_functions.h", in which functions the application writer needs to execute in privileged mode can be implemented. Note that, despite having a .h extension, the header file should contain the implementation of the C functions, not just the functions' prototypes.

Functions implemented in "application_defined_privileged_functions.h

General > Include
Application Defined
Privileged Functions

- Enabled
 - Disabled
- Disabled

" must save and restore the processor's privilege state using the prvRaisePrivilege() function and portRESET_PRIVILEGE() macro respectively. For example, if a library provided print function accesses RAM that is outside of the control of the application writer, and therefore cannot be allocated to a memory protected user mode task, then the print function can be encapsulated in a privileged function using the following code:

```
void MPU_debug_printf(
const char *pcMessage
)
{
/* State the privilege
level of the processor
when the function was
called. */
BaseType_t
xRunningPrivileged =
prvRaisePrivilege();

/* Call the library
function, which now
has access to all RAM.
*/
debug_printf(
pcMessage );

/* Reset the processor
privilege level to its
original value. */
portRESET_PRIVILEGE(
xRunningPrivileged );
}
```

This technique should only be use during development, and not deployment, as it circumvents the memory protection.

Set to Enabled if you

Hooks > Use Idle Hook

the vTaskList() and vTaskGetRunTimeStats() functions in the build. Setting either to Disabled will omit vTaskList() and vTaskGetRunTimeStats() from the build.

The Run Time Stats page describes the use of this parameter.

If Support Static Allocation is Enabled then RTOS objects can be created using RAM provided by the application writer. If Support Static Allocation is Disabled then RTOS objects can only be created using RAM allocated from the FreeRTOS heap.

If Support Static Allocation is left undefined it will default to 0.

If Support Static Allocation is Enabled then the application writer must also provide two callback functions: vApplicationGetIdleTaskMemory() to provide the memory for use by the RTOS Idle task, and (if Use Timers is Enabled) vApplicationGetTimerTaskMemory() to provide memory for use by the RTOS Daemon/Timer Service task. Examples are provided below.

```
/* Support Static Allocation is Enabled, so the application must provide an implementation of vApplicationGetIdleTaskMe
```

```
mory() to provide the
memory that is
used by the Idle task. */
void vApplicationGetIdleTaskMemory(
    StaticTask_t **ppxIdleTaskTCBBuffer, <br>
    StackType_t **ppxIdleTaskStackBuffer, <br>
    uint32_t
    *pulIdleTaskStackSize )
{
    /* If the buffers to be
    provided to the Idle
    task are declared
    inside this
    function then they
    must be declared static
    - otherwise they will be
    allocated on
    the stack and so not
    exists after this
    function exits. */
    static StaticTask_t
    xIdleTaskTCB;
    static StackType_t
    uxIdleTaskStack[ configMINIMAL_STACK_SIZE ];

    /* Pass out a pointer to
    the StaticTask_t
    structure in which the
    Idle task's
    state will be stored. */
    *ppxIdleTaskTCBBuffer
    =

    /* Pass out the array
    that will be used as the
    Idle task's stack. */
    *ppxIdleTaskStackBuffer
    = uxIdleTaskStack;

    /* Pass out the size of
    the array pointed to by
    *ppxIdleTaskStackBuffer.
    Note that, as the array
    is necessarily of type
    StackType_t,
    configMINIMAL_STACK_SIZE
    is specified in
    words, not bytes. */
    *pulIdleTaskStackSize
    = configMINIMAL_STACK
```

```
K_SIZE;

Clock Configuration

The FreeRTOS port uses the SysTick timer as the system clock. The timer rate is configured in the FreeRTOS component under General > Tick Rate Hz.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Hardware Stack Monitor (PSPLIM)

A UsageFault is generated if PSP goes out of the memory area for the stack allocated for the current task. If UsageFault is not enabled, it is escalated to HardFault.

Hardware Stack Monitor (SPMON)

The hardware stack monitor generates an NMI if the PSP goes out of the memory area for the stack allocated for the current task. A callback can be registered using `R_BSP_GroupIrqWrite()` to be called whenever a stack overflow or underflow of the PSP for a particular thread is detected.

Stack Monitor Underflow Detection

By default the hardware stack monitor only checks for overflow of the process stack. To check for underflow define `configRECORD_STACK_HIGH_ADDRESS` as 1 on the command line.

Low Power Modes

When FreeRTOS is configured to use tickless idle, the idle task executes `WFI()` when no task is ready to run. If the MCU is configured to enter software standby mode or deep software standby mode when the idle task executes `WFI()`, the RA FreeRTOS port changes the low power mode to sleep mode so the idle task can wake from `SysTick`. The low power mode settings are restored when the MCU wakes from sleep mode.

TrustZone Integration

When using an RTOS in a TrustZone project, ARM recommends keeping the RTOS in the non-secure project. Tasks may call non-secure callable functions if the task has allocated a secure context (using `portALLOCATE_SECURE_CONTEXT`).

The secure context can be freed by deleting the thread or using the `portCLEAN_UP_TCB(pxTCB)` macro.

Examples

Stack Monitor Example

This is an example of using the stack monitor in an application.

```
#if BSP_FEATURE_BSP_HAS_SP_MON
void stack_monitor_callback (bsp_grp_irq_t irq)
{
    FSP_PARAMETER_NOT_USED(irq);

    if (1U == R_MPU_SPMON->SP[0].CTL_b.ERROR)
    {
        /* Handle main stack monitor error here. */
    }

    if (1U == R_MPU_SPMON->SP[1].CTL_b.ERROR)
```

```
{
/* Handle process stack monitor error here. */
}
}
void rm_freertos_port_stack_monitor_example (void)
{
/* Register a callback to be called when the stack goes outside the allocated stack
area. */
R_BSP_GroupIrqWrite(BSP_GRP_IRQ_MPU_STACK, stack_monitor_callback);
}
#else
/* Allocate stack space to return from UsageFault. */
uint32_t g_stack_overflow_exception_stack[8] BSP_ALIGN_VARIABLE(BSP_STACK_ALIGNMENT)
BSP_PLACE_IN_SECTION(
    BSP_SECTION_STACK);
/* MCUs that do not have an SPMON stack monitor use PSPLIM to detect stack overflows.
When a stack overflow error
* occurs, the UsageFault_Handler fires if it has been enabled. */
void UsageFault_Handler (void)
{
register uint32_t cfsr = SCB->CFSR;
if (cfsr & SCB_CFSR_STKOF_Msk)
{
/* Update PSP and PSPLIM to point to an exception stack frame allocated for stack
overflows. */
register uint32_t * p_exception_stack_frame = (uint32_t *)
(&g_stack_overflow_exception_stack);
__set_PSP((uint32_t) p_exception_stack_frame);
__set_PSPLIM((uint32_t) p_exception_stack_frame);
/* Clear XPSR, only set T-bit. */
p_exception_stack_frame[7] = 1U << 24;
/* Set PC to stack overflow error while loop. When execution returns from the
UsageFault, it will go to the
* stack_overflow_error_occurred function. It cannot return to the location where
```

```
the fault occurred because
 * the MCU does not save the exception stack frame to the stack when a stack
overflow error occurs. */
    p_exception_stack_frame[6] = (uint32_t) stack_overflow_error_occurred;
}
/* Clear flags. */
SCB->CFSR = cfsr;
}
/* This function is called from UsageFault_Handler after a stack overflow occurs. */
void stack_overflow_error_occurred (void)
{
    /* When recovering from a stack overflow, move the task to a while(1) loop. */
    while (1)
    {
        /* Do nothing. */
    }
}
void rm_freertos_port_stack_monitor_example (void)
{
    /* Enable usage fault. */
    SCB->SHCSR |= SCB_SHCSR_USGFAULTENA_Msk;
}
#endif
```

TrustZone Example

This is an example of calling portALLOCATE_SECURE_CONTEXT before calling any non-secure callable functions in a task.

```
void rm_freertos_port_trustzone_task_example (void)
{
    /* When FreeRTOS is used in a non-secure TrustZone application,
portALLOCATE_SECURE_CONTEXT must be called prior
 * to calling any non-secure callable function in a task. The parameter is unused in
the FSP implementation. */
```

```
portALLOCATE_SECURE_CONTEXT(0);
rm_freertos_port_nsc_function();
}
```

4.2.90 RTOS Context Management (rm_tz_context)

Modules

RTOS Context Management for RA MCUs.

Overview

Add this module to a secure TrustZone project to allow the associated non-secure project to use an RTOS. It is used by an RTOS port for RA MCUs (for example, the [FreeRTOS Port \(rm_freertos_port\)](#), which is automatically added to RA projects when FreeRTOS is selected during project creation).

Note

The RTOS Context Management module does not provide any interfaces to the user. To use this module to port an RTOS, consult the Arm documentation at https://arm-software.github.io/CMSIS_5/Core/html/group__context__trustzone__functions.html for further information.

Configuration

Build Time Configurations for rm_tz_context

The following build time configurations are defined in fsp_cfg/rm_tz_context_cfg.h:

Configuration	Options	Default	Description
Process Stack Slots	Value must be a non-negative integer greater than 0	8	The maximum number of threads that can allocate a secure context. For applications using FreeRTOS, the Idle task requires 1 context as well.
Process Stack Size	Value must be a non-negative multiple of 8	256	The maximum stack size of all non-secure callable functions.

Clock Configuration

This module does not use peripheral clocks.

Pin Configuration

This module does not use I/O pins.

Usage Notes

TrustZone Integration

When using an RTOS in a TrustZone project, ARM recommends keeping the RTOS in the non-secure project. Tasks may call non-secure callable functions if the task has allocated a secure context. To allocate a secure context, reference the documentation for the RTOS port used. For example, reference [TrustZone Integration](#) when FreeRTOS is used.

Sealing the Process Stack

This module seals each process stack by placing the value 0xFE5EDA5 above the stack top. For more information, refer to section 3.5 "Sealing a Stack" in "Secure software guidelines for ARMv8-M": <https://developer.arm.com/documentation/100720/0300>.

4.2.91 FS2012 Sensor Middleware (rm_fs2012)

Modules

Functions

`fsp_err_t` `RM_FS2012_Open` (`rm_fsxxxx_ctrl_t *const p_api_ctrl`,
`rm_fsxxxx_cfg_t const *const p_cfg`)
Opens and configures the FS2012 Middle module. Implements `rm_fsxxxx_api_t::open`. [More...](#)

`fsp_err_t` `RM_FS2012_Close` (`rm_fsxxxx_ctrl_t *const p_api_ctrl`)
Disables specified FS2012 control block. Implements `rm_fsxxxx_api_t::close`. [More...](#)

`fsp_err_t` `RM_FS2012_Read` (`rm_fsxxxx_ctrl_t *const p_api_ctrl`,
`rm_fsxxxx_raw_data_t *const p_raw_data`)
Reads ADC data from FS2012. Implements `rm_fsxxxx_api_t::read`. [More...](#)

`fsp_err_t` `RM_FS2012_DataCalculate` (`rm_fsxxxx_ctrl_t *const p_api_ctrl`,
`rm_fsxxxx_raw_data_t *const p_raw_data`, `rm_fsxxxx_data_t *const p_fs2012_data`)
Calculates flow from ADC data. Unit of Gas flow is SLPM (Standard liter per minute) Unit of Liquid flow is SCCM (Standard cubic centimeter per minute) Implements `rm_fsxxxx_api_t::dataCalculate`. [More...](#)

Detailed Description

Middleware to implement the FS2012 sensor interface. This module implements the [FSXXXX Middleware Interface](#).

Overview

Features

The FS2012 sensor interface implementation has the following key features:

- Getting ADC data from the sensor
- Calculating flow value from ADC data

Configuration

Build Time Configurations for rm_fs2012

The following build time configurations are defined in fsp_cfg/rm_fs2012_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.
Device Type	<ul style="list-style-type: none"> • FS2012-1020-N G • FS2012-1100-N G 	FS2012-1100-NG	Select FS2012 device type.

Configurations for Sensor > FS2012 Flow Sensor (rm_fs2012)

This module can be added to the Stacks tab via New Stack > Sensor > FS2012 Flow Sensor (rm_fs2012).

Configuration	Options	Default	Description
Name	Manual Entry	g_fs2012_sensor0	Module name.
Callback	Name must be a valid C symbol	fs2012_callback	A user callback function can be provided.

Pin Configuration

This module uses SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

[FS2012 datasheet is here](#). The module only supports FS2012-1020-NG and FS2012-1100-NG.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The FS2012 interface expects a bus instance to be opened before opening any FS2012 device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate [I2C Master Interface](#) open call.

Examples

Basic Example

This is a basic example of minimal use of FS2012 sensor implementation in an application.

```
void rm_fs2012_basic_example (void)
{
    fsp_err_t          err = FSP_SUCCESS;
    rm_fsxxxx_raw_data_t fs2012_raw_data;
    rm_fsxxxx_data_t   fs2012_data;
    /* Open the I2C bus if it is not already open. */
    rm_comms_i2c_bus_extended_cfg_t * p_extend =
        (rm_comms_i2c_bus_extended_cfg_t *) g_fs2012_cfg.p_instance->p_cfg->p_extend;
    i2c_master_instance_t * p_driver_instance = (i2c_master_instance_t *)
p_extend->p_driver_instance;
    p_driver_instance->p_api->open(p_driver_instance->p_ctrl,
p_driver_instance->p_cfg);
#ifdef BSP_CFG_RTOS
    /* Create a semaphore for blocking if a semaphore is not NULL */
    if (NULL != p_extend->p_blocking_semaphore)
    {
#ifdef BSP_CFG_RTOS == 1 // AzureOS
        tx_semaphore_create(p_extend->p_blocking_semaphore->p_semaphore_handle,
            p_extend->p_blocking_semaphore->p_semaphore_name,
            (ULONG) 0);
#elseif BSP_CFG_RTOS == 2 // FreeRTOS
        *(p_extend->p_blocking_semaphore->p_semaphore_handle) =
            xSemaphoreCreateCountingStatic((UBaseType_t) 1,
```

```
                                (UBaseType_t) 0,

p_extend->p_blocking_semaphore->p_semaphore_memory);

#endif

}

/* Create a recursive mutex for bus lock if a recursive mutex is not NULL */
if (NULL != p_extend->p_bus_recursive_mutex)
{
#ifdef BSP_CFG_RTOS == 1 // AzureOS
    tx_mutex_create(p_extend->p_bus_recursive_mutex->p_mutex_handle,
                   p_extend->p_bus_recursive_mutex->p_mutex_name,
                   TX_INHERIT);
#elif BSP_CFG_RTOS == 2 // FreeRTOS
    *(p_extend->p_bus_recursive_mutex->p_mutex_handle) =
        xSemaphoreCreateRecursiveMutexStatic(p_extend->p_bus_recursive_mutex->p_m
utex_memory);
#endif
}
#endif

err = RM_FS2012_Open(&g_fs2012_ctrl, &g_fs2012_cfg);
/* Handle any errors. This function should be defined by the user. */
handle_error(err);

while (true)
{
    g_flag = 0;

    /* Read ADC Data from FS2012 */
    RM_FS2012_Read(&g_fs2012_ctrl,
                  &fs2012_raw_data);

    while (0 == g_flag)
    {
        /* Wait callback */
    }

    /* Calculate Flow value from ADC data */
    RM_FS2012_DataCalculate(&g_fs2012_ctrl, &fs2012_raw_data, &fs2012_data);
```

```

/* FS2012 sample rate. See table 4 on the page 5 of the datasheet. */
/* Gas : 409.6ms, Liquid : 716.8ms */
R_BSP_SoftwareDelay(FS2012_GAS_SAMPLE_RATE, BSP_DELAY_UNITS_MICROSECONDS);
}
}

```

Data Structures

```
struct rm_fs2012_instance_ctrl_t
```

Data Structure Documentation

◆ rm_fs2012_instance_ctrl_t

struct rm_fs2012_instance_ctrl_t	
FS2012 Control Block	
Data Fields	
uint32_t	open
	Open flag.
rm_fsxxxx_cfg_t const *	p_cfg
	Pointer to FS2012 Configuration.
rm_comms_instance_t const *	p_comms_i2c_instance
	Pointer of I2C Communications Middleware instance structure.
void const *	p_context
	Pointer to the user-provided context.

Function Documentation

◆ **RM_FS2012_Open()**

```
fsp_err_t RM_FS2012_Open ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_cfg_t const *const p_cfg )
```

Opens and configures the FS2012 Middle module. Implements `rm_fsxxxx_api_t::open`.

Example:

```
err = RM_FS2012_Open(&g_fs2012_ctrl, &g_fs2012_cfg);
```

Return values

FSP_SUCCESS	FS2012 successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.

◆ **RM_FS2012_Close()**

```
fsp_err_t RM_FS2012_Close ( rm_fsxxxx_ctrl_t *const p_api_ctrl)
```

Disables specified FS2012 control block. Implements `rm_fsxxxx_api_t::close`.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_FS2012_Read()**

```
fsp_err_t RM_FS2012_Read ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data )
```

Reads ADC data from FS2012. Implements `rm_fsxxxx_api_t::read`.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_FS2012_DataCalculate()

```
fsp_err_t RM_FS2012_DataCalculate ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_raw_data_t
*const p_raw_data, rm_fsxxxx_data_t *const p_fs2012_data )
```

Calculates flow from ADC data. Unit of Gas flow is SLPM (Standard liter per minute) Unit of Liquid flow is SCCM (Standard cubic centimeter per minute) Implements [rm_fsxxxx_api_t::dataCalculate](#).

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.92 Azure RTOS GUIX Port (rm_guix_port)

Modules

Functions

```
UINT rm_guix_port_hw_initialize (GX_DISPLAY *p_display)
```

Detailed Description

Overview

The Azure RTOS GUIX Port module provides the configuration and hardware acceleration support necessary for use of GUIX on RA products. The port provides full integration with the graphics peripherals (GLCDC, DRW and JPEG).

Figure 204: Azure RTOS GUIX Port Block Diagram

Note

This port layer primarily enables hardware acceleration and background handling of many display operations and does not contain code intended to be directly called by the user. For information about how to use GUIX and GUIX Studio (including example code) please consult the [Azure RTOS GUIX documentation](#).

Hardware Acceleration

The following functions are currently performed with hardware acceleration:

- DRW Engine ([D/AVE 2D Port Interface \(r_drw\)](#))
 - Drawing bitmaps
 - 8, 4 and 1bpp uncompressed and compressed (RLE) font rendering
 - Line and shape drawing
 - Anti-aliased operations
 - Circle stroke and fill
 - Polygon stroke and fill
 - Lines and arcs
- [JPEG Codec \(r_jpeg\)](#)
 - JPEG decoding
- [Graphics LCD Controller \(r_glcdc\)](#)
 - Brightness, contrast and gamma correction
 - Pixel format conversion (framebuffer to LCD)

Configuration

Build Time Configurations for gx

The following build time configurations are defined in `fsp_cfg/azure/gx/gx_user.h`:

Configuration	Options	Default	Description
Hardware Acceleration > JPEG Codec Support	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled	Select whether or not to use the JPEG Codec for hardware acceleration.
Hardware Acceleration > DRW Engine Support	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled	Select whether or not to use the DRW Engine for hardware acceleration.
Hardware Acceleration > Max DRW Operations	Value must be a positive integer	85	Specifies the maximum number of DRW operations before flushing the display list. Reducing this value may reduce the peak heap used by the application but may reduce performance.
Internal Thread > Stack Size	Value must be greater than zero	4096	GUIX internal thread stack size in bytes. Must be greater than zero.
Internal Thread >	Value must be between	30	Priority of the GUIX

Priority	0 to 31		Internal Thread. The value must be between 0 to 31.
Internal Thread > Time Slice	Value must be a non-negative integer	10	Time Slice value of the GUIX Internal Thread. The value must be between 0 (TX_NO_TIME_SLICE) to 0xFFFFFFFF.
System Timer (ms)	Value must be greater than or equal to 10	20	GUIX system timer period (GX_SYSTEM_TIMER_MS). This value will be internally converted to RTOS ticks and will be rounded down to the next smallest multiple of the RTOS tick period (1000 / TX_TIMER_TICKS_PER_SECOND).
Multithread Support	<ul style="list-style-type: none"> • Disabled • Enabled 	Enabled	Must be enabled if GUIX functions are called from multiple threads. Set to Disabled when calling GUIX from only one thread to reduce system overhead.
UTF8 Support	<ul style="list-style-type: none"> • Disabled • Enabled 	Enabled	Select whether to enable or disable support for UTF8 characters.
Event Queue Size	Value must be greater than zero	48	Maximum number of events in the GUIX event queue.
Enable GX_WIDGET User Data	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Set to Enabled to use the gx_widget_user_data member in the GX_WIDGET structure.

Build Time Configurations for rm_guix_port

The following build time configurations are defined in fsp_cfg/middleware/rm_guix_port_cfg.h:

Configuration	Options	Default	Description
DRW Buffer Cache	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled	Enabling this option significantly improves DRW Engine performance. Set to

Disabled only if Display underflow events are triggered under high graphics load.

Configurations for Graphics > Azure RTOS GUIX Port (rm_guix_port)

Configuration	Options	Default	Description
Display Rotation > Screen Orientation	<ul style="list-style-type: none"> None CW (90 degrees) FLIP (180 degrees) CCW (270 degrees) 	None	Select the display orientation specified in the GUIX Studio project. The Canvas Buffer must be enabled when rotating 180 degrees (FLIP).
Display Rotation > Use Canvas Buffer	<ul style="list-style-type: none"> Enabled Disabled 	Disabled	When screen rotation is set to a value other than 0 a canvas buffer must be used. The canvas buffer size will be the same as a frame buffer for the display module.
Display Rotation > Canvas Buffer Memory Section	This property must be a valid section name	bss	Specify the memory section where the GUIX Canvas Buffer will be allocated.
JPEG Decoding > Work Buffer Size	Must be a valid integer	0xC800	Specify the JPEG work buffer size in bytes. A larger buffer can reduce JPEG decode/draw times. The buffer will not be allocated if JPEG Codec support is disabled. Unless you are sure of the subsampling used in and the size of the input JPEG images it is recommended to allocate at least 16 framebuffer lines of memory.
JPEG Decoding > Buffer Memory Section	This property must be a valid section name	bss	Specify the memory section where the JPEG Work Buffer will be allocated.
Name	Name must be a valid C symbol	g_rm_guix_port0	Module name.
Target Display Layer	<ul style="list-style-type: none"> Graphics Layer 	Graphics Layer 1	Specify which graphics

	1		screen to inherit the buffer and display dimensions from.
	• Graphics Layer		
	2		
Callback Function	Must be a valid C symbol	NULL	If a callback function is provided it will be called when Display events occur.

Hardware Configuration

No clocks or pins are directly required by this module. Please consult the submodules' documentation for their requirements.

Usage Notes

Getting Started

To get started with GUIX in an RA project the following must be performed:

1. In e2 studio, open the RA Configuration editor for your GUIX project
2. Select or create a thread
3. Add GUIX to your project in the Stacks view by clicking **New Stack -> Azure RTOS -> GUIX**
4. Ensure the configuration options for GUIX and the port layer are set as necessary for your application
5. Set the properties for the GLCDC module to match the timing and memory requirements of your display panel
6. Set the input color format in the GLCDC module (Input -> Graphics Layer * -> General -> Color format) and the output color format in the JPEG Codec module if applicable (Decode -> Output color format) per your project specification
7. Click the BSP tab in the configuration editor and confirm the heap size in the Properties pane is sufficient (see Note below)
8. Click Generate Project Content to save and commit configuration changes
9. Drop the Quick Setup entry in Developer Assistance into the desired thread entry C file and update the items marked with TODO as necessary
10. Call the Quick Setup function from the thread entry function (or where desired)

At this point the project is now ready to build and run your GUIX Studio project. Please refer to the documentation for Azure RTOS GUIX and GUIX Studio for details on how to create and edit a GUI application.

Note

It is recommended to start with 8K-32K of heap to begin development. Actual heap use is typically far lower than this but must be characterized by the developer.

Using Hardware Acceleration

In most cases there is no need to perform additional configuration to ensure the DRW Engine is used. However, there are some guidelines that should be followed:

- Avoid transparent pixelmaps in 8-bit display mode as they are rendered in software. In particular, ensure PNGs to be used in 8bpp GUIX Studio projects are saved without transparency data if no transparency is needed.
- The following items may require a large heap to draw successfully:

- Polygons (more sides = more heap)
- Filled arcs and ellipses (more framebuffer lines occupied = more heap)
- gx_canvas_pixelfmap_tile (more tiles = more heap)
- When using hardware acceleration, images used for tile fill of shapes must have dimensions that are a power of 2. This limitation does not apply to gx_canvas_pixelfmap_tile as well as certain arc/ellipse fill functions as GUIX manually draws pixelmaps to fill these shapes (at the expense of heap space).

Examples

Basic Example

This is a basic example demonstrating how to get GUIX up and running given an existing GUIX Studio project. A template for this code is available in Developer Assistance for the GUIX Port module.

Note

GUIX manages the GLCDC, DRW and JPEG Codec submodules internally; they do not need to be opened directly.

```
GX_WINDOW_ROOT * p_window_root;

void guix_user_start (void)
{
    /* Initialize GUIX */
    gx_system_initialize();

    /* Configure GUIX Studio project main display and get a pointer to the root window
    */
    gx_studio_display_configure(MAIN_DISPLAY,
    rm_guix_port_hw_initialize,
                                MAIN_DISPLAY_LANGUAGE_ENGLISH,
                                MAIN_DISPLAY_THEME,
                                &p_window_root);

    /* Set pointer to the first buffer generated by the configuration
    (rm_guix_port_canvas) */
    gx_canvas_memory_define(p_window_root->gx_window_root_canvas,
                            rm_guix_port_canvas,
                            p_window_root->gx_window_root_canvas->gx_canvas_memory_size);

    /* Create and show the root window in the GUIX Studio project */
    gx_studio_named_widget_create("root_widget_name", (GX_WIDGET *) p_window_root,
    GX_NULL);
}
```

```

    gx_widget_show(p_window_root);

/* Start GUIX */

    gx_system_start();

/* GUIX will continue to run in its own thread */
}

```

Data Structures

struct [rm_guix_port_callback_args_t](#)

Enumerations

enum [rm_guix_port_device_t](#)

enum [rm_guix_port_event_t](#)

Data Structure Documentation

◆ rm_guix_port_callback_args_t

struct rm_guix_port_callback_args_t		
Callback arguments for the FSP GUIX Port		
Data Fields		
rm_guix_port_device_t	device	Device code.
rm_guix_port_event_t	event	Event code of the low level hardware.
uint32_t	error	Error code if RM_GUIX_PORT_EVENT_ERROR.

Enumeration Type Documentation

◆ rm_guix_port_device_t

enum rm_guix_port_device_t	
Low level device code for the GUIX	
Enumerator	
RM_GUIX_PORT_DEVICE_NONE	Non hardware.
RM_GUIX_PORT_DEVICE_DISPLAY	Display device.
RM_GUIX_PORT_DEVICE_DRW	2D Graphics Engine
RM_GUIX_PORT_DEVICE_JPEG	JPEG Codec.

◆ **rm_guix_port_event_t**

enum <code>rm_guix_port_event_t</code>	
Display event codes	
Enumerator	
<code>RM_GUIX_PORT_EVENT_ERROR</code>	Low level driver error occurs.
<code>RM_GUIX_PORT_EVENT_DISPLAY_VSYNC</code>	Display interface VSYNC.
<code>RM_GUIX_PORT_EVENT_UNDERFLOW</code>	Display interface underflow.

Function Documentation◆ **rm_guix_port_hw_initialize()**

UINT <code>rm_guix_port_hw_initialize (GX_DISPLAY * p_display)</code>	
Callback function to be passed to <code>gx_studio_display_configure</code> in order to start hardware modules.	
Example:	
<pre> /* Configure GUIX Studio project main display and get a pointer to the root window */ gx_studio_display_configure(MAIN_DISPLAY, rm_guix_port_hw_initialize, MAIN_DISPLAY_LANGUAGE_ENGLISH, MAIN_DISPLAY_THEME, &p_window_root); </pre>	
<i>Note</i>	
<i>This function should only be called by GUIX.</i>	
Return values	
<code>GX_SUCCESS</code>	Device driver setup is successfully done.
<code>GX_FAILURE</code>	Device driver setup failed.

4.2.93 HS300X Sensor Middleware (rm_hs300x)

Modules

Functions

`fsp_err_t RM_HS300X_Open (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_cfg_t const *const p_cfg)`

Opens and configures the HS300X Middle module. Implements `rm_hs300x_api_t::open`. [More...](#)

`fsp_err_t RM_HS300X_Close (rm_hs300x_ctrl_t *const p_api_ctrl)`

Disables specified HS300X control block. Implements `rm_hs300x_api_t::close`. [More...](#)

`fsp_err_t RM_HS300X_MeasurementStart (rm_hs300x_ctrl_t *const p_api_ctrl)`

This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the hs300x and start a measurement. Implements `rm_hs300x_api_t::measurementStart`. [More...](#)

`fsp_err_t RM_HS300X_Read (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_raw_data_t *const p_raw_data)`

Reads ADC data from HS300X. Implements `rm_hs300x_api_t::read`. [More...](#)

`fsp_err_t RM_HS300X_DataCalculate (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_raw_data_t *const p_raw_data, rm_hs300x_data_t *const p_hs300x_data)`

Calculates humidity [RH] and temperature [Celsius] from ADC data. Implements `rm_hs300x_api_t::dataCalculate`. [More...](#)

`fsp_err_t RM_HS300X_ProgrammingModeEnter (rm_hs300x_ctrl_t *const p_api_ctrl)`

This function must be called within 10ms after applying power to the sensor. Sends the commands to enter the programming mode. After calling this function, please wait 120us. Implements `rm_hs300x_api_t::programmingModeEnter`. [More...](#)

`fsp_err_t RM_HS300X_ResolutionChange (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_data_type_t const data_type, rm_hs300x_resolution_t const resolution)`

This function must be called after calling the `RM_HS300X_ProgrammingModeEnter` function. Changes the sensor resolution. This function blocks for 120 us software delay plus 9 bytes on the I2C bus. After calling this function, 14ms must be waited. Failure to comply with these times may result in data corruption and introduce errors in sensor measurements. Implements `rm_hs300x_api_t::resolutionChange`. [More...](#)

`fsp_err_t RM_HS300X_SensorIdGet (rm_hs300x_ctrl_t *const p_api_ctrl, uint32_t *const p_sensor_id)`

This function must be called after calling the `RM_HS300X_ProgrammingModeEnter` function. Gets the sensor ID. This function blocks for 240 us software delay plus 12 bytes on the I2C bus. Implements `rm_hs300x_api_t::sensorIdGet`. [More...](#)

`fsp_err_t RM_HS300X_ProgrammingModeExit (rm_hs300x_ctrl_t *const p_api_ctrl)`

This function must be called after calling the `RM_HS300X_ProgrammingModeEnter` function. This function must be called to return to normal sensor operation and perform measurements. Sends the commands to exit the programming mode. Implements `rm_hs300x_api_t::programmingModeExit`. [More...](#)

Detailed Description

Middleware to implement the HS300X sensor interface. This module implements the [HS300X Middleware Interface](#).

Overview

Features

The HS300X sensor interface implementation has the following key features:

- Starting a measurement at any time
- Getting ADC data from the sensor
- Calculating humidity and temperature value from getting ADC data
- Changing the sensor resolution
- Getting the sensor ID

Configuration

Build Time Configurations for `rm_hs300x`

The following build time configurations are defined in `fsp_cfg/rm_hs300x_cfg.h`:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.
Data type	<ul style="list-style-type: none"> • Both humidity and temperature • Humidity only 	Both humidity and temperature	Select Getting humidity only and both humidity and temperature.

Programming Mode	<ul style="list-style-type: none"> • ON • OFF 	OFF	If selected the programming mode can be entered.

Configurations for Sensor > HS300X Temperature/Humidity Sensor (rm_hs300x)

This module can be added to the Stacks tab via New Stack > Sensor > HS300X Temperature/Humidity Sensor (rm_hs300x).

Configuration	Options	Default	Description
Name	Manual Entry	g_hs300x_sensor0	Module name.
Callback	Name must be a valid C symbol	hs300x_callback	A user callback function can be provided.

Pin Configuration

This module use SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

[HS300x datasheet is here.](#)

If ADC data is valid and calculating humidity and temperature is finished, it is needed to start a measurement again. If ADC data is invalid, it is needed to read ADC data from HS300x again.

If changing the sensor resolution and getting the sensor ID, RM_HS300X_ProgrammingModeEnter function must be called within 10ms after applying power to the sensor. Entering the programming mode takes 120us. Thresore, after calling RM_HS300X_ProgrammingModeEnter function, please wait 120us. After calling RM_HS300X_ResolutionChange function, 14ms must be waited because failure to comply with these times may result in data corruption and introduce errors in sensor measurements.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The HS300X interface expects a bus instance to be opened before opening any HS300X device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate [I2C Master Interface](#) open call.

Examples

Basic Example

This is a basic example of minimal use of HS300X sensor implementation in an application.

```
void rm_hs300x_basic_example (void)
{
```

```
fsp_err_t          err = FSP_SUCCESS;
rm_hs300x_raw_data_t hs300x_raw_data;
rm_hs300x_data_t    hs300x_data;
uint8_t            calculated_flag = 0;
/* Open the I2C bus if it is not already open. */
rm_comms_i2c_bus_extended_cfg_t * p_extend =
    (rm_comms_i2c_bus_extended_cfg_t *) g_hs300x_cfg.p_instance->p_cfg->p_extend;
i2c_master_instance_t * p_driver_instance = (i2c_master_instance_t *)
p_extend->p_driver_instance;
    p_driver_instance->p_api->open(p_driver_instance->p_ctrl,
p_driver_instance->p_cfg);
#ifdef BSP_CFG_RTOS
/* Create a semaphore for blocking if a semaphore is not NULL */
if (NULL != p_extend->p_blocking_semaphore)
{
#ifdef BSP_CFG_RTOS == 1 // AzureOS
    tx_semaphore_create(p_extend->p_blocking_semaphore->p_semaphore_handle,
        p_extend->p_blocking_semaphore->p_semaphore_name,
        (ULONG) 0);
#elif BSP_CFG_RTOS == 2 // FreeRTOS
    *(p_extend->p_blocking_semaphore->p_semaphore_handle) =
        xSemaphoreCreateCountingStatic((UBaseType_t) 1,
            (UBaseType_t) 0,
p_extend->p_blocking_semaphore->p_semaphore_memory);
#endif
}
/* Create a recursive mutex for bus lock if a recursive mutex is not NULL */
if (NULL != p_extend->p_bus_recursive_mutex)
{
#ifdef BSP_CFG_RTOS == 1 // AzureOS
    tx_mutex_create(p_extend->p_bus_recursive_mutex->p_mutex_handle,

Function Documentation

◆ **RM_HS300X_Open()**

```
fsp_err_t RM_HS300X_Open ( rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_cfg_t const *const p_cfg )
```

Opens and configures the HS300X Middle module. Implements `rm_hs300x_api_t::open`.

Example:

```
err = RM_HS300X_Open(&g_hs300x_ctrl, &g_hs300x_cfg);
```

Return values

FSP_SUCCESS	HS300X successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.

◆ **RM_HS300X_Close()**

```
fsp_err_t RM_HS300X_Close ( rm_hs300x_ctrl_t *const p_api_ctrl)
```

Disables specified HS300X control block. Implements `rm_hs300x_api_t::close`.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_HS300X_MeasurementStart()**

```
fsp_err_t RM_HS300X_MeasurementStart ( rm_hs300x_ctrl_t *const p_api_ctrl)
```

This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the hs300x and start a measurement. Implements `rm_hs300x_api_t::measurementStart`.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_HS300X_Read()**

```
fsp_err_t RM_HS300X_Read ( rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_raw_data_t *const p_raw_data )
```

Reads ADC data from HS300X. Implements `rm_hs300x_api_t::read`.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_HS300X_DataCalculate()**

```
fsp_err_t RM_HS300X_DataCalculate ( rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_raw_data_t *const p_raw_data, rm_hs300x_data_t *const p_hs300x_data )
```

Calculates humidity [RH] and temperature [Celsius] from ADC data. Implements `rm_hs300x_api_t::dataCalculate`.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_SENSOR_INVALID_DATA	Data is invalid.

◆ **RM_HS300X_ProgrammingModeEnter()**

```
fsp_err_t RM_HS300X_ProgrammingModeEnter ( rm_hs300x_ctrl_t *const p_api_ctrl)
```

This function must be called within 10ms after applying power to the sensor. Sends the commands to enter the programming mode. After calling this function, please wait 120us. Implements `rm_hs300x_api_t::programmingModeEnter`.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_UNSUPPORTED	Programming mode is not supported.

◆ **RM_HS300X_ResolutionChange()**

```
fsp_err_t RM_HS300X_ResolutionChange ( rm_hs300x_ctrl_t *const p_api_ctrl,
rm_hs300x_data_type_t const data_type, rm_hs300x_resolution_t const resolution )
```

This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. Changes the sensor resolution. This function blocks for 120 us software delay plus 9 bytes on the I2C bus. After calling this function, 14ms must be waited. Failure to comply with these times may result in data corruption and introduce errors in sensor measurements. Implements `rm_hs300x_api_t::resolutionChange`.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_MODE	Module is not entering the programming mode.
FSP_ERR_ABORTED	Communication is aborted.
FSP_ERR_TIMEOUT	Communication is timeout.
FSP_ERR_UNSUPPORTED	Programming mode is not supported.

◆ **RM_HS300X_SensorIdGet()**

```
fsp_err_t RM_HS300X_SensorIdGet ( rm_hs300x_ctrl_t *const p_api_ctrl, uint32_t *const
p_sensor_id )
```

This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. Gets the sensor ID. This function blocks for 240 us software delay plus 12 bytes on the I2C bus. Implements `rm_hs300x_api_t::sensorIdGet`.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_MODE	Module is not entering the programming mode.
FSP_ERR_ABORTED	Communication is aborted.
FSP_ERR_TIMEOUT	Communication is timeout.
FSP_ERR_UNSUPPORTED	Programming mode is not supported.

◆ RM_HS300X_ProgrammingModeExit()

`fsp_err_t RM_HS300X_ProgrammingModeExit (rm_hs300x_ctrl_t *const p_api_ctrl)`

This function must be called after calling the `RM_HS300X_ProgrammingModeEnter` function. This function must be called to return to normal sensor operation and perform measurements. Sends the commands to exit the programming mode. Implements `rm_hs300x_api_t::programmingModeExit`.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_MODE	Module is not entering the programming mode.
FSP_ERR_UNSUPPORTED	Programming mode is not supported.

Detailed Description

Middleware for using Azure RTOS LevelX on NOR SPI memory.

Overview

This module provides the hardware port layer for LevelX on NOR SPI flash memory. Setup for this module is done solely through calling LevelX APIs. Please refer to the LevelX API reference: <https://docs.microsoft.com/en-us/azure/rtos/levelx/>

Configuration

Build Time Configurations for `rm_levelx_nor_spi`

The following build time configurations are defined in `fsp_cfg/middleware/rm_levelx_nor_spi_cfg.h`:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> Default (BSP) Enabled Disabled 	Default (BSP)	Selects if code for parameter checking is to be included in the build.
Write Verify	<ul style="list-style-type: none"> Enabled Disabled 	Disabled	When enabled reads back data written to SPI memory in order to verify it.
Page Buffer Size (bytes)	Size should be greater than zero	256	When direct read is enabled in LevelX a situation can occur where the driver has to write to SPI memory with the source location also being within the SPI memory address range. In this situation the driver needs a buffer that is at least the same size as a page in order to

temporarily store data to write out.

Configurations for Storage > LevelX NOR Port (rm_levelx_nor_spi)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_levelx_nor_spi0	Module name.
Memory Start Address Offset (bytes)	Offset should be greater than or equal to zero	0	Enter the starting offset to use in the SPI memory. The starting address for LevelX memory will be the SPI memory base address plus this offset.
Memory Size (bytes)	Size should be greater than zero	33554432	Enter the size that the LevelX Memory should be. This can be smaller than the SPI memory size in order to use a subset of SPI memory.
Poll Status Count	Poll Status Count should be greater than or equal to zero	0xFFFFFFFF	Number of times to poll for operation complete status for blocking memory operations.

Build Time Configurations for lx

The following build time configurations are defined in fsp_cfg/azure/lx/lx_user.h:

Configuration	Options	Default	Description
NOR > Direct Read	<ul style="list-style-type: none"> Enabled (default) Disabled 	Enabled (default)	When enabled, this option bypasses the NOR flash driver read routine in favor of reading the NOR memory directly, resulting in a significant performance increase.
NOR > Free Sector Data Verify	<ul style="list-style-type: none"> Enabled Disabled (default) 	Disabled (default)	When enabled, this causes the LevelX NOR instance open logic to verify free NOR sectors are all ones.
NOR > Extended Cache	<ul style="list-style-type: none"> Enabled (default) Disabled 	Enabled (default)	Enables the extended NOR cache.
NOR > Extended Cache Size	Manual Entry		If not set this value defaults to 8, which

NOR > Sector Mapping Cache Size	Value must be greater than or equal to 8 and a power of 2, or empty		represents a maximum of 8 sectors that can be cached in a NOR instance.
NAND > Sector Mapping Cache Size	Value must be greater than or equal to 8 and a power of 2, or empty		If not set this value defaults to 16 and defines the logical sector mapping cache size. Large values improve performance, but cost memory. The minimum size is 8 and all values must be a power of 2.
NAND > Flash Direct Mapping Cache	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, this creates a direct mapping cache, such that there are no cache misses. It also required that LX_NAND_SECTOR_MAPPING_CACHE_SIZE represents the exact number of total pages in your flash device.
Thread Safe	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, this makes LevelX thread-safe by using a ThreadX mutex object throughout the API.
Standalone Mode	<ul style="list-style-type: none"> • Enabled • Disabled (default) 	Disabled (default)	When enabled, allows LevelX to be used in standalone mode (without Azure RTOS).

Usage Notes

Pending during Erase/Write

The LevelX NOR SPI driver is blocking on all SPI operations and will poll device status for operation completion on Writes and Erases. A callback can be provided by the user to wait with an OS-specific thread wait in these instances.

Closing the driver

When `lx_nor_flash_close` is called to close the LevelX instance it does not call any services within the LevelX NOR SPI driver to close out the driver instance. The user should call the generated close function (i.e. `g_rm_levelx_nor_spi0_close`) in order to close out the driver instance.

Erasing Flash Memory Prior to Usage

The area of the flash memory being used for the LevelX instance should be erased using the lower level flash API prior to usage. Otherwise, LevelX API may fail on `lx_nor_flash_open` due to any areas in flash memory that have been written/set.

Examples

Basic Example

This is a basic example of using the LevelX NOR SPI driver with the LevelX API in an application.

```
#define RM_LEVELX_NOR_SPI_EXAMPLE_SECTOR_SIZE (512)
#define RM_LEVELX_NOR_SPI_EXAMPLE_BUFFER_FILL_VALUE (0xA5)
#define RM_LEVELX_NOR_SPI_EXAMPLE_SPI_SECTOR_SIZE (4096)
extern rm_levelx_nor_spi_instance_ctrl_t g_levelx_nor_spi0_ctrl;
extern rm_levelx_nor_spi_cfg_t g_levelx_nor_spi0_cfg;
extern LX_NOR_FLASH g_lx_nor_flash0;
void rm_levelx_nor_spi_example (void)
{
    uint8_t          read_buffer[RM_LEVELX_NOR_SPI_EXAMPLE_SECTOR_SIZE];
    uint8_t          write_buffer[RM_LEVELX_NOR_SPI_EXAMPLE_SECTOR_SIZE];
    spi_flash_instance_t * p_spi_flash_instance = (spi_flash_instance_t *)
g_levelx_nor_spi0_cfg.p_lower_lvl;
    spi_flash_status_t  status;
    memset(write_buffer, RM_LEVELX_NOR_SPI_EXAMPLE_BUFFER_FILL_VALUE, sizeof
(write_buffer));
    /* Erase flash prior to usage */
    fsp_err_t err = p_spi_flash_instance->p_api->open(p_spi_flash_instance->p_ctrl,
p_spi_flash_instance->p_cfg);
    assert(FSP_SUCCESS == err);
    for (uint32_t i = g_levelx_nor_spi0_cfg.address_offset;
        i < g_levelx_nor_spi0_cfg.size;
        i += RM_LEVELX_NOR_SPI_EXAMPLE_SPI_SECTOR_SIZE)
    {
```

```

    err = p_spi_flash_instance->p_api->erase(p_spi_flash_instance->p_ctrl,
                                           (uint8_t *)
g_levelx_nor_spi0_cfg.base_address + i,
RM_LEVELX_NOR_SPI_EXAMPLE_SPI_SECTOR_SIZE);
    assert(FSP_SUCCESS == err);
    status.write_in_progress = true;
    while (status.write_in_progress)
    {
        err =
p_spi_flash_instance->p_api->statusGet(p_spi_flash_instance->p_ctrl, &status);
        assert(FSP_SUCCESS == err);
    }
    err = p_spi_flash_instance->p_api->close(p_spi_flash_instance->p_ctrl);
    assert(FSP_SUCCESS == err);
/* Initialize LevelX */
    lx_nor_flash_initialize();
    UINT lx_err = lx_nor_flash_open(&g_lx_nor_flash0, "LX_NOR_SPI_EXAMPLE",
g_levelx_nor_spi0_initialize);
    handle_lx_error(lx_err);
/* Write test value to sector 0 then read back to verify */
    lx_err = lx_nor_flash_sector_write(&g_lx_nor_flash0, 0, write_buffer);
    handle_lx_error(lx_err);
    lx_err = lx_nor_flash_sector_read(&g_lx_nor_flash0, 0, read_buffer);
    handle_lx_error(lx_err);
    assert(0 == memcmp(read_buffer, write_buffer, sizeof(read_buffer)));
}

```

Callback Wait Example

This shows how to use the LevelX NOR SPI driver callback with ThreadX in order to wait for operations to complete.

```

/* Callback called by LevelX NOR SPI driver needs to wait on operation. */

```

```

void rm_levelx_nor_spi_callback_wait_example (rm_levelx_nor_spi_callback_args_t *
p_args)
{
    if (p_args->event & RM_LEVELX_NOR_SPI_EVENT_BUSY)
    {
        /* Put the thread to sleep while waiting for operation to complete. */
        tx_thread_sleep(1);
    }
}

```

◆ rm_levelx_nor_spi_instance_ctrl_t

struct rm_levelx_nor_spi_instance_ctrl_t		
SF_EL_LX_NOR Control Block Type		
Data Fields		
rm_levelx_nor_spi_cfg_t const *	p_cfg	Pointer to instance configuration.
uint32_t	start_address	Start address of partition to use within memory mapped region.
uint32_t	minimum_erase_size	Minimum erase size of SPI memory.

uint8_t	page_buffer[RM_LEVELX_NOR_S PI_CFG_BUFFER_SIZE]	Page buffer for situations when writing to SPI memory from a source within SPI memory.
uint32_t	open	Used to determine if module is initialized.

Enumeration Type Documentation

◆ rm_levelx_nor_spi_event_t

enum <code>rm_levelx_nor_spi_event_t</code>	
Common macro for FSP header files. There is also a corresponding FSP_FOOTER macro at the end of this file. Options for the callback events.	
Enumerator	
RM_LEVELX_NOR_SPI_EVENT_BUSY	Pending operation, user can define their own wait functionality.

Function Documentation

◆ RM_LEVELX_NOR_SPI_Open()

<code>fsp_err_t RM_LEVELX_NOR_SPI_Open (rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl, rm_levelx_nor_spi_cfg_t const *const p_cfg)</code>		
Initializes LevelX NOR SPI port read/write and control. Calls lower level SPI memory functions.		
Parameters		
[in,out]	p_ctrl	Control block for the LevelX NOR SPI instance.
[in,out]	p_cfg	Configuration for LevelX NOR SPI port.
Return values		
FSP_SUCCESS	LevelX NOR driver is successfully opened.	
FSP_ERR_ASSERTION	p_ctrl or p_cfg is NULL.	
FSP_ERR_ALREADY_OPEN	Driver is already in OPEN state.	
Returns		
See Common_Error_Codes or lower level drivers for other possible return codes. This function calls <ul style="list-style-type: none"> ◦ <code>spi_flash_api_t:open</code> 		

◆ RM_LEVELX_NOR_SPI_Read()

```
fsp_err_t RM_LEVELX_NOR_SPI_Read ( rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl, ULONG
*const p_flash_addr, ULONG *const p_dest, ULONG word_count )
```

LevelX NOR driver "read sector" service.

This is responsible for reading a specific sector in a specific block of the NOR flash. All error checking and correcting logic is the responsibility of this service.

Parameters

[in]	p_ctrl	Control block for the LevelX NOR SPI instance.
[in]	p_flash_addr	Specifies the address of a logical sector within a NOR flash block of memory.
[in,out]	p_dest	Specifies where to place the sector contents.
[in]	word_count	Specifies how many 32-bit words to read.

Return values

FSP_SUCCESS	LevelX NOR flash sector read successful.
FSP_ERR_ASSERTION	p_ctrl, p_flash_addr or p_dest is NULL.
FSP_ERR_NOT_OPEN	Driver not in OPEN state for reading.

Returns

See `Common_Error_Codes` or lower level drivers for other possible return codes.

◆ RM_LEVELX_NOR_SPI_Write()

```
fsp_err_t RM_LEVELX_NOR_SPI_Write ( rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl, ULONG
*const p_flash_addr, ULONG *const p_src, ULONG word_count )
```

LevelX NOR driver "write sector" service.

This is responsible for writing a specific sector into a block of the NOR flash. All error checking is the responsibility of the this service.

Parameters

[in]	p_ctrl	Control block for the LevelX NOR SPI instance.
[in,out]	p_flash_addr	Specifies the address of a logical sector within a NOR flash block of memory.
[in]	p_src	Specifies the source of the write.
[in]	word_count	Specifies how many 32-bit words to write.

Return values

FSP_SUCCESS	LevelX NOR flash sector write successful.
FSP_ERR_ASSERTION	p_ctrl, p_flash_addr or p_src is NULL.
FSP_ERR_NOT_OPEN	Driver not in OPEN state for writing.
FSP_ERR_TIMEOUT	Timeout occurred while waiting for operation to complete.
FSP_ERR_WRITE_FAILED	Verification of Write operation failed.
FSP_ERR_INVALID_ADDRESS	Write address or size falls outside of flash memory range.

Returns

See Common_Error_Codes or lower level drivers for other possible return codes. This function calls

- [spi_flash_api_t:write](#)

◆ **RM_LEVELX_NOR_SPI_BlockErase()**

```
fsp_err_t RM_LEVELX_NOR_SPI_BlockErase ( rm_levelx_nor_spi_instance_ctrl_t*const p_ctrl,
ULONG block, ULONG erase_count )
```

LevelX NOR driver "block erase" service.

This is responsible for erasing the specified block of the NOR flash.

Parameters

[in]	p_ctrl	Control block for the LevelX NOR SPI instance.
[in]	block	Specifies which NOR block to erase.
[in]	erase_count	Provided for diagnostic purposes(currently unused).

Return values

FSP_SUCCESS	LevelX NOR flash block erase successful.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Driver not in OPEN state for erasing.
FSP_ERR_TIMEOUT	Timeout occurred while waiting for operation to complete.

Returns

See [Common_Error_Codes](#) or lower level drivers for other possible return codes. This function calls

- [spi_flash_api_t:erase](#)

◆ **RM_LEVELX_NOR_SPI_BlockErasedVerify()**

```
fsp_err_t RM_LEVELX_NOR_SPI_BlockErasedVerify ( rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl,
ULONG block )
```

LevelX NOR driver "block erased verify" service.

This is responsible for verifying the specified block of the NOR flash is erased.

Parameters

[in]	p_ctrl	Control block for the LevelX NOR SPI instance.
[in]	block	Specifies which block to verify that it is erased.

Return values

FSP_SUCCESS	LevelX flash block erase verification successful.
FSP_ERR_ASSERTION	p_ctrl or lower level driver is NULL.
FSP_ERR_NOT_OPEN	Driver not in OPEN state for verifying.
FSP_ERR_NOT_ERASED	The block is not erased properly.

Returns

See `Common_Error_Codes` or lower level drivers for other possible return codes.

◆ **RM_LEVELX_NOR_SPI_Close()**

```
fsp_err_t RM_LEVELX_NOR_SPI_Close ( rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl)
```

LevelX NOR driver close service.

This is responsible for closing the driver properly.

Parameters

[in]	p_ctrl	Control block for the LevelX NOR SPI instance.
------	--------	--

Return values

FSP_SUCCESS	LevelX flash is available and is now open for read, write, and control access.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Driver not in OPEN state for closing.

Returns

See `Common_Error_Codes` or lower level drivers for other possible return codes. This function calls

- `spi_flash_api_t:close`

4.2.95 LittleFS Flash Port (rm_littlefs_flash)

Modules

Functions

```
fsp_err_t RM_LITTLEFS_FLASH_Open (rm_littlefs_ctrl_t *const p_ctrl,
    rm_littlefs_cfg_t const *const p_cfg)
```

```
fsp_err_t RM_LITTLEFS_FLASH_Close (rm_littlefs_ctrl_t *const p_ctrl)
```

Detailed Description

Middleware for the LittleFS File System control on RA MCUs.

Overview

This module provides the hardware port layer for the LittleFS file system. After initializing this module, refer to the LittleFS documentation to use the file system:

<https://github.com/ARMmbed/littlefs>

Configuration

Build Time Configurations for rm_littlefs_flash

The following build time configurations are defined in fsp_cfg/rm_littlefs_flash_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> Default (BSP) Enabled Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Storage > LittleFS on Flash (rm_littlefs_flash)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_littlefs0	Module name.
Read Size	Must be a non-negative integer	1	Minimum size of a block read. All read operations will be a multiple of this value.
Program Size	Must be a non-negative integer	4	Minimum size of a block program. All program operations will be a multiple of this value.

Block Size (bytes)	Must be a multiple of 64	128	Size of an erasable block. This does not impact RAM consumption and may be larger than the physical erase size. However, non-inlined files take up at minimum one block. Must be a multiple of the read and program sizes.
Block Count	Manual Entry	(BSP_DATA_FLASH_SIZE_BYTES/128)	Number of erasable blocks on the device.
Block Cycles	Must be an integer	1024	Number of erase cycles before LittleFS evicts metadata logs and moves the metadata to another block. Suggested values are in the range 100-1000, with large values having better performance at the cost of less consistent wear distribution. Set to -1 to disable block-level wear-leveling.
Cache Size	Must be a non-negative integer	64	Size of block caches. Each cache buffers a portion of a block in RAM. The LittleFS needs a read cache, a program cache, and one additional cache per file. Larger caches can improve performance by storing more data and reducing the number of disk accesses. Must be a multiple of the read and program sizes, and a factor of the block size.
Lookahead Size	Must be a non-negative multiple of 8	16	Size of the lookahead buffer in bytes. A larger lookahead buffer increases the number of blocks found during an allocation pass. The lookahead buffer is

stored as a compact bitmap, so each byte of RAM can track 8 blocks. Must be a multiple of 8.

Common LittleFS Configuration

Build Time Configurations for LittleFS

The following build time configurations are defined in arm/littlefs/lfs_util.h:

Configuration	Options	Default	Description
Custom lfs_util.h	Manual Entry		Add a path to your custom lfs_util.h file. It can be used to override some or all of the configurations defined here, and to define additional configurations.
Thread Safe	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Enables thread safety in LittleFS.
Use Malloc	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled	Configures the use of malloc by LittleFS.
Use Assert	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled	Configures the use of assert by LittleFS.
Debug Messages	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Configures debug messages.
Warning Messages	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Configures warning messages.
Error Messages	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Configures error messages.
Trace Messages	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Configures trace messages.
Intrinsics	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled	Configures intrinsic functions such as <code>__builtin_clz</code> .
Instance Name for STDIO wrapper	Name must be a valid C symbol	g_rm_littlefs0	The rm_littlefs instance name to use with the STDIO wrapper.

Usage Notes

Blocking Read/Write/Erase

The LittleFS port blocks on Read/Write/Erase calls until the operation has completed.

Memory Constraints

The block size defined in the LittleFS configuration must be a multiple of the data flash erase size of the MCU. It must be greater than 104bytes which is the minimum block size of a LittleFS block. For information about data flash erase sizes refer to the "Specifications of the code flash memory and data flash memory" table of the "Flash Memory" chapter's "Overview" section.

Limitations

This module is not thread safe.

Examples

Basic Example

This is a basic example of LittleFS on Flash in an application.

```
extern const rm_littlefs_cfg_t g_rm_littlefs_flash0_cfg;
#ifdef LFS_NO_MALLOC
static uint8_t g_file_buffer[LFS_CACHE_SIZE];
static struct lfs_file_config g_file_cfg =
{
    .buffer = g_file_buffer
};
#endif
void rm_littlefs_example (void)
{
    uint8_t    buffer[30];
    lfs_file_t file;
    /* Open LittleFS Flash port.*/
    fsp_err_t err = RM_LITTLEFS_FLASH_Open(&g_rm_littlefs_flash0_ctrl,
&g_rm_littlefs_flash0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Format the filesystem. */
    int lfs_err = lfs_format(&g_rm_littlefs_flash0_lfs, &g_rm_littlefs_flash0_lfs_cfg);
    handle_lfs_error(lfs_err);
    /* Mount the filesystem. */
    lfs_err = lfs_mount(&g_rm_littlefs_flash0_lfs, &g_rm_littlefs_flash0_lfs_cfg);
    handle_lfs_error(lfs_err);
}
```

```
/* Create a breakfast directory. */
    lfs_err = lfs_mkdir(&g_rm_littlefs_flash0_lfs, "breakfast");
    handle_lfs_error(lfs_err);

/* Create a file toast in the breakfast directory. */
const char * path = "breakfast/toast";
#ifdef LFS_NO_MALLOC
/*****
*****
* By default LittleFS uses malloc to allocate buffers. This can be disabled in the
RA Configuration editor.
* Buffers will be generated from the configuration for the read, program and
lookahead buffers.
* When opening a file a unique buffer must be passed in for use as a file buffer.
* The buffer size must be equal to the cache size.
*****
*****/
    lfs_err = lfs_file_opencfg(&g_rm_littlefs_flash0_lfs,
                              &file,
                              path,
                              LFS_O_WRONLY | LFS_O_CREAT | LFS_O_APPEND,
                              &g_file_cfg);

    handle_lfs_error(lfs_err);
#else
    lfs_err = lfs_file_open(&g_rm_littlefs_flash0_lfs, &file, path, LFS_O_WRONLY |
LFS_O_CREAT | LFS_O_APPEND);
    handle_lfs_error(lfs_err);
#endif

const char * contents = "butter";
    lfs_size_t len = strlen(contents);

/* Apply butter to toast 10 times. */
for (uint32_t i = 0; i < 10; i++)
{
    lfs_err = lfs_file_write(&g_rm_littlefs_flash0_lfs, &file, contents, len);
    if (lfs_err < 0)
```

```
    {
        handle_lfs_error(lfs_err);
    }
}

/* Close the file. */
lfs_err = lfs_file_close(&g_rm_littlefs_flash0_lfs, &file);
handle_lfs_error(lfs_err);

/* Unmount the filesystem. */
lfs_err = lfs_unmount(&g_rm_littlefs_flash0_lfs);
handle_lfs_error(lfs_err);

/* Remount the filesystem. */
lfs_err = lfs_mount(&g_rm_littlefs_flash0_lfs, &g_rm_littlefs_flash0_lfs_cfg);
handle_lfs_error(lfs_err);

/* Open breakfast/toast. */
#ifdef LFS_NO_MALLOC
    lfs_err = lfs_file_opencfg(&g_rm_littlefs_flash0_lfs, &file, path, LFS_O_RDONLY,
&g_file_cfg);
    handle_lfs_error(lfs_err);
#else
    lfs_err = lfs_file_open(&g_rm_littlefs_flash0_lfs, &file, path, LFS_O_RDONLY);
    handle_lfs_error(lfs_err);
#endif
    handle_lfs_error(lfs_err);

/* Verify the toast is buttered the correct amount. */
for (uint32_t i = 0; i < 10; i++)
    {
        lfs_err = lfs_file_read(&g_rm_littlefs_flash0_lfs, &file, buffer, len);
        if (lfs_err < 0)
            {
                handle_lfs_error(lfs_err);
            }
        assert(0 == memcmp(buffer, contents, len));
    }

/* Close the file. */
```

```

lfs_err = lfs_file_close(&g_rm_littlefs_flash0_lfs, &file);

handle_lfs_error(lfs_err);

}

```

Function Documentation

◆ RM_LITTLEFS_FLASH_Open()

`fsp_err_t RM_LITTLEFS_FLASH_Open (rm_littlefs_ctrl_t *const p_ctrl, rm_littlefs_cfg_t const *const p_cfg)`

Opens the driver and initializes lower layer driver.

Implements `rm_littlefs_api_t::open()`.

Return values

FSP_SUCCESS	Success.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_INVALID_SIZE	The provided block size is invalid.
FSP_ERR_INVALID_ARGUMENT	Flash BGO mode must be disabled.
FSP_ERR_INTERNAL	Failed to create the semaphore.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `flash_api_t::open`

◆ RM_LITTLEFS_FLASH_Close()

`fsp_err_t RM_LITTLEFS_FLASH_Close (rm_littlefs_ctrl_t *const p_ctrl)`

Closes the lower level driver.

Implements `rm_littlefs_api_t::close()`.

Return values

FSP_SUCCESS	Media device closed.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_NOT_OPEN	Module not open.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `flash_api_t::close`

4.2.96 MCUboot Port (rm_mcuboot_port)

Modules

MCUboot Port for RA MCUs.

Overview

Note

The MCUboot Port does not provide any interfaces to the user. Consult the MCUboot documentation at <https://mcu-tools.github.io/mcuboot/> for further information.

Configuration

Build Time Configurations for MCUboot

The following build time configurations are defined in mcu-tools/include/mcuboot_config/mcuboot_config.h:

Configuration	Options	Default	Description
General > Custom mcuboot_config.h	Manual Entry		Add a path to your custom mcuboot_config.h file. It can be used to override some or all of the configurations defined here, and to define additional configurations.
General > Upgrade Mode	<ul style="list-style-type: none"> Swap Overwrite Only Overwrite Only Fast 	Overwrite Only	Swap supports A/B image swapping with rollback. Other modes with simpler code path, which only supports overwriting the existing image with the update image or running the newest image directly from its flash partition, are also available.
General > Validate Primary Image	<ul style="list-style-type: none"> Enabled Disabled 	Enabled	Always check the signature of the image in the primary slot before booting, even if no upgrade was performed. This is recommended if the

General > Downgrade Prevention (Overwrite Only)	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	boot time penalty is acceptable.
General > Number of Images Per Application	<ul style="list-style-type: none"> • 1 • 2 (TrustZone) 	1	Prevent downgrades by enforcing incrementing version numbers. When this option is set, any upgrade must have greater major version or greater minor version with equal major version. This mechanism only protects against some attacks against version downgrades (for example, a JTAG could be used to write an older version).
General > Watchdog Feed	Manual Entry		Number of separately updateable images.
General > Measured Boot	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	This function might be implemented if the OS / HW watchdog is enabled while doing a swap upgrade and the time it takes for a swapping is long enough to cause an unwanted reset. If implementing this, the OS main.c must also enable the watchdog (if required)!
General > Data Sharing	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Copies the boot data into the secure RAM, intended to be used by the secure App.
General > Data Sharing	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Copies the user data into the secure RAM, intended to be used by the secure App.
Signing Options > TrustZone > Boot Record (Image 2)	String length must be 12 characters or less.		Create CBOR encoded boot record TLV for Image 2. Represents the role of the software component (e.g. CoFM for coprocessor firmware). [max. 12 characters]
Signing Options > TrustZone > Custom	Manual Entry	--confirm	Add any custom options to pass to

(Image 2)

imgtool.py here. --pad places a trailer on the image that indicates that the image should be considered an upgrade. Writing this image in the secondary slot will then cause the bootloader to upgrade to it. --confirm marks the image as confirmed, which causes the upgrade to be permanent.

Signing Options >
Signature Type

- None
- ECDSA P-256
- RSA 2048
- RSA 3072

ECDSA P-256

Configure the signature type.

Signing Options > Boot
Record

String length must be 12 characters or less.

Create CBOR encoded boot record TLV. Represents the role of the software component (e.g. CoFM for coprocessor firmware). [max. 12 characters]

Signing Options >
Custom

Manual Entry

--confirm

Add any custom options to pass to imgtool.py here. --pad places a trailer on the image that indicates that the image should be considered an upgrade. Writing this image in the secondary slot will then cause the bootloader to upgrade to it. --confirm marks the image as confirmed, which causes the upgrade to be permanent.

Signing Options >
Python

Manual Entry

python

Name of the python command to use. Default is python, but can be updated to python3 for Linux or an absolute path if needed.

Debugging > Log Level

- Off
- Error
- Warning

Off

Configure log level.

- Info
- Debug

Flash Layout > TrustZone > Non-Secure Callable Region Size (Bytes)	Value must be an integer multiple of the 1024.	0x0	Size of the Non-Secure Callable region of the Secure image.
Flash Layout > TrustZone > Non-Secure Flash Area Size (Bytes) (TrustZone Non-Secure)	Value must be an integer multiple of the largest erase size on the mcu.	0x0	Size of the Non-Secure region. This must be non-zero for all TrustZone projects to ensure memory is partitioned correctly, even if the Secure and Non-Secure regions are treated as a single image. If the Non-Secure region can be updated separately, this size must account for the header and trailer.
Flash Layout > TrustZone > Non-Secure Callable RAM Region Size (Bytes)	Value must be an integer multiple of the 1024.	0x0	Size of the Non-Secure Callable RAM region of the Secure image.
Flash Layout > TrustZone > Non-Secure RAM Region Size (Bytes) (TrustZone Non-Secure)	Value must be an integer multiple of the 8192.	0x0	Size of the Non-Secure RAM region. This must be non-zero for all TrustZone projects to ensure memory is partitioned correctly, even if the Secure and Non-Secure regions are treated as a single image.
Flash Layout > TrustZone > Image 2 Header Size (Bytes)	Value must be an integer multiple of 0x80 (alignment required by VTOR).	0x80	Size of the flash reserved for the application image header for Image 2.
Flash Layout > Bootloader Flash Area Size (Bytes)	Value must be an integer multiple of the largest erase size on the mcu.	0x20000	Size of the flash reserved for the bootloader.
Flash Layout > Image 1 Header Size (Bytes)	Value must be an integer multiple of 0x80 (alignment required by VTOR).	0x80	Size of the flash reserved for the application image header.
Flash Layout > Image 1 Flash Area Size (Bytes)	Value must be an integer multiple of the largest erase size on	0x20000	Size of the application image 1, including the header and trailer. For

the mcu.

TrustZone projects, enter the combined size of the Secure and Non-Secure Callable regions if the Non-Secure image can be updated separately, or enter the size of the entire image slot if Secure, Non-Secure Callable, and Non-Secure regions are updated as a single image.

Flash Layout > Scratch Flash Area Size (Bytes)	Value must be an integer multiple of the largest erase size on the mcu.	0x0	Size of the scratch area. Only required for swap update method.
Data Sharing > Maximum Measured Boot Record Size (Bytes)	Value must be an integer.	0x64	Maximum size of the boot record.
Data Sharing > Shared Data Size (Bytes)	Value must be an integer.	0x380	Size of the shared RAM area. Required for Measured Boot.
Data Sharing > Shared Data Address	Value must be an integer	0x20000000	Shared RAM start address. Required for Measured Boot.

Clock Configuration

This module does not use peripheral clocks.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Getting Started: Creating an MCUboot Project

Start by creating a new project in e2 studio or RA SC. If the MCU supports TrustZone, select a Flat project. The bootloader resides entirely in Secure memory, but it is considered a flat project because it does not provide any Non-Secure Callable functions. On the Stacks tab, add New > Bootloader > MCUboot. Resolve any constraint errors and edit configurations as desired. Add either the example keys or generate your own key. The MCUboot key generation tool is provided at ra/mcu-tools/MCUboot/scripts/imgtool.py and documented at <https://github.com/mcu-tools/mcuboot/blob/master/docs/imgtool.md>. Install the following required python packages to use imgtool.py: <https://github.com/mcu-tools/mcuboot/blob/master/scripts/requirements.txt>.

In src/hal_entry.c, drag in Developer Assistance > HAL/Common > MCUboot > Quick Setup > Call Quick Setup. Add a call to mcuboot_quick_setup() in the application and make any desired updates.

Note

MCUboot will contain either the verification public key or its hash. During production it is necessary to permanently lock the flash region where MCUboot is programmed to prevent the keys or the code from being modified.

Getting Started: Signing Tool Prerequisite

To use the MCUboot signing tool, ensure you have Python 3.x installed on your system. Then install the Python packages required for the signing tool with the following command:

```
pip3 install --user -r ra/mcu-tools/MCUboot/scripts/requirements.txt
```

Getting Started: Converting a Project to an MCUboot Image

MCUboot application images must execute from the image slot defined by the MCUboot project. They are also limited to a single downloadable flash region. All of this is handled by specifying a BootloaderDataFile in the FSP Configuration tool.

Any existing project can be converted to an MCUboot image.

1. If the project was created with a version prior to FSP v3.0.0, update the linker script to the v3.0.0 version before using it as an MCUboot application image.
2. Right click the project to convert in e2 studio or RA SC and select Properties.
3. Open C/C++ Build and select Build Variables.
4. Click Add...
5. For Variable Name, enter BootloaderDataFile. For Type, select File. Browse to the *.bld file created alongside the *.elf file for the associated MCUboot project.
6. Click OK, then Apply and Close.

To convert a TrustZone image, follow the steps above for both the Secure project and the Non-Secure project.

MCUboot application images must also be signed to work with MCUboot. At a minimum, this involves adding a SHA and MCUboot specific constant data called boot magic in the image trailer.

Signing can be done on the as a post-build step in e2 studio. To sign the image as a post-build step:

1. If Linux is used to develop the application image, change the MCUboot property Signing > Python to python3.
2. Build the bootloader project to generate the *.bld file. Make sure to build the bootloader project on the same computer as the application image to ensure the path to the signing script is correct.
3. Define environment variables in the Properties of the application image project in e2 studio.
 - a. Right click the application image project, and select **Properties**.
 - b. Select **C/C++ Build > Environment** on the left.
 - c. Click **Add...**
 - d. Define the following environment variables one at a time:
 - **MCUBOOT_IMAGE_VERSION**: Set to the version of the application image.
 - **MCUBOOT_IMAGE_SIGNING_KEY**: Set the path to the key used for signing. If signing is not required, do not set this variable. If example keys are used, set **MCUBOOT_IMAGE_SIGNING_KEY** as follows (replace <boot_project> with the bootloader project path):
 - ECC: <boot_project>/ra/mcu-tools/MCUboot/root-ec-p256.pem
 - RSA 2K: <boot_project>/ra/mcu-tools/MCUboot/root-rsa-2048.pem

- RSA 3K: <boot_project>/ra/mcu-tools/MCUboot/root-rsa-3072.pem
 - MCUBOOT_APP_BIN_CONVERTER: Optional. Set to path to objcopy, arm-none-eabi-objcopy, fromelf, or ielftool. Not required if one of these tools is on the path.
4. Build the project.
 5. The signed image is output next to the application <project>.elf file with the name <project>.bin.signed.

Getting Started: Download and Debug

For projects that do not use TrustZone, debug the MCUboot project using the default configuration. Before running, load the signed image to the address specified in the signing comment in ra_cfg/mcu-tools/include/mcuboot_config/mcuboot_config.h. This can be done with the Load Ancillary File button when debugging in e2 studio. Upgrade images can be loaded to the upgrade image slots using the same method.

For TrustZone projects, debug using the Secure project to ensure the IDAU is partitioned correctly when debugging in e2 studio. Make the following modifications before debugging in e2 studio:

1. In the Debug Configurations for your project, on the Startup tab, click Add... to add the MCUboot project *.elf file (Image and Symbols), and optionally the Non-Secure project *.elf file.
2. For the Secure and Non-Secure project *.elf file, load Symbols Only.
3. After starting to debug, load the signed Secure image and the signed Non-Secure image into the addresses specified in the signing comment in ra_cfg/mcu-tools/include/mcuboot_config/mcuboot_config.h. This can be done with the Load Ancillary File button when debugging in e2 studio. Upgrade images can be loaded to the upgrade image slots using the same method.

Confirming Upgrade in Swap Mode

In Swap Mode operation, if the upgrade image is signed with the -pad option, MCUboot will install that image as a temporary update where if nothing else is done, a reboot will cause MCUboot to revert to the image version that was swapped out during the upgrade. In order for the updated image to prevent this reversion and make the update permanent, the boot_set_confirmed() must be called from the application.

To avail this capability in the application image, from the Stacks tab, add New > Bootloader > MCUboot Image Utilities (Swap Mode). Resolve any constraint errors and edit configurations as desired.

In src/hal_entry.c, drag in Developer Assistance > HAL/Common > MCUboot Image Utilities > Quick Setup > Confirm Primary Image. Add a call to boot_set_confirmed() in the application and confirm the image in the primary slot.

External Memory Support

QSPI support for secondary image storage can be enabled in the configurator. The bootloader expects the QSPI memory to be pre-configured by user code in the bootloader for read/write operation. The bootloader code operates under the assumption that the user has configured the QSPI in Extended-SPI mode and that R_QSPI_Open() has been called prior to invoking boot_go();. For an example on how to initialize the QSPI device, refer to the QSPI module. The QSPI sector size must be the same as that of the MCU internal flash (BSP_FEATURE_FLASH_HP_CF_REGION1_BLOCK_SIZE) for swap mode operation.

MCUboot Memory Map

For single image projects with no external memory support, the default memory map looks like:

Figure 205: MCUboot Memory Map

For projects with 2 separately updateable images (used for TrustZone applications where the Secure and Non-Secure images can be updated separately), the default memory map with no external memory support looks like:

Figure 206: MCUboot Memory Map (TrustZone)

For single image projects with QSPI, the default memory map looks like:

Figure 207: MCUboot Memory Map with QSPI

For projects with 2 separately updateable images (used for TrustZone applications where the Secure and Non-Secure images can be updated separately), the default memory map with QSPI support looks like:

Figure 208: MCUboot Memory Map (TrustZone) with QSPI

MCUboot Crypto Stack Options

The following crypto stacks can be used with MCUboot in FSP:

1. MbedTLS, which is hardware accelerated on all RA devices. On the RA2 which has an AES engine only, ECC/RSA/SHA operations are in software.
2. TinyCrypt (S/W Only) can be used with all devices.
3. TinyCrypt (H/W Accelerated) has AES operations accelerated for the RA2 family only. When using MCUboot without encryption there is no difference between using this or the S/W only version.
4. SCE9 Protected Mode on devices that have the SCE9 (eg: RA6M4, RA4M3, RA4M2)

MbedTLS provides the best performance for MCUBoot signature verification on the RA6 and RA4 devices but has a much larger code footprint compared to TinyCrypt. For RA2 devices TinyCrypt is the best option.

Using SCE9 Protected Mode Crypto Stack

Using this crypto stack with MCUBoot provides additional security by ensuring that any keys that are used were securely provisioned for the specific device. The Application Note R11AN0496 provides detailed steps on how to go about installing these keys. Since the section "Preparing Keys for Installation and Update Using RFP" document currently only provides information on how to install an AES key, this section will provide information on how to install an ECC public key.

Note

When using the SCE9 Protected Mode Stack with MCUboot it is required that the public keys in the format described in the "MCUboot Example Keys" module in the stack is also provided in the project.

1. Generate an ECC key pair. There are various ways to do this but you can use openssl to do so: "openssl ecparam -name secp256k1 -genkey -noout -out my_ecc_secp256k1_key.pem".
2. Once the key is generated, in order to install the public key using RFP (Renesas Flash Programmer) the user needs to have their own UFPK (User Factory Programming Key) and W-UFPK (Wrapped User Factory Programming Key). Refer to R11AN0496 on how to obtain these keys.
3. Once the UFPK and W-UFPK are available, we need to extract the public key from the pem file. The public key can be viewed by using "openssl ec -noout -text -in my_ecc_secp256k1_key.pem". Note that when the ECC public key is printed out this way, it will contain a 0x04 ASN.1 demarcator at the start which should be discarded.
4. Use the rfp-util.exe utility from the RFP installation folder to wrap the public key using the UFPK and W-UFPK into a format that can be installed by RFP and the factory bootloader on the MCU.
5. Use RFP as described in R11AN0496 to install the key to the location of mcuboot_sce9_key section.

These are examples that install the default keys provided with MCUboot in ra/mcu-tools/MCUboot/. The examples assume that UFPK and W-UFPK are already available.

```
//Print out the EC-P256 Public Key using openssl
C:\> openssl ec -noout -text -in root-ec-p256.pem
read EC key
Private-Key: (256 bit)

```
NIST CURVE: P-256

//Use the public key (ignore the 0x04 ASN.1 demarcator) in the RFP command line to
convert the public key into an installable format

C:\ "C:\Program Files (x86)\Renesas Electronics\Programming Tools\Renesas Flash
Programmer V3.08\rfp-util.exe" /genkey /ufpk "C:\ufpk.key" /wufpk
"C:\ufpk.key_enc.key" /key "2acb403ce8feed5ba44995a1a91daee8dbbe1937cd14fb2f245737e59
53988d994b9d65aebd7cdd5308ad6fe48b24a6a810ee5f07d8b6834cc3a6afc538efac1" /userkey
"16" /output "C:\ECC_pub_install.rkey"

// From the bootloader map file determine the address of mcuboot_sce9_key section
Use RFP to install "ECC_pub_install.rkey" as described in R11AN0496 to the address
where the mcuboot_sce9_key section is located.
```

Limitations

MCUboot tooling updates to adjust available flash in application images are currently only supported for the GCC compiler. IAR and AC6 support will be added in a future release.

Examples

Basic Example

This is an example of using MCUboot in an application.

```
void rm_mcuboot_port_example (void)
{
#ifdef MCUBOOT_USE_MBED_TLS
    /* Initialize mbedtls. */
    mbedtls_platform_context ctx = {0};
    assert(0 == mbedtls_platform_setup(&ctx));
#elif defined(MCUBOOT_USE_TINYCRYPT)
    /* Initialize TinyCrypt port. */
    assert(FSP_SUCCESS == RM_TINYCRYPT_PORT_Init());
#else
    /* Initialize SCE9 Protected Mode driver. */
    sce_instance_ctrl_t sce_ctrl;
    const sce_cfg_t     sce_cfg =
        {.lifecycle = SCE_SSD};
```

```

    assert(FSP_SUCCESS == R_SCE_Open(&sce_ctrl, &sce_cfg));
#endif

/* (Optional) To check for updates, call boot_set_pending. */
bool update = 0;
if (update)
{
    boot_set_pending(0);
}

/* Verify the boot image and get its location. */
struct boot_rsp rsp;
assert(0 == boot_go(&rsp));
/* Enter the application. */
RM_MCUBOOT_PORT_BootApp(&rsp);
}

```

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the [Interface](#).

Overview

The motor current is used to control the electric current of motor rotation in an application. This module should be called cyclically after the A/D conversion of electric current of each phase in an application. This module calculates each phase voltage with input current reference, electric current and rotor angle.

Features

The motor 120 control hall module has below features.

- Calculate each phase(U/V/W) voltage.
- Decoupling control.
- Voltage error compensation.

Configuration

Build Time Configurations for rm_motor_120_control_hall

The following build time configurations are defined in fsp_cfg/rm_motor_120_control_hall_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > 120-degree conduction control with Hall sensors (rm_motor_120_control_hall)

This module can be added to the Stacks tab via New Stack > Motor > 120-degree conduction control with Hall sensors (rm_motor_120_control_hall).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_120_control_hall0	Module name.
General > Conduction type	<ul style="list-style-type: none"> • First 60 degree PWM • Complementary First 60 degree PWM 	First 60 degree PWM	Select conduction type
General > Timeout counts (msec)	Must be a valid non-negative value.	200	Counts to judge rotor unrotate
General > Maximum voltage (V)	Must be a valid non-negative value.	20.0	Maximum output voltage (V)
General > Minimum voltage (V)	Must be a valid non-negative value.	3.0	Minimum output voltage (V)
General > Speed PI decimation	Must be a valid non-negative value.	0	Speed PI control decimation count
General > Freerun timer frequency (MHz)	Must be a valid non-negative value.	120	Freerun timer frequency (MHz)
General > Speed LPF	Must be a valid non-negative value.	1.0	Speed LPF parameter
General > Step of speed reference change	Must be a valid non-negative value.	0.2	Speed ref change step
General > Start reference voltage (V)	Must be a valid non-negative value.	5.8	Reference voltage for boot mode (V)
General > Hall wait counts	Must be a valid non-negative value.	12	Wait counts of hall interrupts to start speed calculation
General > Stop judge time	Must be a valid non-negative value.	1000	Stop judge time
General > Minimum limit speed (rpm)	Must be a valid non-negative value.	550	Minimum limit speed (rpm) (mechanical angle)
General > PI control KP	Must be a valid non-negative value.	0.02	PI control gain of proportional term
General > PI control KI	Must be a valid non-negative value.	0.0005	PI control gain of integral term
General > PI control limit	Must be a valid non-negative value.	24.0	PI control limit of integral term
General > Hall interrupt mask value	Must be a valid non-negative value.	15	For limiting hall interrupt processing. Limited by the number of ADC interrupts

Motor Parameter > Pole pairs	Must be a valid non-negative value.	2	Pole pairs
Motor Parameter > Resistance (ohm)	Must be a valid non-negative value.	6.447	Resistance
Motor Parameter > Inductance of d-axis (H)	Must be a valid non-negative value.	0.0045	Inductance of d-axis
Motor Parameter > Inductance of q-axis (H)	Must be a valid non-negative value.	0.0045	Inductance of q-axis
Motor Parameter > Permanent magnetic flux (Wb)	Must be a valid non-negative value.	0.02159	Permanent magnetic flux
Motor Parameter > Rotor inertia (kgm ²)	Must be a valid non-negative value.	1.8	Rotor inertia
Interrupts > Callback	Name must be a valid C symbol	NULL	Callback function
Hall sensor port U	Manual Entry	BSP_IO_PORT_04_PIN_1	Hall sensor port U
Hall sensor port V	Manual Entry	BSP_IO_PORT_04_PIN_1	Hall sensor port V
Hall sensor port W	Manual Entry	BSP_IO_PORT_04_PIN_0	Hall sensor port W

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

Depend on included ICU module.

Usage Notes

Limitations

- Set the period of current control with none-negative value.
- Set the reference voltage with none-negative value.

Examples

Basic Example

This is a basic example of minimal use of the motor 120 control hall in an application.

```
void motor_120_control_hall_basic_example (void)
{
```

```
fsp_err_t err = FSP_SUCCESS;

/* Initializes the module. */
err = RM_MOTOR_120_CONTROL_HALL_Open(g_motor_120_control_hall0.p_ctrl,
g_motor_120_control_hall0.p_cfg);
assert(FSP_SUCCESS == err);

/* Set speed reference before motor run */
(void) RM_MOTOR_120_CONTROL_HALL_SpeedSet(g_motor_120_control_hall0.p_ctrl,
DEF_120_CONTROL_HALL_TEST_SPEED_REF);

/* Start motor rotation */
(void) RM_MOTOR_120_CONTROL_HALL_Run(g_motor_120_control_hall0.p_ctrl);

/* Get current motor speed */
(void) RM_MOTOR_120_CONTROL_HALL_SpeedGet(g_motor_120_control_hall0.p_ctrl,
&smpl_speed);

/* Get current */
(void) RM_MOTOR_120_CONTROL_HALL_CurrentGet(g_motor_120_control_hall0.p_ctrl,
&smpl_current_status);

/* Get wait stop flag */
(void)
RM_MOTOR_120_CONTROL_HALL_WaitStopFlagGet(g_motor_120_control_hall0.p_ctrl,
&smpl_wait_stop_flag);

/* Get timeout error flag */
(void)
RM_MOTOR_120_CONTROL_HALL_TimeoutErrorFlagGet(g_motor_120_control_hall0.p_ctrl,
&smpl_timeout_error_flag);

/* Get pattern error flag */
(void)
RM_MOTOR_120_CONTROL_HALL_PatternErrorFlagGet(g_motor_120_control_hall0.p_ctrl,
&smpl_pattern_error_flag);

/* Get voltage ref */
(void) RM_MOTOR_120_CONTROL_HALL_VoltageRefGet(g_motor_120_control_hall0.p_ctrl,
&smpl_voltage_ref);

(void)
RM_MOTOR_120_CONTROL_HALL_ParameterUpdate(g_motor_120_control_hall0.p_ctrl,
g_motor_120_control_hall0.p_cfg);
```

```

/* Stop motor rotation */
(void) RM_MOTOR_120_CONTROL_HALL_Stop(g_motor_120_control_hall0.p_ctrl);
/* Reset the process. */
(void) RM_MOTOR_120_CONTROL_HALL_Reset(g_motor_120_control_hall0.p_ctrl);
/* Close the module. */
(void) RM_MOTOR_120_CONTROL_HALL_Close(g_motor_120_control_hall0.p_ctrl);
}

```

Data Structures

motor_120_control_wait_stop_flag_t	flag_wait_stop	Flag for waiting for motor stop.
uint32_t	u4_cnt_wait_stop	Counter for waiting motor stop.
motor_120_driver_phase_pattern_t	v_pattern	Voltage pattern.
motor_120_control_speed_ref_t	flag_speed_ref	Speed reference flag.
motor_120_control_voltage_ref_t	flag_voltage_ref	Voltage reference flag.
uint32_t	u4_cnt_timeout	Counter for timeout error.
uint32_t	u4_hall_timer_cnt	Value of timer counter.

uint32_t	u4_pre_hall_timer_cnt	Previous value of timer counter.
int32_t	s4_timer_cnt_ave	Counts for 360 degrees.
uint32_t	u4_timer_cnt_buf[MOTOR_120_CONTROL_HALL_TIMES]	Counts for 60 degrees.
uint32_t	u4_timer_cnt_num	Array element number before 360 degrees.
float	f4_pi_ctrl_err	PI control error.
float	f4_pi_ctrl_refi	PI control buffer of integral term.
uint32_t	u4_hall_intr_cnt	For start timing of speed calculation.
uint32_t	u4_adc_interrupt_cnt	Number of ADC interrupt processing.
motor_120_control_cfg_t const *	p_cfg	Pointer of configuration structure.
external_irq_callback_args_t	hall_interrupt_args	For call IRQ callbackSet function.
timer_callback_args_t	timer_args	For call timer callbackSet function.

Function Documentation

◆ RM_MOTOR_120_CONTROL_HALL_Open()

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_Open ( motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_cfg_t const *const p_cfg )
```

Opens and configures the motor hall 120 detection module. Implements `motor_120_control_api_t::open`.

Example:

```
/* Initializes the module. */
err = RM_MOTOR_120_CONTROL_HALL_Open(g_motor_120_control_hall0.p_ctrl,
g_motor_120_control_hall0.p_cfg);
```

Return values

FSP_SUCCESS	Motor 120 driver successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ **RM_MOTOR_120_CONTROL_HALL_Close()**

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_Close ( motor_120_control_ctrl_t *const p_ctrl)
```

Disables specified motor hall 120 detection module. Implements `motor_120_control_api_t::close`.

Example:

```
/* Close the module. */
(void) RM_MOTOR_120_CONTROL_HALL_Close(g_motor_120_control_hall0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_CONTROL_HALL_Run()**

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_Run ( motor_120_control_ctrl_t *const p_ctrl)
```

Run motor (Start motor rotation). Implements `motor_120_control_api_t::run`.

Example:

```
/* Start motor rotation */
(void) RM_MOTOR_120_CONTROL_HALL_Run(g_motor_120_control_hall0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_CONTROL_HALL_Stop()**

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_Stop ( motor_120_control_ctrl_t *const p_ctrl)
```

Stop motor (Stop motor rotation). Implements `motor_120_control_api_t::stop`.

Example:

```
/* Stop motor rotation */
(void) RM_MOTOR_120_CONTROL_HALL_Stop(g_motor_120_control_hall0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_CONTROL_HALL_Reset()**

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_Reset ( motor_120_control_ctrl_t *const p_ctrl)
```

Reset variables of motor hall 120 detection module. Implements `motor_120_control_api_t::reset`.

Example:

```
/* Reset the process. */
(void) RM_MOTOR_120_CONTROL_HALL_Reset(g_motor_120_control_hall0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_HALL_SpeedSet()

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_SpeedSet ( motor_120_control_ctrl_t *const p_ctrl, float
const speed_rpm )
```

Set speed[rpm]. Implements `motor_120_control_api_t::speedSet`.

Example:

```
/* Set speed reference before motor run */
(void) RM_MOTOR_120_CONTROL_HALL_SpeedSet(g_motor_120_control_hall0.p_ctrl,
DEF_120_CONTROL_HALL_TEST_SPEED_REF);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_HALL_SpeedGet()

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_SpeedGet ( motor_120_control_ctrl_t *const p_ctrl, float
*const p_speed_rpm )
```

Get speed. Implements `motor_120_control_api_t::speedGet`.

Example:

```
/* Get current motor speed */
(void) RM_MOTOR_120_CONTROL_HALL_SpeedGet(g_motor_120_control_hall0.p_ctrl,
&smpl_speed);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_CurrentGet()

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_CurrentGet ( motor_120_control_ctrl_t *const p_ctrl,
motor_120_driver_current_status_t *const p_current_status )
```

Get current. Implements `motor_120_control_api_t::currentGet`.

Example:

```
/* Get current */
(void) RM_MOTOR_120_CONTROL_HALL_CurrentGet(g_motor_120_control_hall0.p_ctrl,
&smp1_current_status);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_WaitStopFlagGet()

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_WaitStopFlagGet ( motor_120_control_ctrl_t *const
p_ctrl, motor_120_control_wait_stop_flag_t *const p_flag )
```

Get wait stop flag. Implements `motor_120_control_api_t::waitStopFlagGet`.

Example:

```
/* Get wait stop flag */
(void)
RM_MOTOR_120_CONTROL_HALL_WaitStopFlagGet(g_motor_120_control_hall0.p_ctrl,
&smp1_wait_stop_flag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_TimeoutErrorFlagGet()

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_TimeoutErrorFlagGet ( motor_120_control_ctrl_t *const
p_ctrl, motor_120_control_timeout_error_flag_t *const p_timeout_error_flag )
```

Get timeout error flag. Implements `motor_120_control_api_t::timeoutErrorFlagGet`.

Example:

```
/* Get timeout error flag */
(void)
RM_MOTOR_120_CONTROL_HALL_TimeoutErrorFlagGet(g_motor_120_control_hall0.p_ctrl,
&smpl_timeout_error_flag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_PatternErrorFlagGet()

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_PatternErrorFlagGet ( motor_120_control_ctrl_t *const
p_ctrl, motor_120_control_pattern_error_flag_t *const p_pattern_error_flag )
```

Get pattern error flag. Implements `motor_120_control_api_t::patternErrorFlagGet`.

Example:

```
/* Get pattern error flag */
(void)
RM_MOTOR_120_CONTROL_HALL_PatternErrorFlagGet(g_motor_120_control_hall0.p_ctrl,
&smpl_pattern_error_flag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_VoltageRefGet()

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_VoltageRefGet ( motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_voltage_ref_t *const p_voltage_ref )
```

Get voltage ref. Implements [motor_120_control_api_t::voltageRefGet](#).

Example:

```
/* Get voltage ref */
(void) RM_MOTOR_120_CONTROL_HALL_VoltageRefGet(g_motor_120_control_hall0.p_ctrl,
&smpl_voltage_ref);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_ParameterUpdate()

```
fsp_err_t RM_MOTOR_120_CONTROL_HALL_ParameterUpdate ( motor_120_control_ctrl_t *const
p_ctrl, motor_120_control_cfg_t const *const p_cfg )
```

Update the parameters of hall 120 detection module. Implements [motor_120_control_api_t::parameterUpdate](#).

Example:

```
(void)
RM_MOTOR_120_CONTROL_HALL_ParameterUpdate(g_motor_120_control_hall0.p_ctrl,
g_motor_120_control_hall0.p_cfg);
```

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

4.2.98 Motor 120 Control Sensorless (motor_120_control_sensorless)

Modules

Functions

`fsp_err_t` `RM_MOTOR_120_CONTROL_SENSORLESS_Open`
(`motor_120_control_ctrl_t *const p_ctrl`, `motor_120_control_cfg_t const *const p_cfg`)
Opens and configures the motor sensorless 120 detection module. Implements `motor_120_control_api_t::open`. [More...](#)

`fsp_err_t` `RM_MOTOR_120_CONTROL_SENSORLESS_Close`
(`motor_120_control_ctrl_t *const p_ctrl`)
Disables specified motor sensorless 120 detection module. Implements `motor_120_control_api_t::close`. [More...](#)

`fsp_err_t` `RM_MOTOR_120_CONTROL_SENSORLESS_Run`
(`motor_120_control_ctrl_t *const p_ctrl`)
Run motor (Start motor rotation). Implements `motor_120_control_api_t::run`. [More...](#)

`fsp_err_t` `RM_MOTOR_120_CONTROL_SENSORLESS_Stop`
(`motor_120_control_ctrl_t *const p_ctrl`)
Stop motor (Stop motor rotation). Implements `motor_120_control_api_t::stop`. [More...](#)

`fsp_err_t` `RM_MOTOR_120_CONTROL_SENSORLESS_Reset`
(`motor_120_control_ctrl_t *const p_ctrl`)
Reset variables of motor sensorless 120 detection module. Implements `motor_120_control_api_t::reset`. [More...](#)

`fsp_err_t` `RM_MOTOR_120_CONTROL_SENSORLESS_SpeedSet`
(`motor_120_control_ctrl_t *const p_ctrl`, `float const speed_rpm`)
Set speed[rpm]. Implements `motor_120_control_api_t::speedSet`. [More...](#)

`fsp_err_t` `RM_MOTOR_120_CONTROL_SENSORLESS_SpeedGet`
(`motor_120_control_ctrl_t *const p_ctrl`, `float *const p_speed_rpm`)
Get speed. Implements `motor_120_control_api_t::speedGet`. [More...](#)

`fsp_err_t` `RM_MOTOR_120_CONTROL_SENSORLESS_CurrentGet`
(`motor_120_control_ctrl_t *const p_ctrl`,
`motor_120_driver_current_status_t *const p_current_status`)

Get current. Implements [motor_120_control_api_t::currentGet](#).
[More...](#)

`fsp_err_t` [RM_MOTOR_120_CONTROL_SENSORLESS_WaitStopFlagGet](#)
 ([motor_120_control_ctrl_t](#) *const p_ctrl,

Get timeout error flag. Implements
[motor_120_control_api_t::timeoutErrorFlagGet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_120_CONTROL_SENSORLESS_PatternErrorFlagGet](#)
 ([motor_120_control_ctrl_t](#) *const p_ctrl,
[motor_120_control_pattern_error_flag_t](#) *const p_pattern_error_flag)

Get pattern error flag. Implements
[motor_120_control_api_t::patternErrorFlagGet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_120_CONTROL_SENSORLESS_VoltageRefGet](#)
 ([motor_120_control_ctrl_t](#) *const p_ctrl,
[motor_120_control_voltage_ref_t](#) *const p_voltage_ref)

Get voltage ref. Implements [motor_120_control_api_t::voltageRefGet](#).
[More...](#)

`fsp_err_t` [RM_MOTOR_120_CONTROL_SENSORLESS_ParameterUpdate](#)
 ([motor_120_control_ctrl_t](#) *const p_ctrl, [motor_120_control_cfg_t](#)
 const *const p_cfg)

Update the parameters of sensorless 120 detection module.
 Implements [motor_120_control_api_t::parameterUpdate](#). [More...](#)

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the [Interface](#).

Overview

The motor current is used to control the electric current of motor rotation in an application. This module should be called cyclically after the A/D conversion of electric current of each phase in an application. This module calculates each phase voltage with input current reference, electric current

and rotor angle.

Features

The motor 120 control sensorless module has below features.

- Calculate each phase(U/V/W) voltage.
- Decoupling control.
- Voltage error compensation.

Configuration

Build Time Configurations for rm_motor_120_control_sensorless

The following build time configurations are defined in fsp_cfg/rm_motor_120_control_sensorless_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > 120-degree conduction control sensorless (rm_motor_120_control_sensorless)

This module can be added to the Stacks tab via New Stack > Motor > 120-degree conduction control sensorless (rm_motor_120_control_sensorless).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_120_control_s ensorless0	Module name.
General > Conduction type	<ul style="list-style-type: none"> • First 60 degree PWM • Complementary First 60 degree PWM 	First 60 degree PWM	Select conduction type
General > Stop BEMF	Must be a valid non-negative value.	0.5	Value of stop motor BEMF (U+V+W)
General > Timeout counts (msec)	Must be a valid non-negative value.	2000	Undetected time
General > Maximum voltage for BOOT (V)	Must be a valid non-negative value.	8.0	Maximum output voltage for boot mode (V)
General > Maximum voltage (V)	Must be a valid non-negative value.	20.0	Maximum output voltage (V)
General > Minimum voltage (V)	Must be a valid non-negative value.	3.0	Minimum output voltage (V)
General > Carrier	Must be a valid non-	20.0	PWM carrier frequency

frequency (kHz)	negative value.		(kHz)
General > Adjusting angle	Manual Entry	0	Adjusting angle
General > Speed PI decimation	Must be a valid non-negative value.	1	Speed PI control decimation count
General > Free run timer frequency (MHz)	Must be a valid non-negative value.	120	Freerun timer frequency (MHz)
General > Speed LPF K	Must be a valid non-negative value.	1.0	Speed LPF parameter
General > Step of speed change	Must be a valid non-negative value.	0.2	Speed reference change step
General > Boot reference voltage (V)	Must be a valid non-negative value.	3.0	Voltage reference for boot mode
General > Voltage lamping time	Must be a valid non-negative value.	128	Voltage lamping time
General > Voltage constant adjust time	Must be a valid non-negative value.	64	Voltage constant adjust time value (msec)
General > Open loop start speed (rpm)	Manual Entry	150	Open loop start speed (rpm)
General > Open loop mode2 speed (rpm)	Manual Entry	185	to mode2 change speed (rpm)
General > Open loop mode3 speed (rpm)	Manual Entry	1000	to mode3 change speed (rpm)
General > Open loop start voltage (V)	Must be a valid non-negative value.	3.0	start reference voltage (V)
General > Open loop mode1 speed rate	Must be a valid non-negative value.	0.25	increase rate of reference speed (rpm/control period)
General > Open loop mode2 voltage rate	Must be a valid non-negative value.	0.00285	increase rate of reference voltage (v/control period)
General > Open loop mode2 speed rate	Must be a valid non-negative value.	0.71	increase rate of reference speed (rpm/control period)
General > Open loop mode3 voltage rate	Must be a valid non-negative value.	0.002	increase rate of reference voltage (v/control period)
General > Open loop maximum voltage (V)	Must be a valid non-negative value.	6.5	openloop maximum voltage (V)
General > PI control KP	Must be a valid non-negative value.	0.02	PI control gain of proportional term
General > PI control KI	Must be a valid non-negative value.	0.004	PI control gain of integral term

General > PI control limit	Must be a valid non-negative value.	24.0	PI control limit of integral term
Motor Parameter > Pole pairs	Must be a valid non-negative value.	2	Pole pairs
Motor Parameter > Resistance (ohm)	Must be a valid non-negative value.	6.447	Resistance
Motor Parameter > Inductance of d-axis (H)	Must be a valid non-negative value.	0.0045	Inductance of d-axis
Motor Parameter > Inductance of q-axis (H)	Must be a valid non-negative value.	0.0045	Inductance of q-axis
Motor Parameter > Permanent magnetic flux (Wb)	Must be a valid non-negative value.	0.02159	Permanent magnetic flux
Motor Parameter > Rotor inertia (kgm ²)	Must be a valid non-negative value.	1.8	Rotor inertia
Interrupts > Callback	Name must be a valid C symbol	NULL	callback function

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the period of current control with none-negative value.
- Set the reference voltage with none-negative value.

Examples

Basic Example

This is a basic example of minimal use of the motor 120 control sensorless in an application.

```
void motor_120_control_sensorless_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err =
```

```
RM_MOTOR_120_CONTROL_SENSORLESS_Open(g_motor_120_control_sensorless0.p_ctrl,
                                       g_motor_120_control_sensorless0.p_cfg);

    assert(FSP_SUCCESS == err);

/* Set speed reference before motor run */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_SpeedSet(g_motor_120_control_sensorless0.p_ctrl,

DEF_120_CONTROL_SENSORLESSHALL_TEST_OVSPD_LIM);

/* Start motor rotation */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_Run(g_motor_120_control_sensorless0.p_ctrl);

/* Get current motor speed */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_SpeedGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_speed);

/* Get current */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_CurrentGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_current_status);

/* Get wait stop flag */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_WaitStopFlagGet
(g_motor_120_control_sensorless0.p_ctrl,

                                       &smpl_wait_stop_flag);

/* Get timeout error flag */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_TimeoutErrorFlagGet
(g_motor_120_control_sensorless0.p_ctrl,

                                       &smpl_timeout_error_fl
ag);

/* Get pattern error flag */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_PatternErrorFlagGet
(g_motor_120_control_sensorless0.p_ctrl,
```

```

                                                                    &smpl_pattern_error_fl
ag);
/* Get voltage ref */
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_VoltageRefGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_voltage_ref);
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_ParameterUpdate
(g_motor_120_control_sensorless0.p_ctrl,
g_motor_120_control_sensorless0.p_cfg);
/* Stop motor rotation */
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_Stop(g_motor_120_control_sensorless0.p_ctrl);
/* Reset the process. */
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_Reset(g_motor_120_control_sensorless0.p_ctrl);
/* Close the module. */
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_Close(g_motor_120_control_sensorless0.p_ctrl);
}

```

timer_instance_t const *	p_speed_calc_timer_instance	Speed calculate timer module.

◆ motor_120_control_sensorless_instance_ctrl_t

Data Fields		
struct motor_120_control_sensorless_instance_ctrl_t		
120 control sensorless instance control block		
Data Fields		
uint32_t	open	Used to determine if the channel is configured.
motor_120_control_status_t	active	Flag to set active/inactive the motor 120 control.

motor_120_control_run_mode_t	run_mode	Drive mode.
motor_120_control_timeout_error_flag_t	timeout_error_flag	Timeout error status.
motor_120_control_pattern_error_flag_t	pattern_error_flag	Bemf pattern error status.
motor_120_control_rotation_direction_t	direction	Rotational direction (0: CW, 1: CCW)
float	f4_ol_pattern_set_calc	Counts to change timing of open loop pattern.
float	f4_speed_calc_base	Base counts to calculate rotation speed.
float	f_rpm2rad	Translate value to radian/second to rpm.
float	f4_v_ref	Voltage reference (output of speed PI control)
uint32_t	u4_pwm_duty	PWM duty.
float	f4_ref_speed_rad	Motor speed reference.
float	f4_ref_speed_rad_ctrl	Motor speed reference for speed PI control.
float	f4_speed_rad	Motor speed.
uint32_t	u4_cnt_speed_pi	Counter for period of speed PI control.
motor_120_control_wait_stop_flag_t	flag_wait_stop	Flag for waiting for motor stop.
float	f4_vn_ad	Neutral voltage.
uint32_t	u4_cnt_adj_v	Voltage lamping count adjustment.
motor_120_control_sensorless_draw_in_position_t	flag_draw_in	Status of draw in a initial position.
motor_120_driver_phase_pattern_t	v_pattern	Voltage pattern.
uint32_t	u4_v_pattern_num	Selecting pattern number for openloop drive.
uint32_t	u4_bemf_signal	Pattern of BEMF.
uint32_t	u4_pre_bemf_signal	Previous pattern of BEMF.
motor_120_control_sensorless_pattern_change_flag_t	flag_pattern_change	Pattern change flag.
motor_120_control_speed_ref_t	flag_speed_ref	Speed reference flag.
motor_120_control_voltage_ref_t	flag_voltage_ref	Voltage reference flag.

uint32_t	u4_ol_signal	Pattern of BEMF.
uint32_t	u4_ol_pattern_set	Openloop frequency.
uint32_t	u4_cnt_ol_pattern_set	Counter for openloop pattern change.
uint32_t	u4_cnt_timeout	Counter for timeout error.
uint32_t	u4_bemf_timer_cnt	Value of timer counter.
uint32_t	u4_pre_bemf_timer_cnt	Previous value of timer counter.
int32_t	s4_timer_cnt_ave	Counts for 360 degrees.
uint32_t	u4_timer_cnt_buf[MOTOR_120_CONTROL_SENSORLESS_TIMES]	Counts for 60 degrees.
uint32_t	u4_timer_cnt_num	Array element number before 360 degrees.
uint32_t	u4_cnt_carrier	Counter for carrier interrupt.
uint32_t	u4_pre_cnt_carrier	Previous carrier interrupt count.
uint32_t	u4_angle_shift_cnt	Shift degrees count.
float	f4_pi_ctrl_err	PI control error.
float	f4_pi_ctrl_refi	PI control buffer of integral term.
motor_120_control_cfg_t const *	p_cfg	Pointer of configuration structure.
timer_callback_args_t	timer_args	For call timer callbackSet function.

Enumeration Type Documentation

Function Documentation◆ **RM_MOTOR_120_CONTROL_SENSORLESS_Open()**

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_Open ( motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_cfg_t const *const p_cfg )
```

Opens and configures the motor sensorless 120 detection module. Implements `motor_120_control_api_t::open`.

Example:

```
/* Initializes the module. */
err =
RM_MOTOR_120_CONTROL_SENSORLESS_Open(g_motor_120_control_sensorless0.p_ctrl,
g_motor_120_control_sensorless0.p_cfg);
```

Return values

<code>FSP_SUCCESS</code>	Motor driver successfully configured.
<code>FSP_ERR_ASSERTION</code>	Null pointer, or one or more configuration options is invalid.
<code>FSP_ERR_ALREADY_OPEN</code>	Module is already open. This module can only be opened once.
<code>FSP_ERR_INVALID_ARGUMENT</code>	Input parameter error.

◆ **RM_MOTOR_120_CONTROL_SENSORLESS_Close()**

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_Close ( motor_120_control_ctrl_t *const p_ctrl)
```

Disables specified motor sensorless 120 detection module. Implements `motor_120_control_api_t::close`.

Example:

```
/* Close the module. */
```

```
(void)
```

```
RM_MOTOR_120_CONTROL_SENSORLESS_Close(g_motor_120_control_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_CONTROL_SENSORLESS_Run()**

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_Run ( motor_120_control_ctrl_t *const p_ctrl)
```

Run motor (Start motor rotation). Implements `motor_120_control_api_t::run`.

Example:

```
/* Start motor rotation */
```

```
(void)
```

```
RM_MOTOR_120_CONTROL_SENSORLESS_Run(g_motor_120_control_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_CONTROL_SENSORLESS_Stop()**

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_Stop ( motor_120_control_ctrl_t *const p_ctrl)
```

Stop motor (Stop motor rotation). Implements `motor_120_control_api_t::stop`.

Example:

```
/* Stop motor rotation */
(void)
```

```
RM_MOTOR_120_CONTROL_SENSORLESS_Stop(g_motor_120_control_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_CONTROL_SENSORLESS_Reset()**

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_Reset ( motor_120_control_ctrl_t *const p_ctrl)
```

Reset variables of motor sensorless 120 detection module. Implements `motor_120_control_api_t::reset`.

Example:

```
/* Reset the process. */
(void)
```

```
RM_MOTOR_120_CONTROL_SENSORLESS_Reset(g_motor_120_control_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_CONTROL_SENSORLESS_SpeedSet()**

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_SpeedSet ( motor_120_control_ctrl_t *const
p_ctrl, float const speed_rpm )
```

Set speed[rpm]. Implements [motor_120_control_api_t::speedSet](#).

Example:

```
/* Set speed reference before motor run */
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_SpeedSet(g_motor_120_control_sensorless0.p_ctrl,
DEF_120_CONTROL_SENSORLESSHALL_TEST_OVSPD_LIM);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_CONTROL_SENSORLESS_SpeedGet()**

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_SpeedGet ( motor_120_control_ctrl_t *const
p_ctrl, float *const p_speed_rpm )
```

Get speed. Implements [motor_120_control_api_t::speedGet](#).

Example:

```
/* Get current motor speed */
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_SpeedGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_speed);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ **RM_MOTOR_120_CONTROL_SENSORLESS_CurrentGet()**

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_CurrentGet ( motor_120_control_ctrl_t *const
p_ctrl, motor_120_driver_current_status_t *const p_current_status )
```

Get current. Implements `motor_120_control_api_t::currentGet`.

Example:

```
/* Get current */
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_CurrentGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_current_status);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ **RM_MOTOR_120_CONTROL_SENSORLESS_WaitStopFlagGet()**

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_WaitStopFlagGet ( motor_120_control_ctrl_t
*const p_ctrl, motor_120_control_wait_stop_flag_t *const p_flag )
```

Get wait stop flag. Implements `motor_120_control_api_t::waitStopFlagGet`.

Example:

```
/* Get wait stop flag */
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_WaitStopFlagGet
(g_motor_120_control_sensorless0.p_ctrl,
&smpl_wait_stop_flag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_TimeoutErrorFlagGet()

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_TimeoutErrorFlagGet ( motor_120_control_ctrl_t
*const p_ctrl, motor_120_control_timeout_error_flag_t *const p_timeout_error_flag )
```

Get timeout error flag. Implements `motor_120_control_api_t::timeoutErrorFlagGet`.

Example:

```
/* Get timeout error flag */
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_TimeoutErrorFlagGet
(g_motor_120_control_sensorless0.p_ctrl,
                                     &smpl_timeout_error_fl
ag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_PatternErrorFlagGet()

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_PatternErrorFlagGet ( motor_120_control_ctrl_t
*const p_ctrl, motor_120_control_pattern_error_flag_t *const p_pattern_error_flag )
```

Get pattern error flag. Implements `motor_120_control_api_t::patternErrorFlagGet`.

Example:

```
/* Get pattern error flag */
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_PatternErrorFlagGet
(g_motor_120_control_sensorless0.p_ctrl,
&smpl_pattern_error_flag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_VoltageRefGet()

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_VoltageRefGet ( motor_120_control_ctrl_t
*const p_ctrl, motor_120_control_voltage_ref_t *const p_voltage_ref )
```

Get voltage ref. Implements `motor_120_control_api_t::voltageRefGet`.

Example:

```
/* Get voltage ref */
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_VoltageRefGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_voltage_ref);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_ParameterUpdate()

```
fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_ParameterUpdate ( motor_120_control_ctrl_t
*const p_ctrl, motor_120_control_cfg_t const *const p_cfg )
```

Update the parameters of sensorless 120 detection module. Implements [motor_120_control_api_t::parameterUpdate](#).

Example:

```
(void)
RM_MOTOR_120_CONTROL_SENSORLESS_ParameterUpdate
(g_motor_120_control_sensorless0.p_ctrl,
g_motor_120_control_sensorless0.p_cfg);
```

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

```

Set position reference. Implements [motor_api_t::angleGet](#). [More...](#)

Detailed Description

Usual control of a SPM (Surface Permanent Magnet) motor on RA MCUs. This module implements the [Motor 120 Degree \(rm_motor_120_degree\)](#).

Overview

The motor 120 degree control is used to control a motor rotation in an application. This module is implemented with using a SPM motor. User can start/stop motor rotation simply.

Features

The motor 120 degree module has below features.

- Start/Stop a motor rotation
- Error detection (over current, over speed, over voltage, low voltage)

Configuration

Build Time Configurations for rm_motor_120_degree

The following build time configurations are defined in `fsp_cfg/rm_motor_120_degree_cfg.h`:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > Motor 120 degree control (rm_motor_120_degree)

This module can be added to the Stacks tab via `New Stack > Motor > Motor 120 degree control (rm_motor_120_degree)`.

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_120_degree0	Module name.
General > Limit of over current (A)	Must be a valid non-negative value.	4.0	Limit of over current.(Detection threshold)
General > Limit of over voltage (V)	Must be a valid non-negative value.	28.0	Limit of over voltage.(Detection threshold)

General > Limit of over speed (rpm)	Must be a valid non-negative value.	3000.0	Limit of over speed.(Detection threshold)
General > Limit of low voltage (V)	Must be a valid non-negative value.	14.0	Limit of low voltage.(Detection threshold)
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function.

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple status transition process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the limit of electric current with non-negative value.
- Set the limit of input voltage with non-negative value.
- Set the limit of rotational speed with non-negative value.

Examples

Basic Example

This is a basic example of minimal use of the motor 120 degree in an application.

```
void motor_120_degree_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;

    /* Initializes the module. */
    err = RM_MOTOR_120_DEGREE_Open(g_motor_120_degree0.p_ctrl,
g_motor_120_degree0.p_cfg);
    assert(FSP_SUCCESS == err);

    /* Set speed reference before motor run */
    (void) RM_MOTOR_120_DEGREE_SpeedSet(g_motor_120_degree0.p_ctrl,
DEF_120_DEGREE_SPEED_REF);

    /* Start motor rotation */
    (void) RM_MOTOR_120_DEGREE_Run(g_motor_120_degree0.p_ctrl);

    /* Get current status */
}
```

```

    (void) RM_MOTOR_120_DEGREE_StatusGet(g_motor_120_degree0.p_ctrl, &smpl_status);
/* Get current motor speed */
    (void) RM_MOTOR_120_DEGREE_SpeedGet(g_motor_120_degree0.p_ctrl, &smpl_speed);
/* Get wait stop flag */
    (void) RM_MOTOR_120_DEGREE_WaitStopFlagGet(g_motor_120_degree0.p_ctrl,
&smpl_wait_stop_flag);
/* Check error */
    (void) RM_MOTOR_120_DEGREE_ErrorCheck(g_motor_120_degree0.p_ctrl, &smpl_error);
/* Stop motor rotation */
    (void) RM_MOTOR_120_DEGREE_Stop(g_motor_120_degree0.p_ctrl);
    (void) RM_MOTOR_120_DEGREE_ErrorSet(g_motor_120_degree0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
/* Reset the process. */
    (void) RM_MOTOR_120_DEGREE_Reset(g_motor_120_degree0.p_ctrl);
/* Close the module. */
    (void) RM_MOTOR_120_DEGREE_Close(g_motor_120_degree0.p_ctrl);
}

```

Data Structures

struct [motor_120_degree_extended_cfg_t](#)

Enumerations

enum [motor_120_degree_ctrl_status_t](#)

enum [motor_120_degree_ctrl_event_t](#)

Data Structure Documentation

◆ motor_120_degree_statemachine_t

struct motor_120_degree_statemachine_t		
Statemachine structure for motor 120 degree		
Data Fields		
motor_120_degree_ctrl_status_t	status	The current system status.
motor_120_degree_ctrl_status_t	status_next	The next system status.
motor_120_degree_ctrl_event_t	current_event	The current event index.

uint16_t	u2_error_status	The error information.
----------	-----------------	------------------------

◆ motor_120_degree_extended_cfg_t

struct motor_120_degree_extended_cfg_t		
Extended configurations for motor 120 degree		
Data Fields		
motor_120_control_instance_t const *	p_motor_120_control_instance	120 degree control Instance
float	f_overcurrent_limit	Over-current limit (A)
float	f_overvoltage_limit	Over-voltage limit (V)
float	f_overspeed_limit	Over-speed limit (rad/s)
float	f_lowvoltage_limit	Low-voltage limit (V)

Enumeration Type Documentation

◆ motor_120_degree_ctrl_status_t

enum motor_120_degree_ctrl_status_t	
Control state	
Enumerator	
MOTOR_120_DEGREE_CTRL_STATUS_STOP	Stop mode.
MOTOR_120_DEGREE_CTRL_STATUS_RUN	Run mode.
MOTOR_120_DEGREE_CTRL_STATUS_ERROR	Error mode.

◆ motor_120_degree_ctrl_event_t

enum motor_120_degree_ctrl_event_t	
Control event	
Enumerator	
MOTOR_120_DEGREE_CTRL_EVENT_STOP	Stop event.
MOTOR_120_DEGREE_CTRL_EVENT_RUN	Run event.
MOTOR_120_DEGREE_CTRL_EVENT_ERROR	Error event.
MOTOR_120_DEGREE_CTRL_EVENT_RESET	Reset event.

Function Documentation

◆ RM_MOTOR_120_DEGREE_Open()

```
fsp_err_t RM_MOTOR_120_DEGREE_Open ( motor_ctrl_t *const p_ctrl, motor_cfg_t const *const p_cfg )
```

Configure the motor in register start mode. Implements `motor_api_t::open`.

Example:

```
/* Initializes the module. */
err = RM_MOTOR_120_DEGREE_Open(g_motor_120_degree0.p_ctrl,
g_motor_120_degree0.p_cfg);
```

Return values

FSP_SUCCESS	Successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.

Note

This function should only be called once as motor configuration registers can only be written to once so subsequent calls will have no effect.

◆ RM_MOTOR_120_DEGREE_Close()

```
fsp_err_t RM_MOTOR_120_DEGREE_Close ( motor_ctrl_t *const p_ctrl)
```

Disables specified motor control block. Implements `motor_api_t::close`.

Example:

```
/* Close the module. */
(void) RM_MOTOR_120_DEGREE_Close(g_motor_120_degree0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ **RM_MOTOR_120_DEGREE_Run()**

```
fsp_err_t RM_MOTOR_120_DEGREE_Run ( motor_ctrl_t *const p_ctrl)
```

Run motor (Start motor rotation). Implements [motor_api_t::run](#).

Example:

```
/* Start motor rotation */
(void) RM_MOTOR_120_DEGREE_Run(g_motor_120_degree0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ **RM_MOTOR_120_DEGREE_Stop()**

```
fsp_err_t RM_MOTOR_120_DEGREE_Stop ( motor_ctrl_t *const p_ctrl)
```

Stop motor (Stop motor rotation). Implements [motor_api_t::stop](#).

Example:

```
/* Stop motor rotation */
(void) RM_MOTOR_120_DEGREE_Stop(g_motor_120_degree0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully stopped.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_120_DEGREE_Reset()

```
fsp_err_t RM_MOTOR_120_DEGREE_Reset ( motor_ctrl_t *const p_ctrl)
```

Reset motor control block. Implements `motor_api_t::reset`.

Example:

```
/* Reset the process. */
(void) RM_MOTOR_120_DEGREE_Reset(g_motor_120_degree0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_120_DEGREE_ErrorSet()

```
fsp_err_t RM_MOTOR_120_DEGREE_ErrorSet ( motor_ctrl_t *const p_ctrl, motor_error_t const error )
```

Set error information. Implements `motor_api_t::errorSet`.

Example:

```
(void) RM_MOTOR_120_DEGREE_ErrorSet(g_motor_120_degree0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
```

Return values

FSP_SUCCESS	Successfully set error infomation.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_120_DEGREE_SpeedSet()

```
fsp_err_t RM_MOTOR_120_DEGREE_SpeedSet ( motor_ctrl_t *const p_ctrl, float const speed_rpm )
```

Set speed reference[rpm]. Implements `motor_api_t::speedSet`.

Example:

```
/* Set speed reference before motor run */
(void) RM_MOTOR_120_DEGREE_SpeedSet(g_motor_120_degree0.p_ctrl,
DEF_120_DEGREE_SPEED_REF);
```

Return values

FSP_SUCCESS	Successfully set speed reference.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_120_DEGREE_StatusGet()

```
fsp_err_t RM_MOTOR_120_DEGREE_StatusGet ( motor_ctrl_t *const p_ctrl, uint8_t *const p_status )
```

Get current control status. Implements `motor_api_t::statusGet`.

Example:

```
/* Get current status */
(void) RM_MOTOR_120_DEGREE_StatusGet(g_motor_120_degree0.p_ctrl, &smpl_status);
```

Return values

FSP_SUCCESS	Successfully got current control status.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_POINTER	Data received pointer is invalid.

Note

◆ **RM_MOTOR_120_DEGREE_SpeedGet()**

```
fsp_err_t RM_MOTOR_120_DEGREE_SpeedGet ( motor_ctrl_t *const p_ctrl, float *const
p_speed_rpm )
```

Get rotational speed. Implements `motor_api_t::speedGet`.

Example:

```
/* Get current motor speed */
(void) RM_MOTOR_120_DEGREE_SpeedGet(g_motor_120_degree0.p_ctrl, &smpl_speed);
```

Return values

FSP_SUCCESS	Successfully got rotational speed.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_POINTER	Data received pointer is invalid.

Note

◆ **RM_MOTOR_120_DEGREE_WaitStopFlagGet()**

```
fsp_err_t RM_MOTOR_120_DEGREE_WaitStopFlagGet ( motor_ctrl_t *const p_ctrl,
motor_wait_stop_flag_t *const p_flag_wait_stop )
```

Get wait stop flag. Implements `motor_api_t::waitStopFlagGet`.

Example:

```
/* Get wait stop flag */
(void) RM_MOTOR_120_DEGREE_WaitStopFlagGet(g_motor_120_degree0.p_ctrl,
&smpl_wait_stop_flag);
```

Return values

FSP_SUCCESS	Successfully got wait stop flag.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_POINTER	Data received pointer is invalid.

Note

◆ **RM_MOTOR_120_DEGREE_ErrorCheck()**

```
fsp_err_t RM_MOTOR_120_DEGREE_ErrorCheck ( motor_ctrl_t *const p_ctrl, uint16_t *const p_error )
```

Check the occurrence of error. Implements `motor_api_t::errorCheck`.

Example:

```
/* Check error */
(void) RM_MOTOR_120_DEGREE_ErrorCheck(g_motor_120_degree0.p_ctrl, &smpl_error);
```

Return values

FSP_SUCCESS	Successfully error checke process.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_POINTER	Data received pointer is invalid.

Note

◆ **RM_MOTOR_120_DEGREE_PositionSet()**

```
fsp_err_t RM_MOTOR_120_DEGREE_PositionSet ( motor_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position )
```

Set position reference. Implements `motor_api_t::positionSet`.

Example:

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
---------------------	--------------

Note

◆ **RM_MOTOR_120_DEGREE_AngleGet()**

```
fsp_err_t RM_MOTOR_120_DEGREE_AngleGet ( motor_ctrl_t *const p_ctrl, float *const p_angle_rad )
```

Set position reference. Implements [motor_api_t::angleGet](#).

Example:

Return values

FSP_ERR_UNSUPPORTED

Unsupported.

Functions

`fsp_err_t` [RM_MOTOR_120_DRIVER_Open](#) ([motor_120_driver_ctrl_t](#) *const p_ctrl, [motor_120_driver_cfg_t](#) const *const p_cfg)

Opens and configures the motor 120 driver module. Implements [motor_120_driver_api_t::open](#). [More...](#)

`fsp_err_t` [RM_MOTOR_120_DRIVER_Close](#) ([motor_120_driver_ctrl_t](#) *const p_ctrl)

Disables specified motor 120 driver module. Implements [motor_120_driver_api_t::close](#). [More...](#)

`fsp_err_t` [RM_MOTOR_120_DRIVER_Run](#) ([motor_120_driver_ctrl_t](#) *const p_ctrl)

Run motor (Start motor rotation). Implements [motor_120_driver_api_t::run](#). [More...](#)

`fsp_err_t` [RM_MOTOR_120_DRIVER_Stop](#) ([motor_120_driver_ctrl_t](#) *const p_ctrl)

Stop motor (Stop motor rotation). Implements [motor_120_driver_api_t::stop](#). [More...](#)

`fsp_err_t` [RM_MOTOR_120_DRIVER_Reset](#) ([motor_120_driver_ctrl_t](#) *const p_ctrl)

Reset variables of motor 120 driver module. Implements

[motor_120_driver_api_t::reset](#). [More...](#)

`fsp_err_t` [RM_MOTOR_120_DRIVER_PhaseVoltageSet](#) ([motor_120_driver_ctrl_t](#) *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage)

Set phase voltage data to calculate PWM duty. Implements [motor_120_driver_api_t::phaseVoltageSet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_120_DRIVER_PhasePatternSet](#) ([motor_120_driver_ctrl_t](#) *const p_ctrl, [motor_120_driver_phase_pattern_t](#) const pattern)

Set phase voltage pattern. Implements [motor_120_driver_api_t::phasePatternSet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_120_DRIVER_CurrentGet](#) ([motor_120_driver_ctrl_t](#) *const p_ctrl, [motor_120_driver_current_status_t](#) *const p_current_status)

Get calculated phase current, Vdc & Va_max data. Implements [motor_120_driver_api_t::currentGet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_120_DRIVER_CurrentOffsetCalc](#) ([motor_120_driver_ctrl_t](#) *const p_ctrl)

current offset detection. Implements [motor_120_driver_api_t::currentOffsetCalc](#) [More...](#)

`fsp_err_t` [RM_MOTOR_120_DRIVER_FlagCurrentOffsetGet](#) ([motor_120_driver_ctrl_t](#) *const p_ctrl, [motor_120_driver_flag_offset_calc_t](#) *const p_flag_offset)

Get the flag of finish current offset detection. Implements [motor_120_driver_api_t::flagCurrentOffsetGet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_120_DRIVER_ParameterUpdate](#) ([motor_120_driver_ctrl_t](#) *const p_ctrl, [motor_120_driver_cfg_t](#) const *const p_cfg)

Update the parameters of 120 driver module. Implements [motor_120_driver_api_t::parameterUpdate](#). [More...](#)

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the [Interface](#).

Overview

The motor 120 degree driver module is used to translate phase voltage to PWM duty and output PWM, and detect phase current, voltage and main line voltage. This module should be called cyclically at included A/D conversion finish interrupt.

BLOCK DIAGRAM OF SENSORLESS VECTOR CONTROL

It is a block diagram of sensorless vector control. This shows the correspondence between modules and functional blocks.

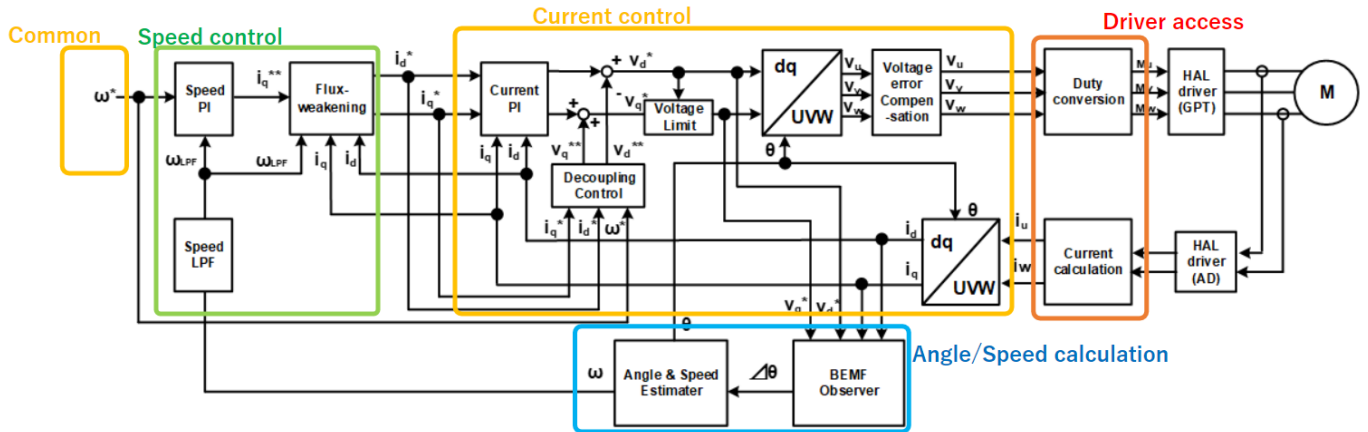

Figure 209: Image of Current Control Module(yellow block)

Features

The motor 120 degree driver module has below features.

- Calculate each phase(U/V/W) PWM duty according to reference and output PWM.
- Detect each phase current, phase voltage and main line voltage.
- Detect and correct A/D offset at phase current and voltage channel

Configuration

Build Time Configurations for rm_motor_120_driver

The following build time configurations are defined in fsp_cfg/rm_motor_120_driver_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > ADC and PWM modulation (rm_motor_120_driver)

This module can be added to the Stacks tab via New Stack > Motor > ADC and PWM modulation (rm_motor_120_driver).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_120_driver0	Module name.

General > 120 degree control type	<ul style="list-style-type: none"> • Sensorless • Hall 	Sensorless	120 degree control type
General > PWM output port UP	Manual Entry	BSP_IO_PORT_06_PIN_0_1	PWM output port UP
General > PWM output port UN	Manual Entry	BSP_IO_PORT_06_PIN_0_0	PWM output port UN
General > PWM output port VP	Manual Entry	BSP_IO_PORT_01_PIN_1_3	PWM output port VP
General > PWM output port VN	Manual Entry	BSP_IO_PORT_01_PIN_1_4	PWM output port VN
General > PWM output port WP	Manual Entry	BSP_IO_PORT_01_PIN_1_1	PWM output port WP
General > PWM output port WN	Manual Entry	BSP_IO_PORT_01_PIN_1_2	PWM output port WN
General > PWM timer frequency (MHz)	Must be a valid non-negative value.	120	GPT PWM timer frequency
General > PWM carrier period (Microseconds)	Must be a valid non-negative value.	50	GPT PWM carrier period
General > Dead time (Raw counts)	Must be a valid non-negative value.	240	GPT PWM dead time
General > Current range (A)	Must be a valid non-negative value.	27.5	Current range to measure(Maximum input current)
General > Voltage range (V)	Must be a valid non-negative value.	111.0	Voltage range to measure(Maximum input main line voltage)
General > Resolution of A/D conversion	Manual Entry	0xFFF	Resolution of A/D conversion
General > Offset of A/D conversion for current	Manual Entry	0x745	Offset of A/D conversion for current
General > Conversion level of A/D conversion for voltage	Must be a valid non-negative value.	0.66	Conversion level of A/D conversion for voltage
General > Counts for current offset measurement	Must be a valid non-negative value.	500	How many times to measure current offset
General > Input voltage	Must be a valid non-negative value.	24.0	Input voltage
General > A/D conversion channel for U phase current	Manual Entry	ADC_CHANNEL_0	Specify the A/D channel for U phase current
General > A/D	Manual Entry	ADC_CHANNEL_2	Specify the A/D

conversion channel for W phase current			channel for W phase current
General > A/D conversion channel for main line voltage	Manual Entry	ADC_CHANNEL_5	Specify the A/D channel for main line voltage
General > A/D conversion channel for U phase voltage	Manual Entry	ADC_CHANNEL_18	Specify the A/D channel for U phase voltage
General > A/D conversion channel for V phase voltage	Manual Entry	ADC_CHANNEL_20	Specify the A/D channel for V phase voltage
General > A/D conversion channel for W phase voltage	Manual Entry	ADC_CHANNEL_6	Specify the A/D channel for W phase voltage
General > GTIOCA stop level	<ul style="list-style-type: none"> Pin Level Low Pin Level High 	Pin Level High	Select the behavior of the output pin when the timer is stopped.
General > GTIOCB stop level	<ul style="list-style-type: none"> Pin Level Low Pin Level High 	Pin Level High	Select the behavior of the output pin when the timer is stopped.
Modulation > Maximum duty	Must be a valid non-negative value.	0.9375	Maximum duty of PWM
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called at A/D conversion finish interrupt.

Clock Configuration

Set used clock with included GPT timer.

Pin Configuration

Depend on included GPT three phase module and ADC module.

Usage Notes

Limitations

Basically no limitation exists.

Examples

Basic Example

This is a basic example of minimal use of the Motor 120 degree driver in an application.

```
void motor_120_driver_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;

    /* Initializes the module. */
    err = RM_MOTOR_120_DRIVER_Open(&g_motor_120_driver0.p_ctrl,
    &g_motor_120_driver0.p_cfg);
    /* Start PWM output */
    err = RM_MOTOR_120_DRIVER_Run(&g_motor_120_driver0.p_ctrl);
    assert(FSP_SUCCESS == err);

    /* Basically run this module at cyclic interrupt (e.g. included GPT PWM carrier
    intterrupt).
    * This implementation is an example. */
    // while (true)
    {
        /* Application work here. */
        /* Caclutarion of current offset */
        (void) RM_MOTOR_120_DRIVER_CurrentOffsetCalc(&g_motor_120_driver0.p_ctrl);
        /* Get electric current, main line voltage and maximum voltage component */
        (void) RM_MOTOR_120_DRIVER_CurrentGet(&g_motor_120_driver0.p_ctrl,
    &g_current_status);
        /* Get the flag of A/D convderted current offset */
        (void) RM_MOTOR_120_DRIVER_FlagCurrentOffsetGet(&g_motor_120_driver0.p_ctrl,
    &ul_get_flg_offset);
        // Perform current control process here
        /* Set phase voltage */
        (void) RM_MOTOR_120_DRIVER_PhaseVoltageSet(&g_motor_120_driver0.p_ctrl, 1.0F,
    1.0F, 1.0F);
        /* Set phase pattern */
        (void) RM_MOTOR_120_DRIVER_PhasePatternSet(&g_motor_120_driver0.p_ctrl,
    MOTOR_120_DRIVER_API_VP_ON_WN_PWM);
        (void) RM_MOTOR_120_DRIVER_ParameterUpdate(&g_motor_120_driver0.p_ctrl,
    &g_motor_120_driver0.p_cfg);
    }
    (void) RM_MOTOR_120_DRIVER_Stop(&g_motor_120_driver0.p_ctrl);
}
```

```

(void) RM_MOTOR_120_DRIVER_Reset(&g_motor_120_driver0.p_ctrl);

//

(void) RM_MOTOR_120_DRIVER_Close(&g_motor_120_driver0.p_ctrl);
}

```

Function Documentation◆ **RM_MOTOR_120_DRIVER_Open()**

```
fsp_err_t RM_MOTOR_120_DRIVER_Open ( motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_cfg_t const *const p_cfg )
```

Opens and configures the motor 120 driver module. Implements `motor_120_driver_api_t::open`.

Example:

```
/* Initializes the module. */
err = RM_MOTOR_120_DRIVER_Open(&g_motor_120_driver0.p_ctrl,
&g_motor_120_driver0.p_cfg);
```

Return values

<code>FSP_SUCCESS</code>	Motor 120 driver successfully configured.
<code>FSP_ERR_ASSERTION</code>	Null pointer, or one or more configuration options is invalid.
<code>FSP_ERR_ALREADY_OPEN</code>	Module is already open. This module can only be opened once.
<code>FSP_ERR_INVALID_ARGUMENT</code>	Input parameter error.

◆ **RM_MOTOR_120_DRIVER_Close()**

```
fsp_err_t RM_MOTOR_120_DRIVER_Close ( motor_120_driver_ctrl_t *const p_ctrl)
```

Disables specified motor 120 driver module. Implements `motor_120_driver_api_t::close`.

Example:

```
(void) RM_MOTOR_120_DRIVER_Close(&g_motor_120_driver0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_DRIVER_Run()**

```
fsp_err_t RM_MOTOR_120_DRIVER_Run ( motor_120_driver_ctrl_t *const p_ctrl)
```

Run motor (Start motor rotation). Implements `motor_120_driver_api_t::run`.

Example:

```
/* Start PWM output */
err = RM_MOTOR_120_DRIVER_Run(&g_motor_120_driver0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_DRIVER_Stop()**

```
fsp_err_t RM_MOTOR_120_DRIVER_Stop ( motor_120_driver_ctrl_t *const p_ctrl)
```

Stop motor (Stop motor rotation). Implements `motor_120_driver_api_t::stop`.

Example:

```
(void) RM_MOTOR_120_DRIVER_Stop(&g_motor_120_driver0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_DRIVER_Reset()**

```
fsp_err_t RM_MOTOR_120_DRIVER_Reset ( motor_120_driver_ctrl_t *const p_ctrl)
```

Reset variables of motor 120 driver module. Implements `motor_120_driver_api_t::reset`.

Example:

```
(void) RM_MOTOR_120_DRIVER_Reset(&g_motor_120_driver0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_DRIVER_PhaseVoltageSet()

```
fsp_err_t RM_MOTOR_120_DRIVER_PhaseVoltageSet ( motor_120_driver_ctrl_t *const p_ctrl, float
const u_voltage, float const v_voltage, float const w_voltage )
```

Set phase voltage data to calculate PWM duty. Implements `motor_120_driver_api_t::phaseVoltageSet`.

Example:

```
/* Set phase voltage */
(void) RM_MOTOR_120_DRIVER_PhaseVoltageSet(&g_motor_120_driver0.p_ctrl, 1.0F,
1.0F, 1.0F);
```

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_DRIVER_PhasePatternSet()

```
fsp_err_t RM_MOTOR_120_DRIVER_PhasePatternSet ( motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_phase_pattern_t const pattern )
```

Set phase voltage pattern. Implements `motor_120_driver_api_t::phasePatternSet`.

Example:

```
/* Set phase pattern */
(void) RM_MOTOR_120_DRIVER_PhasePatternSet(&g_motor_120_driver0.p_ctrl,
MOTOR_120_DRIVER_API_VP_ON_WN_PWM);
```

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_120_DRIVER_CurrentGet()**

```
fsp_err_t RM_MOTOR_120_DRIVER_CurrentGet ( motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_current_status_t *const p_current_status )
```

Get calculated phase current, Vdc & Va_max data. Implements `motor_120_driver_api_t::currentGet`

Example:

```
/* Get electric current, main line voltage and maximum voltage component */
(void) RM_MOTOR_120_DRIVER_CurrentGet(&g_motor_120_driver0.p_ctrl,
&g_current_status);
```

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ **RM_MOTOR_120_DRIVER_CurrentOffsetCalc()**

```
fsp_err_t RM_MOTOR_120_DRIVER_CurrentOffsetCalc ( motor_120_driver_ctrl_t *const p_ctrl)
```

current offset detection. Implements `motor_120_driver_api_t::currentOffsetCalc`

Example:

```
/* Caclutarion of current offset */
(void) RM_MOTOR_120_DRIVER_CurrentOffsetCalc(&g_motor_120_driver0.p_ctrl);
```

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_DRIVER_FlagCurrentOffsetGet()

```
fsp_err_t RM_MOTOR_120_DRIVER_FlagCurrentOffsetGet ( motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_flag_offset_calc_t *const p_flag_offset )
```

Get the flag of finish current offset detection. Implements `motor_120_driver_api_t::flagCurrentOffsetGet`.

Example:

```
/* Get the flag of A/D converted current offset */
(void) RM_MOTOR_120_DRIVER_FlagCurrentOffsetGet(&g_motor_120_driver0.p_ctrl,
&ul_get_flg_offset);
```

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_DRIVER_ParameterUpdate()

```
fsp_err_t RM_MOTOR_120_DRIVER_ParameterUpdate ( motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_cfg_t const *const p_cfg )
```

Update the parameters of 120 driver module. Implements `motor_120_driver_api_t::parameterUpdate`.

Example:

```
(void) RM_MOTOR_120_DRIVER_ParameterUpdate(&g_motor_120_driver0.p_ctrl,
&g_motor_120_driver0.p_cfg);
```

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

4.2.101 Motor Current (rm_motor_current)

Modules

Functions

`fsp_err_t RM_MOTOR_CURRENT_Open (motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t const *const p_cfg)`

Opens and configures the Motor Current Module. Implements `motor_current_api_t::open`. [More...](#)

`fsp_err_t RM_MOTOR_CURRENT_Close (motor_current_ctrl_t *const p_ctrl)`

Disables specified Motor Current Module. Implements `motor_current_api_t::close`. [More...](#)

Run(Start) the Current Control. Implements `motor_current_api_t::run`. [More...](#)

`fsp_err_t RM_MOTOR_CURRENT_ParameterSet (motor_current_ctrl_t *const p_ctrl, motor_current_input_t const *const p_st_input)`

Set (Input) Parameter Data. Implements `motor_current_api_t::parameterSet`. [More...](#)

`fsp_err_t RM_MOTOR_CURRENT_CurrentReferenceSet (motor_current_ctrl_t *const p_ctrl, float const id_reference, float const iq_reference)`

Set Current Reference Data. Implements `motor_current_api_t::currentReferenceSet`. [More...](#)

`fsp_err_t RM_MOTOR_CURRENT_SpeedPhaseSet (motor_current_ctrl_t *const p_ctrl, float const speed, float const phase)`

Set Current Speed & rotor phase Data. Implements `motor_current_api_t::speedPhaseSet`. [More...](#)

`fsp_err_t RM_MOTOR_CURRENT_CurrentSet (motor_current_ctrl_t *const p_ctrl, motor_current_input_current_t const *const p_st_current, motor_current_input_voltage_t const *const p_st_voltage)`

Set d/q-axis Current & Voltage Data. Implements `motor_current_api_t::currentSet`. [More...](#)

`fsp_err_t RM_MOTOR_CURRENT_ParameterGet (motor_current_ctrl_t *const p_ctrl, motor_current_output_t *const p_st_output)`

Get Output Parameters. Implements `motor_current_api_t::parameterGet`. [More...](#)

`fsp_err_t RM_MOTOR_CURRENT_CurrentGet (motor_current_ctrl_t *const p_ctrl, float *const p_id, float *const p_iq)`

Get d/q-axis Current. Implements `motor_current_api_t::currentGet`. [More...](#)

`fsp_err_t RM_MOTOR_CURRENT_PhaseVoltageGet (motor_current_ctrl_t *const p_ctrl, motor_current_get_voltage_t *const p_voltage)`

Gets the set phase voltage. Implements `motor_current_api_t::phaseVoltageGet`. [More...](#)

`fsp_err_t RM_MOTOR_CURRENT_ParameterUpdate (motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t const *const p_cfg)`

Update the parameters of Current Control. Implements `motor_current_api_t::parameterUpdate`. [More...](#)

`void rm_motor_current_encoder_cyclic (motor_current_instance_t const *p_ctrl)`

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the [Motor current Interface](#).

Overview

The motor current is used to control the electric current of motor rotation in an application. This module should be called cyclically after the A/D conversion of electric current of each phase in an application. This module calculates each phase voltage with input current reference, electric current and rotor angle.

Features

The Motor Current Module has below features.

- Calculate each phase(U/V/W) voltage.
- Decoupling Control.
- Voltage Error Compensation.

Configuration

Build Time Configurations for rm_motor_current

The following build time configurations are defined in fsp_cfg/rm_motor_current_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > Motor Current Controller (rm_motor_current)

This module can be added to the Stacks tab via New Stack > Motor > Motor Current Controller (rm_motor_current).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_current0	Module name.
General > Sensor type	<ul style="list-style-type: none"> • Sensorless • Encoder 	Sensorless	Select sensor type
General > Shunt type	<ul style="list-style-type: none"> • 1 shunt • 2 shunt • 3 shunt 	2 shunt	Select shunt type
General > Current control decimation	Must be a valid non-negative value.	0	Decimation of current control.
General > PWM carrier frequency (kHz)	Must be a valid non-negative value.	20.0F	PWM carrier frequency.
General > Input voltage (V)	Must be a valid non-negative value.	24.0F	Input voltage for limitation of current PI control.
General > Sample delay compensation	<ul style="list-style-type: none"> • Disable • Enable 	Enable	Select enable/disable sample delay compensation.
General > Voltage error compensation	<ul style="list-style-type: none"> • Disable • Enable 	Enable	Select enable/disable voltage error compensation.
General > Voltage error compensation table of voltage 1	Must be a valid non-negative value.	0.672F	Voltage error compensation table of voltage.
General > Voltage error compensation table of voltage 2	Must be a valid non-negative value.	0.945F	Voltage error compensation table of voltage.
General > Voltage error compensation table of voltage 3	Must be a valid non-negative value.	1.054F	Voltage error compensation table of voltage.
General > Voltage error compensation	Must be a valid non-negative value.	1.109F	Voltage error compensation table of

table of voltage 4			voltage.
General > Voltage error compensation table of voltage 5	Must be a valid non-negative value.	1.192F	Voltage error compensation table of voltage.
General > Voltage error compensation table of current 1	Must be a valid non-negative value.	0.013F	Voltage error compensation table of current.
General > Voltage error compensation table of current 2	Must be a valid non-negative value.	0.049F	Voltage error compensation table of current.

Motor Parameter > Rotor inertia (kgm ²)	Must be a valid non-negative value.	0.0000028F	Rotor inertia

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the Period of Current Control with none-negative value.
- Set the Reference Voltage with none-negative value.

Examples

Basic Example

This is a basic example of minimal use of the Motor Current in an application.

```
void motor_current_basic_example (void)
{
    motor_current_input_current_t temp_input_current;
    motor_current_input_voltage_t temp_input_voltage;
    motor_current_get_voltage_t temp_get_voltage;

    fsp_err_t err = FSP_SUCCESS;

    /* Initializes the module. */
    err = RM_MOTOR_CURRENT_Open(g_test_motor_current.p_ctrl,
g_test_motor_current.p_cfg);

    assert(FSP_SUCCESS == err);

    /* Basically run this module at A/D conversion finish interrupt.
    * This implementation is an example. */
    // while (true)
    {
        /* Application work here. */
        /* Set current reference before get phase voltage */
        (void) RM_MOTOR_CURRENT_CurrentReferenceSet(g_test_motor_current.p_ctrl, 1.0F,
1.0F);

        /* Set speed and phase data before get phase voltage */
        (void) RM_MOTOR_CURRENT_SpeedPhaseSet(g_test_motor_current.p_ctrl, 104.72F,
```

```
1.0F);

    temp_input_current.iu    = 1.0F;
    temp_input_current.iv    = 1.0F;
    temp_input_current.iw    = 1.0F;
    temp_input_voltage.vdc   = 24.0F;
    temp_input_voltage.va_max = 24.0F;

/* Set electric current and voltage before get phase voltage */
    (void) RM_MOTOR_CURRENT_CurrentSet(g_test_motor_current.p_ctrl,
temp_input_current, temp_input_voltage);

/* Activate the process. */
    (void) RM_MOTOR_CURRENT_Run(g_test_motor_current.p_ctrl);

/* Get d/q-axis current*/
    (void) RM_MOTOR_CURRENT_CurrentGet(g_test_motor_current.p_ctrl, &f_get_id,
&f_get_iq);

/* Get the flag of PI control */
    (void) RM_MOTOR_CURRENT_PhaseVolageGet(g_test_motor_current.p_ctrl,
&temp_get_voltage);

/* Get Output Parameter */
    (void) RM_MOTOR_CURRENT_ParameterGet(g_test_motor_current.p_ctrl,
&test_output);

    (void) RM_MOTOR_CURRENT_ParameterUpdate(g_test_motor_current.p_ctrl,
g_test_motor_current.p_cfg);
}

/* Reset the process. */
    (void) RM_MOTOR_CURRENT_Reset(g_test_motor_current.p_ctrl);

/* Close the module. */
    (void) RM_MOTOR_CURRENT_Close(g_test_motor_current.p_ctrl);
}
```

Enumerations

```
enum motor_current_shunt_type_t
```

Enumeration Type Documentation

◆ **motor_current_shunt_type_t**

enum <code>motor_current_shunt_type_t</code>	
Selection of shunt type	
Enumerator	
<code>MOTOR_CURRENT_SHUNT_TYPE_1_SHUNT</code>	Only use U phase current.
<code>MOTOR_CURRENT_SHUNT_TYPE_2_SHUNT</code>	Use U and W phase current.
<code>MOTOR_CURRENT_SHUNT_TYPE_3_SHUNT</code>	Use all phase current.

Function Documentation◆ **RM_MOTOR_CURRENT_Open()**

```
fsp_err_t RM_MOTOR_CURRENT_Open ( motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t
const *const p_cfg )
```

Opens and configures the Motor Current Module. Implements `motor_current_api_t::open`.

Return values

<code>FSP_SUCCESS</code>	Motor Current successfully configured.
<code>FSP_ERR_ASSERTION</code>	Null pointer, or one or more configuration options is invalid.
<code>FSP_ERR_ALREADY_OPEN</code>	Module is already open. This module can only be opened once.
<code>FSP_ERR_INVALID_ARGUMENT</code>	Configuration parameter error.

◆ **RM_MOTOR_CURRENT_Close()**

```
fsp_err_t RM_MOTOR_CURRENT_Close ( motor_current_ctrl_t *const p_ctrl)
```

Disables specified Motor Current Module. Implements `motor_current_api_t::close`.

Return values

<code>FSP_SUCCESS</code>	Successfully closed.
<code>FSP_ERR_ASSERTION</code>	Null pointer.
<code>FSP_ERR_NOT_OPEN</code>	Module is not open.

◆ **RM_MOTOR_CURRENT_Reset()**

```
fsp_err_t RM_MOTOR_CURRENT_Reset ( motor_current_ctrl_t *const p_ctrl)
```

Reset variables of Motor Current Module. Implements `motor_current_api_t::reset`.

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_CURRENT_Run()**

```
fsp_err_t RM_MOTOR_CURRENT_Run ( motor_current_ctrl_t *const p_ctrl)
```

Run(Start) the Current Control. Implements `motor_current_api_t::run`.

Return values

FSP_SUCCESS	Successfully run.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_CURRENT_ParameterSet()**

```
fsp_err_t RM_MOTOR_CURRENT_ParameterSet ( motor_current_ctrl_t *const p_ctrl,
motor_current_input_t const *const p_st_input )
```

Set (Input) Parameter Data. Implements `motor_current_api_t::parameterSet`.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input argument error.

◆ **RM_MOTOR_CURRENT_CurrentReferenceSet()**

```
fsp_err_t RM_MOTOR_CURRENT_CurrentReferenceSet ( motor_current_ctrl_t *const p_ctrl, float
const id_reference, float const iq_reference )
```

Set Current Reference Data. Implements `motor_current_api_t::currentReferenceSet`.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_CURRENT_SpeedPhaseSet()**

```
fsp_err_t RM_MOTOR_CURRENT_SpeedPhaseSet ( motor_current_ctrl_t *const p_ctrl, float const
speed, float const phase )
```

Set Current Speed & rotor phase Data. Implements `motor_current_api_t::speedPhaseSet`.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_CURRENT_CurrentSet()**

```
fsp_err_t RM_MOTOR_CURRENT_CurrentSet ( motor_current_ctrl_t *const p_ctrl,
motor_current_input_current_t const *const p_st_current, motor_current_input_voltage_t const
*const p_st_voltage )
```

Set d/q-axis Current & Voltage Data. Implements `motor_current_api_t::currentSet`.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ **RM_MOTOR_CURRENT_ParameterGet()**

```
fsp_err_t RM_MOTOR_CURRENT_ParameterGet ( motor_current_ctrl_t *const p_ctrl,
motor_current_output_t *const p_st_output )
```

Get Output Parameters. Implements `motor_current_api_t::parameterGet`.

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ **RM_MOTOR_CURRENT_CurrentGet()**

```
fsp_err_t RM_MOTOR_CURRENT_CurrentGet ( motor_current_ctrl_t *const p_ctrl, float *const p_id,
float *const p_iq )
```

Get d/q-axis Current. Implements `motor_current_api_t::currentGet`.

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ **RM_MOTOR_CURRENT_PhaseVoltageGet()**

```
fsp_err_t RM_MOTOR_CURRENT_PhaseVoltageGet ( motor_current_ctrl_t *const p_ctrl,
motor_current_get_voltage_t *const p_voltage )
```

Gets the set phase voltage. Implements `motor_current_api_t::phaseVoltageGet`.

Return values

FSP_SUCCESS	Successful data calculation.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ **RM_MOTOR_CURRENT_ParameterUpdate()**

```
fsp_err_t RM_MOTOR_CURRENT_ParameterUpdate ( motor_current_ctrl_t *const p_ctrl,
motor_current_cfg_t const *const p_cfg )
```

Update the parameters of Current Control. Implements `motor_current_api_t::parameterUpdate`.

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **rm_motor_current_encoder_cyclic()**

```
void rm_motor_current_encoder_cyclic ( motor_current_instance_t const * p_ctrl)
```

```
(end addtogroup MOTOR_CURRENT)
```

4.2.102 Motor Driver (rm_motor_driver)

Modules

Functions

```
fsp_err_t RM_MOTOR_DRIVER_Open (motor_driver_ctrl_t *const p_ctrl,

`fsp_err_t` [RM_MOTOR_DRIVER_CurrentGet](#) (`motor_driver_ctrl_t *const p_ctrl, motor_driver_current_get_t *const p_current_get`)

Get calculated phase Current, Vdc & Va_max data. Implements [motor_driver_api_t::currentGet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_DRIVER_FlagCurrentOffsetGet](#) (`motor_driver_ctrl_t *const p_ctrl, uint8_t *const p_flag_offset`)

Get the flag of finish current offset detection. Implements [motor_driver_api_t::flagCurrentOffsetGet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_DRIVER_CurrentOffsetRestart](#) (`motor_driver_ctrl_t *const p_ctrl`)

Restart the current offset detection. Implements [motor_driver_api_t::currentOffsetRestart](#). [More...](#)

`fsp_err_t` [RM_MOTOR_DRIVER_ParameterUpdate](#) (`motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg`)

Update the parameters of Driver Module. Implements [motor_driver_api_t::parameterUpdate](#). [More...](#)

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the [Motor driver Interface](#).

Overview

The motor driver module is used to translate phase voltage to PWM duty and output PWM, and detect phase current and main line voltage. This module should be called cyclically at included A/D Conversion finish interrupt.

Features

The Motor Driver Module has below features.

- Calculate each phase(U/V/W) PWM duty according to reference and output PWM.
- Detect each phase current and main line voltage.
- Detect and correct A/D offset at phase current channel

Configuration

Build Time Configurations for rm_motor_driver

The following build time configurations are defined in fsp_cfg/rm_motor_driver_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.
ADC_B Support	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Select ADC_B module support.

Configurations for Motor > ADC and PWM Modulation (rm_motor_driver)

This module can be added to the Stacks tab via New Stack > Motor > ADC and PWM Modulation (rm_motor_driver).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_driver0	Module name.
General > Shunt type	<ul style="list-style-type: none"> • 1 shunt • 2 shunt • 3 shunt 	2 shunt	Select shunt type
General > Modulation method	<ul style="list-style-type: none"> • SVPWM • SPWM 	SVPWM	Select PWM modulation method
General > PWM Timer Frequency (MHz)	Must be a valid non-negative value.	120	GPT PWM timer frequency
General > PWM Carrier Period (Microseconds)	Must be a valid non-negative value.	50	GPT PWM carrier period
General > Dead Time (Raw Counts)	Must be a valid non-negative value.	240	GPT PWM dead time
General > Current Range (A)	Must be a valid non-negative value.	27.5F	Current range to measure(Maximum input current)
General > Voltage Range (V)	Must be a valid non-negative value.	111.0F	Voltage range to measure(Maximum input Main Line Voltage)
General > Counts for current offset measurement	Must be a valid non-negative value.	500	How many times to measure current offset
General > A/D conversion channel for U Phase current	Manual Entry	0	Specify the A/D channel for U phase current
General > A/D conversion channel for W Phase current	Manual Entry	2	Specify the A/D channel for W phase current

General > A/D conversion channel for Main Line Voltage	Manual Entry	5	Specify the A/D channel for main line voltage
General > A/D conversion channel for V Phase current	Manual Entry	1	Specify the A/D channel for V phase current
General > Adjustment value to current A/D	Must be a valid non-negative value.	20.0	Value to adjust 1shunt A/D double buffer
General > Minimum difference of PWM duty	Manual Entry	300	Minimum difference of PWM duty
General > Adjustment delay of A/D conversion	Manual Entry	240	Adjustment delay of A/D conversion
General > Input Voltage (V)	Must be a valid non-negative value.	24.0F	Input voltage
General > Resolution of A/D conversion	Manual Entry	0xFFF	Resolution of A/D conversion
General > Offset of A/D conversion for current	Manual Entry	0x745	Offset of A/D conversion for current
General > Conversion level of A/D conversion for voltage	Must be a valid non-negative value.	0.66F	Conversion level of A/D conversion for voltage
General > GTIOCA Stop Level	<ul style="list-style-type: none"> Pin Level Low Pin Level High 	Pin Level High	Select the behavior of the output pin when the timer is stopped.
General > GTIOCB Stop Level	<ul style="list-style-type: none"> Pin Level Low Pin Level High 	Pin Level High	Select the behavior of the output pin when the timer is stopped.
Modulation > Maximum Duty	Must be a valid non-negative value.	0.9375F	Maximum duty of PWM
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called at A/D conversion finish interrupt.

Clock Configuration

Set used clock with included GPT timer.

Pin Configuration

Depend on included GPT Three Phase Module and ADC Module.

Usage Notes

Limitations

Basically no limitation exists.

Examples

Basic Example

This is a basic example of minimal use of the Motor Driver in an application.

```
void motor_driver_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = RM_MOTOR_DRIVER_Open(&g_motor_driver0.p_ctrl, &g_motor_driver0.p_cfg);
    assert(FSP_SUCCESS == err);
    /* Basically run this module at cyclic interrupt (e.g. included GPT PWM Carrier
    interrupt).
    * This implementation is an example. */
    // while (true)
    {
        /* Application work here. */
        /* Get electric current, main line voltage and maximum voltage component */
        (void) RM_MOTOR_DRIVER_CurrentGet(&g_motor_driver0.p_ctrl, &f_get_iu,
        &f_get_iw, &f_get_vdc, &f_get_va_max);
        /* Get the flag of A/D converted current offset */
        (void) RM_MOTOR_DRIVER_FlagCurrentOffsetGet(&g_motor_driver0.p_ctrl,
        &ul_get_flg_offset);
        // Perform current control process here
        /* Set phase voltage */
        (void) RM_MOTOR_DRIVER_PhaseVoltageSet(&g_motor_driver0.p_ctrl, 1.0F, 1.0F,
        1.0F);
        (void) RM_MOTOR_DRIVER_ParameterUpdate(&g_motor_driver0.p_ctrl,
        &g_motor_driver0.p_cfg);
    }
    (void) RM_MOTOR_DRIVER_Reset(&g_motor_driver0.p_ctrl);
    //
    (void) RM_MOTOR_DRIVER_Close(&g_motor_driver0.p_ctrl);
}
```

}

Enumerations

```
enum motor_driver_modulation_method_t
```

Enumeration Type Documentation

Function Documentation

◆ RM_MOTOR_DRIVER_Open()

fsp_err_t RM_MOTOR_DRIVER_Open (motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg)	
Opens and configures the Motor Driver module. Implements motor_driver_api_t::open .	
Return values	
FSP_SUCCESS	Motor Driver successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.

◆ RM_MOTOR_DRIVER_Close()

fsp_err_t RM_MOTOR_DRIVER_Close (motor_driver_ctrl_t *const p_ctrl)	
Disables specified Motor Driver Module. Implements motor_driver_api_t::close .	
Return values	
FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_DRIVER_Reset()**

```
fsp_err_t RM_MOTOR_DRIVER_Reset ( motor_driver_ctrl_t *const p_ctrl)
```

Reset variables of Motor Driver Module. Implements `motor_driver_api_t::reset`.

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_DRIVER_PhaseVoltageSet()**

```
fsp_err_t RM_MOTOR_DRIVER_PhaseVoltageSet ( motor_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage )
```

Set Phase Voltage Data to calculate PWM duty. Implements `motor_driver_api_t::phaseVoltageSet`.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_DRIVER_CurrentGet()**

```
fsp_err_t RM_MOTOR_DRIVER_CurrentGet ( motor_driver_ctrl_t *const p_ctrl, motor_driver_current_get_t *const p_current_get )
```

Get calculated phase Current, Vdc & Va_max data. Implements `motor_driver_api_t::currentGet`.

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ **RM_MOTOR_DRIVER_FlagCurrentOffsetGet()**

```
fsp_err_t RM_MOTOR_DRIVER_FlagCurrentOffsetGet ( motor_driver_ctrl_t *const p_ctrl, uint8_t *const p_flag_offset )
```

Get the flag of finish current offset detection. Implements `motor_driver_api_t::flagCurrentOffsetGet`.

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ **RM_MOTOR_DRIVER_CurrentOffsetRestart()**

```
fsp_err_t RM_MOTOR_DRIVER_CurrentOffsetRestart ( motor_driver_ctrl_t *const p_ctrl)
```

Restart the current offset detection. Implements `motor_driver_api_t::currentOffsetRestart`.

Return values

FSP_SUCCESS	Successfully restarted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_DRIVER_ParameterUpdate()**

```
fsp_err_t RM_MOTOR_DRIVER_ParameterUpdate ( motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg )
```

Update the parameters of Driver Module. Implements `motor_driver_api_t::parameterUpdate`.

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

`fsp_err_t` [RM_MOTOR_ENCODER_WaitStopFlagGet](#) (`motor_ctrl_t *const p_ctrl`, `motor_wait_stop_flag_t *const p_flag`)
Get wait stop flag. Implements [motor_api_t::waitStopFlagGet](#). [More...](#)

Detailed Description

Control a SPM motor on RA MCUs. This module implements the [Motor encoder vector control \(rm_motor_encoder\)](#).

Overview

The motor encoder vector control is used to control motor rotation in an application. This module is meant to be used with Surface Permanent Magnet (SPM) motors and allows applications to start or stop motor rotation easily.

Features

The motor encoder module has below features.

- Start/stop motor rotation
- Error detection (over current, over speed, over voltage, low voltage)

Configuration

Build Time Configurations for `rm_motor_encoder`

The following build time configurations are defined in `fsp_cfg/rm_motor_encoder_cfg.h`:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP)	Default (BSP)	If selected code for

- Enabled
- Disabled

parameter checking is included in the build.

Configurations for Motor > Motor Encoder Vector Control (rm_motor_encoder)

This module can be added to the Stacks tab via New Stack > Motor > Motor Encoder Vector Control (rm_motor_encoder).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_encoder0	Module name.
General > Limit of over current (A)	Must be a valid non-negative value.	2.0F	Limit of over current.(Detection threshold)
General > Limit of over voltage (V)	Must be a valid non-negative value.	28.0F	Limit of over voltage.(Detection threshold)
General > Limit of over speed (rpm)	Must be a valid non-negative value.	2100.0F	Limit of over speed.(Detection threshold)
General > Limit of low voltage (V)	Must be a valid non-negative value.	18.0F	Limit of low voltage.(Detection threshold)
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called at speed control cyclic interrupt.

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple status transition process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

Examples

Basic Example

This is a basic example of minimal use of the motor encoder module in an application.

```
void motor_encoder_basic_example (void)
```

```
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = RM_MOTOR_ENCODER_Open(g_motor_encoder0.p_ctrl, g_motor_encoder0.p_cfg);
    handle_error(err);
    /* Set speed reference before motor run */
    (void) RM_MOTOR_ENCODER_SpeedSet(g_motor_encoder0.p_ctrl,
RM_MOTOR_ENCODER_TEST_OVER_SPEED_LIMIT);
    /* Set position reference before motor run */
    (void) RM_MOTOR_ENCODER_PositionSet(g_motor_encoder0.p_ctrl, &g_posref_sample1);
    /* Start motor rotation */
    (void) RM_MOTOR_ENCODER_Run(g_motor_encoder0.p_ctrl);
    /* Get current status */
    (void) RM_MOTOR_ENCODER_StatusGet(g_motor_encoder0.p_ctrl, &smpl_status);
    /* Get current rotor angle */
    (void) RM_MOTOR_ENCODER_AngleGet(g_motor_encoder0.p_ctrl, &smpl_angle);
    /* Get current motor speed */
    (void) RM_MOTOR_ENCODER_SpeedGet(g_motor_encoder0.p_ctrl, &smpl_speed);
    /* Check error */
    (void) RM_MOTOR_ENCODER_ErrorCheck(g_motor_encoder0.p_ctrl, &smpl_error);
    /* Stop motor rotation */
    (void) RM_MOTOR_ENCODER_Stop(g_motor_encoder0.p_ctrl);
    /* Stop motor rotation */
    (void) RM_MOTOR_ENCODER_ErrorSet(g_motor_encoder0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
    /* Reset Speed Control */
    (void) RM_MOTOR_ENCODER_Reset(g_motor_encoder0.p_ctrl);
    /* Close Speed Control */
    (void) RM_MOTOR_ENCODER_Close(g_motor_encoder0.p_ctrl);
}
```

Data Structures

```

Function Documentation◆ **RM_MOTOR_ENCODER_Open()**

```
fsp_err_t RM_MOTOR_ENCODER_Open ( motor_ctrl_t *const p_ctrl, motor_cfg_t const *const p_cfg )
```

Configure the MOTOR in register start mode. Implements [motor_api_t::open](#).

This function should only be called once as MOTOR configuration registers can only be written to once so subsequent calls will have no effect.

Example:

```
/* Initializes the module. */
err = RM_MOTOR_ENCODER_Open(g_motor_encoder0.p_ctrl, g_motor_encoder0.p_cfg);
```

Return values

FSP_SUCCESS	MOTOR successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

Note

◆ RM_MOTOR_ENCODER_Close()

`fsp_err_t RM_MOTOR_ENCODER_Close (motor_ctrl_t *const p_ctrl)`

Disables specified Motor Encoder Control block. Implements `motor_api_t::close`.

Example:

```
/* Close Speed Control */
(void) RM_MOTOR_ENCODER_Close(g_motor_encoder0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_Run()

`fsp_err_t RM_MOTOR_ENCODER_Run (motor_ctrl_t *const p_ctrl)`

Run Motor (Start motor rotation). Implements `motor_api_t::run`.

Example:

```
/* Start motor rotation */
(void) RM_MOTOR_ENCODER_Run(g_motor_encoder0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_Stop()

```
fsp_err_t RM_MOTOR_ENCODER_Stop ( motor_ctrl_t *const p_ctrl)
```

Stop Motor (Stop motor rotation). Implements [motor_api_t::stop](#).

Example:

```
/* Stop motor rotation */
(void) RM_MOTOR_ENCODER_Stop(g_motor_encoder0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_Reset()

```
fsp_err_t RM_MOTOR_ENCODER_Reset ( motor_ctrl_t *const p_ctrl)
```

Reset Motor Encoder Control block. Implements [motor_api_t::reset](#).

Example:

```
/* Reset Speed Control */
(void) RM_MOTOR_ENCODER_Reset(g_motor_encoder0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_ErrorSet()

```
fsp_err_t RM_MOTOR_ENCODER_ErrorSet ( motor_ctrl_t *const p_ctrl, motor_error_t const error )
```

Set error information. Implements `motor_api_t::errorSet`.

Example:

```
/* Stop motor rotation */
(void) RM_MOTOR_ENCODER_ErrorSet(g_motor_encoder0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_SpeedSet()

```
fsp_err_t RM_MOTOR_ENCODER_SpeedSet ( motor_ctrl_t *const p_ctrl, float const speed_rpm )
```

Set speed reference[rpm]. Implements `motor_api_t::speedSet`.

Example:

```
/* Set speed reference before motor run */
(void) RM_MOTOR_ENCODER_SpeedSet(g_motor_encoder0.p_ctrl,
RM_MOTOR_ENCODER_TEST_OVER_SPEED_LIMIT);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_PositionSet()

```
fsp_err_t RM_MOTOR_ENCODER_PositionSet ( motor_ctrl_t *const p_ctrl,
motor_speed_position_data_t const *const p_position )
```

Set position reference[degree]. Implements `motor_api_t::positionSet`.

Example:

```
/* Set position reference before motor run */
(void) RM_MOTOR_ENCODER_PositionSet(g_motor_encoder0.p_ctrl, &g_posref_sample1);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data set pointer is invalid..

Note

◆ RM_MOTOR_ENCODER_StatusGet()

```
fsp_err_t RM_MOTOR_ENCODER_StatusGet ( motor_ctrl_t *const p_ctrl, uint8_t *const p_status )
```

Get current control status. Implements `motor_api_t::statusGet`.

Example:

```
/* Get current status */
(void) RM_MOTOR_ENCODER_StatusGet(g_motor_encoder0.p_ctrl, &smpl_status);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ **RM_MOTOR_ENCODER_AngleGet()**

```
fsp_err_t RM_MOTOR_ENCODER_AngleGet ( motor_ctrl_t *const p_ctrl, float *const p_angle_rad )
```

Get current rotor angle. Implements `motor_api_t::angleGet`.

Example:

```
/* Get current rotor angle */
(void) RM_MOTOR_ENCODER_AngleGet(g_motor_encoder0.p_ctrl, &smpl_angle);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ **RM_MOTOR_ENCODER_SpeedGet()**

```
fsp_err_t RM_MOTOR_ENCODER_SpeedGet ( motor_ctrl_t *const p_ctrl, float *const p_speed_rpm )
```

Get rotational speed. Implements `motor_api_t::speedGet`.

Example:

```
/* Get current motor speed */
(void) RM_MOTOR_ENCODER_SpeedGet(g_motor_encoder0.p_ctrl, &smpl_speed);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ **RM_MOTOR_ENCODER_ErrorCheck()**

```
fsp_err_t RM_MOTOR_ENCODER_ErrorCheck ( motor_ctrl_t *const p_ctrl, uint16_t *const p_error )
```

Check the occurrence of Error. Implements `motor_api_t::errorCheck`.

Example:

```
/* Check error */
(void) RM_MOTOR_ENCODER_ErrorCheck(g_motor_encoder0.p_ctrl, &smpl_error);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ **RM_MOTOR_ENCODER_WaitStopFlagGet()**

```
fsp_err_t RM_MOTOR_ENCODER_WaitStopFlagGet ( motor_ctrl_t *const p_ctrl,
motor_wait_stop_flag_t *const p_flag )
```

Get wait stop flag. Implements `motor_api_t::waitStopFlagGet`.

Example:

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
---------------------	--------------

Note

4.2.104 Motor Angle and Speed Estimation (rm_motor_estimate)

Modules

Functions

```
fsp_err_t RM_MOTOR_ESTIMATE_Open (motor_angle_ctrl_t *const p_ctrl,
motor_angle_cfg_t const *const p_cfg)
```

Opens and configures the Angle Estimation module. Implements `motor_angle_api_t::open`. More...

`fsp_err_t RM_MOTOR_ESTIMATE_Close (motor_angle_ctrl_t *const p_ctrl)`
Disables specified Angle Estimation module. Implements `motor_angle_api_t::close`. [More...](#)

`fsp_err_t RM_MOTOR_ESTIMATE_Reset (motor_angle_ctrl_t *const p_ctrl)`
Reset variables of Angle Estimation module. Implements `motor_angle_api_t::reset`. [More...](#)

`fsp_err_t RM_MOTOR_ESTIMATE_CurrentSet (motor_angle_ctrl_t *const p_ctrl, motor_angle_current_t *const p_st_current, motor_angle_voltage_reference_t *const p_st_voltage)`
Set d/q-axis Current Data & Voltage Reference. Implements `motor_angle_api_t::currentSet`. [More...](#)

`fsp_err_t RM_MOTOR_ESTIMATE_SpeedSet (motor_angle_ctrl_t *const p_ctrl, float const speed_ctrl, float const damp_speed)`
Set Speed Information. Implements `motor_angle_api_t::speedSet`. [More...](#)

`fsp_err_t RM_MOTOR_ESTIMATE_FlagPiCtrlSet (motor_angle_ctrl_t *const p_ctrl, uint32_t const flag_pi)`
Set the flag of PI Control runs. Implements `motor_angle_api_t::flagPiCtrlSet`. [More...](#)

`fsp_err_t RM_MOTOR_ESTIMATE_AngleSpeedGet (motor_angle_ctrl_t *const p_ctrl, float *const p_angle, float *const p_speed, float *const p_phase_err)`
Gets the current rotor's angle and rotation speed. Implements `motor_angle_api_t::angleSpeedGet`. [More...](#)

`fsp_err_t RM_MOTOR_ESTIMATE_EstimatedComponentGet (motor_angle_ctrl_t *const p_ctrl, float *const p_ed, float *const p_eq)`
Gets estimated d/q-axis component. Implements `motor_angle_api_t::estimatedComponentGet`. [More...](#)

`fsp_err_t RM_MOTOR_ESTIMATE_ParameterUpdate (motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *const p_cfg)`
Update the parameters of Angle&Speed Estimation. Implements `motor_angle_api_t::parameterUpdate`. [More...](#)

`fsp_err_t RM_MOTOR_ESTIMATE_InternalCalculate (motor_angle_ctrl_t *const p_ctrl)`

Calculate internal parameters. Implements `motor_angle_api_t::internalCalculate`. [More...](#)

`fsp_err_t RM_MOTOR_ESTIMATE_AngleAdjust (motor_angle_ctrl_t *const p_ctrl)`

Angle Adjustment Process. Implements `motor_angle_api_t::angleAdjust`. [More...](#)

`fsp_err_t RM_MOTOR_ESTIMATE_EncoderCyclic (motor_angle_ctrl_t *const p_ctrl)`

Encoder Cyclic Process (Call in cyclic timer). Implements `motor_angle_api_t::encoderCyclic`. [More...](#)

`fsp_err_t RM_MOTOR_ESTIMATE_InfoGet (motor_angle_ctrl_t *const p_ctrl, motor_angle_encoder_info_t *const p_info)`

Gets information of Encoder Angle Module. Implements `motor_angle_api_t::infoGet`. [More...](#)

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the [Motor angle Interface](#).

Overview

The motor angle and speed estimation module is used to calculate rotor angle and rotational speed in an application. This module should be called cyclically after the A/D conversion of electric current of each phase in an application.

Features

The Motor Angle and Speed Estimation Module has below features.

- Calculate rotor angle [radian].
- Calculate rotational speed [radian/second].

Configuration

Build Time Configurations for `rm_motor_estimate`

The following build time configurations are defined in `fsp_cfg/rm_motor_estimate_cfg.h`:

Configuration	Options	Default	Description
---------------	---------	---------	-------------

Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.
--------------------	--	---------------	---

Configurations for Motor > Motor Angle (rm_motor_estimate)

This module can be added to the Stacks tab via New Stack > Motor > Motor Angle (rm_motor_estimate).

Configuration	Options	Default	Description
Motor Parameter > Pole pairs	Manual Entry	2	Pole pairs
Motor Parameter > Resistance[ohm]	Manual Entry	8.5F	Resistance
Motor Parameter > Inductance of d-axis[H]	Manual Entry	0.0045F	Inductance of d-axis
Motor Parameter > Inductance of q-axis[H]	Manual Entry	0.0045F	Inductance of q-axis
Motor Parameter > Permanent magnetic flux[Wb]	Manual Entry	0.02159F	Permanent magnetic flux
Motor Parameter > Rotor inertia[kgm ²]	Manual Entry	0.0000028F	Rotor inertia
Name	Name must be a valid C symbol	g_motor_angle0	Module name.
Openloop damping	<ul style="list-style-type: none"> • Disable • Enable 	Enable	Openloop damping functionally enable or disable
Natural frequency of BEMF observer	Manual Entry	1000.0F	Natural frequency of BEMF observer
Damping ratio of BEMF observer	Manual Entry	1.0F	Damping ratio of BEMF observer
Natural frequency of PLL Speed estimate loop	Manual Entry	20.0F	Natural frequency of PLL Speed estimate loop
Damping ratio of PLL Speed estimate loop	Manual Entry	1.0F	Damping ratio of PLL Speed estimate loop
Control period	Manual Entry	0.00005F	Control period

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

Developers should be aware of the following limitations when using the Motor Angle and Speed Estimation:

Examples

Basic Example

This is a basic example of minimal use of the Motor Angle and Speed Estimation in an application.

```
void motor_estimate_basic_example (void)
{
    fsp_err_t          err = FSP_SUCCESS;
    motor_angle_current_t  smpl_current;
    motor_angle_voltage_reference_t  smpl_voltage;
    /* Initializes the module. */
    err = RM_MOTOR_ESTIMATE_Open(&g_mtr_angle0_ctrl, &g_mtr_angle_set0_cfg);
    assert(FSP_SUCCESS == err);
    /* Basically run this module at A/D conversion finish interrupt.
     * This implementation is an example. */
    while (true)
    {
        /* Application work here. */
        /* Set PI Control Flag before get Angle/Speed and Estimated Component */
        (void) RM_MOTOR_ESTIMATE_FlagPiCtrlSet(&g_mtr_angle0_ctrl, 1U);
        smpl_current.id = 1.0F;
        smpl_current.iq = 1.0F;
        smpl_voltage.vd = 10.0F;
        smpl_voltage.vq = 10.0F;
        /* Set Current and Speed data before get Angle/Speed and Estimated Component */
        (void) RM_MOTOR_ESTIMATE_CurrentSet(&g_mtr_angle0_ctrl, smpl_current,
smpl_voltage);
        /* Set Internal Speed Reference & damping speed data before get Angle/Speed and
Estimated Component */
        (void) RM_MOTOR_ESTIMATE_SpeedSet(&g_mtr_angle0_ctrl, 104.27F, 10.0F);
    }
}
```

```

/* Get Angle/Speed data */
    (void) RM_MOTOR_ESTIMATE_AngleSpeedGet(&g_mtr_angle0_ctrl, &f_get_angle,
&f_get_speed, &f_get_phase_err);

/* Get Estimated Component */
    (void) RM_MOTOR_ESTIMATE_EstimatedComponentGet(&g_mtr_angle0_ctrl, &f_get_ed,
&f_get_eq);
}
}

```

Function Documentation

◆ RM_MOTOR_ESTIMATE_Open()

```
fsp_err_t RM_MOTOR_ESTIMATE_Open ( motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const
*const p_cfg )
```

Opens and configures the Angle Estimation module. Implements `motor_angle_api_t::open`.

Return values

FSP_SUCCESS	MTR_ANGL_EST successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

◆ RM_MOTOR_ESTIMATE_Close()

```
fsp_err_t RM_MOTOR_ESTIMATE_Close ( motor_angle_ctrl_t *const p_ctrl)
```

Disables specified Angle Estimation module. Implements `motor_angle_api_t::close`.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_ESTIMATE_Reset()**

```
fsp_err_t RM_MOTOR_ESTIMATE_Reset ( motor_angle_ctrl_t *const p_ctrl)
```

Reset variables of Angle Estimation module. Implements `motor_angle_api_t::reset`.

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_ESTIMATE_CurrentSet()**

```
fsp_err_t RM_MOTOR_ESTIMATE_CurrentSet ( motor_angle_ctrl_t *const p_ctrl,
motor_angle_current_t *const p_st_current, motor_angle_voltage_reference_t *const p_st_voltage
)
```

Set d/q-axis Current Data & Voltage Reference. Implements `motor_angle_api_t::currentSet`.

Return values

FSP_SUCCESS	Successfully set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_ESTIMATE_SpeedSet()**

```
fsp_err_t RM_MOTOR_ESTIMATE_SpeedSet ( motor_angle_ctrl_t *const p_ctrl, float const
speed_ctrl, float const damp_speed )
```

Set Speed Information. Implements `motor_angle_api_t::speedSet`.

Return values

FSP_SUCCESS	Successfully set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_ESTIMATE_FlagPiCtrlSet()**

```
fsp_err_t RM_MOTOR_ESTIMATE_FlagPiCtrlSet ( motor_angle_ctrl_t *const p_ctrl, uint32_t const flag_pi )
```

Set the flag of PI Control runs. Implements `motor_angle_api_t::flagPiCtrlSet`.

Return values

FSP_SUCCESS	Successfully set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_ESTIMATE_AngleSpeedGet()**

```
fsp_err_t RM_MOTOR_ESTIMATE_AngleSpeedGet ( motor_angle_ctrl_t *const p_ctrl, float *const p_angle, float *const p_speed, float *const p_phase_err )
```

Gets the current rotor's angle and rotation speed. Implements `motor_angle_api_t::angleSpeedGet`.

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_ESTIMATE_EstimatedComponentGet()**

```
fsp_err_t RM_MOTOR_ESTIMATE_EstimatedComponentGet ( motor_angle_ctrl_t *const p_ctrl, float *const p_ed, float *const p_eq )
```

Gets estimated d/q-axis component. Implements `motor_angle_api_t::estimatedComponentGet`.

Return values

FSP_SUCCESS	Successfully data gotten.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_ESTIMATE_ParameterUpdate()**

```
fsp_err_t RM_MOTOR_ESTIMATE_ParameterUpdate ( motor_angle_ctrl_t *const p_ctrl,
motor_angle_cfg_t const *const p_cfg )
```

Update the parameters of Angle&Speed Estimation. Implements [motor_angle_api_t::parameterUpdate](#).

Return values

FSP_SUCCESS	Successfully data is update.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_ESTIMATE_InternalCalculate()**

```
fsp_err_t RM_MOTOR_ESTIMATE_InternalCalculate ( motor_angle_ctrl_t *const p_ctrl)
```

Calculate internal parameters. Implements [motor_angle_api_t::internalCalculate](#).

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_ESTIMATE_AngleAdjust()**

```
fsp_err_t RM_MOTOR_ESTIMATE_AngleAdjust ( motor_angle_ctrl_t *const p_ctrl)
```

Angle Adjustment Process. Implements [motor_angle_api_t::angleAdjust](#).

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_ESTIMATE_EncoderCyclic()**

```
fsp_err_t RM_MOTOR_ESTIMATE_EncoderCyclic ( motor_angle_ctrl_t *const p_ctrl)
```

Encoder Cyclic Process (Call in cyclic timer). Implements [motor_angle_api_t::encoderCyclic](#).

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_ESTIMATE_InfoGet()**

```
fsp_err_t RM_MOTOR_ESTIMATE_InfoGet ( motor_angle_ctrl_t *const p_ctrl,
motor_angle_encoder_info_t *const p_info )
```

Gets information of Encoder Angle Module. Implements [motor_angle_api_t::infoGet](#).

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.105 Motor Position (rm_motor_position)

Modules

Functions

```
fsp_err_t RM_MOTOR_POSITION_Open (motor_position_ctrl_t *const p_ctrl,
motor_position_cfg_t const *const p_cfg)
```

Opens and configures the Motor Position Module. Implements [motor_position_api_t::open](#). [More...](#)

```
fsp_err_t RM_MOTOR_POSITION_Close (motor_position_ctrl_t *const p_ctrl)
```

Disables specified Motor Position Module. Implements [motor_position_api_t::close](#). [More...](#)

```
fsp_err_t RM_MOTOR_POSITION_Reset (motor_position_ctrl_t *const p_ctrl)
```

Reset the variables of Motor Position Module. Implements [motor_position_api_t::reset](#). [More...](#)

`fsp_err_t` [RM_MOTOR_POSITION_PositionGet](#) (`motor_position_ctrl_t *const p_ctrl, int16_t *const p_position`)

Get Rotor Position Data [degree]. Implements [motor_position_api_t::positionGet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_POSITION_PositionSet](#) (`motor_position_ctrl_t *const p_ctrl, float const position_rad`)

Set Position Data from Encoder [radian]. Implements [motor_position_api_t::positionSet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_POSITION_PositionReferenceSet](#) (`motor_position_ctrl_t *const p_ctrl, int16_t const position_reference_deg`)

Set Position Reference Data [degree]. Implements [motor_position_api_t::positionReferenceSet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_POSITION_ControlModeSet](#) (`motor_position_ctrl_t *const p_ctrl, motor_position_ctrl_mode_t const mode`)

Set Position Control Mode. Implements [motor_position_api_t::controlModeSet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_POSITION_PositionControl](#) (`motor_position_ctrl_t *const p_ctrl`)

Calculates internal position reference.(Main process of Position Control) Implements [motor_position_api_t::positionControl](#). [More...](#)

`fsp_err_t` [RM_MOTOR_POSITION_IpdSpeedPControl](#) (`motor_position_ctrl_t *const p_ctrl, float const ref_speed_rad, float const speed_rad, float *const p_iq_ref`)

Calculates the q-axis current reference by P control. Implements [motor_position_api_t::ipdSpeedPControl](#). [More...](#)

`fsp_err_t` [RM_MOTOR_POSITION_SpeedReferencePControlGet](#) (`motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref`)

Get Speed Reference by P Control. Implements [motor_position_api_t::speedReferencePControlGet](#). [More...](#)

`fsp_err_t` [RM_MOTOR_POSITION_SpeedReferenceIpdControlGet](#)

(motor_position_ctrl_t *const p_ctrl, float const max_speed_rad, float *const p_speed_ref)

Get Speed Reference by IPD Control. Implements [motor_position_api_t::speedReferenceIpdControlGet](#). [More...](#)

fsp_err_t RM_MOTOR_POSITION_SpeedReferenceFeedforwardGet (motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)

Get Speed Reference by Feedforward. Implements [motor_position_api_t::speedReferenceFeedforwardGet](#). [More...](#)

fsp_err_t RM_MOTOR_POSITION_ParameterUpdate (motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg)

Update the parameters of Position Control Calculation. Implements [motor_position_api_t::parameterUpdate](#). [More...](#)

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the [Motor position Interface](#).

Overview

The motor position is used to control the position of motor rotor in an application. This module should be called cyclically in an application (e.g. in cyclic timer interrupt). This module calculates speed reference with inputted position reference and current rotational speed.

Features

The Motor Position Module has below features.

- Calculate speed reference.

Configuration

Build Time Configurations for rm_motor_position

The following build time configurations are defined in fsp_cfg/rm_motor_position_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > Motor Position Controller (rm_motor_position)

This module can be added to the Stacks tab via New Stack > Motor > Motor Position Controller

(rm_motor_position).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_position0	Module name.
General > Position Dead Band	Manual Entry	1U	Ignored Area of Position Control.
General > Position Band Limit	Manual Entry	3U	Ignored Area of Position Control.
General > Speed Feedforward Ratio	Manual Entry	0.8F	Speed Feedforward Ratio.
General > Encoder Counts per one rotation	Manual Entry	1200.0F	Encoder Counts per one rotation.
General > Position Omega	Manual Entry	10.0F	Position Control Omega.
General > Period of Speed Control[sec]	Manual Entry	0.0005F	Period of Speed Control.
IPD > IPD LPF	<ul style="list-style-type: none"> • Disable • Enable 	Disable	IPD LPF process enable or disable
IPD > Position Kp ratio	Manual Entry	0.3F	Position Kp ratio.

Position Profiling > Acceleration Maximum Speed	Manual Entry	2000.0F	Acceleration Maximum Speed.
Position Profiling > Update Step of Timer	Manual Entry	0.0005F	Update Step of Timer.
Motor Parameter > Pole Pair	Manual Entry	7	Pole Pair
Motor Parameter >	Manual Entry	0.453F	Resistance

Resistance[ohm]

Motor Parameter > Inductance of d-axis[H]	Manual Entry	0.0009447F	Inductance of d-axis
--	--------------	------------	----------------------

Motor Parameter > Inductance of q-axis[H]	Manual Entry	0.0009447F	Inductance of q-axis
--	--------------	------------	----------------------

Motor Parameter > Inertia[kgm^2]	Manual Entry	0.006198F	Inertia
-------------------------------------	--------------	-----------	---------

Motor Parameter > Motor Inertia[kgm^2]	Manual Entry	0.00000962F	Motor Inertia
---	--------------	-------------	---------------

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the period of speed control with non-negative value.
- Set the limit of speed change step with non-negative value.
- Set the maximum speed with non-negative value.

Examples

Basic Example

This is a basic example of using the Motor Position module in an application.

```
void motor_position_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;

    /* Initializes the module. */
    err = RM_MOTOR_POSITION_Open(g_motor_position0.p_ctrl, g_motor_position0.p_cfg);
    handle_error(err);

    /* Set working mode */
    RM_MOTOR_POSITION_ModeSet(g_motor_position0.p_ctrl,
MOTOR_POSITION_CTRL_MODE_STEP);

    /* Set position reference */
    RM_MOTOR_POSITION_PositionReferenceSet(g_motor_position0.p_ctrl, 180U);

    /* Basically run this module at cyclic interrupt (e.g. AGT timer).
```

```

* This implementation is an example. */
// while (true)
{
/* Application work here. */
/* Perform Position Control Process */
RM_MOTOR_POSITION_PositionControl(g_motor_position0.p_ctrl);
/* Perform Speed IPD Control Process */
RM_MOTOR_POSITION_IpdSpeedPControl(g_motor_position0.p_ctrl, 0.0F, 0.0F,
&temp_iq_ref);
/* Get Position */
RM_MOTOR_POSITION_PositionGet(g_motor_position0.p_ctrl, &temp_position);
/* Update parameters */
RM_MOTOR_POSITION_ParameterUpdate(g_motor_position0.p_ctrl,
&g_motor_position0.p_cfg);
}
/* Reset Speed Control */
RM_MOTOR_POSITION_Reset(g_motor_position0.p_ctrl);
/* Close Speed Control */
RM_MOTOR_POSITION_Close(g_motor_position0.p_ctrl);
}

```

Enumerations

```
enum motor_position_ipd_lpf_t
```

Enumeration Type Documentation

◆ motor_position_ipd_lpf_t

enum motor_position_ipd_lpf_t	
Enumerator	
MOTOR_POSITION_IPD_LPF_DISABLE	ipd control is disabled

Function Documentation

◆ **RM_MOTOR_POSITION_Open()**

```
fsp_err_t RM_MOTOR_POSITION_Open ( motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t
const *const p_cfg )
```

Opens and configures the Motor Position Module. Implements [motor_position_api_t::open](#).

Return values

FSP_SUCCESS	Motor Position Module successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Set parameter is invalid.

◆ **RM_MOTOR_POSITION_Close()**

```
fsp_err_t RM_MOTOR_POSITION_Close ( motor_position_ctrl_t *const p_ctrl)
```

Disables specified Motor Position Module. Implements [motor_position_api_t::close](#).

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_POSITION_Reset()**

```
fsp_err_t RM_MOTOR_POSITION_Reset ( motor_position_ctrl_t *const p_ctrl)
```

Reset the variables of Motor Position Module. Implements [motor_position_api_t::reset](#).

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_POSITION_PositionGet()**

```
fsp_err_t RM_MOTOR_POSITION_PositionGet ( motor_position_ctrl_t *const p_ctrl, int16_t *const p_position )
```

Get Rotor Position Data [degree]. Implements `motor_position_api_t::positionGet`.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ **RM_MOTOR_POSITION_PositionSet()**

```
fsp_err_t RM_MOTOR_POSITION_PositionSet ( motor_position_ctrl_t *const p_ctrl, float const position_rad )
```

Set Position Data from Encoder [radian]. Implements `motor_position_api_t::positionSet`.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_POSITION_PositionReferenceSet()**

```
fsp_err_t RM_MOTOR_POSITION_PositionReferenceSet ( motor_position_ctrl_t *const p_ctrl, int16_t const position_reference_deg )
```

Set Position Reference Data [degree]. Implements `motor_position_api_t::positionReferenceSet`.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_POSITION_ControlModeSet()**

```
fsp_err_t RM_MOTOR_POSITION_ControlModeSet ( motor_position_ctrl_t *const p_ctrl,
motor_position_ctrl_mode_t const mode )
```

Set Position Control Mode. Implements [motor_position_api_t::controlModeSet](#).

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_POSITION_PositionControl()**

```
fsp_err_t RM_MOTOR_POSITION_PositionControl ( motor_position_ctrl_t *const p_ctrl)
```

Calculates internal position reference.(Main process of Position Control) Implements [motor_position_api_t::positionControl](#).

Return values

FSP_SUCCESS	Successful data calculation.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_POSITION_IpdSpeedPControl()**

```
fsp_err_t RM_MOTOR_POSITION_IpdSpeedPControl ( motor_position_ctrl_t *const p_ctrl, float const
ref_speed_rad, float const speed_rad, float *const p_iq_ref )
```

Calculates the q-axis current reference by P control. Implements [motor_position_api_t::ipdSpeedPControl](#).

Return values

FSP_SUCCESS	Successful data calculation.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ **RM_MOTOR_POSITION_SpeedReferencePControlGet()**

```
fsp_err_t RM_MOTOR_POSITION_SpeedReferencePControlGet ( motor_position_ctrl_t *const p_ctrl,
float *const p_speed_ref )
```

Get Speed Reference by P Control. Implements [motor_position_api_t::speedReferencePControlGet](#).

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ **RM_MOTOR_POSITION_SpeedReferenceIpdControlGet()**

```
fsp_err_t RM_MOTOR_POSITION_SpeedReferenceIpdControlGet ( motor_position_ctrl_t *const p_ctrl,
float const max_speed_rad, float *const p_speed_ref )
```

Get Speed Reference by IPD Control. Implements [motor_position_api_t::speedReferenceIpdControlGet](#).

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ **RM_MOTOR_POSITION_SpeedReferenceFeedforwardGet()**

```
fsp_err_t RM_MOTOR_POSITION_SpeedReferenceFeedforwardGet ( motor_position_ctrl_t *const
p_ctrl, float *const p_speed_ref )
```

Get Speed Reference by Feedforward. Implements [motor_position_api_t::speedReferenceFeedforwardGet](#).

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ RM_MOTOR_POSITION_ParameterUpdate()

```
fsp_err_t RM_MOTOR_POSITION_ParameterUpdate ( motor_position_ctrl_t *const p_ctrl,
motor_position_cfg_t const *const p_cfg )
```

Update the parameters of Position Control Calculation. Implements [motor_position_api_t::parameterUpdate](#).

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the [Motor angle Interface](#).

Overview

The motor angle and speed calculation with an encoder module is used to calculate rotor angle and rotational speed in an application. This module is designed to be used with the motor current module (`rm_motor_current`).

Features

The motor angle and speed calculation with an encoder module has the features listed below.

- Calculate rotor angle [radian].
- Calculate rotational speed [radian/second].

Configuration

Build Time Configurations for `rm_motor_sense_encoder`

The following build time configurations are defined in `fsp_cfg/rm_motor_sense_encoder_cfg.h`:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > Motor Angle (`rm_motor_sense_encoder`)

This module can be added to the Stacks tab via New Stack > Motor > Motor Angle (`rm_motor_sense_encoder`).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	<code>g_motor_sense_encode</code> <code>r0</code>	Module name.
Motor Parameter > Pole pairs	Must be a valid non-negative value.	7	Pole pairs

Motor Parameter > Resistance (ohm)	Must be a valid non-negative value.	0.453F	Resistance
Motor Parameter > Inductance of d-axis (H)	Must be a valid non-negative value.	0.0009447F	Inductance of d-axis
Motor Parameter > Inductance of q-axis (H)	Must be a valid non-negative value.	0.0009447F	Inductance of q-axis
Motor Parameter > Permanent magnetic flux (Wb)	Must be a valid non-negative value.	0.006198F	Permanent magnetic flux
Motor Parameter > Rotor inertia (kgm ²)	Must be a valid non-negative value.	0.00000962F	Rotor inertia
Control Type	<ul style="list-style-type: none"> • Speed • Position 	Position	Select control Type
Period of Current control (kHz)	Must be a valid non-negative value.	20.0F	Period of Current control
Period of Speed control (sec)	Must be a valid non-negative value.	0.0005F	Period of Speed control
PWM Carrier Frequency (kHz)	Must be a valid non-negative value.	20.0F	PWM Carrier Frequency
Decimation of Interrupt	Manual Entry	0U	Decimation of Interrupt
Counts per Rotation	Must be a valid non-negative value.	1200U	Encoder Counts per One Rotation
Counts for Angle Adjust	Must be a valid non-negative value.	512U	Counts for Angle Adjust (as working time)
Zero speed counts	Must be a valid non-negative value.	20000000U	Threshold counts to judge zero speed
Occupancy Time	Must be a valid non-negative value.	0.30F	Occupancy time of carrier interrupt
Carrier Time	Must be a valid non-negative value.	0.000013F	Processing time of carrier interrupt
Process Time	Must be a valid non-negative value.	0.000001F	Processing time of encoder interrupt
Highspeed Change Margin (rpm)	Must be a valid non-negative value.	150U	Margin of toggle speed for high speed mode
LPF parameter for Highspeed Filter	Must be a valid non-negative value.	0.1F	Highspeed mode speed LPF parameter
Counts to change speed	Must be a valid non-negative value.	8U	Counts for mode change of position speed calculation

Clock Configuration

Pin Configuration

Usage Notes

Limitations

Developers should be aware of the following limitations when using the motor angle and speed calculation with an encoder: all configurations should be set as positive values.

Examples

Basic Example

This is a basic example of minimal use of the motor angle and speed calculation with an encoder in an application.

```
void motor_sense_encoder_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = RM_MOTOR_SENSE_ENCODER_Open(&g_mtr_angle0_ctrl, &g_mtr_angle_set0_cfg);
    assert(FSP_SUCCESS == err);
    /* Basically run this module at A/D conversion finish interrupt.
     * This implementation is an example. */
    // while (true)
    {
        /* Application work here. */
        /* Initialize motor with the encoder */
        (void) RM_MOTOR_SENSE_ENCODER_AngleAdjust(&g_mtr_angle0_ctrl);
        /* Perform cyclic encoder process*/
        (void) RM_MOTOR_SENSE_ENCODER_EncoderCyclic(&g_mtr_angle0_ctrl);
        /* Calculate information with encoder signal input */
        (void) RM_MOTOR_SENSE_ENCODER_InternalCalculate(&g_mtr_angle0_ctrl);
        /* Get angle/speed data */
        (void) RM_MOTOR_SENSE_ENCODER_AngleSpeedGet(&g_mtr_angle0_ctrl, &f_get_angle,
        &f_get_speed, &f_get_phase_err);
        /* Get calculated component */
        (void) RM_MOTOR_SENSE_ENCODER_InfoGet(&g_mtr_angle0_ctrl, &temp_info);
    }
    /* Reset the module */
}
```

```

(void) RM_MOTOR_SENSE_ENCODER_Reset(&g_mtr_angle0_ctrl);
/* Close the module */
(void) RM_MOTOR_SENSE_ENCODER_Close(&g_mtr_angle0_ctrl);
}

```

Enumerations

```
enum motor_sense_encoder_loop_t
```

```
enum motor_sense_encoder_mode_t
```

Enumeration Type Documentation

◆ motor_sense_encoder_loop_t

enum motor_sense_encoder_loop_t	
Enumerator	
MOTOR_SENSE_ENCODER_LOOP_SPEED	Speed control mode.
MOTOR_SENSE_ENCODER_LOOP_POSITION	Position control mode.

Function Documentation

◆ **RM_MOTOR_SENSE_ENCODER_Open()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_Open ( motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t
const *const p_cfg )
```

Opens and configures the Angle Encoder module. Implements [motor_angle_api_t::open](#).

Return values

FSP_SUCCESS	Angle Encoder module successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

◆ **RM_MOTOR_SENSE_ENCODER_Close()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_Close ( motor_angle_ctrl_t *const p_ctrl)
```

Disables specified Angle Encoder module. Implements [motor_angle_api_t::close](#).

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SENSE_ENCODER_Reset()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_Reset ( motor_angle_ctrl_t *const p_ctrl)
```

Reset variables of Angle Encoder module. Implements [motor_angle_api_t::reset](#).

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SENSE_ENCODER_InternalCalculate()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_InternalCalculate ( motor_angle_ctrl_t *const p_ctrl)
```

Calculate internal parameters. Implements `motor_angle_api_t::internalCalculate`.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SENSE_ENCODER_AngleSpeedGet()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_AngleSpeedGet ( motor_angle_ctrl_t *const p_ctrl, float *const p_angle, float *const p_speed, float *const p_phase_err )
```

Gets the current rotor's angle and rotation speed. Implements `motor_angle_api_t::angleSpeedGet`.

Return values

FSP_SUCCESS	Successfully data calculated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SENSE_ENCODER_AngleAdjust()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_AngleAdjust ( motor_angle_ctrl_t *const p_ctrl)
```

Angle Adjustment Process. Implements `motor_angle_api_t::angleAdjust`.

Return values

FSP_SUCCESS	Successfully data calculated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SENSE_ENCODER_EncoderCyclic()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_EncoderCyclic ( motor_angle_ctrl_t *const p_ctrl)
```

Encoder Cyclic Process (Call in cyclic timer). Implements `motor_angle_api_t::encoderCyclic`.

Return values

FSP_SUCCESS	Successfully data calculated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SENSE_ENCODER_InfoGet()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_InfoGet ( motor_angle_ctrl_t *const p_ctrl,
motor_angle_encoder_info_t *const p_info )
```

Gets information of Encoder Angle Module. Implements `motor_angle_api_t::infoGet`.

Return values

FSP_SUCCESS	Successfully data calculated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SENSE_ENCODER_ParameterUpdate()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_ParameterUpdate ( motor_angle_ctrl_t *const p_ctrl,
motor_angle_cfg_t const *const p_cfg )
```

Update the parameters of Angle&Speed calculation with an encoder. Implements `motor_angle_api_t::parameterUpdate`.

Return values

FSP_SUCCESS	Successfully data is update.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SENSE_ENCODER_CurrentSet()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_CurrentSet ( motor_angle_ctrl_t *const p_ctrl,
motor_angle_current_t *const p_st_current, motor_angle_voltage_reference_t *const p_st_voltage
)
```

Set d/q-axis Current Data & Voltage Reference. Implements `motor_angle_api_t::currentSet`.

Return values

FSP_ERR_UNSUPPORTED	Motor sense encoder software currentSet is not supported.
---------------------	---

◆ **RM_MOTOR_SENSE_ENCODER_SpeedSet()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_SpeedSet ( motor_angle_ctrl_t *const p_ctrl, float const
speed_ctrl, float const damp_speed )
```

Set Speed Information. Implements `motor_angle_api_t::speedSet`.

Return values

FSP_ERR_UNSUPPORTED	Motor sense encoder software speedSet is not supported.
---------------------	---

◆ **RM_MOTOR_SENSE_ENCODER_FlagPiCtrlSet()**

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_FlagPiCtrlSet ( motor_angle_ctrl_t *const p_ctrl, uint32_t
const flag_pi )
```

Set the flag of PI Control runs. Implements `motor_angle_api_t::flagPiCtrlSet`.

Return values

FSP_ERR_UNSUPPORTED	Motor sense encoder software flagPiCtrlSet is not supported.
---------------------	--

◆ RM_MOTOR_SENSE_ENCODER_EstimatedComponentGet()

```
fsp_err_t RM_MOTOR_SENSE_ENCODER_EstimatedComponentGet ( motor_angle_ctrl_t *const
p_ctrl, float *const p_ed, float *const p_eq )
```

Gets estimated d/q-axis component. Implements [motor_angle_api_t::estimatedComponentGet](#).

Return values

FSP_ERR_UNSUPPORTED

Motor sense encoder software
estimatedComponentGet is not supported.

Detailed Description

Usual control of a SPM motor on RA MCUs. This module implements the [Motor Sensorless Vector Control \(rm_motor_sensorless\)](#).

Overview

The motor sensorless vector control is used to control a motor rotation in an application. This module is implemented with using SPM motor. User can start/stop motor rotation simply.

Features

The Motor Sensorless Module has below features.

- Start/Stop a motor rotation
- Error detection (over current, over speed, over voltage, low voltage)

Configuration

Build Time Configurations for rm_motor_sensorless

The following build time configurations are defined in fsp_cfg/rm_motor_sensorless_cfg.h:

Configuration	Options	Default	Description
Parameter checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > Motor Sensorless Vector Control (rm_motor_sensorless)

This module can be added to the Stacks tab via New Stack > Motor > Motor Sensorless Vector Control (rm_motor_sensorless).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_sensorless0	Module name.
General > Limit of over current (A)	Manual Entry	0.42F	Limit of over current.(Detection threshold)
General > Limit of over voltage (V)	Manual Entry	28.0F	Limit of over voltage.(Detection threshold)
General > Limit of over speed (rpm)	Manual Entry	3000.0F	Limit of over speed.(Detection threshold)
General > Limit of low voltage (V)	Manual Entry	14.0F	Limit of low voltage.(Detection threshold)
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called at speed control cyclic interrupt.

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple status transition process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the limit of electric current with non-negative value.
- Set the limit of input voltage with non-negative value.
- Set the limit of rotational speed with non-negative value.

Examples

Basic Example

This is a basic example of minimal use of the Motor Sensorless in an application.

```
void motor_sensorless_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = RM_MOTOR_SENSORLESS_Open(g_motor_sensorless0.p_ctrl,
g_motor_sensorless0.p_cfg);
    assert(FSP_SUCCESS == err);
    /* Set speed reference before motor run */
    (void) RM_MOTOR_SENSORLESS_SpeedSet(g_motor_sensorless0.p_ctrl,
DEF_SENSORLESS_TEST_OVSPD_LIM);
    /* Start motor rotation */
    (void) RM_MOTOR_SENSORLESS_Run(g_motor_sensorless0.p_ctrl);
    /* Get current status */
    (void) RM_MOTOR_SENSORLESS_StatusGet(g_motor_sensorless0.p_ctrl, &smpl_status);
    /* Get current rotor angle */
    (void) RM_MOTOR_SENSORLESS_AngleGet(g_motor_sensorless0.p_ctrl, &smpl_angle);
    /* Get current motor speed */
    (void) RM_MOTOR_SENSORLESS_SpeedGet(g_motor_sensorless0.p_ctrl, &smpl_speed);
    /* Check error */
    (void) RM_MOTOR_SENSORLESS_ErrorCheck(g_motor_sensorless0.p_ctrl, &smpl_error);
    /* Stop motor rotation */
    (void) RM_MOTOR_SENSORLESS_Stop(g_motor_sensorless0.p_ctrl);
    /* Stop motor rotation */
}
```

```

    (void) RM_MOTOR_SENSORLESS_ErrorSet(g_motor_sensorless0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
    /* Reset Speed Control */
    (void) RM_MOTOR_SENSORLESS_Reset(g_motor_sensorless0.p_ctrl);
    /* Close Speed Control */
    (void) RM_MOTOR_SENSORLESS_Close(g_motor_sensorless0.p_ctrl);
}

```

Data Structures

struct [motor_sensorless_callback_args_t](#)

Enumerations

enum [motor_sensorless_callback_event_t](#)

Data Structure Documentation

◆ motor_sensorless_callback_args_t

struct motor_sensorless_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data.
motor_sensorless_callback_event_t	event	

Enumeration Type Documentation

◆ motor_sensorless_callback_event_t

enum motor_sensorless_callback_event_t	
Events that can trigger a callback function	
Enumerator	
MOTOR_SENSORLESS_CALLBACK_EVENT_SPEED_FORWARD	Event forward Speed Control.
MOTOR_SENSORLESS_CALLBACK_EVENT_SPEED_BACKWARD	Event backward Speed Control.
MOTOR_SENSORLESS_CALLBACK_EVENT_CURRENT_FORWARD	Event forward Current Control.
MOTOR_SENSORLESS_CALLBACK_EVENT_CURRENT_BACKWARD	Event backward Current Control.

Function Documentation

◆ RM_MOTOR_SENSORLESS_Open()

```
fsp_err_t RM_MOTOR_SENSORLESS_Open ( motor_ctrl_t *const p_ctrl, motor_cfg_t const *const p_cfg )
```

Configure the MOTOR in register start mode. Implements `motor_api_t::open`.

This function should only be called once as MOTOR configuration registers can only be written to once so subsequent calls will have no effect.

Example:

```
/* Initializes the module. */
err = RM_MOTOR_SENSORLESS_Open(g_motor_sensorless0.p_ctrl,
g_motor_sensorless0.p_cfg);
```

Return values

FSP_SUCCESS	MOTOR successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

Note

◆ RM_MOTOR_SENSORLESS_Close()

```
fsp_err_t RM_MOTOR_SENSORLESS_Close ( motor_ctrl_t *const p_ctrl)
```

Disables specified Motor Sensorless Control block. Implements `motor_api_t::close`.

Example:

```
/* Close Speed Control */
(void) RM_MOTOR_SENSORLESS_Close(g_motor_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ **RM_MOTOR_SENSORLESS_Run()**

```
fsp_err_t RM_MOTOR_SENSORLESS_Run ( motor_ctrl_t *const p_ctrl)
```

Run Motor (Start motor rotation). Implements [motor_api_t::run](#).

Example:

```
/* Start motor rotation */
(void) RM_MOTOR_SENSORLESS_Run(g_motor_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ **RM_MOTOR_SENSORLESS_Stop()**

```
fsp_err_t RM_MOTOR_SENSORLESS_Stop ( motor_ctrl_t *const p_ctrl)
```

Stop Motor (Stop motor rotation). Implements [motor_api_t::stop](#).

Example:

```
/* Stop motor rotation */
(void) RM_MOTOR_SENSORLESS_Stop(g_motor_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_SENSORLESS_Reset()

```
fsp_err_t RM_MOTOR_SENSORLESS_Reset ( motor_ctrl_t *const p_ctrl)
```

Reset Motor Sensorless Control block. Implements `motor_api_t::reset`.

Example:

```
/* Reset Speed Control */
(void) RM_MOTOR_SENSORLESS_Reset(g_motor_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_SENSORLESS_ErrorSet()

```
fsp_err_t RM_MOTOR_SENSORLESS_ErrorSet ( motor_ctrl_t *const p_ctrl, motor_error_t const error )
```

Set error information. Implements `motor_api_t::errorSet`.

Example:

```
/* Stop motor rotation */
(void) RM_MOTOR_SENSORLESS_ErrorSet(g_motor_sensorless0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_SENSORLESS_SpeedSet()

```
fsp_err_t RM_MOTOR_SENSORLESS_SpeedSet ( motor_ctrl_t *const p_ctrl, float const speed_rpm )
```

Set speed reference[rpm]. Implements `motor_api_t::speedSet`.

Example:

```
/* Set speed reference before motor run */
(void) RM_MOTOR_SENSORLESS_SpeedSet(g_motor_sensorless0.p_ctrl,
DEF_SENSORLESS_TEST_OVSPD_LIM);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_SENSORLESS_StatusGet()

```
fsp_err_t RM_MOTOR_SENSORLESS_StatusGet ( motor_ctrl_t *const p_ctrl, uint8_t *const p_status )
```

Get current control status. Implements `motor_api_t::statusGet`.

Example:

```
/* Get current status */
(void) RM_MOTOR_SENSORLESS_StatusGet(g_motor_sensorless0.p_ctrl, &smpl_status);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_SENSORLESS_AngleGet()

```
fsp_err_t RM_MOTOR_SENSORLESS_AngleGet ( motor_ctrl_t *const p_ctrl, float *const p_angle_rad )
```

Get current rotor angle. Implements `motor_api_t::angleGet`.

Example:

```
/* Get current rotor angle */
(void) RM_MOTOR_SENSORLESS_AngleGet(g_motor_sensorless0.p_ctrl, &smpl_angle);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_SENSORLESS_SpeedGet()

```
fsp_err_t RM_MOTOR_SENSORLESS_SpeedGet ( motor_ctrl_t *const p_ctrl, float *const p_speed_rpm )
```

Get rotational speed. Implements `motor_api_t::speedGet`.

Example:

```
/* Get current motor speed */
(void) RM_MOTOR_SENSORLESS_SpeedGet(g_motor_sensorless0.p_ctrl, &smpl_speed);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_SENSORLESS_ErrorCheck()

```
fsp_err_t RM_MOTOR_SENSORLESS_ErrorCheck ( motor_ctrl_t *const p_ctrl, uint16_t *const p_error )
```

Check the occurrence of Error. Implements `motor_api_t::errorCheck`.

Example:

```
/* Check error */
(void) RM_MOTOR_SENSORLESS_ErrorCheck(g_motor_sensorless0.p_ctrl, &smpl_error);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_SENSORLESS_PositionSet()

```
fsp_err_t RM_MOTOR_SENSORLESS_PositionSet ( motor_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position )
```

Set position reference. Implements `motor_api_t::positionSet`.

Example:

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
---------------------	--------------

Note

◆ RM_MOTOR_SENSORLESS_WaitStopFlagGet()

```
fsp_err_t RM_MOTOR_SENSORLESS_WaitStopFlagGet ( motor_ctrl_t *const p_ctrl,
motor_wait_stop_flag_t *const p_flag )
```

Get wait stop flag. Implements `motor_api_t::waitStopFlagGet`.

Example:

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
---------------------	--------------

`fsp_err_t RM_MOTOR_SPEED_SpeedControl (motor_speed_ctrl_t *const p_ctrl)`

Calculates the d/q-axis current reference.(Main process of Speed Control) Implements `motor_speed_api_t::speedControl`. [More...](#)

`fsp_err_t RM_MOTOR_SPEED_ParameterGet (motor_speed_ctrl_t *const p_ctrl, motor_speed_output_t *const p_st_output)`

Get Speed Control Parameters. Implements `motor_speed_api_t::parameterGet`. [More...](#)

`fsp_err_t RM_MOTOR_SPEED_ParameterUpdate (motor_speed_ctrl_t *const p_ctrl, motor_speed_cfg_t const *const p_cfg)`

Update the parameters of Speed Control Calculation. Implements `motor_speed_api_t::parameterUpdate`. [More...](#)

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the [Motor speed Interface](#).

Overview

The motor speed is used to control the speed of motor rotation in an application. This module should be called cyclically in an application (e.g. in cyclic timer interrupt). This module calculates d/q-axis current reference with input speed reference, current rotational speed, and d/q-axis current.

Features

The motor speed module has below features.

- Calculate d/q-axis electric current reference.
- Flux weakening process at high speed rotation.
- Open loop damping control when using sensorless type.
- Low pass filter of input rotational speed.

- Speed observer function when using encoder type.

Configuration

Build Time Configurations for rm_motor_speed

The following build time configurations are defined in fsp_cfg/rm_motor_speed_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.
Position Support	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Enable position algorithm support.

Configurations for Motor > Motor Speed Controller (rm_motor_speed)

This module can be added to the Stacks tab via New Stack > Motor > Motor Speed Controller (rm_motor_speed).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_speed0	Module name.
General > Speed control period (sec)	Manual Entry	0.0005F	Period of speed control function.
General > Step of speed climbing (rpm)	Manual Entry	0.5F	Step of speed change at start of open-loop.
General > Maximum rotational speed (rpm)	Manual Entry	2650	Maximum rotational speed (Limit speed).
General > Speed LPF omega	Manual Entry	10.0F	Design parameter for speed LPF.
General > Speed at Id climbing (rpm)	Manual Entry	500	From this speed d-axis current is controlled climbing.
General > Limit of q-axis current (A)	Manual Entry	0.42F	Limit of q-axis current.
General > Step of speed feedback at open-loop	Manual Entry	0.20F	Step of speed feedback at open-loop.
General > Open-loop damping	<ul style="list-style-type: none"> • Disable • Enable 	Enable	Select enable/disable Open-loop damping control.

Open-Loop > Step of d-axis current climbing	Manual Entry	0.3F		Step of d-axis current climbing
Open-Loop > Step of d-axis current descending	Manual Entry	0.3F		Step of d-axis current descending
Open-Loop > Step of q-axis current descending ratio	Manual Entry	1.0F		Step of q-axis current descending ratio
Open-Loop > Reference of d-axis current	Manual Entry	0.3F		Reference of d-axis current
Open-Loop > Threshold of speed control descending	Manual Entry	600		When rotational speed reaches this speed, d-axis current is controlled descending.
Open-Loop > Threshold of speed control climbing	Manual Entry	500		Until rotational speed reaches this speed, d-axis current is controlled climbing.
Open-Loop > Period between open-loop to BEMF (sec)	Manual Entry	0.025F		Margin time between open-loop control changes to BEMF PI control.
Open-Loop > Phase error(degree) to decide sensor-less switch timing	Manual Entry	10		Phase error(degree) to decide sensor-less switch timing.
Design parameter > Speed PI loop omega	Manual Entry	5.0F		Speed PI loop omega
Design parameter > Speed PI loop zeta	Manual Entry	1.0F		Speed PI loop zeta
Design parameter > Estimated d-axis HPF omega	Manual Entry	2.5F		HPF cutoff frequency for ed (Hz)
Design parameter > Open-loop damping	Manual Entry	1.0F		Damping ratio of open-loop damping control

zeta

Design parameter > Cutoff frequency of phase error LPF	Manual Entry	10.0F	Cutoff frequency of phase error LPF
Design parameter > Speed observer omega	Manual Entry	200.0F	Speed observer loop omega
Design parameter > Speed observer zeta	Manual Entry	1.0F	Speed observer loop zeta
Motor Parameter > Pole pairs	Manual Entry	2	Pole pairs
Motor Parameter > Resistance (ohm)	Manual Entry	8.5F	Resistance
Motor Parameter > Inductance of d-axis (H)	Manual Entry	0.0045F	Inductance of d-axis
Motor Parameter > Inductance of q-axis (H)	Manual Entry	0.0045F	Inductance of q-axis
Motor Parameter > Permanent magnetic flux (Wb)	Manual Entry	0.02159F	Permanent magnetic flux
Motor Parameter > Rotor inertia (kgm ²)	Manual Entry	0.0000028F	Rotor inertia
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called at timer interrupt.
Interrupts > Input data	Name must be a valid C symbol	NULL	Structure for Speed control Input. If you set this content, Speed Control function read these data automatically. (No need to use Set API.)
Interrupts > Output data	Name must be a valid C symbol	NULL	Structure for Speed control Output. If you set this content, Speed Control function write need data automatically. (No need to use Get API.)

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the period of speed control with none-negative value.
- Set the limit of speed change step with none-negative value.
- Set the maximum speed with none-negative value.

Examples

Basic Example

This is a basic example of minimal use of the motor speed in an application.

```
void motor_speed_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = RM_MOTOR_SPEED_Open(g_motor_speed0.p_ctrl, g_motor_speed0.p_cfg);
    handle_error(err);

    /* Set speed reference before get current reference */
    (void) RM_MOTOR_SPEED_SpeedReferenceSet(g_motor_speed0.p_ctrl, 104.72F);
    /* Set position reference before get current reference
     * (Basically Exclusive to SpeedReferenceSet. This is only sample,) */
    (void) RM_MOTOR_SPEED_PositionReferenceSet(g_motor_speed0.p_ctrl,
    &g_posref_sample);

    /* Basically run this module at cyclic interrupt (e.g. AGT timer).
     * This implementation is an example. */
    // while (true)
    {
        /* Application work here. */
        /* Set input parameter data before get current reference */
        (void) RM_MOTOR_SPEED_ParameterSet(g_motor_speed0.p_ctrl,
    &g_test_speed_input);

        /* Activate Speed Process */
        (void) RM_MOTOR_SPEED_Run(g_motor_speed0.p_ctrl);
    }
}
```

```

/* Perform Speed Control Process */
    (void) RM_MOTOR_SPEED_SpeedControl(g_motor_speed0.p_ctrl);
/* Get output parameters */
    (void) RM_MOTOR_SPEED_ParameterGet(g_motor_speed0.p_ctrl,
&g_test_speed_output);
//

/* Update parameters */
    (void) RM_MOTOR_SPEED_ParameterUpdate(g_motor_speed0.p_ctrl,
&g_motor_speed0.p_cfg);
}
/* Reset Speed Control */
    (void) RM_MOTOR_SPEED_Reset(g_motor_speed0.p_ctrl);
/* Close Speed Control */
    (void) RM_MOTOR_SPEED_Close(g_motor_speed0.p_ctrl);
}

```

Function Documentation◆ **RM_MOTOR_SPEED_Open()**

```
fsp_err_t RM_MOTOR_SPEED_Open ( motor\_speed\_ctrl\_t *const p_ctrl, motor\_speed\_cfg\_t const *const p_cfg )
```

Opens and configures the Motor Speed Module. Implements [motor_speed_api_t::open](#).

Return values

FSP_SUCCESS	Motor Speed Module successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

◆ **RM_MOTOR_SPEED_Close()**

```
fsp_err_t RM_MOTOR_SPEED_Close ( motor\_speed\_ctrl\_t *const p_ctrl)
```

Disables specified Motor Speed Module. Implements [motor_speed_api_t::close](#).

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SPEED_Reset()**

```
fsp_err_t RM_MOTOR_SPEED_Reset ( motor_speed_ctrl_t *const p_ctrl)
```

Reset the variables of Motor Speed Module. Implements `motor_speed_api_t::reset`.

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SPEED_Run()**

```
fsp_err_t RM_MOTOR_SPEED_Run ( motor_speed_ctrl_t *const p_ctrl)
```

Run(Start) the Motor Speed Control. Implements `motor_speed_api_t::run`.

Return values

FSP_SUCCESS	Successfully start.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SPEED_SpeedReferenceSet()**

```
fsp_err_t RM_MOTOR_SPEED_SpeedReferenceSet ( motor_speed_ctrl_t *const p_ctrl, float const speed_reference_rpm )
```

Set Speed Reference Data. Implements `motor_speed_api_t::speedReferenceSet`.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_MOTOR_SPEED_PositionReferenceSet()**

```
fsp_err_t RM_MOTOR_SPEED_PositionReferenceSet ( motor_speed_ctrl_t *const p_ctrl,
motor_speed_position_data_t const *const p_position_data )
```

Set Position Reference Data. Implements `motor_speed_api_t::positionReferenceSet`.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input structure pointer is NULL.

◆ **RM_MOTOR_SPEED_ParameterSet()**

```
fsp_err_t RM_MOTOR_SPEED_ParameterSet ( motor_speed_ctrl_t *const p_ctrl,
motor_speed_input_t const *const p_st_input )
```

Set Input parameters. Implements `motor_speed_api_t::parameterSet`.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ **RM_MOTOR_SPEED_SpeedControl()**

```
fsp_err_t RM_MOTOR_SPEED_SpeedControl ( motor_speed_ctrl_t *const p_ctrl)
```

Calculates the d/q-axis current reference.(Main process of Speed Control) Implements `motor_speed_api_t::speedControl`.

Return values

FSP_SUCCESS	Successful data calculation.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SPEED_ParameterGet()

```
fsp_err_t RM_MOTOR_SPEED_ParameterGet ( motor_speed_ctrl_t *const p_ctrl,
motor_speed_output_t *const p_st_output )
```

Get Speed Control Parameters. Implements [motor_speed_api_t::parameterGet](#).

Return values

FSP_SUCCESS	Successfully the flag is gotten.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ RM_MOTOR_SPEED_ParameterUpdate()

```
fsp_err_t RM_MOTOR_SPEED_ParameterUpdate ( motor_speed_ctrl_t *const p_ctrl,
motor_speed_cfg_t const *const p_cfg )
```

Update the parameters of Speed Control Calculation. Implements [motor_speed_api_t::parameterUpdate](#).

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

4.2.109 Azure RTOS NetX Secure Crypto Hardware Acceleration (rm_netx_secure_crypto)

Modules

Detailed Description

Hardware acceleration for the Netx Crypto implementation of the Microsoft Azure RTOS NetX Crypto API.

Overview

Please refer to the [NetXDuo - NetX Crypto documentation](#) for further details.

HW Overview

Crypto Peripheral version	Devices
SCE9	RA6M4, RA4M3, RA4M2, RA6M5
SCE7	RA6M3, RA6M2, RA6M1, RA6T1
SCE5	RA4W1, RA4M1
AES Engine	RA2A1, RA2E1, RA2E2, RA2L1

Note

NetX Crypto hardware acceleration is unsupported on 'SCE5' and 'AES Engine' crypto peripherals listed above.

Features

This module provides SCE9 hardware support for the following NetX Crypto operations

- SHA256 calculation
- SHA224 calculation
- MAC Operations
 - HMAC with SHA224
 - HMAC with SHA256
- AES
 - Keybits - 128, 192, 256
 - Encryption and Decryption.
 - Chaining Modes: CBC, CTR, GCM mode

AES Chaining Mode	HW Acceleration
CBC	Fully accelerated
CTR	Fully accelerated
GCM	Encrypt - Fully accelerated; Decrypt - Only GHASH and block cipher unit is HW accelerated
CCM	Only block cipher unit is HW accelerated

- Random number generation
- ECC
 - ECDSA: Supported Curves - SECP384R1, SECP256R1, SECP224R1.
 - ECDH: Supported Curves - SECP384R1, SECP256R1, SECP224R1.
- RSA
 - Signature Generation - RSA 2048 (Plain or Wrapped private) key. (This can be used for decryption)
 - Signature Verification - RSA 2048, RSA 3072 and RSA 4096 keys. (This can be used for encryption)
 - Supported encoding scheme: PKCS1V15 This module provides SCE7 hardware support for the following NetX Crypto operations
- AES
 - Keybits - 128, 256
 - Encryption and Decryption.
 - Chaining Modes: CBC, CTR, GCM mode

AES Chaining Mode	HW Acceleration
-------------------	-----------------

CBC	Fully accelerated
CTR	Fully accelerated
GCM	Only block cipher unit is HW accelerated
CCM	Only block cipher unit is HW accelerated

Configuration

Build Time Configurations for rm_netx_secure_crypto_sw_port

The following build time configurations are defined in fsp_cfg/middleware/rm_netx_secure_crypto_cfg.h:

Configuration	Options	Default	Description
Standalone Usage	<ul style="list-style-type: none"> Use Standalone Crypto Only Use with TLS 	Use Standalone Crypto Only	Defines NX_CRYPTOSTANDALONE_ENABLE.
Maximum RSA Modulus size (bits)	<ul style="list-style-type: none"> 1024 2048 3072 4096 	4096	

Build Time Configurations for rm_netx_secure_crypto

The following build time configurations are defined in fsp_cfg/middleware/rm_netx_secure_crypto_cfg.h:

Configuration	Options	Default	Description
Hardware Acceleration > Hash > SHA256/224	MCU Specific Options		Enables NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_SHA256_ALT.
Hardware Acceleration > Cipher > AES	MCU Specific Options		Enables NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_AES_ALT.
Hardware Acceleration > Public Key Cryptography (PKC) > ECC > ECC	MCU Specific Options		Enables NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_ECC_ALT.
Hardware Acceleration > Public Key Cryptography (PKC) > ECC > ECDSA Scratch Buffer Size (Bytes)	Value must be an integer	3016	Sets value of NX_CRYPTOTO_ECDSA_SCRATCH_BUFFER_SIZE.
Hardware Acceleration > Public Key	Value must be an integer	2464	Sets value of NX_CRYPTOTO_ECDH_SCRATCH_BU

Cryptography (PKC) > ECC > ECDH Scratch Buffer Size (Bytes)			FFER_SIZE
Hardware Acceleration > Public Key Cryptography (PKC) > RSA > RSA	MCU Specific Options		Enables/Disables RSA HW support
Hardware Acceleration > Public Key Cryptography (PKC) > RSA > RSA 2048 (HW)	MCU Specific Options		Enables NETX_SECURE_ CRYPTO_NX_CRYPTOM_ METHODS_RSA_2048_AL T to allow HW support
Hardware Acceleration > Public Key Cryptography (PKC) > RSA > RSA 3072 Verify/Encryption (HW)	MCU Specific Options		Enables NETX_SECURE_ CRYPTO_NX_CRYPTOM_ METHODS_RSA_3072_AL T to allow HW support
Hardware Acceleration > Public Key Cryptography (PKC) > RSA > RSA 4096 Verify/Encryption (HW)	MCU Specific Options		Enables RSA NETX_SEC URE_CRYPTONX_CRYP TOMETHODS_RSA_409 6_ALT to allow HW support
Hardware Acceleration > Public Key Cryptography (PKC) > RSA > RSA Scratch Buffer Size (Bytes)	MCU Specific Options		Sets value of NX_CRYP TOMETHODS_RSA_SCRAT CH_BUFFER_SIZE
Hardware Acceleration > TRNG	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled	Enables NETX_SECURE_ CRYPTONX_CRYPTOM_ METHODSTRNG_ALT.
Standalone Usage	<ul style="list-style-type: none"> • Use Standalone Crypto Only • Use with TLS 	Use Standalone Crypto Only	Defines NX_CRYPTOST ANDALONE_ENABLE.

Random Number Generator Configuration

To enable hardware acceleration for the TRNG, the macro `NETX_SECURE_CRYPTONX_CRYPTOMETHODSTRNG_ALT` must be defined in the configuration file. By default TRNG is enabled which can be disabled using the RA Configuration editor.

Once enabled 'rand' function will be mapped to HW TRNG; the 'srand' function is not supported, any calls to this function will have no effect. Functionality to re-seed the HW TRNG is not supported by the existing implementation.

If disabled, both 'rand' and 'srand' will be mapped to the C Standard Library. This would require setting up the heap as 'rand' implementation calls 'malloc'.

SHA256 Configuration

To enable hardware acceleration for the SHA256/224 calculation, the macro `NETX_SECURE_CRYPTONX_CRYPTOMETHODSSHA256_ALT` must be defined in the configuration file. By default SHA256 is enabled which can be disabled using the RA Configuration editor.

AES Configuration

To enable hardware acceleration for the AES128/192/256 operation, the macro `NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_AES_ALT` must be defined in the configuration file. By default AES is enabled which can be disabled using the RA Configuration editor.

ECC Configuration

To enable hardware acceleration for the ECDSA and ECDH for curves SECP384R1, SECP256R1 and SECP224R1, the macro `NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_ECC_ALT` must be defined in the configuration file. By default ECC operations are enabled which can be disabled using the RA Configuration editor.

RSA Configuration

To enable hardware acceleration for the RSA Encrypt/Decrypt (or Sign/Verify) operation(s), the macro(s) below must be defined in the configuration file:

Configuration Macro	Feature / Operation
<code>NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_RSA_2048_ALT</code>	Signature Generation / Signature Verification (Encryption / Decryption)
<code>NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_RSA_3072_ALT</code>	Signature Verification (Encryption Only)
<code>NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_RSA_4096_ALT</code>	Signature Verification (Encryption Only)

By default RSA 2048 is enabled which can be disabled using the RA Configuration editor.

RSA software implementation is completely disabled when any of the above macros are enabled.

Usage Notes

Memory Alignment

Use 32bit aligned buffer pointers as arguments to APIs for best performance.

Hardware Initialization

`_nx_crypto_initialize()` must be invoked before using the NetX Crypto APIs to ensure that the SCE peripheral is initialized.

Memory Usage

Sufficient memory must be allocated to be used as 'crypto_metadata' for the chosen crypto operation(s). Refer [Azure RTOS NetX Crypto API description](#) for recommended 'crypto_metadata_size' based on selected crypto operations. Sufficient amount of memory must be allocated for the thread stack to support low level crypto operations when using this module in the standalone mode or through NetX Secure (TLS). A minimum stack of 0x1000 is required to use ECC and RSA. This is either the main stack in a bare metal application or the specific thread stack for an RTOS based application.

AES Usage

GCM mode

The first byte of the IV must indicate the length of the subsequent IV. For example if the IV is {0x00, 0x00, 0x00}, then the IV pointer passed to the `_nx_crypto_method_aes_operation` must store the IV as {0x03, 0x00, 0x00, 0x00}. Refer to the example code for actual usage.

CTR mode

For CTR mode the IV pointer must be as defined in [Using Advanced Encryption Standard \(AES\) Counter Mode With IPsec Encapsulating Security Payload \(ESP\)](#) under 'Figure 2. Counter Block Format'. The IV must be 8 bytes in length. The Nonce field in the reference above must be 4 bytes and should be passed to `_nx_crypto_method_aes_operation` through the key pointer stored after the actual AES key. For Example, if the AES 128-bit Plain Key is {0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00} and the Nonce is {0x01, 0x07, 0xBD, 0xFD}, the key passed to the `_nx_crypto_method_aes_operation` during Encryption/Decryption should be set as {0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x01, 0x07, 0xBD, 0xFD}. This format would also be valid for Wrapped keys where the Nonce is appended at the end of the actual Wrapped key. Refer to the example code for actual usage.

The 'Block Counter' field in the above reference is fixed to {0x00, 0x00, 0x00, 0x01} at the beginning and increments internally after every subsequent AES block is processed. Test vectors that have the initial Block Counter not set to {0x00, 0x00, 0x00, 0x01} cannot be used in this implementation.

ECC Usage

ECC operations include ECDH and ECDSA. As a part of ECDSA operation the input message can be hashed before signing or verification, or the message digest can be provided directly. ECC Scratch buffer size can be optionally reduced as supported ECC computations are now done by the HW. This is controlled by `NX_CRYPT0_ECDSA_SCRATCH_BUFFER_SIZE` and `NX_CRYPT0_ECDH_SCRATCH_BUFFER_SIZE` macros for ECDSA and ECDH respectively.

Operation	Key Format
ECDSA Signature	Plain private key; Wrapped private key
ECDSA Signature-Verify	Uncompressed public key
Key Generation using ECDSA operation API	Wrapped private key; Uncompressed public key
ECDH private key import	Plain private key; Wrapped private key (Allows for Uncompressed and Formatted public key)
ECDH public key export	Uncompressed public key
ECDH setup	Uncompressed public key
ECDH shared secret calculate	Uncompressed public key
Key Generation using ECDH operation API	Wrapped private key; Uncompressed public key

Note:

- Uncompressed public key is of the form (0x04 || Qx || Qy). Refer Section 2.2. Subject Public Key under [RFC5480](#)
- Formatted public key is of the form (Key Info (4 bytes) || Qx || Qy || Key Info (16 bytes)). This is the key which is used internally by SCE peripheral. (Qx and Qy are zero padded for

224 bit curves).

RSA Usage

Wrapped Key Usage

To use the NetX Crypto stack with wrapped private keys (for signature generation/decryption), a dummy pointer (non-NULL) should be passed to the 'key' parameter during `_nx_crypto_method_rsa_init` API call. However, the 'key_size_in_bits' parameter should be equal to the intended RSA modulus length in bits. The actual wrapped key must be passed as the 'key' parameter to the `_nx_crypto_method_rsa_operation` API call with its length in bits passed through the 'key_size_in_bits' parameter.

For PKCS1V15 operation 'key' and 'key_size_in_bits' parameters of `_nx_crypto_method_pkcs1_v1_5_init` are unused. These can be passed as NULL and 0 respectively. The actual wrapped key must be passed as the 'key' parameter to the `_nx_crypto_method_pkcs1_v1_5_operation` API call and the intended modulus length in bits must be passed through the 'key_size_in_bits' parameter.

Limitations

- Only little endian mode is supported.
- RSA CRT keys are not supported.
- ECJPAKE related operations are unsupported for NIST 224, 256 and 384 bit curves when HW ECC is enabled.

Examples

Initialization Example

This example shows how to initialize the HW crypto engine. This step must be performed before any crypto algorithm is used.

```
/* Setup the platform; initialize the SCE and the TRNG */
err = _nx_crypto_initialize();
assert(NX_CRYPTOSUCCESS == err);
```

Hash Example

This is an example on calculating the SHA256 hash using the NetX Crypto API.

```
extern NX_CRYPTOMETHOD crypto_method_sha256;
const uint8_t NIST_SHA256ShortMsgLen200[] =
{
    0x2e, 0x7e, 0xa8, 0x4d, 0xa4, 0xbc, 0x4d, 0x7c, 0xfb, 0x46, 0x3e, 0x3f, 0x2c,
    0x86, 0x47, 0x05,
    0x7a, 0xff, 0xf3, 0xfb, 0xec, 0xec, 0xa1, 0xd2, 00
```

```
};  
  
const uint8_t NIST_SHA256ShortMsgLen200_expected[] =  
{  
    0x76, 0xe3, 0xac, 0xbc, 0x71, 0x88, 0x36, 0xf2, 0xdf, 0x8a, 0xd2, 0xd0, 0xd2,  
    0xd7, 0x6f, 0x0c,  
    0xfa, 0x5f, 0xea, 0x09, 0x86, 0xbe, 0x91, 0x8f, 0x10, 0xbc, 0xee, 0x73, 0x0d,  
    0xf4, 0x41, 0xb9  
};  
  
void netx_secure_crypto_sha256_example (void)  
{  
    size_t    actual_hash_len = RM_NETX_SECURE_CRYPTO_EXAMPLE_SHA256_HASH_SIZE_BYTES;  
    uint8_t  actual_hash[RM_NETX_SECURE_CRYPTO_EXAMPLE_SHA256_HASH_SIZE_BYTES];  
    uint8_t  metadata[sizeof(NX_CRYPTO_SHA256)];  
    uint32_t metadata_size = sizeof(NX_CRYPTO_SHA256);  
  
    void * handler          = NX_CRYPTO_NULL;  
    uint32_t err            = NX_CRYPTO_SUCCESS;  
  
    /* Setup the platform; initialize the SCE and the TRNG */  
    err = _nx_crypto_initialize();  
    assert(NX_CRYPTO_SUCCESS == err);  
  
    /* Nx Crypto SHA256 init */  
    err = _nx_crypto_method_sha256_init(&crypto_method_sha256, NX_CRYPTO_NULL, 0,  
&handler, metadata, metadata_size);  
    assert(NX_CRYPTO_SUCCESS == err);  
  
    /* Nx Crypto SHA256 operation - NX_CRYPTO_HASH_INITIALIZE */  
    err = _nx_crypto_method_sha256_operation(NX_CRYPTO_HASH_INITIALIZE,  
                                             handler,  
                                             &crypto_method_sha256,  
                                             NX_CRYPTO_NULL,

ECDH Example

This is an example on using the NetX Crypto API to generate a shared secret using ECDH. A shared secret is computed using known public key (from peer) and generated private key. Another shared secret is computed using the generated public key and known private key (imported to mimic peer). Both the shared secrets are checked to be the same.

```
extern NX_CRYPT_METHOD crypto_method_ecdh;
/*Private key 59137e38152350b195c9718d39673d519838055ad908dd4757152fd8255c09bf */

4.2.110 Azure RTOS NetX Duo Ether Driver (rm_netxduo_ether)

Modules

Overview

This module provides a NetX Duo driver that is implemented using the [Ethernet Interface](#).

Please refer to the [NetXDuo documentation](#) for further details.

Features

- Packet Types Supported
 - ARP
 - IPv4
 - IPv6
- Link status callback
- Configurable IP MTU

Configuration

Configurations for Networking > NetX Duo Ethernet Driver (rm_netxduo_ether)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_netxduo_ether_0	Module name.
IP MTU	Value must be in the range [576, 1500] bytes.	1500	IP MTU

Usage Notes

Calculating the Packet Size for an IP instance

In order to ensure that there is enough space to store an entire Ethernet frame, the packet pool used for receiving packets must have a payload size that is 32 bytes larger than the configured [ether_cfg_t::ether_buffer_size](#). The extra 32 bytes is needed in order to ensure that the allocated packets are properly aligned to 32 bytes.

[ether_cfg_t::ether_buffer_size](#) is calculated from the IP MTU using the following formula:

$$\text{ceil}((\text{rm_netxduo_ether_cfg_t::mtu} + \text{Ethernet Header (14)} + \text{Padding Bytes (2)}) / 32) * 32$$

Examples

Basic Example

This is a basic example of minimal use of the NetX Duo Ether Driver in an application.

```
#define NETXDUEXAMPLE_IP_STACK_SIZE (2048U)
```

```
#define NETXDUO_EXAMPLE_ARP_CACHE_SIZE (2048U)
#define NETXDUO_EXAMPLE_PACKET_SIZE (1568U)
#define NETXDUO_EXAMPLE_PACKET_NUM (100U)
#define NETXDUO_EXAMPLE_PACKET_POOL_SIZE ((sizeof(NX_PACKET) +
NETXDUO_EXAMPLE_PACKET_SIZE) * \
    NETXDUO_EXAMPLE_PACKET_NUM)
static NX_IP g_ip;
static NX_PACKET_POOL g_packet_pool;
static uint8_t g_ip_stack_memory[NETXDUO_EXAMPLE_IP_STACK_SIZE]
BSP_ALIGN_VARIABLE(4);
static uint8_t g_packet_pool_memory[NETXDUO_EXAMPLE_PACKET_POOL_SIZE]
BSP_ALIGN_VARIABLE(4);
static uint8_t g_ip_arp_cache_memory[NETXDUO_EXAMPLE_ARP_CACHE_SIZE]
BSP_ALIGN_VARIABLE(4);
static void rm_netxduo_ether0 (NX_IP_DRIVER * driver_req_ptr)
{
    /* Pass the driver request and ethernet driver configuration to the NetX Duo Ether
Driver. */
    rm_netxduo_ether(driver_req_ptr, &g_netxduo_ether_instance);
}
void rm_netxduo_ether_example ()
{
    UINT status;
    nx_system_initialize();
    /* Create a packet pool for the IP instance. */
    status = nx_packet_pool_create(&g_packet_pool,
"Packet Pool",
                                NETXDUO_EXAMPLE_PACKET_SIZE,
                                &g_packet_pool_memory[0],
                                NETXDUO_EXAMPLE_PACKET_POOL_SIZE);
    assert(NX_SUCCESS == status);
    /* Create an IP instance using the rm_netxduo_ether driver and packet pool instance.
*/
    status = nx_ip_create(&g_ip,
```

```
"IP Instance",
    IP_ADDRESS(192, 168, 1, 2),
    IP_ADDRESS(255, 255, 255, 0),
    &g_packet_pool,
    rm_netxduo_ether0,
    &g_ip_stack_memory[0],
sizeof(g_ip_stack_memory),
    0);

assert(NX_SUCCESS == status);
/* Enable all modules that are required by the application. */
status = nx_arp_enable(&g_ip, g_ip_arp_cache_memory, sizeof
(g_ip_arp_cache_memory));
assert(NX_SUCCESS == status);
status = nx_tcp_enable(&g_ip);
assert(NX_SUCCESS == status);
status = nx_icmp_enable(&g_ip);
assert(NX_SUCCESS == status);
}
```

4.2.111 Azure RTOS NetX Duo WiFi Driver (rm_netxduo_wifi)

Modules

Overview

This module provides a NetX Duo driver that is implemented using the `rm_wifi_onchip_silex` driver.

Please refer to the [NetXDuo documentation](#) for further details.

Features

- Packet Types Supported
 - TCP/IPv4
- Configurable IP MTU

Configuration

Build Time Configurations for rm_netxduo_wifi

The following build time configurations are defined in fsp_cfg/middleware/rm_netxduo_wifi_cfg.h:

Configuration	Options	Default	Description
IP MTU (bytes)	Value must be in the range [576, 1500] bytes.	1500	IP MTU

Usage Notes

Connecting to a Wireless Network

NetX Duo does not support connecting to a wireless network directly and instead the driver functions should be called directly to establish a connection.

- `rm_wifi_onchip_silex_open()` should be called to initialize the WiFi module driver.
- `rm_wifi_onchip_silex_scan()` should be used to scan for access points.
- `rm_wifi_onchip_silex_connect()` should be used before opening a NetX IP instance in order to connect it to a network.
- `rm_wifi_onchip_silex_network_info_get()` should be used after an access point connection has been established to get DHCP acquired IP address, subnet mask, and gateway.

Unsupported NetX Duo Features

TCP client sockets are the sole feature supported by both the hardware TCP/IP feature in NetX Duo and the WiFi driver as well. Any protocol that does not utilize a TCP client socket will be unsupported.

- TCP server mode is not currently supported.
- DNS is not supported. The user can preform a DNS lookup by calling `rm_wifi_onchip_silex_dns_query`.
- ICMP is not supported. The user can perform a ping by calling `rm_wifi_onchip_silex_ping`.
- ARP is not supported. This should be handled directly by the WiFi module.
- UDP is not supported. The WiFi module driver does not support UDP sockets.
- SNTP is not supported. See the public APIs for communication with time servers [Wifi Middleware \(rm_wifi_onchip_silex\)](#).
- Static address assignment is not currently supported by the `rm_wifi_onchip_silex` driver. You must use DHCP.

Examples

Basic Example

This is a basic example of minimal use of the NetX Duo WiFi Driver in an application.

```
#define NETXDUO_EXAMPLE_IP_STACK_SIZE (2048U)
#define NETXDUO_EXAMPLE_ARP_CACHE_SIZE (2048U)
#define NETXDUO_EXAMPLE_PACKET_SIZE (1568U)
#define NETXDUO_EXAMPLE_PACKET_NUM (100U)
```

```
#define NETXDUO_EXAMPLE_PACKET_POOL_SIZE ((sizeof(NX_PACKET) +
NETXDUO_EXAMPLE_PACKET_SIZE) * \

4.2.112 Crypto Middleware (rm_psa_crypto)

Modules

Functions

`fsp_err_t` [RM_PSA_CRYPTO_TRNG_Read](#) (uint8_t *const p_rngbuf, uint32_t num_req_bytes, uint32_t *p_num_gen_bytes)

Reads requested length of random data from the TRNG. Generate nbytes of random bytes and store them in p_rngbuf buffer. [More...](#)

`int` [mbedtls_platform_setup](#) (mbedtls_platform_context *ctx)

`void` [mbedtls_platform_teardown](#) (mbedtls_platform_context *ctx)

Detailed Description

Hardware acceleration for the mbedCrypto implementation of the ARM PSA Crypto API.

Overview

Note

The PSA Crypto module does not provide any interfaces to the user. This release uses the Mbed TLS version 2.24.0 which conforms to the PSA Crypto API 1.0 specification. Consult the ARM documentation at <https://armmbed.github.io/mbed-crypto/psa/#application-programming-interface> for further information. FSP 3.0 onward adopts a change by ARM where mbedCrypto has been integrated back to MbedTLS and the term mbedCrypto has been deprecated. The mbedCrypto term in FSP now refers to the crypto portion of the MbedTLS module.

HW Overview

Crypto Peripheral version	Devices
SCE9	RA6M4, RA4M3, RA4M2, RA6M5
SCE7	RA6M3, RA6M2, RA6M1, RA6T1
SCE5	RA4W1, RA4M1
AES Engine	RA2A1, RA2E1, RA2E2, RA2L1

Features

The PSA_Crypto module provides hardware support for the following PSA Crypto operations

- SHA256 calculation
- SHA224 calculation
 - MAC Operations
- AES
 - Keybits - 128, 192, 256
 - Plain-Text Key Generation
 - Wrapped Key Generation
 - Encryption and Decryption with no padding and with PKCS7 padding.
 - CBC, CTR, CCM and GCM modes
 - MAC operations
 - Export and Import for Plaintext and Wrapped keys
- ECC
 - Curves:
 - SECP256R1
 - SECP256K1
 - Brainpool256R1
 - SECP384R1
 - Brainpool384R1
 - Plain-Text Key Generation (Unavailable on SCE9)
 - Wrapped Key Generation
 - Signing and Verification
 - Export and Import for Plaintext and Wrapped keys
 - ECDH Support
- RSA
 - Keybits - 2048. Verification only for 3072 and 4096 bits
 - Plain-Text Key Generation (Unavailable on SCE9)
 - Wrapped Key Generation
 - Signature Generation

- Verification
- Encryption and Decryption with PKCS1V15 and OAEP padding
- Export and Import for Plaintext and Wrapped keys
- Random number generation
- Persistent Key Storage

Configuration

Build Time Configurations for mbedCrypto

The following build time configurations are defined in arm/mbedtls/config.h:

Configuration	Options	Default	Description
Hardware Acceleration > Key Format > AES	MCU Specific Options		Select AES key formats used
Hardware Acceleration > Key Format > ECC	MCU Specific Options		Select ECC key formats used
Hardware Acceleration > Key Format > RSA	MCU Specific Options		Select RSA key formats used
Hardware Acceleration > Hash > SHA256/224	MCU Specific Options		Defines MBEDTLS_SHA256_ALT and MBEDTLS_SHA256_PROCESS_ALT.
Hardware Acceleration > Cipher > AES	MCU Specific Options		Defines MBEDTLS_AES_ALT, MBEDTLS_AES_SETKEY_ENC_ALT, MBEDTLS_AES_SETKEY_DEC_ALT, MBEDTLS_AES_ENCRYPT_ALT and MBEDTLS_AES_DECRYPT_ALT
Hardware Acceleration > Public Key Cryptography (PKC) > ECC	MCU Specific Options		Defines MBEDTLS_ECP_ALT
Hardware Acceleration > Public Key Cryptography (PKC) > ECDSA	MCU Specific Options		Defines MBEDTLS_ECDSA_SIGN_ALT and MBEDTLS_ECDSA_VERIFY_ALT
Hardware Acceleration > Public Key Cryptography (PKC) > RSA	MCU Specific Options		Defines MBEDTLS_RSA_ALT.
Hardware Acceleration > Public Key Cryptography (PKC) > RSA 3072 Verify	MCU Specific Options		Enables RSA 3072 Verify.
Hardware Acceleration	MCU Specific Options		Enables RSA 4096

> Public Key Cryptography (PKC) > RSA 4096 Verify			Verify.
Hardware Acceleration > TRNG	Enabled	Enabled	Defines MBEDTLS_ENTROPY_HARDWARE_ALT.
Hardware Acceleration > Secure Crypto Engine Initialization	Enabled	Enabled	MBEDTLS_PLATFORM_SETUP_TEAR_DOWN_ALT
Platform > Alternate > MBEDTLS_PLATFORM_EXIT_ALT	<ul style="list-style-type: none"> • Define • Undefine 	Undefine	MBEDTLS_PLATFORM_EXIT_ALT
Platform > Alternate > MBEDTLS_PLATFORM_TIME_ALT	<ul style="list-style-type: none"> • Define • Undefine 	Undefine	MBEDTLS_PLATFORM_TIME_ALT

SHA256 Configuration

To enable hardware acceleration for the SHA256/224 calculation, the macro `MBEDTLS_SHA256_ALT` and `MBEDTLS_SHA256_PROCESS_ALT` must be defined in the configuration file. By default SHA256 is enabled. SHA256 can be disabled, but SHA512 then needs to be enabled (software version) because the PSA implementation uses it for the entropy accumulator. This can be done using the RA Configuration editor.

AES Configuration

To enable hardware acceleration for the AES128/256 operation, the macro `MBEDTLS_AES_SETKEY_ENC_ALT`, `MBEDTLS_AES_SETKEY_DEC_ALT`, `MBEDTLS_AES_ENCRYPT_ALT` and `MBEDTLS_AES_DECRYPT_ALT` must be defined in the configuration file. By default AES is enabled. AES cannot be disabled because the PSA implementation requires it for the `CTR_DRBG` random number generator. This can be done using the RA Configuration editor.

ECC Configuration

To enable hardware acceleration for the ECC Key Generation operation, the macro `MBEDTLS_ECP_ALT` must be defined in the configuration file. For ECDSA, the macros `MBEDTLS_ECDSA_SIGN_ALT` and `MBEDTLS_ECDSA_VERIFY_ALT` must be defined. By default ECC, ECDSA and ECDHE are enabled. To disable ECC, undefine `MBEDTLS_ECP_C`, `MBEDTLS_ECDSA_C` and `MBEDTLS_ECDH_C`. This can be done using the RA Configuration editor.

RSA Configuration

To enable hardware acceleration for the RSA2048 operation, the macro `MBEDTLS_RSA_ALT` must be defined in the configuration file. By default RSA is enabled. To disable RSA, undefine `MBEDTLS_RSA_C`, `MBEDTLS_PK_C`, `MBEDTLS_PK_PARSE_C`, `MBEDTLS_PK_WRITE_C`. This can be done using the RA Configuration editor.

Wrapped Key Usage

To use the Secure Crypto Engine to generate and use wrapped keys, use `PSA_KEY_TYPE_AES_WRAPPED` or `PSA_KEY_TYPE_ECC_KEY_PAIR_WRAPPED(curve)` or `PSA_KEY_TYPE_RSA_KEY_PAIR` when setting the key type attribute. Setting the key's type attribute using this value will cause the SCE to use wrapped key mode for all operations related to that key. The user can use the export functionality to save the wrapped keys to user ROM and import it later for usage. This mode requires that Wrapped Key functionality for the algorithm is enabled in the project configuration.

Note

On the SCE9 devices, only the RSA public key can be exported. A file system must be used to store the internally generated private key.

Persistent Key Storage

Persistent key storage can be enabled by defining MBEDTLS_FS_IO, MBEDTLS_PSA_CRYPTOSTORAGE_C, and MBEDTLS_PSA_ITS_FILE_C. The key lifetime must also be specified as PSA_KEY_LIFETIME_PERSISTENT. A lower level storage module must be added in the RA Configuration editor and initialized in the code before generating persistent keys. Persistent storage supports the use of plaintext and vendor keys. Refer to the lower level storage module documentation for information on how it should be initialized. To generate a persistent key the key must be assigned a unique id prior to calling generate using the psa_set_key_id api.

```
if (PSA_KEY_LIFETIME_IS_PERSISTENT(lifetime))
{
/* Set the id to a positive integer. */
    psa_set_key_id(&attributes, (psa_key_id_t) 5);
}
```

Platform Configuration

To run the mbedCrypto implementation of the PSA Crypto API on the MCU, the macro MBEDTLS_PLATFORM_SETUP_TEAR_DOWN_ALT must be defined in the configuration file. This enables code that will initialize the SCE. Parameter checking (General|MBEDTLS_CHECK_PARAMS) is enabled by default. To reduce code size, disable parameter checking.

Random Number Configuration

To run the mbedCrypto implementation of the PSA Crypto API on the MCU, the macro MBEDTLS_ENTROPY_HARDWARE_ALT must be defined in the configuration file. This enables using the TRNG as an entropy source. None of the other cryptographic operations (even in software only mode) will work without this feature.

Usage Notes

Hardware Initialization

`mbedtls_platform_setup()` must be invoked before using the PSA Crypto API to ensure that the SCE peripheral is initialized.

Memory Usage

In general, depending on the mbedCrypto features being used a heap size of 0x1000 to 0x5000 bytes is required. The total allocated heap should be the **sum** of the heap requirements of the individual algorithms:

Algorithm	Required Heap (bytes)
SHA256/224	None

AES	0x200
Hardware ECC	0x400
Software ECC	0x1800
RSA	0x1500

A minimum stack of 0x1000 is required where the module is used. This is either the main stack in a bare metal application or the task stack of the task used for crypto operations.

Limitations

- Only little endian mode is supported.

SCE9 Usage

The SCE9 is used in Compatibility Mode for mbedCrypto acceleration. The crypto capabilities in this mode on the SCE9 are different which results in the below usage limitations with mbedCrypto:

- The module includes **both** wrapped and plaintext keys code irrespective of whether the application requires it.
- Plaintext key generation is not supported for RSA and ECC; only wrapped keys can be generated.
- If ECDH is used, only wrapped key will be generated on SCE9 and will not return an error even if the user context is somehow set for plain key. This may be relevant only if the `psa_key_agreement()` function with plaintext key on SCE9 is attempted.

Note

For a detailed description of the different SCE9 operating modes, refer to Application Note R11AN0498.

Using PSA Crypto with TrustZone

Unlike FSP drivers, PSA Crypto cannot be configured as Non-secure callable in the RA Configurator for a secure project. The reason for this is that in order to achieve the security objective of controlling access to protected keys, both the PSA Crypto code as well as the keys must be placed in the secure region. Since the PSA Crypto API requires access to the keys directly during initialization and later via a key handle, allowing non-secure code to use the API by making it Non-secure callable will require the keys to be stored in non-secure memory.

This section will provide a short explanation of how to add PSA Crypto to a secure project and have it usable by the non-secure project without exposing the keys. In this example the secure project will contain an RSA private key and the non-secure project is expected to be able to perform sign and verify operations using that key.

Figure 210: PSA Crypto Non-secure callable example

- Secure project
 - During secure project boot-up, `psa_crypto_init()` is called.
 - The RSA private key is programmed into secure flash either at the factory or by calling `psa_generate_key()` in persistent mode. Note that the data-flash area used by the LittleFS will have to be in the secure region if the key is generated as a persistent.
 - `psa_import_key()/psa_open_key()` are called with the resultant handle held in secure RAM.
 - The Non-secure callable section contains the following **user-defined** functions
 - `verify_with_my_rsa_key(input_signature, input_hash, verification_result)`
 - The implementation of this function in secure region will call `psa_verify_hash()` and return the result via `verification_result`.
 - `sign_with_my_rsa_key(input_hash, output_signature)`
 - The implementation of this function in secure region will call `psa_sign_hash()` and return the signature via `output_signature`.

- Non-secure project
 - Calls `verify_with_my_rsa_key()` to verify a signature. The implementation will use the public key that is present in the secure project.
 - Calls `sign_with_my_rsa_key()` to generate a signature. The implementation will use the private key that is present on the secure project.

For more details on how to add user-code to the Non-secure callable region refer to the "Security Design with Arm TrustZone - IP Protection (R11AN0467EU0100)" Application Note.

Examples

Hash Example

This is an example on calculating the SHA256 hash using the PSA Crypto API.

```
const uint8_t NIST_SHA256ShortMsgLen200[] =
{
    0x2e, 0x7e, 0xa8, 0x4d, 0xa4, 0xbc, 0x4d, 0x7c, 0xfb, 0x46, 0x3e, 0x3f, 0x2c,
```

```
0x86, 0x47, 0x05,
    0x7a, 0xff, 0xf3, 0xfb, 0xec, 0xec, 0xa1, 0xd2, 00
};
const uint8_t NIST_SHA256ShortMsgLen200_expected[] =
{
    0x76, 0xe3, 0xac, 0xbc, 0x71, 0x88, 0x36, 0xf2, 0xdf, 0x8a, 0xd2, 0xd0, 0xd2,
0xd7, 0x6f, 0x0c,
    0xfa, 0x5f, 0xea, 0x09, 0x86, 0xbe, 0x91, 0x8f, 0x10, 0xbc, 0xee, 0x73, 0x0d,
0xf4, 0x41, 0xb9
};
void psa_crypto_sha256_example (void)
{
    psa_algorithm_t      alg          = PSA_ALG_SHA_256;
    psa_hash_operation_t operation    = {0};
    size_t               expected_hash_len = PSA_HASH_SIZE(alg);
    uint8_t              actual_hash[PSA_HASH_MAX_SIZE];
    size_t               actual_hash_len;

        /* Hash setup failed */
        debugger_break();
    }
    else if (PSA_SUCCESS != psa_hash_update(&operation, NIST_SHA256ShortMsgLen200,
sizeof(NIST_SHA256ShortMsgLen200)))
    {
        /* Hash calculation failed */
        debugger_break();
    }
}
```

```
    }
    else if (PSA_SUCCESS != psa_hash_finish(&operation, &actual_hash[0], sizeof
(actual_hash), &actual_hash_len))
    {
        /* Reading calculated hash failed */
        debugger_break();
    }
    else if (0 != memcmp(&actual_hash[0], &NIST_SHA256ShortMsgLen200_expected[0],
actual_hash_len))
    {
        /* Hash compare of calculated value with expected value failed */
        debugger_break();
    }
    else if (0 != memcmp(&expected_hash_len, &actual_hash_len, sizeof
(expected_hash_len)))
    {
        /* Hash size compare of calculated value with expected value failed */
        debugger_break();
    }
    else
    {
        /* SHA256 calculation succeeded */
        debugger_break();
    }
    /* De-initialize the platform. This is currently a placeholder function which does
not do anything. */
    mbedtls_platform_teardown(&ctx);
}
```

AES Example

This is an example on using the PSA Crypto API to generate an AES256 key, encrypting and decrypting multi-block data and using PKCS7 padding.

```
static psa_status_t cipher_operation (psa_cipher_operation_t * operation,
```

```
const uint8_t      * input,
size_t            input_size,
size_t            part_size,
                  uint8_t      * output,
size_t            output_size,
size_t            * output_len)
{
    psa_status_t status;
    size_t      bytes_to_write = 0;
    size_t      bytes_written = 0;
    size_t      len           = 0;
    *output_len = 0;
    while (bytes_written != input_size)
    {

mac_ret))
{
/* MAC verification failed */
    debugger_break();
}
else
{
/* All the operations succeeded for MAC verification */
}
```

ECC Example

This is an example on using the PSA Crypto API to generate an ECC-P256R1 key, signing and verifying data after hashing it first using SHA256.

Note

Unlike RSA, ECDSA does not have any padding schemes. Thus the hash argument for the ECC sign operation MUST have a size larger than or equal to the curve size; i.e. for PSA_ECC_CURVE_SECP256R1 the payload size

must be at least 256/8 bytes. nist.fips.186-4: " A hash function that provides a lower security strength than the security strength associated with the bit length of 'n' ordinarily should not be used, since this would reduce the security strength of the digital signature process to a level no greater than that provided by the hash function."

```
#define ECC_256_BIT_LENGTH 256
#define ECC_256_EXPORTED_SIZE 500
uint8_t exportedECC_SECP256R1Key[ECC_256_EXPORTED_SIZE];
size_t exportedECC_SECP256R1Keylength = 0;
void psa_ecc256R1_example (void)
{
/* This example generates an ECC-P256R1 keypair, performs signing and verification
operations.

* It then exports the generated key into ASN1 DER format to a RAM array which can
then be programmed to flash.

* It then re-imports that key, and performs signing and verification operations. */
unsigned char      payload[] = "ASYMMETRIC_INPUT_FOR_SIGN.....";

mbedtls_psa_crypto_free();
mbedtls_platform_teardown(&ctx);
```

}

Function Documentation

◆ RM_PSA_CRYPTO_TRNG_Read()

```
fsp_err_t RM_PSA_CRYPTO_TRNG_Read ( uint8_t *const p_rngbuf, uint32_t num_req_bytes,
uint32_t * p_num_gen_bytes )
```

Reads requested length of random data from the TRNG. Generate nbytes of random bytes and store them in p_rngbuf buffer.

Return values

FSP_SUCCESS	Random number generation successful
FSP_ERR_ASSERTION	NULL input parameter(s).
FSP_ERR_CRYPTO_UNKNOWN	An unknown error occurred.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- s_generate_16byte_random_data

◆ mbedtls_platform_setup()

```
int mbedtls_platform_setup ( mbedtls_platform_context * ctx)
```

This function initializes the SCE and the TRNG. It **must** be invoked before the crypto library can be used. This implementation is used if MBEDTLS_PLATFORM_SETUP_TEARDOWN_ALT is defined.

Example:

```
mbedtls_platform_context ctx = {0};
/* Setup the platform; initialize the SCE and the TRNG */
if (PSA_SUCCESS != mbedtls_platform_setup(&ctx))
```

Return values

0	Initialization was successful.
MBEDTLS_ERR_PLATFORM_HW_ACCEL_FAILED	SCE Initialization error.

◆ mbedtls_platform_teardown()

```
void mbedtls_platform_teardown ( mbedtls_platform_context * ctx)
```

This implementation is used if MBEDTLS_PLATFORM_SETUP_TEARDOWN_ALT is defined. It is intended to de-initialize any items that were initialized in the `mbedtls_platform_setup()` function, but currently is only a placeholder function.

Example:

```
/* De-initialize the platform. This is currently a placeholder function which does
not do anything. */
mbedtls_platform_teardown(&ctx);
```

Return values

N/A

4.2.113 Azure RTOS ThreadX Port (rm_threadx_port)**Modules**

ThreadX port for RA MCUs.

Overview

Note

The ThreadX Port does not provide any interfaces to the user. Consult the ThreadX documentation at <https://docs.microsoft.com/en-us/azure/rtos/threadx/> for further information.

Features

The RA ThreadX port supports the following features:

- Standard ThreadX configurations
- Hardware stack monitor

Configuration**Build Time Configurations for ThreadX**

The following build time configurations are defined in `fsp_cfg/azure/tx/tx_user.h`:

Configuration	Options	Default	Description
General > Custom tx_user.h	Manual Entry		Add a path to your custom tx_user.h file. It

General > Error Checking	<ul style="list-style-type: none"> • Enabled • Disabled 	Enabled	<p>can be used to override some or all of the configurations defined here, and to define additional configurations.</p>

RA > Hardware Thread Stack Monitoring	MCU Specific Options		Use RA Hardware Stack Monitors to monitor thread stacks for overflow. Not available on MCUs that support PSPLIM.
Interrupts > SysTick Interrupt Priority	MCU Specific Options		Select the SysTick interrupt priority.
Interrupts > Maximum Interrupt Priority	MCU Specific Options		The maximum priority (lowest numerical value) an interrupt can have and use scheduler services. Interrupts with higher priority can interrupt most scheduler critical sections. Setting this to Priority 0 (highest) disables this feature. This feature is not available on MCUs that do not have the

BASEPRI register.

Clock Configuration

The ThreadX port uses the SysTick timer as the system clock. The timer rate is configured in the ThreadX component under General > Timer Ticks Per Second.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Interrupt Priorities

When no threads are ready to run, the ThreadX port spins in the PendSV_Handler, which is fixed at the lowest interrupt priority. The MCU does not service any other interrupts of the lowest priority while no threads are ready to run.

To get around this limitation, the application can create an idle thread that is always ready to run. If the idle thread enters a lower power mode, make sure all interrupts that are required to resume the scheduler can wake the MCU in the configured power mode. If the application expects to wake after a certain number of ticks, the idle thread should not enter standby mode because the SysTick cannot wake the MCU from standby mode. See [Low Power Modes \(r_lpm\)](#) for more information regarding low power modes.

Warning

Do not attempt to wake a thread from an interrupt with the lowest available interrupt priority unless the application has created an idle thread.

Hardware Stack Monitor

The hardware stack monitor generates an NMI if the PSP goes out of the memory area for the stack allocated for the current thread. A callback can be registered using [R_BSP_GroupIrqWrite\(\)](#) to be called whenever a stack overflow or underflow of the PSP for a particular thread is detected.

Low Power Modes

The idle processing executes WFI() when no thread is ready to run. If the MCU is configured to enter software standby mode or deep software standby mode when the idle processing executes WFI(), the RA ThreadX port changes the low power mode to sleep mode so the idle processing can wake from SysTick. The low power mode settings are restored when the MCU wakes from sleep mode.

TrustZone Integration

When using an RTOS in a TrustZone project, ARM recommends keeping the RTOS in the non-secure project. Tasks may call non-secure callable functions if the thread has allocated a secure context (using [tx_thread_secure_stack_allocate](#)).

The secure context can be freed by deleting the thread or calling [tx_thread_secure_stack_free](#).

Examples

Stack Monitor Example

This is an example of using the stack monitor in an application.

```
#if BSP_FEATURE_BSP_HAS_SP_MON
void stack_monitor_callback(bsp_grp_irq_t irq);
void stack_monitor_callback (bsp_grp_irq_t irq)
{
    FSP_PARAMETER_NOT_USED(irq);
    if (1U == R_MPU_SPMON->SP[0].CTL_b.ERROR)
    {
        /* Handle main stack monitor error here. */
    }
    if (1U == R_MPU_SPMON->SP[1].CTL_b.ERROR)
    {
        /* Handle process stack monitor error here. */
    }
}
void rm_threadx_port_stack_monitor_example (void)
{
    /* Register a callback to be called when the stack goes outside the allocated stack
area. */
    R_BSP_GroupIrqWrite(BSP_GRP_IRQ_MPU_STACK, stack_monitor_callback);
}
#else
/* Allocate stack space to return from UsageFault. */
uint32_t g_stack_overflow_exception_stack[8] BSP_ALIGN_VARIABLE(BSP_STACK_ALIGNMENT)
BSP_PLACE_IN_SECTION(
    BSP_SECTION_STACK);
/* MCUs that do not have an SPMON stack monitor use PSPLIM to detect stack overflows.
When a stack overflow error
* occurs, the UsageFault_Handler fires if it has been enabled. */
void UsageFault_Handler (void)
{
    register uint32_t cfsr = SCB->CFSR;
    if (cfsr & SCB_CFSR_STKOF_Msk)
    {
```

```
/* Update PSP and PSPLIM to point to an exception stack frame allocated for stack
overflows. */
register uint32_t * p_exception_stack_frame = (uint32_t *)
(&g_stack_overflow_exception_stack);
    __set_PSP((uint32_t) p_exception_stack_frame);
    __set_PSPLIM((uint32_t) p_exception_stack_frame);
/* Clear XPSR, only set T-bit. */
    p_exception_stack_frame[7] = 1U << 24;
/* Set PC to stack overflow error while loop. When execution returns from the
UsageFault, it will go to the
    * stack_overflow_error_occurred function. It cannot return to the location where
the fault occurred because
    * the MCU does not save the exception stack frame to the stack when a stack
overflow error occurs. */
    p_exception_stack_frame[6] = (uint32_t) stack_overflow_error_occurred;
}
/* Clear flags. */
    SCB->CFSR = cfsr;
}
/* This function is called from UsageFault_Handler after a stack overflow occurs. */
void stack_overflow_error_occurred (void)
{
    /* When recovering from a stack overflow, move the thread to a while(1) loop. */
    while (1)
    {
        /* Do nothing. */
    }
}
void rm_threadx_port_stack_monitor_example (void)
{
    /* Enable usage fault. */
    SCB->SHCSR |= SCB_SHCSR_USGFAULTENA_Msk;
}
#endif
```

TrustZone Example

This is an example of calling `tx_thread_secure_stack_allocate` before calling any non-secure callable functions in a thread.

```
extern TX_THREAD * _tx_thread_current_ptr;
void rm_threadx_port_trustzone_thread_example (void)
{
    /* When ThreadX is used in a non-secure TrustZone application,
    tx_thread_secure_stack_allocate must be called prior
    * to calling any non-secure callable function in a thread. The first parameter is a
    pointer to the thread control block.
    * This function can be called when the thread is created or in the thread before an
    non-secure callable function is
    * called. The second parameter is unused in the FSP implementation. */
    UINT status = tx_thread_secure_stack_allocate(_tx_thread_current_ptr, 0);
    assert(TX_SUCCESS == status);
    rm_threadx_port_nsc_function();
}
```

4.2.114 Intel TinyCrypt (rm_tinycrypt_port)

Modules

Functions

`fsp_err_t` [RM_TINCYRYPT_PORT_TRNG_Read](#) (uint8_t *const p_rngbuf, uint32_t num_req_bytes)

Reads requested length of random data from the TRNG. Generate num_req_bytes of random bytes and store them in p_rngbuf buffer. [More...](#)

`fsp_err_t` [RM_TINCYRYPT_PORT_Init](#) (void)

`int` [default_CSPRNG](#) (uint8_t *dest, unsigned int size)

Implements the Cryptographically Secure Pseudo-Random Number Generator function required by TinyCrypt. [More...](#)

Detailed Description

AES128 Hardware acceleration for TinyCrypt on the RA2 family.

Overview

Note

The TinyCrypt port module does not provide any interfaces to the user. Consult the documentation at <https://github.com/intel/tinycrypt/blob/master/documentation/tinycrypt.rst> for further information.

TinyCrypt is designed as a small footprint software crypto implementation to be used on resource constrained devices. The software only module is available in FSP on all RA devices. Hardware acceleration for AES-128 is provided only for the RA2 family. This release uses TinyCrypt v0.2.8.

Hardware Overview

Crypto Peripheral version	Devices
AES Engine	RA2A1, RA2E1, RA2L1

Features

For features supported by the software-only version, refer to the TinyCrypt documentation.

The TinyCrypt port module provides hardware support for the following operations

- AES
 - Keybits - 128
 - ECB, CBC, CTR, CCM and CMAC modes -TRNG

Configuration

Build Time Configurations for TinyCrypt_Acceleration

The following build time configurations are defined in fsp_cfg/rm_tinycrypt_port_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

AES Configuration

To enable hardware acceleration for the AES128 operation, choose TinyCrypt (H/W Accelerated) from the stack options . This feature is only supported on the RA2 family.

Usage Notes

Hardware Initialization

Invoke RM_TINCRYPT_PORT_Init () to initialize the hardware before using Tinycrypt if either hardware acceleration or the TRNG is to be used.

Random Number Generation

There are two Pseudo-random Number Generators (PRNG) provided in TinyCrypt

- CTR-PRNG which uses AES128 internally in its implementation. Enabling AES128 hardware acceleration will improve the performance of this module.
- HMAC-PRNG which uses SHA256 internally in its implementation.

Both these implementations will only be able to provide a random pseudo-random number sequence if they are seeded with truly random data. The TRNG module that is present in hardware and available in `rm_tinycrypt_port` must be used to seed these modules. When using CTR-PRNG or HMAC-PRNG, use the `RM_TINCRYPT_PORT_TRNG_Read()` function to obtain random data from the TRNG hardware and use that to seed the PRNG modules before invoking the pseudo-random number generation. If purely random data is sufficient for the application, then `RM_TINCRYPT_PORT_TRNG_Read()` can be used directly instead. The hardware TRNG implements the CTR_DRBG spec.

Default CSPRNG

The TinyCrypt ECC implementation requires a platform specific implementation of the `default_CSPRNG()` function. This function has been implemented using the hardware TRNG in the port to support software ECC usage. When using TinyCrypt in S/W mode, it is necessary to implement `default_CSPRNG()` if using ECC signature generation (ECDSA) or key derivation (ECDH).

AES-128 Usage

The AES ECB mode implementation is provided in `aes_encrypt.decrypt.c`. All the other modes of AES operation including CBC, CCN, CMAC and CTR use the ECB mode for the block operation. On the RA2, the ECB mode has been hardware accelerated which improves performance of the other modes as well. Additionally the CBC and CTR modes are also accelerated.

To use the different AES modes, first initialize the hardware (on the RA2) and then use the functions defined in the header file of each AES mode. Note that TinyCrypt does not provide any type of padding or buffering so the data provided to these modes should be multiples of AES block size.

Memory Usage

TinyCrypt does not use dynamic allocation so there is no heap requirement.

Limitations

Usage with RA4 and RA6 devices

TinyCrypt (S/W Only) can be used on RA4 and RA6 devices. However, since ECC signature generation (ECDSA) and key derivation (ECDH) requires a random number source, that operation is currently not supported on these devices when using TinyCrypt (S/W Only). In order to support those operations the function `default_CSPRNG()` must be implemented in the user code.

TinyCrypt

- No padding is supported; the user is expected to provide adequately padded data depending on the algorithm used.
- AES Key generation is not supported.
- Key encoding/decoding is not supported.

Using TinyCrypt with TrustZone

Unlike FSP drivers, TinyCrypt cannot be configured as Non-secure callable in the RA Configurator for a secure project. The reason for this is that in order to achieve the security objective of controlling access to protected keys, both the crypto code as well as the keys must be placed in the secure region. Since the tinyCrypt API requires access to the keys directly during initialization and later via a key handle, allowing non-secure code to use the API by making it Non-secure callable will require the keys to be stored in non-secure memory.

This limitation is identical to that for PSA Crypto. Refer to the documentation of that module on how to create a crypto Non-Secure Callable layer to be used in such situations.

Examples

AES-CBC Example

This is an example on using TinyCrypt to encrypt and decrypt data using an AES-128 key in CBC mode.

CTR-PRNG Example

This is an example on using the CTR_PRNG module in TinyCrypt to obtain random data.

```
#define TC_ENTROPY_SIZE 64U
#define TC_CTRPRNG_OUTPUT_SIZE 32U
void tinycrypt_ctr_prng_example (void)
{
    TCctrPrng_t cprng_ctx;
    uint8_t     seed[TC_ENTROPY_SIZE];
    uint8_t     ctr_prng_output_1[TC_CTRPRNG_OUTPUT_SIZE] = {0};
    uint8_t     ctr_prng_output_2[TC_CTRPRNG_OUTPUT_SIZE] = {0};
    /* Setup the platform; initialize the crypto engine. */
    if (0 != RM_TINCRYPT_PORT_Init())
    {
        debugger_break();
    }
    /* Read random data from the TRNG to use as seed for the CTR_PRNG. */
    else if (FSP_SUCCESS != RM_TINCRYPT_PORT_TRNG_Read(seed, sizeof(seed)))
    {
        debugger_break();
    }
    /* Initialize and seed the CTR_PRNG with the random data from the TRNG. */
    else if (TC_CRYPTOSUCCESS != tc_ctr_prng_init(&cprng_ctx, seed, sizeof(seed), 0,
0))
    {
        debugger_break();
    }
    /* Read random data from the CTR_PRNG. */
    else if (TC_CRYPTOSUCCESS !=
```

```
        tc_ctr_prng_generate(&cprng_ctx, 0, 0, ctr_prng_output_1, sizeof
(ctr_prng_output_1))
    {
        debugger_break();
    }
    /* Check that the generated value is not 0. */
    else if (0 != memcmp(&ctr_prng_output_1[0], &ctr_prng_output_2[0], sizeof
(ctr_prng_output_1))
    {
        debugger_break();
    }
    /* Read random data again from the TRNG. */
    else if (TC_CRYPTOSUCCESS !=
        tc_ctr_prng_generate(&cprng_ctx, 0, 0, ctr_prng_output_1, sizeof
(ctr_prng_output_1))
    {
        debugger_break();
    }
    /* Check that the generated value is different than the previous call. */
    else if (0 != memcmp(&ctr_prng_output_1[0], &ctr_prng_output_2[0], sizeof
(ctr_prng_output_1))
    {
        debugger_break();
    }
    else
    {
        /* Operation successful. */
        while (1)
        {
            ;
        }
    }
}
```

Function Documentation

◆ RM_TINCRYPT_PORT_TRNG_Read()

```
fsp_err_t RM_TINCRYPT_PORT_TRNG_Read ( uint8_t *const p_rngbuf, uint32_t num_req_bytes )
```

Reads requested length of random data from the TRNG. Generate num_req_bytes of random bytes and store them in p_rngbuf buffer.

Return values

FSP_SUCCESS	Random number generation successful
FSP_ERR_ASSERTION	NULL input parameter(s).
FSP_ERR_CRYPT_UNKNOWN	An unknown error occurred.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- HW_SCE_RNG_Read

◆ RM_TINCRYPT_PORT_Init()

```
fsp_err_t RM_TINCRYPT_PORT_Init ( )
```

Initialize the SCE.

◆ default_CSPRNG()

```
int default_CSPRNG ( uint8_t * dest, unsigned int size )
```

Implements the Cryptographically Secure Pseudo-Random Number Generator function required by TinyCrypt.

Return values

TC_CRYPT_SUCCESS	Random number generation successful
TC_CRYPT_FAIL	Random number generation failed.

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- RM_TINCRYPT_PORT_TRNG_Read

4.2.115 Capacitive Touch Middleware (rm_touch)

Modules

Functions

`fsp_err_t RM_TOUCH_Open (touch_ctrl_t *const p_ctrl, touch_cfg_t const *const p_cfg)`

Opens and configures the TOUCH Middle module. Implements [touch_api_t::open](#). [More...](#)

`fsp_err_t RM_TOUCH_ScanStart (touch_ctrl_t *const p_ctrl)`

This function should be called each time a periodic timer expires. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Before starting the next scan, first get the data with [RM_TOUCH_DataGet\(\)](#). If a different control block scan should be run, check the scan is complete before executing. Implements [touch_api_t::scanStart](#). [More...](#)

`fsp_err_t RM_TOUCH_DataGet (touch_ctrl_t *const p_ctrl, uint64_t *p_button_status, uint16_t *p_slider_position, uint16_t *p_wheel_position)`

Gets the 64-bit mask indicating which buttons are pressed. Also, this function gets the current position of where slider or wheel is being pressed. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Implements [touch_api_t::dataGet](#). [More...](#)

`fsp_err_t RM_TOUCH_PadDataGet (touch_ctrl_t *const p_ctrl, uint16_t *p_pad_rx_coordinate, uint16_t *p_pad_tx_coordinate, uint8_t *p_pad_num_touch)`

This function gets the current position of pad is being pressed. Implements [touch_api_t::padDataGet](#) , [g_touch_on_ctsu](#). [More...](#)

`fsp_err_t RM_TOUCH_ScanStop (touch_ctrl_t *const p_ctrl)`

Scan stop specified TOUCH control block. Implements [touch_api_t::scanStop](#). [More...](#)

`fsp_err_t RM_TOUCH_CallbackSet (touch_ctrl_t *const p_api_ctrl, void(*p_callback)(touch_callback_args_t *), void const *const p_context, touch_callback_args_t *const p_callback_memory)`

`fsp_err_t RM_TOUCH_Close (touch_ctrl_t *const p_ctrl)`

Disables specified TOUCH control block. Implements [touch_api_t::close](#). [More...](#)

`fsp_err_t RM_TOUCH_SensitivityRatioGet (touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info)`

Get the touch sensitivity ratio. Implements

[touch_api_t::sensitivityRatioGet. More...](#)

`fsp_err_t` [RM_TOUCH_ThresholdAdjust](#) (`touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info`)

Adjust the touch judgment threshold. Implements [touch_api_t::thresholdAdjust. More...](#)

`fsp_err_t` [RM_TOUCH_DriftControl](#) (`touch_ctrl_t *const p_ctrl, uint16_t input_drift_freq`)

Control drift correction. Implements [touch_api_t::driftControl. More...](#)

Detailed Description

This module supports the Capacitive Touch Sensing Unit (CTSUs). It implements the [Touch Middleware Interface](#).

Overview

The Touch Middleware uses the [Capacitive Touch Sensing Unit \(r_ctsu\)](#) API and provides application-level APIs for scanning touch buttons, sliders, and wheels. This module is configured via the [QE for Capacitive Touch](#).

Features

- Supports touch buttons (Self and Mutual), sliders, and wheels
- Can retrieve the status of up to 64 buttons at once
- Software and external triggering
- Callback on scan end
- Collects and calculates usable scan results:
 - Slider position from 1 to 100 (percent)
 - Wheel position from 1 to 360 (degrees)
- Dynamic touch-judgment-threshold adjustment
- Calculate the XY coordinates of the pad(CTSUs)
- Optional (build time) support for real-time monitoring functionality through the QE tool over UART
- Optional (build time) support for tuning function through the QE Standalone Version tool over UART
- TrustZone Support

Configuration

Note

This module is configured via the [QE for Capacitive Touch](#). For information on how to use the QE tool, once the tool is installed click [Help](#) -> [Help Contents in e2 studio](#) and search for "QE".

This module supports the QE monitor function. The monitor determines whether to use debugger or serial communications, determines the type of the information from QE and sends only the

necessary information. This module supports the serial tuning function with the standalone version of QE. Generates a configuration configuration file by UART communication with QE.

Note

Multiple configurations can be defined within a single project allowing for different scan procedures or button layouts.

Build Time Configurations for rm_touch

The following build time configurations are defined in fsp_cfg/rm_touch_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.
Support for QE monitoring using UART	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Enable SCI_UART support for QE monitoring.
Support for QE Tuning using UART	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Enable SCI_UART support for QE Tuning.

Configurations for CapTouch > Touch (rm_touch)

This module can be added to the Stacks tab via New Stack > CapTouch > Touch (rm_touch). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
---------------	---------	---------	-------------

Interrupt Configuration

Refer to the [Capacitive Touch Sensing Unit \(r_ctsu\)](#) section for details.

Clock Configuration

Refer to the [Capacitive Touch Sensing Unit \(r_ctsu\)](#) section for details.

Pin Configuration

Refer to the [Capacitive Touch Sensing Unit \(r_ctsu\)](#) section for details.

Usage Notes

Measurements and Data Processing

The module determines whether the button has been touched based on the change in capacitance and detects the position of the slider or wheel. This requires continued periodic measurements of capacitance. When developing your application, make sure to periodically call [RM_TOUCH_ScanStart\(\)](#) and [RM_TOUCH_DataGet\(\)](#). For more details, refer to the sample application.

Button Touch Determination

Creating reference value and threshold

A touch button is not a mechanical button in which the ON/OFF state is switched by hardware. The ON/OFF state is determined via software.

First, a reference value is created based on measurement results in the non-touch state. The initial reference value is the first measured value. The threshold is then determined with an arbitrary offset. If a measured value exceeds the threshold, the button is determined to be in the ON state, if it does not exceed the threshold, it is in the OFF state.

Processing for self-capacitance and mutual capacitance are basically the same. However, because the amount of capacitance decreases when a mutual capacitance button is touched, the user needs to set the threshold based on decreasing measured values to determine the ON/OFF state.

You can set the threshold for each button separately in the configuration settings (threshold in [touch_button_cfg_t](#)). The following functions are also included to deal with issues such as chattering suppression and changes in the external environment which affect actual touch recognition.

Positive Noise Filter/Negative Noise Filter

As a chattering countermeasure, you can confirm the ON/OFF state after a set number of consecutive ON or OFF determinations.

In the configuration settings (on_freq and off_freq in [touch_cfg_t](#)) set the number of consecutive ON or OFF states. You can do this for all buttons in the touch interface configuration. Be aware that, although this is an effective solution to improving chattering, the greater the number of consecutive states, the slower the response to actual touch.

Hysteresis

This is another chattering countermeasure. Offset the constant to the threshold after the state goes to ON, and prevent chattering by using hysteresis as the OFF-to-ON and ON-to-OFF threshold.

You can set the hysteresis value for each button in the configuration settings (hysteresis in [touch_button_cfg_t](#)). The larger the hysteresis, the more effective the countermeasure is in suppressing chattering. However, keep in mind that this will make it more difficult to return the state from ON-to-OFF or OFF-to-ON.

Drift Correction Process

As a countermeasure for changes in the external environment, the drift correction process refreshes the reference value.

After averaging the measured value in the OFF state over a set period, if the button is in the touch OFF state after a set period, the reference value is refreshed. The drift correction is only executed in the OFF state and is cleared when touch ON is determined.

Set the period in the configuration settings (drift_freq in [touch_cfg_t](#)). You can do this for all buttons in the touch interface configuration. This allows you to adjust the ability to determine the touch state despite changes in the external environment.

Figure 211: Button Touch Determination

Press and hold cancel

Strong noise or other sudden environment changes can disable the drift correction process, preventing return from the ON state. The press and hold cancel function implements the drift correction process and returns the button from the ON state by forcibly turning the state to OFF after a certain number of consecutive ON state periods.

Set the number of consecutive ON periods required for the press and hold cancel function to return the button to the OFF state in the configuration settings (`cancel_freq` in `touch_cfg_t`). You can do this for all buttons in the touch interface configuration.

Touch Position Detection of Slider/Wheel

Configure a slider with multiple terminals to be measured (TS) physically arranged in a straight line. Configure a wheel with multiple terminals physically arranged in a circle.

The touch position is calculated from the measured values of the TS in the configuration. The calculation method for sliders and wheels is fundamentally the same.

1. Detect the maximum value (TS_MAX) among the terminals in the configuration.
2. Calculate the difference (d1, d2) between TS_MAX and the terminals on either side. (If the TS_MAX terminal is at one end of the slider, use the values of the two terminals to the right or left, accordingly.)
3. If the total of d1 and d2 exceeds the threshold, position calculation is initiated. If the total amount does not exceed the threshold, the position calculation process is ended.
4. With TS_MAX as the middle position, the ratio of d1 to d2 is used to calculate the position. The slider has a range of 1 to 100, and the while has a range of 1 to 360.

	Slider	Wheel
Electrode type	Self capacitance only	Self capacitance only
Number of electrodes	3-10	4+
Touch position output range	1-100	1-360
Default value (no touch)	0xFFFF	0xFFFF

Tuning the Touch Determination Adjustment

When QE tuning, a measurement is performed with a finger touching the button and the tuned parameters are output in the configuration file. The setting value of the threshold is 60% of the touch sensitivity between touch and non-touch state, and the setting value of the hysteresis coefficient is 5% of the threshold.

This module provides the functions for dynamic adjusting of these threshold and hysteresis coefficient.

They are two functions as below.

Adjusting the threshold and hysteresis coefficient to an arbitrary ratio.

Use **RM_TOUCH_ThresholdAdjust()**.

When changing the touch determination threshold ratio from 60% QE set to 70% user specified, the touch determination thresholds are as below.

If you want to make this setting, set the member of the second argument as follows. It is also necessary to set the ratio of the amount of touch change and the hysteresis value.

```
*p_touch_sensitivity_ratio = 100,
old_threshold_ratio = 60,
new_threshold_ratio = 70,
new_hysteresis_ratio = 5
```

Figure 212: Example of changing the threshold ratio

Adjusting the threshold and hysteresis coefficient according to the current touch sensitivity.

Use **RM_TOUCH_SensitivityRatioGet()**, **RM_TOUCH_ThresholdAdjust()**, and **RM_TOUCH_DriftControl()**.

When changing the kind of the overlay panel, the touch sensitivity differs from the one QE tuned. Wanting to use the software as it is without re-tuning. If you use a thicker overlay than that at QE tuning, the touch sensitivity decreases, and a touch may not be determined because of the same

touch determination threshold. This function adjusts the touch determination threshold based on the ratio of the touch sensitivity after changing the overlay to the touch sensitivity at the QE tuning.

`RM_TOUCH_SensitivityRatioGet()` outputs the ratio of the current touch sensitivity assuming that the touch sensitivity at the QE setting is 100%.

The following figure shows the case where an overlay panel is thinner and the touch sensitivity increases.

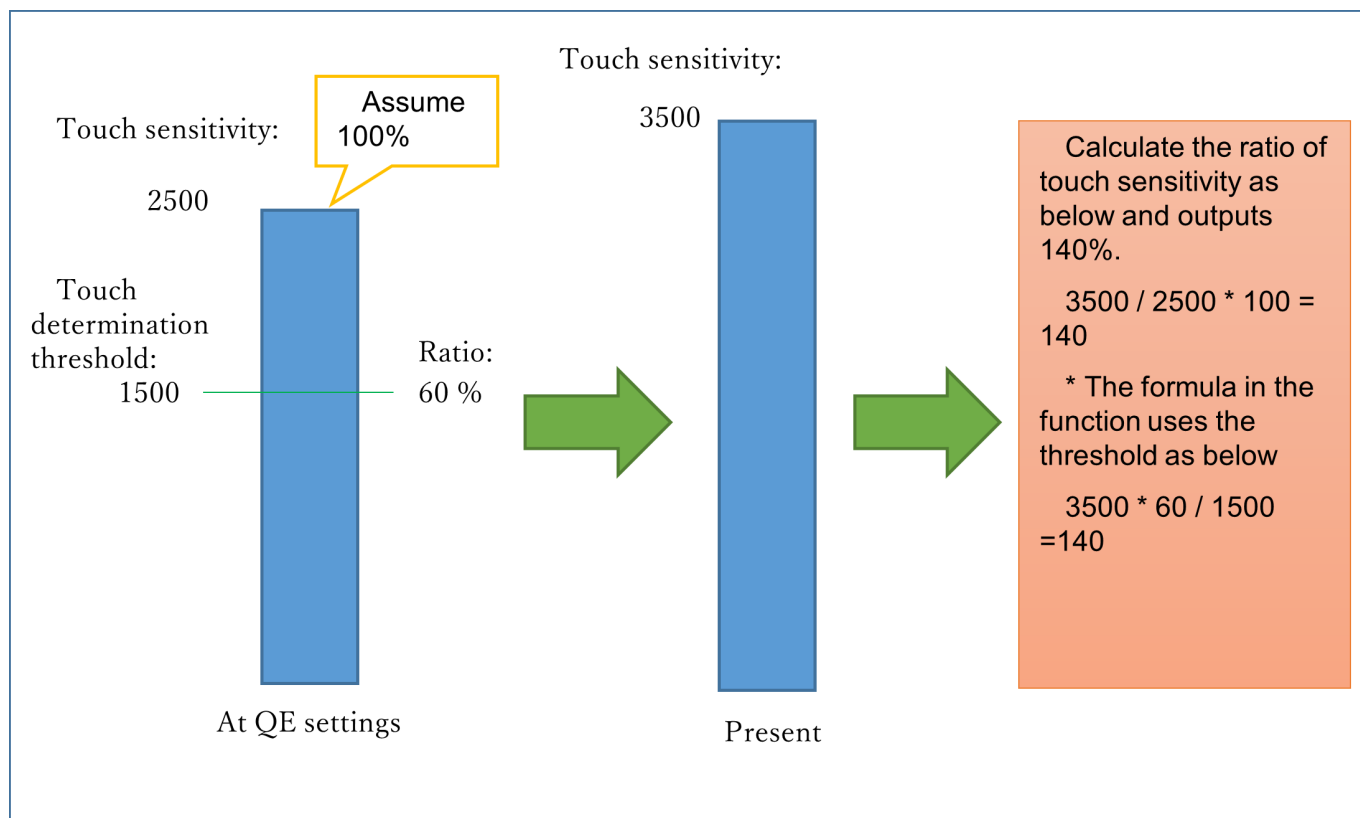

Figure 213: Example of increase touch sensitivity for thin overlay panels

Following figure shows the case where an overlay panel is thicker and the touch sensitivity decreases.

Figure 214: Example of decrease touch sensitivity for thicker overlay panels

[RM_TOUCH_ThresholdAdjust\(\)](#) sets the new touch determination threshold and the hysteresis value by using the touch sensitivity ratio obtained with [RM_TOUCH_SensitivityRatioGet\(\)](#) as arguments.

Example of calculation 1:

The touch sensitivity ratio is 140%, and the threshold set by QE is 1500.

Threshold = $140 * 1500 / 100 = 2100$

*p_touch_sensitivity_ratio = 140,

old_threshold_ratio = 60,

new_threshold_ratio = 60,

new_hysteresis_ratio = 5

Figure 215: Example of calculation 1

Example of calculation 2:

The touch sensitivity ratio is 60%, and the threshold set by QE is 1500.
 $\text{Threshold} = 60 * 1500 / 100 = 900$

*p_touch_sensitivity_ratio = 60,
 old_threshold_ratio = 60,
 new_threshold_ratio = 60,
 new_hysteresis_ratio = 5

Figure 216: Example of calculation 2

RM_TOUCH_DriftControl() set the second argument to 0 to stop the drift correction function.

When calculating the ratio of the touch change amount using `RM_TOUCH_SensitivityRatioGet()`, the touch change amount decreases due to the thick overlay, and the threshold value is not exceeded even if touched. Prevents the reference value from drifting.

Example of the application for adjustment using data flash without re-tuning or software rewriting

Enable UART communication to PC and 'tuning mode'. In tuning mode, the MCU transmits the ratio of the touch sensitivity in the touch state to the PC in real time. A user sends a command to decide the ratio while monitoring on the PC. The MCU stores the received ratio in the data flash. Make sure that the ratio stored in the data flash is read at the software activation, and the touch determination threshold is adjusted based on this stored value.

Pad

Configure a pad with multiple terminals physically arranged in cross.

The current position is Calculated from the measured values of the CTSU mutual scanning in the configuration.

Use `RM_TOUCH_PadDataGet()`.

Pad is subject so some limitations:

	Pad
Electrode type	CFC mutual capacitance only
Number of electrodes	RX(TS-CFC)3+, TX(Any TS)3+
Touch position output range	rx_coodinate:(0 ~ rx_pixel), tx_coodinate:(0 ~ tx_pixsel)
Default value (no touch)	rx_coodinate:0xFFFF, tx_coodinate:0xFFFF
Pixel range	rx_pixel:(1 ~ 65535), tx_pixsel:(1 ~ 65535)

Pitch for each terminal can be set with QE. Pitch's default value is 64.

The relationship between pixel and pitch : $\text{Pixel} = \text{Pitch} \times \text{number of TS} - 1$

Figure 217: Example of Pad

TrustZone Support

In `r_ctsu` and `rm_touch` module, Non-Secure Callable Guard Functions are only generated from QE for Capacitive Touch. QE can be used for tuning in secure or flat project, but not in non-secure project. If you want to use in non-secure project, copy the output file from secure or flat project. Refer to QE Help for more information.

Examples

Basic Example

This is a basic example of minimal use of the TOUCH in an application.

```
void touch_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;

    err = RM_TOUCH_Open(&g_touch_ctrl, &g_touch_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    while (true)
    {
        RM_TOUCH_ScanStart(&g_touch_ctrl);
    }
}
```

```
while (0 == g_flag)
{
/* Wait scan end callback */
}
g_flag = 0;
err = RM_TOUCH_DataGet(&g_touch_ctrl, &button, slider, wheel);
if (FSP_SUCCESS == err)
{
/* Application specific data processing. */
}
}
}
```

Multi Mode Example

This is an optional example of using both Self-capacitance and Mutual-capacitance. Refer to the Multi Mode Example in CTSU usage notes.

```
void touch_optional_example (void)
{
fsp_err_t err = FSP_SUCCESS;
err = RM_TOUCH_Open(&g_touch_ctrl, &g_touch_cfg);
assert(FSP_SUCCESS == err);
err = RM_TOUCH_Open(&g_touch_ctrl_mutual, &g_touch_cfg_mutual);
assert(FSP_SUCCESS == err);
while (true)
{
RM_TOUCH_ScanStart(&g_touch_ctrl);
while (0 == g_flag)
{
/* Wait scan end callback */
}
g_flag = 0;
RM_TOUCH_ScanStart(&g_touch_ctrl_mutual);
while (0 == g_flag)
```

```

    {
    /* Wait scan end callback */
    }
    g_flag = 0;
    err = RM_TOUCH_DataGet(&g_touch_ctrl, &button, slider, wheel);
    if (FSP_SUCCESS == err)
    {
    /* Application specific data processing. */
    }
    err = RM_TOUCH_DataGet(&g_touch_ctrl_mutual, &button, slider, wheel);
    if (FSP_SUCCESS == err)
    {
    /* Application specific data processing. */
    }
    }
}

```

Information of pad		
Data Fields		
uint16_t *	p_rx_coordinate	RX coordinate.
uint16_t *	p_tx_coordinate	TX coordinate.
uint16_t *	p_num_touch	number of touch
uint16_t *	p_threshold	Coordinate calculation threshold value.
uint16_t *	p_base_buf	ScanData Base Value Buffer.
uint16_t *	p_rx_pixel	X coordinate resolution.
uint16_t *	p_tx_pixel	Y coordinate resolution.
uint8_t *	p_max_touch	Maximum number of touch judgments used by the pad.
int32_t *	p_drift_buf	Drift reference value. g_touch_button_drift_buf[] is set by Open API.
uint16_t *	p_drift_count	Drift counter. g_touch_button_drift_count[] is set by Open API.
uint8_t	num_drift	Copy from config by Open API.

◆ touch_instance_ctrl_t

struct touch_instance_ctrl_t		
TOUCH private control block. DO NOT MODIFY. Initialization occurs when RM_TOUCH_Open() is called.		
Data Fields		
uint32_t	open	Whether or not driver is open.
touch_button_info_t	binfo	Information of button.
touch_slider_info_t	sinfo	Information of slider.
touch_wheel_info_t	winfo	Information of wheel.
bool	serial_tuning_enable	Flag of serial tuning status.
touch_pad_info_t	pinfo	Information of pad.
touch_cfg_t const *	p_touch_cfg	Pointer to initial configurations.
ctsu_instance_t const *	p_ctsu_instance	Pointer to CTSU instance.

Function Documentation

◆ RM_TOUCH_Open()

```
fsp_err_t RM_TOUCH_Open ( touch_ctrl_t *const p_ctrl, touch_cfg_t const *const p_cfg )
```

Opens and configures the TOUCH Middle module. Implements `touch_api_t::open`.

Example:

```
err = RM_TOUCH_Open(&g_touch_ctrl, &g_touch_cfg);
```

Return values

FSP_SUCCESS	TOUCH successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

◆ RM_TOUCH_ScanStart()

```
fsp_err_t RM_TOUCH_ScanStart ( touch_ctrl_t *const p_ctrl)
```

This function should be called each time a periodic timer expires. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Before starting the next scan, first get the data with `RM_TOUCH_DataGet()`. If a different control block scan should be run, check the scan is complete before executing. Implements `touch_api_t::scanStart`.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance or other.
FSP_ERR_CTSU_NOT_GET_DATA	The previous data has not been retrieved by DataGet.

◆ **RM_TOUCH_DataGet()**

```
fsp_err_t RM_TOUCH_DataGet ( touch_ctrl_t *const p_ctrl, uint64_t * p_button_status, uint16_t *
p_slider_position, uint16_t * p_wheel_position )
```

Gets the 64-bit mask indicating which buttons are pressed. Also, this function gets the current position of where slider or wheel is being pressed. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Implements [touch_api_t::dataGet](#).

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance.
FSP_ERR_CTSU_INCOMPLETE_TUNING	Incomplete initial offset tuning.

◆ **RM_TOUCH_PadDataGet()**

```
fsp_err_t RM_TOUCH_PadDataGet ( touch_ctrl_t *const p_ctrl, uint16_t * p_pad_rx_coordinate,
uint16_t * p_pad_tx_coordinate, uint8_t * p_pad_num_touch )
```

This function gets the current position of pad is being pressed. Implements [touch_api_t::padDataGet](#) , [g_touch_on_ctsu](#).

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance.

◆ **RM_TOUCH_ScanStop()**

```
fsp_err_t RM_TOUCH_ScanStop ( touch_ctrl_t *const p_ctrl)
```

Scan stop specified TOUCH control block. Implements [touch_api_t::scanStop](#).

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_TOUCH_CallbackSet()**

```
fsp_err_t RM_TOUCH_CallbackSet ( touch_ctrl_t *const p_api_ctrl, void(*) (touch_callback_args_t *)
p_callback, void const *const p_context, touch_callback_args_t *const p_callback_memory )
```

Updates the user callback and has option of providing memory for callback structure. Implements `touch_api_t::callbackSet`

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.

◆ **RM_TOUCH_Close()**

```
fsp_err_t RM_TOUCH_Close ( touch_ctrl_t *const p_ctrl)
```

Disables specified TOUCH control block. Implements `touch_api_t::close`.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_TOUCH_SensitivityRatioGet()**

```
fsp_err_t RM_TOUCH_SensitivityRatioGet ( touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *
p_touch_sensitivity_info )
```

Get the touch sensitivity ratio. Implements `touch_api_t::sensitivityRatioGet`.

Return values

FSP_SUCCESS	Successfully touch sensitivity ratio got.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance.
FSP_ERR_CTSU_INCOMPLETE_TUNING	Incomplete initial offset tuning.

◆ **RM_TOUCH_ThresholdAdjust()**

```
fsp_err_t RM_TOUCH_ThresholdAdjust ( touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *
p_touch_sensitivity_info )
```

Adjust the touch judgment threshold. Implements `touch_api_t::thresholdAdjust`.

Return values

FSP_SUCCESS	Successfully touch judgment threshold was adjusted.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_TOUCH_DriftControl()**

```
fsp_err_t RM_TOUCH_DriftControl ( touch_ctrl_t *const p_ctrl, uint16_t input_drift_freq )
```

Control drift correction. Implements `touch_api_t::driftControl`.

Return values

FSP_SUCCESS	Successfully drift correction was controlled.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.116 USBX Porting Layer (rm_usbx_port)**Modules****Functions**

Refer to [USB \(r_usb_basic\)](#) for the common API (`r_usb_basic`) to be called from the application.

Overview

This USB driver works by combining USBX and `r_usb_basic` module.

How to Configuration

- Using a class other than HMSC. The following describes how to configure USBX using PCDC

as an example.

1. Select [New Stack]->[Azure RTOS]->[USBX]->[PCDC]

Figure 218: Select USB Device Class

2. The following is displayed when selecting USBX PCDC.

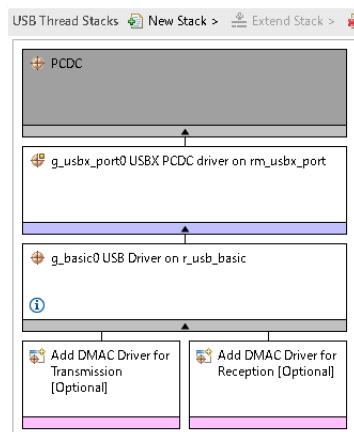

Figure 219: USBX PCDC Stack

3. Select the USB pipe to use.

Figure 220: Select using USB Pipe

- Using HMSC. Since HMSC is used in a different way from other USBX modules, the usage is described below.

1. Select [New Stack]->[Azure RTOS]->[FileX]->[FileX on USBX]

Figure 221: Select USB Device Class

2. The following is displayed when selecting Filex on USBX.

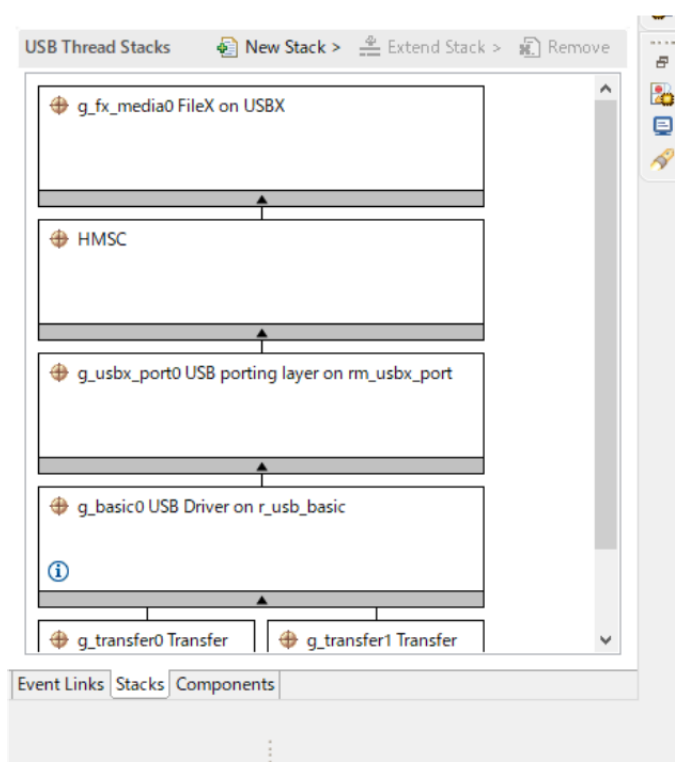

Figure 222: FileX on USBX Stack

Note

- The following are notes on using the `ux_host_class_cdc_acm_read` function or the `ux_device_class_cdc_acm_read` function.
 - Please specify a multiple of `MaxPacketSize` to the 3rd argument(`requested_length`). since If the value of the 3rd argument is not multiple of `MaxPacketSize`, all data sent by USB Host or USB Peripheral may not be received correctly.
 - Please specify start address of thr area allocated a size larger than 3rd argument(`requested_length`) to the 2nd argument(`data_pointer` or `buffer`).
- HMSC uses FileX. For more information on FileX, please refer to the following URL.

<https://docs.microsoft.com/en-us/azure/rtos/filex/>

Limitations

1. Please call the initialization function in the application program. Please be sure to call R_USB_Open function after calling the following functions.

- Peripheral
 - PCDC / PHID / PAUD
 - ux_system_initialize
 - ux_device_stack_initialize
 - ux_device_stack_class_register
 - PMSC
 - ux_system_initialize
 - ux_device_stack_initialize
- Host
 - HCDC / HHID
 - ux_system_initialize
 - ux_host_stack_initialize
 - HMSC
 - ux_system_initialize
 - ux_host_stack_initialize
 - fx_system_initialize

2. Set the value for 1000 Ticks per second in the "Timer Ticks Per Second" item.

Property	Value
▼ Common	
> General	
▼ Timer	
Timer Ticks Per Second	1000
Timer Thread Stack Size	1024
Timer Thread Priority	0
Timer Process In ISR	Enabled
Reactivate Inline	Disabled
Timer	Enabled

Figure 223: Specify value of Timer Ticks Per Second

3. Set the Thread priority to a value of 21.

▼ Thread	
Symbol	usb_thread0
Name	USB Thread
Stack size (bytes)	1024
Priority	15
Auto start	Enabled
Time slicing interval (ticks)	1

Figure 224: Specify value of Thread priority

4. When using the following functions, call the following functions in the following order after calling the R_USB_Close function. NOTE : Do not call R_USB_Close function in Peripheral Audio Class.

- Peripheral
 - PCDC / PHID
 - _ux_device_stack_class_unregister
 - _ux_device_stack_uninitialize
 - PMSC

- `_ux_device_stack_uninitialize`
- Host
 - `_ux_host_stack_uninitialize`

5.The USBX HID class does not support OUT transfer.

6.When using USBX HHID, please use Wired device.

7.This module does not support the MCU(RA4M1 and RA2A1) since the RAM size is small.

Descriptor

Templates for USBX descriptors can be found in `ra/fsp/src/rm_usbx_port` folder. Also, please be sure to use your vendor ID.

Change the descriptor.c.template file for each class as follows if High-speed mode is used.

- `rm_usbx_pcdc_descriptor.c.template`
 1. Comment on lines 108 and 243.
 2. Delete the `"/"` on lines 109 and 242.
- `rm_usbx_pmsc_descriptor.c.template`
 1. Comment on lines 78 and 153.
 2. Delete the `"/"` on lines 79 and 152.
- `rm_usbx_paud_descriptor.c.template`
 1. Comment on lines 167 and 485.
 2. Delete the `"/"` on lines 168 and 486.

There are two types of templates for PHID descriptor.

Keyboard templates should be referred to `rm_usbx_phid_descriptor_keyboard.c.template`.

Mouse templates should be referred to `rm_usbx_phid_descriptor_mouse.c.template`.

Examples

USBX PCDC Example

PCDC loopback example is as follows.

```

USBX HCDC Example

The main functions of the HCDC loopback example are as follows:

1. Virtual UART control settings are configured by transmitting the class request SET_LINE_CODING to the CDC device.
2. Sends receive (Bulk In transfer) requests to a CDC peripheral device and receives data.
3. Loops received data back to the peripheral by means of Bulk Out transfers.

The main loop performs loopback processing in which data received from a CDC peripheral device is transmitted unaltered back to the peripheral.

```
#define VALUE_100 (100)

Detailed Description

Virtual EEPROM on RA MCUs. This module implements the [Virtual EEPROM Interface](#).

Overview

This VEE module emulates basic EEPROM capabilities. Support is provided for reading and writing both common records and reference data (originally programmed during product assembly or test). A count of the number of segments erased throughout the lifetime of the application is maintained and can be accessed at any time. Wear leveling is handled automatically by the driver.

Features

- Writing and reading user defined records of any length to data flash.
- Wear leveling is handled automatically.
- Reference data such as calibration data programmed at assembly or test time is preserved.
- Reference data can be updated at run time.
- Fault resilient design.

Data Flash Segmentation

Wear leveling is handled by changing the location in the data flash where a record is stored every time that it is updated. This change in physical location of the record is transparent to the user. Any time an update for a specific record ID is written, it is written to the next unused location in data flash and its location is stored in RAM for quick look-up later. When required, only the most recent version of these records is automatically copied to the next blank segment in data flash. The data flash area is divided into a number of equal-size segments. There is only one segment active at a time. A segment contains two areas- the record area (which is the vast majority of the segment) and the reference data area which contains optional data typically programmed during assembly or final test. Records and updated reference data are written to this segment until one of the two areas becomes full. The record area must be able to hold at least one of every record ID possible and still have space left over for record updates.

Figure 225: Segment Data Format

When a segment does not have sufficient space for additional records or updated reference data, a Refresh occurs. This process copies the most recent record for each ID as well as the latest version of reference data (if any) to the next segment. The very first time VEE runs on an MCU, it marks the last segment as active whether there is reference data configured or not. The end of VEE data flash area is used to provide an easily identified physical flash address that can be used while programming reference data without requiring Virtual EEPROM middleware.

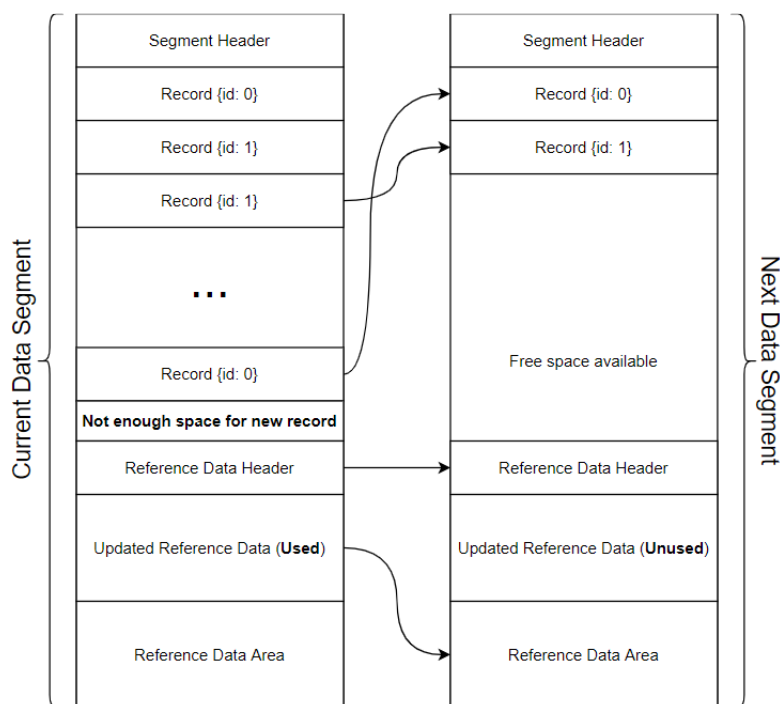

Figure 226: Refresh Operation

Record Format

Each record begins with a header that contains the record size, followed by the data, and the trailer. The trailer contains a validation code which is used for internal purposes only and is not a 16-bit CRC or ECC value. If that level of error checking is desired, the user should include that in the record data passed to the driver. Padding is added between the end of user data and the trailer to ensure the trailer is aligned properly.

Figure 227: Record Format

Reference Data Area

VEE can be configured for the presence of reference data. The original programmed reference data must be located at the end of the VEE data flash area. An area of equal size is reserved below this in case updated reference data becomes available later. Below that is a header which indicates

whether the update area has been written to.

Figure 228: Reference Data Area Format

Just as with records, the validation code is used for internal purposes only and is not a 16-bit CRC or ECC value. If that level of error checking is desired, the user should include that in the updated reference data passed to the driver.

Fault Tolerance

The Virtual EEPROM has a fault tolerant design. If for any reason an operation fails before it is completed the next time the module is opened a refresh will occur. Any corrupted data will be discarded.

Configuration

Build Time Configurations for rm_vee_flash

The following build time configurations are defined in fsp_cfg/rm_vee_flash_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.
Reference Data Support	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Support writing reference data to the end of the segment.
Refresh Buffer Size	Value must be an integer greater than 0 and a multiple of 4 bytes.	32	The size of the internal buffer used to copying data from one flash segment to another during a refresh operation. This is required because data flash to data flash transfers are not supported by the hardware.

Configurations for Storage > Virtual EEPROM on Flash (rm_vee_flash)

This module can be added to the Stacks tab via New Stack > Storage > Virtual EEPROM on Flash (rm_vee_flash). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid	g_vee0	Module name.

	C symbol		
Record Max ID	Value must be an integer.	16	Set this value to the highest record ID in use.
Number of Segments	Value must be an integer.	2	Set value to number of segments desired in data flash (minimum 2). The fewer the segments, the fewer refreshes occur, but the longer refreshes take to complete (erase time).
Start Address	Manual Entry	BSP_FEATURE_FLASH_DATA_FLASH_START	Start address of the flash area used by Virtual EEPROM.
Total Size	Manual Entry	BSP_DATA_FLASH_SIZE_BYTES	The total size (In bytes) of the flash area used by Virtual EEPROM.
Reference Data Size	Value must be an integer.	0	The size of the reference area (In bytes) used by Virtual EEPROM.
Callback	Name must be a valid C symbol	vee_callback	A user callback function can be provided. If this callback function is provided, it will be called from the flash interrupt service routine (ISR).

Clock Configuration

There is no clock configuration for the RM_VEE_FLASH module.

Pin Configuration

This module does not use I/O pins.

Usage Notes

A refresh buffer is required to copy data between segments. Data flash cannot be simultaneously read from and written to. Data will be temporarily copied into RAM during refresh operations.

Examples

Basic Example

This is a basic example of minimal use of the RM_VEE_FLASH module in an application.

```
volatile bool callback_called = false;

/* Record ID to use for storing pressure data. */
#define ID_PRESSURE (0U)

/* Example data structure. */
typedef struct st_pressure
{
    uint32_t timestamp;
    uint16_t low;
    uint16_t average;
    uint16_t high;
} pressure_t;

Data Structures

struct [rm_vee_flash_cfg_t](#)

struct [rm_vee_flash_instance_ctrl_t](#)

Data Structure Documentation

◆ [rm_vee_flash_cfg_t](#)

struct [rm_vee_flash_cfg_t](#)

User configuration structure, used in open function

Data Fields

flash_instance_t const *	p_flash	Pointer to a flash instance.
--	---------	------------------------------

◆ [rm_vee_flash_instance_ctrl_t](#)

struct [rm_vee_flash_instance_ctrl_t](#)

Instance control block. This is private to the FSP and should not be used or modified by the application.

Function Documentation

◆ RM_VEE_FLASH_Open()

```
fsp_err_t RM_VEE_FLASH_Open ( rm_vee_ctrl_t *const p_api_ctrl, rm_vee_cfg_t const *const p_cfg )
```

Open the RM_VEE_FLASH driver module

Implements [rm_vee_api_t::open](#)

Initializes the driver's internal structures and opens the Flash driver. The Flash driver must be closed prior to opening VEE. The error code FSP_SUCCESS_RECOVERY indicates that VEE detected corrupted data; most likely due to a power loss during a data flash write or erase. In these cases, an automatic internal Refresh is performed and the partially written data is lost.

Return values

FSP_SUCCESS	Successful. FSP_SUCCESS_RECOVERY changed to FSP_SUCCESS
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_ALREADY_OPEN	This function has already been called.
FSP_ERR_PE_FAILURE	This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware.
FSP_ERR_TIMEOUT	Interrupts disabled outside of VEE
FSP_ERR_NOT_INITIALIZED	Corruption found. A refresh is required.
FSP_ERR_INVALID_ARGUMENT	The supplied configuration is invalid.

◆ RM_VEE_FLASH_RecordWrite()

```
fsp_err_t RM_VEE_FLASH_RecordWrite ( rm_vee_ctrl_t *const p_api_ctrl, uint32_t const rec_id,
uint8_t const *const p_rec_data, uint32_t const num_bytes )
```

Writes a record to data flash.

Implements `rm_vee_api_t::recordWrite`

This function writes `num_bytes` of data pointed to by `p_rec_data` to data flash. This function returns immediately after starting the flash write. BE SURE NOT TO MODIFY the data buffer contents until after the write completes. This includes exiting the calling function when the data buffer is a local variable (stack may be used by another function and corrupt the data buffer contents).

Return values

FSP_SUCCESS	Write started successfully.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_INVALID_ARGUMENT	An argument contains an illegal value.
FSP_ERR_INVALID_MODE	The operation cannot be started in the current mode.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_PE_FAILURE	This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware.
FSP_ERR_TIMEOUT	Flash write timed out (Should not be possible when flash bgo is used).
FSP_ERR_NOT_INITIALIZED	Corruption found. A refresh is required.

◆ **RM_VEE_FLASH_RecordPtrGet()**

```
fsp_err_t RM_VEE_FLASH_RecordPtrGet ( rm_vee_ctrl_t *const p_api_ctrl, uint32_t const rec_id,
uint8_t **const pp_rec_data, uint32_t *const p_num_bytes )
```

Gets a pointer to the most recent record data.

Implements `rm_vee_api_t::recordPtrGet`

This function sets the argument pointer to the most recent version of the record data in flash. Flash cannot be accessed for reading and writing at the same time. Therefore, reading the data at `p_ref_data` must be completed prior to initiating any type of Flash write.

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_ASSERTION	<code>p_ref_data</code> is NULL.
FSP_ERR_INVALID_ARGUMENT	Record data not configured.
FSP_ERR_NOT_FOUND	The record associated with the requested ID could not be found.

◆ RM_VEE_FLASH_RefDataWrite()

```
fsp_err_t RM_VEE_FLASH_RefDataWrite ( rm_vee_ctrl_t *const p_api_ctrl, uint8_t const *const p_ref_data )
```

Writes new Reference data to the reference update area.

Implements `rm_vee_api_t::refDataWrite`

This function writes VEE_CFG_REF_DATA_SIZE bytes pointed to by p_ref_data to data flash. This function returns immediately after starting the flash write. BE SURE NOT TO MODIFY the data buffer contents until after the write completes.

Return values

FSP_SUCCESS	Write started successfully.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_INVALID_MODE	The operation cannot be started in the current mode.
FSP_ERR_PE_FAILURE	This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware.
FSP_ERR_TIMEOUT	Flash write timed out (Should not be possible when flash bgo is used).
FSP_ERR_UNSUPPORTED	Reference data is not supported in the current configuration.
FSP_ERR_NOT_INITIALIZED	Corruption found. A refresh is required.

◆ **RM_VEE_FLASH_RefDataPtrGet()**

```
fsp_err_t RM_VEE_FLASH_RefDataPtrGet ( rm_vee_ctrl_t *const p_api_ctrl, uint8_t **const pp_ref_data )
```

Gets a pointer to the most recent reference data.

Implements `rm_vee_api_t::recordPtrGet`

This function sets the argument pointer to the most recent version of the reference data in flash. Flash cannot be accessed for reading and writing at the same time.

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_UNSUPPORTED	Reference data is not supported in the current configuration.
FSP_ERR_NOT_FOUND	No reference data was found.

◆ **RM_VEE_FLASH_StatusGet()**

```
fsp_err_t RM_VEE_FLASH_StatusGet ( rm_vee_ctrl_t *const p_api_ctrl, rm_vee_status_t *const p_status )
```

Get the current status of the driver.

Implements `rm_vee_api_t::statusGet`

This command is typically used to verify that the last Write or Refresh command has completed before attempting to perform another API call.

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_ASSERTION	An input parameter is NULL.

◆ **RM_VEE_FLASH_Refresh()**

```
fsp_err_t RM_VEE_FLASH_Refresh ( rm_vee_ctrl_t *const p_api_ctrl)
```

Manually start a refresh operation

Implements `rm_vee_api_t::refresh`

This function is used to start a segment Refresh at any time. The Refresh process by default occurs automatically when no more record or reference data space is available and a Write is requested. However, the app may desire to force a refresh when it knows it is running low on space and large amounts of data are about to be recorded.

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_PE_FAILURE	This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware.
FSP_ERR_INVALID_MODE	The operation cannot be started in the current mode.
FSP_ERR_TIMEOUT	Flash write timed out (Should not be possible when flash bgo is used).
FSP_ERR_NOT_INITIALIZED	Corruption found. A refresh is required.

◆ **RM_VEE_FLASH_Format()**

```
fsp_err_t RM_VEE_FLASH_Format ( rm_vee_ctrl_t *const p_api_ctrl, uint8_t const *const p_ref_data )
```

Start a manual format operation.

Implements `rm_vee_api_t::format`

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_PE_FAILURE	This error indicates that a flash programming, erase, or blankcheck operation has failed
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_TIMEOUT	Flash write timed out (Should not be possible when flash bgo is used).
FSP_ERR_NOT_INITIALIZED	Corruption found. A refresh is required.

◆ **RM_VEE_FLASH_CallbackSet()**

```
fsp_err_t RM_VEE_FLASH_CallbackSet ( rm_vee_ctrl_t *const p_api_ctrl, void(*) (rm_vee_callback_args_t *) p_callback, void const *const p_context, rm_vee_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure.

Implements `rm_vee_api_t::callbackSet`.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	<code>p_callback</code> is non-secure and <code>p_callback_memory</code> is either secure or NULL.

◆ RM_VEE_FLASH_Close()

```
fsp_err_t RM_VEE_FLASH_Close ( rm_vee_ctrl_t *const p_api_ctrl)
```

Closes the Flash driver and VEE driver.

Implements `rm_vee_api_t::close`

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_ASSERTION	An input parameter is NULL.

4.2.118 AWS Device Provisioning

Modules

AWS Device Provisioning example software.

Overview

Terminology

The terminology defined below will be used in the following sections.

Term	Description
Service Provider	Entity that provides the cloud infrastructure and associated services, for example, AWS/Azure.
Device Manufacturer	Entity that provides the MCU, for example, Renesas.
OEM	Entity that uses the MCU to create a product.
Customer	End user of OEM product.

Device ID

For systems that intend to use Public Key Certificate (PKC), the Device ID is in the form of a key pair (RSA or ECC). A PKC comprises of a **public key**, metadata, and finally a signature over all that. This signature is generated by the entity that issues the certificate and is known as a CA (Certificate Authority). The most common format for a public certificate is the [X.509 format](#) which is typically PEM (base 64) encoded such that the certificate is human-readable. It can also be DER encoded which is binary encoding and thus not human readable. The **public key** portion of the Device ID is used for the Device Certificate.

Provisioning

Device Provisioning refers to the process by which a service provider links a certificate to a Device ID and thus a device. Depending on the provisioning model, an existing certificate from the device may be used or a new one will be issued at this stage. Provisioning (also referred to as Registration) occurs with respect to a particular service provider, for example, AWS or Azure. It is necessary that the certificate is issued by the service provider or a CA known to those providers. When a device is provisioned with AWS for example, the AWS IoT service associates the Device ID (and thus the device) with a specific certificate. The certificate will be programmed into the device and for all future transactions with AWS, the certificate will be used as the means of identifying the device. The public and private key are also stored on the MCU.

Provisioning Models

Provisioning services vary between [service providers](#). There are essentially three general provisioning models.

1. Provisioning happens on the production line. This requires the provisioning Infrastructure to be present on the production line. This is the most secure model, but is expensive.
2. Devices are programmed with a shared credential that is linked into the code at build time and the provisioning occurs when a customer uses the device for the first time. The shared credential and a unique device serial number are used to uniquely identify the device during the provisioning process. So long as the product only has the shared credential, it will only operate with limited (as defined by certificate policy) functionality. Once the provisioning is done, then the device will be fully functional. This is the most common use case for consumer products where no sensitive information is being transmitted. AWS provides an [example](#) of this model.
3. Devices have no identity programmed in the factory; provisioning occurs through some other device like a smartphone which is already trusted by the service provider.

In all these cases, the Device Identity

1. Is unique to the device
2. Must have restricted access within the device
3. Can be used to issue more than one certificate and the certificates themselves have to be updatable in the field.

AWS uses the PKCS11 API to erase, store and retrieve certificates. These PKCS11 functions (Write, Read and Erase) are separated out into a Physical Abstraction Layer (PAL) which the OEM/Device Manufacturer is expected to implement for the type of memory that they intend to use. The internal `rm_aws_pkcs11_pal` module implements these requirements on RA MCU data flash.

AWS Provisioning Example

AWS provides an **example** implementation to support device provisioning. This implementation uses the PKCS11 API to store device credentials into the PKCS11 defined memory. The implementation (`aws_dev_mode_key_provisioning.c`) exposes two functions:

1. `vDevModeKeyProvisioning()`
2. `vAlternateKeyProvisioning()`

Both of these functions require that the device credentials be provided in PEM format. Using either of these example functions as is in production is not recommended; but `vAlternateKeyProvisioning()` provides more flexibility because of the ability to provide credentials as arguments.

ProvisioningParams_t params;

/* Provision device with provided credentials. The provided credentials are written
to data flash.

* In production, the credentials can be provided over a comms channel instead of
being linked into the image.

* The same example provisioning function, vAlternateKeyProvisioning, can be used in
```

```
that case. */
    params.pucClientPrivateKey      = (uint8_t *) keyCLIENT_PRIVATE_KEY_PEM;
    params.pucClientCertificate     = (uint8_t *) keyCLIENT_CERTIFICATE_PEM;
    params.ulClientPrivateKeyLength = 1 + strlen((const char *)
params.pucClientPrivateKey);
    params.ulClientCertificateLength = 1 + strlen((const char *)
params.pucClientCertificate);
    params.pucJITPCertificate       = NULL;
    params.ulJITPCertificateLength  = 0;
    vAlternateKeyProvisioning(&params);
}
```

Limitations

The provisioning code is an example provided by AWS. It must be modified to meet product requirements.

4.2.119 AWS HTTPS

Modules

This module provides the AWS HTTPS integration documentation.

Overview

The AWS HTTPS core library can be used to send HTTP and HTTPS requests. The documentation for the library can be found at the following link: [coreHTTP](#).

Features

- Secure and Non-secure HTTP requests
- [Mutually authenticated connections](#)

Configuration

Memory Usage

The AWS HTTPS library relies heavily on dynamic memory allocation for thread/task creation as well as other uses. It is recommended to tweak the thread stack configuration values based on usage. Notable values are:

AWS IoT Common

- IoT Thread Default Stack Size
- IoT Network Receive Task Stack Size

FreeRTOS Thread

- General|Minimal Stack Size

FreeRTOS Plus TCP

- Stack size in words (not bytes)

Usage Notes

Limitations

- MbedTLS must be initialized and key provisioning must be done before starting a secure connection. Refer to [AWS Secure Sockets](#).

Examples

HTTPS GET request

```

/* Certificate copied from https://www.amazontrust.com/repository/AmazonRootCA1.pem
*/

```

```
assert(HTTPSSuccess == xHTTPStatus);  
  
xNetworkStatus = SecureSocketsTransport_Disconnect(&xNetworkContext);  
  
assert(TRANSPORT_SOCKET_STATUS_SUCCESS == xNetworkStatus);  
  
/* The HTTPS request has completed. The result is stored in xResponse. */  
}
```

4.2.120 AWS MQTT

Modules

This module provides the AWS MQTT integration documentation.

Overview

The AWS MQTT library can connect to either AWS or a third party MQTT broker such as [Mosquitto](#). The documentation for the library can be found at the following link: [coreMQTT](#).

Features

- MQTT connections over TLS to an AWS IoT Endpoint or Mosquitto server
- Unsecure MQTT connections to Mosquitto servers. This is not recommended for production and should only be done to a local server for testing.

Configuration

Memory Usage

The AWS MQTT library relies heavily on dynamic memory allocation for thread/task creation as well as other uses. Depending on the configuration it may be required to provide as much as 110k heap. To decrease this it is recommended to tweak the thread stack configuration values based on usage. Notable values are:

AWS IoT Common

- IoT Thread Default Stack Size
- IoT Network Receive Task Stack Size

FreeRTOS Thread

- General|Minimal Stack Size

FreeRTOS Plus TCP

- Stack size in words (not bytes)

Usage Notes

The AWS MQTT library utilizes a system taskpool to queue up messages. This system task pool must be created before calling into the MQTT library. `iot_init.c` has been provided for easy initialization of this taskpool via `lotSdk_Init()`.

The AWS MQTT Demo has been provided to easily demonstrate MQTT functionality. An example of initializing the system taskpool and running the MQTT demo has been provided below.

Limitations

- `aws_clientcredential.h` and `aws_clientcredential_keys.h` need to be added manually.
- The IoT Thread must have a higher priority than the Network Receive Thread.
- MbedTLS must be initialized and key provisioning must be done before starting a secure connection. Refer to [AWS Secure Sockets](#).

Examples

Non-secure connection to a Mosquitto server

```
#define IOT_LOG_STACK_SIZE (256)
const uint8_t g_ip_address[4] = {169, 254, 57, 49};
const uint8_t g_net_mask[4] = {255, 255, 0, 0};
const uint8_t g_gateway_address[4] = {169, 254, 57, 49};
const uint8_t g_dns_address[4] = {8, 8, 8, 8};
const uint8_t g_mac_address[6] = {0x66, 0x66, 0x66, 0x66, 0x66, 0x66};
void mqtt_non_secure_example ()
{
    /* Initialize IOT FreeRTOS Libraries */
    SYSTEM_Init();
    /* Initialize the crypto hardware acceleration. */
    mbedtls_platform_setup(NULL);
    xLoggingTaskInitialize(IOT_LOG_STACK_SIZE, 1, 10);
    /* Start up the network stack. */
    FreeRTOS_IPInit(g_ip_address, g_net_mask, g_gateway_address, g_dns_address,
g_mac_address);
    while (pdFALSE == FreeRTOS_IsNetworkUp())
    {
        vTaskDelay(1);
    }
    /* AWS MQTT APIs can now be called. Please refer to the documentation linked above.
*/
```

```

/* If using the MQTT Wrapper IotSdk_Init() must be called prior to using MQTT. */
}

```

Secure connection to a Mosquitto server

Note

MbedTLS must be initialized and key provisioning must be done before starting a secure connection. Refer to [AWS Secure Sockets](#).

```

#define keyCLIENT_CERTIFICATE_PEM \
    "-----BEGIN CERTIFICATE-----\n" \
    "example_certificate_formatting\n" \
    "-----END CERTIFICATE-----"
#define keyCLIENT_PRIVATE_KEY_PEM \
    "-----BEGIN RSA PRIVATE KEY-----\n" \
    "example_certificate_formatting\n" \
    "-----END RSA PRIVATE KEY-----"
void mqtt_secure_example ()
{
    /* Initialize IOT FreeRTOS Libraries */
    SYSTEM_Init();
    /* Initialize the crypto hardware acceleration. */
    mbedtls_platform_setup(NULL);
    xLoggingTaskInitialize(IOT_LOG_STACK_SIZE, 1, 10);
    ProvisioningParams_t params;
    /* Write the keys into a secure region in data flash. */
    params.pucClientPrivateKey      = (uint8_t *) keyCLIENT_PRIVATE_KEY_PEM;
    params.pucClientCertificate     = (uint8_t *) keyCLIENT_CERTIFICATE_PEM;
    params.ulClientPrivateKeyLength = 1 + strlen((const char *)
params.pucClientPrivateKey);
    params.ulClientCertificateLength = 1 + strlen((const char *)
params.pucClientCertificate);
    params.pucJITPCertificate       = NULL;
    params.ulJITPCertificateLength  = 0;
    vAlternateKeyProvisioning(&params);
    /* Start up the network stack. */

```

```

FreeRTOS_IPInit(g_ip_address, g_net_mask, g_gateway_address, g_dns_address,
g_mac_address);
while (pdFALSE == FreeRTOS_IsNetworkUp())
{
    vTaskDelay(1);
}
/* AWS MQTT APIs can now be called. Please refer to the documentation linked above.
*/
/* If using the MQTT Wrapper IotSdk_Init() must be called prior to using MQTT. */
}

```

4.2.121 Wifi Middleware (rm_wifi_onchip_silex)

Modules

Functions

`fsp_err_t` [RM_WIFI_ONCHIP_SILEX_LocalTimeGet](#) (`uint8_t *p_local_time`, `uint32_t size_string`)

`fsp_err_t` [RM_WIFI_ONCHIP_SILEX_SntpEnableSet](#) (`wifi_onchip_silex_sntp_enable_t enable`)

`fsp_err_t` [RM_WIFI_ONCHIP_SILEX_SntpServerIpAddressSet](#) (`uint8_t *p_ip_address`)

`fsp_err_t` [RM_WIFI_ONCHIP_SILEX_SntpTimeZoneSet](#) (`int32_t hours`, `uint32_t minutes`, `wifi_onchip_silex_sntp_daylight_savings_enable_t daylightSavingsEnable`)

Detailed Description

Wifi and Socket implementation using the Silex SX-ULPGN WiFi module on RA MCUs.

Overview

This Middleware module supplies an implementation for the [FreeRTOS Secure Sockets and WiFi interfaces](#) using the Silex SX-ULPGN module.

You can find specifics about the WiFi and Secure Socket interface APIs supported by this module at these web sites: [Secure Sockets API](#) or [Wifi API](#).

The SX-ULPGN is a low-power, compact IEEE 802.11b/g/n 2.4GHz 1x1 Wireless LAN module equipped with the Qualcomm® QCA4010 Wireless SOC. The module comes readily equipped with radio certification for Japan, North America and Europe. More information about this module can be found at the [Silex Web Site](#)

Features

The WiFi Onchip Silex Middleware driver supplies these features:

- Supports connect/disconnect to a b/g/n (2.4GHz) WiFi Access Point using Open, WPA, and WPA2 security. Encryption types can be either TKIP, or CCMP(AES).
- Supports retrieval of the module device MAC address.
- Once connected you can acquire the assigned module device IP.
- Supports a WiFi network scan capability to get a list of local Access Points.
- Supports a Ping function to test network connectivity.
- Supports a DNS Query call to retrieve the IPv4 address of a supplied URL.
- Supports a BSD style Secure Socket interface.
- Drive supports 1 or 2 UARTs for interfacing with the SX-ULPGN module. The second UART is considered optional.

Configuration

Build Time Configurations for rm_wifi_onchip_silex

The following build time configurations are defined in fsp_cfg/rm_wifi_onchip_silex_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.
Number of supported socket instances	Refer to the RA Configuration tool for available options.	1	Enable number of socket instances
Size of RX buffer for socket	Manual Entry	4096	
Size of TX buffer for CMD Port	Manual Entry	1500	
Size of RX buffer for CMD Port	Manual Entry	3000	
Semaphore maximum timeout	Manual Entry	10000	
Number of retries for AT commands	Manual Entry	10	
Module Reset Port	Refer to the RA Configuration tool for available options.	06	Specify the module reset pin port for the MCU.
Module Reset Pin	Refer to the RA Configuration tool for	03	Specify the module reset pin for the MCU.

available options.

Enable SNTP Client	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Should the SNTP client of the module be enabled
--------------------	---	----------	---

Configurations for Networking > WiFi Onchip Silex Driver using r_sci_uart (rm_wifi_onchip_silex)

Configuration	Options	Default	Description
SNTP server IPv4 address	Must be a valid IPv4 address	0.0.0.0	
STNP Timezone Offset from UTC Hours	Must be between 12 and -12 hours	0	Value in hours from 12 to -12
STNP Timezone Offset from UTC Minutes	Must be between 0 and 59 minutes	0	Value in minutes from 0 to 59
Use Daylight Savings Time	<ul style="list-style-type: none"> • Enabled • Disabled 	Disabled	Specify if daytime savings should be used for local time calculation

Note: It is suggested that when using the Silex Module that DTC and FIFO are enabled in the UART configuration to facilitate a more reliable data transfer between module and MCU.

Note: If you wish to use flow control then you must enable flow control in the RA Configuration editor. This can be found in the UART setting. It is advantageous to use flow control all the time since it allows the hardware to gate the flow of data across the serial bus. Without hardware flow control for faster data rate you will most likely see an overflow condition between MCU and the module device.

Note: Higher baud rates are supported in the RA Configuration editor and should be changed in the first UART configuration. There is no need to change the second UART baud rate since it is only used as an AT command channel.

Note: It is a good idea to also enable the FIFO in the UART configuration settings if you plan to use higher baud rates.

Interrupt Configuration

Refer to [Serial Communications Interface \(SCI\) UART \(r_sci_uart\)](#). `R_SCI_UART_Open()` is called by [Wifi Middleware \(rm_wifi_onchip_silex\)](#).

Clock Configuration

Refer to [Serial Communications Interface \(SCI\) UART \(r_sci_uart\)](#).

Pin Configuration

Refer to [Serial Communications Interface \(SCI\) UART \(r_sci_uart\)](#). `R_SCI_UART_Open()` is called by [Wifi Middleware \(rm_wifi_onchip_silex\)](#)

Usage Notes

Limitations

- WiFi AP connections do not currently support WEP security.
- When operating with a single UART only single socket connections are possible. To support multiple sockets two UART channels must be connected to the module. When using the Renesas-provided SX-ULPGN PMOD board the second UART channel is on pins 9 and 10 of the PMOD header.
- Network connection parameters SSID and Passphrase for the Access Point can not contain any commas. This is a current limitation of the Silex module firmware. The `rm_wifi_onchip_silex_connect()` function will return an error if a comma is detected.
- When operating with a single UART and there is an active socket connection you cannot call `WIFI_Scan()`, `WIFI_Ping()`, `SOCKETS_GetHostByName()`, `WIFI_GetMAC()`, or `WIFI_GetIPInfo()`. Calling one of these function will return an error code in this situation. These commands are blocked in the one UART case during an active socket connection because they could cause data loss. To avoid this limitation please configure the hardware to use both UARTs.
- The Silex WiFi modules SNTP support requires all configuration changes to made when the WiFi is disconnected from an Access Point. This is a limitation of the Silex module firmware. If changes to the default SNTP settings are required then the application will have to close the current AP connection, make the necessary SNTP changes, and then re-establish the original connection.

Examples

Basic Example

This is a basic example of minimal use of WiFi Middleware in an application.

```
void wifi_onchip_basic_example (void)
{
    WIFIReturnCode_t wifi_err;
    /* Setup Access Point connection parameters */
    WIFINetworkParams_t net_params =
    {
        .ucChannel                = 0,
        .xPassword.xWPA.cPassphrase = "password",
        .ucSSID                    = "access_point_ssid",
        .xPassword.xWPA.ucLength = 8,
        .ucSSIDLength              = 17,
        .xSecurity                 = eWiFiSecurityWPA2,
    };
    SocketsSockaddr_t addr        = {0};
    int32_t                number_bytes_rx = 0;
    int32_t                number_bytes_tx = 0;
    memset(scan_data, 0, sizeof(WIFIScanResult_t) * MAX_WIFI_SCAN_RESULTS);
}
```

```
memset(g_socket_recv_buffer, 0, sizeof(uint8_t) * SX_WIFI_SOCKET_RX_BUFFER_SIZE);
/* Open connection to the Wifi Module */
wifi_err = WIFI_On();
assert(eWiFiSuccess == wifi_err);
/* Connect to the Access Point */
wifi_err = WIFI_ConnectAP(&net_params);
assert(eWiFiSuccess == wifi_err);
/* Get address assigned by AP */
WIFIIPConfiguration_t ipInfo;
wifi_err = WIFI_GetIPInfo(&ipInfo);
assert(eWiFiSuccess == wifi_err);
/* Ping an address accessible on the network */
uint8_t ip_address[4] = {216, 58, 194, 174}; // NOLINT
const uint16_t ping_count = 3;
const uint32_t intervalMS = 100;
wifi_err = WIFI_Ping(&ip_address[0], ping_count, intervalMS);
assert(eWiFiSuccess == wifi_err);
/* Scan the local Wifi network for other APs */
wifi_err = WIFI_Scan(&scan_data[0], MAX_WIFI_SCAN_RESULTS);
assert(eWiFiSuccess == wifi_err);
/* Do a DNS Query for IP address of server */
addr.ulAddress = SOCKETS_GetHostByName("www.renesas.com");
addr.usPort = SOCKETS_htons(80);
/* Initialize the Socket Interface */
BaseType_t sock_err = SOCKETS_Init();
assert(pdPASS == sock_err);
/* Create a socket instance */
Socket_t socket1 = SOCKETS_Socket(SOCKETS_AF_INET, SOCKETS SOCK_STREAM,
SOCKET_IPPROTO_TCP);
assert(NULL != socket1);
/* Connect to an server using address */
sock_err = SOCKETS_Connect(socket1, &addr, sizeof(SocketsSockaddr_t));
assert(pdPASS == sock_err);
/* Send a HTTP Get call to server */
```

```
    number_bytes_tx = SOCKETS_Send(socket1, HTTP_GET_string, strlen(HTTP_GET_string),
0);

    assert(number_bytes_tx > 0);

    /* Receive the HTTP GET call reply */

    number_bytes_rx = SOCKETS_Recv(socket1, g_socket_recv_buffer,
SX_WIFI_SOCKET_RX_BUFFER_SIZE, 0);

    assert(number_bytes_rx > 0);

    /* Close the socket connection */

    SOCKETS_Close(socket1);

    /* Shutdown the WIFI and Socket Interfaces */

    WIFI_Off();
}
```

SNTP example

An example of using Simple Network Time Protocol (SNTP) on WiFi in an application.

```
#define RM_WIFI_ONCHIP_SILEX_TEMP_BUFFER_SIZE (64)

/*
 * Example of the use of SNTP with Wifi. Example gets the epoch time and local
 * system time strings. It is also demonstrated how the user will need to disconnect
 * from the access point to make changes to the SNTP configuration during runtime.
 *
 * Function assumes that the SNTP has been enabled and configured with proper
 * SNTP server address. For brevity error checking has not been implemented.
 */

void wifi_onchip_sntp_example (void)
{
    /* Setup Access Point connection parameters */

    WIFINetworkParams_t net_params =

    {

        .ucSSID = "access_point_ssid",

        .ucSSIDLength = 17,

        .xPassword.xWPA.cPassphrase = "password",
    }
}
```

```
.xPassword.xWPA.ucLength      = 8,
.ucChannel                    = 0,
.xSecurity                    = eWiFiSecurityWPA2
};

uint8_t local_time[RM_WIFI_ONCHIP_SILEX_TEMP_BUFFER_SIZE];
time_t current_sys_time = 0;
// SNTP IP address
uint8_t ip_address_sntp_server_valid[4] = {216, 239, 35, 0}; // NOLINT : Static
IP address
memset(local_time, 0, sizeof(local_time));
/* Open connection to the Wifi Module */
WIFI_On();
/* Connect to the Access Point */
WIFI_ConnectAP(&net_params);
/* Get the Epoch time in seconds since Jan 1, 1970 UTC */
RM_WIFI_ONCHIP_SILEX_EpochTimeGet(&current_sys_time);
/* Get the local time string */
RM_WIFI_ONCHIP_SILEX_LocalTimeGet((uint8_t *) local_time, sizeof(local_time));
/* Disconnect from the access point to make changes to the SNTP configuration */
WIFI_Disconnect();
/* Change the IP address of the server */
RM_WIFI_ONCHIP_SILEX_SntpServerIpAddressSet((uint8_t *)
ip_address_sntp_server_valid);
/* Change the timezone to PST with daylight saving enabled */
RM_WIFI_ONCHIP_SILEX_SntpTimeZoneSet(-7, 0,
WIFI_ONCHIP_SILEX_Sntp_DAYLIGHT_SAVINGS_ENABLE);
/* Connect back to the access point */
WIFI_ConnectAP(&net_params);
/* Get the Epoch time in seconds since Jan 1, 1970 UTC */
RM_WIFI_ONCHIP_SILEX_EpochTimeGet(&current_sys_time);
/* Get the local time string in format [DayOfWeek Month DayOfMonth Year
Hour:Minute:Second] */
RM_WIFI_ONCHIP_SILEX_LocalTimeGet((uint8_t *) local_time, sizeof(local_time));
/* Disconnect from the Access Point and shutdown the WIFI module*/
```

```

WIFI_Disconnect();

WIFI_Off();
}

```

Function Documentation

◆ **RM_WIFI_ONCHIP_SILEX_EpochTimeGet()**

`fsp_err_t RM_WIFI_ONCHIP_SILEX_EpochTimeGet (time_t * p_utc_time)`

Get the current system time as the number of seconds since epoch 1970-01-01 00:00:00 UTC

This will retrieve time info from an NTP server at the address entered via an during configuration. If the server isn't set or the client isn't enabled, then it will return an error. The date/time is retrieved as the number of seconds since 00:00:00 UTC January 1, 1970

Parameters

[out]	p_utc_time	Returns the epoch time in seconds.
-------	------------	------------------------------------

Return values

FSP_SUCCESS	Successfully retrieved the system time from module.
FSP_ERR_ASSERTION	The parameter utc_time or p_instance_ctrl is NULL.
FSP_ERR_WIFI_FAILED	Error occurred with command to Wifi module.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_WIFI_ONCHIP_SILEX_LocalTimeGet()**

```
fsp_err_t RM_WIFI_ONCHIP_SILEX_LocalTimeGet ( uint8_t * p_local_time, uint32_t size_string )
```

Get the current local time based on current timezone in a string format

Get the current local time based on current timezone in a string . Exp: Wed Oct 15 1975 07:06:00

Parameters

[out]	p_local_time	Returns local time in string format.
[in]	size_string	Size of p_local_time string buffer.The size of this string needs to be at least 25 bytes

Return values

FSP_SUCCESS	Successfully returned the local time string.
FSP_ERR_ASSERTION	The parameter local_time or p_instance_ctrl is NULL.
FSP_ERR_WIFI_FAILED	Error occurred with command to Wifi module.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_SIZE	String size value passed in exceeds maximum.

◆ **RM_WIFI_ONCHIP_SILEX_SntpEnableSet()**

```
fsp_err_t RM_WIFI_ONCHIP_SILEX_SntpEnableSet ( wifi_onchip_silex_sntp_enable_t enable)
```

Enable or Disable the SNTP Client Service

Set the SNTP Client to Enable or Disable

Parameters

[in]	enable	Can be set to enable/disable for SNTP support.
------	--------	--

Return values

FSP_SUCCESS	Successfully set the value.
FSP_ERR_WIFI_FAILED	Error occurred with command to Wifi module.
FSP_ERR_NOT_OPEN	Module is not open.

◆ **RM_WIFI_ONCHIP_SILEX_SntpServerIpAddressSet()**

```
fsp_err_t RM_WIFI_ONCHIP_SILEX_SntpServerIpAddressSet ( uint8_t * p_ip_address)
```

Update the SNTP Server IP Address

Set the SNTP Client Server IP Address

Parameters

[in]	p_ip_address	Pointer to IP address of SNTP server in byte array format.
------	--------------	--

Return values

FSP_SUCCESS	Successfully set the value.
FSP_ERR_ASSERTION	The parameter p_ip_address or p_instance_ctrl is NULL.
FSP_ERR_WIFI_FAILED	Error occurred with command to Wifi module.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_WIFI_ONCHIP_SILEX_SntpTimeZoneSet()

```
fsp_err_t RM_WIFI_ONCHIP_SILEX_SntpTimeZoneSet ( int32_t hours, uint32_t minutes,
wifi_onchip_silex_sntp_daylight_savings_enable_t daylightSavingsEnable )
```

Update the SNTP Timezone

Set the SNTP Client Timezone

Parameters

[in]	hours	Number of hours (+/-) used for timezone offset from GMT.
[in]	minutes	Number of minutes used for timezone offset from GMT.
[in]	daylightSavingsEnable	Enable/Disable daylight saving in the timezone calculation.

Return values

FSP_SUCCESS	Successfully set the value.
FSP_ERR_WIFI_FAILED	Error occurred with command to Wifi module.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Parameter passed into function was invalid.

4.2.122 AWS Secure Sockets

Modules

This module provides the AWS Secure Sockets implementation.

Overview

Features

Information about the features provided by the AWS Secure Sockets Library is available in the [FreeRTOS Libraries User Guide](#).

The FSP implementation supports using Secure Sockets with either Ethernet or WiFi. These stacks can be added in FSP via the RA Configuration editor under FreeRTOS | Secure Sockets.

Dependencies

The Secure Sockets library has two dependencies:

1. A TCP/IP implementation
2. A TLS implementation

For TCP/IP, AWS have provided the FreeRTOS TCP/IP implementation. For TLS, AWS have chosen mbedTLS, but use PKCS11 for storage and invoking the crypto portion of mbedTLS. For more information about AWS Secure Sockets, refer to the [AWS documentation](#). An example of Secure Sockets usage is on the same page.

mbedTLS

[mbedTLS](#) is ARM's implementation of the TLS and SSL protocols as well as the cryptographic primitives required by those implementations. mbedTLS is also solely used for its cryptographic features even if the TLS/SSL portions are not used. With [PSA](#), ARM have created a separate API for cryptography. Starting with mbedTLS3, crypto implementation has been moved out to a new module called mbedCrypto (PSA Crypto API) and a build time configuration can direct the mbedTLS3 implementation to use either the old mbedtls cryptography functions or use the new PSA Crypto API. Since the current version of mbedCrypto (PSA Crypto API) implements both the old mbedtls crypto API as well as the new PSA Crypto API, either option is functional for now.

CipherSuites

During the TLS connection setup stage, the client has to indicate to the server the type of cryptographic operations that it supports. This is referred to as the ciphersuite. The entire list of ciphersuites supported by mbedTLS can be found in `mbedtls/ssl_ciphersuites.h`.

Configuration

In FSP, Secure Sockets can be added as a new stack via `FreeRTOS | Secure Sockets | Secure Sockets on WiFi` or `Secure Sockets on FreeRTOS Plus TCP`. All required dependant modules, except heap, are automatically added. To complete the configuration,

- Add a heap instance and use the same one for all dependencies.
- Resolve the module configuration requirements.

Usage Notes

For detailed documentation on Secure Sockets consult the [AWS documentation](#).

Examples

Basic Example

This is a basic example of using the Secure Sockets API with Ethernet. The message "hello, world!" is sent to a remote socket.

```

4.2.123 ZMOD4XXX Sensor Middleware (rm_zmod4xxx)

Modules

Functions

fsp_err_t [RM_ZMOD4XXX_Open](#) ([rm_zmod4xxx_ctrl_t](#) *const p_api_ctrl, [rm_zmod4xxx_cfg_t](#) const *const p_cfg)

This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the zmod4xxx and start a measurement. Implements [rm_zmod4xxx_api_t::open](#). [More...](#)

fsp_err_t [RM_ZMOD4XXX_MeasurementStart](#) ([rm_zmod4xxx_ctrl_t](#) *const p_api_ctrl)

This function should be called when start a measurement.
Implements [rm_zmod4xxx_api_t::measurementStart](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_MeasurementStop](#) ([rm_zmod4xxx_ctrl_t](#) *const
[p_api_ctrl](#))

This function should be called when stop a measurement.
Implements [rm_zmod4xxx_api_t::measurementStop](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_StatusCheck](#) ([rm_zmod4xxx_ctrl_t](#) *const [p_api_ctrl](#))

This function should be called when polling is used. It reads the
status of sensor. Implements [rm_zmod4xxx_api_t::statusCheck](#).
[More...](#)

`fsp_err_t` [RM_ZMOD4XXX_Read](#) ([rm_zmod4xxx_ctrl_t](#) *const [p_api_ctrl](#),
[rm_zmod4xxx_raw_data_t](#) *const [p_raw_data](#))

This function should be called when measurement finishes. To check
measurement status either polling or busy/interrupt pin can be used.
Implements [rm_zmod4xxx_api_t::read](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_TemperatureAndHumiditySet](#) ([rm_zmod4xxx_ctrl_t](#)
*const [p_api_ctrl](#), float temperature, float humidity)

This function is valid only for OAQ_2nd_Gen. This function should be
called before DataCalculate. Humidity and temperature
measurements are needed for ambient compensation. Implements
[rm_zmod4xxx_api_t::temperatureAndHumiditySet](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_Iaq1stGenDataCalculate](#) ([rm_zmod4xxx_ctrl_t](#) *const
[p_api_ctrl](#), [rm_zmod4xxx_raw_data_t](#) *const [p_raw_data](#),
[rm_zmod4xxx_iaq_1st_data_t](#) *const [p_zmod4xxx_data](#))

This function should be called when measurement finishes. To check
measurement status either polling or busy/interrupt pin can be used.
Implements [rm_zmod4xxx_api_t::iaq1stGenDataCalculate](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_Iaq2ndGenDataCalculate](#) ([rm_zmod4xxx_ctrl_t](#)
*const [p_api_ctrl](#), [rm_zmod4xxx_raw_data_t](#) *const [p_raw_data](#),
[rm_zmod4xxx_iaq_2nd_data_t](#) *const [p_zmod4xxx_data](#))

This function should be called when measurement finishes. To check
measurement status either polling or busy/interrupt pin can be used.
Implements [rm_zmod4xxx_api_t::iaq2ndGenDataCalculate](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_OdorDataCalculate](#) ([rm_zmod4xxx_ctrl_t](#) *const
[p_api_ctrl](#), [rm_zmod4xxx_raw_data_t](#) *const [p_raw_data](#),

`rm_zmod4xxx_odor_data_t *const p_zmod4xxx_data)`

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::odorDataCalculate`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_SulfurOdorDataCalculate (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_sulfur_odor_data_t *const p_zmod4xxx_data)`

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::sulfurOdorDataCalculate`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_Oaq1stGenDataCalculate (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_1st_data_t *const p_zmod4xxx_data)`

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::oaq1stGenDataCalculate`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_Oaq2ndGenDataCalculate (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_2nd_data_t *const p_zmod4xxx_data)`

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::oaq2ndGenDataCalculate`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_Close (rm_zmod4xxx_ctrl_t *const p_api_ctrl)`

This function should be called when close the sensor. Implements `rm_zmod4xxx_api_t::close`. [More...](#)

Detailed Description

Middleware to implement the ZMOD4XXX sensor interface. This module implements the [ZMOD4XXX Middleware Interface](#).

Overview

This module provides an API for configuring and controlling the ZMOD4XXX sensor. Supported ZMOD4XXX sensors are below.

- ZMOD4410
- ZMOD4510

I2C communication with the ZMOD4XXX sensor is realized by connecting with the `rm_comms_i2c`

module.

Features

The ZMOD4XXX sensor interface implementation has the following key features:

- Initialize the sensor for measurement
- Start a measurement at any time
- Read status register for wait until the measurement is done. This will also be signaled by an interrupt
- Get the ADC data from the sensor
- Input the ADC data and acquire the air quality values by calculation in the library.

Configuration

RM_ZMOD4XXX_CFG_OPERATION_MODE is set according to the library selected.

Build Time Configurations for rm_zmod4xxx

The following build time configurations are defined in fsp_cfg/rm_zmod4xxx_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	<ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled 	Default (BSP)	If selected code for parameter checking is included in the build.

Build Time Configurations for rm_zmod4410_iaq_1st

The following build time configurations are defined in fsp_cfg/rm_zmod4xxx_lib_cfg.h:

Configuration	Options	Default	Description
[DEPRECATED] Power mode (This will be removed in FSP v4.0.0)	<ul style="list-style-type: none"> • Continuous • Low Power 	Continuous	Select power mode

Configurations for Sensor > ZMOD4XXX Gas Sensor (rm_zmod4xxx)

This module can be added to the Stacks tab via New Stack > Sensor > ZMOD4XXX Gas Sensor (rm_zmod4xxx).

Configuration	Options	Default	Description
Name	Manual Entry	g_zmod4xxx_sensor0	Module name.
Comms I2C Callback	Name must be a valid C symbol	zmod4xxx_comms_i2c_callback	A user COMMS I2C callback function can be provided.
IRQ Callback	Name must be a valid C symbol	zmod4xxx_irq_callback	A user IRQ callback function can be provided.

Configurations for Sensor > ZMOD4410 IAQ 1st Generation (rm_zmod4xxx)

Configuration	Options	Default	Description
---------------	---------	---------	-------------

Configuration	Options	Default	Description
Operation Mode	<ul style="list-style-type: none"> Continuous Low Power 	Continuous	Select the operation mode.

Pin Configuration

This module use SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

[ZMOD4410 datasheet is here.](#)

The ZMOD4410 has five modes of operation.

The ZMOD4410 will respond to TVOC immediately upon start-up; however, a conditioning period of 48 hours followed by a sensor module restart in an ambient environment is recommended to improve stability and obtain maximum performance.

Best results are achieved with continuous operation because the module algorithm can learn about the environment over time.

Mode	Method	Description
Operation Mode 1	IAQ 1st Generation Continuous	Measurement of UBA levels for IAQ and eCO ₂ , provides continuous data
Operation Mode 2	IAQ 1st Generation Low Power	Measurement of UBA levels for IAQ and eCO ₂ , fixed sampling interval of 6 seconds
Operation Mode 3	IAQ 2nd Generation	Using AI for improved ppm TVOC, IAQ and eCO ₂ functionality (recommended for new designs)
Operation Mode 4	Odor	Control signal based on Air Quality Changes
Operation Mode 5	Sulfur-based Odor Discrimination	The odors in "sulfur" (sulfur based) and "acceptable" (organic based) and shows an intensity level of the smell

[ZMOD4510 datasheet is here.](#)

The ZMOD4510 has two modes of operation.

The ZMOD4510 in OAQ 1st Gen operation will respond to typical outdoor gases after a warm-up time of 60 min, consisting of 20 min for stabilization and 40 min for baseline finding.

For OAQ 2nd Gen operation a response to ozone will be seen after a warmup time of 30 min.

In all operation modes a conditioning period of 48 hours followed by a sensor module restart in an ambient environment is recommended to improve stability and obtain maximum performance.

Mode	Method	Description
Operation Mode 1	OAQ 1st Generation	Measurement of Air Quality
Operation Mode 2	OAQ 2nd Generation	Selective Ozone featuring Ultra-Low Power

A library corresponding to each of these modes is required. By setting in RA Configuration, the library will be generated in the ra/fsp/lib/rm_zmod4xxx folder of your project.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The ZMOD4XXX interface expects a bus instance to be opened before opening any ZMOD4XXX device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate [I2C Master Interface](#) open call.

Initialization

Initialize with [RM_ZMOD4XXX_Open\(\)](#). One channel of timer is required to measure the waiting time at initialization.

From measurement start to data acquisition

After normal completion, start the measurement with [RM_ZMOD4XXX_MeasurementStart\(\)](#). An endless loop continuously checks the status of the ZMOD4XXX sensor and reads its data. The raw data is subsequently processed, and the air quality values are calculated.

If IRQ is enabled

1. Call [RM_ZMOD4XXX_MeasurementStart\(\)](#).
2. Wait until [RM_ZMOD4XXX_EVENT_MEASUREMENT_COMPLETE](#) is received via IRQ callback.
3. Call [RM_ZMOD4XXX_Read\(\)](#). This function will read the ADC data.
4. Wait until [RM_ZMOD4XXX_EVENT_SUCCESS](#) is received.
5. Call the DataCalculate API according to the mode.

If IRQ is disabled

1. Call [RM_ZMOD4XXX_MeasurementStart\(\)](#).
2. Wait until [RM_ZMOD4XXX_EVENT_SUCCESS](#) is received.
3. Call [RM_ZMOD4XXX_StatusCheck\(\)](#). This function will execute a status check over I2C.
4. If [RM_ZMOD4XXX_EVENT_MEASUREMENT_NOT_COMPLETE](#) is received in callback, user should wait some time and then call [RM_ZMOD4XXX_StatusCheck\(\)](#) again.
5. Wait until [RM_ZMOD4XXX_EVENT_MEASUREMENT_COMPLETE](#) is received.
6. Call [RM_ZMOD4XXX_Read\(\)](#) and read the ADC data.
7. Wait until [RM_ZMOD4XXX_EVENT_SUCCESS](#) is received.
8. Call the DataCalculate API according to the mode.

Examples

Basic Example

These are basic examples of minimal use of ZMOD4XXX sensor implementation in an application.

IAQ 1st Gen. Continuous mode

```

Enumerations

enum [rm_zmod4xxx_lib_type_t](#)

Data Structure Documentation

◆ [rm_zmod4xxx_init_process_params_t](#)

struct rm_zmod4xxx_init_process_params_t		
ZMOD4XXX initialization process block		
Data Fields		
volatile uint32_t	delay_ms	Delay milliseconds.
volatile bool	communication_finished	Communication flag for blocking.
volatile bool	measurement_finished	IRQ flag.

volatile rm_zmod4xxx_event_t	event	Callback event.
--	-----------------------	-----------------

◆ [rm_zmod4xxx_instance_ctrl_t](#)

struct rm_zmod4xxx_instance_ctrl_t		
ZMOD4XXX control block		
Data Fields		
uint32_t	open	
		Open flag.
uint8_t	buf [RM_ZMOD4XXX_MAX_I2C_BUF_SIZE]	
		Buffer for I2C communications.
uint8_t	register_address	
		Register address to access.
rm_zmod4xxx_status_params_t	status	
		Status parameter.
volatile rm_zmod4xxx_event_t	event	
		Callback event.
rm_zmod4xxx_init_process_params_t	init_process_params	
		For the initialization process.
rm_zmod4xxx_cfg_t const *	p_cfg	
		Pointer of configuration block.
rm_comms_instance_t const *	p_comms_i2c_instance	

	Pointer of I2C Communications Middleware instance structure.
rm_zmod4xxx_lib_extended_cfg_t *	p_zmod4xxx_lib
	Pointer of ZMOD4XXX Lib extended configuration.
void const *	p_irq_instance
	Pointer to IRQ instance.
void const *	p_context
	Pointer to the user-provided context.
void(*	p_comms_callback)(rm_zmod4xxx_callback_args_t *p_args)
	I2C Communications callback.
void(*	p_irq_callback)(rm_zmod4xxx_callback_args_t *p_args)
	IRQ callback.

Enumeration Type Documentation

◆ rm_zmod4xxx_lib_type_t

enum rm_zmod4xxx_lib_type_t
ZMOD4XXX Library type

Function Documentation

◆ **RM_ZMOD4XXX_Open()**

```
fsp_err_t RM_ZMOD4XXX_Open ( rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_cfg_t const *const p_cfg )
```

This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the zmod4xxx and start a measurement. Implements [rm_zmod4xxx_api_t::open](#).

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_UNSUPPORTED	Unsupport product ID.
FSP_ERR_TIMEOUT	communication is timeout.
FSP_ERR_ABORTED	communication is aborted.

◆ **RM_ZMOD4XXX_MeasurementStart()**

```
fsp_err_t RM_ZMOD4XXX_MeasurementStart ( rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

This function should be called when start a measurement. Implements [rm_zmod4xxx_api_t::measurementStart](#).

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.
FSP_ERR_TIMEOUT	communication is timeout.
FSP_ERR_ABORTED	communication is aborted.

◆ **RM_ZMOD4XXX_MeasurementStop()**

```
fsp_err_t RM_ZMOD4XXX_MeasurementStop ( rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

This function should be called when stop a measurement. Implements [rm_zmod4xxx_api_t::measurementStop](#).

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.
FSP_ERR_TIMEOUT	communication is timeout.
FSP_ERR_ABORTED	communication is aborted.

◆ **RM_ZMOD4XXX_StatusCheck()**

```
fsp_err_t RM_ZMOD4XXX_StatusCheck ( rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

This function should be called when polling is used. It reads the status of sensor. Implements [rm_zmod4xxx_api_t::statusCheck](#).

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.
FSP_ERR_TIMEOUT	communication is timeout.
FSP_ERR_ABORTED	communication is aborted.

◆ RM_ZMOD4XXX_Read()

```
fsp_err_t RM_ZMOD4XXX_Read ( rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::read](#).

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.
FSP_ERR_TIMEOUT	Communication is timeout.
FSP_ERR_ABORTED	Communication is aborted.
FSP_ERR_SENSOR_MEASUREMENT_NOT_FINISHED	Measurement is not finished.

◆ RM_ZMOD4XXX_TemperatureAndHumiditySet()

```
fsp_err_t RM_ZMOD4XXX_TemperatureAndHumiditySet ( rm_zmod4xxx_ctrl_t *const p_api_ctrl, float temperature, float humidity )
```

This function is valid only for OAQ_2nd_Gen. This function should be called before DataCalculate. Humidity and temperature measurements are needed for ambient compensation. Implements [rm_zmod4xxx_api_t::temperatureAndHumiditySet](#).

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_Iaq1stGenDataCalculate()

```
fsp_err_t RM_ZMOD4XXX_Iaq1stGenDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_1st_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::iaq1stGenDataCalculate`.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_Iaq2ndGenDataCalculate()

```
fsp_err_t RM_ZMOD4XXX_Iaq2ndGenDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_2nd_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::iaq2ndGenDataCalculate`.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_OdorDataCalculate()

```
fsp_err_t RM_ZMOD4XXX_OdorDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_odor_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::odorDataCalculate`.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_SulfurOdorDataCalculate()

```
fsp_err_t RM_ZMOD4XXX_SulfurOdorDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_sulfur_odor_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::sulfurOdorDataCalculate`.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_Oaq1stGenDataCalculate()

```
fsp_err_t RM_ZMOD4XXX_Oaq1stGenDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_1st_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::oaq1stGenDataCalculate](#).

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_Oaq2ndGenDataCalculate()

```
fsp_err_t RM_ZMOD4XXX_Oaq2ndGenDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_2nd_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::oaq2ndGenDataCalculate](#).

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_Close()

```
fsp_err_t RM_ZMOD4XXX_Close ( rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

This function should be called when close the sensor. Implements [rm_zmod4xxx_api_t::close](#).

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

4.3 Interfaces

Detailed Description

The FSP interfaces provide APIs for common functionality. They can be implemented by one or more modules. Modules can use other modules as dependencies using this interface layer.

Modules

ADC Interface

Interface for A/D Converters.

BLE Interface

Interface for Bluetooth Low Energy functions.

CAC Interface

Interface for clock frequency accuracy measurements.

CAN Interface

Interface for CAN peripheral.

CEC Interface

Interface for CEC peripheral.

CGC Interface

Interface for clock generation.

Comparator Interface

Interface for comparators.

CRC Interface

Interface for cyclic redundancy checking.

CTSU Interface

Interface for Capacitive Touch Sensing Unit (CTSU) functions.

DAC Interface

Interface for D/A converters.

Display Interface

Interface for LCD panel displays.

DOC Interface

Interface for the Data Operation Circuit.

ELC Interface

Interface for the Event Link Controller.

Ethernet Interface

Interface for Ethernet functions.

Ethernet PHY Interface

Interface for Ethernet PHY functions.

External IRQ Interface

Interface for detecting external interrupts.

Flash Interface

Interface for the Flash Memory.

I2C Master Interface

Interface for I2C master communication.

I2C Slave Interface

Interface for I2C slave communication.

I2S Interface

Interface for I2S audio communication.

I3C Interface

Interface for I3C.

I/O Port Interface

Interface for accessing I/O ports and configuring I/O functionality.

JPEG Codec Interface

Interface for JPEG functions.

Key Matrix Interface

Interface for key matrix functions.

Low Power Modes Interface

Interface for accessing low power modes.

Low Voltage Detection Interface

Interface for Low Voltage Detection.

OPAMP Interface

Interface for Operational Amplifiers.

PDC Interface

Interface for PDC functions.

POEG Interface

Interface for the Port Output Enable for GPT.

PTP Interface

Interface for PTP functions.

RTC Interface

Interface for accessing the Realtime Clock.

SD/MMC Interface

Interface for accessing SD, eMMC, and SDIO devices.

SLCDC Interface

Interface for Segment LCD controllers.

SPI Interface

Interface for SPI communications.

SPI Flash Interface

Interface for accessing external SPI flash devices.

Three-Phase Interface

Interface for three-phase timer functions.

Timer Interface

Interface for timer functions.

Transfer Interface

Interface for data transfer functions.

UART Interface

Interface for UART communications.

USB Interface

Interface for USB functions.

USB HCDC Interface

Interface for USB HCDC functions.

USB HHID Interface

Interface for USB HHID functions.

USB HMSC Interface

Interface for USB HMSC functions.

USB PCDC Interface

Interface for USB PCDC functions.

USB PHID Interface

Interface for USB PHID functions.

USB PMSC Interface

Interface for USB PMSC functions.

WDT Interface

Interface for watch dog timer functions.

ADPCM Decoder Interface

Interface for ADPCM decoder.

AUDIO PLAYBACK Interface

Interface for the Audio Playback.

BLE ABS Interface

Interface for Bluetooth Low Energy Abstraction functions.

Block Media Interface

Interface for block media memory access.

Communicatons Middleware Interface

Interface for Communications Middleware functions.

FileX Block Media Port Interface

Interface for FileX Block Media port.

FreeRTOS+FAT Port Interface

Interface for FreeRTOS+FAT port.

FSXXX Middleware Interface

Interface for FSXXX Middleware functions.

HS300X Middleware Interface

Interface for HS300X Middleware functions.

LittleFS Interface

Interface for LittleFS access.

Interface

Interface for motor 120 control functions.

Interface

Interface for motor driver functions.

Motor angle Interface

Interface for motor angle and speed calculation functions.

Motor Interface

Interface for Motor functions.

Motor current Interface

Interface for motor current functions.

Motor driver Interface

Interface for motor driver functions.

Motor position Interface

Interface for motor position functions.

Motor speed Interface

Interface for motor speed functions.

Touch Middleware Interface

Interface for Touch Middleware functions.

Virtual EEPROM Interface

Interface for Virtual EEPROM access.

ZMOD4XXX Middleware Interface

Interface for ZMOD4XXX Middleware functions.

SCE Interface

Interface for Secure Crypto Engine (SCE) functions.

4.3.1 ADC Interface

Interfaces

Detailed Description

Interface for A/D Converters.

Summary

The ADC interface provides standard ADC functionality including one-shot mode (single scan), continuous scan and group scan. It also allows configuration of hardware and software triggers for starting scans. After each conversion an interrupt can be triggered, and if a callback function is provided, the call back is invoked with the appropriate event information.

Implemented by: [Analog to Digital Converter \(r_adc\)](#)

Data Structures

struct [adc_status_t](#)

struct [adc_callback_args_t](#)

struct [adc_info_t](#)

struct [adc_cfg_t](#)

Data Structure Documentation

◆ adc_status_t

struct adc_status_t		
ADC status.		
Data Fields		
adc_state_t	state	Current state.

◆ adc_callback_args_t

struct adc_callback_args_t		
ADC callback arguments definitions		
Data Fields		
uint16_t	unit	ADC device in use.
adc_event_t	event	ADC callback event.
void const *	p_context	Placeholder for user data.
adc_channel_t	channel	Channel of conversion result. Only valid for r_adc ADC_EVENT_CONVERSION_COMPLETE.
uint64_t	channel_mask	Channel mask for conversion result. Only valid for r_adc_b.

adc_group_mask_t	group_mask	Group Mask.
----------------------------------	------------	-------------

◆ **adc_info_t**

struct adc_info_t		
ADC Information Structure for Transfer Interface		
Data Fields		
<code>_l void *</code>	p_address	The address to start reading the data from.
uint32_t	length	The total number of transfers to read.
transfer_size_t	transfer_size	The size of each transfer.
elc_peripheral_t	elc_peripheral	Name of the peripheral in the ELC list.
elc_event_t	elc_event	Name of the ELC event for the peripheral.
uint32_t	calibration_data	Temperature sensor calibration data (0xFFFFFFFF if unsupported) for reference voltage.
int16_t	slope_microvolts	Temperature sensor slope in microvolts/degrees C.
bool	calibration_ongoing	Calibration is in progress.

◆ **adc_cfg_t**

struct adc_cfg_t		
ADC general configuration		
Data Fields		
	uint16_t	unit
		ADC unit to be used.
	adc_mode_t	mode
		ADC operation mode.
	adc_resolution_t	resolution
		ADC resolution.

<code>adc_alignment_t</code>	<code>alignment</code>
	Specify left or right alignment; ignored if addition used.
<code>adc_trigger_t</code>	<code>trigger</code>
	Default and Group A trigger source.
<code>IRQn_Type</code>	<code>scan_end_irq</code>
	Scan end IRQ number.
<code>IRQn_Type</code>	<code>scan_end_b_irq</code>
	Scan end group B IRQ number.
<code>uint8_t</code>	<code>scan_end_ipl</code>
	Scan end interrupt priority.
<code>uint8_t</code>	<code>scan_end_b_ipl</code>
	Scan end group B interrupt priority.
<code>void(*</code>	<code>p_callback)(adc_callback_args_t *p_args)</code>
	Callback function; set to NULL for none.
<code>void const *</code>	<code>p_context</code>
	Placeholder for user data. Passed to the user callback in <code>adc_callback_args_t</code> .
<code>void const *</code>	<code>p_extend</code>
	Extension parameter for hardware specific settings.

◆ `adc_api_t`

struct adc_api_t	
ADC functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(adc_ctrl_t *const p_ctrl, adc_cfg_t const *const p_cfg)
fsp_err_t(*	scanCfg)(adc_ctrl_t *const p_ctrl, void const *const p_extend)
fsp_err_t(*	scanStart)(adc_ctrl_t *const p_ctrl)
fsp_err_t(*	scanGroupStart)(adc_ctrl_t *p_ctrl, adc_group_mask_t group_mask)
fsp_err_t(*	scanStop)(adc_ctrl_t *const p_ctrl)
fsp_err_t(*	scanStatusGet)(adc_ctrl_t *const p_ctrl, adc_status_t *p_status)
fsp_err_t(*	read)(adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint16_t *const p_data)
fsp_err_t(*	read32)(adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint32_t *const p_data)
fsp_err_t(*	calibrate)(adc_ctrl_t *const p_ctrl, void const *p_extend)
fsp_err_t(*	offsetSet)(adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, int32_t const offset)
fsp_err_t(*	callbackSet)(adc_ctrl_t *const p_api_ctrl, void(*p_callback)(adc_callback_args_t *), void const *const p_context, adc_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(adc_ctrl_t *const p_ctrl)
fsp_err_t(*	infoGet)(adc_ctrl_t *const p_ctrl, adc_info_t *const p_adc_info)
Field Documentation	

◆ **open**

```
fsp_err_t(* adc_api_t::open) (adc_ctrl_t *const p_ctrl, adc_cfg_t const *const p_cfg)
```

Initialize ADC Unit; apply power, set the operational mode, trigger sources, interrupt priority, and configurations common to all channels and sensors.

Implemented as

- R_ADC_Open()
- R_ADC_B_Open()
- R_SDADC_Open()

Precondition

Configure peripheral clocks, ADC pins and IRQs prior to calling this function.

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	p_cfg	Pointer to configuration structure

◆ **scanCfg**

```
fsp_err_t(* adc_api_t::scanCfg) (adc_ctrl_t *const p_ctrl, void const *const p_extend)
```

Configure the scan including the channels, groups, and scan triggers to be used for the unit that was initialized in the open call. Some configurations are not supported for all implementations. See implementation for details.

Implemented as

- R_ADC_ScanCfg()
- R_ADC_B_ScanCfg()
- R_SDADC_ScanCfg()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	p_extend	See implementation for details

◆ scanStart

```
fsp_err_t(* adc_api_t::scanStart) (adc_ctrl_t *const p_ctrl)
```

Start the scan (in case of a software trigger), or enable the hardware trigger.

Implemented as

- R_ADC_ScanStart()
- R_SDADC_ScanStart()

Parameters

[in]	p_ctrl	Pointer to control handle structure
------	--------	-------------------------------------

◆ scanGroupStart

```
fsp_err_t(* adc_api_t::scanGroupStart) (adc_ctrl_t *p_ctrl, adc_group_mask_t group_mask)
```

Start the scan group (in case of a software trigger), or enable the hardware trigger.

Implemented as

- R_ADC_B_ScanGroupStart()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	group_mask	Mask of groups to start

◆ scanStop

```
fsp_err_t(* adc_api_t::scanStop) (adc_ctrl_t *const p_ctrl)
```

Stop the ADC scan (in case of a software trigger), or disable the hardware trigger.

Implemented as

- R_ADC_ScanStop()
- R_SDADC_ScanStop()

Parameters

[in]	p_ctrl	Pointer to control handle structure
------	--------	-------------------------------------

◆ **scanStatusGet**

```
fsp_err_t(* adc_api_t::scanStatusGet) (adc_ctrl_t *const p_ctrl, adc_status_t *p_status)
```

Check scan status.

Implemented as

- R_ADC_StatusGet()
- R_ADC_B_StatusGet()
- R_SDADC_StatusGet()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[out]	p_status	Pointer to store current status in

◆ **read**

```
fsp_err_t(* adc_api_t::read) (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint16_t *const p_data)
```

Read ADC conversion result.

Implemented as

- R_ADC_Read()
- R_ADC_B_Read()
- R_SDADC_Read()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	reg_id	ADC channel to read (see enumeration adc_channel_t)
[in]	p_data	Pointer to variable to load value into.

◆ **read32**

```
fsp_err_t(* adc_api_t::read32) (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint32_t *const p_data)
```

Read ADC conversion result into a 32-bit word.

Implemented as

- R_ADC_Read32()
- R_ADC_B_Read32()
- R_SDADC_Read32()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	reg_id	ADC channel to read (see enumeration adc_channel_t)
[in]	p_data	Pointer to variable to load value into.

◆ **calibrate**

```
fsp_err_t(* adc_api_t::calibrate) (adc_ctrl_t *const p_ctrl, void const *p_extend)
```

Calibrate ADC or associated PGA (programmable gain amplifier). The driver may require implementation specific arguments to the p_extend input. Not supported for all implementations. See implementation for details.

Implemented as

- R_ADC_Calibrate()
- R_ADC_B_Calibrate()
- R_SDADC_Calibrate()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	p_extend	Pointer to implementation specific arguments

◆ offsetSet

```
fsp_err_t(* adc_api_t::offsetSet) (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, int32_t const offset)
```

Set offset for input PGA configured for differential input. Not supported for all implementations. See implementation for details.

Implemented as

- R_SDADC_OffsetSet()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	reg_id	ADC channel to read (see enumeration adc_channel_t)
[in]	offset	See implementation for details.

◆ callbackSet

```
fsp_err_t(* adc_api_t::callbackSet) (adc_ctrl_t *const p_api_ctrl, void(*p_callback)(adc_callback_args_t *), void const *const p_context, adc_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_ADC_CallbackSet()
- R_ADC_B_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the ADC control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* adc_api_t::close) (adc_ctrl_t *const p_ctrl)
```

Close the specified ADC unit by ending any scan in progress, disabling interrupts, and removing power to the specified A/D unit.

Implemented as

- R_ADC_Close()
- R_ADC_B_Close()
- R_SDADC_Close()

Parameters

[in]	p_ctrl	Pointer to control handle structure
------	--------	-------------------------------------

◆ **infoGet**

```
fsp_err_t(* adc_api_t::infoGet) (adc_ctrl_t *const p_ctrl, adc_info_t *const p_adc_info)
```

Return the ADC data register address of the first (lowest number) channel and the total number of bytes to be read in order for the DTC/DMAC to read the conversion results of all configured channels. Return the temperature sensor calibration and slope data.

Implemented as

- R_ADC_InfoGet()
- R_ADC_B_InfoGet()
- R_SDADC_InfoGet()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[out]	p_adc_info	Pointer to ADC information structure

◆ **adc_instance_t**

```
struct adc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

adc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
adc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
void const *	p_channel_cfg	Pointer to the channel configuration structure for this instance.
adc_api_t const *	p_api	Pointer to the API structure for

		this instance.
--	--	----------------

Typedef Documentation

◆ `adc_ctrl_t`

typedef void <code>adc_ctrl_t</code>
ADC control block. Allocate using driver instance control structure from driver instance header file.

Enumeration Type Documentation

◆ `adc_mode_t`

enum <code>adc_mode_t</code>	
ADC operation mode definitions	
Enumerator	
<code>ADC_MODE_SINGLE_SCAN</code>	Single scan - one or more channels.
<code>ADC_MODE_GROUP_SCAN</code>	Two trigger sources to trigger scan for two groups which contain one or more channels.
<code>ADC_MODE_CONTINUOUS_SCAN</code>	Continuous scan - one or more channels.

◆ `adc_resolution_t`

enum <code>adc_resolution_t</code>	
ADC data resolution definitions	
Enumerator	
<code>ADC_RESOLUTION_12_BIT</code>	12 bit resolution
<code>ADC_RESOLUTION_10_BIT</code>	10 bit resolution
<code>ADC_RESOLUTION_8_BIT</code>	8 bit resolution
<code>ADC_RESOLUTION_14_BIT</code>	14 bit resolution
<code>ADC_RESOLUTION_16_BIT</code>	16 bit resolution
<code>ADC_RESOLUTION_24_BIT</code>	24 bit resolution

◆ **adc_alignment_t**

enum <code>adc_alignment_t</code>	
ADC data alignment definitions	
Enumerator	
<code>ADC_ALIGNMENT_RIGHT</code>	Data alignment right.
<code>ADC_ALIGNMENT_LEFT</code>	Data alignment left.

◆ **adc_trigger_t**

enum <code>adc_trigger_t</code>	
ADC trigger mode definitions	
Enumerator	
<code>ADC_TRIGGER_SOFTWARE</code>	Software trigger; not for group modes.
<code>ADC_TRIGGER_SYNC_ELC</code>	Synchronous trigger via ELC.
<code>ADC_TRIGGER_ASYNC_EXTERNAL</code>	External asynchronous trigger; not for group modes.

◆ **adc_event_t**

enum adc_event_t	
ADC callback event definitions	
Enumerator	
ADC_EVENT_SCAN_COMPLETE	Normal/Group A scan complete.
ADC_EVENT_SCAN_COMPLETE_GROUP_B	Group B scan complete.
ADC_EVENT_CALIBRATION_COMPLETE	Calibration complete.
ADC_EVENT_CONVERSION_COMPLETE	Conversion complete.
ADC_EVENT_CALIBRATION_REQUEST	Calibration requested.
ADC_EVENT_CONVERSION_ERROR	Scan error.
ADC_EVENT_OVERFLOW	Overflow occurred.
ADC_EVENT_LIMIT_CLIP	Limiter clipping occurred.
ADC_EVENT_FIFO_READ_REQUEST	FIFO read requested.
ADC_EVENT_FIFO_OVERFLOW	FIFO overflow occurred.
ADC_EVENT_WINDOW_COMPARE_A	Window A comparison condition met.
ADC_EVENT_WINDOW_COMPARE_B	Window B comparison condition met.

◆ **adc_channel_t**

enum adc_channel_t	
ADC channels	
Enumerator	
ADC_CHANNEL_0	ADC channel 0.
ADC_CHANNEL_1	ADC channel 1.
ADC_CHANNEL_2	ADC channel 2.
ADC_CHANNEL_3	ADC channel 3.
ADC_CHANNEL_4	ADC channel 4.

ADC_CHANNEL_5	ADC channel 5.
ADC_CHANNEL_6	ADC channel 6.
ADC_CHANNEL_7	ADC channel 7.
ADC_CHANNEL_8	ADC channel 8.
ADC_CHANNEL_9	ADC channel 9.
ADC_CHANNEL_10	ADC channel 10.
ADC_CHANNEL_11	ADC channel 11.
ADC_CHANNEL_12	ADC channel 12.
ADC_CHANNEL_13	ADC channel 13.
ADC_CHANNEL_14	ADC channel 14.
ADC_CHANNEL_15	ADC channel 15.
ADC_CHANNEL_16	ADC channel 16.
ADC_CHANNEL_17	ADC channel 17.
ADC_CHANNEL_18	ADC channel 18.
ADC_CHANNEL_19	ADC channel 19.
ADC_CHANNEL_20	ADC channel 20.
ADC_CHANNEL_21	ADC channel 21.
ADC_CHANNEL_22	ADC channel 22.
ADC_CHANNEL_23	ADC channel 23.
ADC_CHANNEL_24	ADC channel 24.
ADC_CHANNEL_25	ADC channel 25.
ADC_CHANNEL_26	ADC channel 26.
ADC_CHANNEL_27	ADC channel 27.
ADC_CHANNEL_28	ADC channel 28.

ADC_CHANNEL_DUPLEX_A	Data duplexing register A.
ADC_CHANNEL_DUPLEX_B	Data duplexing register B.
ADC_CHANNEL_DUPLEX	Data duplexing register.
ADC_CHANNEL_TEMPERATURE	Temperature sensor output.
ADC_CHANNEL_VOLT	Internal reference voltage.
ADC_CHANNEL_0	ADC channel 0.
ADC_CHANNEL_1	ADC channel 1.
ADC_CHANNEL_2	ADC channel 2.
ADC_CHANNEL_3	ADC channel 3.
ADC_CHANNEL_4	ADC channel 4.
ADC_CHANNEL_5	ADC channel 5.
ADC_CHANNEL_6	ADC channel 6.
ADC_CHANNEL_7	ADC channel 7.
ADC_CHANNEL_8	ADC channel 8.
ADC_CHANNEL_9	ADC channel 9.
ADC_CHANNEL_10	ADC channel 10.
ADC_CHANNEL_11	ADC channel 11.
ADC_CHANNEL_12	ADC channel 12.
ADC_CHANNEL_13	ADC channel 13.
ADC_CHANNEL_14	ADC channel 14.
ADC_CHANNEL_15	ADC channel 15.
ADC_CHANNEL_16	ADC channel 16.
ADC_CHANNEL_17	ADC channel 17.
ADC_CHANNEL_18	ADC channel 18.

ADC_CHANNEL_19	ADC channel 19.
ADC_CHANNEL_20	ADC channel 20.
ADC_CHANNEL_21	ADC channel 21.
ADC_CHANNEL_22	ADC channel 22.
ADC_CHANNEL_23	ADC channel 23.
ADC_CHANNEL_24	ADC channel 24.
ADC_CHANNEL_25	ADC channel 25.
ADC_CHANNEL_26	ADC channel 26.
ADC_CHANNEL_27	ADC channel 27.
ADC_CHANNEL_28	ADC channel 28.
ADC_CHANNEL_SELF_DIAGNOSIS	Self-Diagnosis channel.
ADC_CHANNEL_TEMPERATURE	Temperature sensor output.
ADC_CHANNEL_VOLT	Internal reference voltage.
ADC_CHANNEL_DA0	D/A Converter Channel 0.
ADC_CHANNEL_DA1	D/A Converter Channel 1.
ADC_CHANNEL_DA2	D/A Converter Channel 2.
ADC_CHANNEL_DA3	D/A Converter Channel 3.

◆ **adc_group_id_t**

enum <code>adc_group_id_t</code>	
Enumerator	
<code>ADC_GROUP_ID_0</code>	Group ID 0.
<code>ADC_GROUP_ID_1</code>	Group ID 1.
<code>ADC_GROUP_ID_2</code>	Group ID 2.
<code>ADC_GROUP_ID_3</code>	Group ID 3.
<code>ADC_GROUP_ID_4</code>	Group ID 4.
<code>ADC_GROUP_ID_5</code>	Group ID 5.
<code>ADC_GROUP_ID_6</code>	Group ID 6.
<code>ADC_GROUP_ID_7</code>	Group ID 7.
<code>ADC_GROUP_ID_8</code>	Group ID 8.

◆ **adc_group_mask_t**

enum <code>adc_group_mask_t</code>	
Enumerator	
<code>ADC_GROUP_MASK_NONE</code>	Group Mask Unknown or None.
<code>ADC_GROUP_MASK_0</code>	Group Mask 0.
<code>ADC_GROUP_MASK_1</code>	Group Mask 1.
<code>ADC_GROUP_MASK_2</code>	Group Mask 2.
<code>ADC_GROUP_MASK_3</code>	Group Mask 3.
<code>ADC_GROUP_MASK_4</code>	Group Mask 4.
<code>ADC_GROUP_MASK_5</code>	Group Mask 5.
<code>ADC_GROUP_MASK_6</code>	Group Mask 6.
<code>ADC_GROUP_MASK_7</code>	Group Mask 7.
<code>ADC_GROUP_MASK_8</code>	Group Mask 8.
<code>ADC_GROUP_MASK_ALL</code>	All Groups.

◆ **adc_state_t**

enum <code>adc_state_t</code>	
ADC states.	
Enumerator	
<code>ADC_STATE_IDLE</code>	ADC is idle.
<code>ADC_STATE_SCAN_IN_PROGRESS</code>	ADC scan in progress.

4.3.2 BLE Interface

Detailed Description

Interface for Bluetooth Low Energy functions.

Summary

The BLE interface for the Bluetooth Low Energy (BLE) peripheral provides Bluetooth Low Energy functionality.

The Bluetooth Low Energy interface can be implemented by:

- [Bluetooth Low Energy Library of Extended Configuration \(r_ble\)](#)
- [Bluetooth Low Energy Library of Balance Configuration \(r_ble\)](#)
- [Bluetooth Low Energy Library of Compact Configuration \(r_ble\)](#)

Modules

GAP

#define BLE_VERSION_MINOR

#define BLE_LIB_EXTENDED

#define BLE_LIB_BALANCE

#define BLE_LIB_COMPACT

Typedefs

typedef void(* ble_event_cb_t) (void)

ble_event_cb_t is the callback function type for R_BLE_SetEvent().
More...

Macro Definition Documentation

◆ BLE_VERSION_MAJOR

#define BLE_VERSION_MAJOR

BLE Module Major Version.

◆ BLE_VERSION_MINOR

#define BLE_VERSION_MINOR

BLE Module Minor Version.

◆ BLE_LIB_EXTENDED

#define BLE_LIB_EXTENDED

BLE Protocol Stack Library Extended type.

◆ **BLE_LIB_BALANCE**

```
#define BLE_LIB_BALANCE
```

BLE Protocol Stack Library Balance type.

◆ **BLE_LIB_COMPACT**

```
#define BLE_LIB_COMPACT
```

BLE Protocol Stack Library Compacy type.

Typedef Documentation◆ **ble_event_cb_t**

```
ble_event_cb_t
```

ble_event_cb_t is the callback function type for [R_BLE_SetEvent\(\)](#).

Parameters

[in]	void	
------	------	--

Returns

none

Function Documentation◆ **R_BLE_Open()**

```
ble_status_t R_BLE_Open ( void )
```

Open the BLE protocol stack.

This function should be called once before using the BLE protocol stack.

Return values

BLE_SUCCESS(0x0000)	Success
---------------------	---------

◆ **R_BLE_Close()**

ble_status_t R_BLE_Close (void)

Close the BLE protocol stack.

This function should be called once to close the BLE protocol stack.

Return values

BLE_SUCCESS(0x0000)	Success
---------------------	---------

◆ **R_BLE_Execute()**

ble_status_t R_BLE_Execute (void)

Execute the BLE task.

This handles all the task queued in the BLE protocol stack internal task queue and return. This function should be called repeatedly in the main loop.

Return values

BLE_SUCCESS(0x0000)	Success
---------------------	---------

◆ **R_BLE_IsTaskFree()**

uint32_t R_BLE_IsTaskFree (void)

Check the BLE task queue is free or not.

This function returns the BLE task queue free status. When this function returns 0x0, call [R_BLE_Execute\(\)](#) to execute the BLE task.

Return values

0x0	BLE task queue is not free
0x1	BLE task queue is free

◆ **R_BLE_SetEvent()**

```
ble_status_t R_BLE_SetEvent ( ble_event_cb_t cb)
```

Set event.

This function add an event in the BLE protocol stack internal queue. The event is handled in R_BLE_Execute just like Bluetooth event. This function is intended to be called in hardware interrupt context. Even if calling this function with the same cb before the cb is invoked, only one event is registered. The maximum number of the events can be registered at a time is eight.

Parameters

cb	The callback for the event.
----	-----------------------------

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_ALREADY_IN_PROGRESS(0x000A)	The event already registered with the callback.
BLE_ERR_CONTEXT_FULL(0x000B)	No free slot for the event.

◆ **R_BLE_GetVersion()**

```
uint32_t R_BLE_GetVersion ( void )
```

Get the BLE FIT module version.

This function returns the BLE FIT module version.

The major version(BLE_VERSION_MAJOR) is contained in the two most significant bytes, and the minor version(BLE_VERSION_MINOR) occupies the remaining two bytes.

Return values

BLE_VERSION_MAJOR BLE_VERSION_MINOR	
---------------------------------------	--

◆ R_BLE_GetLibType()

uint32_t R_BLE_GetLibType (void)

Get the type of BLE protocol stack library.

This function returns the type of BLE protocol stack library.

Return values

BLE_LIB_EXTENDED(0x00)	Extended
BLE_LIB_BALANCE(0x01)	Balance
BLE_LIB_COMPACT(0x02)	Compact

4.3.2.1 GAP

Interfaces » BLE Interface

Functions

ble_status_t R_BLE_GAP_Init (ble_gap_app_cb_t gap_cb)

Initialize the Host Stack. [More...](#)

ble_status_t R_BLE_GAP_Terminate (void)

Terminate the Host Stack. [More...](#)

ble_status_t R_BLE_GAP_UpdConn (uint16_t conn_hdl, uint8_t mode, uint16_t accept, st_ble_gap_conn_param_t *p_conn_updt_param)

Update the connection parameters. [More...](#)

ble_status_t R_BLE_GAP_SetDataLen (uint16_t conn_hdl, uint16_t tx_octets, uint16_t tx_time)

Update the packet size and the packet transmit time. [More...](#)

ble_status_t R_BLE_GAP_Disconnect (uint16_t conn_hdl, uint8_t reason)

Disconnect the link. [More...](#)

ble_status_t R_BLE_GAP_SetPhy (uint16_t conn_hdl, st_ble_gap_set_phy_param_t *p_phy_param)

Set the phy for connection. [More...](#)

ble_status_t [R_BLE_GAP_SetDefPhy](#) (st_ble_gap_set_def_phy_param_t *p_def_phy_param)
Set the default phy which allows remote device to change. [More...](#)

ble_status_t [R_BLE_GAP_SetPrivMode](#) (st_ble_dev_addr_t *p_addr, uint8_t *p_privacy_mode, uint8_t device_num)
Set the privacy mode. [More...](#)

ble_status_t [R_BLE_GAP_ConfWhiteList](#) (uint8_t op_code, st_ble_dev_addr_t *p_addr, uint8_t device_num)
Set White List. [More...](#)

ble_status_t [R_BLE_GAP_GetVerInfo](#) (void)
Get the version number of the Controller and the host stack. [More...](#)

ble_status_t [R_BLE_GAP_ReadPhy](#) (uint16_t conn_hdl)
Get the phy settings. [More...](#)

ble_status_t [R_BLE_GAP_ConfRslvList](#) (uint8_t op_code, st_ble_dev_addr_t *p_addr, st_ble_gap_rslv_list_key_set_t *p_peer_irk, uint8_t device_num)
Set Resolving List. [More...](#)

ble_status_t [R_BLE_GAP_EnableRpa](#) (uint8_t enable)
Enable/Disable address resolution and generation of a resolvable private address. [More...](#)

ble_status_t [R_BLE_GAP_SetRpaTo](#) (uint16_t rpa_timeout)
Set the update time of resolvable private address. [More...](#)

ble_status_t [R_BLE_GAP_ReadRpa](#) (st_ble_dev_addr_t *p_addr)
Get the resolvable private address of local device. [More...](#)

ble_status_t [R_BLE_GAP_ReadRssi](#) (uint16_t conn_hdl)
Get RSSI. [More...](#)

ble_status_t [R_BLE_GAP_ReadChMap](#) (uint16_t conn_hdl)
Get the Channel Map. [More...](#)

ble_status_t [R_BLE_GAP_SetRandAddr](#) (uint8_t *p_random_addr)
Set a random address. [More...](#)

ble_status_t [R_BLE_GAP_SetAdvParam](#) (st_ble_gap_adv_param_t *p_adv_param)
Set advertising parameters. [More...](#)

ble_status_t [R_BLE_GAP_SetAdvSresData](#) (st_ble_gap_adv_data_t *p_adv_srsp_data)
Set advertising data/scan response data/periodic advertising data. [More...](#)

ble_status_t [R_BLE_GAP_StartAdv](#) (uint8_t adv_hdl, uint16_t duration, uint8_t max_extd_adv_evts)
Start advertising. [More...](#)

ble_status_t [R_BLE_GAP_StopAdv](#) (uint8_t adv_hdl)
Stop advertising. [More...](#)

ble_status_t [R_BLE_GAP_SetPerdAdvParam](#) (st_ble_gap_perd_adv_param_t *p_perd_adv_param)
Set periodic advertising parameters. [More...](#)

ble_status_t [R_BLE_GAP_StartPerdAdv](#) (uint8_t adv_hdl)
Start periodic advertising. [More...](#)

ble_status_t [R_BLE_GAP_StopPerdAdv](#) (uint8_t adv_hdl)
Stop periodic advertising. [More...](#)

ble_status_t [R_BLE_GAP_GetRemainAdvBufSize](#) (uint16_t *p_remain_adv_data_size, uint16_t *p_remain_perd_adv_data_size)
Get buffer size for advertising data/scan response data/periodic advertising data in the Controller. [More...](#)

ble_status_t [R_BLE_GAP_RemoveAdvSet](#) (uint8_t op_code, uint8_t adv_hdl)
Delete advertising set. [More...](#)

ble_status_t [R_BLE_GAP_CreateConn](#) (st_ble_gap_create_conn_param_t *p_param)
Request for a link establishment. [More...](#)

ble_status_t [R_BLE_GAP_CancelCreateConn](#) (void)
Cancel the request for a link establishment. [More...](#)

ble_status_t [R_BLE_GAP_SetChMap](#) (uint8_t *p_channel_map)
Set the Channel Map. [More...](#)

ble_status_t [R_BLE_GAP_StartScan](#) (st_ble_gap_scan_param_t *p_scan_param, st_ble_gap_scan_on_t *p_scan_enable)
Set scan parameter and start scan. [More...](#)

ble_status_t [R_BLE_GAP_StopScan](#) (void)
Stop scan. [More...](#)

ble_status_t [R_BLE_GAP_CreateSync](#) (st_ble_dev_addr_t *p_addr, uint8_t adv_sid, uint16_t skip, uint16_t sync_to)
Request for a periodic sync establishment. [More...](#)

ble_status_t [R_BLE_GAP_CancelCreateSync](#) (void)
Cancel the request for a periodic sync establishment. [More...](#)

ble_status_t [R_BLE_GAP_TerminateSync](#) (uint16_t sync_hdl)
Terminate the periodic sync. [More...](#)

ble_status_t [R_BLE_GAP_ConfPerdAdvList](#) (uint8_t op_code, st_ble_dev_addr_t *p_addr, uint8_t *p_adv_sid_set, uint8_t device_num)
Set Periodic Advertiser List. [More...](#)

ble_status_t [R_BLE_GAP_AuthorizeDev](#) (uint16_t conn_hdl, uint8_t author_flag)

Authorize a remote device. [More...](#)

ble_status_t [R_BLE_GAP_GetRemDevInfo](#) (uint16_t conn_hdl)
Get the information about remote device. [More...](#)

ble_status_t [R_BLE_GAP_SetPairingParams](#) (st_ble_gap_pairing_param_t *p_pair_param)
Set the parameters using pairing. [More...](#)

ble_status_t [R_BLE_GAP_SetLocIdInfo](#) (st_ble_dev_addr_t *p_lc_id_addr, uint8_t *p_lc_irk)
Set the IRK and the identity address distributed to a remote device. [More...](#)

ble_status_t [R_BLE_GAP_SetLocCsrk](#) (uint8_t *p_local_csrk)
Set the CSRK distributed to a remote device. [More...](#)

ble_status_t [R_BLE_GAP_StartPairing](#) (uint16_t conn_hdl)
Start pairing. [More...](#)

ble_status_t [R_BLE_GAP_ReplyPairing](#) (uint16_t conn_hdl, uint8_t response)
Reply the pairing request from a remote device. [More...](#)

ble_status_t [R_BLE_GAP_StartEnc](#) (uint16_t conn_hdl)
Encryption the link. [More...](#)

ble_status_t [R_BLE_GAP_ReplyPasskeyEntry](#) (uint16_t conn_hdl, uint32_t passkey, uint8_t response)
Reply the passkey entry request. [More...](#)

ble_status_t [R_BLE_GAP_ReplyNumComp](#) (uint16_t conn_hdl, uint8_t response)
Reply the numeric comparison request. [More...](#)

ble_status_t [R_BLE_GAP_NotifyKeyPress](#) (uint16_t conn_hdl, uint8_t key_press)
Notify the input key type which a remote device inputs in the passkey entry. [More...](#)

ble_status_t [R_BLE_GAP_GetDevSecInfo](#) (uint16_t conn_hdl, st_ble_gap_auth_info_t *p_sec_info)
Get the security information about the remote device. [More...](#)

ble_status_t [R_BLE_GAP_ReplyExKeyInfoReq](#) (uint16_t conn_hdl)
Distribute the keys of local device. [More...](#)

ble_status_t [R_BLE_GAP_SetRemOobData](#) (st_ble_dev_addr_t *p_addr, uint8_t oob_data_flag, st_ble_gap_oob_data_t *p_oob)
Set the oob data from a remote device. [More...](#)

ble_status_t [R_BLE_GAP_CreateScOobData](#) (void)
Create data for oob in secure connection. [More...](#)

ble_status_t [R_BLE_GAP_SetBondInfo](#) (st_ble_gap_bond_info_t *p_bond_info, uint8_t device_num, uint8_t *p_set_num)
Set the bonding information stored in non-volatile memory to the host stack. [More...](#)

void [R_BLE_GAP_DeleteBondInfo](#) (int32_t local, int32_t remote, st_ble_dev_addr_t *p_addr, ble_gap_del_bond_cb_t gap_del_bond_cb)
This function deletes the bonding information in Host Stack. When a function for deleting the bonding information stored in non-volatile area is registered by the gap_del_bond_cb parameter, it is deleted as well as the bonding information in Host Stack. [More...](#)

ble_status_t [R_BLE_GAP_ReplyLtkReq](#) (uint16_t conn_hdl, uint16_t ediv, uint8_t *p_peer_rand, uint8_t response)
Reply the LTK request from a remote device. [More...](#)

Detailed Description

(end addtogroup BLE_API)

Data Structures

struct [st_ble_evt_data_t](#)
[st_ble_evt_data_t](#) is the type of the data notified in a GAP Event. [More...](#)

struct [st_ble_dev_addr_t](#)
[st_ble_dev_addr_t](#) is the type of bluetooth device address(BD_ADDR).
[More...](#)

struct [st_ble_gap_ext_adv_param_t](#)
Advertising parameters. [More...](#)

struct [st_ble_gap_adv_data_t](#)
Advertising data/scan response data/periodic advertising data.
[More...](#)

struct [st_ble_gap_perd_adv_param_t](#)
Periodic advertising parameter. [More...](#)

struct [st_ble_gap_scan_phy_param_t](#)
Scan parameters per scan PHY. [More...](#)

struct [st_ble_gap_ext_scan_param_t](#)
Scan parameters. [More...](#)

struct [st_ble_gap_scan_on_t](#)
Parameters configured when scanning starts. [More...](#)

struct [st_ble_gap_conn_param_t](#)
Connection parameters included in connection interval, slave latency, supervision timeout, ce length. [More...](#)

struct [st_ble_gap_conn_phy_param_t](#)
Connection parameters per PHY. [More...](#)

struct [st_ble_gap_create_conn_param_t](#)
Connection parameters used in [R_BLE_GAP_CreateConn\(\)](#). [More...](#)

struct [st_ble_gap_rslv_list_key_set_t](#)

IRK of a remote device and IRK type of local device used in [R_BLE_GAP_ConfRslvList\(\)](#). [More...](#)

struct [st_ble_gap_set_phy_param_t](#)

PHY configuration parameters used in [R_BLE_GAP_SetPhy\(\)](#). [More...](#)

struct [st_ble_gap_set_def_phy_param_t](#)

PHY preferences which allows a remote device to set used in [R_BLE_GAP_SetDefPhy\(\)](#). [More...](#)

struct [st_ble_gap_auth_info_t](#)

Pairing parameters required from a remote device or information about keys distributed from a remote device. [More...](#)

struct [st_ble_gap_key_dist_t](#)

Keys distributed from a remote device. [More...](#)

struct [st_ble_gap_key_ex_param_t](#)

This structure includes the distributed keys and negotiated LTK size. [More...](#)

struct [st_ble_gap_pairing_param_t](#)

Pairing parameters used in [R_BLE_GAP_SetPairingParams\(\)](#). [More...](#)

struct [st_ble_gap_oob_data_t](#)

Oob data received from the remote device. This is used in [R_BLE_GAP_SetRemOobData\(\)](#). [More...](#)

struct [st_ble_gap_ver_num_t](#)

Version number of host stack. [More...](#)

struct [st_ble_gap_loc_ver_info_t](#)

Version number of Controller. [More...](#)

struct [st_ble_gap_loc_dev_info_evt_t](#)

Version information of local device. [More...](#)

struct [st_ble_gap_hw_err_evt_t](#)
Hardware error that is notified from Controller. [More...](#)

struct [st_ble_gap_cmd_err_evt_t](#)
HCI Command error. [More...](#)

struct [st_ble_gap_adv_rept_t](#)
Advertising Report. [More...](#)

struct [st_ble_gap_ext_adv_rept_t](#)
Extended Advertising Report. [More...](#)

struct [st_ble_gap_perd_adv_rept_t](#)
Periodic Advertising Report. [More...](#)

struct [st_ble_gap_adv_rept_evt_t](#)
Advertising report. [More...](#)

union [st_ble_gap_adv_rept_evt_t.param](#)
Advertising Report. [More...](#)

struct [st_ble_gap_adv_set_evt_t](#)
Advertising handle. [More...](#)

struct [st_ble_gap_adv_off_evt_t](#)
Information about the advertising set which stops advertising.
[More...](#)

struct [st_ble_gap_adv_data_evt_t](#)
This structure notifies that advertising data has been set to
Controller by [R_BLE_GAP_SetAdvSresData\(\)](#). [More...](#)

struct [st_ble_gap_rem_adv_set_evt_t](#)
This structure notifies that an advertising set has been removed.

[More...](#)

struct [st_ble_gap_conn_evt_t](#)

This structure notifies that a link has been established. [More...](#)

struct [st_ble_gap_disconn_evt_t](#)

This structure notifies that a link has been disconnected. [More...](#)

struct [st_ble_gap_rd_ch_map_evt_t](#)

This structure notifies that Channel Map has been retrieved by [R_BLE_GAP_ReadChMap\(\)](#). [More...](#)

struct [st_ble_gap_rd_rssi_evt_t](#)

This structure notifies that RSSI has been retrieved by [R_BLE_GAP_ReadRssi\(\)](#). [More...](#)

struct [st_ble_gap_dev_info_evt_t](#)

This structure notifies that information about remote device has been retrieved by [R_BLE_GAP_GetRemDevInfo\(\)](#). [More...](#)

struct [st_ble_gap_conn_upd_evt_t](#)

This structure notifies that connection parameters has been updated. [More...](#)

struct [st_ble_gap_conn_upd_req_evt_t](#)

This structure notifies that a request for connection parameters update has been received. [More...](#)

struct [st_ble_gap_conn_hdl_evt_t](#)

This structure notifies that a GAP Event that includes only connection handle has occurred. [More...](#)

struct [st_ble_gap_data_len_chg_evt_t](#)

This structure notifies that the packet data length has been updated. [More...](#)

struct [st_ble_gap_rd_rpa_evt_t](#)

This structure notifies that the local resolvable private address has been retrieved by [R_BLE_GAP_ReadRpa\(\)](#). [More...](#)

struct [st_ble_gap_phy_upd_evt_t](#)

This structure notifies that PHY for a connection has been updated. [More...](#)

struct [st_ble_gap_phy_rd_evt_t](#)

This structure notifies that the PHY settings has been retrieved by [R_BLE_GAP_ReadPhy\(\)](#). [More...](#)

struct [st_ble_gap_scan_req_rcv_evt_t](#)

This structure notifies that a Scan Request packet has been received from a Scanner. [More...](#)

struct [st_ble_gap_sync_est_evt_t](#)

This structure notifies that a Periodic sync has been established. [More...](#)

struct [st_ble_gap_sync_hdl_evt_t](#)

This structure notifies that a GAP Event that includes only sync handle has occurred. [More...](#)

struct [st_ble_gap_white_list_conf_evt_t](#)

This structure notifies that White List has been configured. [More...](#)

struct [st_ble_gap_rslv_list_conf_evt_t](#)

This structure notifies that Resolving List has been configured. [More...](#)

struct [st_ble_gap_perd_list_conf_evt_t](#)

This structure notifies that Periodic Advertiser List has been configured. [More...](#)

struct [st_ble_gap_set_priv_mode_evt_t](#)

This structure notifies that Privacy Mode has been configured.

[More...](#)

struct [st_ble_gap_pairing_req_evt_t](#)

This structure notifies that a pairing request from a remote device has been received. [More...](#)

struct [st_ble_gap_passkey_display_evt_t](#)

This structure notifies that a request for Passkey display in pairing has been received. [More...](#)

struct [st_ble_gap_num_comp_evt_t](#)

This structure notifies that a request for Numeric Comparison in pairing has been received. [More...](#)

struct [st_ble_gap_key_press_ntf_evt_t](#)

This structure notifies that the remote device has input a key in Passkey Entry. [More...](#)

struct [st_ble_gap_pairing_info_evt_t](#)

This structure notifies that the pairing has completed. [More...](#)

struct [st_ble_gap_enc_chg_evt_t](#)

This structure notifies that the encryption status of a link has been changed. [More...](#)

struct [st_ble_gap_peer_key_info_evt_t](#)

This structure notifies that the remote device has distributed the keys. [More...](#)

struct [st_ble_gap_ltk_req_evt_t](#)

This structure notifies that a LTK request from a remote device has been received. [More...](#)

struct [st_ble_gap_ltk_rsp_evt_t](#)

This structure notifies that local device has replied to the LTK request from the remote device. [More...](#)

struct [st_ble_gap_sc_oob_data_evt_t](#)

This structure notifies that OOB data for Secure Connections has been generated by [R_BLE_GAP_CreateScOobData\(\)](#). [More...](#)

struct [st_ble_gap_bond_info_t](#)

Bonding information used in [R_BLE_GAP_SetBondInfo\(\)](#). [More...](#)

Macros

#define [BLE_BD_ADDR_LEN](#)

#define [BLE_MASTER](#)

#define [BLE_SLAVE](#)

#define [BLE_GAP_ADDR_PUBLIC](#)

#define [BLE_GAP_ADDR_RAND](#)

#define [BLE_GAP_ADDR_RPA_ID_PUBLIC](#)

Resolvable Private Address. [More...](#)

#define [BLE_GAP_ADDR_RPA_ID_RANDOM](#)

Resolvable Private Address. [More...](#)

#define [BLE_GAP_AD_FLAGS_LE_LIM_DISC_MODE](#)

LE Limited Discoverable Mode flag used in AD type.

#define [BLE_GAP_AD_FLAGS_LE_GEN_DISC_MODE](#)

LE General Discoverable Mode flag used in AD type.

#define [BLE_GAP_AD_FLAGS_BR_EDR_NOT_SUPPORTED](#)

BR/EDR Not Supported flag used in AD type.

#define [BLE_GAP_ADV_DATA_MODE](#)

Advertising data.

#define [BLE_GAP_SCAN_RSP_DATA_MODE](#)

Scan response data.

```
#define BLE_GAP_PERD_ADV_DATA_MODE  
Periodic advertising data.
```

```
#define BLE_GAP_ADV_CH_37  
Use 37 CH.
```

```
#define BLE_GAP_ADV_CH_38  
Use 38 CH.
```

```
#define BLE_GAP_ADV_CH_39  
Use 39 CH.
```

```
#define BLE_GAP_ADV_CH_ALL  
Use 37 - 39 CH.
```

```
#define BLE_GAP_SCAN_PASSIVE  
Passive Scan.
```

```
#define BLE_GAP_SCAN_ACTIVE  
Active Scan.
```

```
#define BLE_GAP_SCAN_INTV_MIN  
Active Scan.
```

```
#define BLE_GAP_SCAN_FILT_DUPLIC_DISABLE  
Duplicate filter disabled.
```

```
#define BLE_GAP_SCAN_FILT_DUPLIC_ENABLE  
Duplicate filter enabled.
```

```
#define BLE_GAP_SCAN_FILT_DUPLIC_ENABLE_FOR_PERIOD  
Duplicate filtering enabled, reset for each scan period.
```

```
#define BLE_GAP_SCAN_ALLOW_ADV_ALL
```

Accept all advertising and scan response PDUs except directed advertising PDUs not addressed to local device.

```
#define BLE_GAP_SCAN_ALLOW_ADV_WLST
```

Accept only advertising and scan response PDUs from remote devices whose address is registered in the White List. Directed advertising PDUs which are not addressed to local device is ignored.

```
#define BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED
```

Accept all advertising and scan response PDUs except directed advertising PDUs whose the target address is identity address but doesn't address local device. However directed advertising PDUs whose the target address is the local resolvable private address are accepted.

```
#define BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED_WLST
```

Accept all advertising and scan response PDUs.
The following are excluded. [More...](#)

```
#define BLE_GAP_INIT_FILT_USE_ADDR
```

White List is not used.

```
#define BLE_GAP_INIT_FILT_USE_WLST
```

White List is used.

```
#define BLE_GAP_DATA_0_CLEAR
```

Clear the advertising data/scan response data/periodic advertising data in the advertising set.

```
#define BLE_GAP_DATA_0_DID_UPD
```

Update Advertising DID without changing advertising data.

```
#define BLE_GAP_NET_PRIV_MODE
```

Network Privacy Mode.

```
#define BLE_GAP_DEV_PRIV_MODE
```

Device Privacy Mode.

```
#define BLE_GAP_REM_FEATURE_SIZE  
The length of the features supported by a remote device.
```

```
#define BLE_GAP_NOT_AUTHORIZED  
Not authorize the remote device.
```

```
#define BLE_GAP_AUTHORIZED  
Authorize the remote device.
```

```
#define BLE_GAP_RMV_ADV_SET_REM_OP  
Delete an advertising set.
```

```
#define BLE_GAP_RMV_ADV_SET_CLR_OP  
Delete all the advertising sets.
```

```
#define BLE_GAP_SC_PROC_GEN  
General Discovery Procedure.
```

```
#define BLE_GAP_SC_PROC_LIM  
Limited Discovery Procedure.
```

```
#define BLE_GAP_SC_PROC_OBS  
Observation Procedure.
```

```
#define BLE_GAP_LIST_ADD_DEV  
Add the device to the list.
```

```
#define BLE_GAP_LIST_REM_DEV  
Delete the device from the list.
```

```
#define BLE_GAP_LIST_CLR  
Clear the list.
```

```
#define BLE_GAP_WHITE_LIST_MAX_ENTRY
    The maximum entry number of White List.
```

```
#define BLE_GAP_RSLV_LIST_MAX_ENTRY
    The maximum entry number of Resolving List.
```

```
#define BLE_GAP_PERD_LIST_MAX_ENTRY
    The maximum entry number of Periodic Advertiser List.
```

```
#define BLE_GAP_RPA_DISABLED
    Disable RPA generation/resolution.
```

```
#define BLE_GAP_RPA_ENABLED
    Enable RPA generation/resolution.
```

```
#define BLE_GAP_RL_LOC_KEY_ALL_ZERO
    All-zero IRK.
```

```
#define BLE_GAP_RL_LOC_KEY_REGISTERED
    The IRK registered by R_BLE_GAP_SetLocIdInfo().
```

```
#define BLE_MAX_NO_OF_ADV_SETS_SUPPORTED
    The maximum number of advertising set for the Abstraction API.
```

```
#define BLE_GAP_LEGACY_PROP_ADV_IND
    Connectable and scannable undirected Legacy Advertising Packet.
```

```
#define BLE_GAP_LEGACY_PROP_ADV_DIRECT_IND
    Connectable directed (low duty cycle) Legacy Advertising Packet.
```

```
#define BLE_GAP_LEGACY_PROP_ADV_HDC_DIRECT_IND
    Connectable directed (high duty cycle) Legacy Advertising Packet.
```

```
#define BLE_GAP_LEGACY_PROP_ADV_SCAN_IND  
Scannable undirected Legacy Advertising Packet.
```

```
#define BLE_GAP_LEGACY_PROP_ADV_NONCONN_IND  
Non-connectable and non-scannable undirected Legacy Advertising  
Packet.
```

```
#define BLE_GAP_EXT_PROP_ADV_CONN_NOSCAN_UNDIRECT  
Connectable and non-scannable undirected Extended Advertising  
Packet.
```

```
#define BLE_GAP_EXT_PROP_ADV_CONN_NOSCAN_DIRECT  
Connectable and non-scannable directed (low duty cycle) Extended  
Advertising Packet.
```

```
#define BLE_GAP_EXT_PROP_ADV_CONN_NOSCAN_HDC_DIRECT  
Connectable and non-scannable directed (high duty cycle) Extended  
Advertising Packet.
```

```
#define BLE_GAP_EXT_PROP_ADV_NOCONN_SCAN_UNDIRECT  
Non-connectable and scannable undirected Extended Advertising  
Packet.
```

```
#define BLE_GAP_EXT_PROP_ADV_NOCONN_SCAN_DIRECT  
Non-connectable and scannable directed (low duty cycle) Extended  
Advertising Packet.
```

```
#define BLE_GAP_EXT_PROP_ADV_NOCONN_SCAN_HDC_DIRECT  
Non-connectable and scannable directed (high duty cycle) Extended  
Advertising Packet.
```

```
#define BLE_GAP_EXT_PROP_ADV_NOCONN_NOSCAN_UNDIRECT  
Non-connectable and non-scannable undirected Extended  
Advertising Packet.
```

```
#define BLE_GAP_EXT_PROP_ADV_NOCONN_NOSCAN_DIRECT  
Non-connectable and non-scannable directed (low duty cycle)
```

Extended Advertising Packet.

```
#define BLE_GAP_EXT_PROP_ADV_NOCONN_NOSCAN_HDC_DIRECT
```

Non-connectable and non-scannable directed (high duty cycle) Extended Advertising Packet.

```
#define BLE_GAP_EXT_PROP_ADV_ANONYMOUS
```

Omit the advertiser address from Extended Advertising Packet.

```
#define BLE_GAP_EXT_PROP_ADV_INCLUDE_TX_POWER
```

Indicate that the advertising data includes TX Power.

```
#define BLE_GAP_ADV_ALLOW_SCAN_ANY_CONN_ANY
```

Process scan and connection requests from all devices.

```
#define BLE_GAP_ADV_ALLOW_SCAN_WLST_CONN_ANY
```

Process connection requests from all devices and scan requests from only devices that are in the White List.

```
#define BLE_GAP_ADV_ALLOW_SCAN_ANY_CONN_WLST
```

Process scan requests from all devices and connection requests from only devices that are in the White List.

```
#define BLE_GAP_ADV_ALLOW_SCAN_WLST_CONN_WLST
```

Process scan and connection requests from only devices in the White List.

```
#define BLE_GAP_ADV_PHY_1M
```

Use 1M PHY.

```
#define BLE_GAP_ADV_PHY_2M
```

Use 2M PHY.

```
#define BLE_GAP_ADV_PHY_CD
```

Use Coded PHY.

```
#define BLE_GAP_SCAN_REQ_NTF_DISABLE  
Disable Scan Request Notification.
```

```
#define BLE_GAP_SCAN_REQ_NTF_ENABLE  
Enable Scan Request Notification.
```

```
#define BLE_GAP_PERD_PROP_TX_POWER  
Indicate that periodic advertising data includes Tx Power.
```

```
#define BLE_GAP_INVALID_ADV_HDL  
Invalid advertising handle.
```

```
#define BLE_GAP_SET_PHYS_HOST_PREF_1M  
Use 1M PHY.
```

```
#define BLE_GAP_SET_PHYS_HOST_PREF_2M  
Use 2M PHY.
```

```
#define BLE_GAP_SET_PHYS_HOST_PREF_CD  
Use Coded PHY.
```

```
#define BLE_GAP_SET_PHYS_OP_HOST_NO_PREF  
No preferred coding.
```

```
#define BLE_GAP_SET_PHYS_OP_HOST_PREF_S_2  
Use S=2 coding.
```

```
#define BLE_GAP_SET_PHYS_OP_HOST_PREF_S_8  
Use S=8 coding.
```

```
#define BLE_GAP_CONN_UPD_MODE_REQ  
Request for updating the connection parameters.
```

`#define BLE_GAP_CONN_UPD_MODE_RSP`
Reply a connection parameter update request.

`#define BLE_GAP_CONN_UPD_ACCEPT`
Accept the update request.

`#define BLE_GAP_CONN_UPD_REJECT`
Reject the update request.

`#define BLE_GAP_CH_MAP_SIZE`
The size of channel map.

`#define BLE_GAP_INVALID_CONN_HDL`
Invalid Connection handle.

`#define BLE_GAP_NOT_USE_CONN_HDL`
This macro indicates that connection handle is not used.

`#define BLE_GAP_INIT_CONN_HDL`
Initial Connection handle.

`#define BLE_GAP_PAIRING_ACCEPT`
Accept a request regarding pairing.

`#define BLE_GAP_PAIRING_REJECT`
Reject a request regarding pairing.

`#define BLE_GAP_LTK_REQ_ACCEPT`
Reply for the LTK request.

`#define BLE_GAP_LTK_REQ_DENY`
Reject the LTK request.

`#define BLE_GAP_LESC_PASSKEY_ENTRY_STARTED`

Notify that passkey entry started.

```
#define BLE_GAP_LESC_PASKEY_DIGIT_ENTERED  
Notify that passkey digit entered.
```

```
#define BLE_GAP_LESC_PASKEY_DIGIT_ERASED  
Notify that passkey digit erased.
```

```
#define BLE_GAP_LESC_PASKEY_CLEARED  
Notify that passkey cleared.
```

```
#define BLE_GAP_LESC_PASKEY_ENTRY_COMPLETED  
Notify that passkey entry completed.
```

```
#define BLE_GAP_SEC_MITM_BEST_EFFORT  
MITM Protection not required.
```

```
#define BLE_GAP_SEC_MITM_STRICT  
MITM Protection required.
```

```
#define BLE_GAP_KEY_DIST_ENCKEY  
LTK.
```

```
#define BLE_GAP_KEY_DIST_IDKEY  
IRK and Identity Address.
```

```
#define BLE_GAP_KEY_DIST_SIGNKEY  
CSRK.
```

```
#define BLE_GAP_ID_ADDR_SIZE  
The size of identity address.
```

```
#define BLE_GAP_IRK_SIZE  
The size of IRK.
```

`#define BLE_GAP_CSRK_SIZE`
The size of CSRK.

`#define BLE_GAP_LTK_SIZE`
The size of LTK.

`#define BLE_GAP_EDIV_SIZE`
The size of EDIV.

`#define BLE_GAP_RAND_64_BIT_SIZE`
The size of Rand.

`#define BLE_GAP_UNAUTH_PAIRING`
Unauthenticated pairing.

`#define BLE_GAP_AUTH_PAIRING`
Authenticated pairing.

`#define BLE_GAP_LEGACY_PAIRING`
Legacy pairing.

`#define BLE_GAP_LESC_PAIRING`
Secure Connections.

`#define BLE_GAP_BONDING_NONE`
The device doesn't support Bonding.

`#define BLE_GAP_BONDING`
The device supports Bonding.

`#define BLE_GAP_IOCAP_DISPLAY_ONLY`
Display Only iocapability. [More...](#)

```
#define BLE_GAP_IOCAP_DISPLAY_YESNO  
Display Yes/No iocapability. More...
```

```
#define BLE_GAP_IOCAP_KEYBOARD_ONLY  
Keyboard Only iocapability. More...
```

```
#define BLE_GAP_IOCAP_NOINPUT_NOOUTPUT  
No Input No Output iocapability. More...
```

```
#define BLE_GAP_IOCAP_KEYBOARD_DISPLAY  
Keyboard Display iocapability. More...
```

```
#define BLE_GAP_OOB_DATA_NOT_PRESENT  
Reply that No OOB data has been received when pairing.
```

```
#define BLE_GAP_OOB_DATA_PRESENT  
Reply that the OOB data has been received when pairing.
```

```
#define BLE_GAP_SC_BEST_EFFORT  
Accept Legacy pairing and Secure Connections.
```

```
#define BLE_GAP_SC_STRICT  
Accept only Secure Connections.
```

```
#define BLE_GAP_SC_KEY_PRESS_NTF_NOT_SPRT  
Not support for Key Press Notification.
```

```
#define BLE_GAP_SC_KEY_PRESS_NTF_SPRT  
Support for Key Press Notification.
```

```
#define BLE_GAP_LEGACY_OOB_SIZE  
The size of Temporary Key for OOB in legacy pairing.
```

```
#define BLE_GAP_OOB_CONFIRM_VAL_SIZE
```

The size of Confirmation Value for OOB in Secure Connections.

```
#define BLE_GAP_OOB_RANDOM_VAL_SIZE
```

The size of Rand for OOB in Secure Connections.

```
#define BLE_GAP_SEC_DEL_LOC_NONE
```

Delete no local keys.

```
#define BLE_GAP_SEC_DEL_LOC_IRK
```

Delete local IRK.

```
#define BLE_GAP_SEC_DEL_LOC_CSRK
```

Delete local CSRK.

```
#define BLE_GAP_SEC_DEL_LOC_ALL
```

Delete all local keys.

```
#define BLE_GAP_SEC_DEL_REM_NONE
```

Delete no remote device keys.

```
#define BLE_GAP_SEC_DEL_REM_SA
```

Delete a key specified by the p_addr parameter.

```
#define BLE_GAP_SEC_DEL_REM_NOT_CONN
```

Delete keys of not connected remote devices.

```
#define BLE_GAP_SEC_DEL_REM_ALL
```

Delete all remote device keys.

Typedefs

```
typedef void(* ble_gap_app_cb_t) (uint16_t event_type, ble_status_t event_result,  
st_ble_evt_data_t *p_event_data)
```

ble_gap_app_cb_t is the GAP Event callback function type. [More...](#)

```
typedef void(* ble_gap_del_bond_cb_t) (st_ble_dev_addr_t *p_addr)
```

ble_gap_del_bond_cb_t is the type of the callback function for delete bonding information stored in non-volatile area.
This type is used in [R_BLE_GAP_DeleteBondInfo\(\)](#). [More...](#)

```
typedef st_ble_gap_adv_param_t
st_ble_gap_ext_adv_param_t
```

Advertising parameters. [More...](#)

```
typedef st_ble_gap_scan_param_t
st_ble_gap_ext_scan_param_t
```

Scan parameters. [More...](#)

Enumerations

```
enum e_ble_gap_evt_t
```

GAP Event Identifier. [More...](#)

Data Structure Documentation

◆ st_ble_evt_data_t

```
struct st_ble_evt_data_t
```

st_ble_evt_data_t is the type of the data notified in a GAP Event.

Data Fields

uint16_t	param_len	The size of GAP Event parameters.
void *	p_param	GAP Event parameters. This parameter differs in each GAP Event.

◆ st_ble_dev_addr_t

```
struct st_ble_dev_addr_t
```

st_ble_dev_addr_t is the type of bluetooth device address(BD_ADDR).

Note

The BD address setting format is little endian.

If the address is "AA:BB:CC:DD:EE:FF", set the byte array in the order {0xFF, 0xEE, 0xDD, 0xCC, 0xBB, 0xAA}.

Data Fields

uint8_t	addr[BLE_BD_ADDR_LEN]	BD_ADDR.
---------	-----------------------	----------

uint8_t	type	Bluetooth address type.	
		macro	description
		BLE_GAP_ADD R_PUBLIC(0x00)	Public Address.
		BLE_GAP_ADD R_RAND(0x01)	Random Address.

◆ st_ble_gap_ext_adv_param_t

struct st_ble_gap_ext_adv_param_t											
Advertising parameters.											
Data Fields											
uint8_t	adv_hdl	Advertising handle identifying the advertising set to be set the advertising parameters. Valid range is 0x00 - 0x03. In the first advertising parameters setting, the advertising set specified by adv_hdl is generated. The Advertising Set ID(Advertising SID) of the advertising set is same as adv_hdl.									
uint16_t	adv_prop_type	Advertising packet type. Legacy advertising PDU type, or bitwise or of Extended advertising PDU type and Extended advertising option.

<code>uint16_t</code>	<code>perd_intv_max</code>	<p>Maximum Periodic Advertising Interval.</p> <p>$\text{Time(ms)} = \text{perd_intv_max} * 1.25$.</p> <p>Valid range is 0x0006 - 0xFFFF.</p>				

◆ **st_ble_gap_scan_phy_param_t**

struct st_ble_gap_scan_phy_param_t						
Scan parameters per scan PHY.						
In case of start scanning with both 1M PHY and Coded PHY, adjust scan windows and scan intervals according to the following. $p_phy_param_1M \rightarrow scan_window / p_phy_param_1M \rightarrow scan_intv + p_phy_param_coded \rightarrow scan_window / p_phy_param_coded \rightarrow scan_intv \leq 1$						
Data Fields						
uint8_t	scan_type	Scan type.				
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td><code>BLE_GAP_SCAN_PASSIVE(0x00)</code></td> <td>Passive Scan.</td> </tr> <tr> <td><code>BLE_GAP_SCAN_ACTIVE(0x01)</code></td> <td>Active Scan.</td> </tr> </tbody> </table>	macro	description	<code>BLE_GAP_SCAN_PASSIVE(0x00)</code>	Passive Scan.
macro	description					
<code>BLE_GAP_SCAN_PASSIVE(0x00)</code>	Passive Scan.					
<code>BLE_GAP_SCAN_ACTIVE(0x01)</code>	Active Scan.					
uint16_t	scan_intv	Scan interval. $interval(ms) = scan_intv * 0.625.$ Valid range is 0x0000 and 0x0004 - 0xFFFF.				
uint16_t	scan_window	Scan window. $window(ms) = scan_window * 0.625.$ Valid range is 0x0000 and 0x0004 - 0xFFFF.				

◆ **st_ble_gap_ext_scan_param_t**

struct st_ble_gap_ext_scan_param_t						
Scan parameters.						
Data Fields						
uint8_t	o_addr_type	Own BD Address Type. In case of passive scan, this field is ignored.				
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td><code>BLE_GAP_ADD_PUBLIC(0x00)</code></td> <td>Public Address</td> </tr> <tr> <td><code>BLE_GAP_ADD_RANDOM(0x01)</code></td> <td>Random Address</td> </tr> </tbody> </table>	macro	description	<code>BLE_GAP_ADD_PUBLIC(0x00)</code>	Public Address
macro	description					
<code>BLE_GAP_ADD_PUBLIC(0x00)</code>	Public Address					
<code>BLE_GAP_ADD_RANDOM(0x01)</code>	Random Address					

[BLE_GAP_ADD_R_RPA_ID_PUBLIC\(0x02\)](#) Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, public address is used.

[BLE_GAP_ADD_R_RPA_ID_RANDOM\(0x03\)](#) Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, the random address set by [R_BLE_GAP_SetRandAddr\(\)](#) is used.

uint8_t

filter_policy

Scan Filter Policy.

macro	description
BLE_GAP_SCAN_ALLOW_ALL(0x00)	Accept all advertising and scan response PDUs except directed advertising PDUs not addressed to local device.
BLE_GAP_SCAN_ALLOW_WHITE_LIST(0x01)	Accept only advertising and scan response PDUs from remote devices whose address is registered in the White List. Directed advertising PDUs which are not addressed to

BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED(0x02)

local device is ignored.

Accept all advertising and scan response PDUs except directed advertising PDUs whose the target address is identity address but doesn't address local device. However directed advertising PDUs whose the target address is the local resolvable private address are accepted.

BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED_WLIST(0x03)

Accept all advertising and scan response PDUs. The following are excluded.

- Advertising and scan response PDUs where the advertiser's identity address is not in the White

		<p>List.</p> <ul style="list-style-type: none"> • Directed advertising PDUs whose the target address is identity address but doesn't address local device. However directed advertising PDUs whose the target address is the local resolvable private address are accepted.
<p>st_ble_gap_scan_phy_param_t *</p>	<p>p_phy_param_1M</p>	<p>Scan parameters 1M PHY.</p> <p>When this field is NULL, Controller doesn't set the scan parameters for 1M PHY.</p>

◆ **st_ble_gap_scan_on_t**

struct st_ble_gap_scan_on_t								
Parameters configured when scanning starts.								
Data Fields								
uint8_t	proc_type	Procedure type.						
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_SC_PROC_OBS(0x00)</td> <td>Observation Procedure. Notify all advertising PDUs.</td> </tr> <tr> <td>BLE_GAP_SC_PROC_LIM(0x01)</td> <td>Limited Discovery Procedure. Notify advertising PDUs from only devices in the limited discoverable mode.</td> </tr> <tr> <td>BLE_GAP_SC_PROC_GEN(0x02)</td> <td>General Discovery Procedure. Notify advertising PDUs from devices in the limited discoverable mode and the general discoverable mode.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_SC_PROC_OBS(0x00)	Observation Procedure. Notify all advertising PDUs.	BLE_GAP_SC_PROC_LIM(0x01)	Limited Discovery Procedure. Notify advertising PDUs from only devices in the limited discoverable mode.
macro	description							
BLE_GAP_SC_PROC_OBS(0x00)	Observation Procedure. Notify all advertising PDUs.							
BLE_GAP_SC_PROC_LIM(0x01)	Limited Discovery Procedure. Notify advertising PDUs from only devices in the limited discoverable mode.							
BLE_GAP_SC_PROC_GEN(0x02)	General Discovery Procedure. Notify advertising PDUs from devices in the limited discoverable mode and the general discoverable mode.							
uint8_t	filter_dups	Filter duplicates.						
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_SCAN_FILTER_DUPLICATION_DISABLE(0x00)</td> <td>Duplicate filter disabled.</td> </tr> <tr> <td>BLE_GAP_SCAN_FILTER_DUPLICATION_ENABLE(0x01)</td> <td>Duplicate filter enabled.</td> </tr> <tr> <td>BLE_GAP_SCAN_FILTER_DUPLICATION_ENABLE_RESET_PERIOD(0x02)</td> <td>Duplicate filtering enabled, reset for each scan period</td> </tr> </tbody> </table>	macro	description	BLE_GAP_SCAN_FILTER_DUPLICATION_DISABLE(0x00)	Duplicate filter disabled.	BLE_GAP_SCAN_FILTER_DUPLICATION_ENABLE(0x01)	Duplicate filter enabled.
macro	description							
BLE_GAP_SCAN_FILTER_DUPLICATION_DISABLE(0x00)	Duplicate filter disabled.							
BLE_GAP_SCAN_FILTER_DUPLICATION_ENABLE(0x01)	Duplicate filter enabled.							
BLE_GAP_SCAN_FILTER_DUPLICATION_ENABLE_RESET_PERIOD(0x02)	Duplicate filtering enabled, reset for each scan period							

uint16_t	duration	Scan duration. Time(ms) = duration * 10. Valid range is 0x0000 - 0xFFFF. If this field is set to 0x0000, scanning is continued until R_BLE_GAP_StopScan() is called. When the period field is zero and the time specified the duration field expires, BLE_GAP_EVENT_SCAN_TO event notifies the application layer that scanning stops.
uint16_t	period	Scan period. Time(s) = N * 1.28. Valid range is 0x0000 - 0xFFFF. If the duration field is set to 0x0000, this field is ignored.

◆ st_ble_gap_conn_param_t

struct st_ble_gap_conn_param_t		
Connection parameters included in connection interval, slave latency, supervision timeout, ce length.		
This structure is used in R_BLE_GAP_CreateConn() and R_BLE_GAP_UpdConn() .		
Set the fields in this structure to match the following condition.		
Supervision_timeout(ms) >= (1 + conn_latency) * conn_intv_max_Time(ms)		
conn_intv_max_Time(ms) = conn_intv_max * 1.25 Supervision_timeout(ms) = sup_to * 10		
Data Fields		
uint16_t	conn_intv_min	Minimum connection interval. Time(ms) = conn_intv_min * 1.25. Valid range is 0x0006 - 0x0C80.
uint16_t	conn_intv_max	Maximum connection interval. Time(ms) = conn_intv_max * 1.25. Valid range is 0x0006 - 0x0C80.
uint16_t	conn_latency	Slave latency. Valid range is 0x0000 - 0x01F3.
uint16_t	sup_to	Supervision timeout.

		Time(ms) = sup_to * 10. Valid range is 0x000A - 0x0C80.
uint16_t	min_ce_length	Minimum CE Length. Valid range is 0x0000 - 0xFFFF.
uint16_t	max_ce_length	Maximum CE Length. Valid range is 0x0000 - 0xFFFF.

◆ st_ble_gap_conn_phy_param_t

struct st_ble_gap_conn_phy_param_t		
Connection parameters per PHY.		
Data Fields		
uint16_t	scan_intv	Scan interval. Time(ms) = scan_intv * 0.625. Valid range is 0x0004 - 0xFFFF.
uint16_t	scan_window	Scan window. Time(ms) = scan_window * 0.625. Valid range is 0x0004 - 0xFFFF.
st_ble_gap_conn_param_t *	p_conn_param	Connection interval, slave latency, supervision timeout, and CE length.

◆ st_ble_gap_create_conn_param_t

struct st_ble_gap_create_conn_param_t						
Connection parameters used in R_BLE_GAP_CreateConn().						
Data Fields						
uint8_t	init_filter_policy	This field specifies whether the White List is used or not, when connecting with a remote device.				
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_INIT_FILTER_USE_ADDR(0x00)</td> <td>White List is not used. If the IRK of local device has not been registered in Resolving List, the random address set by <code>R_BLE_GAP_SetRandAddr()</code>.</p>
<code>st_ble_gap_conn_phy_param_t *</code>	<code>p_conn_param_1M</code>	<p>Connection parameters for 1M PHY.</p> <p>If this field is set to NULL, 1M PHY is not used in connecting.</p>
<code>st_ble_gap_conn_phy_param_t *</code>	<code>p_conn_param_2M</code>	<p>Connection parameters for 2M PHY.</p> <p>If this field is set to NULL, 2M PHY is not used in connecting.</p>
<code>st_ble_gap_conn_phy_param_t *</code>	<code>p_conn_param_coded</code>	<p>Connection parameters for Coded PHY.</p> <p>If this field is set to NULL, Coded PHY is not used in connecting.</p>

◆ `st_ble_gap_rslv_list_key_set_t`

<code>struct st_ble_gap_rslv_list_key_set_t</code>	
IRK of a remote device and IRK type of local device used in <code>R_BLE_GAP_ConfRslvList()</code> .	
Data Fields	

uint8_t	remote_irk[BLE_GAP_IRK_SIZE]	IRK of a remote device to be registered in the Resolving List.						
uint8_t	local_irk_type	IRK type of the local device to be registered in the Resolving List. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_RL_LOCAL_KEY_ALL_ZERO(0x00)</td> <td>All-zero IRK.</td> </tr> <tr> <td>BLE_GAP_RL_LOCAL_KEY_REGISTERED(0x01)</td> <td>The IRK registered by R_BLE_GAP_SetLocIdInfo().</td> </tr> </tbody> </table>	macro	description	BLE_GAP_RL_LOCAL_KEY_ALL_ZERO(0x00)	All-zero IRK.	BLE_GAP_RL_LOCAL_KEY_REGISTERED(0x01)	The IRK registered by R_BLE_GAP_SetLocIdInfo().
macro	description							
BLE_GAP_RL_LOCAL_KEY_ALL_ZERO(0x00)	All-zero IRK.							
BLE_GAP_RL_LOCAL_KEY_REGISTERED(0x01)	The IRK registered by R_BLE_GAP_SetLocIdInfo().							

◆ st_ble_gap_set_phy_param_t

struct st_ble_gap_set_phy_param_t										
PHY configuration parameters used in R_BLE_GAP_SetPhy().										
Data Fields										
uint8_t	tx_phys	Transmitter PHY preference. The tx_phys field is set to a bitwise OR of the following values. All other values are ignored. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_SET_PHYS_HOST_PREF_1M(0x01)</td> <td>Use 1M PHY for Transmitter PHY.</td> </tr> <tr> <td>BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02)</td> <td>Use 2M PHY for Transmitter PHY.</td> </tr> <tr> <td>BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04)</td> <td>Use Coded PHY for Transmitter PHY.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_SET_PHYS_HOST_PREF_1M(0x01)	Use 1M PHY for Transmitter PHY.	BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02)	Use 2M PHY for Transmitter PHY.	BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04)	Use Coded PHY for Transmitter PHY.
macro	description									
BLE_GAP_SET_PHYS_HOST_PREF_1M(0x01)	Use 1M PHY for Transmitter PHY.									
BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02)	Use 2M PHY for Transmitter PHY.									
BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04)	Use Coded PHY for Transmitter PHY.									
uint8_t	rx_phys	Receiver PHY preference. The rx_phys field is set to a bitwise OR of the following values. All other values are ignored. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> </tbody> </table>	macro	description						
macro	description									

		<p><code>BLE_GAP_SET_PHYS_HOST_PREF_1M(0x01)</code> Use 1M PHY for Receiver PHY.</p> <p><code>BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02)</code> Use 2M PHY for Receiver PHY.</p> <p><code>BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04)</code> Use Coded PHY for Receiver PHY.</p>								
<code>uint16_t</code>	<code>phy_options</code>	<p>Coding scheme used in Coded PHY.</p> <p>Select one of the following.</p> <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td><code>BLE_GAP_SET_PHYS_OP_HOST_NO_PREF(0x00)</code></td> <td>No preferred coding.</td> </tr> <tr> <td><code>BLE_GAP_SET_PHYS_OP_HOST_PREF_S_2(0x01)</code></td> <td>Use S=2 coding.</td> </tr> <tr> <td><code>BLE_GAP_SET_PHYS_OP_HOST_PREF_S_8(0x02)</code></td> <td>Use S=8 coding.</td> </tr> </tbody> </table>	macro	description	<code>BLE_GAP_SET_PHYS_OP_HOST_NO_PREF(0x00)</code>	No preferred coding.	<code>BLE_GAP_SET_PHYS_OP_HOST_PREF_S_2(0x01)</code>	Use S=2 coding.	<code>BLE_GAP_SET_PHYS_OP_HOST_PREF_S_8(0x02)</code>	Use S=8 coding.
macro	description									
<code>BLE_GAP_SET_PHYS_OP_HOST_NO_PREF(0x00)</code>	No preferred coding.									
<code>BLE_GAP_SET_PHYS_OP_HOST_PREF_S_2(0x01)</code>	Use S=2 coding.									
<code>BLE_GAP_SET_PHYS_OP_HOST_PREF_S_8(0x02)</code>	Use S=8 coding.									

◆ `st_ble_gap_set_def_phy_param_t`

<code>struct st_ble_gap_set_def_phy_param_t</code>						
PHY preferences which allows a remote device to set used in <code>R_BLE_GAP_SetDefPhy()</code> .						
Data Fields						
<code>uint8_t</code>	<code>tx_phys</code>	<p>Transmitter PHY preferences which a remote device may change.</p> <p>The <code>tx_phys</code> field is set to a bitwise OR of the following values. All other values are ignored.</p> <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td><code>BLE_GAP_SET_PHYS_HOST_</code></td> <td>Allow a remote device</td> </tr> </tbody> </table>	macro	description	<code>BLE_GAP_SET_PHYS_HOST_</code>	Allow a remote device
macro	description					
<code>BLE_GAP_SET_PHYS_HOST_</code>	Allow a remote device					

		<p>PREF_1M(0x01) to set 1M PHY for transmitter PHY.</p> <p>BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02) Allow a remote device to set 2M PHY for transmitter PHY.</p> <p>BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04) Allow a remote device to set Coded PHY for transmitter PHY.</p>								
uint8_t	rx_phys	<p>Receiver PHY preferences which a remote device may change.</p> <p>The rx_phys field is set to a bitwise OR of the following values. All other values are ignored.</p> <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_SET_PHYS_HOST_PREF_1M(0x01)</td> <td>Allow a remote device to set 1M PHY for receiver PHY.</td> </tr> <tr> <td>BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02)</td> <td>Allow a remote device to set 2M PHY for receiver PHY.</td> </tr> <tr> <td>BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04)</td> <td>Allow a remote device to set Coded PHY for receiver PHY.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_SET_PHYS_HOST_PREF_1M(0x01)	Allow a remote device to set 1M PHY for receiver PHY.	BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02)	Allow a remote device to set 2M PHY for receiver PHY.	BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04)	Allow a remote device to set Coded PHY for receiver PHY.
macro	description									
BLE_GAP_SET_PHYS_HOST_PREF_1M(0x01)	Allow a remote device to set 1M PHY for receiver PHY.									
BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02)	Allow a remote device to set 2M PHY for receiver PHY.									
BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04)	Allow a remote device to set Coded PHY for receiver PHY.									

◆ **st_ble_gap_auth_info_t**

struct st_ble_gap_auth_info_t		
Pairing parameters required from a remote device or information about keys distributed from a remote device.		
Data Fields		
uint8_t	security	Security level.

		value	description
		0x01	The remote device requests Unauthenticated pairing.
		0x02	The remote device requests Authenticated pairing.
uint8_t	pair_mode	Pairing mode.	
		value	description
		0x01	The remote device requests Legacy pairing.
		0x02	The remote device requests Secure Connections.
uint8_t	bonding	Bonding policy.	
		value	description
		0x00	The remote device does not store the Bonding information.
		0x01	The remote device stores the Bonding information.
uint8_t	ekey_size	Encryption key size.	

◆ st_ble_gap_key_dist_t

struct st_ble_gap_key_dist_t		
Keys distributed from a remote device.		
Data Fields		
uint8_t	enc_info[BLE_GAP_LTK_SIZE]	LTK.
uint8_t	mid_info[BLE_GAP_EDIV_SIZE + BLE_GAP_RAND_64_BIT_SIZE]	Ediv and rand. The first two bytes is ediv, the remaining bytes are rand.

uint8_t	id_info[BLE_GAP_IRK_SIZE]	IRK.
uint8_t	id_addr_info[BLE_GAP_ID_ADDR_SIZE]	Identity address. The first byte is address type. The remaining bytes are device address.
uint8_t	sign_info[BLE_GAP_CSRK_SIZE]	CSRK.

◆ st_ble_gap_key_ex_param_t

struct st_ble_gap_key_ex_param_t										
This structure includes the distributed keys and negotiated LTK size.										
Data Fields										
st_ble_gap_key_dist_t *	p_keys_info	Key information.								
uint8_t	keys	Type of the distributed keys. This field is a bitwise OR of the following values. <table border="1" style="margin-left: 20px;"> <thead> <tr> <th>Bit Number</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>LTK and Master Identification. LTK is distributed in Secure Connections, even if the bit is 1.</td> </tr> <tr> <td>1</td> <td>IRK and Identity Address Information.</td> </tr> <tr> <td>2</td> <td>CSRK</td> </tr> </tbody> </table>	Bit Number	description	0	LTK and Master Identification. LTK is distributed in Secure Connections, even if the bit is 1.	1	IRK and Identity Address Information.	2	CSRK
Bit Number	description									
0	LTK and Master Identification. LTK is distributed in Secure Connections, even if the bit is 1.									
1	IRK and Identity Address Information.									
2	CSRK									
uint8_t	ekey_size	The negotiated LTK size.								

◆ st_ble_gap_pairing_param_t

struct st_ble_gap_pairing_param_t						
Pairing parameters used in R_BLE_GAP_SetPairingParams() .						
Data Fields						
uint8_t	iocap	IO capabilities of local device. Select one of the following. <table border="1" style="margin-left: 20px;"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_IOC</td> <td>Output</td> </tr> </tbody> </table>	macro	description	BLE_GAP_IOC	Output
macro	description					
BLE_GAP_IOC	Output					

AP_DISPLAY_ONLY(0x00) function :
Local device has the ability to display a 6 digit decimal number.
Input function : None

BLE_GAP_IOC AP_DISPLAY_YESNO(0x01) Output function :
Output function :
Local device has the ability to display a 6 digit decimal number.
Input function : Local device has the ability to indicate 'yes' or 'no'

BLE_GAP_IOC AP_KEYBOARD_ONLY(0x02) Output function :
None
Input function : Local device has the ability to input the number '0' - '9'.

BLE_GAP_IOC AP_NOINPUT_NOOUTPUT(0x03) Output function :
None
Input function : None

BLE_GAP_IOC AP_KEYBOARD_DISPLAY(0x04) Output function :
Output function :
Local device has the ability to display a 6 digit decimal number.
Input function : Local device has the ability

		to input the number '0' - '9'.						
uint8_t	mitm	<p>MITM protection policy.</p> <p>Select one of the following.</p> <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_SEC_MITM_BEST_EFFORT(0x00)</td> <td>MITM Protection not required.</td> </tr> <tr> <td>BLE_GAP_SEC_MITM_STRICT(0x01)</td> <td>MITM Protection required.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_SEC_MITM_BEST_EFFORT(0x00)	MITM Protection not required. 		Connections. BLE_GAP_SC_STRICT(0x01) Accept only Secure Connections.
--	--	--

◆ st_ble_gap_oob_data_t

struct st_ble_gap_oob_data_t		
Oob data received from the remote device. This is used in R_BLE_GAP_SetRemOobData().		
Data Fields		
uint8_t	legacy_oob[BLE_GAP_LEGACY_OOB_SIZE]	OOB data used in Legacy Pairing.
uint8_t	sc_cnf_val[BLE_GAP_OOB_CONFIRM_VAL_SIZE]	OOB confirmation value used in Secure Connections.
uint8_t	sc_rand[BLE_GAP_OOB_RANDOM_VAL_SIZE]	OOB rand used in Secure Connections.

◆ st_ble_gap_ver_num_t

struct st_ble_gap_ver_num_t		
Version number of host stack.		
Data Fields		
uint8_t	major	Major version number.
uint8_t	minor	Minor version number.
uint8_t	subminor	Subminor version number.

◆ st_ble_gap_loc_ver_info_t

struct st_ble_gap_loc_ver_info_t		
Version number of Controller. Refer Bluetooth SIG Assigned Number(https://www.bluetooth.com/specifications/assigned-numbers).		
Data Fields		
uint8_t	hci_ver	Bluetooth HCI version.
uint16_t	hci_rev	Bluetooth HCI revision.
uint8_t	imp_ver	Link Layer revision.
uint16_t	mnf_name	Manufacturer ID.
uint16_t	imp_sub_ver	Link Layer subversion.

◆ st_ble_gap_loc_dev_info_evt_t

struct st_ble_gap_loc_dev_info_evt_t		
--------------------------------------	--	--

Version information of local device.		
Data Fields		
<code>st_ble_dev_addr_t</code>	<code>l_dev_addr</code>	Bluetooth Device Address.
<code>st_ble_gap_ver_num_t</code>	<code>l_ver_num</code>	Version number of host stack in local device.
<code>st_ble_gap_loc_ver_info_t</code>	<code>l_bt_info</code>	Version number of Controller in local device.

◆ `st_ble_gap_hw_err_evt_t`

struct <code>st_ble_gap_hw_err_evt_t</code>		
Hardware error that is notified from Controller.		
Data Fields		
<code>uint8_t</code>	<code>hw_code</code>	The <code>hw_code</code> field indicates the cause of the hardware error.

◆ `st_ble_gap_cmd_err_evt_t`

struct <code>st_ble_gap_cmd_err_evt_t</code>		
HCI Command error.		
Data Fields		
<code>uint16_t</code>	<code>op_code</code>	The opcode of HCI Command which caused the error.
<code>uint32_t</code>	<code>module_id</code>	Module ID which caused the error.

◆ `st_ble_gap_adv_rept_t`

struct <code>st_ble_gap_adv_rept_t</code>								
Advertising Report.								
Data Fields								
<code>uint8_t</code>	<code>num</code>	The number of Advertising Reports received.						
<code>uint8_t</code>	<code>adv_type</code>	Type of Advertising Packet. <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 20%;">valuer</th> <th style="width: 80%;">description</th> </tr> </thead> <tbody> <tr> <td>0x00</td> <td>Connectable and scannable undirected advertising(ADV_IND).</td> </tr> <tr> <td>0x01</td> <td>Connectable directed advertising(ADV_DIRECT_IND).</td> </tr> </tbody> </table>	valuer	description	0x00	Connectable and scannable undirected advertising(ADV_IND).	0x01	Connectable directed advertising(ADV_DIRECT_IND).
valuer	description							
0x00	Connectable and scannable undirected advertising(ADV_IND).							
0x01	Connectable directed advertising(ADV_DIRECT_IND).							

		0x02	Scannable undirected advertising(ADV_SCAN_IND).
		0x03	Non-connectable undirected advertising(ADV_NONCONN_IND).
		0x04	Scan response(SCAN_RSP).
uint8_t	addr_type	Address type of the advertiser.	
		value	description
		0x00	Public Address.
		0x01	Random Address.
		0x02	Public Identity Address which could be resolved in Controller.
		0x03	Random Identity Address which could be resolved in Controller.
uint8_t *	p_addr	Address of the advertiser.	
		<i>Note</i> The BD address setting format is little endian.	
uint8_t	len	Length of Advertising data(in bytes).	
		Valid range is 0 - 31.	
int8_t	rss_i	RSSI(in dBm).	
		Valid range is $-127 \leq tx_pwr \leq 20$ and 127. If the tx_pwr is 127, it means that RSSI could not be retrieved.	
uint8_t *	p_data	Advertising data/Scan Response Data.	

◆ **st_ble_gap_ext_adv_rept_t**

struct st_ble_gap_ext_adv_rept_t																
Extended Advertising Report.																
Data Fields																
uint8_t	num	The number of Advertising Reports received.														
uint16_t	adv_type	Type of Advertising Packet.														
		<table border="1"> <thead> <tr> <th>Bit Number</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Connectable advertising.</td> </tr> <tr> <td>1</td> <td>Scannable advertising.</td> </tr> <tr> <td>2</td> <td>Directed advertising.</td> </tr> <tr> <td>3</td> <td>Scan response.</td> </tr> <tr> <td>4</td> <td>Legacy advertising PDU.</td> </tr> <tr> <td>5-6</td> <td>The status of Advertising Data/Scan Response Data. value	description									
0x00	Nothing has been received with Secondary Advertising Channel.									
0x01	The Secondary Advertising PHY configuration was 1M PHY.									
0x02	The Secondary Advertising									

		<p>PHY configuration was 2M PHY.</p> <p>0x03 The Secondary Advertising PHY configuration was Coded PHY.</p>						
uint8_t	adv_sid	<p>Advertising SID included in the received Advertising Report.</p> <p>Valid range is $0 \leq \text{adv_sid} \leq 0x0F$ and $0xFF$. If the adv_sid is 0xFF, there is no field which includes SID.</p>						
int8_t	tx_pwr	<p>TX power(in dBm).</p> <p>Valid range is $-127 \leq \text{tx_pwr} \leq 20$ and 127. If the tx_pwr is 127, it means that Tx power could not be retrieved.</p>						
int8_t	rssr	<p>RSSI(in dBm).</p> <p>Valid range is $-127 \leq \text{tx_pwr} \leq 20$ and 127. If the tx_pwr is 127, it means that RSSI could not be retrieved.</p>						
uint16_t	perd_adv_intv	<p>Periodic Advertising interval.</p> <p>If the perd_adv_intv is 0x0000, it means that this advertising is not periodic advertising. If the perd_adv_intv is 0x0006 - 0xFFFF, it means that this field is the Periodic Advertising interval. Periodic Advertising interval = per_adv_intr * 1.25ms.</p>						
uint8_t	dir_addr_type	<p>The address type of Direct Advertising PDU.</p> <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x00</td> <td>Public Address.</td> </tr> <tr> <td>0x01</td> <td>Random Address.</td> </tr> </tbody> </table>	value	description	0x00	Public Address.	0x01	Random Address.
value	description							
0x00	Public Address.							
0x01	Random Address.							

		0x02 Public Identity Address which could be resolved in Controller. 0x03 Random Identity Address which could be resolved in Controller. 0xFE Resolvable Privacy Address which could not be resolved in Controller.
uint8_t *	p_dir_addr	Address of Direct Advertising PDU. <i>Note</i> <i>The BD address setting format is little endian.</i>
uint8_t	len	Length of Advertising data(in bytes). Valid range is 0 - 229.
uint8_t *	p_data	Advertising data/Scan Response Data.

◆ st_ble_gap_perd_adv_rept_t

struct st_ble_gap_perd_adv_rept_t		
Periodic Advertising Report.		
Data Fields		
uint16_t	sync_hdl	Sync handle. Valid range is 0x0000 - 0x0EFF.
int8_t	tx_pwr	TX power(in dBm). Valid range is -127 <= tx_pwr <= 20 and 127. If tx_pwr is 127, it means that Tx power could not be retrieved.
int8_t	rss_i	RSSI(in dBm). Valid range is -127 <= rssi <=

		20 and 127. If rssi is 127, it means that RSSI could not be retrieved.								
uint8_t	rfu	Reserved for future use.								
uint8_t	data_status	Reserved for future use. <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x00</td> <td>Data Complete.</td> </tr> <tr> <td>0x01</td> <td>Data incomplete, more data to come.</td> </tr> <tr> <td>0x02</td> <td>Data incomplete, data truncated, no more to come.</td> </tr> </tbody> </table>	value	description	0x00	Data Complete.	0x01	Data incomplete, more data to come.	0x02	Data incomplete, data truncated, no more to come.
value	description									
0x00	Data Complete.									
0x01	Data incomplete, more data to come.									
0x02	Data incomplete, data truncated, no more to come.									
uint8_t	len	Length of Periodic Advertising data(in bytes). Valid range is 0 - 247.								
uint8_t *	p_data	Periodic Advertising data.								

◆ **st_ble_gap_adv_rept_evt_t**

struct st_ble_gap_adv_rept_evt_t										
Advertising report.										
Data Fields										
uint8_t	adv_rpt_type	Data type. <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x00</td> <td>Advertising Report.</td> </tr> <tr> <td>0x01</td> <td>Extended Advertising Report.</td> </tr> <tr> <td>0x02</td> <td>Periodic Advertising Report.</td> </tr> </tbody> </table> <p>If the BLE Protocol Stack library type is "extended", the adv_rpt_type field in a Legacy Advertising Report event is 0x01.</p>	value	description	0x00	Advertising Report.	0x01	Extended Advertising Report.	0x02	Periodic Advertising Report.
value	description									
0x00	Advertising Report.									
0x01	Extended Advertising Report.									
0x02	Periodic Advertising Report.									

union st_ble_gap_adv_rept_evt_t	param	Advertising Report.
--	-------	---------------------

◆ [st_ble_gap_adv_rept_evt_t.param](#)

union st_ble_gap_adv_rept_evt_t.param		
Advertising Report.		
Data Fields		
st_ble_gap_adv_rept_t *	p_adv_rpt	Advertising Report.
st_ble_gap_ext_adv_rept_t *	p_ext_adv_rpt	Extended Advertising Report.
st_ble_gap_perd_adv_rept_t *	p_per_adv_rpt	Periodic Advertising Report.

◆ [st_ble_gap_adv_set_evt_t](#)

struct st_ble_gap_adv_set_evt_t		
Advertising handle.		
Data Fields		
uint8_t	adv_hdl	Advertising handle specifying the advertising set configured advertising parameters.

◆ [st_ble_gap_adv_off_evt_t](#)

struct st_ble_gap_adv_off_evt_t								
Information about the advertising set which stops advertising.								
Data Fields								
uint8_t	adv_hdl	Advertising handle identifying the advertising set which has stopped advertising. Valid range is 0x00 - 0x03.						
uint8_t	reason	The reason for stopping advertising. <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 20%;">value</th> <th style="width: 80%;">description</th> </tr> </thead> <tbody> <tr> <td>0x01</td> <td>Advertising has been stopped by R_BLE_GAP_StopAdv().</td> </tr> <tr> <td>0x02</td> <td>Because the duration specified by R_BLE_GAP_StartAdv() was expired, advertising</td> </tr> </tbody> </table>	value	description	0x01	Advertising has been stopped by R_BLE_GAP_StopAdv() .	0x02	Because the duration specified by R_BLE_GAP_StartAdv() was expired, advertising
value	description							
0x01	Advertising has been stopped by R_BLE_GAP_StopAdv() .							
0x02	Because the duration specified by R_BLE_GAP_StartAdv() was expired, advertising							

		<p>has terminated.</p> <p>0x03 Because the max_extd_adv_evts parameter specified by R_BLE_GAP_StartAdv() was reached, advertising has terminated.</p> <p>0x04 Because the connection was established with the remote device, advertising has terminated.</p>
uint16_t	conn_hdl	<p>Connection handle.</p> <p>If the reason field is 0x04, this field indicates connection handle identifying the remote device connected with local device. If other reasons, ignore this field.</p>
uint8_t	num_comp_ext_adv_evts	<p>The number of the advertising event that has been received until advertising has terminated.</p> <p>If max_extd_adv_evts by R_BLE_GAP_StartAdv() is not 0, this parameter is valid.</p>

◆ st_ble_gap_adv_data_evt_t

struct st_ble_gap_adv_data_evt_t		
This structure notifies that advertising data has been set to Controller by R_BLE_GAP_SetAdvSresData() .		
Data Fields		
uint8_t	adv_hdl	Advertising handle identifying the advertising set to which advertising data/scan response data/periodic advertising data is set.

uint8_t	data_type	Type of the data set to the advertising set.	
		value	description
		BLE_GAP_ADV_DATA_MODE(0x00)	Advertising data
		BLE_GAP_SCAN_RSP_DATA_MODE(0x01)	Scan response data
		BLE_GAP_PERIODIC_ADV_DATA_MODE(0x02)	Periodic advertising data

◆ st_ble_gap_rem_adv_set_evt_t

struct st_ble_gap_rem_adv_set_evt_t			
This structure notifies that an advertising set has been removed.			
Data Fields			
uint8_t	remove_op	This field indicates that the advertising set has been removed or cleared.	
		value	description
		0x01	The advertising set has been removed.
		0x02	The advertising set has been cleared.
uint8_t	adv_hdl	Advertising handle identifying the advertising set which has been removed.	
		If the advertising set has been cleared, this field is ignored.	

◆ st_ble_gap_conn_evt_t

struct st_ble_gap_conn_evt_t			
This structure notifies that a link has been established.			
Data Fields			
uint16_t	conn_hdl	Connection handle identifying the created link.	
uint8_t	role	The role of the link.	

		value	description
		0x00	Master
		0x01	Slave
uint8_t	remote_addr_type	Address type of the remote device.	
		value	description
		0x00	Public Address
		0x01	Random Address
		0x02	Public Identity Address. It indicates that the Controller could resolve the resolvable private address of the remote device.
		0x03	Random Identity Address. It indicates that the Controller could resolve the resolvable private address of the remote device.
uint8_t	remote_addr[BLE_BD_ADDR_LEN]	Address of the remote device.	
		<i>Note</i> The BD address setting format is little endian.	
uint8_t	local_rpa[BLE_BD_ADDR_LEN]	Resolvable private address that local device used in connection procedure.	
		The local device address used in creating the link when the address type was set to BLE_GAP_ADDR_RPA_ID_PUBLIC or BLE_GAP_ADDR_RPA_ID_RANDOM by	

		<p>R_BLE_GAP_SetAdvParam() or R_BLE_GAP_CreateConn(). If the address type was set to other than BLE_GAP_ADDR_RPA_ID_PUBLIC and BLE_GAP_ADDR_RPA_ID_RANDOM, this field is set to all-zero.</p> <p><i>Note</i> The BD address setting format is little endian.</p>														
uint8_t	remote_rpa[BLE_BD_ADDR_LEN]	<p>Resolvable private address that the remote device used in connection procedure.</p> <p>This field indicates the remote resolvable private address when remote_addr_type is 0x02 or 0x03. If remote_addr_type is other than 0x02 and 0x03, this field is set to all-zero.</p> <p><i>Note</i> The BD address setting format is little endian.</p>														
uint16_t	conn_intv	<p>Connection interval.</p> <p>Valid range is 0x0006 - 0x0C80. Time(ms) = conn_intv * 1.25.</p>														
uint16_t	conn_latency	<p>Slave latency.</p> <p>Valid range is 0x0000 - 0x01F3.</p>														
uint16_t	sup_to	<p>Supervision timeout.</p> <p>Valid range is 0x000A - 0x0C80. Time(ms) = sup_to * 10.</p>														
uint8_t	clk_acc	<p>Master_Clock_Accuracy.</p> <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x00</td> <td>500ppm</td> </tr> <tr> <td>0x01</td> <td>250ppm</td> </tr> <tr> <td>0x02</td> <td>150ppm</td> </tr> <tr> <td>0x03</td> <td>100ppm</td> </tr> <tr> <td>0x04</td> <td>75ppm</td> </tr> <tr> <td>0x05</td> <td>50ppm</td> </tr> </tbody> </table>	value	description	0x00	500ppm	0x01	250ppm	0x02	150ppm	0x03	100ppm	0x04	75ppm	0x05	50ppm
value	description															
0x00	500ppm															
0x01	250ppm															
0x02	150ppm															
0x03	100ppm															
0x04	75ppm															
0x05	50ppm															

		0x06	30ppm
		0x07	20ppm

◆ `st_ble_gap_disconn_evt_t`

struct <code>st_ble_gap_disconn_evt_t</code>		
This structure notifies that a link has been disconnected.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the link disconnected.
uint8_t	reason	The reason for disconnection. Refer Core Specification Vol.2 Part D , "2 Error Code Descriptions".

◆ `st_ble_gap_rd_ch_map_evt_t`

struct <code>st_ble_gap_rd_ch_map_evt_t</code>		
This structure notifies that Channel Map has been retrieved by R_BLE_GAP_ReadChMap() .		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the link whose Channel Map was retrieved.
uint8_t	ch_map[BLE_GAP_CH_MAP_SIZE]	Channel Map.

◆ `st_ble_gap_rd_rssi_evt_t`

struct <code>st_ble_gap_rd_rssi_evt_t</code>		
This structure notifies that RSSI has been retrieved by R_BLE_GAP_ReadRssi() .		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the link whose RSSI was retrieved.
int8_t	rssi	RSSI(in dBm). Valid range is $-127 < rssi < 20$ and 127. If this field is 127, it indicates that RSSI could not be retrieved.

◆ `st_ble_gap_dev_info_evt_t`

struct <code>st_ble_gap_dev_info_evt_t</code>		

This structure notifies that information about remote device has been retrieved by [R_BLE_GAP_GetRemDevInfo\(\)](#).

Data Fields												
uint16_t	conn_hdl	Connection handle identifying the remote device whose information has been retrieved.										
uint8_t	get_status	Information about the remote device. This field is a bitwise OR of the following values. <table border="1"> <thead> <tr> <th>Bit Number</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>bit0</td> <td>Address</td> </tr> <tr> <td>bit1</td> <td>Version, company_id, subversion</td> </tr> <tr> <td>bit2</td> <td>Feature</td> </tr> <tr> <td>All other bits</td> <td>Reserved for future use</td> </tr> </tbody> </table>	Bit Number	description	bit0	Address	bit1	Version, company_id, subversion	bit2	Feature	All other bits	Reserved for future use
Bit Number	description											
bit0	Address											
bit1	Version, company_id, subversion											
bit2	Feature											
All other bits	Reserved for future use											
st_ble_dev_addr_t	addr	Address of the remote device.										
uint8_t	version	The version of Link Layer of the remote device. Refer to Bluetooth SIG Assigned Number (https://www.bluetooth.com/specifications/assigned-numbers) regarding defined number.										
uint16_t	company_id	The manufacturer ID of the remote device. Refer to Bluetooth SIG Assigned Number (https://www.bluetooth.com/specifications/assigned-numbers) regarding defined number.										
uint16_t	subversion	The subversion of Link Layer.										
uint8_t	features[BLE_GAP_REM_FEATURE_SIZE]	LE feature supported in the remote device. Refer to Core Spec Vol 6, Part B 4.6 FEATURE SUPPORT.										

◆ [st_ble_gap_conn_upd_evt_t](#)

```
struct st_ble_gap_conn_upd_evt_t
```

This structure notifies that connection parameters has been updated.

Data Fields		
uint16_t	conn_hdl	Connection handle identifying the connection whose parameters has been updated.
uint16_t	conn_intv	Updated Connection Interval. Valid range is 0x0006 - 0x0C80. Time(ms) = conn_intv * 1.25.
uint16_t	conn_latency	Updated slave latency. Valid range is 0x0000 - 0x01F3.
uint16_t	sup_to	Updated supervision timeout. Valid range is 0x000A - 0x0C80. Time(ms) = sup_to * 10.

◆ st_ble_gap_conn_upd_req_evt_t

```
struct st_ble_gap_conn_upd_req_evt_t
```

This structure notifies that a request for connection parameters update has been received.

Data Fields		
uint16_t	conn_hdl	Connection handle identifying the link that was requested to update connection parameters.
uint16_t	conn_intv_min	Minimum connection interval. Valid range is 0x0006 - 0x0C80. Time(ms) = conn_intv_min * 1.25.
uint16_t	conn_intv_max	Maximum connection interval. Valid range is 0x0006 - 0x0C80. Time(ms) = conn_intv_max * 1.25.
uint16_t	conn_latency	Slave latency. Valid range is 0x0000 - 0x01F3.
uint16_t	sup_to	Supervision timeout. Valid range is 0x000A - 0x0C80. Time(ms) = sup_to * 10

◆ st_ble_gap_conn_hdl_evt_t

```
struct st_ble_gap_conn_hdl_evt_t
```

This structure notifies that a GAP Event that includes only connection handle has occurred.

Data Fields

uint16_t	conn_hdl	Connection handle.
----------	----------	--------------------

◆ **st_ble_gap_data_len_chg_evt_t**

struct st_ble_gap_data_len_chg_evt_t

This structure notifies that the packet data length has been updated.

Data Fields

uint16_t	conn_hdl	Connection handle identifying the link that updated Data Length.
uint16_t	tx_octets	Updated transmission packet size(in bytes). Valid range is 0x001B - 0x00FB.
uint16_t	tx_time	Updated transmission time(us). Valid range is 0x0148 - 0x4290.
uint16_t	rx_octets	Updated receive packet size(in bytes). Valid range is 0x001B - 0x00FB.
uint16_t	rx_time	Updated receive time(us). Valid range is 0x0148 - 0x4290.

◆ **st_ble_gap_rd_rpa_evt_t**

struct st_ble_gap_rd_rpa_evt_t

This structure notifies that the local resolvable private address has been retrieved by [R_BLE_GAP_ReadRpa\(\)](#).

Data Fields

st_ble_dev_addr_t	addr	The resolvable private address of local device.
-----------------------------------	------	---

◆ **st_ble_gap_phy_upd_evt_t**

struct st_ble_gap_phy_upd_evt_t

This structure notifies that PHY for a connection has been updated.

Data Fields

uint16_t	conn_hdl	Connection handle identifying
----------	----------	-------------------------------

		the link that has been updated.								
uint8_t	tx_phy	<p>Transmitter PHY.</p> <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x01</td> <td>The transmitter PHY has been updated to 1M PHY.</td> </tr> <tr> <td>0x02</td> <td>The transmitter PHY has been updated to 2M PHY.</td> </tr> <tr> <td>0x03</td> <td>The transmitter PHY has been updated to Coded PHY.</td> </tr> </tbody> </table>	value	description	0x01	The transmitter PHY has been updated to 1M PHY.	0x02	The transmitter PHY has been updated to 2M PHY.	0x03	The transmitter PHY has been updated to Coded PHY.
value	description									
0x01	The transmitter PHY has been updated to 1M PHY.									
0x02	The transmitter PHY has been updated to 2M PHY.									
0x03	The transmitter PHY has been updated to Coded PHY.									
uint8_t	rx_phy	<p>Receiver PHY.</p> <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x01</td> <td>The receiver PHY has been updated to 1M PHY.</td> </tr> <tr> <td>0x02</td> <td>The receiver PHY has been updated to 2M PHY.</td> </tr> <tr> <td>0x03</td> <td>The receiver PHY has been updated to Coded PHY.</td> </tr> </tbody> </table>	value	description	0x01	The receiver PHY has been updated to 1M PHY.	0x02	The receiver PHY has been updated to 2M PHY.	0x03	The receiver PHY has been updated to Coded PHY.
value	description									
0x01	The receiver PHY has been updated to 1M PHY.									
0x02	The receiver PHY has been updated to 2M PHY.									
0x03	The receiver PHY has been updated to Coded PHY.									

◆ **st_ble_gap_phy_rd_evt_t**

struct st_ble_gap_phy_rd_evt_t						
This structure notifies that the PHY settings has been retrieved by R_BLE_GAP_ReadPhy() .						
Data Fields						
uint16_t	conn_hdl	Connection handle identifying the link that has been retrieved the PHY settings.				
uint8_t	tx_phy	<p>Transmitter PHY.</p> <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x01</td> <td>The transmitter</td> </tr> </tbody> </table>	value	description	0x01	The transmitter
value	description					
0x01	The transmitter					

		<p>0x02 The transmitter PHY has been updated to 1M PHY.</p> <p>0x03 The transmitter PHY has been updated to Coded PHY.</p>								
uint8_t	rx_phy	<p>Receiver PHY.</p> <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x01</td> <td>The receiver PHY has been updated to 1M PHY.</td> </tr> <tr> <td>0x02</td> <td>The receiver PHY has been updated to 2M PHY.</td> </tr> <tr> <td>0x03</td> <td>The receiver PHY has been updated to Coded PHY.</td> </tr> </tbody> </table>	value	description	0x01	The receiver PHY has been updated to 1M PHY.	0x02	The receiver PHY has been updated to 2M PHY.	0x03	The receiver PHY has been updated to Coded PHY.
value	description									
0x01	The receiver PHY has been updated to 1M PHY.									
0x02	The receiver PHY has been updated to 2M PHY.									
0x03	The receiver PHY has been updated to Coded PHY.									

◆ **st_ble_gap_scan_req_rcv_evt_t**

struct st_ble_gap_scan_req_rcv_evt_t										
This structure notifies that a Scan Request packet has been received from a Scanner.										
Data Fields										
uint8_t	adv_hdl	Advertising handle identifying the advertising set that has received the Scan Request.								
uint8_t	scanner_addr_type	<p>Address type of the Scanner.</p> <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x00</td> <td>Public Address.</td> </tr> <tr> <td>0x01</td> <td>Random Address.</td> </tr> <tr> <td>0x02</td> <td>Public Identity Address which could be resolved in</td> </tr> </tbody> </table>	value	description	0x00	Public Address.	0x01	Random Address.	0x02	Public Identity Address which could be resolved in
value	description									
0x00	Public Address.									
0x01	Random Address.									
0x02	Public Identity Address which could be resolved in									

		0x03	Controller. Random Identity Address which could be resolved in Controller.
uint8_t	scanner_addr[BLE_BD_ADDR_LEN]	Address of the Scanner. <i>Note</i> The BD address setting format is little endian.	

◆ st_ble_gap_sync_est_evt_t

struct st_ble_gap_sync_est_evt_t			
This structure notifies that a Periodic sync has been established.			
Data Fields			
uint16_t	sync_hdl	Sync handle identifying the Periodic Sync that has been established.	
uint8_t	adv_sid	Advertising SID identifying the advertising set that has established the Periodic Sync.	
uint8_t	adv_addr_type	Address type of the advertiser.	
		value	description
		0x00	Public Address.
		0x01	Random Address.
		0x02	Public Identity Address which could be resolved in Controller.
		0x03	Random Identity Address which could be resolved in Controller.
uint8_t *	p_adv_addr	Address of the advertiser. <i>Note</i> The BD address setting format is little endian.	

uint8_t	adv_phy	Advertising PHY.	
		value	description
		0x01	Advertiser PHY is 1M PHY.
		0x02	Advertiser PHY is 2M PHY.
	0x03	Advertiser PHY is Coded PHY.	
uint16_t	perd_adv_intv	Periodic Advertising Interval. Valid range is 0x0006 - 0xFFFF. Time(ms) = perd_adv_intv * 1.25.	
uint8_t	adv_clk_acc	Advertiser Clock Accuracy.	
		value	description
		0x00	500ppm
		0x01	250ppm
		0x02	150ppm
		0x03	100ppm
		0x04	75ppm
		0x05	50ppm
		0x06	30ppm
0x07	20ppm		

◆ st_ble_gap_sync_hdl_evt_t

struct st_ble_gap_sync_hdl_evt_t		
This structure notifies that a GAP Event that includes only sync handle has occurred.		
Data Fields		
uint16_t	sync_hdl	Sync handle.

◆ st_ble_gap_white_list_conf_evt_t

struct st_ble_gap_white_list_conf_evt_t			
This structure notifies that White List has been configured.			
Data Fields			
uint8_t	op_code	The operation for White List.	
		value	description

		0x01	A device was added to White List.
		0x02	A device was deleted from White List.
		0x03	White List was cleared.
uint8_t	num	The number of devices which have been added to or deleted from White List.	

◆ st_ble_gap_rslv_list_conf_evt_t

struct st_ble_gap_rslv_list_conf_evt_t			
This structure notifies that Resolving List has been configured.			
Data Fields			
uint8_t	op_code	The operation for Resolving List.	
		value	description
		0x01	A device was added to Resolving List.
		0x02	A device was deleted from Resolving List.
		0x03	Resolving List was cleared.
uint8_t	num	The number of devices which have been added to or deleted from Resolving List.	

◆ st_ble_gap_perd_list_conf_evt_t

struct st_ble_gap_perd_list_conf_evt_t			
This structure notifies that Periodic Advertiser List has been configured.			
Data Fields			
uint8_t	op_code	The operation for Periodic Advertiser List.	
		value	description
		0x01	A device was added to Periodic Advertiser List.

		0x02	A device was deleted from Periodic Advertiser List.
		0x03	Periodic Advertiser List was cleared.
uint8_t	num	The number of devices which have been added to or deleted from Periodic Advertiser List.	

◆ st_ble_gap_set_priv_mode_evt_t

struct st_ble_gap_set_priv_mode_evt_t			
This structure notifies that Privacy Mode has been configured.			
Data Fields			
uint8_t	num	The number of devices which have been set privacy mode.	

◆ st_ble_gap_pairing_req_evt_t

struct st_ble_gap_pairing_req_evt_t			
This structure notifies that a pairing request from a remote device has been received.			
Data Fields			
uint16_t	conn_hdl	Connection handle identifying the remote device that sent the pairing request.	
st_ble_dev_addr_t	bd_addr	The address of the remote device.	
st_ble_gap_auth_info_t	auth_info	The Pairing parameters of the remote device.	

◆ st_ble_gap_passkey_display_evt_t

struct st_ble_gap_passkey_display_evt_t			
This structure notifies that a request for Passkey display in pairing has been received.			
Data Fields			
uint16_t	conn_hdl	Connection handle identifying the remote device that requested Passkey display.	
uint32_t	passkey	Passkey. This field is a 6 digit decimal number(000000-999999).	

◆ st_ble_gap_num_comp_evt_t

struct st_ble_gap_num_comp_evt_t		
This structure notifies that a request for Numeric Comparison in pairing has been received.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device that requested Numeric Comparison.
uint32_t	numeric	The number to be confirmed in Numeric Comparison. This field is a 6 digit decimal number(000000-999999).

◆ st_ble_gap_key_press_ntf_evt_t

struct st_ble_gap_key_press_ntf_evt_t														
This structure notifies that the remote device has input a key in Passkey Entry.														
Data Fields														
uint16_t	conn_hdl	Connection handle identifying the remote device that input a key.												
uint8_t	key_type	Type of the key that the remote device input. <table border="1" data-bbox="1034 1137 1471 1635"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x00</td> <td>Passkey entry started.</td> </tr> <tr> <td>0x01</td> <td>Passkey digit entered.</td> </tr> <tr> <td>0x02</td> <td>Passkey digit erased.</td> </tr> <tr> <td>0x03</td> <td>Passkey cleared.</td> </tr> <tr> <td>0x04</td> <td>Passkey entry completed.</td> </tr> </tbody> </table>	value	description	0x00	Passkey entry started.	0x01	Passkey digit entered.	0x02	Passkey digit erased.	0x03	Passkey cleared.	0x04	Passkey entry completed.
value	description													
0x00	Passkey entry started.													
0x01	Passkey digit entered.													
0x02	Passkey digit erased.													
0x03	Passkey cleared.													
0x04	Passkey entry completed.													

◆ st_ble_gap_pairing_info_evt_t

struct st_ble_gap_pairing_info_evt_t		
This structure notifies that the pairing has completed.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device that the pairing has been done with.
st_ble_dev_addr_t	bd_addr	Address of the remote device.

st_ble_gap_auth_info_t	auth_info	Key information exchanged in pairing. If local device supports bonding, store the information in non-volatile memory in order to set it to host stack after power re-supply.
--	-----------	---

◆ st_ble_gap_enc_chg_evt_t

struct st_ble_gap_enc_chg_evt_t										
This structure notifies that the encryption status of a link has been changed.										
Data Fields										
uint16_t	conn_hdl	Connection handle identifying the link that has been changed.								
uint8_t	enc_status	Encryption Status. <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 30%;">value</th> <th style="width: 70%;">description</th> </tr> </thead> <tbody> <tr> <td>0x00</td> <td>Encryption OFF.</td> </tr> <tr> <td>0x01</td> <td>Encryption ON.</td> </tr> <tr> <td>0x03</td> <td>Encryption updated by Encryption Key Refresh Completed.</td> </tr> </tbody> </table>	value	description	0x00	Encryption OFF.	0x01	Encryption ON.	0x03	Encryption updated by Encryption Key Refresh Completed.
value	description									
0x00	Encryption OFF.									
0x01	Encryption ON.									
0x03	Encryption updated by Encryption Key Refresh Completed.									

◆ st_ble_gap_peer_key_info_evt_t

struct st_ble_gap_peer_key_info_evt_t		
This structure notifies that the remote device has distributed the keys.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device that has distributed the keys.
st_ble_dev_addr_t	bd_addr	Address of the remote device.
st_ble_gap_key_ex_param_t	key_ex_param	Distributed keys. If local device supports bonding, store the keys in non-volatile memory and at power re-supply set to the host stack by R_BLE_GAP_SetBondInfo() .

◆ st_ble_gap_ltk_req_evt_t

--	--	--

```
struct st_ble_gap_ltk_req_evt_t
```

This structure notifies that a LTK request from a remote device has been received.

Data Fields

uint16_t	conn_hdl	Connection handle identifying the remote device which requests for the LTK.
uint16_t	ediv	Ediv.
uint8_t *	p_peer_rand	Rand.

◆ st_ble_gap_ltk_rsp_evt_t

```
struct st_ble_gap_ltk_rsp_evt_t
```

This structure notifies that local device has replied to the LTK request from the remote device.

Data Fields

uint16_t	conn_hdl	Connection handle identifying the remote device to be sent the response to the LTK request.						
uint8_t	response	The response to the LTK request. <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x00</td> <td>Local device replied with the stored LTK.</td> </tr> <tr> <td>0x01</td> <td>Local device rejected the LTK request, because the LTK was not found.</td> </tr> </tbody> </table>	value	description	0x00	Local device replied with the stored LTK.	0x01	Local device rejected the LTK request, because the LTK was not found.
value	description							
0x00	Local device replied with the stored LTK.							
0x01	Local device rejected the LTK request, because the LTK was not found.							

◆ st_ble_gap_sc_oob_data_evt_t

```
struct st_ble_gap_sc_oob_data_evt_t
```

This structure notifies that OOB data for Secure Connections has been generated by [R_BLE_GAP_CreateScOobData\(\)](#).

Data Fields

uint8_t *	p_sc_oob_conf	Confirmation value(16 bytes) of OOB Data.
uint8_t *	p_sc_oob_rand	Rand(16bytes) of OOB Data.

◆ st_ble_gap_bond_info_t

```
struct st_ble_gap_bond_info_t
```

Bonding information used in `R_BLE_GAP_SetBondInfo()`.

Data Fields		
<code>st_ble_dev_addr_t *</code>	<code>p_addr</code>	Address of the device which exchanged the keys.
<code>st_ble_gap_auth_info_t *</code>	<code>p_auth_info</code>	Information about the keys.
<code>st_ble_gap_key_ex_param_t *</code>	<code>p_keys</code>	Keys distributed from the remote device in paring.

Macro Definition Documentation

◆ BLE_BD_ADDR_LEN

```
#define BLE_BD_ADDR_LEN
```

Bluetooth Device Address Size

◆ BLE_MASTER

```
#define BLE_MASTER
```

Master Role.

◆ BLE_SLAVE

```
#define BLE_SLAVE
```

Slave Role.

◆ BLE_GAP_ADDR_PUBLIC

```
#define BLE_GAP_ADDR_PUBLIC
```

Public Address.

◆ BLE_GAP_ADDR_RAND

```
#define BLE_GAP_ADDR_RAND
```

Random Address.

◆ BLE_GAP_ADDR_RPA_ID_PUBLIC

```
#define BLE_GAP_ADDR_RPA_ID_PUBLIC
```

Resolvable Private Address.

If the IRK of local device has not been registered in Resolving List, public address is used.

◆ BLE_GAP_ADDR_RPA_ID_RANDOM

```
#define BLE_GAP_ADDR_RPA_ID_RANDOM
```

Resolvable Private Address.

If the IRK of local device has not been registered in Resolving List, random address is used.

◆ BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED_WLST

```
#define BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED_WLST
```

Accept all advertising and scan response PDUs.

The following are excluded.

- Advertising and scan response PDUs where the advertiser's identity address is not in the White List.
- Directed advertising PDUs whose the target address is identity address but doesn't address local device. However directed advertising PDUs whose the target address is the local resolvable private address are accepted.

◆ BLE_GAP_IOCAP_DISPLAY_ONLY

```
#define BLE_GAP_IOCAP_DISPLAY_ONLY
```

Display Only iocapability.

Output function : Local device has the ability to display a 6 digit decimal number.

Input function : None

◆ BLE_GAP_IOCAP_DISPLAY_YESNO

```
#define BLE_GAP_IOCAP_DISPLAY_YESNO
```

Display Yes/No iocapability.

Output function : Output function : Local device has the ability to display a 6 digit decimal number.

Input function : Local device has the ability to indicate 'yes' or 'no'

◆ **BLE_GAP_IOCAP_KEYBOARD_ONLY**

#define BLE_GAP_IOCAP_KEYBOARD_ONLY

Keyboard Only iocapability.

Output function : None

Input function : Local device has the ability to input the number '0' - '9'.

◆ **BLE_GAP_IOCAP_NOINPUT_NOOUTPUT**

#define BLE_GAP_IOCAP_NOINPUT_NOOUTPUT

No Input No Output iocapability.

Output function : None

Input function : None

◆ **BLE_GAP_IOCAP_KEYBOARD_DISPLAY**

#define BLE_GAP_IOCAP_KEYBOARD_DISPLAY

Keyboard Display iocapability.

Output function : Output function : Local device has the ability to display a 6 digit decimal number.

Input function : Local device has the ability to input the number '0' - '9'.

Typedef Documentation◆ **ble_gap_app_cb_t**

ble_gap_app_cb_t

ble_gap_app_cb_t is the GAP Event callback function type.

Parameters

[in]	event_type	The type of GAP Event.
[in]	event_result	The result of API call which generates the GAP Event.
[in]	p_event_data	Data notified in the GAP Event.

Returns

none

◆ **ble_gap_del_bond_cb_t**

ble_gap_del_bond_cb_t

ble_gap_del_bond_cb_t is the type of the callback function for delete bonding information stored in non-volatile area.

This type is used in [R_BLE_GAP_DeleteBondInfo\(\)](#).

Parameters

[in]	p_addr	The parameter returns the address of the remote device whose keys are deleted by R_BLE_GAP_DeleteBondInfo() . If R_BLE_GAP_DeleteBondInfo() deletes the keys of all remote devices, the parameter returns NULL.
------	--------	--

Returns

none

◆ **st_ble_gap_adv_param_t**

typedef [st_ble_gap_ext_adv_param_t](#) st_ble_gap_adv_param_t

Advertising parameters.

See also

[st_ble_gap_ext_adv_param_t](#)

◆ **st_ble_gap_scan_param_t**

typedef [st_ble_gap_ext_scan_param_t](#) st_ble_gap_scan_param_t

Scan parameters.

See also

[st_ble_gap_ext_scan_param_t](#)

Enumeration Type Documentation

◆ e_ble_gap_evt_t

enum e_ble_gap_evt_t	
GAP Event Identifier.

Function Documentation

◆ **R_BLE_GAP_Init()**

```
ble_status_t R_BLE_GAP_Init ( ble_gap_app_cb_t gap_cb)
```

Initialize the Host Stack.

Host stack is initialized with this function. Before using All the R_BLE APIs, it's necessary to call this function. A callback function is registered with this function. In order to receive the GAP event, it's necessary to register a callback function. The result of this API call is notified in BLE_GAP_EVENT_STACK_ON event.

Parameters

[in]	gap_cb	A callback function registered with this function.
------	--------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	gap_cb is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: <ul style="list-style-type: none"> • Host Stack was already initialized. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_Terminate()**

```
ble_status_t R_BLE_GAP_Terminate ( void )
```

Terminate the Host Stack.

Host stack is terminated with this function. In order to reset all the Bluetooth functions, it's necessary to call this function. The result of this API call is notified in BLE_GAP_EVENT_STACK_OFF event.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	Host stack hasn't been initialized.

◆ R_BLE_GAP_UpdConn()

```
ble_status_t R_BLE_GAP_UpdConn ( uint16_t conn_hdl, uint8_t mode, uint16_t accept,
st_ble_gap_conn_param_t * p_conn_updt_param )
```

Update the connection parameters.

This function updates the connection parameters or replies a request for updating connection parameters notified by BLE_GAP_EVENT_CONN_PARAM_UPD_REQ event. When the connection parameters has been updated, BLE_GAP_EVENT_CONN_PARAM_UPD_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the link to be updated.						
[in]	mode	Connection parameter update request or response. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_CONN_UPD_MODE_REQ (0x01)</td> <td>Request for updating the connection parameters.</td> </tr> <tr> <td>BLE_GAP_CONN_UPD_MODE_RSP (0x02)</td> <td>Reply a connection parameter update request.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_CONN_UPD_MODE_REQ (0x01)	Request for updating the connection parameters.	BLE_GAP_CONN_UPD_MODE_RSP (0x02)	Reply a connection parameter update request.
macro	description							
BLE_GAP_CONN_UPD_MODE_REQ (0x01)	Request for updating the connection parameters.							
BLE_GAP_CONN_UPD_MODE_RSP (0x02)	Reply a connection parameter update request.							
[in]	accept	When mode is BLE_GAP_CONN_UPD_MODE_RSP, accept or reject the connection parameters update request. If mode is BLE_GAP_CONN_UPD_MODE_REQ, accept is ignored. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_CONN_UPD_ACCEPT (0x0000)</td> <td>Accept the update request.</td> </tr> <tr> <td>BLE_GAP_CONN_UPD_REJECT (0x0001)</td> <td>Reject the update request.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_CONN_UPD_ACCEPT (0x0000)	Accept the update request.	BLE_GAP_CONN_UPD_REJECT (0x0001)	Reject the update request.
macro	description							
BLE_GAP_CONN_UPD_ACCEPT (0x0000)	Accept the update request.							
BLE_GAP_CONN_UPD_REJECT (0x0001)	Reject the update request.							
[in]	p_conn_updt_param	Connection parameters to be updated. When mode is BLE_GAP_CONN_UPD_MODE_RSP and accept is						

		BLE_GAP_CONN_UPD_REJECT , p_conn_updt_param is ignored.
--	--	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	When accept is BLE_GAP_CONN_UPD_ACCEPT, p_conn_updt_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The following is out of range. <ul style="list-style-type: none"> • mode • accept • conn_intv_min field in p_conn_updt_param • conn_intv_max field in p_conn_updt_param • conn_latency in p_conn_updt_param • sup_to in p_conn_updt_param • conn_hdl
BLE_ERR_INVALID_STATE(0x0008)	Not connected with the remote device.
BLE_ERR_CONTEXT_FULL(0x000B)	Sending a L2CAP command, an error occurred.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ **R_BLE_GAP_SetDataLen()**

```
ble_status_t R_BLE_GAP_SetDataLen ( uint16_t conn_hdl, uint16_t tx_octets, uint16_t tx_time )
```

Update the packet size and the packet transmit time.

This function requests for changing the maximum transmission packet size and the maximum packet transmission time. When Controller has received the request from host stack, BLE_GAP_EVENT_SET_DATA_LEN_COMP event is notified to the application layer. When the transmission packet size or the transmission time has been changed, BLE_GAP_EVENT_DATA_LEN_CHG event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose the transmission packet size or the transmission time to be changed.
[in]	tx_octets	Maximum transmission packet size. Valid range is 0x001B - 0x00FB.
[in]	tx_time	Maximum transmission time(us). Valid range is 0x0148 - 0x4290.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_Disconnect()**

```
ble_status_t R_BLE_GAP_Disconnect ( uint16_t conn_hdl, uint8_t reason )
```

Disconnect the link.

This function disconnects a link. When the link has disconnected, BLE_GAP_EVENT_DISCONN_IND event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the link to be disconnected.
[in]	reason	The reason for disconnection. Usually, set 0x13 which indicates that a user disconnects the link. If setting other than 0x13, refer the error code described in Core Specification Vol.2 Part D , "2 Error Code Descriptions".

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	conn_hdl is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ R_BLE_GAP_SetPhy()

```
ble_status_t R_BLE_GAP_SetPhy ( uint16_t conn_hdl, st_ble_gap_set_phy_param_t * p_phy_param )
```

Set the phy for connection.

This function sets the PHY preferences for the connection. The result of this API call is notified in BLE_GAP_EVENT_PHY_SET_COMP event. When the PHY has been updated, BLE_GAP_EVENT_PHY_UPD event is notified to the application layer.

After PHY update, the PHY accept configuration of local device is the same as the values in BLE_GAP_EVENT_PHY_UPD event.

For example, after calling R_BLE_GAP_SetPhy(), if tx_phy, rx_phy by BLE_GAP_EVENT_PHY_UPD event are updated to 2M PHY, the PHY accept configuration is 2M PHY only.

Therefore after receiving BLE_GAP_EVENT_PHY_UPD event, if local device wants to accept the other PHY configuration, it needs to call R_BLE_GAP_SetPhy() with the desired PHY accept configuration.

Because the maximum transmission packet size or the maximum transmission time might be updated by PHY update, if the same packet size or transmission time as the previous one is desired, change the maximum transmission packet size or the maximum transmission time by R_BLE_GAP_SetDataLen().

Parameters

[in]	conn_hdl	Connection handle identifying the link whose PHY to be updated.
[in]	p_phy_param	PHY preferences.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_phy_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	conn_hdl or option field in p_phy_param is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetDefPhy()

```
ble_status_t R_BLE_GAP_SetDefPhy ( st_ble_gap_set_def_phy_param_t* p_def_phy_param)
```

Set the default phy which allows remote device to change.

This function sets the PHY preferences which a remote device may change. The result of this API call is notified in BLE_GAP_EVENT_DEF_PHY_SET_COMP event.

Parameters

[in]	p_def_phy_param	The PHY preference which a remote device may change.
------	-----------------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_def_phy_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	tx_phys or tx_phys field in p_def_phy_param is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetPrivMode()

```
ble_status_t R_BLE_GAP_SetPrivMode ( st_ble_dev_addr_t* p_addr, uint8_t* p_privacy_mode, uint8_t device_num )
```

Set the privacy mode.

This function sets privacy mode for the remote device registered in Resolving List. By default, Network Privacy Mode is set.

The result of this API call is notified in BLE_GAP_EVENT_PRIV_MODE_SET_COMP event.

Parameters

[in]	p_addr	An array of identity address of the remote device to set privacy mode. The number of elements is specified by device_num.
[in]	p_privacy_mode	An array of privacy mode to set to remote device. The number of elements is specified by device_num. The following value is set as

the privacy mode.

macro	description
BLE_GAP_NETWORK_PRIVACY_MODE (0x00)	Network Privacy Mode.
BLE_GAP_DEVICE_PRIVACY_MODE (0x01)	Device Privacy Mode.

[in]	device_num	The number of devices to set privacy mode. Valid range is 1-BLE_GAP_RSLV_LIST_MAX_ENTRY.
------	------------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_addr or p_privacy_mode is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The following parameter is out of range. <ul style="list-style-type: none"> The address type in p_addr. The privacy mode specified by p_privacy_mode. device_num
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: <ul style="list-style-type: none"> While configuring privacy mode, this function was called. The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_ConfWhiteList()

```
ble_status_t R_BLE_GAP_ConfWhiteList ( uint8_t op_code, st_ble_dev_addr_t* p_addr, uint8_t device_num )
```

Set White List.

This function supports the following operations regarding White List.

- Add the device to White List.
- Delete the device from White List.
- Clear White List.

The total number of White List entries is defined as BLE_GAP_WHITE_LIST_MAX_ENTRY. The result of this API call is notified in BLE_GAP_EVENT_WHITE_LIST_CONF_COMP event.

Parameters

[in]	op_code	The operation for White List.								
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_LIST_ADD_DV(0x01)</td> <td>Add the device to the list.</td> </tr> <tr> <td>BLE_GAP_LIST_REMOVE_DV(0x02)</td> <td>Delete the device from the list.</td> </tr> <tr> <td>BLE_GAP_LIST_CLEAR(0x03)</td> <td>Clear the list.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_LIST_ADD_DV(0x01)	Add the device to the list.	BLE_GAP_LIST_REMOVE_DV(0x02)	Delete the device from the list.	BLE_GAP_LIST_CLEAR(0x03)	Clear the list.
macro	description									
BLE_GAP_LIST_ADD_DV(0x01)	Add the device to the list.									
BLE_GAP_LIST_REMOVE_DV(0x02)	Delete the device from the list.									
BLE_GAP_LIST_CLEAR(0x03)	Clear the list.									
[in]	p_addr	An array of device address to add / delete to the list. The number of elements is specified by device_num. If op_code is BLE_GAP_LIST_CLR, p_addr is ignored.								
[in]	device_num	The number of devices add / delete to the list. Valid range is 1-BLE_GAP_WHITE_LIST_MAX_ENTRY. If op_code is BLE_GAP_LIST_CLR, device_num is ignored.								

Return values

BLE_SUCCESS(0x0000)	Success
---------------------	---------

BLE_ERR_INVALID_PTR(0x0001)	When op_code is BLE_GAP_LIST_ADD_DEV or BLE_GAP_LIST_REM_DEV, p_addr is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	op_code or address type field in p_addr is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: <ul style="list-style-type: none"> • While operating White List, this function was called. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for operating the White List.

◆ R_BLE_GAP_GetVerInfo()

ble_status_t R_BLE_GAP_GetVerInfo (void)

Get the version number of the Controller and the host stack.

This function retrieves the version information of local device. The result of this API call is notified in BLE_GAP_EVENT_LOC_VER_INFO event.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_ReadPhy()**

```
ble_status_t R_BLE_GAP_ReadPhy ( uint16_t conn_hdl)
```

Get the phy settings.

This function gets the PHY settings for the connection. The result of this API call is notified in BLE_GAP_EVENT_PHY_RD_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose PHY settings to be retrieved.
------	----------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	conn_hdl is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_ConfRslvList()**

```
ble_status_t R_BLE_GAP_ConfRslvList ( uint8_t op_code, st_ble_dev_addr_t* p_addr,
st_ble_gap_rslv_list_key_set_t* p_peer_irk, uint8_t device_num )
```

Set Resolving List.

This function supports the following operations regarding Resolving List.

- Add the device to Resolving List.
- Delete the device from Resolving List.
- Clear Resolving List.

In order to generate a resolvable private address, a local IRK needs to be registered by [R_BLE_GAP_SetLocIdInfo\(\)](#). If communicating with the identity address, register all-zero IRK as local IRK. In order to resolve resolvable private address of the remote device, the IRK distributed from the remote device needs to be added to Resolving List. The total number of Resolving List entries is defined as BLE_GAP_RESOLV_LIST_MAX_ENTRY. The result of this API call is notified in BLE_GAP_EVENT_RSLV_LIST_CONF_COMP event.

Parameters

[in]	op_code	The operation for Resolving List.	
		macro	description
		BLE_GAP_LIST_ADD_DEV	Add the device to the list.
		BLE_GAP_LIST_REMOVE_DEV	Delete the device from the list.
		BLE_GAP_LIST_CLR	Clear the list.
[in]	p_addr	An array of Identity Addresses to add / delete to the list. The number of elements is specified by device_num. If op_code is BLE_GAP_LIST_CLR, p_addr is ignored.	
[in]	p_peer_irk	The remote IRK and the type of local IRK added to Resolving List. If op_code is other than BLE_GAP_LIST_ADD_DEV, p_peer_irk is ignored. The number of elements is	

		specified by device_num.
[in]	device_num	The number of devices add / delete to the list. Valid range is 1-BLE_GAP_RSLV_LIST_MAX_ENTRY. If op_code is BLE_GAP_LIST_CLR, device_num is ignored.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows: <ul style="list-style-type: none"> • When added to or deleted from the list, p_addr is specified as NULL. • When added to the list, p_peer_irk is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: <ul style="list-style-type: none"> • op_code is out of range. • When op_code is BLE_GAP_LIST_ADD_DEV or BLE_GAP_LIST_REM_DEV, device_num is out of range. • When op_code is BLE_GAP_LIST_ADD_DEV or BLE_GAP_LIST_REM_DEV, address type field in p_addr is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: <ul style="list-style-type: none"> • While operating Resolving List, this function was called. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for operating the Resolving List.
BLE_ERR_INVALID_HDL(0x000E)	The specified Identity Address was not found in Resolving List.

◆ R_BLE_GAP_EnableRpa()

ble_status_t R_BLE_GAP_EnableRpa (uint8_t enable)

Enable/Disable address resolution and generation of a resolvable private address.

This function enables or disables RPA functionality. The RPA functionality includes the following.

- Generation of local resolvable private address
- Resolution of remote resolvable private address

In order to do advertising, scanning or creating a link with local resolvable private address, the RPA functionality needs to be enabled. After enabling the RPA functionality and the identity address of remote device and the IRKs of local/remote device is registered, local device can generate own resolvable private address in the time interval set by R_BLE_GAP_SetRpaTo(), and can resolve a resolvable private address of a remote device. It is recommended that the RPA functionality is called immediately after the initialization by R_BLE_GAP_Init(). The result of this API call is notified in BLE_GAP_EVENT_RPA_EN_COMP event.

Parameters

[in]	enable	Enable or disable address resolution function.						
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_RPA_DISABLED (0x00)</td> <td>Disable RPA generation/resolution.</td> </tr> <tr> <td>BLE_GAP_RPA_ENABLED (0x01)</td> <td>Enable RPA generation/resolution.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_RPA_DISABLED (0x00)	Disable RPA generation/resolution.	BLE_GAP_RPA_ENABLED (0x01)	Enable RPA generation/resolution.
macro	description							
BLE_GAP_RPA_DISABLED (0x00)	Disable RPA generation/resolution.							
BLE_GAP_RPA_ENABLED (0x01)	Enable RPA generation/resolution.							

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	enable is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_SetRpaTo()**

```
ble_status_t R_BLE_GAP_SetRpaTo ( uint16_t rpa_timeout)
```

Set the update time of resolvable private address.

This function sets the time interval to update the resolvable private address. The result of this API call is notified in BLE_GAP_EVENT_SET_RPA_TO_COMP event.

Parameters

[in]	rpa_timeout	Time interval to update resolvable private address in seconds. Valid range is 0x003C - 0xA1B8. Default is 900s.
------	-------------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_ReadRpa()**

```
ble_status_t R_BLE_GAP_ReadRpa ( st_ble_dev_addr_t* p_addr)
```

Get the resolvable private address of local device.

This function retrieves the local resolvable private address. Before getting the address, enable the resolvable private address function by [R_BLE_GAP_EnableRpa\(\)](#). The result of this API call is notified in BLE_GAP_EVENT_RD_RPA_COMP event.

Parameters

[in]	p_addr	Identity address registered in Resolving List.
------	--------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_addr is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	Address type in p_addr is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows. <ul style="list-style-type: none"> • When retrieving the local resolvable private address, this function was called. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_ReadRssi()**

```
ble_status_t R_BLE_GAP_ReadRssi ( uint16_t conn_hdl)
```

Get RSSI.

This function retrieves RSSI. The result of this API call is notified in BLE_GAP_EVENT_RSSI_RD_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose RSSI to be retrieved.
------	----------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	conn_hdl is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_ReadChMap()**

```
ble_status_t R_BLE_GAP_ReadChMap ( uint16_t conn_hdl)
```

Get the Channel Map.

This function retrieves the channel map. The result of this API call is notified in BLE_GAP_EVENT_CH_MAP_RD_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose channel map to be retrieved.
------	----------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	conn_hdl is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_SetRandAddr()**

```
ble_status_t R_BLE_GAP_SetRandAddr ( uint8_t* p_random_addr)
```

Set a random address.

This function sets static address or non-resolvable private address to Controller. Refer to Core Specification Vol 6, PartB, "1.3.2 Random Device Address" regarding the format of the random address. Resolvable private address cannot set by this API. The result of this API call is notified in BLE_GAP_EVENT_RAND_ADDR_SET_COMP event.

Parameters

[in]	p_random_addr	Static address or non-resolvable private address. The BD address setting format is little endian.
------	---------------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_random_addr is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetAdvParam()

```
ble_status_t R_BLE_GAP_SetAdvParam ( st_ble_gap_adv_param_t * p_adv_param)
```

Set advertising parameters.

This function sets advertising parameters. It's possible to do advertising where the advertising parameters are different every each advertising set. The number of advertising set in the Controller is defined as BLE_MAX_NO_OF_ADV_SETS_SUPPORTED. Each advertising set is identified with advertising handle (0x00-0x03). Create an advertising set with this function before start advertising, setting periodic advertising parameters, start periodic advertising, setting advertising data/scan response data/periodic advertising data. The result of this API call is notified in BLE_GAP_EVENT_ADV_PARAM_SET_COMP event.

Parameters

[in]	p_adv_param	Advertising parameters.
------	-------------	-------------------------

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_adv_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The below p_adv_param field value is out of range. <ul style="list-style-type: none"> • adv_handle • adv_intv_min/adv_intv_max • adv_ch_map • o_addr_type • p_addr_type • adv_phy • sec_adv_phy • scan_req_ntf_flag
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetAdvSresData()

```
ble_status_t R_BLE_GAP_SetAdvSresData ( st_ble_gap_adv_data_t * p_adv_srsp_data)
```

Set advertising data/scan response data/periodic advertising data.

This function sets advertising data/scan response data/periodic advertising data to the advertising set. It is necessary to create an advertising set by R_BLE_GAP_SetAdvParam(), before calling this function. Set advertising data/scan response data/periodic advertising data, after allocating the memory for the data. The following shall be applied regarding the adv_prop_type field and the data_type field in st_ble_gap_adv_param_t parameter specified in R_BLE_GAP_SetAdvParam().

The following shall be applied regarding the adv_prop_type field and the data_type field in st_ble_gap_adv_param_t parameter specified in R_BLE_GAP_SetAdvParam().

- When `adv_prop_type` is Legacy Advertising PDU type,
 - it's possible to set advertising data/scan response data up to 31 bytes.
 - advertising data/scan response data can be updated by this function in advertising.
- When `adv_prop_type` is Extended Advertising PDU type,
 - it's possible to set at most 1650 bytes of data as advertising data/scan response data per 1 advertising set.
 - the total buffer size in Controller for advertising data/scan response data is 4250 bytes. Therefore please note that more than 4250 bytes of advertising data/scan response data can not be set to all the advertising sets. Please refer to Figure 1.1 and Figure 1.2 about examples of setting advertising data/scan response data.
 - it's possible to update advertising data/scan response data in advertising, if the `data_length` field in `st_ble_gap_adv_data_t` parameter is up to 251 bytes.

Figure 229: Figure 1.1

Figure 230: Figure 1.2

- When periodic advertising data is set,
 - At most 1650 bytes of data can be set to 1 advertising set.
 - The total buffer size in Controller for periodic advertising data is 4306 bytes. Therefore please note that more than 4306 bytes of periodic advertising data can not be set to all the advertising sets.
 - it's possible to update periodic advertising data in advertising, if the data_length field in `st_ble_gap_adv_data_t` parameter is up to 252 bytes.

The result of this API call is notified in `BLE_GAP_EVENT_ADV_DATA_UPD_COMP` event.

Parameters

[in]	p_adv_srsp_data	Advertising data/scan response data/periodic advertising data.
------	-----------------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows: <ul style="list-style-type: none"> • p_adv_srsp_data is specified as NULL. • data_length field in p_adv_srsp_data parameter is not 0 and p_data field is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The following field in p_adv_srsp_data parameter is out of range. <ul style="list-style-type: none"> • adv_hdl • data_type • data_length • zero_length_flag
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_StartAdv()**

```
ble_status_t R_BLE_GAP_StartAdv ( uint8_t adv_hdl, uint16_t duration, uint8_t
max_extd_adv_evts )
```

Start advertising.

This function starts advertising. Create the advertising set specified with `adv_hdl` by [R_BLE_GAP_SetAdvParam\(\)](#), before calling this function. The result of this API call is notified in `BLE_GAP_EVENT_ADV_ON` event.

Parameters

[in]	adv_hdl	The advertising handle pointing to the advertising set which starts advertising. The valid range is 0x00 - 0x03.
[in]	duration	The duration for which the advertising set identified by <code>adv_hdl</code> is enabled. Time = duration * 10ms. When the duration expires, <code>BLE_GAP_EVENT_ADV_OFF</code> event notifies that advertising is stopped. The valid range is 0x0000 - 0xFFFF. The duration parameter is ignored when the value is set to 0x0000.
[in]	max_extd_adv_evts	The maximum number of advertising events that be sent during advertising. When all the advertising events(<code>max_extd_adv_evts</code>) have been sent, <code>BLE_GAP_EVENT_ADV_OFF</code> event notifies that advertising is stopped. The <code>max_extd_adv_evts</code> parameter is ignored when the value is set to 0x00.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	adv_hdl is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_StopAdv()**

```
ble_status_t R_BLE_GAP_StopAdv ( uint8_t adv_hdl)
```

Stop advertising.

This function stops advertising. The result of this API call is notified in BLE_GAP_EVENT_ADV_OFF event.

Parameters

[in]	adv_hdl	The advertising handle pointing to the advertising set which stops advertising. The valid range is 0x00 - 0x03.
------	---------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	adv_hdl is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_SetPerdAdvParam()**

```
ble_status_t R_BLE_GAP_SetPerdAdvParam ( st_ble_gap_perd_adv_param_t * p_perd_adv_param)
```

Set periodic advertising parameters.

This function sets periodic advertising parameters. Create the advertising set which supports Non-Connectable, Non-Scannable advertising by [R_BLE_GAP_SetAdvParam\(\)](#) before setting periodic advertising parameters. The result of this API call is notified in BLE_GAP_EVENT_PERD_ADV_PARAM_SET_COMP event.

Parameters

[in]	p_perd_adv_param	Periodic advertising parameters.
------	------------------	----------------------------------

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_perd_adv_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The following field in the p_perd_adv_param parameter is out of range. <ul style="list-style-type: none"> • adv_hdl • per_d_intv_min or per_d_intv_max • prop_type is neither 0x0000 nor 0x0040(BLE_GAP_PERD_PROP_TX_POWER)
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_StartPerdAdv()**

```
ble_status_t R_BLE_GAP_StartPerdAdv ( uint8_t adv_hdl)
```

Start periodic advertising.

This function starts periodic advertising. Set periodic advertising parameters to the advertising set, before starting periodic advertising. The result of this API call is notified in BLE_GAP_EVENT_PERD_ADV_ON event.

Parameters

[in]	adv_hdl	Advertising handle identifying the advertising set which starts periodic advertising.
------	---------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	adv_hdl is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_StopPerdAdv()**

```
ble_status_t R_BLE_GAP_StopPerdAdv ( uint8_t adv_hdl)
```

Stop periodic advertising.

This function stops periodic advertising. If the return value of this API is BLE_SUCCESS, the result is notified in BLE_GAP_EVENT_PERD_ADV_OFF event.

Parameters

[in]	adv_hdl	Specify the handle of Advertising Set to stop Periodic Advertising.
------	---------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	adv_hdl is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_GetRemainAdvBufSize()**

```
ble_status_t R_BLE_GAP_GetRemainAdvBufSize ( uint16_t* p_remain_adv_data_size, uint16_t*
p_remain_perd_adv_data_size )
```

Get buffer size for advertising data/scan response data/periodic advertising data in the Controller.

This function gets the total size of advertising data/scan response data/periodic advertising data which can be currently set to Controller(all of the advertising sets). The application layer gets the data sizes via the parameters. By this API function call, no events occur.

Parameters

[out]	p_remain_adv_data_size	The free buffer size of Controller to which advertising data/scan response data can be currently set.
[out]	p_remain_perd_adv_data_size	The free buffer size of Controller to which periodic advertising data can be currently set.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_remain_adv_data_size or p_remain_perd_adv_data_size is specified as NULL.

◆ R_BLE_GAP_RemoveAdvSet()

```
ble_status_t R_BLE_GAP_RemoveAdvSet ( uint8_t op_code, uint8_t adv_hdl )
```

Delete advertising set.

This function deletes an advertising set or deletes all the advertising sets. The result of this API call is notified in BLE_GAP_EVENT_ADV_SET_REMOVE_COMP event.

Parameters

[in]	op_code	The operation for delete or clear.						
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_RM_V_ADV_SET_REM_OP(0x01)</td> <td>Delete an advertising set.</td> </tr> <tr> <td>BLE_GAP_RM_V_ADV_SET_CLR_OP(0x02)</td> <td>Delete all the advertising sets.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_RM_V_ADV_SET_REM_OP(0x01)	Delete an advertising set.	BLE_GAP_RM_V_ADV_SET_CLR_OP(0x02)	Delete all the advertising sets.
macro	description							
BLE_GAP_RM_V_ADV_SET_REM_OP(0x01)	Delete an advertising set.							
BLE_GAP_RM_V_ADV_SET_CLR_OP(0x02)	Delete all the advertising sets.							
[in]	adv_hdl	Advertising handle identifying the advertising set deleted. If op_code is BLE_GAP_RMV_ADV_SET_CLR_OP, adv_hdl is ignored.						

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: <ul style="list-style-type: none"> op_code is out of range. When op_code is BLE_GAP_RMV_ADV_SET_REM_OP(0x01), adv_hdl is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_CreateConn()

```
ble_status_t R_BLE_GAP_CreateConn ( st_ble_gap_create_conn_param_t* p_param)
```

Request for a link establishment.

This function sends a connection request to a remote device to create a link. When Controller has received a request for establishment of a link from host stack, BLE_GAP_EVENT_CREATE_CONN_COMP event is notified to the application layer. When the link is established, BLE_GAP_EVENT_CONN_IND event is notified to the application layer.

Parameters

[in]	p_param	Connection parameters.
------	---------	------------------------

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows: <ul style="list-style-type: none"> • p_param is specified as NULL. • p_conn_param_1M field and p_conn_param_2M and p_conn_param_coded field in p_param are specified as NULL. • When creating a link with 1M PHY, p_conn_param in p_conn_param_1M field in p_param is specified as NULL. • When creating a link with 2M PHY, p_conn_param in p_conn_param_2M field in p_param is specified as NULL. • When creating a link with coded MPHY, p_conn_param in p_conn_param_coded field in p_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: <ul style="list-style-type: none"> • init_filter_policy in p_param is out of range. • remote_bd_addr_type field or own_addr_type address field in p_param is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_CancelCreateConn()**

```
ble_status_t R_BLE_GAP_CancelCreateConn ( void )
```

Cancel the request for a link establishment.

This function cancels a request for establishing a link. When Controller has received the cancel request from host stack, BLE_GAP_EVENT_CONN_CANCEL_COMP event is notified to the application layer. When the cancel procedure has completed, BLE_GAP_EVENT_CONN_IND event is notified to the application layer.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_SetChMap()**

```
ble_status_t R_BLE_GAP_SetChMap ( uint8_t* p_channel_map)
```

Set the Channel Map.

This function sets the channel map. The result of this API call is notified in BLE_GAP_EVENT_CH_MAP_SET_COMP event.

Parameters

[in]	p_channel_map	Channel map.
------	---------------	--------------

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_channel_map is specified as NULL.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_StartScan()**

```
ble_status_t R_BLE_GAP_StartScan ( st_ble_gap_scan_param_t* p_scan_param,  
st_ble_gap_scan_on_t* p_scan_enable )
```

Set scan parameter and start scan.

This function starts scanning. When scanning for the first time, set the `p_scan_param`. Setting scan parameters can be omitted by specifying `p_scan_param` as `NULL` after next time. The result of this API call is notified in `BLE_GAP_EVENT_SCAN_ON` event. Advertising report is notified in `BLE_GAP_EVENT_ADV_REPT_IND` event. Figure 1.3 shows the relationship between scan period, scan duration, scan interval and scan window.

Figure 231: Figure 1.3

When scan duration is non-zero, scan period is zero and scan duration expires, BLE_GAP_EVENT_SCAN_TO event is notified to the application layer.

Parameters

[in]	p_scan_param	Scan parameter. When p_scan_param is specified as NULL, host stack doesn't set scan parameters and start scanning with the previous parameters.
[in]	p_scan_enable	Scan period, scan duration, duplicate filter and procedure type.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows: <ul style="list-style-type: none"> p_scan_enable is specified as NULL. p_phy_param_1M field and p_phy_param_coded field in p_scan_param are specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: <ul style="list-style-type: none"> proc_type field in p_scan_enable is out of range. filter_dups in p_scan_enable is out of range. o_addr_type in p_scan_param is out of range. filter_policy in p_scan_param is out of range. scan_type of p_scan_param's p_phy_param_1M or p_phy_param_coded is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_StopScan()**

```
ble_status_t R_BLE_GAP_StopScan ( void )
```

Stop scan.

This function stops scanning. The result of this API call is notified in BLE_GAP_EVENT_SCAN_OFF event.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_CreateSync()**

```
ble_status_t R_BLE_GAP_CreateSync ( st_ble_dev_addr_t * p_addr, uint8_t adv_sid, uint16_t skip, uint16_t sync_to )
```

Request for a periodic sync establishment.

This function sends a request for establishment of a periodic sync to a advertiser. In order to create a periodic sync, scan needs to be starting by [R_BLE_GAP_StartScan\(\)](#). When Controller has received the request from host stack, BLE_GAP_EVENT_CREATE_SYNC_COMP event is notified to the application layer. When the periodic sync is established, BLE_GAP_EVENT_SYNC_EST event is notified to the application layer.

Parameters

[in]	p_addr	The address of periodic advertiser. When p_addr is specified as NULL, local device creates a periodic sync with the advertiser registered in Periodic Advertiser List.
[in]	adv_sid	Advertising SID. When p_addr is specified as NULL, adv_sid is ignored. Valid range is 0x00 - 0x0F.
[in]	skip	The number of consecutive periodic advertising packets that local device may skip after receiving a periodic advertising packet. Valid range is 0x0000 - 0x01F3.

[in]	sync_to	The maximum permitted time between successful receives. When sync_to expires, the periodic sync is lost. Time(ms) = sync_to * 10. Valid range is 0x000A - 0x4000.
------	---------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_addr is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The following parameter is out of range. <ul style="list-style-type: none"> • address type in p_addr • adv_sid • skip • sync_to
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_CancelCreateSync()

```
ble_status_t R_BLE_GAP_CancelCreateSync ( void )
```

Cancel the request for a periodic sync establishment.

This function cancels a request for establishing a periodic sync. The result of this API call is notified in BLE_GAP_EVENT_SYNC_CREATE_CANCEL_COMP event.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_TerminateSync()**

```
ble_status_t R_BLE_GAP_TerminateSync ( uint16_t sync_hdl)
```

Terminate the periodic sync.

This function terminates a periodic sync. The result of this API call is notified in BLE_GAP_EVENT_SYNC_TERM event.

Parameters

[in]	sync_hdl	Sync handle identifying the periodic sync to be terminated.
------	----------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	sync_hdl is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_ConfPerdAdvList()

```
ble_status_t R_BLE_GAP_ConfPerdAdvList ( uint8_t op_code, st_ble_dev_addr_t * p_addr, uint8_t *
p_adv_sid_set, uint8_t device_num )
```

Set Periodic Advertiser List.

This function supports the following operations regarding Periodic Advertiser List.

- Add the device to Periodic Advertiser List.
- Delete the device from Periodic Advertiser List.
- Clear Periodic Advertiser List.

The total number of Periodic Advertiser List entries is defined as BLE_GAP_PERD_LIST_MAX_ENTRY. The result of this API call is notified in BLE_GAP_EVENT_PERD_LIST_CONF_COMP event.

Parameters

[in]	op_code	The operation for Periodic Advertiser List.								
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_LIST_ADD_DV(0x01)</td> <td>Add the device to the list.</td> </tr> <tr> <td>BLE_GAP_LIST_REMOVE_DV(0x02)</td> <td>Delete the device from the list.</td> </tr> <tr> <td>BLE_GAP_LIST_CLEAR(0x03)</td> <td>Clear the list.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_LIST_ADD_DV(0x01)	Add the device to the list.	BLE_GAP_LIST_REMOVE_DV(0x02)	Delete the device from the list.	BLE_GAP_LIST_CLEAR(0x03)	Clear the list.
macro	description									
BLE_GAP_LIST_ADD_DV(0x01)	Add the device to the list.									
BLE_GAP_LIST_REMOVE_DV(0x02)	Delete the device from the list.									
BLE_GAP_LIST_CLEAR(0x03)	Clear the list.									
[in]	p_addr	An array of device address to add / delete to the list. The number of elements is specified by device_num. If op_code is BLE_GAP_LIST_CLR, p_addr is ignored.								
[in]	p_adv_sid_set	An array of SID of the advertiser to add / delete to the list. The number of elements is specified by device_num. If op_code is BLE_GAP_LIST_CLR, p_adv_sid_set is ignored.								
[in]	device_num	The number of devices add / delete to the list.								

		Valid range is 1-BLE_GAP_PERD_LIST_MAX_ENTRY. If op_code is BLE_GAP_LIST_CLR, device_num is ignored.
--	--	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	When op_code is BLE_GAP_LIST_ADD_DEV or BLE_GAP_LIST_REM_DEV, p_addr or p_adv_sid_set is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	op_code or address type field in p_addr or p_adv_sid_set or device_num is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: <ul style="list-style-type: none"> • While operating Periodic Advertiser List, this function was called. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for operating periodic advertiser.

◆ **R_BLE_GAP_AuthorizeDev()**

```
ble_status_t R_BLE_GAP_AuthorizeDev ( uint16_t conn_hdl, uint8_t author_flag )
```

Authorize a remote device.

User authorizes a remote device by this function. This function is used when a remote device accesses a GATT Characteristic in local device which requests user authorization. The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to be authorized or not by user.						
[in]	author_flag	Authorize or not the remote device. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_NOT_AUTHORIZE(0x00)</td> <td>Not authorize the remote device.</td> </tr> <tr> <td>BLE_GAP_AUTHORIZED(0x01)</td> <td>Authorize the remote device.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_NOT_AUTHORIZE(0x00)	Not authorize the remote device.	BLE_GAP_AUTHORIZED(0x01)	Authorize the remote device.
macro	description							
BLE_GAP_NOT_AUTHORIZE(0x00)	Not authorize the remote device.							
BLE_GAP_AUTHORIZED(0x01)	Authorize the remote device.							

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	author_flag is out of range.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ **R_BLE_GAP_GetRemDevInfo()**

```
ble_status_t R_BLE_GAP_GetRemDevInfo ( uint16_t conn_hdl)
```

Get the information about remote device.

This function retrieves information about the remote device. The information includes BD_ADDR, the version number and LE features. The result of this API call is notified in BLE_GAP_EVENT_GET_REM_DEV_INFO event.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device whose information to be retrieved.
------	----------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_SetPairingParams()**

```
ble_status_t R_BLE_GAP_SetPairingParams ( st_ble_gap_pairing_param_t * p_pair_param)
```

Set the parameters using pairing.

This function sets the parameters used in pairing. The parameters set by this API are sent to the remote device when pairing occurred. The result of this API call is returned by a return value.

Parameters

[in]	p_pair_param	Pairing parameters.
------	--------------	---------------------

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The following field in p_pair_param is out of range. <ul style="list-style-type: none"> • iocap • max_key_size • mitm • bonding • key_notf • sec_conn_only

◆ **R_BLE_GAP_SetLocIdInfo()**

```
ble_status_t R_BLE_GAP_SetLocIdInfo ( st_ble_dev_addr_t * p_lc_id_addr, uint8_t * p_lc_irk )
```

Set the IRK and the identity address distributed to a remote device.

This function registers local IRK and identity address of local device in host stack. The IRK and the identity address are distributed to a remote device in pairing. The result of this API call is returned by a return value.

Parameters

[in]	p_lc_id_addr	Identity address to be registered in host stack.
[in]	p_lc_irk	IRK to be registered in host stack.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_lc_id_addr or p_lc_irk is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	Address type field in p_lc_id_addr is out of range.

◆ **R_BLE_GAP_SetLocCsrk()**

```
ble_status_t R_BLE_GAP_SetLocCsrk ( uint8_t * p_local_csrk )
```

Set the CSRK distributed to a remote device.

This function registers local CSRK in host stack. The CSRK is distributed to a remote device in pairing. The result of this API call is returned by a return value.

Parameters

[in]	p_local_csrk	CSRK to be registered in host stack.
------	--------------	--------------------------------------

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_local_csrk is specified as NULL.

◆ **R_BLE_GAP_StartPairing()**

```
ble_status_t R_BLE_GAP_StartPairing ( uint16_t conn_hdl)
```

Start pairing.

This function starts pairing with a remote device. The result of this API call is returned by a return value. The result of pairing is notified in BLE_GAP_EVENT_PAIRING_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device which local device starts pairing with.
------	----------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	While generating OOB data, this function was called.
BLE_ERR_CONTEXT_FULL(0x000B)	While pairing, this function was called.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ **R_BLE_GAP_ReplyPairing()**

```
ble_status_t R_BLE_GAP_ReplyPairing ( uint16_t conn_hdl, uint8_t response )
```

Reply the pairing request from a remote device.

This function replies to the pairing request from the remote device. The pairing request from the remote device is notified in BLE_GAP_EVENT_PAIRING_REQ event. The result of this API call is returned by a return value. The result of pairing is notified in BLE_GAP_EVENT_PAIRING_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device which local device starts pairing with.						
[in]	response	Accept or reject the pairing request from the remote device. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_PAIRING_ACCEPT(0x00)</td> <td>Accept the pairing request.</td> </tr> <tr> <td>BLE_GAP_PAIRING_REJECT(0x01)</td> <td>Reject the pairing request.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_PAIRING_ACCEPT(0x00)	Accept the pairing request.	BLE_GAP_PAIRING_REJECT(0x01)	Reject the pairing request.
macro	description							
BLE_GAP_PAIRING_ACCEPT(0x00)	Accept the pairing request.							
BLE_GAP_PAIRING_REJECT(0x01)	Reject the pairing request.							

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	response is out of range.
BLE_ERR_INVALID_STATE(0x0008)	While generating OOB data, this function was called.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	When this function was called, host stack has not yet received BLE_GAP_EVENT_PAIRING_REQ event.

◆ **R_BLE_GAP_StartEnc()**

```
ble_status_t R_BLE_GAP_StartEnc ( uint16_t conn_hdl)
```

Encryption the link.

This function starts encryption of the link. In case of master device, the local device requests for the encryption to a remote device. In case of slave device, the local device sends a Security Request to a remote device. After receiving the Security Request, the remote device requests for the encryption to the local device. The result of the encryption is returned in BLE_GAP_EVENT_ENC_CHG event.

Parameters

[in]	conn_hdl	Connection handle identifying the link which is encrypted.
------	----------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: <ul style="list-style-type: none"> • Pairing has not been completed. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ R_BLE_GAP_ReplyPasskeyEntry()

```
ble_status_t R_BLE_GAP_ReplyPasskeyEntry ( uint16_t conn_hdl, uint32_t passkey, uint8_t response )
```

Reply the passkey entry request.

When BLE_GAP_EVENT_PASSKEY_ENTRY_REQ event is notified, the response to passkey entry is sent by this function. The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device which the reply to passkey entry is sent.						
[in]	passkey	Passkey. The valid range is 000000 - 999999 in decimal.						
[in]	response	Active or negative reply to passkey entry. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_PAIRING_ACCEPT(0x00)</td> <td>Accept the passkey entry pairing.</td> </tr> <tr> <td>BLE_GAP_PAIRING_REJECT(0x01)</td> <td>Reject the passkey entry pairing.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_PAIRING_ACCEPT(0x00)	Accept the passkey entry pairing.	BLE_GAP_PAIRING_REJECT(0x01)	Reject the passkey entry pairing.
macro	description							
BLE_GAP_PAIRING_ACCEPT(0x00)	Accept the passkey entry pairing.							
BLE_GAP_PAIRING_REJECT(0x01)	Reject the passkey entry pairing.							

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	passkey or response is out of range.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	When this function was called, pairing has not yet started.

◆ R_BLE_GAP_ReplyNumComp()

```
ble_status_t R_BLE_GAP_ReplyNumComp ( uint16_t conn_hdl, uint8_t response )
```

Reply the numeric comparison request.

When BLE_GAP_EVENT_NUM_COMP_REQ event is notified, the response to Numeric Comparison is sent by this function. The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device which the reply to Numeric Comparison is sent.						
[in]	response	Active or negative reply in Numeric Comparison. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_PAIRING_ACCEPT(0x00)</td> <td>The number displayed in the local is the same as the one of the remote.</td> </tr> <tr> <td>BLE_GAP_PAIRING_REJECT(0x01)</td> <td>The number displayed in the local is differs from the one of the remote.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_PAIRING_ACCEPT(0x00)	The number displayed in the local is the same as the one of the remote.	BLE_GAP_PAIRING_REJECT(0x01)	The number displayed in the local is differs from the one of the remote.
macro	description							
BLE_GAP_PAIRING_ACCEPT(0x00)	The number displayed in the local is the same as the one of the remote.							
BLE_GAP_PAIRING_REJECT(0x01)	The number displayed in the local is differs from the one of the remote.							

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	response is out of range.
BLE_ERR_INVALID_STATE(0x0008)	When this function was called, host stack has not yet received BLE_GAP_EVENT_NUM_COMP_REQ event.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	When this function was called, pairing has not yet started.

◆ R_BLE_GAP_NotifyKeyPress()

```
ble_status_t R_BLE_GAP_NotifyKeyPress ( uint16_t conn_hdl, uint8_t key_press )
```

Notify the input key type which a remote device inputs in the passkey entry.

This function notifies the input key type to the remote device in passkey entry. The result is returned from this API.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to which the key notification is sent.												
[in]	key_press	Input key type. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_LE_SC_PASSKEY_ENTRY_STARTED(0x00)</td> <td>Notify that passkey entry started.</td> </tr> <tr> <td>BLE_GAP_LE_SC_PASSKEY_DIGIT_ENTERED(0x01)</td> <td>Notify that passkey digit entered.</td> </tr> <tr> <td>BLE_GAP_LE_SC_PASSKEY_DIGIT_ERASED(0x02)</td> <td>Notify that passkey digit erased.</td> </tr> <tr> <td>BLE_GAP_LE_SC_PASSKEY_CLEARED(0x03)</td> <td>Notify that passkey cleared.</td> </tr> <tr> <td>BLE_GAP_LE_SC_PASSKEY_ENTRY_COMPLETED(0x04)</td> <td>Notify that passkey entry completed.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_LE_SC_PASSKEY_ENTRY_STARTED(0x00)	Notify that passkey entry started.	BLE_GAP_LE_SC_PASSKEY_DIGIT_ENTERED(0x01)	Notify that passkey digit entered.	BLE_GAP_LE_SC_PASSKEY_DIGIT_ERASED(0x02)	Notify that passkey digit erased.	BLE_GAP_LE_SC_PASSKEY_CLEARED(0x03)	Notify that passkey cleared.	BLE_GAP_LE_SC_PASSKEY_ENTRY_COMPLETED(0x04)	Notify that passkey entry completed.
macro	description													
BLE_GAP_LE_SC_PASSKEY_ENTRY_STARTED(0x00)	Notify that passkey entry started.													
BLE_GAP_LE_SC_PASSKEY_DIGIT_ENTERED(0x01)	Notify that passkey digit entered.													
BLE_GAP_LE_SC_PASSKEY_DIGIT_ERASED(0x02)	Notify that passkey digit erased.													
BLE_GAP_LE_SC_PASSKEY_CLEARED(0x03)	Notify that passkey cleared.													
BLE_GAP_LE_SC_PASSKEY_ENTRY_COMPLETED(0x04)	Notify that passkey entry completed.													

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	key_press parameter is out of range.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	When this function was called, pairing has not yet started.

◆ **R_BLE_GAP_GetDevSecInfo()**

```
ble_status_t R_BLE_GAP_GetDevSecInfo ( uint16_t conn_hdl, st_ble_gap_auth_info_t * p_sec_info )
```

Get the security information about the remote device.

This function gets the parameters which has been negotiated with the remote device in pairing. The parameters can be retrieved after pairing. The result is returned by p_sec_info.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device whose bonding information is retrieved.
[in]	p_sec_info	Return the security information which has been negotiated in pairing.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_sec_info is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The remote device bonding information has not been set to host stack.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ **R_BLE_GAP_ReplyExKeyInfoReq()**

ble_status_t R_BLE_GAP_ReplyExKeyInfoReq (uint16_t conn_hdl)

Distribute the keys of local device.

When key exchange request is notified by BLE_GAP_EVENT_EX_KEY_REQ event at pairing, keys of the local device are distributed. The result is returned from this API.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to which the key is distributed.
------	----------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	When this function was called, pairing has not yet started.

◆ R_BLE_GAP_SetRemOobData()

```
ble_status_t R_BLE_GAP_SetRemOobData ( st_ble_dev_addr_t * p_addr, uint8_t oob_data_flag,
st_ble_gap_oob_data_t * p_oob )
```

Set the oob data from a remote device.

This function registers the OOB data received from a remote device. When oob_data_flag indicates that the OOB data has been received, the setting regarding OOB data is reflected in pairing. In order to do OOB pairing, set the OOB data received from the remote device before pairing. The result is returned from this API.

Parameters

[in]	p_addr	The remote device address.						
[in]	oob_data_flag	This parameter indicates whether the local device has received the OOB data from the remote device or not. <table border="1" data-bbox="1072 864 1469 1402"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_OOB_DATA_NO_T_PRESENT(0x00)</td> <td>Reply that No OOB data has been received when pairing.</td> </tr> <tr> <td>BLE_GAP_OOB_DATA_PRESENT(0x01)</td> <td>Reply that the OOB data has been received when pairing.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_OOB_DATA_NO_T_PRESENT(0x00)	Reply that No OOB data has been received when pairing.	BLE_GAP_OOB_DATA_PRESENT(0x01)	Reply that the OOB data has been received when pairing.
macro	description							
BLE_GAP_OOB_DATA_NO_T_PRESENT(0x00)	Reply that No OOB data has been received when pairing.							
BLE_GAP_OOB_DATA_PRESENT(0x01)	Reply that the OOB data has been received when pairing.							
[in]	p_oob	The OOB data received from the remote device.						

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows. <ul style="list-style-type: none"> p_addr is specified as NULL. oob_data_flag is BLE_GAP_OOB_DATA_PRESENT and p_oob is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	oob_data_flag is out of range.
BLE_ERR_CONTEXT_FULL(0x000B)	There is no room to register the OOB data received from a remote device.

◆ R_BLE_GAP_CreateScOobData()

ble_status_t R_BLE_GAP_CreateScOobData (void)

Create data for oob in secure connection.

This function generates the OOB data distributed to a remote device in Secure Connections. The result of this API call is notified in BLE_GAP_EVENT_SC_OOB_CREATE_COMP event.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: <ul style="list-style-type: none">• This function was called in pairing.• The task for host stack is not running.
BLE_ERR_ALREADY_IN_PROGRESS(0x000A)	This function was called in creating OOB data.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ **R_BLE_GAP_SetBondInfo()**

```
ble_status_t R_BLE_GAP_SetBondInfo ( st_ble_gap_bond_info_t* p_bond_info, uint8_t device_num,
uint8_t* p_set_num )
```

Set the bonding information stored in non-volatile memory to the host stack.

Set the bonding information of the remote device in the host stack. After power re-supply, when the remote device bonding information stored in non-volatile memory is set to host stack, this function is used. Host stack can be set the number specified by the device_num parameter of bonding information.

Parameters

[in]	p_bond_info	An array of bonding information. The number of elements is specified by device_num.
[in]	device_num	The number of the devices of which host stack registers bonding information.
[in]	p_set_num	The number of the devices whose bonding information was registered in host stack.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_bond_info or p_set_num is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	device_num is out of range.
BLE_ERR_CONTEXT_FULL(0x000B)	Host stack already has the maximum number of bonding information.

◆ R_BLE_GAP_DeleteBondInfo()

```
void R_BLE_GAP_DeleteBondInfo ( int32_t local, int32_t remote, st_ble_dev_addr_t* p_addr,
ble_gap_del_bond_cb_t gap_del_bond_cb )
```

This function deletes the bonding information in Host Stack.
When a function for deleting the bonding information stored in non-volatile area is registered by the gap_del_bond_cb parameter, it is deleted as well as the bonding information in Host Stack.

Parameters

[in]	local	The type of the local bonding information to be deleted.
[in]	remote	The type of the remote bonding information to be deleted.

macro	description
BLE_GAP_SE C_DEL_LOC_ NONE(0x00)	Delete no local keys.
BLE_GAP_SE C_DEL_LOC_I RK(0x01)	Delete local IRK and identity address.
BLE_GAP_SE C_DEL_LOC_ CSRK(0x02)	Delete local CSRK.
BLE_GAP_SE C_DEL_LOC_ ALL(0x03)	Delete all local keys.

macro	description
BLE_GAP_SE C_DEL_REM_ NONE(0x00)	Delete no remote device keys.
BLE_GAP_SE C_DEL_REM_ SA(0x01)	Delete the keys specified by the p_addr parameter.
BLE_GAP_SE C_DEL_REM_ NOT_CONN(0x02)	Delete keys of not connected remote devices.
BLE_GAP_SE C_DEL_REM_ ALL(0x03)	Delete all remote device keys.

[in]	p_addr	p_addr is specified as the address of the remote device whose keys are deleted when the rem_info parameter is set to BLE_GAP_SEC_DEL_REM_SA(0x01) .
[in]	gap_del_bond_cb	This parameter is a callback function which deletes the bonding information stored in non-volatile area. After deleting the bonding information stored in Host Stack, the callback function is called. If no bonding information is stored in non-volatile area, specify the parameter as NULL.
Return values		
none		

◆ R_BLE_GAP_ReplyLtkReq()

```
ble_status_t R_BLE_GAP_ReplyLtkReq ( uint16_t conn_hdl, uint16_t ediv, uint8_t* p_peer_rand,
uint8_t response )
```

Reply the LTK request from a remote device.

This function replies to the LTK request in BLE_GAP_EVENT_LTK_REQ event from a remote device. The result of the LTK reply is returned in BLE_GAP_EVENT_LTK_RSP_COMP event. When the link encryption has completed, BLE_GAP_EVENT_ENC_CHG event is notified.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device which sent the LTK request.
[in]	ediv	Ediv notified in BLE_GAP_EVENT_LTK_REQ event.
[in]	p_peer_rand	Rand notified in BLE_GAP_EVENT_LTK_REQ event.
[in]	response	Response to the LTK request. If

"BLE_GAP_LTK_REQ_ACCEPT" is specified, when no LTK has been exchanged in pairing, reject the LTK request.

macro	description
BLE_GAP_LTK_REQ_ACCEPT	Reply for the LTK request.
BLE_GAP_LTK_REQ_DENY	Reject the LTK request.

Return values

BLE_SUCCESS (0x0000)	Success
BLE_ERR_INVALID_PTR (0x0001)	p_peer_rand is specified as NULL in case of legacy pairing.
BLE_ERR_INVALID_ARG (0x0003)	response is out of range.
BLE_ERR_INVALID_STATE (0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED (0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL (0x000E)	The remote device specified by conn_hdl is not found.

[Interfaces](#) » [BLE Interface](#)

Functions

ble_status_t [R_BLE_GATT_GetMtu](#) (uint16_t conn_hdl, uint16_t *p_mtu)

This function gets the current MTU used in GATT communication.

[More...](#)

Detailed Description

Function Documentation

◆ **R_BLE_GATT_GetMtu()**

```
ble_status_t R_BLE_GATT_GetMtu ( uint16_t conn_hdl, uint16_t* p_mtu )
```

This function gets the current MTU used in GATT communication.

Both GATT server and GATT Client can use this function.

The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server or the GATT Client.
[in]	p_mtu	The Current MTU. Before MTU exchange, this parameter is 23 bytes. After MTU exchange, this parameter is the negotiated MTU.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The mtu parameter is NULL.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server or the GATT Client specified by conn_hdl was not found.

4.3.2.3 GATT_SERVER

[Interfaces](#) » [BLE Interface](#)

Functions

```
ble_status_t R_BLE_GATTS_Init (uint8_t cb_num)
```

This function initializes the GATT Server and registers the number of the callbacks for GATT Server event. [More...](#)

```
ble_status_t R_BLE_GATTS_SetDbInst (st_ble_gatts_db_cfg_t *p_db_inst)
```

This function sets GATT Database to host stack. [More...](#)

```
ble_status_t R_BLE_GATTS_RegisterCb (ble_gatts_app_cb_t cb, uint8_t priority)
```

This function registers a callback for GATT Server event. [More...](#)

```
ble_status_t R_BLE_GATTS_DeregisterCb (ble_gatts_app_cb_t cb)
```

This function deregisters the callback function for GATT Server event. [More...](#)

`ble_status_t` [R_BLE_GATTS_Notification](#) (`uint16_t conn_hdl`,
`st_ble_gatt_hdl_value_pair_t *p_ntf_data`)

This function sends a notification of an attribute's value. [More...](#)

`ble_status_t` [R_BLE_GATTS_Indication](#) (`uint16_t conn_hdl`,
`st_ble_gatt_hdl_value_pair_t *p_ind_data`)

`ble_status_t` [R_BLE_GATTS_GetAttr](#) (`uint16_t conn_hdl`, `uint16_t attr_hdl`,
`st_ble_gatt_value_t *p_value`)

This function gets a attribute value from the GATT Database. [More...](#)

`ble_status_t` [R_BLE_GATTS_SetAttr](#) (`uint16_t conn_hdl`, `uint16_t attr_hdl`,
`st_ble_gatt_value_t *p_value`)

This function sets an attribute value to the GATT Database. [More...](#)

`ble_status_t` [R_BLE_GATTS_SendErrRsp](#) (`uint16_t error_code`)

This function sends an error response to a remote device. [More...](#)

`ble_status_t` [R_BLE_GATTS_RspExMtu](#) (`uint16_t conn_hdl`, `uint16_t mtu`)

This function replies to a MTU Exchange Request from a remote device. [More...](#)

`ble_status_t` [R_BLE_GATTS_SetPrepareQueue](#) (`st_ble_gatt_pre_queue_t`
`*p_pre_queues`, `uint8_t queue_num`)

Register prepare queue and buffer in Host Stack. [More...](#)

Detailed Description

Data Structures

struct [st_ble_gatt_value_t](#)
Attribute Value. [More...](#)

struct [st_ble_gatt_hdl_value_pair_t](#)
Attribute handle and attribute Value. [More...](#)

struct [st_ble_gatt_queue_att_val_t](#)
Queued writes Attribute Value. [More...](#)

struct [st_ble_gatt_queue_pair_t](#)
Queued writes Attribute Value. [More...](#)

struct [st_ble_gatt_queue_elm_t](#)
Prepare Write Queue element for long characteristic. [More...](#)

struct [st_ble_gatt_pre_queue_t](#)
Prepare Write Queue for long characteristic. [More...](#)

struct [st_ble_gatts_db_params_t](#)
Attribute value to be set to or retrieved from the GATT Database and the access type from the GATT Client. [More...](#)

struct [st_ble_gatts_db_conn_hdl_t](#)
Information about the service or the characteristic that the attribute belongs to. [More...](#)

struct [st_ble_gatts_db_access_evt_t](#)
This structure notifies that the GATT Database has been accessed from a GATT Client. [More...](#)

struct [st_ble_gatts_conn_evt_t](#)
This structure notifies that the link with the GATT Client has been established. [More...](#)

struct [st_ble_gatts_disconn_evt_t](#)
This structure notifies that the link with the GATT Client has been disconnected. [More...](#)

struct [st_ble_gatts_ex_mtu_req_evt_t](#)

This structure notifies that a MTU Exchange Request PDU has been received from a GATT Client. [More...](#)

struct [st_ble_gatts_cfm_evt_t](#)

This structure notifies that a Confirmation PDU has been received from a GATT Client. [More...](#)

struct [st_ble_gatts_read_by_type_rsp_evt_t](#)

This structure notifies that a Read By Type Response PDU has been sent from GATT Server. [More...](#)

struct [st_ble_gatts_read_rsp_evt_t](#)

This structure notifies that a Read Response PDU has been sent from GATT Server. [More...](#)

struct [st_ble_gatts_read_blob_rsp_evt_t](#)

This structure notifies that a Read Blob Response PDU has been sent from GATT Server. [More...](#)

struct [st_ble_gatts_read_multi_rsp_evt_t](#)

This structure notifies that a Read Multiple Response PDU has been sent from GATT Server. [More...](#)

struct [st_ble_gatts_write_rsp_evt_t](#)

This structure notifies that a Write Response PDU has been sent from GATT Server. [More...](#)

struct [st_ble_gatts_prepare_write_rsp_evt_t](#)

This structure notifies that a Prepare Write Response PDU has been sent from GATT Server. [More...](#)

struct [st_ble_gatts_exe_write_rsp_evt_t](#)

This structure notifies that a Execute Write Response PDU has been sent from GATT Server. [More...](#)

struct [st_ble_gatts_db_uuid_cfg_t](#)

A structure that defines the information on the position where UUIDs

are used. [More...](#)

struct [st_ble_gatts_db_attr_cfg_t](#)

A structure that defines the detailed information of the attributes. [More...](#)

struct [st_ble_gatts_db_attr_list_t](#)

The number of attributes are stored. [More...](#)

struct [st_ble_gatts_db_char_cfg_t](#)

A structure that defines the detailed information of the characteristics. [More...](#)

struct [st_ble_gatts_db_serv_cfg_t](#)

A structure that defines the detailed information of the characteristics. [More...](#)

struct [st_ble_gatts_db_cfg_t](#)

This is the structure of GATT Database that is specified in [R_BLE_GATTS_SetDbInst\(\)](#). [More...](#)

struct [st_ble_gatts_evt_data_t](#)

[st_ble_gatts_evt_data_t](#) is the type of the data notified in a GATT Server Event. [More...](#)

Macros

#define [BLE_GATT_DEFAULT_MTU](#)

GATT Default MTU.

#define [BLE_GATT_16_BIT_UUID_FORMAT](#)

GATT Identification for 16-bit UUID Format.

#define [BLE_GATT_128_BIT_UUID_FORMAT](#)

GATT Identification for 128-bit UUID Format.

#define [BLE_GATT_16_BIT_UUID_SIZE](#)

GATT 16-bit UUID Size.

```
#define BLE_GATT_128_BIT_UUID_SIZE  
GATT 128-bit UUID Size.
```

```
#define BLE_GATT_INVALID_ATTR_HDL_VAL  
GATT Invalid Attribute Handle Value.
```

```
#define BLE_GATT_ATTR_HDL_START_RANGE  
GATT Attribute Handle Start Range.
```

```
#define BLE_GATT_ATTR_HDL_END_RANGE  
GATT Attribute Handle End Range.
```

```
#define BLE_GATTS_CLI_CNFG_NOTIFICATION  
GATT Client Configuration values. Enable Notification.
```

```
#define BLE_GATTS_CLI_CNFG_INDICATION  
GATT Client Configuration values. Enable Indication.
```

```
#define BLE_GATTS_CLI_CNFG_DEFAULT  
GATT Client Configuration values. Default value or disable  
notification/indication.
```

```
#define BLE_GATTS_SER_CNFG_BROADCAST  
GATT Server Configuration values. Enable broadcast.
```

```
#define BLE_GATTS_SER_CNFG_DEFAULT  
GATT Server Configuration values. Default value.
```

```
#define BLE_GATTS_MAX_CB  
GATT Server Callback Number.
```

```
#define BLE_GATTS_OP_CHAR_VALUE_READ_REQ
```

Characteristic Value Local Read Operation.

```
#define BLE_GATTS_OP_CHAR_VALUE_WRITE_REQ
```

Characteristic Value Local Write Operation.

```
#define BLE_GATTS_OP_CHAR_VALUE_WRITE_WITHOUT_REQ
```

Characteristic Value Local Write Without Response Operation.

```
#define BLE_GATTS_OP_CHAR_CLI_CNFG_READ_REQ
```

Characteristic Client Configuration Local Read Operation.

```
#define BLE_GATTS_OP_CHAR_CLI_CNFG_WRITE_REQ
```

Characteristic Client Configuration Local Write Operation.

```
#define BLE_GATTS_OP_CHAR_SER_CNFG_READ_REQ
```

Characteristic Server Configuration Local Read Operation.

```
#define BLE_GATTS_OP_CHAR_SER_CNFG_WRITE_REQ
```

Characteristic Server Configuration Local Write Operation.

```
#define BLE_GATTS_OP_CHAR_PEER_READ_REQ
```

Characteristic Value Peer Read Operation.

```
#define BLE_GATTS_OP_CHAR_PEER_WRITE_REQ
```

Characteristic Value Peer Write Operation.

```
#define BLE_GATTS_OP_CHAR_PEER_WRITE_CMD
```

Characteristic Value Peer Write Command.

```
#define BLE_GATTS_OP_CHAR_PEER_CLI_CNFG_READ_REQ
```

Characteristic Client Configuration Peer Read Operation.

```
#define BLE_GATTS_OP_CHAR_PEER_CLI_CNFG_WRITE_REQ
```

Characteristic Client Configuration Peer Write Operation.

```
#define BLE_GATTS_OP_CHAR_PEER_SER_CNFG_READ_REQ  
Characteristic Server Configuration Peer Read Operation.
```

```
#define BLE_GATTS_OP_CHAR_PEER_SER_CNFG_WRITE_REQ  
Characteristic Server Configuration Peer Write Operation.
```

```
#define BLE_GATTS_OP_CHAR_PEER_USR_DESC_READ_REQ  
Characteristic User Description Peer Read Operation.
```

```
#define BLE_GATTS_OP_CHAR_PEER_USR_DESC_WRITE_REQ  
Characteristic User Description Peer Write Operation.
```

```
#define BLE_GATTS_OP_CHAR_PEER_HLD_DESC_READ_REQ  
Characteristic Higher Layer Defined Descriptor Peer Read Operation.
```

```
#define BLE_GATTS_OP_CHAR_PEER_HLD_DESC_WRITE_REQ  
Characteristic Higher Layer Defined Descriptor Peer Write Operation.
```

```
#define BLE_GATTS_OP_CHAR_REQ_AUTHOR  
Operation Required Authorization.
```

```
#define BLE_GATT_DB_READ  
Allow clients to read.
```

```
#define BLE_GATT_DB_WRITE  
Allow clients to write.
```

```
#define BLE_GATT_DB_WRITE_WITHOUT_RSP  
Allow clients to write without response.
```

```
#define BLE_GATT_DB_READ_WRITE  
Allow clients to access of all.
```

```
#define BLE_GATT_DB_NO_AUXILIARY_PROPERTY
```

No auxiliary properties.

```
#define BLE_GATT_DB_FIXED_LENGTH_PROPERTY
```

Fixed length attribute value.

```
#define BLE_GATT_DB_AUTHORIZATION_PROPERTY
```

Attributes requiring authorization.

```
#define BLE_GATT_DB_ATTR_DISABLED
```

The attribute is disabled. If this value is set, the attribute cannot be found and accessed by a GATT Client.

```
#define BLE_GATT_DB_128_BIT_UUID_FORMAT
```

Attribute with 128 bit UUID.

```
#define BLE_GATT_DB_PEER_SPECIFIC_VAL_PROPERTY
```

Attribute managed by each GATT Client.

```
#define BLE_GATT_DB_CONST_ATTR_VAL_PROPERTY
```

Fixed attribute value.

```
#define BLE_GATT_DB_SER_SECURITY_UNAUTH
```

Unauthenticated pairing(Security Mode1 Security Level 2, Security Mode 2 Security Level 1). Unauthenticated pairing is required to access the service.

```
#define BLE_GATT_DB_SER_SECURITY_AUTH
```

Authenticated pairing(Security Mode1 Security Level 3, Security Mode 2 Security Level 2). Authenticated pairing is required to access the service.

```
#define BLE_GATT_DB_SER_SECURITY_SECONN
```

Authenticated LE secure connections that generates 16bytes LTK(Security Mode1 Security Level 4). Authenticated LE secure connections pairing that generates 16bytes LTK is required to access the service. If this bit is set, bit24-27 are ignored.

```
#define BLE_GATT_DB_SER_SECURITY_ENC  
Encryption. Encryption by the LTK exchanged in pairing is required to access.
```

```
#define BLE_GATT_DB_SER_NO_SECURITY_PROPERTY  
No Security(Security Mode1 Security Level 1).
```

```
#define BLE_GATT_DB_SER_ENC_KEY_SIZE_DONT_CARE  
7-byte or larger encryption key.
```

```
#define BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_7  
7-byte encryption key.
```

```
#define BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_8  
8-byte encryption key.
```

```
#define BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_9  
9-byte encryption key.
```

```
#define BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_10  
10-byte encryption key.
```

```
#define BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_11  
11-byte encryption key.
```

```
#define BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_12  
12-byte encryption key.
```

```
#define BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_13  
13-byte encryption key.
```

```
#define BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_14  
14-byte encryption key.
```

```
#define BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_15
    15-byte encryption key.
```

```
#define BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_16
    16-byte encryption key.
```

Typedefs

```
typedef void(* ble_gatts_app_cb_t) (uint16_t event_type, ble_status_t event_result,
    st_ble_gatts_evt_data_t *p_event_data)

ble_gatts_app_cb_t is the GATT Server Event callback function type.
More...
```

Enumerations

```
enum e_r_ble_gatts_evt_t
    GATT Server Event Identifier. More...
```

Data Structure Documentation

◆ st_ble_gatt_value_t

struct st_ble_gatt_value_t		
Attribute Value.		
Data Fields		
uint16_t	value_len	Length of the attribute value.
uint8_t *	p_value	Attribute Value.

◆ st_ble_gatt_hdl_value_pair_t

struct st_ble_gatt_hdl_value_pair_t		
Attribute handle and attribute Value.		
Data Fields		
uint16_t	attr_hdl	Attribute Handle.
st_ble_gatt_value_t	value	Attribute Value.

◆ st_ble_gatt_queue_att_val_t

struct st_ble_gatt_queue_att_val_t		
Queued writes Attribute Value.		
Data Fields		

uint8_t *	p_value	Attribute Value for Queued Write .
uint16_t	value_len	Length of the attribute value.
uint16_t	padding	padding.

◆ st_ble_gatt_queue_pair_t

struct st_ble_gatt_queue_pair_t		
Queued writes Attribute Value.		
Data Fields		
st_ble_gatt_queue_att_val_t	queue_value	Attribute Value for Queued Write.
uint16_t	attr_hdl	Attribute Handle.

◆ st_ble_gatt_queue_elm_t

struct st_ble_gatt_queue_elm_t		
Prepare Write Queue element for long characteristic.		
Data Fields		
st_ble_gatt_queue_pair_t	queue_value_pair	Part of Long Characteristic Value and Characteristic Value Handle.
uint16_t	offset	Offset that indicates the location to be written.

◆ st_ble_gatt_pre_queue_t

struct st_ble_gatt_pre_queue_t		
Prepare Write Queue for long characteristic.		
Data Fields		
uint8_t *	p_buf_start	Buffer start address for Write Long Characteristic Request.
st_ble_gatt_queue_elm_t *	p_queue	Prepare Write Queue for Long Characteristic Value.
uint16_t	buffer_len	Buffer length.
uint16_t	conn_hdl	Connection Handle.
uint16_t	buf_offset	Current buffer offset.
uint8_t	queue_size	Number of elements in the prepare write queue.
uint8_t	queue_idx	Index of Prepare Write Queue.

◆ st_ble_gatts_db_params_t

struct st_ble_gatts_db_params_t		
---------------------------------	--	--

Attribute value to be set to or retrieved from the GATT Database and the access type from the GATT Client.		
Data Fields		
st_ble_gatt_value_t	value	Attribute value to be set to or retrieved from the GATT Database. Note that the address of the value field in the value field is invalid in case of read access.
uint16_t	attr_hdl	Attribute handle identifying the attribute to be set or retrieved.
uint8_t	db_op	Type of the access to GATT Database from the GATT Client. See also access_type_to_gatt_database

◆ [st_ble_gatts_db_conn_hdl_t](#)

struct st_ble_gatts_db_conn_hdl_t		
Information about the service or the characteristic that the attribute belongs to.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the GATT Client that accesses to the GATT DataBase.
uint8_t	service_id	ID of the service that the attribute belongs to.
uint8_t	char_id	ID of the Characteristic that the attribute belongs to.

◆ [st_ble_gatts_db_access_evt_t](#)

struct st_ble_gatts_db_access_evt_t		
This structure notifies that the GATT Database has been accessed from a GATT Client.		
Data Fields		
st_ble_gatts_db_conn_hdl_t *	p_handle	Information about the service or the characteristic that the attribute belongs to.
st_ble_gatts_db_params_t *	p_params	Attribute value to be set to or retrieved from the GATT Database and the access type from the GATT Client.

◆ [st_ble_gatts_conn_evt_t](#)

struct st_ble_gatts_conn_evt_t		
--	--	--

This structure notifies that the link with the GATT Client has been established.

Data Fields		
-------------	--	--

<code>st_ble_dev_addr_t*</code>	<code>p_addr</code>	Address of the GATT Client.
---------------------------------	---------------------	-----------------------------

◆ `st_ble_gatts_disconn_evt_t`

`struct st_ble_gatts_disconn_evt_t`

This structure notifies that the link with the GATT Client has been disconnected.

Data Fields		
-------------	--	--

<code>st_ble_dev_addr_t*</code>	<code>p_addr</code>	Address of the GATT Client.
---------------------------------	---------------------	-----------------------------

◆ `st_ble_gatts_ex_mtu_req_evt_t`

`struct st_ble_gatts_ex_mtu_req_evt_t`

This structure notifies that a MTU Exchange Request PDU has been received from a GATT Client.

Data Fields		
-------------	--	--

<code>uint16_t</code>	<code>mtu</code>	Maximum receive MTU size by GATT Client.
-----------------------	------------------	--

◆ `st_ble_gatts_cfm_evt_t`

`struct st_ble_gatts_cfm_evt_t`

This structure notifies that a Confirmation PDU has been received from a GATT Client.

Data Fields		
-------------	--	--

<code>uint16_t</code>	<code>attr_hdl</code>	Attribute handle identifying the Characteristic sent by the Indication PDU.
-----------------------	-----------------------	---

◆ `st_ble_gatts_read_by_type_rsp_evt_t`

`struct st_ble_gatts_read_by_type_rsp_evt_t`

This structure notifies that a Read By Type Response PDU has been sent from GATT Server.

Data Fields		
-------------	--	--

<code>uint16_t</code>	<code>attr_hdl</code>	Attribute handle identifying the Characteristic read by the Read By Type Request PDU.
-----------------------	-----------------------	---

◆ `st_ble_gatts_read_rsp_evt_t`

`struct st_ble_gatts_read_rsp_evt_t`

This structure notifies that a Read Response PDU has been sent from GATT Server.

Data Fields		
-------------	--	--

<code>uint16_t</code>	<code>attr_hdl</code>	Attribute handle identifying the Characteristic read by the Read Request PDU.
-----------------------	-----------------------	---

◆ **st_ble_gatts_read_blob_rsp_evt_t**

struct st_ble_gatts_read_blob_rsp_evt_t		
This structure notifies that a Read Blob Response PDU has been sent from GATT Server.		
Data Fields		
uint16_t	attr_hdl	Attribute handle identifying the Characteristic read by the Read Blob Request PDU.

◆ **st_ble_gatts_read_multi_rsp_evt_t**

struct st_ble_gatts_read_multi_rsp_evt_t		
This structure notifies that a Read Multiple Response PDU has been sent from GATT Server.		
Data Fields		
uint8_t	count	The number of attribute read by the Read Multiple Request PDU.
uint16_t*	p_attr_hdl_list	The list of attribute read by the Read Multiple Request PDU.

◆ **st_ble_gatts_write_rsp_evt_t**

struct st_ble_gatts_write_rsp_evt_t		
This structure notifies that a Write Response PDU has been sent from GATT Server.		
Data Fields		
uint16_t	attr_hdl	Attribute handle identifying the Characteristic written by the Write Request PDU.

◆ **st_ble_gatts_prepare_write_rsp_evt_t**

struct st_ble_gatts_prepare_write_rsp_evt_t		
This structure notifies that a Prepare Write Response PDU has been sent from GATT Server.		
Data Fields		
uint16_t	attr_hdl	Attribute handle identifying the Characteristic written by the Prepare Write Request PDU.
uint16_t	length	The length of written bytes by the Prepare Write Request PDU.
uint16_t	offset	The offset of the first octet to be written.

◆ **st_ble_gatts_exe_write_rsp_evt_t**

struct st_ble_gatts_exe_write_rsp_evt_t		
This structure notifies that a Execute Write Response PDU has been sent from GATT Server.		
Data Fields		

uint8_t	exe_flag	The flag that indicates whether execution or cancellation.	
		value	description
		0x00	Cancellation.
		0x01	Execution.

◆ st_ble_gatts_db_uuid_cfg_t

struct st_ble_gatts_db_uuid_cfg_t		
A structure that defines the information on the position where UUIDs are used.		
Data Fields		
uint16_t	offset	The position of the defined UUID is specified by offset value in uuid_table of st_ble_gatts_db_cfg_t .
uint16_t	first	The attribute handle that indicates the first position in st_ble_gatts_db_attr_cfg_t for the defined UUID is specified.
uint16_t	last	The attribute handle that indicates the last position in st_ble_gatts_db_attr_cfg_t for the defined UUID is specified.

◆ st_ble_gatts_db_attr_cfg_t

struct st_ble_gatts_db_attr_cfg_t			
A structure that defines the detailed information of the attributes.			
Data Fields			
uint8_t	desc_prop	The properties of attribute are specified.	
		Set the following properties by a bitwise OR.	
		macro	description
		BLE_GATT_DB_READ(0x01)	Allow clients to read.
		BLE_GATT_DB_WRITE(0x02)	Allow clients to write.
BLE_GATT_DB_WRITE_WITH_OUT_RSP(0x04)	Allow clients to write.		
BLE_GATT_DB	Allow clients		

		<p><code>_READ_WRITE (0x07)</code> to access of all.</p>														
<p>uint8_t</p>	<p>aux_prop</p>	<p>The auxiliary properties of attribute are specified.</p> <p>Set the following properties by a bitwise OR.</p> <table border="1" data-bbox="1034 501 1473 557"> <thead> <tr> <th data-bbox="1034 501 1254 557">macro</th> <th data-bbox="1254 501 1473 557">description</th> </tr> </thead> <tbody> <tr> <td data-bbox="1034 566 1254 696"> <p><code>BLE_GATT_DB_NO_AUXILIARY_PROPERTY(0x00)</code></p> </td> <td data-bbox="1254 566 1473 831"> <p>No auxiliary properties. 		<p>RTY(0x40) Client.</p> <p>BLE_GATT_DB_CONST_ATTR_VAL_PROPERTY(0x80) Fixed attribute value. Writing from Client and setting from Server are prohibited.</p>
uint16_t	length	The length of the attribute value is specified.
uint16_t	next	The position of the next attribute with the same UUID as the defined attribute is specified by an attribute handle.
uint16_t	uuid_offset	<p>The storage area of attribute value.</p> <p>UUID of the defined attribute is set by specifying the position of the UUID registered in <code>uuid_table</code> of <code>st_ble_gatts_db_cfg_t</code> with the array offset value.</p>
uint8_t *	p_data_offset	<p>Storage area of attribute value.</p> <p>The address in the array registered in No.1-No.4 is specified to set the attribute value storage area of the defined attribute.</p>

◆ st_ble_gatts_db_attr_list_t

struct st_ble_gatts_db_attr_list_t		
The number of attributes are stored.		
Data Fields		
uint8_t	count	The number of the services or the characteristics.

◆ st_ble_gatts_db_char_cfg_t

struct st_ble_gatts_db_char_cfg_t		
A structure that defines the detailed information of the characteristics.		
Data Fields		
st_ble_gatts_db_attr_list_t	list	The total number of attributes in the defined characteristic is

		specified.
uint16_t	start_hdl	The first attribute handle of the characteristic is specified.
uint8_t	service_id	The index of service to which the characteristic belongs is specified.

◆ **st_ble_gatts_db_serv_cfg_t**

struct st_ble_gatts_db_serv_cfg_t								
A structure that defines the detailed information of the characteristics.								
Data Fields								
st_ble_gatts_db_attr_list_t	list	The total number of service declarations in the defined service is specified.						
uint32_t	desc	<p>The properties of the defined service are specified.</p> <p>Set the security level, the security mode and the key size with a bitwise OR. The bit0-bit3 are specified as the security level. Select one of the following.</p> <table border="1" style="width: 100%;"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GATT_DB_SER_SECURITY_UNAUTH(0x00000001)</td> <td>Unauthenticated pairing(Security Mode1 Security Level 2, Security Mode 2 Security Level 1) Unauthenticated pairing is required to access the service.</td> </tr> <tr> <td>BLE_GATT_DB_SER_SECURITY_AUTH(0x00000002)</td> <td>Authenticated pairing(Security Mode1 Security Level 3, Security Mode 2 Security Level 2) Authenticated pairing is required to</td> </tr> </tbody> </table>	macro	description	BLE_GATT_DB_SER_SECURITY_UNAUTH(0x00000001)	Unauthenticated pairing(Security Mode1 Security Level 2, Security Mode 2 Security Level 1) Unauthenticated pairing is required to access the service. macro	description							
BLE_GATT_DB_SER_SECURITY_UNAUTH(0x00000001)	Unauthenticated pairing(Security Mode1 Security Level 2, Security Mode 2 Security Level 1) Unauthenticated pairing is required to access the service.							
BLE_GATT_DB_SER_SECURITY_AUTH(0x00000002)	Authenticated pairing(Security Mode1 Security Level 3, Security Mode 2 Security Level 2) Authenticated pairing is required to							

access the service.

[BLE_GATT_DB_SER_SECURITY_SECONN\(0x00000004\)](#) Authenticated LE secure connections that generates 16bytes LTK(Security Mode1 Security Level 4) Authenticated LE secure connections pairing that generates 16bytes LTK is required to access the service. If this bit is set, bit24-27 are ignored.

The bit4 is specified as the security mode.

macro	description
-------	-------------

BLE_GATT_DB_SER_SECURITY_ENC(0x00000010)	Encryption Encryption by the LTK exchanged in pairing is required to access.
--	--

If the security requirement of the service is not needed, specify the bit0-bit4 to [BLE_GATT_DB_SER_NO_SECURITY_PROPERTY\(0x00000000\)](#) .(Security Mode1 Security Level 1)

The bit24-bit27 are specified as the key size required by the defined service.

Select one of the following.

macro	description
-------	-------------

BLE_GATT_DB_SER_ENCRYP	7-byte encryption
--	-------------------

T_KEY_SIZE_7(0x01000000)	key.
BLE_GATT_DB_SER_ENCRYP_T_KEY_SIZE_8(0x02000000)	8-byte encryption key.
BLE_GATT_DB_SER_ENCRYP_T_KEY_SIZE_9(0x03000000)	9-byte encryption key.
BLE_GATT_DB_SER_ENCRYP_T_KEY_SIZE_10(0x04000000)	10-byte encryption key.
BLE_GATT_DB_SER_ENCRYP_T_KEY_SIZE_11(0x05000000)	11-byte encryption key.
BLE_GATT_DB_SER_ENCRYP_T_KEY_SIZE_12(0x06000000)	12-byte encryption key.
BLE_GATT_DB_SER_ENCRYP_T_KEY_SIZE_13(0x07000000)	13-byte encryption key.
BLE_GATT_DB_SER_ENCRYP_T_KEY_SIZE_14(0x08000000)	14-byte encryption key.
BLE_GATT_DB_SER_ENCRYP_T_KEY_SIZE_15(0x09000000)	15-byte encryption key.
BLE_GATT_DB_SER_ENCRYP_T_KEY_SIZE_16(0x0A000000)	16-byte encryption key.
BLE_GATT_DB_SER_ENC_KEY_SIZE_DONT_CARE(0x0000)	7-byte or larger encryption key.

		0000) Other bits are reserved.
uint16_t	start_hdl	The start attribute handle of the defined service is specified.
uint16_t	end_hdl	The end attribute handle of the defined service is specified.
uint8_t	char_start_idx	The start index of the characteristic that belongs to the defined service is specified.
uint8_t	char_end_idx	The end index of the characteristic that belongs to the defined service is specified.

◆ st_ble_gatts_db_cfg_t

struct st_ble_gatts_db_cfg_t		
This is the structure of GATT Database that is specified in R_BLE_GATTS_SetDbInst() .		
Data Fields		
const uint8_t *	p_uuid_table	The array to register the UUID to be used.
uint8_t *	p_attr_val_table	The array to register variable attribute values.
const uint8_t *	p_const_attr_val_table	The array to register fixed attribute values.
uint8_t *	p_rem_spec_val_table	The array to manage the attribute values handled for each GATT client.
const uint8_t *	p_const_rem_spec_val_table	The array to register the default of the attribute value handled by each GATT client.
const st_ble_gatts_db_uuid_cfg_t *	p_uuid_cfg	The array to register information on the position where UUIDs are used.
const st_ble_gatts_db_attr_cfg_t *	p_attr_cfg	The array to register the detailed information of attributes.
const st_ble_gatts_db_char_cfg_t *	p_char_cfg	The array to register the detailed information of characteristics.
const st_ble_gatts_db_serv_cfg_t *	p_serv_cfg	The array to register the detailed information of services.
uint8_t	serv_cnt	The number of services included in the GATT Database.

uint8_t	char_cnt	The number of characteristics included in the GATT Database.
uint8_t	uuid_type_cnt	The number of UUIDs included in the GATT Database.
uint8_t	peer_spec_val_cnt	The total size of attribute value that needs to be managed for each GATT client.

◆ st_ble_gatts_evt_data_t

struct st_ble_gatts_evt_data_t		
st_ble_gatts_evt_data_t is the type of the data notified in a GATT Server Event.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the GATT Client.
uint16_t	param_len	The size of GATT Server Event parameters.
void *	p_param	GATT Server Event parameters. This parameter differs in each GATT Server Event.

Typedef Documentation

◆ ble_gatts_app_cb_t

ble_gatts_app_cb_t		
ble_gatts_app_cb_t is the GATT Server Event callback function type.		
Parameters		
[in]	event_type	The type of GATT Server Event.
[in]	event_result	The result of GATT Server Event
[in]	p_event_data	Data notified by GATT Server Event.
Returns		
none		

Enumeration Type Documentation

◆ e_r_ble_gatts_evt_t

enum e_r_ble_gatts_evt_t	
GATT Server Event Identifier.	
Enumerator

Function Documentation

◆ R_BLE_GATTS_Init()

```
ble_status_t R_BLE_GATTS_Init ( uint8_t cb_num)
```

This function initializes the GATT Server and registers the number of the callbacks for GATT Server event.

Specify the `cb_num` parameter to a value between 1 and `BLE_GATTS_MAX_CB`.

[R_BLE_GATTS_RegisterCb\(\)](#) registers the callback.

The result of this API call is returned by a return value.

Parameters

[in]	<code>cb_num</code>	The number of callbacks to be registered.
------	---------------------	---

Return values

<code>BLE_SUCCESS(0x0000)</code>	Success
<code>BLE_ERR_INVALID_ARG(0x0003)</code>	The <code>cb_num</code> parameter is out of range.

◆ R_BLE_GATTS_SetDbInst()

```
ble_status_t R_BLE_GATTS_SetDbInst ( st_ble_gatts_db_cfg_t * p_db_inst)
```

This function sets GATT Database to host stack.

The result of this API call is returned by a return value.

Parameters

[in]	<code>p_db_inst</code>	GATT Database to be set.
------	------------------------	--------------------------

Return values

<code>BLE_SUCCESS(0x0000)</code>	Success
<code>BLE_ERR_INVALID_PTR(0x0001)</code>	The reason for this error is as follows. <ul style="list-style-type: none"> • The <code>db_inst</code> parameter is specified as NULL. • The array in the <code>db_inst</code> is specified as NULL.

◆ **R_BLE_GATTS_RegisterCb()**

```
ble_status_t R_BLE_GATTS_RegisterCb ( ble_gatts_app_cb_t cb, uint8_t priority )
```

This function registers a callback for GATT Server event.

The number of the callback that may be registered by this function is the value specified by [R_BLE_GATTS_Init\(\)](#).

The result of this API call is returned by a return value.

Parameters

[in]	cb	Callback function for GATT Server event.
[in]	priority	The priority of the callback function. Valid range is $1 \leq \text{priority} \leq \text{BLE_GATTS_MAX_CB}$. A lower priority number means a higher priority level.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The cb parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The priority parameter is out of range.
BLE_ERR_CONTEXT_FULL(0x000B)	Host stack has already registered the maximum number of callbacks.

◆ **R_BLE_GATTS_DeregisterCb()**

```
ble_status_t R_BLE_GATTS_DeregisterCb ( ble_gatts_app_cb_t cb)
```

This function deregisters the callback function for GATT Server event.

The result of this API call is returned by a return value.

Parameters

[in]	cb	The callback function to be deregistered.
------	----	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The cb parameter is specified as NULL.
BLE_ERR_NOT_FOUND(0x000D)	The callback has not been registered.

◆ R_BLE_GATTS_Notification()

```
ble_status_t R_BLE_GATTS_Notification ( uint16_t conn_hdl, st_ble_gatt_hdl_value_pair_t *
p_ntf_data )
```

This function sends a notification of an attribute's value.

The maximum length of the attribute value that can be sent with notification is MTU-3.

The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to be sent the notification.
[in]	p_ntf_data	The attribute value to send.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_ntf_data parameter or the value field in the value field in the p_ntf_data parameter is NULL.
BLE_ERR_INVALID_ARG(0x0003)	The value_len field in the value field in the p_ntf_data parameter is 0 or the attr_hdl field in the p_ntf_data parameters is 0.
BLE_ERR_INVALID_OPERATION(0x0009)	This function was called while processing other request.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl was not found.

◆ R_BLE_GATTS_Indication()

```
ble_status_t R_BLE_GATTS_Indication ( uint16_t conn_hdl, st_ble_gatt_hdl_value_pair_t *
p_ind_data )
```

This function sends a indication of an attribute's value.

The maximum length of the attribute value that can be sent with indication is MTU-3.

The result of this API call is returned by a return value.

The remote device that receives a indication sends a confirmation.

BLE_GATTS_EVENT_HDL_VAL_CNF event notifies the application layer that the confirmation has been received.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to be sent the indication.
[in]	p_ind_data	The attribute value to send.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_ind_data parameter or the value field in the value field in the p_ind_data parameter is NULL.
BLE_ERR_INVALID_ARG(0x0003)	The value_len field in the value field in the p_ind_data parameter is 0 or the attr_hdl field in the p_ind_data parameters is 0.
BLE_ERR_INVALID_OPERATION(0x0009)	This function was called while processing other request.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl was not found.

◆ R_BLE_GATTS_GetAttr()

```
ble_status_t R_BLE_GATTS_GetAttr ( uint16_t conn_hdl, uint16_t attr_hdl, st_ble_gatt_value_t *
p_value )
```

This function gets a attribute value from the GATT Database.

The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	If the attribute value that has information about the remote device is retrieved, specify the remote device with the conn_hdl parameter. When information about the remote device is not required, set the conn_hdl parameter to BLE_GAP_INVALID_CONN_HDL.
[in]	attr_hdl	The attribute handle of the attribute value to be retrieved.
[out]	p_value	The attribute value to be retrieved.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_value parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The attr_hdl parameter is 0 or larger than the last attribute handle of GATT Database.
BLE_ERR_INVALID_STATE(0x0008)	The attribute is not in a state to be read.
BLE_ERR_INVALID_OPERATION(0x0009)	The attribute cannot be read.
BLE_ERR_NOT_FOUND(0x000D)	The attribute specified by the attr_hdl parameter is not belonging to any services or characteristics.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by the conn_hdl parameter was not found.

◆ R_BLE_GATTS_SetAttr()

```
ble_status_t R_BLE_GATTS_SetAttr ( uint16_t conn_hdl, uint16_t attr_hdl, st_ble_gatt_value_t *
p_value )
```

This function sets an attribute value to the GATT Database.

The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	If the attribute value that has information about the remote device is retrieved, specify the remote device with the conn_hdl parameter. When information about the remote device is not required, set the conn_hdl parameter to BLE_GAP_INVALID_CONN_HDL.
[in]	attr_hdl	The attribute handle of the attribute value to be set.
[in]	p_value	The attribute value to be set.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_value parameter is specified as NULL.
BLE_ERR_INVALID_DATA(0x0002)	The write size is larger than the length of the attribute value.
BLE_ERR_INVALID_ARG(0x0003)	The attr_hdl parameter is 0 or larger than the last attribute handle of GATT Database.
BLE_ERR_INVALID_STATE(0x0008)	The attribute is not in a state to be written.
BLE_ERR_INVALID_OPERATION(0x0009)	The attribute cannot be written.
BLE_ERR_NOT_FOUND(0x000D)	The attribute specified by the attr_hdl parameter is not belonging to any services or characteristics.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by the conn_hdl parameter was not found.

◆ R_BLE_GATTS_SendErrRsp()

```
ble_status_t R_BLE_GATTS_SendErrRsp ( uint16_t error_code)
```

This function sends an error response to a remote device.

The result is returned from the API.
 The error code specified in the callback is notified as Error Response to the remote device.
 The result of this API call is returned by a return value.

Parameters

[in]	error_code	The error codes to be notified the client. It is a bitwise OR of GATT Error Group ID : 0x3000 and the following error codes defined in Core Spec and Core Spec Supplement.																		
		<table border="1"> <thead> <tr> <th data-bbox="1078 640 1273 685">Error Code</th> <th data-bbox="1273 640 1473 685">description</th> </tr> </thead> <tbody> <tr> <td data-bbox="1078 698 1273 833">BLE_ERR_GATT_INVALID_HANDLE(0x3001)</td> <td data-bbox="1273 698 1473 833">Invalid attribute handle</td> </tr> <tr> <td data-bbox="1078 855 1273 990">BLE_ERR_GATT_READ_NOT_PERMITTED(0x3002)</td> <td data-bbox="1273 855 1473 990">The attribute cannot be read.</td> </tr> <tr> <td data-bbox="1078 1012 1273 1146">BLE_ERR_GATT_WRITE_NOT_PERMITTED(0x3003)</td> <td data-bbox="1273 1012 1473 1146">The attribute cannot be written.</td> </tr> <tr> <td data-bbox="1078 1169 1273 1303">BLE_ERR_GATT_INVALID_PDU(0x3004)</td> <td data-bbox="1273 1169 1473 1303">Invalid PDU.</td> </tr> <tr> <td data-bbox="1078 1326 1273 1482">BLE_ERR_GATT_INSUFFICIENT_AUTHENTICATION(0x3005)</td> <td data-bbox="1273 1326 1473 1482">The authentication to access the attribute is insufficient.</td> </tr> <tr> <td data-bbox="1078 1505 1273 1662">BLE_ERR_GATT_REQUEST_NOT_SUPPORTED(0x3006)</td> <td data-bbox="1273 1505 1473 1662">The request is not supported.</td> </tr> <tr> <td data-bbox="1078 1684 1273 1818">BLE_ERR_GATT_INVALID_OFFSET(0x3007)</td> <td data-bbox="1273 1684 1473 1818">The specified offset is larger than the length of the attribute value.</td> </tr> <tr> <td data-bbox="1078 1841 1273 2045">BLE_ERR_GATT_INSUFFICIENT_AUTHORIZATION(0x3008)</td> <td data-bbox="1273 1841 1473 2045">Authorization is required to access</td> </tr> </tbody> </table>	Error Code	description	BLE_ERR_GATT_INVALID_HANDLE(0x3001)	Invalid attribute handle	BLE_ERR_GATT_READ_NOT_PERMITTED(0x3002)	The attribute cannot be read. 			BLE_ERR_GATT_OUT_OF_RANGE(0x30FF)	The attribute value is out of range.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The Group ID of the error_code parameter is not 0x3000, or it is 0x3000.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other error response, this function was called.

◆ **R_BLE_GATTS_RspExMtu()**

```
ble_status_t R_BLE_GATTS_RspExMtu ( uint16_t conn_hdl, uint16_t mtu )
```

This function replies to a MTU Exchange Request from a remote device.

BLE_GATTS_EVENT_EX_MTU_REQ event notifies the application layer that a MTU Exchange Request has been received. Therefore when the callback has received the event, call this function.

The new MTU is the minimum of the mtu parameter specified by this function and the mtu field in BLE_GATTS_EVENT_EX_MTU_REQ event.

Default MTU size is 23 bytes.

The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to be sent MTU Exchange Response.
[in]	mtu	The maximum size(in bytes) of the GATT PDU that GATT Server can receive. Valid range is 23 <= mtu <= 247.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The mtu parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	This function was called while processing other request.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl was not found.

◆ R_BLE_GATTS_SetPrepareQueue()

```
ble_status_t R_BLE_GATTS_SetPrepareQueue ( st_ble_gatt_pre_queue_t * p_pre_queues, uint8_t queue_num )
```

Register prepare queue and buffer in Host Stack.

This function registers the prepare queue and buffer for long characteristic write and reliable writes. The result of this API call is returned by a return value.

Parameters

[in]	p_pre_queues	The prepare write queues to be registered.
[in]	queue_num	The number of prepare write queues to be registered.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_pre_queue parameter is specified as NULL.

4.3.2.4 GATT_CLIENT

Interfaces » BLE Interface

Functions

ble_status_t [R_BLE_GATTC_Init](#) (uint8_t cb_num)

This function initializes the GATT Client and registers the number of the callbacks for GATT Client event. [More...](#)

ble_status_t [R_BLE_GATTC_RegisterCb](#) (ble_gattc_app_cb_t cb, uint8_t priority)

This function registers a callback function for GATT Client event. [More...](#)

ble_status_t [R_BLE_GATTC_DeregisterCb](#) (ble_gattc_app_cb_t cb)

This function deregisters the callback function for GATT Client event. [More...](#)

ble_status_t [R_BLE_GATTC_ReqExMtu](#) (uint16_t conn_hdl, uint16_t mtu)

This function sends a MTU Exchange Request PDU to a GATT Server

in order to change the current MTU. [More...](#)

ble_status_t [R_BLE_GATTC_DiscAllPrimServ](#) (uint16_t conn_hdl)

This function discovers all Primary Services in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_DiscPrimServ](#) (uint16_t conn_hdl, uint8_t *p_uuid, uint8_t uuid_type)

This function discovers Primary Service specified by p_uuid in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_DiscAllSecondServ](#) (uint16_t conn_hdl)

This function discovers all Secondary Services in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_DiscInclServ](#) (uint16_t conn_hdl, st_ble_gatt_hdl_range_t *p_range)

This function discovers Included Services within the specified attribute handle range in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_DiscAllChar](#) (uint16_t conn_hdl, st_ble_gatt_hdl_range_t *p_range)

This function discovers Characteristic within the specified attribute handle range in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_DiscCharByUuid](#) (uint16_t conn_hdl, uint8_t *p_uuid, uint8_t uuid_type, st_ble_gatt_hdl_range_t *p_range)

This function discovers Characteristic specified by uuid within the specified attribute handle range in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_DiscAllCharDesc](#) (uint16_t conn_hdl, st_ble_gatt_hdl_range_t *p_range)

This function discovers Characteristic Descriptor within the specified attribute handle range in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_ReadChar](#) (uint16_t conn_hdl, uint16_t value_hdl)

This function reads a Characteristic/Characteristic Descriptor in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_ReadCharUsingUuid](#) (uint16_t conn_hdl, uint8_t *p_uuid, uint8_t uuid_type, st_ble_gatt_hdl_range_t *p_range)

This function reads a Characteristic in a GATT Server using a specified UUID. [More...](#)

ble_status_t [R_BLE_GATTC_ReadLongChar](#) (uint16_t conn_hdl, uint16_t value_hdl, uint16_t offset)

This function reads a Long Characteristic in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_ReadMultiChar](#) (uint16_t conn_hdl, st_ble_gattc_rd_multi_req_param_t *p_list)

This function reads multiple Characteristics in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_WriteCharWithoutRsp](#) (uint16_t conn_hdl, st_ble_gatt_hdl_value_pair_t *p_write_data)

This function writes a Characteristic in a GATT Server without response. [More...](#)

ble_status_t [R_BLE_GATTC_SignedWriteChar](#) (uint16_t conn_hdl, st_ble_gatt_hdl_value_pair_t *p_write_data)

This function writes Signed Data to a Characteristic in a GATT Server without response. [More...](#)

ble_status_t [R_BLE_GATTC_WriteChar](#) (uint16_t conn_hdl, st_ble_gatt_hdl_value_pair_t *p_write_data)

This function writes a Characteristic in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_WriteLongChar](#) (uint16_t conn_hdl, st_ble_gatt_hdl_value_pair_t *p_write_data, uint16_t offset)

This function writes a Long Characteristic in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_ReliableWrites](#) (uint16_t conn_hdl, st_ble_gattc_reliable_writes_char_pair_t *p_char_pair, uint8_t pair_num, uint8_t auto_flag)

This function performs the Reliable Writes procedure described in GATT Specification. [More...](#)

ble_status_t [R_BLE_GATTC_ExecWrite](#) (uint16_t conn_hdl, uint8_t exe_flag)

If the auto execute of Reliable Writes is not specified by

[R_BLE_GATTC_ReliableWrites\(\)](#), this function is used to execute a write to Characteristic. [More...](#)

Detailed Description

Data Structures

struct [st_ble_gatt_hdl_range_t](#)
Attribute handle range. [More...](#)

struct [st_ble_gattc_reliable_writes_char_pair_t](#)
This is used in [R_BLE_GATTC_ReliableWrites\(\)](#) to specify the pair of Characteristic Value and Characteristic Value Handle. [More...](#)

struct [st_ble_gattc_conn_evt_t](#)
This structure notifies that the link with the GATT Server has been established. [More...](#)

struct [st_ble_gattc_disconn_evt_t](#)
This structure notifies that the link with the GATT Server has been disconnected. [More...](#)

struct [st_ble_gattc_ex_mtu_rsp_evt_t](#)
This structure notifies that a MTU Exchange Response PDU has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_serv_16_evt_t](#)
This structure notifies that a 16-bit UUID Service has been discovered. [More...](#)

struct [st_ble_gattc_serv_128_evt_t](#)
This structure notifies that a 128-bit UUID Service has been discovered. [More...](#)

struct [st_ble_gattc_inc_serv_16_evt_t](#)
This structure notifies that a 16-bit UUID Included Service has been discovered. [More...](#)

struct [st_ble_gattc_inc_serv_128_evt_t](#)

This structure notifies that a 128-bit UUID Included Service has been discovered. [More...](#)

struct [st_ble_gattc_char_16_evt_t](#)

This structure notifies that a 16-bit UUID Characteristic has been discovered. [More...](#)

struct [st_ble_gattc_char_128_evt_t](#)

This structure notifies that a 128-bit UUID Characteristic has been discovered. [More...](#)

struct [st_ble_gattc_char_desc_16_evt_t](#)

This structure notifies that a 16-bit UUID Characteristic Descriptor has been discovered. [More...](#)

struct [st_ble_gattc_char_desc_128_evt_t](#)

This structure notifies that a 128-bit UUID Characteristic Descriptor has been discovered. [More...](#)

struct [st_ble_gattc_err_rsp_evt_t](#)

This structure notifies that a Error Response PDU has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_ntf_evt_t](#)

This structure notifies that a Notification PDU has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_ind_evt_t](#)

This structure notifies that a Indication PDU has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_rd_char_evt_t](#)

This structure notifies that read response to [R_BLE_GATTC_ReadChar\(\)](#) or [R_BLE_GATTC_ReadCharUsingUuid\(\)](#) has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_wr_char_evt_t](#)

This structure notifies that write response to [R_BLE_GATTC_WriteChar\(\)](#) has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_rd_multi_char_evt_t](#)

This structure notifies that read response to [R_BLE_GATTC_ReadMultiChar\(\)](#) has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_char_part_wr_evt_t](#)

This structure notifies that write response to [R_BLE_GATTC_WriteLongChar\(\)](#) or [R_BLE_GATTC_ReliableWrites\(\)](#) has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_reliable_writes_comp_evt_t](#)

This structure notifies that a response to [R_BLE_GATTC_ExecWrite\(\)](#) has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_rd_multi_req_param_t](#)

This is used in [R_BLE_GATTC_ReadMultiChar\(\)](#) to specify multiple Characteristics to be read. [More...](#)

struct [st_ble_gattc_evt_data_t](#)

[st_ble_gattc_evt_data_t](#) is the type of the data notified in a GATT Client Event. [More...](#)

struct [st_ble_gatt_value_t](#)

Attribute Value. [More...](#)

struct [st_ble_gatt_hdl_value_pair_t](#)

Attribute handle and attribute Value. [More...](#)

Macros

#define [BLE_GATTC_EXECUTE_WRITE_CANCEL_FLAG](#)

#define [BLE_GATTC_EXECUTE_WRITE_EXEC_FLAG](#)

#define [BLE_GATTC_MAX_CB](#)

GATT Client Callback Number.

```
#define BLE_GATTC_EXEC_AUTO
```

Auto execution.

```
#define BLE_GATTC_EXEC_NOT_AUTO
```

Not auto execution.

```
#define BLE_GATTC_RELIABLE_WRITES_MAX_CHAR_PAIR
```

Length of the Queue used with Prepare Write procedure to write a characteristic whose size is larger than MTU.

Typedefs

```
typedef void(* ble_gattc_app_cb_t) (uint16_t event_type, ble_status_t event_result,
st_ble_gattc_evt_data_t *p_event_data)
```

ble_gattc_app_cb_t is the GATT Client Event callback function type.
[More...](#)

Enumerations

```
enum e_r_ble_gattc_evt_t
```

GATT Client Event Identifier. [More...](#)

Data Structure Documentation

◆ st_ble_gatt_hdl_range_t

struct st_ble_gatt_hdl_range_t		
Attribute handle range.		
Data Fields		
uint16_t	start_hdl	Start Attribute Handle.
uint16_t	end_hdl	End Attribute Handle.

◆ st_ble_gattc_reliable_writes_char_pair_t

struct st_ble_gattc_reliable_writes_char_pair_t		
This is used in R_BLE_GATTC_ReliableWrites() to specify the pair of Characteristic Value and Characteristic Value Handle.		
Data Fields		

st_ble_gatt_hdl_value_pair_t	write_data	Pair of Characteristic Value and Characteristic Value Handle.
uint16_t	offset	Offset that indicates the location to be written. Normally, set 0 to this parameter. If this parameter sets to a value other than 0, Adjust the offset parameter and the length of the value to be written not to exceed the length of the Characteristic.

◆ st_ble_gattc_conn_evt_t

struct st_ble_gattc_conn_evt_t		
This structure notifies that the link with the GATT Server has been established.		
Data Fields		
st_ble_dev_addr_t *	p_addr	Address of the GATT Server.

◆ st_ble_gattc_disconn_evt_t

struct st_ble_gattc_disconn_evt_t		
This structure notifies that the link with the GATT Server has been disconnected.		
Data Fields		
st_ble_dev_addr_t *	p_addr	Address of the GATT Server.

◆ st_ble_gattc_ex_mtu_rsp_evt_t

struct st_ble_gattc_ex_mtu_rsp_evt_t		
This structure notifies that a MTU Exchange Response PDU has been received from a GATT Server.		
Data Fields		
uint16_t	mtu	MTU size(in bytes) that GATT Server can receive.

◆ st_ble_gattc_serv_16_evt_t

struct st_ble_gattc_serv_16_evt_t		
This structure notifies that a 16-bit UUID Service has been discovered.		
Data Fields		
st_ble_gatt_hdl_range_t	range	Attribute handle range of the 16-bit UUID service.
uint16_t	uuid_16	Service UUID.

◆ st_ble_gattc_serv_128_evt_t

struct st_ble_gattc_serv_128_evt_t		
------------------------------------	--	--

This structure notifies that a 128-bit UUID Service has been discovered.		
Data Fields		
st_ble_gatt_hdl_range_t	range	Attribute handle range of the 128-bit UUID service.
uint8_t	uuid_128[BLE_GATT_128_BIT_UUID_SIZE]	Service UUID.

◆ [st_ble_gattc_inc_serv_16_evt_t](#)

struct st_ble_gattc_inc_serv_16_evt_t		
This structure notifies that a 16-bit UUID Included Service has been discovered.		
Data Fields		
uint16_t	decl_hdl	Service Declaration handle of the 16-bit UUID Included Service.
st_ble_gattc_serv_16_evt_t	service	The contents of the Included Service.

◆ [st_ble_gattc_inc_serv_128_evt_t](#)

struct st_ble_gattc_inc_serv_128_evt_t		
This structure notifies that a 128-bit UUID Included Service has been discovered.		
Data Fields		
uint16_t	decl_hdl	Service Declaration handle of the 128-bit UUID Included Service.
st_ble_gattc_serv_128_evt_t	service	The contents of the Included Service.

◆ [st_ble_gattc_char_16_evt_t](#)

struct st_ble_gattc_char_16_evt_t		
This structure notifies that a 16-bit UUID Characteristic has been discovered.		
Data Fields		
uint16_t	decl_hdl	Attribute handle of Characteristic Declaration.
uint8_t	cproperty	Characteristic Properties. It is a bitwise OR of the following values. Refer to Core Spec [Vol.3] Generic Attribute Profile(GATT) "3.3.1.1 Characteristic Properties" regarding the details of the Characteristic Properties.

		value	description
		0x01	Broadcast property
		0x02	Read property
		0x04	Write Without Response property
		0x08	Write property
		0x10	Notify property
		0x20	Indicate property
		0x40	Authenticated Signed Writes property
		0x80	Extended Properties property
uint16_t	value_hdl	Value Handle of the Characteristic.	
uint16_t	uuid_16	Characteristic UUID.	

◆ **st_ble_gattc_char_128_evt_t**

struct st_ble_gattc_char_128_evt_t						
This structure notifies that a 128-bit UUID Characteristic has been discovered.						
Data Fields						
uint16_t	decl_hdl	Attribute Handle of Characteristic Declaration.				
uint8_t	cproperty	Characteristic Properties. It is a bitwise OR of the following values. Refer to Core Spec [Vol.3] Generic Attribute Profile(GATT) "3.3.1.1 Characteristic Properties" regarding the details of the Characteristic Properties.				
		<table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x01</td> <td>Broadcast property</td> </tr> </tbody> </table>	value	description	0x01	Broadcast property
value	description					
0x01	Broadcast property					

		0x02	Read property
		0x04	Write Without Response property
		0x08	Write property
		0x10	Notify property
		0x20	Indicate property
		0x40	Authenticated Signed Writes property
		0x80	Extended Properties property
uint16_t	value_hdl	Value Handle of the Characteristic.	
uint8_t	uuid_128[BLE_GATT_128_BIT_UUID_SIZE]	Characteristic UUID.	

◆ st_ble_gattc_char_desc_16_evt_t

struct st_ble_gattc_char_desc_16_evt_t		
This structure notifies that a 16-bit UUID Characteristic Descriptor has been discovered.		
Data Fields		
uint16_t	desc_hdl	Attribute Handle of Characteristic Descriptor.
uint16_t	uuid_16	Characteristic Descriptor UUID.

◆ st_ble_gattc_char_desc_128_evt_t

struct st_ble_gattc_char_desc_128_evt_t		
This structure notifies that a 128-bit UUID Characteristic Descriptor has been discovered.		
Data Fields		
uint16_t	desc_hdl	Attribute Handle of Characteristic Descriptor.
uint8_t	uuid_128[BLE_GATT_128_BIT_UUID_SIZE]	Characteristic Descriptor UUID.

◆ st_ble_gattc_err_rsp_evt_t

struct st_ble_gattc_err_rsp_evt_t		
This structure notifies that a Error Response PDU has been received from a GATT Server.		

Data Fields														
uint8_t	op_code	<p>The op code of the ATT Request that causes the Error Response.</p> <table border="1"> <thead> <tr> <th>op_code</th> </tr> </thead> <tbody> <tr> <td>Exchange MTU Request(0x02)</td> </tr> <tr> <td>Find Information Request(0x04)</td> </tr> <tr> <td>Find By Type Value Request(0x06)</td> </tr> <tr> <td>Read By Type Request(0x08)</td> </tr> <tr> <td>Read Request(0x0A)</td> </tr> <tr> <td>Read Blob Request(0x0C)</td> </tr> <tr> <td>Read Multiple Request(0x0E)</td> </tr> <tr> <td>Read by Group Type Request(0x10)</td> </tr> <tr> <td>Write Request(0x12)</td> </tr> <tr> <td>Prepare Write Request(0x16)</td> </tr> <tr> <td>Execute Write Request(0x18)</td> </tr> </tbody> </table>	op_code	Exchange MTU Request(0x02)	Find Information Request(0x04)	Find By Type Value Request(0x06)	Read By Type Request(0x08)	Read Request(0x0A)	Read Blob Request(0x0C)	Read Multiple Request(0x0E)	Read by Group Type Request(0x10)	Write Request(0x12)	Prepare Write Request(0x16)	Execute Write Request(0x18)

uint16_t	attr_hdl	Attribute handle that is target for the request.												
uint16_t	rsp_code	<p>The error codes notified from the GATT Server.</p> <p>It is a bitwise OR of GATT Error Group ID : 0x3000 and the following error codes defined in Core Spec and Core Spec Supplement.</p> <table border="1"> <thead> <tr> <th>Error Code</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_ERR_GATT_INVALID_HANDLE(0x3001)</td> <td>Invalid attribute handle</td> </tr> <tr> <td>BLE_ERR_GATT_READ_NOT_PERMITTED(0x3002)</td> <td>The attribute cannot be read.</td> </tr> <tr> <td>BLE_ERR_GATT_WRITE_NOT_PERMITTED(0x3003)</td> <td>The attribute cannot be written.</td> </tr> <tr> <td>BLE_ERR_GATT_INVALID_PDU</td> <td>Invalid PDU.</td> </tr> </tbody> </table>	Error Code	description	BLE_ERR_GATT_INVALID_HANDLE(0x3001)	Invalid attribute handle	BLE_ERR_GATT_READ_NOT_PERMITTED(0x3002)	The attribute cannot be read.	BLE_ERR_GATT_WRITE_NOT_PERMITTED(0x3003)	The attribute cannot be written.	BLE_ERR_GATT_INVALID_PDU	Invalid PDU.		
Error Code	description													
BLE_ERR_GATT_INVALID_HANDLE(0x3001)	Invalid attribute handle													
BLE_ERR_GATT_READ_NOT_PERMITTED(0x3002)	The attribute cannot be read.													
BLE_ERR_GATT_WRITE_NOT_PERMITTED(0x3003)	The attribute cannot be written.													
BLE_ERR_GATT_INVALID_PDU	Invalid PDU.													

T_INVALID_PD U(0x3004)	
BLE_ERR_GATT_INSUFFICIENT_AUTHENTICATION(0x3005)	The authentication to access the attribute is insufficient.
BLE_ERR_GATT_REQUEST_NOT_SUPPORTED(0x3006)	The request is not supported.
BLE_ERR_GATT_INVALID_OFFSET(0x3007)	The specified offset is larger than the length of the attribute value.
BLE_ERR_GATT_INSUFFICIENT_AUTHORIZATION(0x3008)	Authorization is required to access the attribute.
BLE_ERR_GATT_PREPARE_WRITE_QUEUE_FULL(0x3009)	The Write Queue in the GATT Server is full.
BLE_ERR_GATT_ATTRIBUTE_NOT_FOUND(0x300A)	The specified attribute is not found.
BLE_ERR_GATT_ATTRIBUTE_NOT_LONG(0x300B)	The attribute cannot be read by Read Blob Request.
BLE_ERR_GATT_INSUFFICIENT_ENCRYPTION_KEY_SIZE(0x300C)	The Encryption Key Size is insufficient.
BLE_ERR_GATT_INVALID_ATTRIBUTE_LENGTH(0x300D)	The length of the specified attribute is invalid.
BLE_ERR_GATT_UNLIKELY_ERROR(0x300E)	Because an error has occurred, the process cannot be advanced.

BLE_ERR_GATT_INSUFFICIENT_ENCRYPTION(0x300F)	Encryption is required to access the attribute.
BLE_ERR_GATT_UNSUPPORTED_GROUP_TYPE(0x3010)	The type of the specified attribute is not supported.
BLE_ERR_GATT_INSUFFICIENT_RESOURCES(0x3011)	The resource to complete the request is insufficient.
0x3080 - 0x309F	Application Error. The upper layer defines the error codes.
0x30E0 - 0x30FF	The error code defined in Common Profile and Service Error Core Specification Supplement(CSS). CSS ver.7 defines the error codes from 0x30FC to 0x30FF.
BLE_ERR_GATT_WRITE_REQUEST_REJECTED(0x30FC)	The Write Request has not been completed due to the reason other than Permission.
BLE_ERR_GATT_INVALID_CONFIG(0x30FD)	The CCCD is set to be invalid.
BLE_ERR_GATT_ALREADY_IN_PROGRESS(0x30FE)	The request is now in progress.
BLE_ERR_GATT_OUT_OF_RANGE	The attribute value is out of

		NGE(0x30FF) range.
--	--	--------------------

◆ **st_ble_gattc_ntf_evt_t**

struct st_ble_gattc_ntf_evt_t		
This structure notifies that a Notification PDU has been received from a GATT Server.		
Data Fields		
st_ble_gatt_hdl_value_pair_t	data	Characteristic that causes the Notification.

◆ **st_ble_gattc_ind_evt_t**

struct st_ble_gattc_ind_evt_t		
This structure notifies that a Indication PDU has been received from a GATT Server.		
Data Fields		
st_ble_gatt_hdl_value_pair_t	data	Characteristic that causes the Indication.

◆ **st_ble_gattc_rd_char_evt_t**

struct st_ble_gattc_rd_char_evt_t		
This structure notifies that read response to R_BLE_GATTC_ReadChar() or R_BLE_GATTC_ReadCharUsingUuid() has been received from a GATT Server.		
Data Fields		
st_ble_gatt_hdl_value_pair_t	read_data	The contents of the Characteristic that has been read.

◆ **st_ble_gattc_wr_char_evt_t**

struct st_ble_gattc_wr_char_evt_t		
This structure notifies that write response to R_BLE_GATTC_WriteChar() has been received from a GATT Server.		
Data Fields		
uint16_t	value_hdl	Value Handle of the Characteristic/Characteristic Descriptor that has been written.

◆ **st_ble_gattc_rd_multi_char_evt_t**

struct st_ble_gattc_rd_multi_char_evt_t		
This structure notifies that read response to R_BLE_GATTC_ReadMultiChar() has been received from a GATT Server.		
Data Fields		
uint16_t	value_hdl_num	The number of Value Handles of the Characteristics that has

		been read.
st_ble_gatt_value_t	multi_char_val	The contents of multiple Characteristics that have been read.

◆ st_ble_gattc_char_part_wr_evt_t

struct st_ble_gattc_char_part_wr_evt_t		
This structure notifies that write response to R_BLE_GATTC_WriteLongChar() or R_BLE_GATTC_ReliableWrites() has been received from a GATT Server.		
Data Fields		
st_ble_gatt_hdl_value_pair_t	write_data	The data to be written to the Characteristic/Long Characteristic/Long Characteristic Descriptor.
uint16_t	offset	Offset that indicates the location to be written.

◆ st_ble_gattc_reliable_writes_comp_evt_t

struct st_ble_gattc_reliable_writes_comp_evt_t								
This structure notifies that a response to R_BLE_GATTC_ExecWrite() has been received from a GATT Server.								
Data Fields								
uint8_t	exe_flag	This field indicates the command of the Execute Write that has been done.						
		<table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x00</td> <td>Cancel the write.</td> </tr> <tr> <td>0x01</td> <td>Execute the write.</td> </tr> </tbody> </table>	value	description	0x00	Cancel the write.	0x01	Execute the write.
		value	description					
0x00	Cancel the write.							
0x01	Execute the write.							

◆ st_ble_gattc_rd_multi_req_param_t

struct st_ble_gattc_rd_multi_req_param_t		
This is used in R_BLE_GATTC_ReadMultiChar() to specify multiple Characteristics to be read.		
Data Fields		
uint16_t *	p_hdl_list	List of Value Handles that point the Characteristics to be read.
uint16_t	list_count	The number of Value Handles included in the hdl_list parameter.

◆ st_ble_gattc_evt_data_t

struct st_ble_gattc_evt_data_t

`st_ble_gattc_evt_data_t` is the type of the data notified in a GATT Client Event.

Data Fields		
uint16_t	conn_hdl	Connection handle identifying the GATT Server.
uint16_t	param_len	The size of GATT Client Event parameters.
void *	p_param	GATT Client Event parameters. This parameter differs in each GATT Client Event.

◆ `st_ble_gatt_value_t`

Data Fields		
uint16_t	value_len	Length of the attribute value.
uint8_t *	p_value	Attribute Value.

◆ `st_ble_gatt_hdl_value_pair_t`

Data Fields		
uint16_t	attr_hdl	Attribute Handle.
<code>st_ble_gatt_value_t</code>	value	Attribute Value.

Macro Definition Documentation

◆ `BLE_GATTC_EXECUTE_WRITE_CANCEL_FLAG`

<code>#define BLE_GATTC_EXECUTE_WRITE_CANCEL_FLAG</code>
GATT Execute Write Cancel Flag.

◆ `BLE_GATTC_EXECUTE_WRITE_EXEC_FLAG`

<code>#define BLE_GATTC_EXECUTE_WRITE_EXEC_FLAG</code>
GATT Execute Write Execute Flag.

Typedef Documentation

◆ ble_gattc_app_cb_t

ble_gattc_app_cb_t

ble_gattc_app_cb_t is the GATT Client Event callback function type.

Parameters

[in]	event_type	The type of GATT Client Event.
[in]	event_result	The result of GATT Client Event
[in]	p_event_data	Data notified by GATT Client Event.

Returns

none

Enumeration Type Documentation

◆ e_r_ble_gattc_evt_t

enum e_r_ble_gattc_evt_t

GATT Client Event Identifier.

Enumerator

BLE_GATTC_EVENT_ERROR_RSP

This event notifies the application layer that a problem has occurred in the GATT Server while processing a request from GATT Client.

When GATT Client has received a Error Response PDU from a GATT Server, BLE_GATTC_EVENT_ERROR_RSP event is notified the application layer.

Event Code: 0x4001**result:**

BLE_SUCCESS(0x0 Success
000)

Event Data:

st_ble_gattc_err_rsp_evt_t BLE_GATTC_EVENT_ERROR_RSP

BLE_GATTC_EVENT_EX_MTU_RSP

This event notifies the application layer that a MTU Exchange Response PDU has been received from a GATT Server.

	<p>Event Code: 0x4003</p> <p>result:</p> <p>BLE_SUCCESS(0x000) Success</p> <p>BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a Exchange MTU Response since GATT Client sent a Exchange MTU Request PDU to the GATT Server.</p> <p>Event Data:</p> <p>st_ble_gattc_ex_mtu_rsp_evt_tBLE_GATTC_EVENT_EX_MTU_RSP</p>
BLE_GATTC_EVENT_CHAR_READ_BY_UUID_RSP	<p>When the read of Characteristic specified by UUID has been completed, this event is notified to the application layer.</p> <p>Event Code: 0x4009</p> <p>result:</p> <p>BLE_SUCCESS(0x000) Success</p> <p>BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a Exchange MTU Response since GATT Client sent a Exchange MTU Request PDU to the GATT Server.</p> <p>Event Data:</p> <p>st_ble_gattc_rd_char_evt_tBLE_GATTC_EVENT_CHAR_READ_BY_UUID_RSP</p>
BLE_GATTC_EVENT_CHAR_READ_RSP	<p>When the read of Characteristic/Characteristic Descriptor has been completed, this event is notified to the application layer.</p> <p>Event Code: 0x400B</p> <p>result:</p>

	<p>BLE_SUCCESS(0x000) Success</p> <p>BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a read response since GATT Client sent a request for read by R_BLE_GATTC_ReadCharUsingUuid() to the GATT Server.</p> <p>Event Data:</p> <p>st_ble_gattc_rd_char_evt_tBLE_GATTC_EVENT_CHAR_READ_RSP</p>
BLE_GATTC_EVENT_CHAR_PART_READ_RSP	<p>After calling R_BLE_GATTC_ReadLongChar(), this event notifies the application layer that the partial contents of Long Characteristic/Long Characteristic Descriptor has been received from the GATT Server.</p> <p>Event Code: 0x400D</p> <p>result:</p> <p>BLE_SUCCESS(0x000) Success</p> <p>BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a read response since GATT Client sent a request for read by R_BLE_GATTC_ReadLongChar() to the GATT Server.</p> <p>Event Data:</p> <p>st_ble_gattc_rd_char_evt_tBLE_GATTC_EVENT_CHAR_PART_READ_RSP</p>
BLE_GATTC_EVENT_MULTI_CHAR_READ_RSP	<p>This event notifies the application layer that the read of multiple Characteristics has been completed.</p> <p>Event Code: 0x400F</p>

	<p>result:</p> <p>BLE_SUCCESS(0x000) Success</p> <p>BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a read response since GATT Client sent a request for read by R_BLE_GATTC_ReadMultiChar() to the GATT Server.</p> <p>Event Data:</p> <p>st_ble_gattc_rd_multi_char_evt_tBLE_GATTC_EVENT_MULTI_CHAR_READ_RSP</p>
BLE_GATTC_EVENT_CHAR_WRITE_RSP	<p>This event notifies the application layer that the write of Characteristic/Characteristic Descriptor has been completed.</p> <p>Event Code: 0x4013</p> <p>result:</p> <p>BLE_SUCCESS(0x000) Success</p> <p>BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a write response since GATT Client sent a request for write by R_BLE_GATTC_WriteChar() to the GATT Server.</p> <p>Event Data:</p> <p>st_ble_gattc_wr_char_evt_tBLE_GATTC_EVENT_CHAR_WRITE_RSP</p>

Function Documentation

◆ R_BLE_GATTC_Init()

```
ble_status_t R_BLE_GATTC_Init ( uint8_t cb_num)
```

This function initializes the GATT Client and registers the number of the callbacks for GATT Client event.

Specify the `cb_num` parameter to a value between 1 and `BLE_GATTC_MAX_CB`.

[R_BLE_GATTC_RegisterCb\(\)](#) registers the callback.

The result of this API call is returned by a return value.

Parameters

[in]	<code>cb_num</code>	The number of callbacks to be registered.
------	---------------------	---

Return values

<code>BLE_SUCCESS(0x0000)</code>	Success
<code>BLE_ERR_INVALID_ARG(0x0003)</code>	The <code>cb_num</code> parameter is out of range.

◆ **R_BLE_GATTC_RegisterCb()**

```
ble_status_t R_BLE_GATTC_RegisterCb ( ble_gattc_app_cb_t cb, uint8_t priority )
```

This function registers a callback function for GATT Client event.

The number of the callback that may be registered by this function is the value specified by [R_BLE_GATTC_Init\(\)](#).

The result of this API call is returned by a return value.

Parameters

[in]	cb	Callback function for GATT Client event.
[in]	priority	The priority of the callback function. Valid range is $1 \leq \text{priority} \leq \text{BLE_GATTC_MAX_CB}$. A lower priority number means a higher priority level.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The cb parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The priority parameter is out of range.
BLE_ERR_CONTEXT_FULL(0x000B)	Host stack has already registered the maximum number of callbacks.

◆ **R_BLE_GATTC_DeregisterCb()**

```
ble_status_t R_BLE_GATTC_DeregisterCb ( ble_gattc_app_cb_t cb)
```

This function deregisters the callback function for GATT Client event.

The result of this API call is returned by a return value.

Parameters

[in]	cb	The callback function to be deregistered.
------	----	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The cb parameter is specified as NULL.
BLE_ERR_NOT_FOUND(0x000D)	The callback has not been registered.

◆ **R_BLE_GATTC_ReqExMtu()**

```
ble_status_t R_BLE_GATTC_ReqExMtu ( uint16_t conn_hdl, uint16_t mtu )
```

This function sends a MTU Exchange Request PDU to a GATT Server in order to change the current MTU.

MTU Exchange Response is notified by BLE_GATTC_EVENT_EX_MTU_RSP event.

The new MTU is the minimum value of the mtu parameter specified by this function and the mtu field in BLE_GATTC_EVENT_EX_MTU_RSP event. Default MTU size is 23 bytes.

The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be sent.
[in]	mtu	The maximum size(in bytes) of the GATT PDU that GATT Client can receive. Valid range is 23 <= mtu <= 247.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The mtu parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ **R_BLE_GATTC_DiscAllPrimServ()**

```
ble_status_t R_BLE_GATTC_DiscAllPrimServ ( uint16_t conn_hdl)
```

This function discovers all Primary Services in a GATT Server.

When 16-bit UUID Primary Service has been discovered,
BLE_GATTC_EVENT_PRIM_SERV_16_DISC_IND event is notified to the application layer.
When 128-bit UUID Primary Service has been discovered,
BLE_GATTC_EVENT_PRIM_SERV_128_DISC_IND event is notified to the application layer.
When the Primary Service discovery has been completed,
BLE_GATTC_EVENT_ALL_PRIM_SERV_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.
------	----------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_OPERATION(0x0009)	This function was called while processing other request.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_DiscPrimServ()

```
ble_status_t R_BLE_GATTC_DiscPrimServ ( uint16_t conn_hdl, uint8_t* p_uuid, uint8_t uuid_type )
```

This function discovers Primary Service specified by p_uuid in a GATT Server.

When Primary Service whose uuid is the same as the specified uuid has been discovered, BLE_GATTC_EVENT_PRIM_SERV_16_DISC_IND event or BLE_GATTC_EVENT_PRIM_SERV_128_DISC_IND event is notified to the application layer. When the Primary Service discovery has been completed, BLE_GATTC_EVENT_PRIM_SERV_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.						
[in]	p_uuid	UUID of Primary Service to be discovered.						
[in]	uuid_type	<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GATT_1_6_BIT_UUID_FORMAT(0x01)</td> <td>16-bit UUID</td> </tr> <tr> <td>BLE_GATT_1_28_BIT_UUID_FORMAT(0x02)</td> <td>128-bit UUID</td> </tr> </tbody> </table>	macro	description	BLE_GATT_1_6_BIT_UUID_FORMAT(0x01)	16-bit UUID	BLE_GATT_1_28_BIT_UUID_FORMAT(0x02)	128-bit UUID
macro	description							
BLE_GATT_1_6_BIT_UUID_FORMAT(0x01)	16-bit UUID							
BLE_GATT_1_28_BIT_UUID_FORMAT(0x02)	128-bit UUID							

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_uuid parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The uuid_type parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ **R_BLE_GATTC_DiscAllSecondServ()**

```
ble_status_t R_BLE_GATTC_DiscAllSecondServ ( uint16_t conn_hdl)
```

This function discovers all Secondary Services in a GATT Server.

When a 16-bit UUID Secondary Service has been discovered, BLE_GATTC_EVENT_SECOND_SERV_16_DISC_IND event is notified to the application layer.
 When a 128-bit UUID Secondary Service has been discovered, BLE_GATTC_EVENT_SECOND_SERV_128_DISC_IND event is notified to the application layer.
 When the Secondary Service discovery has been completed, BLE_GATTC_EVENT_ALL_SECOND_SERV_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.
------	----------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ **R_BLE_GATTC_DiscIncServ()**

```
ble_status_t R_BLE_GATTC_DiscIncServ ( uint16_t conn_hdl, st_ble_gatt_hdl_range_t * p_range )
```

This function discovers Included Services within the specified attribute handle range in a GATT Server.

When Included Service that includes 16-bit UUID Service has been discovered, BLE_GATTC_EVENT_INC_SERV_16_DISC_IND event is notified to the application layer.
 When Included Service that includes 128-bit UUID Service has been discovered, BLE_GATTC_EVENT_INC_SERV_128_DISC_IND event is notified to the application layer.
 When the Included Service discovery has been completed, BLE_GATTC_EVENT_INC_SERV_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.
[in]	p_range	Retrieval range of Included Service.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_range parameter is specified as NULL.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_DiscAllChar()

```
ble_status_t R_BLE_GATTC_DiscAllChar ( uint16_t conn_hdl, st_ble_gatt_hdl_range_t* p_range )
```

This function discovers Characteristic within the specified attribute handle range in a GATT Server.

When 16-bit UUID Characteristic has been discovered, BLE_GATTC_EVENT_CHAR_16_DISC_IND event is notified to the application layer.

When 128-bit UUID Characteristic has been discovered, BLE_GATTC_EVENT_CHAR_128_DISC_IND event is notified to the application layer.

When the Characteristic discovery has been completed, BLE_GATTC_EVENT_ALL_CHAR_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.
[in]	p_range	Retrieval range of Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_range parameter is specified as NULL.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_DiscCharByUuid()

```
ble_status_t R_BLE_GATTC_DiscCharByUuid ( uint16_t conn_hdl, uint8_t* p_uuid, uint8_t uuid_type, st_ble_gatt_hdl_range_t* p_range )
```

This function discovers Characteristic specified by uuid within the specified attribute handle range in a GATT Server.

When 16-bit UUID Characteristic has been discovered, BLE_GATTC_EVENT_CHAR_16_DISC_IND event is notified to the application layer.

When 128-bit UUID Characteristic has been discovered, BLE_GATTC_EVENT_CHAR_128_DISC_IND event is notified to the application layer.

When the Characteristic discovery has been completed, BLE_GATTC_EVENT_CHAR_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.						
[in]	p_uuid	UUID of Characteristic to be discovered.						
[in]	uuid_type	<p>UUID type of Characteristic to be discovered.</p> <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GATT_1_6_BIT_UUID_FORMAT(0x01)</td> <td>The p_uuid parameter is 16-bit UUID.</td> </tr> <tr> <td>BLE_GATT_1_28_BIT_UUID_FORMAT(0x02)</td> <td>The p_uuid parameter is 128-bit UUID.</td> </tr> </tbody> </table>	macro	description	BLE_GATT_1_6_BIT_UUID_FORMAT(0x01)	The p_uuid parameter is 16-bit UUID.	BLE_GATT_1_28_BIT_UUID_FORMAT(0x02)	The p_uuid parameter is 128-bit UUID.
macro	description							
BLE_GATT_1_6_BIT_UUID_FORMAT(0x01)	The p_uuid parameter is 16-bit UUID.							
BLE_GATT_1_28_BIT_UUID_FORMAT(0x02)	The p_uuid parameter is 128-bit UUID.							
[in]	p_range	Retrieval range of Characteristic.						

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_uuid parameter or the p_range parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The uuid_type parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ **R_BLE_GATTC_DiscAllCharDesc()**

```
ble_status_t R_BLE_GATTC_DiscAllCharDesc ( uint16_t conn_hdl, st_ble_gatt_hdl_range_t *
p_range )
```

This function discovers Characteristic Descriptor within the specified attribute handle range in a GATT Server.

When 16-bit UUID Characteristic Descriptor has been discovered, BLE_GATTC_EVENT_CHAR_DESC_16_DISC_IND event is notified to the application layer. When 128-bit UUID Characteristic Descriptor has been discovered, BLE_GATTC_EVENT_CHAR_DESC_128_DISC_IND event is notified to the application layer. When the Characteristic Descriptor discovery has been completed, BLE_GATTC_EVENT_ALL_CHAR_DESC_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.
[in]	p_range	Retrieval range of Characteristic Descriptor.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_range parameter is specified as NULL.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ **R_BLE_GATTC_ReadChar()**

```
ble_status_t R_BLE_GATTC_ReadChar ( uint16_t conn_hdl, uint16_t value_hdl )
```

This function reads a Characteristic/Characteristic Descriptor in a GATT Server.

The result of the read is notified in BLE_GATTC_EVENT_CHAR_READ_RSP event.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be read.
[in]	value_hdl	Value handle of the Characteristic/Characteristic Descriptor to be read.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	0 is specified in the value_hdl parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_ReadCharUsingUuid()

```
ble_status_t R_BLE_GATTC_ReadCharUsingUuid ( uint16_t conn_hdl, uint8_t* p_uuid, uint8_t
uuid_type, st_ble_gatt_hdl_range_t* p_range )
```

This function reads a Characteristic in a GATT Server using a specified UUID.

The result of the read is notified in BLE_GATTC_EVENT_CHAR_READ_BY_UUID_RSP event.

Parameters

[in]	conn_hdl	Connection handle that identifies Characteristic to be read to GATT Server.						
[in]	p_uuid	UUID of the Characteristic to be read.						
[in]	uuid_type	UUID type of the Characteristic to be read. <table border="1" data-bbox="1075 853 1469 1227"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GATT_1_6_BIT_UUID_FORMAT(0x01)</td> <td>The p_uuid parameter is 16-bit UUID.</td> </tr> <tr> <td>BLE_GATT_1_28_BIT_UUID_FORMAT(0x02)</td> <td>The p_uuid parameter is 128-bit UUID.</td> </tr> </tbody> </table>	macro	description	BLE_GATT_1_6_BIT_UUID_FORMAT(0x01)	The p_uuid parameter is 16-bit UUID.	BLE_GATT_1_28_BIT_UUID_FORMAT(0x02)	The p_uuid parameter is 128-bit UUID.
macro	description							
BLE_GATT_1_6_BIT_UUID_FORMAT(0x01)	The p_uuid parameter is 16-bit UUID.							
BLE_GATT_1_28_BIT_UUID_FORMAT(0x02)	The p_uuid parameter is 128-bit UUID.							
[in]	p_range	Retrieval range of Characteristic.						

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_uuid parameter or the p_range parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The uuid_type parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_ReadLongChar()

```
ble_status_t R_BLE_GATTC_ReadLongChar ( uint16_t conn_hdl, uint16_t value_hdl, uint16_t offset )
```

This function reads a Long Characteristic in a GATT Server.

The contents of the Long Characteristic that has been read is notified every MTU-1 bytes to the application layer by BLE_GATTC_EVENT_CHAR_READ_RSP event.

When all of the contents has been received in GATT Client, BLE_GATTC_EVENT_LONG_CHAR_READ_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be read.
[in]	value_hdl	Value handle of the Long Characteristic to be read.
[in]	offset	Offset that indicates the location to be read. Normally, set 0 to this parameter.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	0 is specified in the value_hdl parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_ReadMultiChar()

```
ble_status_t R_BLE_GATTC_ReadMultiChar ( uint16_t conn_hdl, st_ble_gattc_rd_multi_req_param_t
* p_list )
```

This function reads multiple Characteristics in a GATT Server.

The contents of the multiple Characteristics that has been read is notified to the application layer by BLE_GATTC_EVENT_MULTI_CHAR_READ_RSP event.

Parameters

[in]	conn_hdl	Connection handle that identifies Characteristic to be read to GATT Server.
[in]	p_list	List of Value Handles that point the Characteristics to be read.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_list parameter or the p_hdl_list field in the p_list parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	0 is specified in the list_count field in the p_list parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_WriteCharWithoutRsp()

```
ble_status_t R_BLE_GATTC_WriteCharWithoutRsp ( uint16_t conn_hdl, st_ble_gatt_hdl_value_pair_t
* p_write_data )
```

This function writes a Characteristic in a GATT Server without response.

The result is returned from the API.

Parameters

[in]	conn_hdl	Connection handle that identifies Characteristic to be read to GATT Server.
[in]	p_write_data	Value to be written to the Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_write_data parameter or the p_value field in the value field in the p_write_data parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: <ul style="list-style-type: none"> • 0 is specified in the value_len field in the p_value field in the p_write_data parameter. • 0 is specified in the attr_hdl field in the p_write_data parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_SignedWriteChar()

```
ble_status_t R_BLE_GATTC_SignedWriteChar ( uint16_t conn_hdl, st_ble_gatt_hdl_value_pair_t *
p_write_data )
```

This function writes Signed Data to a Characteristic in a GATT Server without response.

The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be written.
[in]	p_write_data	Signed Data to be written to the Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_write_data parameter or the p_value field in the value field in the p_write_data parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: <ul style="list-style-type: none"> • 0 is specified in the value_len field in the value field in the p_write_data parameter. • 0 is specified in the attr_hdl field in the p_write_data parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function or Signed Data.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_WriteChar()

```
ble_status_t R_BLE_GATTC_WriteChar ( uint16_t conn_hdl, st_ble_gatt_hdl_value_pair_t *
p_write_data )
```

This function writes a Characteristic in a GATT Server.

The result of the write is notified in BLE_GATTC_EVENT_CHAR_WRITE_RSP event.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be written.
[in]	p_write_data	Value to be written to the Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_write_data parameter or the p_value field in the value field in the p_write_data parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: <ul style="list-style-type: none"> • 0 is specified in the value_len field in the value field in the p_write_data parameter. • 0 is specified in the attr_hdl field in the p_write_data parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_WriteLongChar()

```
ble_status_t R_BLE_GATTC_WriteLongChar ( uint16_t conn_hdl, st_ble_gatt_hdl_value_pair_t *
p_write_data, uint16_t offset )
```

This function writes a Long Characteristic in a GATT Server.

The result of a write that has been done every segmentation is notified to the application layer in BLE_GATTC_EVENT_CHAR_PART_WRITE_RSP event.

The maximum writable size to a Long Characteristic with this function is 512 bytes.

When all of the contents has been written to the Long Characteristic,

BLE_GATTC_EVENT_LONG_CHAR_WRITE_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be written.
[in]	p_write_data	Value to be written to the Long Characteristic.
[in]	offset	Offset that indicates the location to be written. Normally, set 0 to this parameter. If this parameter sets to a value other than 0, adjust the offset parameter and the length of the value to be written not to exceed the length of the Long Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_write_data parameter or the p_value field in the value field in the p_write_data parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: <ul style="list-style-type: none"> • The value_len field in the value field in the p_write_data parameter is 0. • The sum of the value_len field in the value field in the p_write_data parameter and the offset parameter larger than 512. • The attr_hdl field in the p_write_data parameter is 0.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_ReliableWrites()

```
ble_status_t R_BLE_GATTC_ReliableWrites ( uint16_t conn_hdl,
st_ble_gattc_reliable_writes_char_pair_t* p_char_pair, uint8_t pair_num, uint8_t auto_flag )
```

This function performs the Reliable Writes procedure described in GATT Specification.

When the data written to the Characteristic has been transmitted, BLE_GATTC_EVENT_CHAR_PART_WRITE_RSP event is notified to the application layer. If the data included in the event is different from the data that GATT Client has sent, host stack automatically cancels the Reliable Writes.

After all of the contents has been sent to the GATT Server, if the auto_flag parameter has been set to BLE_GATTC_EXEC_AUTO, the GATT Server automatically writes the data to the Characteristic. If the auto_flag parameter has been set to BLE_GATTC_EXEC_NOT_AUTO, BLE_GATTC_EVENT_RELIABLE_WRITES_TX_COMP event notifies the application layer in GATT Client that all of the contents has been sent to the GATT Server. Then GATT Client requests for writing the data to the Characteristic to the GATT Server with R_BLE_GATTC_ExecWrite(). When the write has been done, BLE_GATTC_EVENT_RELIABLE_WRITES_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be written.						
[in]	p_char_pair	Pair of Characteristic Value and Characteristic Value Handle identifying the Characteristic to be written by Reliable Writes.						
[in]	pair_num	The number of the pairs specified by the p_char_pair parameter. Valid range is 0 < pair_num ≤ BLE_GATTC_RELIABLE_WRITES_MAX_CHAR_PAIR.						
[in]	auto_flag	The flag that indicates whether auto execution or not. <table border="1" data-bbox="1072 1570 1468 1874"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GATTC_EXEC_AUTO(0x01)</td> <td>Auto execution.</td> </tr> <tr> <td>BLE_GATTC_EXEC_NOT_AUTO(0x02)</td> <td>Not auto execution.</td> </tr> </tbody> </table>	macro	description	BLE_GATTC_EXEC_AUTO(0x01)	Auto execution.	BLE_GATTC_EXEC_NOT_AUTO(0x02)	Not auto execution.
macro	description							
BLE_GATTC_EXEC_AUTO(0x01)	Auto execution.							
BLE_GATTC_EXEC_NOT_AUTO(0x02)	Not auto execution.							

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows:

	<ul style="list-style-type: none"> • The p_char_pair parameter is specified as NULL. • The p_value field in the value field in the write_data field in the p_char_pair parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	<p>The reason for this error is as follows:</p> <ul style="list-style-type: none"> • The pair_num parameter or the auto_flag parameter is out of range. • The value_len field in the value field in the write_data field in the p_char_pair parameter is 0.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function or to store the temporary write data.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_ExecWrite()

```
ble_status_t R_BLE_GATTC_ExecWrite ( uint16_t conn_hdl, uint8_t exe_flag )
```

If the auto execute of Reliable Writes is not specified by [R_BLE_GATTC_ReliableWrites\(\)](#), this function is used to execute a write to Characteristic.

When all of the contents has been sent to the GATT Server, BLE_GATTC_EVENT_RELIABLE_WRITES_TX_COMP event notifies the application layer. After this event has been received, execute the write by this function. The result of the write is notified by BLE_GATTC_EVENT_RELIABLE_WRITES_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the target GATT Server.						
[in]	exe_flag	The flag that indicates whether execution or cancellation. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GATTC_EXECUTE_WRITE_CANCEL_FLAG(0x00)</td> <td>Execute the write.</td> </tr> <tr> <td>BLE_GATTC_EXECUTE_WRITE_FLAG(0x01)</td> <td>Cancel the write.</td> </tr> </tbody> </table>	macro	description	BLE_GATTC_EXECUTE_WRITE_CANCEL_FLAG(0x00)	Execute the write.	BLE_GATTC_EXECUTE_WRITE_FLAG(0x01)	Cancel the write.
macro	description							
BLE_GATTC_EXECUTE_WRITE_CANCEL_FLAG(0x00)	Execute the write.							
BLE_GATTC_EXECUTE_WRITE_FLAG(0x01)	Cancel the write.							

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The exe_flag parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	The reason for this error is as follows: <ul style="list-style-type: none"> GATT Client has not requested for Reliable Writes by R_BLE_GATTC_ReliableWrites(). Although auto execution has been specified by R_BLE_GATTC_ReliableWrites(), this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

4.3.2.5 L2CAP

Functions

`ble_status_t` [R_BLE_L2CAP_RegisterCfPsm](#) ([ble_l2cap_cf_app_cb_t](#) cb, `uint16_t` psm, `uint16_t` lwm)

This function registers PSM that uses L2CAP CBFC Channel and a callback for L2CAP event. [More...](#)

`ble_status_t` [R_BLE_L2CAP_DeregisterCfPsm](#) (`uint16_t` psm)

This function stops the use of the L2CAP CBFC Channel specified by the psm parameter and deregisters the callback function for L2CAP event. [More...](#)

`ble_status_t` [R_BLE_L2CAP_ReqCfConn](#) (`uint16_t` conn_hdl, [st_ble_l2cap_conn_req_param_t](#) *p_conn_req_param)

This function sends a connection request for L2CAP CBFC Channel. [More...](#)

`ble_status_t` [R_BLE_L2CAP_RspCfConn](#) ([st_ble_l2cap_conn_rsp_param_t](#) *p_conn_rsp_param)

This function replies to the connection request for L2CAP CBFC Channel from the remote device. [More...](#)

`ble_status_t` [R_BLE_L2CAP_DisconnectCf](#) (`uint16_t` lcid)

This function sends a disconnection request for L2CAP CBFC Channel. [More...](#)

`ble_status_t` [R_BLE_L2CAP_SendCfCredit](#) (`uint16_t` lcid, `uint16_t` credit)

This function sends credit to a remote device. [More...](#)

`ble_status_t` [R_BLE_L2CAP_SendCfData](#) (`uint16_t` conn_hdl, `uint16_t` lcid, `uint16_t` data_len, `uint8_t` *p_sdu)

This function sends the data to a remote device via L2CAP CBFC Channel. [More...](#)

Detailed Description

Data Structures

struct [st_ble_l2cap_conn_req_param_t](#)
L2CAP CBFC Channel connection request parameters. [More...](#)

Data Structure Documentation

◆ st_ble_l2cap_conn_req_param_t

struct st_ble_l2cap_conn_req_param_t		
L2CAP CBFC Channel connection request parameters.		
Data Fields		
uint16_t	local_psm	Identifier indicating the

		protocol/profile that uses L2CAP CBFC Channel on local device.
uint16_t	remote_psm	Identifier indicating the protocol/profile that uses L2CAP CBFC Channel on remote device.
uint16_t	mtu	MTU size(byte) receivable on L2CAP CBFC Channel.
uint16_t	mps	MPS size(byte) receivable on L2CAP CBFC Channel.
uint16_t	credit	The number of LE-Frame that local device can receive.

◆ **st_ble_l2cap_conn_rsp_param_t**

struct st_ble_l2cap_conn_rsp_param_t										
L2CAP CBFC Channel connection response parameters.										
Data Fields										
uint16_t	lcid	CID identifying the L2CAP CBFC Channel on local device. The valid range is 0x40-0x40 + BLE_L2CAP_MAX_CBFC_PSM - 1.								
uint16_t	response	<p>The response to the connection request. Select one of the following.</p> <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_L2CAP_CF_RSP_SUCCESS(0x0000)</td> <td>Notify the remote device that the connection can be established.</td> </tr> <tr> <td>BLE_L2CAP_CF_RSP_RFSD_INSF_AUTH(0x0005)</td> <td>Notify the remote device that the connection can not be established because of insufficient authentication</td> </tr> <tr> <td>BLE_L2CAP_CF_RSP_RFSD_INSF_AUTRZ(0x0006)</td> <td>Notify the remote device that the connection can not be established</td> </tr> </tbody> </table>	macro	description	BLE_L2CAP_CF_RSP_SUCCESS(0x0000)	Notify the remote device that the connection can be established.	BLE_L2CAP_CF_RSP_RFSD_INSF_AUTH(0x0005)	Notify the remote device that the connection can not be established because of insufficient authentication	BLE_L2CAP_CF_RSP_RFSD_INSF_AUTRZ(0x0006)	Notify the remote device that the connection can not be established
macro	description									
BLE_L2CAP_CF_RSP_SUCCESS(0x0000)	Notify the remote device that the connection can be established.

uint16_t	mtu	MTU(byte) of packet that L2CAP CBFC Channel on local device can receive.
uint16_t	mps	MPS(byte) of packet that L2CAP CBFC Channel on local device can receive.
uint16_t	credit	The number of LE-Frame that L2CAP CBFC Channel on local device can receive.

◆ **st_ble_l2cap_cf_conn_evt_t**

struct st_ble_l2cap_cf_conn_evt_t		
L2CAP CBFC Channel connection parameters.		
Data Fields		
uint16_t	cid	CID identifying the L2CAP CBFC Channel.
uint16_t	psm	PSM allocated by the cid field.

uint16_t	mtu	MTU of local/remote device.
uint16_t	mps	MPS of local/remote device.
uint16_t	credit	Credit of local/remote device.

◆ st_ble_l2cap_cf_data_evt_t

struct st_ble_l2cap_cf_data_evt_t		
Sent/Received Data parameters.		
Data Fields		
uint16_t	cid	CID identifying the L2CAP CBFC Channel that has sent or received the data .
uint16_t	psm	PSM allocated by the cid field.
uint16_t	data_len	Data length.
uint8_t*	p_data	Sent/Received data.

◆ st_ble_l2cap_cf_credit_evt_t

struct st_ble_l2cap_cf_credit_evt_t		
Credit parameters of local or remote device.		
Data Fields		
uint16_t	cid	CID identifying the L2CAP CBFC Channel.
uint16_t	psm	PSM allocated by the cid field.
uint16_t	credit	Current credit of local/remote device.

◆ st_ble_l2cap_cf_disconn_evt_t

struct st_ble_l2cap_cf_disconn_evt_t		
Disconnection parameters.		
Data Fields		
uint16_t	cid	CID identifying the L2CAP CBFC Channel that has been disconnected.

◆ st_ble_l2cap_rej_evt_t

struct st_ble_l2cap_rej_evt_t		
Command Reject parameters.		
Data Fields		
uint16_t	reason	The reason that the remote device has sent Command Reject.

uint16_t	data_1	Optional information about the reason that the remote device has sent Command Reject.
uint16_t	data_2	Optional information about the reason that the remote device has sent Command Reject.

◆ st_ble_l2cap_cf_evt_data_t

struct st_ble_l2cap_cf_evt_data_t		
st_ble_l2cap_cf_evt_data_t is the type of the data notified in a L2CAP Event.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device.
uint16_t	param_len	The size of L2CAP Event parameters.
void *	p_param	L2CAP Event parameters. This parameter differs in each L2CAP Event.

Typedef Documentation

◆ ble_l2cap_cf_app_cb_t

ble_l2cap_cf_app_cb_t		
ble_l2cap_cf_app_cb_t is the L2CAP Event callback function type.		
Parameters		
[in]	event_type	The type of L2CAP Event.
[in]	event_result	The result of L2CAP Event
[in]	p_event_data	Data notified by L2CAP Event.
Returns		
none		

Enumeration Type Documentation

◆ e_r_ble_l2cap_cf_evt_t

enum e_r_ble_l2cap_cf_evt_t

L2CAP Event Identifier.

Enumerator

BLE_L2CAP_EVENT_CF_CONN_CNF

After the connection request for L2CAP CBFC Channel has been sent with [R_BLE_L2CAP_ReqCfConn\(\)](#), when the L2CAP CBFC Channel connection response has been received, BLE_L2CAP_EVENT_CF_CONN_CNF event occurs.

Event Code: 0x5001**result:**

BLE_SUCCESS(0x000)	Success
BLE_ERR_RSP_TIMEOUT(0x0011)	L2CAP Command timeout.
BLE_ERR_L2CAP_PSM_NOT_SUPPORTED(0x4002)	PSM specified by R_BLE_L2CAP_ReqCfConn() is not supported.
BLE_ERR_L2CAP_NO_RESOURCE(0x4004)	No resource for connection.
BLE_ERR_L2CAP_INSUF_AUTHEN(0x4005)	Insufficient authentication.
BLE_ERR_L2CAP_INSUF_AUTHOR(0x4006)	Insufficient authorization.
BLE_ERR_L2CAP_INSUF_ENC_KEY_SIZE(0x4007)	Insufficient encryption key size.
BLE_ERR_L2CAP_RFUSE_INSUF_ENC(0x4008)	Insufficient encryption.
BLE_ERR_L2CAP_RFUSE_INVALID_SCID(0x4009)	Invalid Source CID.
BLE_ERR_L2CAP_RFUSE_SCID_ALREADY_ALLOC(0x400A)	Source CID already allocated.

	<p>BLE_ERR_L2CAP_R EFUSE_UNACCEPT ABLE_PARAM(0x40 0B)</p> <p>Unacceptable parameters.</p> <p>Event Data:</p> <p>st_ble_l2cap_cf_conn_evt_t</p>

Function Documentation

◆ **R_BLE_L2CAP_RegisterCfPsm()**

```
ble_status_t R_BLE_L2CAP_RegisterCfPsm ( ble_l2cap_cf_app_cb_t cb, uint16_t psm, uint16_t lwm )
```

This function registers PSM that uses L2CAP CBFC Channel and a callback for L2CAP event.

Only one callback is available per PSM. Configure in each PSM the Low Water Mark of the LE-Frames that the local device can receive.

When the number of the credit reaches the Low Water Mark, BLE_L2CAP_EVENT_CF_LOW_RX_CRD_IND event is notified to the application layer.

The number of PSM is defined as BLE_L2CAP_MAX_CBFC_PSM.

The result of this API call is returned by a return value.

Parameters

[in]	cb	Callback function for L2CAP event.									
[in]	psm	Identifier indicating the protocol/profile that uses L2CAP CBFC Channel. <table border="1"> <thead> <tr> <th>type</th> <th>range</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>Fixed, SIG assigned</td> <td>0x0001 - 0x007F</td> <td>PSM defined by SIG. For more information on PSM, refer Bluetooth SIG Assigned Number (https://www.bluetooth.com/specifications/assigned-numbers).</td> </tr> <tr> <td>Dynamically allocated</td> <td>0x0080 - 0x00FF</td> <td>Statically allocated PSM by custom protocol or dynamically</td> </tr> </tbody> </table>	type	range	description	Fixed, SIG assigned	0x0001 - 0x007F	PSM defined by SIG. For more information on PSM, refer Bluetooth SIG Assigned Number (https://www.bluetooth.com/specifications/assigned-numbers).	Dynamically allocated	0x0080 - 0x00FF	Statically allocated PSM by custom protocol or dynamically
type	range	description									
Fixed, SIG assigned	0x0001 - 0x007F	PSM defined by SIG. For more information on PSM, refer Bluetooth SIG Assigned Number (https://www.bluetooth.com/specifications/assigned-numbers).									
Dynamically allocated	0x0080 - 0x00FF	Statically allocated PSM by custom protocol or dynamically									

			y allocated PSM by GATT Service.
[in]	lwm		Low Water Mark that indicates the LE-Frame numbers that the local device can receive.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The cb parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The psm parameter is out of range.
BLE_ERR_CONTEXT_FULL(0x000B)	More than BLE_L2CAP_MAX_CBFC_PSM+1 PSMs, callbacks has been registered.

◆ R_BLE_L2CAP_DeregisterCfPsm()

```
ble_status_t R_BLE_L2CAP_DeregisterCfPsm ( uint16_t psm)
```

This function stops the use of the L2CAP CBFC Channel specified by the psm parameter and deregisters the callback function for L2CAP event.

The result of this API call is returned by a return value.

Parameters

[in]	psm	PSM that is to be stopped to use the L2CAP CBFC Channel. Set the PSM registered by R_BLE_L2CAP_RegisterCfPsm() .
------	-----	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_NOT_FOUND(0x000D)	The callback function allocated by the psm parameter is not found.

◆ **R_BLE_L2CAP_ReqCfConn()**

```
ble_status_t R_BLE_L2CAP_ReqCfConn ( uint16_t conn_hdl, st_ble_l2cap_conn_req_param_t *
p_conn_req_param )
```

This function sends a connection request for L2CAP CBFC Channel.

The connection response is notified by BLE_L2CAP_EVENT_CF_CONN_CNF event.

The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device that the connection request is sent to.
[in]	p_conn_req_param	Connection request parameters.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_conn_req_param parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The mtu parameter or the mps parameter is out of range.
BLE_ERR_INVALID_STATE(0x0008)	CF Channel connection has not been established.
BLE_ERR_CONTEXT_FULL(0x000B)	New CF Channel can not be registered or other L2CAP Command is processing.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	The psm parameter is not registered.

◆ **R_BLE_L2CAP_RspCfConn()**

```
ble_status_t R_BLE_L2CAP_RspCfConn ( st_ble_l2cap_conn_rsp_param_t* p_conn_rsp_param)
```

This function replies to the connection request for L2CAP CBFC Channel from the remote device.

The connection request is notified by BLE_L2CAP_EVENT_CF_CONN_IND event. The result of this API call is returned by a return value.

Parameters

[in]	p_conn_rsp_param	Connection response parameters.
------	------------------	---------------------------------

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_conn_rsp_param parameter is specified as NULL.
BLE_ERR_NOT_FOUND(0x000D)	A connection request for L2CAP CBFC Channel has not been received, or CID specified by the lcid field in the p_conn_rsp_param parameter is not found.

◆ **R_BLE_L2CAP_DisconnectCf()**

```
ble_status_t R_BLE_L2CAP_DisconnectCf ( uint16_t lcid)
```

This function sends a disconnection request for L2CAP CBFC Channel.

When L2CAP CBFC Channel has been disconnected, BLE_L2CAP_EVENT_CF_DISCONN_CNF event is notified to the application layer.

Parameters

[in]	lcid	CID identifying the L2CAP CBFC Channel that has been disconnected. The valid range is 0x40 - (0x40 + BLE_L2CAP_MAX_CBFC_PSM - 1).
------	------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_OPERATION(0x0009)	CF Channel connection has not been established.
BLE_ERR_CONTEXT_FULL(0x000B)	This function was called while processing other L2CAP command.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for L2CAP Command.
BLE_ERR_NOT_FOUND(0x000D)	CID specified the lcid parameter is not found.

◆ **R_BLE_L2CAP_SendCfCredit()**

```
ble_status_t R_BLE_L2CAP_SendCfCredit ( uint16_t lcid, uint16_t credit )
```

This function sends credit to a remote device.

In L2CAP CBFC communication, if credit is 0, the remote device stops data transmission. Therefore when processing the received data has been completed and local device affords to receive data, the remote device is notified of the number of LE-Frame that local device can receive by this function and local device can continue to receive data from the remote device. The result of this API call is returned by a return value.

Parameters

[in]	lcid	CID identifying the L2CAP CBFC Channel on local device that sends credit.
[in]	credit	Credit to be sent to the remote device.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The credit parameter is set to 0.
BLE_ERR_CONTEXT_FULL(0x000B)	This function was called while processing other L2CAP command.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for L2CAP Command.

◆ **R_BLE_L2CAP_SendCfData()**

```
ble_status_t R_BLE_L2CAP_SendCfData ( uint16_t conn_hdl, uint16_t lcid, uint16_t data_len,
uint8_t * p_sdu )
```

This function sends the data to a remote device via L2CAP CBFC Channel.

When the data transmission to Controller has been completed, BLE_L2CAP_EVENT_CF_TX_DATA_CNF event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to be sent the data.
[in]	lcid	CID identifying the L2CAP CBFC Channel on local device used in the data transmission.
[in]	data_len	Length of the data.
[in]	p_sdu	Service Data Unit. Input the data length specified by the data_len parameter to the first 2 bytes (Little Endian).

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_data parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The length parameter is out of range.
BLE_ERR_INVALID_STATE(0x0008)	CF Channel connection has not been established or the data whose length exceeds the MTU has been sent.
BLE_ERR_ALREADY_IN_PROGRESS(0x000A)	Data transmission has been already started.
BLE_ERR_CONTEXT_FULL(0x000B)	L2CAP task queue is full.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for L2CAP Command.
BLE_ERR_NOT_FOUND(0x000D)	CID specified the lcid parameter is not found.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by the conn_hdl parameter is not found.

4.3.2.6 VS

Interfaces » BLE Interface

Functions

ble_status_t [R_BLE_VS_Init](#) (ble_vs_app_cb_t vs_cb)

This function initializes Vendor Specific API and registers a callback function for Vendor Specific Event. [More...](#)

ble_status_t [R_BLE_VS_StartTxTest](#) (st_ble_vs_tx_test_param_t *p_tx_test_param)

This function starts extended Transmitter Test. [More...](#)

ble_status_t [R_BLE_VS_StartRxTest](#) (st_ble_vs_rx_test_param_t *p_rx_test_param)

This function starts extended Receiver Test. [More...](#)

ble_status_t [R_BLE_VS_EndTest](#) (void)

This function terminates the extended transmitter or receiver test. [More...](#)

ble_status_t [R_BLE_VS_SetTxPower](#) (uint16_t conn_hdl, uint8_t tx_power)

This function configures transmit power. [More...](#)

ble_status_t [R_BLE_VS_GetTxPower](#) (uint16_t conn_hdl)

This function gets transmit power. [More...](#)

ble_status_t [R_BLE_VS_SetCodingScheme](#) (uint8_t coding_scheme)

This function configure default Coding scheme(S=8 or S=2) that is used in the case of selecting Coded PHY in Primary advertising PHY or Secondary advertising PHY advertising or request for link establishment. [More...](#)

ble_status_t [R_BLE_VS_SetRfControl](#) (st_ble_vs_set_rf_ctrl_param_t *p_rf_ctrl)

This function performs power control on RF. [More...](#)

ble_status_t [R_BLE_VS_SetBdAddr](#) (uint8_t area, st_ble_dev_addr_t *p_addr)

This function sets public/random address of local device to the area specified by the parameter. [More...](#)

ble_status_t [R_BLE_VS_GetBdAddr](#) (uint8_t area, uint8_t addr_type)
This function gets currently configured public/random address. [More...](#)

ble_status_t [R_BLE_VS_GetRand](#) (uint8_t rand_size)
This function generates 4-16 bytes of random number used in creating keys. [More...](#)

ble_status_t [R_BLE_VS_StartTxFlowEvtNtf](#) (void)
This function starts the notification(BLE_VS_EVENT_TX_FLOW_STATE_CHG event) of the state transition of TxFlow. [More...](#)

ble_status_t [R_BLE_VS_StopTxFlowEvtNtf](#) (void)
This function stops the notification(BLE_VS_EVENT_TX_FLOW_STATE_CHG event) of the state transition of TxFlow. [More...](#)

ble_status_t [R_BLE_VS_GetTxBufferNum](#) (uint32_t *p_buffer_num)
This function retrieves the number of the available transmission packet buffers. [More...](#)

ble_status_t [R_BLE_VS_SetTxLimit](#) (uint32_t tx_queue_lwm, uint32_t tx_queue_hwm)
This function sets the threshold for notifying the application layer of the TxFlow state. [More...](#)

ble_status_t [R_BLE_VS_SetScanChMap](#) (uint16_t ch_map)
This function sets the scan channel map. [More...](#)

ble_status_t [R_BLE_VS_GetScanChMap](#) (void)
This function gets currently scan channel map. [More...](#)

Detailed Description

Data Structures

struct [st_ble_vs_tx_test_param_t](#)

This is the extended transmitter test parameters used in [R_BLE_VS_StartTxTest\(\)](#). [More...](#)

struct [st_ble_vs_rx_test_param_t](#)

This is the extended receiver test parameters used in [R_BLE_VS_StartRxTest\(\)](#). [More...](#)

#define BLE_VS_RF_OFF  
RF power off.
```

```
#define BLE_VS_RF_ON  
RF power on.
```

```
#define BLE_VS_RF_INIT_PARAM_NOT_CHG  
The parameters are not changed in RF power on.
```

```
#define BLE_VS_RF_INIT_PARAM_CHG
```

The parameters are changed in RF power on.

```
#define BLE_VS_CS_PRIM_ADV_S_8
```

Coding scheme for Primary Advertising PHY(S=8).

```
#define BLE_VS_CS_PRIM_ADV_S_2
```

Coding scheme for Primary Advertising PHY(S=2).

```
#define BLE_VS_CS_SECOND_ADV_S_8
```

Coding scheme for Secondary Advertising PHY(S=8).

```
#define BLE_VS_CS_SECOND_ADV_S_2
```

Coding scheme for Secondary Advertising PHY(S=2).

```
#define BLE_VS_CS_CONN_S_8
```

Coding scheme for request for link establishment(S=8).

```
#define BLE_VS_CS_CONN_S_2
```

Coding scheme for request for link establishment(S=2).

```
#define BLE_VS_TX_FLOW_CTL_ON
```

It means that the number of buffer has reached the High Water Mark from flow off state.

```
#define BLE_VS_TX_FLOW_CTL_OFF
```

It means that the number of buffer has reached the Low Water Mark from flow on state.

Typedefs

```
typedef void(* ble_vs_app_cb_t) (uint16_t event_type, ble_status_t event_result,  
st_ble_vs_evt_data_t *p_event_data)
```

ble_vs_app_cb_t is the Vendor Specific Event callback function type.
[More...](#)

Enumerations

```
enum e_r_ble_vs_evt_t
```

Vendor Specific Event Identifier. [More...](#)

Data Structure Documentation

◆ st_ble_vs_tx_test_param_t

struct st_ble_vs_tx_test_param_t		
This is the extended transmitter test parameters used in R_BLE_VS_StartTxTest() .		
Data Fields		
uint8_t	ch	Channel used in Tx test.
uint8_t	test_data_len	Length(in bytes) of the packet used in Tx Test.
uint8_t	packet_payload	Packet Payload.
uint8_t	phy	Transmitter PHY used in test.
uint8_t	tx_power	Tx Power Level used in DTM Tx Test.
uint8_t	option	Option.
uint16_t	num_of_packet	The number of packet to be sent.

◆ st_ble_vs_rx_test_param_t

struct st_ble_vs_rx_test_param_t		
This is the extended receiver test parameters used in R_BLE_VS_StartRxTest() .		
Data Fields		
uint8_t	ch	Channel used in Rx test.
uint8_t	phy	Receiver PHY used in the test.

◆ st_ble_vs_set_rf_ctrl_param_t

struct st_ble_vs_set_rf_ctrl_param_t		
This is the RF parameters used in R_BLE_VS_SetRfControl() .		
Data Fields		
uint8_t	power	RF power on/off.
uint8_t	option	This field indicates whether the parameters change in RF power on.
uint8_t	clval	RF rapid clock frequency adjust value(OSC internal CL adjust).

uint8_t	slow_clock	RF slow clock configurations.
uint8_t	tx_power	Set tx power in power on.
uint8_t	rf_option	Set RF option.

◆ st_ble_vs_test_end_evt_t

struct st_ble_vs_test_end_evt_t		
This structure notifies that the extended test has been terminated.		
Data Fields		
uint16_t	num_of_packet	The number of packet successfully received in the receiver test.
uint16_t	num_of_crc_err_packet	The number of CRC error packets in the receiver test.
int8_t	ave_rssi	Average RSSI(dBm) in the receiver test.
int8_t	max_rssi	Maximum RSSI(dBm) in the receiver test.
int8_t	min_rssi	Minimum RSSI(dBm) in the receiver test.

◆ st_ble_vs_set_tx_pwr_comp_evt_t

struct st_ble_vs_set_tx_pwr_comp_evt_t		
This structure notifies that tx power has been set.		
Data Fields		
uint16_t	conn_hdl	Connection handle that identifying the link whose tx power has been set.
int8_t	curr_tx_pwr	Tx power that has been set(dBm).

◆ st_ble_vs_get_tx_pwr_comp_evt_t

struct st_ble_vs_get_tx_pwr_comp_evt_t		
This structure notifies that tx power has been retrieved.		
Data Fields		
uint16_t	conn_hdl	Connection handle that identifying the link whose tx power has been retrieved.
int8_t	curr_tx_pwr	Current tx power(dBm).
int8_t	max_tx_pwr	Maximum tx power(dBm).

◆ st_ble_vs_set_rf_ctrl_comp_evt_t

struct st_ble_vs_set_rf_ctrl_comp_evt_t		
This structure notifies that RF has been configured.		
Data Fields		
uint8_t	ctrl	The result of RF power control.

◆ st_ble_vs_get_bd_addr_comp_evt_t

struct st_ble_vs_get_bd_addr_comp_evt_t						
This structure notifies that BD_ADDR has been retrieved.						
Data Fields						
uint8_t	area	The area that public/random address has been retrieved.				
		<table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_VS_ADDR_AREA_REG(0x00)</td> <td>Register.</td> </tr> <tr> <td>BLE_VS_ADDR_AREA_DATA_FLASH(0x01)</td> <td>Data Flash.</td> </tr> </tbody> </table>	value	description	BLE_VS_ADDR_AREA_REG(0x00)	Register.
value	description					
BLE_VS_ADDR_AREA_REG(0x00)	Register.					
BLE_VS_ADDR_AREA_DATA_FLASH(0x01)	Data Flash.					
st_ble_dev_addr_t	addr	The address that has been retrieved.				

◆ st_ble_vs_get_rand_comp_evt_t

struct st_ble_vs_get_rand_comp_evt_t		
This structure notifies that random number has been generated.		
Data Fields		
uint8_t	rand_size	Length of random number.
uint8_t *	p_rand	Random number.

◆ st_ble_vs_tx_flow_chg_evt_t

struct st_ble_vs_tx_flow_chg_evt_t				
This structure notifies that the state transition of TxFlow has been changed.				
Data Fields				
uint8_t	state	The state of the flow control.		
		<table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_VS_TX_FLOW_CTL_ON(0x00)</td> <td>The number of buffer has reached the High Water Mark from flow off state.</td> </tr> </tbody> </table>	value	description
value	description			
BLE_VS_TX_FLOW_CTL_ON(0x00)	The number of buffer has reached the High Water Mark from flow off state.			

		BLE_VS_TX_FLOW_CTL_OFF(0x01) The number of buffer has reached the Low Water Mark from flow on state.
uint32_t	buffer_num	The number of the current transmission buffers.

◆ st_ble_vs_evt_data_t

struct st_ble_vs_evt_data_t		
st_ble_vs_evt_data_t is the type of the data notified in a Vendor Specific Event.		
Data Fields		
uint16_t	param_len	The size of Vendor Specific Event parameters.
void *	p_param	Vendor Specific Event parameters. This parameter differs in each Vendor Specific Event.

◆ st_ble_vs_get_scan_ch_map_comp_evt_t

struct st_ble_vs_get_scan_ch_map_comp_evt_t		
This structure notifies that current scan channel map.		
Data Fields		
uint8_t	ch_map	The result of current scan channel map.

Typedef Documentation

◆ ble_vs_app_cb_t

ble_vs_app_cb_t		
ble_vs_app_cb_t is the Vendor Specific Event callback function type.		
Parameters		
[in]	event_type	The type of Vendor Specific Event.
[in]	event_result	The result of API call which generates the Vendor Specific Event.
[in]	p_event_data	Data notified in the Vendor Specific Event.
Returns		
none		

Enumeration Type Documentation

◆ e_r_ble_vs_evt_t

enum e_r_ble_vs_evt_t							
Vendor Specific Event Identifier.							
Enumerator							
BLE_VS_EVENT_SET_TX_POWER	<p>This event notifies that the tx power has been set by R_BLE_VS_SetTxPower().</p> <p>Event Code: 0x8001</p> <p>result:</p> <table> <tr> <td>BLE_SUCCESS(0x000)</td> <td>Success</td> </tr> <tr> <td>BLE_ERR_INVALID_ARG(0x0003)</td> <td>The tx_power parameter specified by R_BLE_VS_SetTxPower() is out of range.</td> </tr> <tr> <td>BLE_ERR_INVALID_HDL(0x000E)</td> <td>The link identified with the conn_hdl specified by R_BLE_VS_SetTxPower() is not found.</td> </tr> </table> <p>Event Data:</p> <p>st_ble_vs_set_tx_pwr_comp_evt_t</p>	BLE_SUCCESS(0x000)	Success	BLE_ERR_INVALID_ARG(0x0003)	The tx_power parameter specified by R_BLE_VS_SetTxPower() is out of range.	BLE_ERR_INVALID_HDL(0x000E)	The link identified with the conn_hdl specified by R_BLE_VS_SetTxPower() is not found.

Function Documentation

◆ R_BLE_VS_Init()

```
ble_status_t R_BLE_VS_Init ( ble_vs_app_cb_t vs_cb)
```

This function initializes Vendor Specific API and registers a callback function for Vendor Specific Event.

The result of this API call is returned by a return value.

Parameters

[in]	vs_cb	Callback function to be registered.
------	-------	-------------------------------------

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The vs_cb parameter is specified as NULL.
BLE_ERR_CONTEXT_FULL(0x000B)	Callback function has already been registered.

◆ R_BLE_VS_StartTxTest()

```
ble_status_t R_BLE_VS_StartTxTest ( st_ble_vs_tx_test_param_t * p_tx_test_param)
```

This function starts extended Transmitter Test.

The following extended transmitter test functions of DTM Tx are supported by this function.

- Tx Power
- Tx Modulation Enable/Modulation Disable
- Tx packet transmission/continuous transmission
- Tx packets count

The result of this API call is notified in BLE_VS_EVENT_TX_TEST_START event.

If the num_of_packet field in the p_tx_test_param parameter is other than 0x0000, BLE_VS_EVENT_TX_TEST_TERM event notifies the application layer that the number of packet has been sent.

If R_BLE_VS_EndTest() is called before the specified number of packets completions, BLE_VS_EVENT_TX_TEST_TERM event is not notified to the application layer.

The condition that phy field in the p_tx_test_param parameter is BLE_VS_EH_TEST_PHY_CODED_S_8(0x03) and option field is modulation(bit0:0) & continuous transmission(bit1:1) is not supported.

Parameters

[in]	p_tx_test_param	Tx Test parameters.
------	-----------------	---------------------

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_tx_test_param parameter is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ **R_BLE_VS_StartRxTest()**

```
ble_status_t R_BLE_VS_StartRxTest ( st_ble_vs_rx_test_param_t* p_rx_test_param)
```

This function starts extended Receiver Test.

The result of this API call is notified in BLE_VS_EVENT_RX_TEST_START event. The following extended receiver test functions of DTM Rx are supported by this function.

- Calculating the maximum, the minimum and the average of RSSI in the receiver test.
- The number of CRC error packets in the receiver test.

The transmitter is configured to one of the following, the receiver can't receive the packets by this function.

- Tx Non-Modulation Enable
- Tx continuous transmission

After [R_BLE_VS_EndTest\(\)](#) has been called, the receiver test result value are notified in BLE_VS_EVENT_TEST_END event.

Parameters

[in]	p_rx_test_param	The extended receiver test parameters.
------	-----------------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_rx_test_param parameter is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ **R_BLE_VS_EndTest()**

```
ble_status_t R_BLE_VS_EndTest ( void )
```

This function terminates the extended transmitter or receiver test.

The result of this API call is notified in BLE_VS_EVENT_TEST_END event. In case of extended receiver test, this event notifies the application layer of the result of the extended receiver test.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_SetTxPower()

```
ble_status_t R_BLE_VS_SetTxPower ( uint16_t conn_hdl, uint8_t tx_power )
```

This function configures transmit power.

This function configures the following transmit power.

- The transmit power used in sending advertising PDU, scan request PDU, connection request PDU (in not connected state)
- The transmit power used in sending PDU in connected state. When configuring the transmit power used in not connected state, set the conn_hdl parameter to

[BLE_GAP_INIT_CONN_HDL\(0xFFFF\)](#).

When the transmit power used in connected state is configured, set the conn_hdl parameter to the connection handle of the link.

Select one of the following transmit power levels.

- High
- Middle
- Low

Max transmit power of "High" is dependent on the configuration of the firmware. The result of this API call is notified in BLE_VS_EVENT_SET_TX_POWER event.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose transmit power to be configured. If non connected state, set BLE_GAP_INIT_CONN_HDL(0xFFFF) .
[in]	tx_power	Transmission power. Select one of the following. <ul style="list-style-type: none"> • BLE_VS_TX_POWER_HIGH(0x00) • BLE_VS_TX_POWER_MID(0x01) • BLE_VS_TX_POWER_LOW(0x02)

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_GetTxPower()

```
ble_status_t R_BLE_VS_GetTxPower ( uint16_t conn_hdl)
```

This function gets transmit power.

This function gets the following transmit power.

- The transmit power used in sending advertising PDU, scan request PDU, connection request PDU (in not connected state)
- The transmit power used in sending PDU in connected state. When getting the transmit power used in not connected state, set the conn_hdl parameter to

[BLE_GAP_INIT_CONN_HDL\(0xFFFF\)](#).

When the transmit power used in connected state is retrieved, set the conn_hdl parameter to the connection handle of the link. The result of this API call is notified in BLE_VS_EVENT_GET_TX_POWER event.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose transmit power to be retrieved. If non connected state, set BLE_GAP_INIT_CONN_HDL(0xFFFF) .
------	----------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_SetCodingScheme()

ble_status_t R_BLE_VS_SetCodingScheme (uint8_t coding_scheme)

This function configure default Coding scheme(S=8 or S=2) that is used in the case of selecting Coded PHY in Primary advertising PHY or Secondary advertising PHY advertising or request for link establishment.

After setting the default Coding scheme by this function, configure the advertising parameters by [R_BLE_GAP_SetAdvParam\(\)](#) or send a request for link establishment.

The result of this API call is notified in BLE_VS_EVENT_SET_CODING_SCHEME_COMP event.

Parameters

[in]	coding_scheme	Coding scheme for Primary advertising PHY, Secondary advertising PHY, request for link establishment. The coding_scheme field is set to a bitwise OR of the following values.	
		bit	description
		bit0	Coding scheme for Primary Advertising PHY(0:S=8/1:S=2).
		bit1	Coding scheme for Secondary Advertising PHY(0:S=8/1:S=2).
		bit2	Coding scheme for request for link establishment(0:S=8/1:S=2).
		All other bits	Reserved for future use.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ **R_BLE_VS_SetRfControl()**

```
ble_status_t R_BLE_VS_SetRfControl ( st_ble_vs_set_rf_ctrl_param_t * p_rf_ctrl)
```

This function performs power control on RF.

If BLE communication is not used for a long time, RF reduces the power consumption by moving to the RF Power-Down Mode.

When RF power on, RF initialization processing is executed.

After RF power off by this function, API functions other than this are not available until RF power on again.

The result of this API call is notified in BLE_VS_EVENT_RF_CONTROL_COMP event. After RF power on again with this function, call [R_BLE_GAP_Terminate\(\)](#), [R_BLE_GAP_Init\(\)](#) in order to restart the host stack.

Parameters

[in]	p_rf_ctrl	RF parameters.
------	-----------	----------------

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_rf_ctrl parameter is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ **R_BLE_VS_SetBdAddr()**

```
ble_status_t R_BLE_VS_SetBdAddr ( uint8_t area, st_ble_dev_addr_t* p_addr )
```

This function sets public/random address of local device to the area specified by the parameter.

If the address is written in non-volatile area, the address is used as default address on the next MCU reset.

For more information on the random address, refer to Core Specification Vol 6, PartB, "1.3.2 Random Device Address".

The result of this API call is notified in BLE_VS_EVENT_SET_ADDR_COMP event.

Parameters

[in]	area	The area that the address is to be written in. Select one of the following.						
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_VS_ADDR_AREA_REG (0x00)</td> <td>Address writing to non-volatile area is not performed. Only the address in register is written.</td> </tr> <tr> <td>BLE_VS_ADDR_AREA_DAT_FLASH(0x01)</td> <td>Address wiring to DataFlash area is performed.</td> </tr> </tbody> </table>	macro	description	BLE_VS_ADDR_AREA_REG (0x00)	Address writing to non-volatile area is not performed. Only the address in register is written.	BLE_VS_ADDR_AREA_DAT_FLASH(0x01)	Address wiring to DataFlash area is performed.
macro	description							
BLE_VS_ADDR_AREA_REG (0x00)	Address writing to non-volatile area is not performed. Only the address in register is written.							
BLE_VS_ADDR_AREA_DAT_FLASH(0x01)	Address wiring to DataFlash area is performed.							
[in]	p_addr	The address to be set to the area. Set BLE_GAP_ADDR_PUBLIC(0x00) or BLE_GAP_ADDR_RANDOM(0x01) to the type field in the p_addr parameter.						

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_addr parameter is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_GetBdAddr()

```
ble_status_t R_BLE_VS_GetBdAddr ( uint8_t area, uint8_t addr_type )
```

This function gets currently configured public/random address.

The area parameter specifies the place where this function retrieves public/random address. The result of this API call is notified in BLE_VS_EVENT_GET_ADDR_COMP event.

Parameters

[in]	area	The area that the address is to be retrieved. Select one of the following.						
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_VS_ADD_R_AREA_REG (0x00)</td> <td>Retrieve the address in register.</td> </tr> <tr> <td>BLE_VS_ADD_R_AREA_DATA_FLASH (0x01)</td> <td>Retrieve the address in DataFlash area.</td> </tr> </tbody> </table>	macro	description	BLE_VS_ADD_R_AREA_REG (0x00)	Retrieve the address in register.	BLE_VS_ADD_R_AREA_DATA_FLASH (0x01)	Retrieve the address in DataFlash area.
macro	description							
BLE_VS_ADD_R_AREA_REG (0x00)	Retrieve the address in register.							
BLE_VS_ADD_R_AREA_DATA_FLASH (0x01)	Retrieve the address in DataFlash area.							
[in]	addr_type	The address type that is type of the address to be retrieved.						
		<table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_ADDR_PUBLIC (0x00)</td> <td>Public address.</td> </tr> <tr> <td>BLE_GAP_ADDR_RANDOM (0x01)</td> <td>Random address.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_ADDR_PUBLIC (0x00)	Public address.	BLE_GAP_ADDR_RANDOM (0x01)	Random address.
macro	description							
BLE_GAP_ADDR_PUBLIC (0x00)	Public address.							
BLE_GAP_ADDR_RANDOM (0x01)	Random address.							

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ **R_BLE_VS_GetRand()**

```
ble_status_t R_BLE_VS_GetRand ( uint8_t rand_size)
```

This function generates 4-16 bytes of random number used in creating keys.

The result of this API call is notified in BLE_VS_EVENT_GET_RAND event.

Parameters

[in]	rand_size	Length of the random number (byte). The valid range is 4<=rand_size<=16.
------	-----------	---

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ **R_BLE_VS_StartTxFlowEvtNtf()**

```
ble_status_t R_BLE_VS_StartTxFlowEvtNtf ( void )
```

This function starts the notification(BLE_VS_EVENT_TX_FLOW_STATE_CHG event) of the state transition of TxFlow.

If the number of the available transmission packet buffers is the following, BLE_VS_EVENT_TX_FLOW_STATE_CHG event notifies the application layer of the state of the TxFlow.

- The number of the available transmission packet buffers is less than Low Water Mark.
- The number of the available transmission packet buffers is more than High Water Mark. The result of this API call is returned by a return value.

Return values

BLE_SUCCESS(0x0000)	Success
---------------------	---------

◆ **R_BLE_VS_StopTxFlowEvtNtf()**

```
ble_status_t R_BLE_VS_StopTxFlowEvtNtf ( void )
```

This function stops the notification(BLE_VS_EVENT_TX_FLOW_STATE_CHG event) of the state transition of TxFlow.

The result of this API call is returned by a return value.

Return values

BLE_SUCCESS(0x0000)	Success
---------------------	---------

◆ **R_BLE_VS_GetTxBufferNum()**

```
ble_status_t R_BLE_VS_GetTxBufferNum ( uint32_t * p_buffer_num)
```

This function retrieves the number of the available transmission packet buffers.

The maximum number of the available buffers is 10.

The result of this API call is returned by a return value.

Parameters

[out]	p_buffer_num	The number of the available transmission packet buffers.
-------	--------------	--

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_buffer_num parameter is specified as NULL.

◆ **R_BLE_VS_SetTxLimit()**

```
ble_status_t R_BLE_VS_SetTxLimit ( uint32_t tx_queue_lwm, uint32_t tx_queue_hwm )
```

This function sets the threshold for notifying the application layer of the TxFlow state.

Call this function before the notification(BLE_VS_EVENT_TX_FLOW_STATE_CHG event) has been started by [R_BLE_VS_StartTxFlowEvtNtf\(\)](#).

The result is returned from this API.

Vendor Specific API supports the flow control function(TxFlow) for the transmission on L2CAP fixed channel in Basic Mode such as GATT.

Host stack has 10 transmission packet buffers for the transmission.

When the number of the available transmission packet buffers has been less than Low Water Mark, the state of TxFlow transmits into the TxFlow OFF state from the TxFlow ON state that is the initial state and host stack notifies the application layer of timing to stop packet transmission.

When host stack has sent the transmission packets to Controller and the number of the available transmission packet buffers has been more than High Water Mark, the state of TxFlow transmits into the TxFlow ON state from the TxFlow OFF state and host stack notifies the application layer of

timing to restart packet transmission.

It is possible to perform flow control on a fixed channel by using the event notification.

Parameters

[in]	tx_queue_lwm	Low Water Mark. Set 0-9 less than tx_queue_hwm to the parameter. When the number of the available transmission packet buffers has been less than the value specified by the tx_queue_lwm parameter, host stack notifies the application layer of the timing to stop packet transmission.
[in]	tx_queue_hwm	High Water Mark. Set 1-10 more than tx_queue_lwm to the parameter. When the number of the available transmission packet buffers has been more than the value specified by the tx_queue_hwm parameter, host stack notifies the application layer of the timing to restart packet transmission.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The tx_queue_lwm parameter or the tx_queue_hwm parameter is out of range.

◆ **R_BLE_VS_SetScanChMap()**

```
ble_status_t R_BLE_VS_SetScanChMap ( uint16_t ch_map)
```

This function sets the scan channel map.

Set specify the scan channel for use.
At least one channel must be enabled.

Note

Calling this API while Scan is already running will not change the channel map.

Parameters

[in]	ch_map	Specify the channel map for use.	
		bit	description
		bit0	Enable channel 37 for use (0:disable, 1:enable)
		bit1	Enable channel 38 for use (0:disable, 1:enable)
		bit2	Enable channel 39 for use (0:disable, 1:enable)
		All other bits	Reserved for future use.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The ch_map parameter is out of range.

◆ R_BLE_VS_GetScanChMap()

```
ble_status_t R_BLE_VS_GetScanChMap ( void )
```

This function gets currently scan channel map.

The result of this API call is notified in BLE_VS_EVENT_GET_SCAN_CH_MAP event.

Return values

BLE_SUCCESS(0x0000)	Success
---------------------	---------

4.3.3 CAC Interface**Interfaces****Detailed Description**

Interface for clock frequency accuracy measurements.

Summary

The interface for the clock frequency accuracy measurement circuit (CAC) peripheral is used to check a system clock frequency with a reference clock signal by counting the number of pulses of the clock to be measured.

Implemented by: [Clock Frequency Accuracy Measurement Circuit \(r_cac\)](#)

Data Structures

struct [cac_ref_clock_config_t](#)

struct [cac_meas_clock_config_t](#)

struct [cac_callback_args_t](#)

struct [cac_cfg_t](#)

struct [cac_api_t](#)

struct [cac_instance_t](#)

Typedefs

typedef void [cac_ctrl_t](#)

Enumerations

enum [cac_event_t](#)enum [cac_clock_type_t](#)enum [cac_clock_source_t](#)enum [cac_ref_divider_t](#)enum [cac_ref_digfilter_t](#)enum [cac_ref_edge_t](#)enum [cac_meas_divider_t](#)

Data Structure Documentation

◆ [cac_ref_clock_config_t](#)

struct [cac_ref_clock_config_t](#)

Structure defining the settings that apply to reference clock configuration.

Data Fields

cac_ref_divider_t	divider	Divider specification for the Reference clock.
cac_clock_source_t	clock	Clock source for the Reference clock.
cac_ref_digfilter_t	digfilter	Digital filter selection for the CACREF ext clock.
cac_ref_edge_t	edge	Edge detection for the Reference clock.

◆ [cac_meas_clock_config_t](#)

struct [cac_meas_clock_config_t](#)

Structure defining the settings that apply to measurement clock configuration.

Data Fields

cac_meas_divider_t	divider	Divider specification for the Measurement clock.
cac_clock_source_t	clock	Clock source for the Measurement clock.

◆ [cac_callback_args_t](#)

struct [cac_callback_args_t](#)

Callback function parameter data

Data Fields

cac_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Value provided in configuration structure.

◆ **cac_cfg_t**

struct cac_cfg_t		
CAC Configuration		
Data Fields		
cac_ref_clock_config_t	cac_ref_clock	
		Reference clock specific settings.
cac_meas_clock_config_t	cac_meas_clock	
		Measurement clock specific settings.
uint16_t	cac_upper_limit	
		The upper limit counter threshold.
uint16_t	cac_lower_limit	
		The lower limit counter threshold.
IRQn_Type	mendi_irq	
		Measurement End IRQ number.
IRQn_Type	ovfi_irq	
		Measurement Overflow IRQ number.
IRQn_Type	ferri_irq	
		Frequency Error IRQ number.

uint8_t	mendi_ipl
	Measurement end interrupt priority.
uint8_t	ovfi_ipl
	Overflow interrupt priority.
uint8_t	ferri_ipl
	Frequency error interrupt priority.
void(*	p_callback)(cac_callback_args_t *p_args)
	Callback provided when a CAC interrupt ISR occurs.
void const *	p_context
	Passed to user callback in cac_callback_args_t .
void const *	p_extend
	CAC hardware dependent configuration */.

◆ **cac_api_t**

struct cac_api_t	
CAC functions implemented at the HAL layer API	
Data Fields	
fsp_err_t (*	open)(cac_ctrl_t *const p_ctrl, cac_cfg_t const *const p_cfg)
fsp_err_t (*	startMeasurement)(cac_ctrl_t *const p_ctrl)
fsp_err_t (*	stopMeasurement)(cac_ctrl_t *const p_ctrl)
fsp_err_t (*	read)(cac_ctrl_t *const p_ctrl, uint16_t *const p_counter)

<code>fsp_err_t(*</code>	<code>callbackSet)(cac_ctrl_t *const p_api_ctrl, void(*p_callback)(cac_callback_args_t *), void const *const p_context, cac_callback_args_t *const p_callback_memory)</code>
--------------------------	---

<code>fsp_err_t(*</code>	<code>close)(cac_ctrl_t *const p_ctrl)</code>
--------------------------	--

Field Documentation

◆ open

`fsp_err_t(* cac_api_t::open) (cac_ctrl_t *const p_ctrl, cac_cfg_t const *const p_cfg)`

Open function for CAC device.

Parameters

[out]	<code>p_ctrl</code>	Pointer to CAC device control. Must be declared by user.
[in]	<code>cac_cfg_t</code>	Pointer to CAC configuration structure.

◆ startMeasurement

`fsp_err_t(* cac_api_t::startMeasurement) (cac_ctrl_t *const p_ctrl)`

Begin a measurement for the CAC peripheral.

Parameters

[in]	<code>p_ctrl</code>	Pointer to CAC device control.
------	---------------------	--------------------------------

◆ stopMeasurement

`fsp_err_t(* cac_api_t::stopMeasurement) (cac_ctrl_t *const p_ctrl)`

End a measurement for the CAC peripheral.

Parameters

[in]	<code>p_ctrl</code>	Pointer to CAC device control.
------	---------------------	--------------------------------

◆ read

```
fsp_err_t(* cac_api_t::read) (cac_ctrl_t *const p_ctrl, uint16_t *const p_counter)
```

Read function for CAC peripheral.

Parameters

[in]	p_ctrl	Control for the CAC device context.
[in]	p_counter	Pointer to variable in which to store the current CACNTBR register contents.

◆ callbackSet

```
fsp_err_t(* cac_api_t::callbackSet) (cac_ctrl_t *const p_api_ctrl,
void(*p_callback)(cac_callback_args_t *), void const *const p_context, cac_callback_args_t *const
p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_CAC_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in cac_api_t::open call
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

```
fsp_err_t(* cac_api_t::close) (cac_ctrl_t *const p_ctrl)
```

Close function for CAC device.

Parameters

[in]	p_ctrl	Pointer to CAC device control.
------	--------	--------------------------------

◆ cac_instance_t

struct cac_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
cac_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
cac_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
cac_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ [cac_ctrl_t](#)

typedef void cac_ctrl_t
CAC control block. Allocate an instance specific control block to pass into the CAC API calls.
Implemented as
◦ cac_instance_ctrl_t

Enumeration Type Documentation

◆ [cac_event_t](#)

enum cac_event_t	
Event types returned by the ISR callback when used in CAC interrupt mode	
Enumerator	
CAC_EVENT_FREQUENCY_ERROR	Frequency error.
CAC_EVENT_MEASUREMENT_COMPLETE	Measurement complete.
CAC_EVENT_COUNTER_OVERFLOW	Counter overflow.

◆ **cac_clock_type_t**

enum <code>cac_clock_type_t</code>	
Enumeration of the two possible clocks.	
Enumerator	
<code>CAC_CLOCK_MEASURED</code>	Measurement clock.
<code>CAC_CLOCK_REFERENCE</code>	Reference clock.

◆ **cac_clock_source_t**

enum <code>cac_clock_source_t</code>	
Enumeration of the possible clock sources for both the reference and measurement clocks.	
Enumerator	
<code>CAC_CLOCK_SOURCE_MAIN_OSC</code>	Main clock oscillator.
<code>CAC_CLOCK_SOURCE_SUBCLOCK</code>	Sub-clock.
<code>CAC_CLOCK_SOURCE_HOCO</code>	HOCO (High speed on chip oscillator)
<code>CAC_CLOCK_SOURCE_MOCO</code>	MOCO (Middle speed on chip oscillator)
<code>CAC_CLOCK_SOURCE_LOCO</code>	LOCO (Low speed on chip oscillator)
<code>CAC_CLOCK_SOURCE_PCLKB</code>	PCLKB (Peripheral Clock B)
<code>CAC_CLOCK_SOURCE_IWDT</code>	IWDT-dedicated on-chip oscillator.
<code>CAC_CLOCK_SOURCE_EXTERNAL</code>	Externally supplied measurement clock on CACREF pin.

◆ **cac_ref_divider_t**

enum <code>cac_ref_divider_t</code>	
Enumeration of available dividers for the reference clock.	
Enumerator	
<code>CAC_REF_DIV_32</code>	Reference clock divided by 32.
<code>CAC_REF_DIV_128</code>	Reference clock divided by 128.
<code>CAC_REF_DIV_1024</code>	Reference clock divided by 1024.
<code>CAC_REF_DIV_8192</code>	Reference clock divided by 8192.

◆ **cac_ref_digfilter_t**

enum <code>cac_ref_digfilter_t</code>	
Enumeration of available digital filter settings for an external reference clock.	
Enumerator	
<code>CAC_REF_DIGITAL_FILTER_OFF</code>	No digital filter on the CACREF pin for reference clock.
<code>CAC_REF_DIGITAL_FILTER_1</code>	Sampling clock for digital filter = measuring frequency.
<code>CAC_REF_DIGITAL_FILTER_4</code>	Sampling clock for digital filter = measuring frequency/4.
<code>CAC_REF_DIGITAL_FILTER_16</code>	Sampling clock for digital filter = measuring frequency/16.

◆ **cac_ref_edge_t**

enum <code>cac_ref_edge_t</code>	
Enumeration of available edge detect settings for the reference clock.	
Enumerator	
<code>CAC_REF_EDGE_RISE</code>	Rising edge detect for the Reference clock.
<code>CAC_REF_EDGE_FALL</code>	Falling edge detect for the Reference clock.
<code>CAC_REF_EDGE_BOTH</code>	Both Rising and Falling edges detect for the Reference clock.

◆ **cac_meas_divider_t**

enum <code>cac_meas_divider_t</code>	
Enumeration of available dividers for the measurement clock	
Enumerator	
<code>CAC_MEAS_DIV_1</code>	Measurement clock divided by 1.
<code>CAC_MEAS_DIV_4</code>	Measurement clock divided by 4.
<code>CAC_MEAS_DIV_8</code>	Measurement clock divided by 8.
<code>CAC_MEAS_DIV_32</code>	Measurement clock divided by 32.

4.3.4 CAN Interface

Interfaces

Detailed Description

Interface for CAN peripheral.

Summary

The CAN interface provides common APIs for CAN HAL drivers. CAN interface supports following features.

- Full-duplex CAN communication
- Generic CAN parameter setting

- Interrupt driven transmit/receive processing
- Callback function support with returning event code
- Hardware resource locking during a transaction

Implemented by:

- [Controller Area Network \(r_can\)](#)
- [Controller Area Network - Flexible Data \(r_canfd\)](#)

Data Structures

struct [can_info_t](#)

struct [can_bit_timing_cfg_t](#)

struct [can_frame_t](#)

struct [can_callback_args_t](#)

struct [can_cfg_t](#)

struct [can_api_t](#)

struct [can_instance_t](#)

Typedefs

typedef void [can_ctrl_t](#)

Enumerations

enum [can_event_t](#)

enum [can_operation_mode_t](#)

enum [can_test_mode_t](#)

enum [can_id_mode_t](#)

enum [can_frame_type_t](#)

Data Structure Documentation

◆ can_info_t

struct can_info_t		
CAN status info		
Data Fields		
uint32_t	status	Useful information from the CAN status register.

uint32_t	rx_mb_status	RX Message Buffer New Data flags.
uint32_t	rx_fifo_status	RX FIFO Empty flags.
uint8_t	error_count_transmit	Transmit error count.
uint8_t	error_count_receive	Receive error count.
uint32_t	error_code	Error code, cleared after reading.

◆ can_bit_timing_cfg_t

struct can_bit_timing_cfg_t		
CAN bit rate configuration.		
Data Fields		
uint32_t	baud_rate_prescaler	Baud rate prescaler. Valid values: 1 - 1024.
uint32_t	time_segment_1	Time segment 1 control.
uint32_t	time_segment_2	Time segment 2 control.
uint32_t	synchronization_jump_width	Synchronization jump width.

◆ can_frame_t

struct can_frame_t		
CAN data Frame		
Data Fields		
uint32_t	id	CAN ID.
can_id_mode_t	id_mode	Standard or Extended ID (IDE).
can_frame_type_t	type	Frame type (RTR).
uint8_t	data_length_code	CAN Data Length Code (DLC).
uint32_t	options	Implementation-specific options.
uint8_t	data[CAN_DATA_BUFFER_LENGTH]	CAN data.

◆ can_callback_args_t

struct can_callback_args_t		
CAN callback parameter definition		
Data Fields		
uint32_t	channel	Device channel number.
can_event_t	event	Event code.
uint32_t	error	Error code.

union can_callback_args_t	<code>__unnamed__</code>	
can_frame_t *	<code>p_frame</code>	
void const *	<code>p_context</code>	Context provided to user during callback.
can_frame_t	<code>frame</code>	Received frame data.

◆ [can_cfg_t](#)

struct can_cfg_t		
CAN Configuration		
Data Fields		
<code>uint32_t</code>	channel	
		CAN channel.
can_bit_timing_cfg_t *	p_bit_timing	
		CAN bit timing.
<code>void(*</code>	p_callback)(can_callback_args_t * <code>p_args</code>)	
		Pointer to callback function.
<code>void const *</code>	p_context	
		User defined callback context.
<code>void const *</code>	p_extend	
		CAN hardware dependent configuration.
<code>uint8_t</code>	ipl	
		Error/Transmit/Receive interrupt priority.
<code>IRQn_Type</code>	error_irq	
		Error IRQ number.

IRQn_Type	rx_irq
	Receive IRQ number.
IRQn_Type	tx_irq
	Transmit IRQ number.

◆ **can_api_t**

struct can_api_t	
Shared Interface definition for CAN	
Data Fields	
fsp_err_t (*	open)(can_ctrl_t *const p_ctrl, can_cfg_t const *const p_cfg)
fsp_err_t (*	write)(can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)
fsp_err_t (*	read)(can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)
fsp_err_t (*	close)(can_ctrl_t *const p_ctrl)
fsp_err_t (*	modeTransition)(can_ctrl_t *const p_api_ctrl, can_operation_mode_t operation_mode, can_test_mode_t test_mode)
fsp_err_t (*	infoGet)(can_ctrl_t *const p_ctrl, can_info_t *const p_info)
fsp_err_t (*	callbackSet)(can_ctrl_t *const p_api_ctrl, void(*p_callback)(can_callback_args_t *), void const *const p_context, can_callback_args_t *const p_callback_memory)
Field Documentation	

◆ **open**

```
fsp_err_t(* can_api_t::open) (can_ctrl_t *const p_ctrl, can_cfg_t const *const p_cfg)
```

Open function for CAN device

Implemented as

- R_CAN_Open()
- R_CANFD_Open()

Parameters

[in,out]	p_ctrl	Pointer to the CAN control block. Must be declared by user. Value set here.
[in]	can_cfg_t	Pointer to CAN configuration structure. All elements of this structure must be set by user.

◆ **write**

```
fsp_err_t(* can_api_t::write) (can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)
```

Write function for CAN device

Implemented as

- R_CAN_Write()
- R_CANFD_Write()

Parameters

[in]	p_ctrl	Pointer to the CAN control block.
[in]	buffer	Buffer number (mailbox or message buffer) to write to.
[in]	p_frame	Pointer for frame of CAN ID, DLC, data and frame type to write.

◆ read

```
fsp_err_t(* can_api_t::read) (can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)
```

Read function for CAN device

Implemented as

- R_CANFD_Read()

Parameters

[in]	p_ctrl	Pointer to the CAN control block.
[in]	buffer	Message buffer (number) to read from.
[in]	p_frame	Pointer to store the CAN ID, DLC, data and frame type.

◆ close

```
fsp_err_t(* can_api_t::close) (can_ctrl_t *const p_ctrl)
```

Close function for CAN device

Implemented as

- R_CAN_Close()

Parameters

[in]	p_ctrl	Pointer to the CAN control block.
------	--------	-----------------------------------

◆ modeTransition

```
fsp_err_t(* can_api_t::modeTransition) (can_ctrl_t *const p_api_ctrl, can_operation_mode_t operation_mode, can_test_mode_t test_mode)
```

Mode Transition function for CAN device

Implemented as

- R_CAN_ModeTransition()
- R_CANFD_ModeTransition()

Parameters

[in]	p_ctrl	Pointer to the CAN control block.
[in]	operation_mode	Destination CAN operation state.
[in]	test_mode	Destination CAN test state.

◆ infoGet

```
fsp_err_t(* can_api_t::infoGet) (can_ctrl_t *const p_ctrl, can_info_t *const p_info)
```

Get CAN channel info.

Implemented as

- R_CAN_InfoGet()
- R_CANFD_InfoGet()

Parameters

[in]	p_ctrl	Handle for channel (pointer to channel control block)
[out]	p_info	Memory address to return channel specific data to.

◆ callbackSet

```
fsp_err_t(* can_api_t::callbackSet) (can_ctrl_t *const p_api_ctrl, void(*p_callback)(can_callback_args_t *), void const *const p_context, can_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_CAN_CallbackSet()
- R_CANFD_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in can_api_t::open call.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ can_instance_t

```
struct can_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

can_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
------------------------------	--------	---

<code>can_cfg_t</code> const *	<code>p_cfg</code>	Pointer to the configuration structure for this instance.
<code>can_api_t</code> const *	<code>p_api</code>	Pointer to the API structure for this instance.

Typedef Documentation

◆ `can_ctrl_t`

typedef void `can_ctrl_t`

CAN control block. Allocate an instance specific control block to pass into the CAN API calls.

Implemented as

- `can_instance_ctrl_t`
- `canfd_instance_ctrl_t`

Enumeration Type Documentation

◆ **can_event_t**

enum <code>can_event_t</code>	
CAN event codes	
Enumerator	
<code>CAN_EVENT_ERR_WARNING</code>	Error Warning event.
<code>CAN_EVENT_ERR_PASSIVE</code>	Error Passive event.
<code>CAN_EVENT_ERR_BUS_OFF</code>	Bus Off event.
<code>CAN_EVENT_BUS_RECOVERY</code>	Bus Off Recovery event.
<code>CAN_EVENT_MAILBOX_MESSAGE_LOST</code>	Mailbox has been overrun.
<code>CAN_EVENT_ERR_BUS_LOCK</code>	Bus lock detected (32 consecutive dominant bits).
<code>CAN_EVENT_ERR_CHANNEL</code>	Channel error has occurred.
<code>CAN_EVENT_TX_ABORTED</code>	Transmit abort event.
<code>CAN_EVENT_RX_COMPLETE</code>	Receive complete event.
<code>CAN_EVENT_TX_COMPLETE</code>	Transmit complete event.
<code>CAN_EVENT_ERR_GLOBAL</code>	Global error has occurred.
<code>CAN_EVENT_TX_FIFO_EMPTY</code>	Transmit FIFO is empty.

◆ **can_operation_mode_t**

enum <code>can_operation_mode_t</code>	
CAN Operation modes	
Enumerator	
<code>CAN_OPERATION_MODE_NORMAL</code>	CAN Normal Operation Mode.
<code>CAN_OPERATION_MODE_RESET</code>	CAN Reset Operation Mode.
<code>CAN_OPERATION_MODE_HALT</code>	CAN Halt Operation Mode.
<code>CAN_OPERATION_MODE_SLEEP</code>	CAN Sleep Operation Mode.

◆ **can_test_mode_t**

enum <code>can_test_mode_t</code>	
CAN Test modes	
Enumerator	
<code>CAN_TEST_MODE_DISABLED</code>	CAN Test Mode Disabled.
<code>CAN_TEST_MODE_LISTEN</code>	CAN Test Listen Mode.
<code>CAN_TEST_MODE_LOOPBACK_EXTERNAL</code>	CAN Test External Loopback Mode.
<code>CAN_TEST_MODE_LOOPBACK_INTERNAL</code>	CAN Test Internal Loopback Mode.
<code>CAN_TEST_MODE_INTERNAL_BUS</code>	CANFD Internal CAN Bus Communication Test Mode.

◆ **can_id_mode_t**

enum <code>can_id_mode_t</code>	
CAN ID modes	
Enumerator	
<code>CAN_ID_MODE_STANDARD</code>	Standard IDs of 11 bits used.
<code>CAN_ID_MODE_EXTENDED</code>	Extended IDs of 29 bits used.

◆ **can_frame_type_t**

enum <code>can_frame_type_t</code>	
CAN frame types	
Enumerator	
<code>CAN_FRAME_TYPE_DATA</code>	Data frame.
<code>CAN_FRAME_TYPE_REMOTE</code>	Remote frame.

4.3.5 CEC Interface[Interfaces](#)

Detailed Description

Interface for CEC peripheral.

Summary

The CEC interface provides common APIs for CEC HAL drivers and supports the following features:

- Opening and closing the CEC module.
- Allocation for full range of local address settings (TV, Recording Device, Playback Device, etc.)
- Supports a user-callback function (required), invoked when transmit, receive, or error interrupts are received.

Implemented by:

- [Consumer Electronics Control \(r_cec\)](#)

Data Structures

union [cec_message_t](#)

struct [cec_callback_args_t](#)

struct [cec_cfg_t](#)

struct [cec_api_t](#)

struct [cec_instance_t](#)

Typedefs

typedef void [cec_ctrl_t](#)

Enumerations

enum [cec_addr_t](#)

enum [cec_clock_source_t](#)

enum [cec_state_t](#)

enum [cec_event_t](#)

Data Structure Documentation

◆ [cec_message_t](#)

union cec_message_t

CEC message		
Data Fields		
struct cec_message_t	<code>__unnamed__</code>	
uint8_t	<code>raw_data[CEC_DATA_BUFFER_LENGTH+2 *sizeof(uint8_t)]</code>	Contiguous raw data.

◆ **cec_callback_args_t**

struct cec_callback_args_t		
CEC callback parameter definition		
Data Fields		
cec_event_t	<code>event</code>	Event code.
<code>void const *</code>	<code>p_context</code>	Context provided to user during callback.
<code>bool</code>	<code>addr_match</code>	Local address matches message destination.
uint8_t	<code>data_byte</code>	Received data byte (INTDA)
cec_status_t	<code>status</code>	CEC Module status data.
cec_error_t	<code>errors</code>	Error code bitfield.

◆ **cec_cfg_t**

struct cec_cfg_t		
CEC Configuration		
Data Fields		
<code>cec_timing_t const *</code>	bit_timing_cfg	
		CEC Bit Timing Configuration.
uint16_t	rx_data_sample_time	
		Receive Data Sample Time Setting.
uint16_t	rx_data_bit_reference_width	
		Receive Data Bit Reference Width.
<code>void(*</code>	<code>p_callback)(cec_callback_args_t *p_args)</code>	
		Pointer to callback function.

void const *	p_context
	User defined callback context.
uint8_t	ipl
	Error/Data/Message interrupt priority level.
IRQn_Type	error_irq
	Error IRQ number.
IRQn_Type	data_irq
	Data IRQ number.
IRQn_Type	msg_irq
	Communication Complete IRQ number.
void *	p_extend
	Pointer to extended configuration structure.

◆ **cec_api_t**

struct cec_api_t	
Shared Interface definition for CEC	
Data Fields	
fsp_err_t (*	open)(cec_ctrl_t *const p_ctrl, cec_cfg_t const *const p_cfg)
fsp_err_t (*	medialnit)(cec_ctrl_t *const p_ctrl, cec_addr_t local_address)
fsp_err_t (*	write)(cec_ctrl_t *const p_ctrl, cec_message_t const *const p_message, uint32_t message_size)

<code>fsp_err_t(*</code>	<code>close)(cec_ctrl_t *const p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>statusGet)(cec_ctrl_t *const p_ctrl, cec_status_t *const p_status)</code>
<code>fsp_err_t(*</code>	<code>callbackSet)(cec_ctrl_t *const p_ctrl, void(*p_callback)(cec_callback_args_t *), void const *const p_context, cec_callback_args_t *const p_callback_memory)</code>

Field Documentation

◆ open

`fsp_err_t(* cec_api_t::open) (cec_ctrl_t *const p_ctrl, cec_cfg_t const *const p_cfg)`

Open function for CEC device

Implemented as

- `R_CEC_Open()`

Parameters

[in,out]	<code>p_ctrl</code>	Pointer to the CEC control block. Must be declared by user. Value set here.
[in]	<code>p_cfg</code>	Pointer to CEC configuration structure. All elements of this structure must be set by user.

◆ medialnit

`fsp_err_t(* cec_api_t::medialnit) (cec_ctrl_t *const p_ctrl, cec_addr_t local_address)`

Initializes the CEC device. May be called any time after the CEC module has been opened. This API blocks until the device initialization procedure is complete.

Implemented as

- `R_CEC_Medialnit()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to CEC instance control block.
[out]	<code>local_address</code>	Desired Logical address for local device.

◆ write

```
fsp_err_t(* cec_api_t::write) (cec_ctrl_t *const p_ctrl, cec_message_t const *const p_message,
uint32_t message_size)
```

Write function for CEC device

Implemented as

- R_CEC_Write()

Parameters

[in]	p_ctrl	Pointer to CEC instance control block
[in]	p_message	Message data
[in]	message_size	Total size of entire message

◆ close

```
fsp_err_t(* cec_api_t::close) (cec_ctrl_t *const p_ctrl)
```

Close function for CEC device

Implemented as

- R_CEC_Close()

Parameters

[in]	p_ctrl	Pointer to CEC instance control block
[out]	p_message	Message data

◆ statusGet

```
fsp_err_t(* cec_api_t::statusGet) (cec_ctrl_t *const p_ctrl, cec_status_t *const p_status)
```

Get CEC channel info.

Implemented as

- R_CEC_StatusGet()

Parameters

[in]	p_ctrl	Pointer to CEC instance control block
[out]	p_status	Memory address to return channel specific data to.

◆ **callbackSet**

```
fsp_err_t(* cec_api_t::callbackSet) (cec_ctrl_t *const p_ctrl, void(*p_callback)(cec_callback_args_t *),
void const *const p_context, cec_callback_args_t *const p_callback_memory)
```

Specify callback function, optional context pointer and working memory pointer.

Implemented as

- R_CEC_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in cec_api_t::open call.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_callback_memory	Pointer to volatile memory where callback structure cec be allocated. Callback arguments allocated here are only valid during the callback.

◆ **cec_instance_t**

```
struct cec_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

cec_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
cec_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
cec_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **cec_ctrl_t**

```
typedef void cec_ctrl_t
```

CEC control block. Allocate an instance specific control block to pass into the CEC API calls.

Implemented as

- [cec_instance_ctrl_t](#)

Enumeration Type Documentation

◆ cec_addr_t

enum cec_addr_t	
CEC Addresses	
Enumerator	
CEC_ADDR_TV	CEC Address for TV.
CEC_ADDR_RECORDING_DEVICE_1	CEC Address for Recording Device 1.
CEC_ADDR_RECORDING_DEVICE_2	CEC Address for Recording Device 2.
CEC_ADDR_TUNER_1	CEC Address for Tuner 1.
CEC_ADDR_PLAYBACK_DEVICE_1	CEC Address for Playback Device 1.
CEC_ADDR_AUDIO_SYSTEM	CEC Address for Audio System.
CEC_ADDR_TUNER_2	CEC Address for Tuner 2.
CEC_ADDR_TUNER_3	CEC Address for Tuner 3.
CEC_ADDR_PLAYBACK_DEVICE_2	CEC Address for Playback Device 2.
CEC_ADDR_RECORDING_DEVICE_3	CEC Address for Recording Device 3.
CEC_ADDR_TUNER_4	CEC Address for Tuner 4.
CEC_ADDR_PLAYBACK_DEVICE_3	CEC Address for Playback Device 3.
CEC_ADDR_SPECIFIC_USE	CEC Address for Specific Use.
CEC_ADDR_UNREGISTERED	CEC Address for Unregistered Devices.
CEC_ADDR_BROADCAST	CEC Broadcast message.

◆ **cec_clock_source_t**

enum <code>cec_clock_source_t</code>	
CEC Source Clock	
Enumerator	
<code>CEC_CLOCK_SOURCE_PCLKB_DIV_32</code>	PCLKB / 32 is the source of the CEC Clock.
<code>CEC_CLOCK_SOURCE_PCLKB_DIV_64</code>	PCLKB / 64 is the source of the CEC Clock.
<code>CEC_CLOCK_SOURCE_PCLKB_DIV_128</code>	PCLKB / 128 is the source of the CEC Clock.
<code>CEC_CLOCK_SOURCE_PCLKB_DIV_256</code>	PCLKB / 256 is the source of the CEC Clock.
<code>CEC_CLOCK_SOURCE_PCLKB_DIV_512</code>	PCLKB / 512 is the source of the CEC Clock.
<code>CEC_CLOCK_SOURCE_PCLKB_DIV_1024</code>	PCLKB / 1024 is the source of the CEC Clock.
<code>CEC_CLOCK_SOURCE_CECCLK</code>	CECCLK is the source of the CEC Clock.
<code>CEC_CLOCK_SOURCE_CECCLK_DIV_256</code>	CECCLK / 256 is the source of the CEC Clock.

◆ **cec_state_t**

enum <code>cec_state_t</code>	
CEC State	
Enumerator	
<code>CEC_STATE_UNINIT</code>	Module requires initialization.
<code>CEC_STATE_READY</code>	Module ready for operation.
<code>CEC_STATE_TX_ACTIVE</code>	Transmit in progress, either direct or broadcast.
<code>CEC_STATE_RX_ACTIVE</code>	Receive in progress, either direct or broadcast.
<code>CEC_STATE_BUSY</code>	CEC Signal Free Time has not yet elapsed.

◆ **cec_error_t**

enum <code>cec_error_t</code>	
CEC Error Code	
Enumerator	
<code>CEC_ERROR_NONE</code>	No errors currently active.
<code>CEC_ERROR_OERR</code>	Overrun error.
<code>CEC_ERROR_UERR</code>	Unterrun Error.
<code>CEC_ERROR_ACKERR</code>	ACK Error.
<code>CEC_ERROR_TERR</code>	Timing Error.
<code>CEC_ERROR_TXERR</code>	Transmission Error.
<code>CEC_ERROR_AERR</code>	Bus arbitration Loss.
<code>CEC_ERROR_BLERR</code>	Bus lock error.
<code>CEC_ERROR_ADDR</code>	Address allocation error.

◆ **cec_event_t**

enum <code>cec_event_t</code>	
CEC event codes	
Enumerator	
<code>CEC_EVENT_RX_DATA</code>	Receive Data byte event.
<code>CEC_EVENT_RX_COMPLETE</code>	Receive complete event.
<code>CEC_EVENT_TX_COMPLETE</code>	Transmit complete event.
<code>CEC_EVENT_READY</code>	CEC Address allocated and module is now ready.
<code>CEC_EVENT_ERR</code>	Error has occurred.

4.3.6 CGC Interface

Interfaces

Detailed Description

Interface for clock generation.

Summary

The CGC interface provides the ability to configure and use all of the CGC module's capabilities. Among the capabilities is the selection of several clock sources to use as the system clock source. Additionally, the system clocks can be divided down to provide a wide range of frequencies for various system and peripheral needs.

Clock stability can be checked and clocks may also be stopped to save power when not needed. The API has a function to return the frequency of the system and system peripheral clocks at run time. There is also a feature to detect when the main oscillator has stopped, with the option of calling a user provided callback function.

The CGC interface is implemented by:

- [Clock Generation Circuit \(r_cgc\)](#)

Data Structures

<code>fsp_err_t(*</code>	<code>close)(cgc_ctrl_t *const p_ctrl)</code>

Field Documentation

◆ open

`fsp_err_t(* cgc_api_t::open) (cgc_ctrl_t *const p_ctrl, cgc_cfg_t const *const p_cfg)`

Initial configuration

Implemented as

- `R_CGC_Open()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to instance control block
[in]	<code>p_cfg</code>	Pointer to configuration

◆ **clocksCfg**

```
fsp_err_t(* cgc_api_t::clocksCfg) (cgc_ctrl_t *const p_ctrl, cgc_clocks_cfg_t const *const p_clock_cfg)
```

Configure all system clocks.

Implemented as

- R_CGC_ClocksCfg()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	p_clock_cfg	Pointer to desired configuration of system clocks

◆ **clockStart**

```
fsp_err_t(* cgc_api_t::clockStart) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source, cgc_pll_cfg_t const *const p_pll_cfg)
```

Start a clock.

Implemented as

- R_CGC_ClockStart()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	clock_source	Clock source to start
[in]	p_pll_cfg	Pointer to PLL configuration, can be NULL if clock_source is not CGC_CLOCK_PLL or CGC_CLOCK_PLL2

◆ **clockStop**

```
fsp_err_t(* cgc_api_t::clockStop) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source)
```

Stop a clock.

Implemented as

- R_CGC_ClockStop()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	clock_source	The clock source to stop

◆ **clockCheck**

```
fsp_err_t(* cgc_api_t::clockCheck) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source)
```

Check the stability of the selected clock.

Implemented as

- R_CGC_ClockCheck()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	clock_source	Which clock source to check for stability

◆ **systemClockSet**

```
fsp_err_t(* cgc_api_t::systemClockSet) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source, cgc_divider_cfg_t const *const p_divider_cfg)
```

Set the system clock.

Implemented as

- R_CGC_SystemClockSet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	clock_source	Clock source to set as system clock
[in]	p_divider_cfg	Pointer to the clock divider configuration

◆ systemClockGet

```
fsp_err_t(* cgc_api_t::systemClockGet) (cgc_ctrl_t *const p_ctrl, cgc_clock_t *const p_clock_source,
cgc_divider_cfg_t *const p_divider_cfg)
```

Get the system clock information.

Implemented as

- R_CGC_SystemClockGet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[out]	p_clock_source	Returns the current system clock
[out]	p_divider_cfg	Returns the current system clock dividers

◆ oscStopDetectEnable

```
fsp_err_t(* cgc_api_t::oscStopDetectEnable) (cgc_ctrl_t *const p_ctrl)
```

Enable and optionally register a callback for Main Oscillator stop detection.

Implemented as

- R_CGC_OscStopDetectEnable()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	p_callback	Callback function that will be called by the NMI interrupt when an oscillation stop is detected. If the second argument is "false", then this argument can be NULL.
[in]	enable	Enable/disable Oscillation Stop Detection

◆ **oscStopDetectDisable**

```
fsp_err_t(* cgc_api_t::oscStopDetectDisable) (cgc_ctrl_t *const p_ctrl)
```

Disable Main Oscillator stop detection.

Implemented as

- [R_CGC_OscStopDetectDisable\(\)](#)

Parameters

[in]	p_ctrl	Pointer to instance control block
------	--------	-----------------------------------

◆ **oscStopStatusClear**

```
fsp_err_t(* cgc_api_t::oscStopStatusClear) (cgc_ctrl_t *const p_ctrl)
```

Clear the oscillator stop detection flag.

Implemented as

- [R_CGC_OscStopStatusClear\(\)](#)

Parameters

[in]	p_ctrl	Pointer to instance control block
------	--------	-----------------------------------

◆ **callbackSet**

```
fsp_err_t(* cgc_api_t::callbackSet) (cgc_ctrl_t *const p_api_ctrl, void(*p_callback)(cgc_callback_args_t *), void const *const p_context, cgc_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- [R_CGC_CallbackSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to the CGC control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* cgc_api_t::close) (cgc_ctrl_t *const p_ctrl)
```

Close the CGC driver.

Implemented as

- [R_CGC_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to instance control block
------	--------	-----------------------------------

◆ **cgc_instance_t**

```
struct cgc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

cgc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
cgc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
cgc_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **cgc_ctrl_t**

```
typedef void cgc_ctrl_t
```

CGC control block. Allocate an instance specific control block to pass into the CGC API calls.

Implemented as

- [cgc_instance_ctrl_t](#)

Enumeration Type Documentation

◆ **cgc_event_t**

enum <code>cgc_event_t</code>	
Events that can trigger a callback function	
Enumerator	
<code>CGC_EVENT_OSC_STOP_DETECT</code>	Oscillator stop detection has caused the event.

◆ **cgc_clock_t**

enum <code>cgc_clock_t</code>	
System clock source identifiers - The source of ICLK, BCLK, FCLK, PCLKS A-D and UCLK prior to the system clock divider	
Enumerator	
<code>CGC_CLOCK_HOCO</code>	The high speed on chip oscillator.
<code>CGC_CLOCK_MOCO</code>	The middle speed on chip oscillator.
<code>CGC_CLOCK_LOCO</code>	The low speed on chip oscillator.
<code>CGC_CLOCK_MAIN_OSC</code>	The main oscillator.
<code>CGC_CLOCK_SUBCLOCK</code>	The subclock oscillator.
<code>CGC_CLOCK_PLL</code>	The PLL oscillator.
<code>CGC_CLOCK_PLL2</code>	The PLL2 oscillator.

◆ **cgc_pll_div_t**

enum <code>cgc_pll_div_t</code>	
PLL divider values	
Enumerator	
<code>CGC_PLL_DIV_1</code>	PLL divider of 1.
<code>CGC_PLL_DIV_2</code>	PLL divider of 2.
<code>CGC_PLL_DIV_3</code>	PLL divider of 3 (S7, S5 only)
<code>CGC_PLL_DIV_4</code>	PLL divider of 4 (S3 only)

◆ **cgc_pll_mul_t**

enum <code>cgc_pll_mul_t</code>	
PLL multiplier values	
Enumerator	
<code>CGC_PLL_MUL_8_0</code>	PLL multiplier of 8.0.
<code>CGC_PLL_MUL_9_0</code>	PLL multiplier of 9.0.
<code>CGC_PLL_MUL_10_0</code>	PLL multiplier of 10.0.
<code>CGC_PLL_MUL_10_5</code>	PLL multiplier of 10.5.
<code>CGC_PLL_MUL_11_0</code>	PLL multiplier of 11.0.
<code>CGC_PLL_MUL_11_5</code>	PLL multiplier of 11.5.
<code>CGC_PLL_MUL_12_0</code>	PLL multiplier of 12.0.
<code>CGC_PLL_MUL_12_5</code>	PLL multiplier of 12.5.
<code>CGC_PLL_MUL_13_0</code>	PLL multiplier of 13.0.
<code>CGC_PLL_MUL_13_5</code>	PLL multiplier of 13.5.
<code>CGC_PLL_MUL_14_0</code>	PLL multiplier of 14.0.
<code>CGC_PLL_MUL_14_5</code>	PLL multiplier of 14.5.
<code>CGC_PLL_MUL_15_0</code>	PLL multiplier of 15.0.
<code>CGC_PLL_MUL_15_5</code>	PLL multiplier of 15.5.
<code>CGC_PLL_MUL_16_0</code>	PLL multiplier of 16.0.
<code>CGC_PLL_MUL_16_5</code>	PLL multiplier of 16.5.
<code>CGC_PLL_MUL_17_0</code>	PLL multiplier of 17.0.
<code>CGC_PLL_MUL_17_5</code>	PLL multiplier of 17.5.
<code>CGC_PLL_MUL_18_0</code>	PLL multiplier of 18.0.
<code>CGC_PLL_MUL_18_5</code>	PLL multiplier of 18.5.
<code>CGC_PLL_MUL_19_0</code>	PLL multiplier of 19.0.

CGC_PLL_MUL_19_5	PLL multiplier of 19.5.
CGC_PLL_MUL_20_0	PLL multiplier of 20.0.
CGC_PLL_MUL_20_5	PLL multiplier of 20.5.
CGC_PLL_MUL_21_0	PLL multiplier of 21.0.
CGC_PLL_MUL_21_5	PLL multiplier of 21.5.
CGC_PLL_MUL_22_0	PLL multiplier of 22.0.
CGC_PLL_MUL_22_5	PLL multiplier of 22.5.
CGC_PLL_MUL_23_0	PLL multiplier of 23.0.
CGC_PLL_MUL_23_5	PLL multiplier of 23.5.
CGC_PLL_MUL_24_0	PLL multiplier of 24.0.
CGC_PLL_MUL_24_5	PLL multiplier of 24.5.
CGC_PLL_MUL_25_0	PLL multiplier of 25.0.
CGC_PLL_MUL_25_5	PLL multiplier of 25.5.
CGC_PLL_MUL_26_0	PLL multiplier of 26.0.
CGC_PLL_MUL_26_5	PLL multiplier of 26.5.
CGC_PLL_MUL_27_0	PLL multiplier of 27.0.
CGC_PLL_MUL_27_5	PLL multiplier of 27.5.
CGC_PLL_MUL_28_0	PLL multiplier of 28.0.
CGC_PLL_MUL_28_5	PLL multiplier of 28.5.
CGC_PLL_MUL_29_0	PLL multiplier of 29.0.
CGC_PLL_MUL_29_5	PLL multiplier of 29.5.
CGC_PLL_MUL_30_0	PLL multiplier of 30.0.
CGC_PLL_MUL_31_0	PLL multiplier of 31.0.

◆ **cgc_sys_clock_div_t**

enum <code>cgc_sys_clock_div_t</code>	
System clock divider values - The individually selectable divider of each of the system clocks, ICLK, BCLK, FCLK, PCLKS A-D.	
Enumerator	
<code>CGC_SYS_CLOCK_DIV_1</code>	System clock divided by 1.
<code>CGC_SYS_CLOCK_DIV_2</code>	System clock divided by 2.
<code>CGC_SYS_CLOCK_DIV_4</code>	System clock divided by 4.
<code>CGC_SYS_CLOCK_DIV_8</code>	System clock divided by 8.
<code>CGC_SYS_CLOCK_DIV_16</code>	System clock divided by 16.
<code>CGC_SYS_CLOCK_DIV_32</code>	System clock divided by 32.
<code>CGC_SYS_CLOCK_DIV_64</code>	System clock divided by 64.

◆ **cgc_usb_clock_div_t**

enum <code>cgc_usb_clock_div_t</code>	
USB clock divider values	
Enumerator	
<code>CGC_USB_CLOCK_DIV_3</code>	Divide USB source clock by 3.
<code>CGC_USB_CLOCK_DIV_4</code>	Divide USB source clock by 4.
<code>CGC_USB_CLOCK_DIV_5</code>	Divide USB source clock by 5.

◆ **cgc_clock_change_t**

enum <code>cgc_clock_change_t</code>	
Clock options	
Enumerator	
<code>CGC_CLOCK_CHANGE_START</code>	Start the clock.
<code>CGC_CLOCK_CHANGE_STOP</code>	Stop the clock.
<code>CGC_CLOCK_CHANGE_NONE</code>	No change to the clock.

4.3.7 Comparator Interface

Interfaces

Detailed Description

Interface for comparators.

Summary

The comparator interface provides standard comparator functionality, including generating an event when the comparator result changes.

Implemented by:

- [High-Speed Analog Comparator \(r_acmphs\)](#)
- [Low-Power Analog Comparator \(r_acmplp\)](#)

Data Structures

struct `comparator_info_t`

struct `comparator_status_t`

struct `comparator_callback_args_t`

struct `comparator_cfg_t`

struct `comparator_api_t`

struct `comparator_instance_t`

Typedefs

```
typedef void comparator_ctrl_t
```

Enumerations

```
enum comparator_mode_t
```

```
enum comparator_trigger_t
```

```
enum comparator_polarity_invert_t
```

```
enum comparator_pin_output_t
```

```
enum comparator_filter_t
```

```
enum comparator_state_t
```

Data Structure Documentation

◆ comparator_info_t

struct comparator_info_t		
Comparator information.		
Data Fields		
uint32_t	min_stabilization_wait_us	Minimum stabilization wait time in microseconds.

◆ comparator_status_t

struct comparator_status_t		
Comparator status.		
Data Fields		
comparator_state_t	state	Current comparator state.

◆ comparator_callback_args_t

struct comparator_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data. Set in comparator_api_t::open function in comparator_cfg_t .
uint32_t	channel	The physical hardware channel that caused the interrupt.

◆ comparator_cfg_t

struct comparator_cfg_t		
-------------------------	--	--

User configuration structure, used in open function

Data Fields

uint8_t	channel
	Hardware channel used.
comparator_mode_t	mode
	Normal or window mode.
comparator_trigger_t	trigger
	Trigger setting.
comparator_filter_t	filter
	Digital filter clock divisor setting.
comparator_polarity_invert_t	invert
	Whether to invert output.
comparator_pin_output_t	pin_output
	Whether to include output on output pin.
uint8_t	vref_select
	Internal Vref Select.
uint8_t	ipl
	Interrupt priority.
IRQn_Type	irq
	NVIC interrupt number.

void(*	p_callback)(comparator_callback_args_t *p_args)
void const *	p_context
void const *	p_extend
	Comparator hardware dependent configuration.

Field Documentation

◆ [p_callback](#)

void(* comparator_cfg_t::p_callback) ([comparator_callback_args_t](#) *p_args)

Callback called when comparator event occurs.

◆ [p_context](#)

void const* comparator_cfg_t::p_context

Placeholder for user data. Passed to the user callback in [comparator_callback_args_t](#).

◆ [comparator_api_t](#)

struct comparator_api_t

Comparator functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t (*	open)(comparator_ctrl_t *const p_ctrl, comparator_cfg_t const *const p_cfg)
fsp_err_t (*	outputEnable)(comparator_ctrl_t *const p_ctrl)
fsp_err_t (*	infoGet)(comparator_ctrl_t *const p_ctrl, comparator_info_t *const p_info)
fsp_err_t (*	statusGet)(comparator_ctrl_t *const p_ctrl, comparator_status_t *const p_status)
fsp_err_t (*	close)(comparator_ctrl_t *const p_ctrl)

Field Documentation

◆ **open**

```
fsp_err_t(* comparator_api_t::open) (comparator_ctrl_t *const p_ctrl, comparator_cfg_t const *const p_cfg)
```

Initialize the comparator.

Implemented as

- R_ACMPHS_Open()
- R_ACMPLP_Open()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	p_cfg	Pointer to configuration

◆ **outputEnable**

```
fsp_err_t(* comparator_api_t::outputEnable) (comparator_ctrl_t *const p_ctrl)
```

Start the comparator.

Implemented as

- R_ACMPHS_OutputEnable()
- R_ACMPLP_OutputEnable()

Parameters

[in]	p_ctrl	Pointer to instance control block
------	--------	-----------------------------------

◆ **infoGet**

```
fsp_err_t(* comparator_api_t::infoGet) (comparator_ctrl_t *const p_ctrl, comparator_info_t *const p_info)
```

Provide information such as the recommended minimum stabilization wait time.

Implemented as

- R_ACMPHS_InfoGet()
- R_ACMPLP_InfoGet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[out]	p_info	Comparator information stored here

◆ **statusGet**

```
fsp_err_t(* comparator_api_t::statusGet) (comparator_ctrl_t *const p_ctrl, comparator_status_t *const p_status)
```

Provide current comparator status.

Implemented as

- R_ACMPHS_StatusGet()
- R_ACMPPLP_StatusGet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[out]	p_status	Status stored here

◆ **close**

```
fsp_err_t(* comparator_api_t::close) (comparator_ctrl_t *const p_ctrl)
```

Stop the comparator.

Implemented as

- R_ACMPHS_Close()
- R_ACMPPLP_Close()

Parameters

[in]	p_ctrl	Pointer to instance control block
------	--------	-----------------------------------

◆ **comparator_instance_t**

```
struct comparator_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

comparator_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
comparator_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
comparator_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ **comparator_ctrl_t**typedef void `comparator_ctrl_t`

Includes board and MCU related header files. Comparator control block. Allocate an instance specific control block to pass into the comparator API calls.

Implemented as

- `acmphs_instance_ctrl_t`
- `acmplp_instance_ctrl_t`

Enumeration Type Documentation◆ **comparator_mode_t**enum `comparator_mode_t`

Select whether to invert the polarity of the comparator output.

Enumerator

<code>COMPARATOR_MODE_NORMAL</code>	Normal mode.
<code>COMPARATOR_MODE_WINDOW</code>	Window mode, not supported by all implementations.

◆ **comparator_trigger_t**enum `comparator_trigger_t`

Trigger type: rising edge, falling edge, both edges, low level.

Enumerator

<code>COMPARATOR_TRIGGER_RISING</code>	Rising edge trigger.
<code>COMPARATOR_TRIGGER_FALLING</code>	Falling edge trigger.
<code>COMPARATOR_TRIGGER_BOTH_EDGE</code>	Both edges trigger.

◆ **comparator_polarity_invert_t**

enum <code>comparator_polarity_invert_t</code>	
Select whether to invert the polarity of the comparator output.	
Enumerator	
COMPARATOR_POLARITY_INVERT_OFF	Do not invert polarity.
COMPARATOR_POLARITY_INVERT_ON	Invert polarity.

◆ **comparator_pin_output_t**

enum <code>comparator_pin_output_t</code>	
Select whether to include the comparator output on the output pin.	
Enumerator	
COMPARATOR_PIN_OUTPUT_OFF	Do not include comparator output on output pin.
COMPARATOR_PIN_OUTPUT_ON	Include comparator output on output pin.

◆ **comparator_filter_t**

enum <code>comparator_filter_t</code>	
Comparator digital filtering sample clock divisor settings.	
Enumerator	
COMPARATOR_FILTER_OFF	Disable debounce filter.
COMPARATOR_FILTER_1	Filter using PCLK divided by 1, not supported by all implementations.
COMPARATOR_FILTER_8	Filter using PCLK divided by 8.
COMPARATOR_FILTER_16	Filter using PCLK divided by 16, not supported by all implementations.
COMPARATOR_FILTER_32	Filter using PCLK divided by 32.

◆ **comparator_state_t**

enum <code>comparator_state_t</code>	
Current comparator state.	
Enumerator	
<code>COMPARATOR_STATE_OUTPUT_LOW</code>	VCMP < VREF if polarity is not inverted, VCMP > VREF if inverted.
<code>COMPARATOR_STATE_OUTPUT_HIGH</code>	VCMP > VREF if polarity is not inverted, VCMP < VREF if inverted.
<code>COMPARATOR_STATE_OUTPUT_DISABLED</code>	<code>comparator_api_t::outputEnable()</code> has not been called

4.3.8 CRC Interface

Interfaces

Detailed Description

Interface for cyclic redundancy checking.

Summary

The CRC (Cyclic Redundancy Check) calculator generates CRC codes using five different polynomials including 8 bit, 16 bit, and 32 bit variations. Calculation can be performed by sending data to the block using the CPU or by snooping on read or write activity on one of 10 SCI channels.

Implemented by:

- [Cyclic Redundancy Check \(CRC\) Calculator \(`r_crc`\)](#)

Data Structures

struct `crc_input_t`

struct `crc_cfg_t`

struct `crc_api_t`

struct `crc_instance_t`

Typedefs

typedef void `crc_ctrl_t`

Enumerations

enum [crc_polynomial_t](#)

enum [crc_bit_order_t](#)

enum [crc_snoop_direction_t](#)

enum [crc_snoop_address_t](#)

Data Structure Documentation

◆ [crc_input_t](#)

struct [crc_input_t](#)

Structure for CRC inputs

◆ [crc_cfg_t](#)

struct [crc_cfg_t](#)

User configuration structure, used in open function

Data Fields

crc_polynomial_t	polynomial	CRC Generating Polynomial Switching (GPS)
crc_bit_order_t	bit_order	CRC Calculation Switching (LMS)
crc_snoop_address_t	snoop_address	Register Snoop Address (CRCSA)
void const *	p_extend	CRC Hardware Dependent Configuration.

◆ [crc_api_t](#)

struct [crc_api_t](#)

CRC driver structure. General CRC functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t (*	open)(crc_ctrl_t *const p_ctrl, crc_cfg_t const *const p_cfg)
fsp_err_t (*	close)(crc_ctrl_t *const p_ctrl)
fsp_err_t (*	crcResultGet)(crc_ctrl_t *const p_ctrl, uint32_t *crc_result)
fsp_err_t (*	snoopEnable)(crc_ctrl_t *const p_ctrl, uint32_t crc_seed)

fsp_err_t(*	snoopDisable)(crc_ctrl_t *const p_ctrl)
-------------	--

fsp_err_t(*	calculate)(crc_ctrl_t *const p_ctrl, crc_input_t *const p_crc_input, uint32_t *p_crc_result)
-------------	---

Field Documentation

◆ open

fsp_err_t(* crc_api_t::open) (crc_ctrl_t *const p_ctrl, crc_cfg_t const *const p_cfg)
--------------------------------	---

Open the CRC driver module.

Implemented as

- [R_CRC_Open\(\)](#)

Parameters

[in]	p_ctrl	Pointer to CRC device handle.
[in]	p_cfg	Pointer to a configuration structure.

◆ close

fsp_err_t(* crc_api_t::close) (crc_ctrl_t *const p_ctrl)
---------------------------------	---------------------------

Close the CRC module driver

Implemented as

- [R_CRC_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to crc device handle
------	--------	------------------------------

Return values

FSP_SUCCESS	Configuration was successful.
-------------	-------------------------------

◆ **crcResultGet**

```
fsp_err_t(* crc_api_t::crcResultGet) (crc_ctrl_t *const p_ctrl, uint32_t *crc_result)
```

Return the current calculated value.

Implemented as

- [R_CRC_CalculatedValueGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to CRC device handle.
[out]	crc_result	The calculated value from the last CRC calculation.

◆ **snoopEnable**

```
fsp_err_t(* crc_api_t::snoopEnable) (crc_ctrl_t *const p_ctrl, uint32_t crc_seed)
```

Configure and Enable snooping.

Implemented as

- [R_CRC_SnoopEnable\(\)](#)

Parameters

[in]	p_ctrl	Pointer to CRC device handle.
[in]	crc_seed	CRC seed.

◆ **snoopDisable**

```
fsp_err_t(* crc_api_t::snoopDisable) (crc_ctrl_t *const p_ctrl)
```

Disable snooping.

Implemented as

- [R_CRC_SnoopDisable\(\)](#)

Parameters

[in]	p_ctrl	Pointer to CRC device handle.
------	--------	-------------------------------

◆ **calculate**

```
fsp_err_t(* crc_api_t::calculate) (crc_ctrl_t *const p_ctrl, crc_input_t *const p_crc_input, uint32_t *p_crc_result)
```

Perform a CRC calculation on a block of data.

Implemented as

- [R_CRC_Calculate\(\)](#)

Parameters

[in]	p_ctrl	Pointer to crc device handle.
[in]	p_crc_input	A pointer to structure for CRC inputs
[out]	crc_result	The calculated value of the CRC calculation.

◆ **crc_instance_t**

```
struct crc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

crc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
crc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
crc_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **crc_ctrl_t**

```
typedef void crc_ctrl_t
```

CRC control block. Allocate an instance specific control block to pass into the CRC API calls.

Implemented as

- [crc_instance_ctrl_t](#)

Enumeration Type Documentation

◆ **crc_polynomial_t**

enum <code>crc_polynomial_t</code>	
CRC Generating Polynomial Switching (GPS).	
Enumerator	
<code>CRC_POLYNOMIAL_CRC_8</code>	8-bit CRC-8 ($X^8 + X^2 + X + 1$)
<code>CRC_POLYNOMIAL_CRC_16</code>	16-bit CRC-16 ($X^{16} + X^{15} + X^2 + 1$)
<code>CRC_POLYNOMIAL_CRC_CCITT</code>	16-bit CRC-CCITT ($X^{16} + X^{12} + X^5 + 1$)
<code>CRC_POLYNOMIAL_CRC_32</code>	32-bit CRC-32 ($X^{32} + X^{26} + X^{23} + X^{22} + X^{16} + X^{12} + X^{11} + X^{10} + X^8 + X^7 + X^5 + X^4 + X^2 + X + 1$)
<code>CRC_POLYNOMIAL_CRC_32C</code>	32-bit CRC-32C ($X^{32} + X^{28} + X^{27} + X^{26} + X^{25} + X^{23} + X^{22} + X^{20} + X^{19} + X^{18} + X^{14} + X^{13} + X^{11} + X^{10} + X^9 + X^8 + X^6 + 1$)

◆ **crc_bit_order_t**

enum <code>crc_bit_order_t</code>	
CRC Calculation Switching (LMS)	
Enumerator	
<code>CRC_BIT_ORDER_LMS_LSB</code>	Generates CRC for LSB first communication.
<code>CRC_BIT_ORDER_LMS_MSB</code>	Generates CRC for MSB first communication.

◆ **crc_snoop_direction_t**

enum <code>crc_snoop_direction_t</code>	
Snoop-On-Write/Read Switch (CRCSWR)	
Enumerator	
<code>CRC_SNOOP_DIRECTION_RECEIVE</code>	Snoop-on-read.
<code>CRC_SNOOP_DIRECTION_TRANSMIT</code>	Snoop-on-write.

◆ **crc_snoop_address_t**

enum <code>crc_snoop_address_t</code>	
Snoop SCI register Address (lower 14 bits)	
Enumerator	
<code>CRC_SNOOP_ADDRESS_NONE</code>	Snoop mode disabled.
<code>CRC_SNOOP_ADDRESS_SCI0_TDR</code>	Snoop SCI0 transmit data register.
<code>CRC_SNOOP_ADDRESS_SCI1_TDR</code>	Snoop SCI1 transmit data register.
<code>CRC_SNOOP_ADDRESS_SCI2_TDR</code>	Snoop SCI2 transmit data register.
<code>CRC_SNOOP_ADDRESS_SCI3_TDR</code>	Snoop SCI3 transmit data register.
<code>CRC_SNOOP_ADDRESS_SCI4_TDR</code>	Snoop SCI4 transmit data register.
<code>CRC_SNOOP_ADDRESS_SCI5_TDR</code>	Snoop SCI5 transmit data register.
<code>CRC_SNOOP_ADDRESS_SCI6_TDR</code>	Snoop SCI6 transmit data register.
<code>CRC_SNOOP_ADDRESS_SCI7_TDR</code>	Snoop SCI7 transmit data register.
<code>CRC_SNOOP_ADDRESS_SCI8_TDR</code>	Snoop SCI8 transmit data register.
<code>CRC_SNOOP_ADDRESS_SCI9_TDR</code>	Snoop SCI9 transmit data register.
<code>CRC_SNOOP_ADDRESS_SCI0_FTDRL</code>	Snoop SCI0 transmit FIFO data register.
<code>CRC_SNOOP_ADDRESS_SCI1_FTDRL</code>	Snoop SCI1 transmit FIFO data register.
<code>CRC_SNOOP_ADDRESS_SCI2_FTDRL</code>	Snoop SCI2 transmit FIFO data register.
<code>CRC_SNOOP_ADDRESS_SCI3_FTDRL</code>	Snoop SCI3 transmit FIFO data register.
<code>CRC_SNOOP_ADDRESS_SCI4_FTDRL</code>	Snoop SCI4 transmit FIFO data register.
<code>CRC_SNOOP_ADDRESS_SCI5_FTDRL</code>	Snoop SCI5 transmit FIFO data register.
<code>CRC_SNOOP_ADDRESS_SCI6_FTDRL</code>	Snoop SCI6 transmit FIFO data register.
<code>CRC_SNOOP_ADDRESS_SCI7_FTDRL</code>	Snoop SCI7 transmit FIFO data register.
<code>CRC_SNOOP_ADDRESS_SCI8_FTDRL</code>	Snoop SCI8 transmit FIFO data register.
<code>CRC_SNOOP_ADDRESS_SCI9_FTDRL</code>	Snoop SCI9 transmit FIFO data register.

CRC_SNOOP_ADDRESS_SCI0_RDR	Snoop SCI0 receive data register.
CRC_SNOOP_ADDRESS_SCI1_RDR	Snoop SCI1 receive data register.
CRC_SNOOP_ADDRESS_SCI2_RDR	Snoop SCI2 receive data register.
CRC_SNOOP_ADDRESS_SCI3_RDR	Snoop SCI3 receive data register.
CRC_SNOOP_ADDRESS_SCI4_RDR	Snoop SCI4 receive data register.
CRC_SNOOP_ADDRESS_SCI5_RDR	Snoop SCI5 receive data register.
CRC_SNOOP_ADDRESS_SCI6_RDR	Snoop SCI6 receive data register.
CRC_SNOOP_ADDRESS_SCI7_RDR	Snoop SCI7 receive data register.
CRC_SNOOP_ADDRESS_SCI8_RDR	Snoop SCI8 receive data register.
CRC_SNOOP_ADDRESS_SCI9_RDR	Snoop SCI9 receive data register.
CRC_SNOOP_ADDRESS_SCI0_FRDRL	Snoop SCI0 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI1_FRDRL	Snoop SCI1 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI2_FRDRL	Snoop SCI2 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI3_FRDRL	Snoop SCI3 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI4_FRDRL	Snoop SCI4 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI5_FRDRL	Snoop SCI5 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI6_FRDRL	Snoop SCI6 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI7_FRDRL	Snoop SCI7 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI8_FRDRL	Snoop SCI8 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI9_FRDRL	Snoop SCI9 receive FIFO data register.

4.3.9 CTSU Interface

Interfaces

Detailed Description

Interface for Capacitive Touch Sensing Unit (CTSU) functions.

Summary

The CTSU interface provides CTSU functionality.

The CTSU interface can be implemented by:

- [Capacitive Touch Sensing Unit \(r_ctsu\)](#)

Data Structures

struct [ctsu_callback_args_t](#)

struct [ctsu_element_cfg_t](#)

struct [ctsu_cfg_t](#)

struct [ctsu_api_t](#)

struct [ctsu_instance_t](#)

Typedefs

typedef void [ctsu_ctrl_t](#)

Enumerations

enum [ctsu_event_t](#)

enum [ctsu_cap_t](#)

enum [ctsu_txvsel_t](#)

enum [ctsu_txvsel2_t](#)

enum [ctsu_atune1_t](#)

enum [ctsu_atune12_t](#)

enum [ctsu_md_t](#)

enum [ctsu_posel_t](#)

enum [ctsu_ssdiv_t](#)

enum [ctsu_specific_data_type_t](#)

Data Structure Documentation

◆ `ctsu_callback_args_t`

struct <code>ctsu_callback_args_t</code>		
Callback function parameter data		
Data Fields		
<code>ctsu_event_t</code>	event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data. Set in <code>ctsu_api_t::open</code> function in <code>ctsu_cfg_t</code> .

◆ `ctsu_element_cfg_t`

struct <code>ctsu_element_cfg_t</code>		
CTSU Configuration parameters. Element Configuration		
Data Fields		
<code>ctsu_sdiv_t</code>	sdiv	CTSU Spectrum Diffusion Frequency Division Setting (CTSU Only)
uint16_t	so	CTSU Sensor Offset Adjustment.
uint8_t	snum	CTSU Measurement Count Setting.
uint8_t	sdpa	CTSU Base Clock Setting.

◆ `ctsu_cfg_t`

struct <code>ctsu_cfg_t</code>		
User configuration structure, used in open function		
Data Fields		
<code>ctsu_cap_t</code>	cap	
		CTSU Scan Start Trigger Select.
<code>ctsu_txvsel_t</code>	txvsel	
		CTSU Transmission Power Supply Select.
<code>ctsu_txvsel2_t</code>	txvsel2	
		CTSU Transmission Power Supply Select 2 (CTSU2 Only)

<code>ctsu_atune1_t</code>	<code>atune1</code>
	CTSU Power Supply Capacity Adjustment (CTSU Only)
<code>ctsu_atune12_t</code>	<code>atune12</code>
	CTSU Power Supply Capacity Adjustment (CTSU2 Only)
<code>ctsu_md_t</code>	<code>md</code>
	CTSU Measurement Mode Select.
<code>ctsu_posel_t</code>	<code>posel</code>
	CTSU Non-Measured Channel Output Select (CTSU2 Only)
<code>uint8_t</code>	<code>ctsuchac0</code>
	TS00-TS07 enable mask.
<code>uint8_t</code>	<code>ctsuchac1</code>
	TS08-TS15 enable mask.
<code>uint8_t</code>	<code>ctsuchac2</code>
	TS16-TS23 enable mask.
<code>uint8_t</code>	<code>ctsuchac3</code>
	TS24-TS31 enable mask.
<code>uint8_t</code>	<code>ctsuchac4</code>
	TS32-TS39 enable mask.

uint8_t	ctsuchtrc0
	TS00-TS07 mutual-tx mask.
uint8_t	ctsuchtrc1
	TS08-TS15 mutual-tx mask.
uint8_t	ctsuchtrc2
	TS16-TS23 mutual-tx mask.
uint8_t	ctsuchtrc3
	TS24-TS31 mutual-tx mask.
uint8_t	ctsuchtrc4
	TS32-TS39 mutual-tx mask.
cts_element_cfg_t const *	p_elements
	Pointer to elements configuration array.
uint8_t	num_rx
	Number of receive terminals.
uint8_t	num_tx
	Number of transmit terminals.
uint16_t	num_moving_average
	Number of moving average for measurement data.
bool	tunning_enable

	Initial offset tuning flag.
void(*	p_callback)(ctsu_callback_args_t *p_args)
	Callback provided when CTSUFN ISR occurs.
transfer_instance_t const *	p_transfer_tx
	DTC instance for transmit at CTSUWR. Set to NULL if unused.
transfer_instance_t const *	p_transfer_rx
	DTC instance for receive at CTSURD. Set to NULL if unused.
adc_instance_t const *	p_adc_instance
	ADC instance for temperature correction.
IRQn_Type	write_irq
	CTSU_CTSUWR interrupt vector.
IRQn_Type	read_irq
	CTSU_CTSURD interrupt vector.
IRQn_Type	end_irq
	CTSU_CTSUFN interrupt vector.
void const *	p_context
	User defined context passed into callback function.
void const *	p_extend
	Pointer to extended configuration by instance of interface.

uint16_t	tuning_self_target_value
	Target self value for initial offset tuning.
uint16_t	tuning_mutual_target_value
	Target mutual value for initial offset tuning.

◆ [ctsu_api_t](#)

struct ctsu_api_t	
Functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t (*	open)(ctsu_ctrl_t *const p_ctrl, ctsu_cfg_t const *const p_cfg)
fsp_err_t (*	scanStart)(ctsu_ctrl_t *const p_ctrl)

fsp_err_t (*	specificDataGet)(ctsu_ctrl_t *const p_ctrl, uint16_t *p_specific_data, ctsu_specific_data_type_t specific_data_type)
fsp_err_t (*	dataInsert)(ctsu_ctrl_t *const p_ctrl, uint16_t *p_insert_data)
Field Documentation	

◆ **open**

```
fsp_err_t(* ctsu_api_t::open) (ctsu_ctrl_t *const p_ctrl, ctsu_cfg_t const *const p_cfg)
```

Open driver.

Implemented as

- R_CTSU_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ **scanStart**

```
fsp_err_t(* ctsu_api_t::scanStart) (ctsu_ctrl_t *const p_ctrl)
```

Scan start.

Implemented as

- R_CTSU_ScanStart()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **dataGet**

```
fsp_err_t(* ctsu_api_t::dataGet) (ctsu_ctrl_t *const p_ctrl, uint16_t *p_data)
```

Data get.

Implemented as

- R_CTSU_DataGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_data	Pointer to get data array.

◆ **scanStop**

```
fsp_err_t(* ctsu_api_t::scanStop) (ctsu_ctrl_t *const p_ctrl)
```

ScanStop.

Implemented as

- R_CTSU_ScanStop()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **diagnosis**

```
fsp_err_t(* ctsu_api_t::diagnosis) (ctsu_ctrl_t *const p_ctrl)
```

Diagnosis.

Implemented as

- R_CTSU_Diagnosis()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **callbackSet**

```
fsp_err_t(* ctsu_api_t::callbackSet) (ctsu_ctrl_t *const p_api_ctrl,
void(*p_callback)(ctsu_callback_args_t *), void const *const p_context,
ctsu_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_CTSU_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the CTSU control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* ctsu_api_t::close) (ctsu_ctrl_t *const p_ctrl)
```

Close driver.

Implemented as

- R_CTSU_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **specificDataGet**

```
fsp_err_t(* ctsu_api_t::specificDataGet) (ctsu_ctrl_t *const p_ctrl, uint16_t *p_specific_data,
ctsu_specific_data_type_t specific_data_type)
```

Specific Data get.

Implemented as

- R_CTSU_SpecificDataGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_specific_data	Pointer to get specific data array.
[in]	specific_data_type	Specific data type

◆ **dataInsert**

```
fsp_err_t(* ctsu_api_t::dataInsert) (ctsu_ctrl_t *const p_ctrl, uint16_t *p_insert_data)
```

Data Insert.

Implemented as

- R_CTSU_DataInsert()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_insert_data	Pointer to insert data.

◆ **ctsu_instance_t**

```
struct ctsu_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

ctsu_ctrl_t *	p_ctrl	Pointer to the control structure
---------------	--------	----------------------------------

		for this instance.
<code>ctsu_cfg_t</code> const *	<code>p_cfg</code>	Pointer to the configuration structure for this instance.
<code>ctsu_api_t</code> const *	<code>p_api</code>	Pointer to the API structure for this instance.

Typedef Documentation

◆ `ctsu_ctrl_t`

typedef void <code>ctsu_ctrl_t</code>
CTSUSU Control block. Allocate an instance specific control block to pass into the API calls.
Implemented as
<ul style="list-style-type: none"> ◦ <code>ctsu_instance_ctrl_t</code>

Enumeration Type Documentation

◆ `ctsu_event_t`

enum <code>ctsu_event_t</code>	
CTSUSU Events for callback function	
Enumerator	
<code>CTSUSU_EVENT_SCAN_COMPLETE</code>	Normal end.
<code>CTSUSU_EVENT_OVERFLOW</code>	Sensor counter overflow (<code>CTSUSUST.CTUSUSOVF</code> set)
<code>CTSUSU_EVENT_ICOMP</code>	Abnormal TSCAP voltage (<code>CTSUSUERRS.CTUSUICOMP</code> set)
<code>CTSUSU_EVENT_ICOMP1</code>	Abnormal sensor current (<code>CTSUSUSR.ICOMP1</code> set)

◆ `ctsu_cap_t`

enum <code>ctsu_cap_t</code>	
CTSUSU Scan Start Trigger Select	
Enumerator	
<code>CTSUSU_CAP_SOFTWARE</code>	Scan start by software trigger.
<code>CTSUSU_CAP_EXTERNAL</code>	Scan start by external trigger.

◆ **ctsu_txvsel_t**

enum ctsu_txvsel_t	
CTSU Transmission Power Supply Select	
Enumerator	
CTSU_TXVSEL_VCC	VCC selected.
CTSU_TXVSEL_INTERNAL_POWER	Internal logic power supply selected.

◆ **ctsu_txvsel2_t**

enum ctsu_txvsel2_t	
CTSU Transmission Power Supply Select 2 (CTS2 Only)	
Enumerator	
CTSU_TXVSEL_MODE	Follow TXVSEL setting.
CTSU_TXVSEL_VCC_PRIVATE	VCC private selected.

◆ **ctsu_atune1_t**

enum ctsu_atune1_t	
CTSU Power Supply Capacity Adjustment (CTS Only)	
Enumerator	
CTSU_ATUNE1_NORMAL	Normal output (40uA)
CTSU_ATUNE1_HIGH	High-current output (80uA)

◆ **ctsu_atune12_t**

enum <code>ctsu_atune12_t</code>	
CTSU Power Supply Capacity Adjustment (CTSU2 Only)	
Enumerator	
<code>CTSU_ATUNE12_80UA</code>	High-current output (80uA)
<code>CTSU_ATUNE12_40UA</code>	Normal output (40uA)
<code>CTSU_ATUNE12_20UA</code>	Low-current output (20uA)
<code>CTSU_ATUNE12_160UA</code>	Very high-current output (160uA)

◆ **ctsu_md_t**

enum <code>ctsu_md_t</code>	
CTSU Measurement Mode Select	
Enumerator	
<code>CTSU_MODE_SELF_MULTI_SCAN</code>	Self-capacitance multi scan mode.
<code>CTSU_MODE_MUTUAL_FULL_SCAN</code>	Mutual capacitance full scan mode.
<code>CTSU_MODE_MUTUAL_CFC_SCAN</code>	Mutual capacitance cfc scan mode (CTSU2 Only)
<code>CTSU_MODE_CURRENT_SCAN</code>	Current scan mode (CTSU2 Only)
<code>CTSU_MODE_CORRECTION_SCAN</code>	Correction scan mode (CTSU2 Only)
<code>CTSU_MODE_DIAGNOSIS_SCAN</code>	Diagnosis scan mode.

◆ **ctsu_posel_t**

enum <code>ctsu_posel_t</code>	
CTSU Non-Measured Channel Output Select (CTSU2 Only)	
Enumerator	
<code>CTSU_POSEL_LOW_GPIO</code>	Output low through GPIO.
<code>CTSU_POSEL_HI_Z</code>	Hi-Z.
<code>CTSU_POSEL_LOW</code>	Setting prohibited.
<code>CTSU_POSEL_SAME_PULSE</code>	Same phase pulse output as transmission channel through the power setting by the <code>TXVSEL[1:0]</code> bits.

◆ **ctsu_ssddiv_t**

enum <code>ctsu_ssddiv_t</code>	
CTSU Spectrum Diffusion Frequency Division Setting (CTSU Only)	
Enumerator	
<code>CTSU_SSDIV_4000</code>	4.00 <= Base clock frequency (MHz)
<code>CTSU_SSDIV_2000</code>	2.00 <= Base clock frequency (MHz) < 4.00
<code>CTSU_SSDIV_1330</code>	1.33 <= Base clock frequency (MHz) < 2.00
<code>CTSU_SSDIV_1000</code>	1.00 <= Base clock frequency (MHz) < 1.33
<code>CTSU_SSDIV_0800</code>	0.80 <= Base clock frequency (MHz) < 1.00
<code>CTSU_SSDIV_0670</code>	0.67 <= Base clock frequency (MHz) < 0.80
<code>CTSU_SSDIV_0570</code>	0.57 <= Base clock frequency (MHz) < 0.67
<code>CTSU_SSDIV_0500</code>	0.50 <= Base clock frequency (MHz) < 0.57
<code>CTSU_SSDIV_0440</code>	0.44 <= Base clock frequency (MHz) < 0.50
<code>CTSU_SSDIV_0400</code>	0.40 <= Base clock frequency (MHz) < 0.44
<code>CTSU_SSDIV_0360</code>	0.36 <= Base clock frequency (MHz) < 0.40
<code>CTSU_SSDIV_0330</code>	0.33 <= Base clock frequency (MHz) < 0.36
<code>CTSU_SSDIV_0310</code>	0.31 <= Base clock frequency (MHz) < 0.33
<code>CTSU_SSDIV_0290</code>	0.29 <= Base clock frequency (MHz) < 0.31
<code>CTSU_SSDIV_0270</code>	0.27 <= Base clock frequency (MHz) < 0.29
<code>CTSU_SSDIV_0000</code>	0.00 <= Base clock frequency (MHz) < 0.27

◆ **ctsu_specific_data_type_t**

enum <code>ctsu_specific_data_type_t</code>
CTSU select data type for select data get

4.3.10 DAC Interface

Interfaces

Detailed Description

Interface for D/A converters.

Summary

The DAC interface provides standard Digital/Analog Converter functionality. A DAC application writes digital sample data to the device and generates analog output on the DAC output pin.

Implemented by:

- Digital to Analog Converter (r_dac)
- Digital to Analog Converter (r_dac8)

Data Structures

struct [dac_info_t](#)

struct [dac_cfg_t](#)

struct [dac_api_t](#)

struct [dac_instance_t](#)

Typedefs

typedef void [dac_ctrl_t](#)

Enumerations

enum [dac_data_format_t](#)

Data Structure Documentation

◆ [dac_info_t](#)

struct dac_info_t		
DAC information structure to store various information for a DAC		
Data Fields		
uint8_t	bit_width	Resolution of the DAC.

◆ [dac_cfg_t](#)

struct dac_cfg_t
DAC Open API configuration parameter

Data Fields		
uint8_t	channel	ID associated with this DAC channel.
bool	ad_da_synchronized	AD/DA synchronization.
void const *	p_extend	

◆ dac_api_t

struct dac_api_t

DAC driver structure. General DAC functions implemented at the HAL layer follow this API.

Data Fields

fsp_err_t(*) [open](#))(dac_ctrl_t *const p_ctrl, dac_cfg_t const *const p_cfg)

fsp_err_t(*) [close](#))(dac_ctrl_t *const p_ctrl)

fsp_err_t(*) [write](#))(dac_ctrl_t *const p_ctrl, uint16_t value)

fsp_err_t(*) [start](#))(dac_ctrl_t *const p_ctrl)

fsp_err_t(*) [stop](#))(dac_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(*) dac_api_t::open) (dac_ctrl_t *const p_ctrl, dac_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_DAC_Open()
- R_DAC8_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ **close**

```
fsp_err_t(* dac_api_t::close) (dac_ctrl_t *const p_ctrl)
```

Close the D/A Converter.

Implemented as

- [R_DAC_Close\(\)](#)
- [R_DAC8_Close\(\)](#)

Parameters

[in]	p_ctrl	Control block set in dac_api_t::open call for this timer.
------	--------	---

◆ **write**

```
fsp_err_t(* dac_api_t::write) (dac_ctrl_t *const p_ctrl, uint16_t value)
```

Write sample value to the D/A Converter.

Implemented as

- [R_DAC_Write\(\)](#)
- [R_DAC8_Write\(\)](#)

Parameters

[in]	p_ctrl	Control block set in dac_api_t::open call for this timer.
[in]	value	Sample value to be written to the D/A Converter.

◆ **start**

```
fsp_err_t(* dac_api_t::start) (dac_ctrl_t *const p_ctrl)
```

Start the D/A Converter if it has not been started yet.

Implemented as

- [R_DAC_Start\(\)](#)
- [R_DAC8_Start\(\)](#)

Parameters

[in]	p_ctrl	Control block set in dac_api_t::open call for this timer.
------	--------	---

◆ **stop**

```
fsp_err_t(* dac_api_t::stop) (dac_ctrl_t *const p_ctrl)
```

Stop the D/A Converter if the converter is running.

Implemented as

- R_DAC_Stop()
- R_DAC8_Stop()

Parameters

[in]	p_ctrl	Control block set in dac_api_t::open call for this timer.
------	--------	---

◆ **dac_instance_t**

```
struct dac_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

dac_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
dac_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
dac_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **dac_ctrl_t**

```
typedef void dac_ctrl_t
```

DAC control block. Allocate an instance specific control block to pass into the DAC API calls.

Implemented as

- [dac_instance_ctrl_t](#)
- [dac8_instance_ctrl_t](#)

Enumeration Type Documentation

◆ **dac_data_format_t**

enum <code>dac_data_format_t</code>	
DAC Open API data format settings.	
Enumerator	
<code>DAC_DATA_FORMAT_FLUSH_RIGHT</code>	LSB of data is flush to the right leaving the top 4 bits unused.
<code>DAC_DATA_FORMAT_FLUSH_LEFT</code>	MSB of data is flush to the left leaving the bottom 4 bits unused.

4.3.11 Display Interface[Interfaces](#)**Detailed Description**

Interface for LCD panel displays.

Summary

The display interface provides standard display functionality:

- Signal timing configuration for LCD panels with RGB interface.
- Dot clock source selection (internal or external) and frequency divider.
- Blending of multiple graphics layers on the background screen.
- Color correction (brightness/configuration/gamma correction).
- Interrupts and callback function.

Implemented by: [Graphics LCD Controller \(r_glcdc\)](#)

Data Structure Documentation

◆ display_timing_t

struct display_timing_t		
Display signal timing setting		
Data Fields		
uint16_t	total_cyc	Total cycles in one line or total lines in one frame.
uint16_t	display_cyc	Active video cycles or lines.
uint16_t	back_porch	Back porch cycles or lines.
uint16_t	sync_width	Sync signal asserting width.
display_signal_polarity_t	sync_polarity	Sync signal polarity.

◆ display_color_t

struct display_color_t		
RGB Color setting		

◆ display_coordinate_t

struct display_coordinate_t		
Contrast (gain) correction setting		
Data Fields		
int16_t	x	Coordinate X, this allows to set signed value.
int16_t	y	Coordinate Y, this allows to set signed value.

◆ display_brightness_t

struct display_brightness_t		
Brightness (DC) correction setting		
Data Fields		
bool	enable	Brightness Correction On/Off.
uint16_t	r	Brightness (DC) adjustment for R channel.
uint16_t	g	Brightness (DC) adjustment for G channel.

uint16_t	b	Brightness (DC) adjustment for B channel.
----------	---	---

◆ **display_contrast_t**

struct display_contrast_t		
Contrast (gain) correction setting		
Data Fields		
bool	enable	Contrast Correction On/Off.
uint8_t	r	Contrast (gain) adjustment for R channel.
uint8_t	g	Contrast (gain) adjustment for G channel.
uint8_t	b	Contrast (gain) adjustment for B channel.

◆ **display_correction_t**

struct display_correction_t		
Color correction setting		
Data Fields		
display_brightness_t	brightness	Brightness.
display_contrast_t	contrast	Contrast.

◆ **gamma_correction_t**

struct gamma_correction_t		
Gamma correction setting for each color		
Data Fields		
bool	enable	Gamma Correction On/Off.
uint16_t *	gain	Gain adjustment.
uint16_t *	threshold	Start threshold.

◆ **display_gamma_correction_t**

struct display_gamma_correction_t		
Gamma correction setting		
Data Fields		
gamma_correction_t	r	Gamma correction for R channel.
gamma_correction_t	g	Gamma correction for G channel.
gamma_correction_t	b	Gamma correction for B

channel.

◆ **display_clut_t**

struct display_clut_t		
CLUT setting		
Data Fields		
uint32_t	color_num	The number of colors in CLUT.
const uint32_t *	p_clut	Address of the area storing the CLUT data (in ARGB8888 format)

◆ **display_input_cfg_t**

struct display_input_cfg_t		
Graphics plane input configuration structure		
Data Fields		
uint32_t *	p_base	Base address to the frame buffer.
uint16_t	hsize	Horizontal pixel size in a line.
uint16_t	vsize	Vertical pixel size in a frame.
uint32_t	hstride	Memory stride (bytes) in a line.
display_in_format_t	format	Input format setting.
bool	line_descending_enable	Line descending enable.
bool	lines_repeat_enable	Line repeat enable.
uint16_t	lines_repeat_times	Expected number of line repeating.

◆ **display_output_cfg_t**

struct display_output_cfg_t		
Display output configuration structure		
Data Fields		
display_timing_t	htiming	Horizontal display cycle setting.
display_timing_t	vtiming	Vertical display cycle setting.
display_out_format_t	format	Output format setting.
display_endian_t	endian	Bit order of output data.
display_color_order_t	color_order	Color order in pixel.
display_signal_polarity_t	data_enable_polarity	Data Enable signal polarity.
display_sync_edge_t	sync_edge	Signal sync edge selection.
display_color_t	bg_color	Background color.

display_brightness_t	brightness	Brightness setting.
display_contrast_t	contrast	Contrast setting.
display_gamma_correction_t *	p_gamma_correction	Pointer to gamma correction setting.
bool	dithering_on	Dithering on/off.

◆ **display_layer_t**

struct display_layer_t		
Graphics layer blend setup parameter structure		
Data Fields		
display_coordinate_t	coordinate	Blending location (starting point of image)
display_color_t	bg_color	Color outside region.
display_fade_control_t	fade_control	Layer fade-in/out control on/off.
uint8_t	fade_speed	Layer fade-in/out frame rate.

◆ **display_callback_args_t**

struct display_callback_args_t		
Display callback parameter definition		
Data Fields		
display_event_t	event	Event code.
void const *	p_context	Context provided to user during callback.

◆ **display_cfg_t**

struct display_cfg_t		
Display main configuration structure		
Data Fields		
display_input_cfg_t	input [2]	
		Graphics input frame setting. More...
display_output_cfg_t	output	
		Graphics output frame setting.
display_layer_t	layer [2]	
		Graphics layer blend setting.

uint8_t	line_detect_ipl
	Line detect interrupt priority.
uint8_t	underflow_1_ipl
	Underflow 1 interrupt priority.
uint8_t	underflow_2_ipl
	Underflow 2 interrupt priority.
IRQn_Type	line_detect_irq
	Line detect interrupt vector.
IRQn_Type	underflow_1_irq
	Underflow 1 interrupt vector.
IRQn_Type	underflow_2_irq
	Underflow 2 interrupt vector.
void(*)	p_callback (display_callback_args_t *p_args)
	Pointer to callback function. More...
void const *	p_context
	User defined context passed into callback function.
void const *	p_extend
	Display hardware dependent configuration. More...

Field Documentation

◆ input

`display_input_cfg_t display_cfg_t::input[2]`

Graphics input frame setting.

Generic configuration for display devices

◆ p_callback

`void(* display_cfg_t::p_callback) (display_callback_args_t *p_args)`

Pointer to callback function.

Configuration for display event processing

◆ p_extend

`void const* display_cfg_t::p_extend`

Display hardware dependent configuration.

Pointer to display peripheral specific configuration

◆ display_runtime_cfg_t

`struct display_runtime_cfg_t`

Display main configuration structure

Data Fields

<code>display_input_cfg_t</code>	input	Graphics input frame setting. Generic configuration for display devices
<code>display_layer_t</code>	layer	Graphics layer alpha blending setting.

◆ display_clut_cfg_t

`struct display_clut_cfg_t`

Display CLUT configuration structure

Data Fields

<code>uint32_t *</code>	p_base	Pointer to CLUT source data.
<code>uint16_t</code>	start	Beginning of CLUT entry to be updated.
<code>uint16_t</code>	size	Size of CLUT entry to be updated.

◆ display_status_t

`struct display_status_t`

Display Status		
Data Fields		
display_state_t	state	Status of GLCDC module.
display_fade_status_t	fade_status[DISPLAY_FRAME_LAYER_2+1]	Status of fade-in/fade-out status.

◆ **display_api_t**

struct display_api_t		
Shared Interface definition for display peripheral		
Data Fields		
fsp_err_t (*	open)(display_ctrl_t *const p_ctrl, display_cfg_t const *const p_cfg)	
fsp_err_t (*	close)(display_ctrl_t *const p_ctrl)	
fsp_err_t (*	start)(display_ctrl_t *const p_ctrl)	
fsp_err_t (*	stop)(display_ctrl_t *const p_ctrl)	
fsp_err_t (*	layerChange)(display_ctrl_t const *const p_ctrl, display_runtime_cfg_t const *const p_cfg, display_frame_layer_t frame)	
fsp_err_t (*	bufferChange)(display_ctrl_t const *const p_ctrl, uint8_t *const framebuffer, display_frame_layer_t frame)	
fsp_err_t (*	correction)(display_ctrl_t const *const p_ctrl, display_correction_t const *const p_param)	
fsp_err_t (*	clut)(display_ctrl_t const *const p_ctrl, display_clut_cfg_t const *const p_clut_cfg, display_frame_layer_t layer)	
fsp_err_t (*	clutEdit)(display_ctrl_t const *const p_ctrl, display_frame_layer_t layer, uint8_t index, uint32_t color)	
fsp_err_t (*	statusGet)(display_ctrl_t const *const p_ctrl, display_status_t *const p_status)	

Field Documentation

◆ open

`fsp_err_t(* display_api_t::open) (display_ctrl_t *const p_ctrl, display_cfg_t const *const p_cfg)`

Open display device.

Implemented as

- [R_GLCDC_Open\(\)](#)

Parameters

[in,out]	p_ctrl	Pointer to display interface control block. Must be declared by user. Value set here.
[in]	p_cfg	Pointer to display configuration structure. All elements of this structure must be set by user.

◆ close

`fsp_err_t(* display_api_t::close) (display_ctrl_t *const p_ctrl)`

Close display device.

Implemented as

- [R_GLCDC_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to display interface control block.
------	--------	---

◆ start

`fsp_err_t(* display_api_t::start) (display_ctrl_t *const p_ctrl)`

Display start.

Implemented as

- [R_GLCDC_Start\(\)](#)

Parameters

[in]	p_ctrl	Pointer to display interface control block.
------	--------	---

◆ stop

```
fsp_err_t(* display_api_t::stop) (display_ctrl_t *const p_ctrl)
```

Display stop.

Implemented as

- R_GLCDC_Stop()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
------	--------	---

◆ layerChange

```
fsp_err_t(* display_api_t::layerChange) (display_ctrl_t const *const p_ctrl, display_runtime_cfg_t const *const p_cfg, display_frame_layer_t frame)
```

Change layer parameters at runtime.

Implemented as

- R_GLCDC_LayerChange()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	p_cfg	Pointer to run-time layer configuration structure.
[in]	frame	Number of graphic frames.

◆ bufferChange

```
fsp_err_t(* display_api_t::bufferChange) (display_ctrl_t const *const p_ctrl, uint8_t *const framebuffer, display_frame_layer_t frame)
```

Change layer framebuffer pointer.

Implemented as

- R_GLCDC_BufferChange()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	framebuffer	Pointer to desired framebuffer.
[in]	frame	Number of graphic frames.

◆ **correction**

```
fsp_err_t(* display_api_t::correction) (display_ctrl_t const *const p_ctrl, display_correction_t const *const p_param)
```

Color correction.

Implemented as

- R_GLCDC_ColorCorrection()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	param	Pointer to color correction configuration structure.

◆ **clut**

```
fsp_err_t(* display_api_t::clut) (display_ctrl_t const *const p_ctrl, display_clut_cfg_t const *const p_clut_cfg, display_frame_layer_t layer)
```

Set CLUT for display device.

Implemented as

- R_GLCDC_ClutUpdate()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	p_clut_cfg	Pointer to CLUT configuration structure.
[in]	layer	Layer number corresponding to the CLUT.

◆ **clutEdit**

```
fsp_err_t(* display_api_t::clutEdit) (display_ctrl_t const *const p_ctrl, display_frame_layer_t layer,
uint8_t index, uint32_t color)
```

Set CLUT element for display device.

Implemented as

- R_GLCDC_ClutEdit()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	layer	Layer number corresponding to the CLUT.
[in]	index	CLUT element index.
[in]	color	Desired CLUT index color.

◆ **statusGet**

```
fsp_err_t(* display_api_t::statusGet) (display_ctrl_t const *const p_ctrl, display_status_t *const
p_status)
```

Get status for display device.

Implemented as

- R_GLCDC_StatusGet()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	status	Pointer to display interface status structure.

◆ **display_instance_t**

```
struct display_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

display_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
display_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
display_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ display_ctrl_t

typedef void [display_ctrl_t](#)

Display control block. Allocate an instance specific control block to pass into the display API calls.

Implemented as

- `glcdc_instance_ctrl_t` Display control block

Enumeration Type Documentation

◆ display_frame_layer_t

enum [display_frame_layer_t](#)

Display frame number

Enumerator

DISPLAY_FRAME_LAYER_1	Frame layer 1.
DISPLAY_FRAME_LAYER_2	Frame layer 2.

◆ display_state_t

enum [display_state_t](#)

Display interface operation state

Enumerator

DISPLAY_STATE_CLOSED	Display closed.
DISPLAY_STATE_OPENED	Display opened.
DISPLAY_STATE_DISPLAYING	Displaying.

◆ **display_event_t**

enum <code>display_event_t</code>	
Display event codes	
Enumerator	
<code>DISPLAY_EVENT_GR1_UNDERFLOW</code>	Graphics frame1 underflow occurs.
<code>DISPLAY_EVENT_GR2_UNDERFLOW</code>	Graphics frame2 underflow occurs.
<code>DISPLAY_EVENT_LINE_DETECTION</code>	Designated line is processed.

◆ **display_in_format_t**

enum <code>display_in_format_t</code>	
Input format setting	
Enumerator	
<code>DISPLAY_IN_FORMAT_32BITS_ARGB8888</code>	ARGB8888, 32 bits.
<code>DISPLAY_IN_FORMAT_32BITS_RGB888</code>	RGB888, 32 bits.
<code>DISPLAY_IN_FORMAT_16BITS_RGB565</code>	RGB565, 16 bits.
<code>DISPLAY_IN_FORMAT_16BITS_ARGB1555</code>	ARGB1555, 16 bits.
<code>DISPLAY_IN_FORMAT_16BITS_ARGB4444</code>	ARGB4444, 16 bits.
<code>DISPLAY_IN_FORMAT_CLUT8</code>	CLUT8.
<code>DISPLAY_IN_FORMAT_CLUT4</code>	CLUT4.
<code>DISPLAY_IN_FORMAT_CLUT1</code>	CLUT1.

◆ **display_out_format_t**

enum <code>display_out_format_t</code>	
Output format setting	
Enumerator	
<code>DISPLAY_OUT_FORMAT_24BITS_RGB888</code>	RGB888, 24 bits.
<code>DISPLAY_OUT_FORMAT_18BITS_RGB666</code>	RGB666, 18 bits.
<code>DISPLAY_OUT_FORMAT_16BITS_RGB565</code>	RGB565, 16 bits.
<code>DISPLAY_OUT_FORMAT_8BITS_SERIAL</code>	SERIAL, 8 bits.

◆ **display_endian_t**

enum <code>display_endian_t</code>	
Data endian select	
Enumerator	
<code>DISPLAY_ENDIAN_LITTLE</code>	Little-endian.
<code>DISPLAY_ENDIAN_BIG</code>	Big-endian.

◆ **display_color_order_t**

enum <code>display_color_order_t</code>	
RGB color order select	
Enumerator	
<code>DISPLAY_COLOR_ORDER_RGB</code>	Color order RGB.
<code>DISPLAY_COLOR_ORDER_BGR</code>	Color order BGR.

◆ **display_signal_polarity_t**

enum <code>display_signal_polarity_t</code>	
Polarity of a signal select	
Enumerator	
<code>DISPLAY_SIGNAL_POLARITY_LOACTIVE</code>	Low active signal.
<code>DISPLAY_SIGNAL_POLARITY_HIACTIVE</code>	High active signal.

◆ **display_sync_edge_t**

enum <code>display_sync_edge_t</code>	
Signal synchronization edge select	
Enumerator	
<code>DISPLAY_SIGNAL_SYNC_EDGE_RISING</code>	Signal is synchronized to rising edge.
<code>DISPLAY_SIGNAL_SYNC_EDGE_FALLING</code>	Signal is synchronized to falling edge.

◆ **display_fade_control_t**

enum <code>display_fade_control_t</code>	
Fading control	
Enumerator	
<code>DISPLAY_FADE_CONTROL_NONE</code>	Applying no fading control.
<code>DISPLAY_FADE_CONTROL_FADEIN</code>	Applying fade-in control.
<code>DISPLAY_FADE_CONTROL_FADEOUT</code>	Applying fade-out control.

◆ **display_fade_status_t**

enum display_fade_status_t	
Fading status	
Enumerator	
DISPLAY_FADE_STATUS_NOT_UNDERWAY	Fade-in/fade-out is not in progress.
DISPLAY_FADE_STATUS_FADING_UNDERWAY	Fade-in or fade-out is in progress.
DISPLAY_FADE_STATUS_PENDING	Fade-in/fade-out is configured but not yet started.

4.3.12 DOC Interface[Interfaces](#)**Detailed Description**

Interface for the Data Operation Circuit.

Defines the API and data structures for the DOC implementation of the Data Operation Circuit (DOC) interface.

Summary

This module implements the DOC_API using the Data Operation Circuit (DOC).

Implemented by: [Data Operation Circuit \(r_doc\)](#)

Data Structures

struct [doc_status_t](#)

struct [doc_callback_args_t](#)

struct [doc_cfg_t](#)

struct [doc_api_t](#)

struct [doc_instance_t](#)

Typedefs

typedef void [doc_ctrl_t](#)

Enumerations

enum [doc_event_t](#)

enum [doc_bit_width_t](#)

Data Structure Documentation

◆ doc_status_t

struct doc_status_t

DOC status

◆ doc_callback_args_t

struct doc_callback_args_t

Callback function parameter data.

Data Fields

void const *	p_context	Set in doc_api_t::open function in doc_cfg_t . Placeholder for user data.
--------------	-----------	--

◆ doc_cfg_t

struct doc_cfg_t

User configuration structure, used in the open function.

Data Fields

doc_event_t	event	Select enumerated value from doc_event_t .
doc_bit_width_t	bit_width	The bit width of operations.
uint32_t	doc_data	
uint32_t	doc_data_extra	
uint8_t	ipl	DOC interrupt priority.

IRQn_Type	irq
	NVIC interrupt number assigned to this instance.
void(*	p_callback)(doc_callback_args_t *p_args)
void const *	p_context
Field Documentation	
◆ doc_data	
uint32_t doc_cfg_t::doc_data	
Initial/Reference data for addition, subtraction, and comparison operations.	
<ul style="list-style-type: none"> • In Addition and Subtraction mode, this value sets the initial value of the operations. • In Comparison match, mismatch, lower, and upper modes, this value is compared with data that is written. • In Comparison inside window and outside window modes, this value is used as the lower bound for comparisons. 	
◆ doc_data_extra	
uint32_t doc_cfg_t::doc_data_extra	
Additional reference data for use in Window Comparison operations.	
<ul style="list-style-type: none"> • In Comparison inside window and outside window modes, this value is used as the upper bound for comparisons. 	
◆ p_callback	
void(* doc_cfg_t::p_callback) (doc_callback_args_t *p_args)	
Callback provided when a DOC ISR occurs.	
◆ p_context	
void const* doc_cfg_t::p_context	
Placeholder for user data. Passed to the user callback in doc_callback_args_t .	
◆ doc_api_t	
struct doc_api_t	
Data Operation Circuit (DOC) API structure. DOC functions implemented at the HAL layer will follow this API.	
Data Fields	

<code>fsp_err_t(*</code>	<code>open</code> <code>)(doc_ctrl_t *const p_ctrl, doc_cfg_t const *const p_cfg)</code>
<code>fsp_err_t(*</code>	<code>close</code> <code>)(doc_ctrl_t *const p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>statusGet</code> <code>)(doc_ctrl_t *const p_ctrl, doc_status_t *p_status)</code>
<code>fsp_err_t(*</code>	<code>read</code> <code>)(doc_ctrl_t *const p_ctrl, uint32_t *p_result)</code>
<code>fsp_err_t(*</code>	<code>write</code> <code>)(doc_ctrl_t *const p_ctrl, uint32_t data)</code>
<code>fsp_err_t(*</code>	<code>callbackSet</code> <code>)(doc_ctrl_t *const p_api_ctrl, void(*p_callback)(doc_callback_args_t *), void const *const p_context, doc_callback_args_t *const p_callback_memory)</code>

Field Documentation

◆ open

`fsp_err_t(* doc_api_t::open) (doc_ctrl_t *const p_ctrl, doc_cfg_t const *const p_cfg)`

Initial configuration.

Implemented as

- [R_DOC_Open\(\)](#)

Parameters

[in]	<code>p_ctrl</code>	Pointer to control block. Must be declared by user. Elements set here.
[in]	<code>p_cfg</code>	Pointer to configuration structure. All elements of this structure must be set by user.

◆ **close**

```
fsp_err_t(* doc_api_t::close) (doc_ctrl_t *const p_ctrl)
```

Allow the driver to be reconfigured. Will reduce power consumption.

Implemented as

- [R_DOC_Close\(\)](#)

Parameters

[in]	p_ctrl	Control block set in doc_api_t::open call.
------	--------	--

◆ **statusGet**

```
fsp_err_t(* doc_api_t::statusGet) (doc_ctrl_t *const p_ctrl, doc_status_t *p_status)
```

DEPRECATED - Gets the result of addition/subtraction operations and stores it in the provided pointer p_status.

Implemented as

- [R_DOC_StatusGet\(\)](#)

Parameters

[in]	p_ctrl	Control block set in doc_api_t::open call.
[out]	p_data	Provides the 16 bit result of the addition/subtraction operation at the user defined location.

◆ **read**

```
fsp_err_t(* doc_api_t::read) (doc_ctrl_t *const p_ctrl, uint32_t *p_result)
```

Gets the result of addition/subtraction operations and stores it in the provided pointer p_result.

Implemented as

- [R_DOC_Read\(\)](#)

Parameters

[in]	p_ctrl	Control block set in doc_api_t::open call.
[in]	p_result	The result of the DOC operation.

◆ **write**

```
fsp_err_t(* doc_api_t::write) (doc_ctrl_t *const p_ctrl, uint32_t data)
```

Write to the DODIR register.

Implemented as

- R_DOC_Write()

Parameters

[in]	p_ctrl	Control block set in doc_api_t::open call.
[in]	data	data to be written to DOC DODIR register.

◆ **callbackSet**

```
fsp_err_t(* doc_api_t::callbackSet) (doc_ctrl_t *const p_api_ctrl,
void(*p_callback)(doc_callback_args_t *), void const *const p_context, doc_callback_args_t *const
p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_DOC_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the DOC control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **doc_instance_t**

```
struct doc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

doc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
doc_cfg_t const *	p_cfg	Pointer to the configuration

		structure for this instance.
<code>doc_api_t</code> const *	<code>p_api</code>	Pointer to the API structure for this instance.

Typedef Documentation

◆ `doc_ctrl_t`

```
typedef void doc_ctrl_t
```

DOC control block. Allocate an instance specific control block to pass into the DOC API calls.

Implemented as

- `doc_instance_ctrl_t`

Enumeration Type Documentation

◆ `doc_event_t`

```
enum doc_event_t
```

Event that can trigger a callback function.

Enumerator

<code>DOC_EVENT_COMPARISON_MISMATCH</code>	The data is not equal to the reference data setting.
<code>DOC_EVENT_ADDITION</code>	Addition resulted in a value greater than the max for the configured bit width.
<code>DOC_EVENT_SUBTRACTION</code>	Subtraction resulted in a value less than 0.
<code>DOC_EVENT_COMPARISON_MATCH</code>	The data is equal to the reference data setting.
<code>DOC_EVENT_COMPARISON_LOWER</code>	The data is less than the reference data setting.
<code>DOC_EVENT_COMPARISON_UPPER</code>	The data is greater than the reference data setting.
<code>DOC_EVENT_COMPARISON_INSIDE_WINDOW</code>	The data is between the two reference data settings.
<code>DOC_EVENT_COMPARISON_OUTSIDE_WINDOW</code>	The data is outside the two reference data settings.

◆ **doc_bit_width_t**

enum doc_bit_width_t	
The bit width used during operations.	
Enumerator	
DOC_BIT_WIDTH_16	Operations are 16-bit.
DOC_BIT_WIDTH_32	Operations are 32-bit.

4.3.13 ELC Interface[Interfaces](#)**Detailed Description**

Interface for the Event Link Controller.

Data Structures

struct [elc_cfg_t](#)

struct [elc_api_t](#)

struct [elc_instance_t](#)

Typedefs

typedef void [elc_ctrl_t](#)

Enumerations

enum [elc_peripheral_t](#)

enum [elc_software_event_t](#)

Data Structure Documentation◆ **elc_cfg_t**

struct elc_cfg_t		
Main configuration structure for the Event Link Controller		
Data Fields		
elc_event_t const	link[ELC_PERIPHERAL_NUM]	Event link register (ELSR)

settings.

◆ **elc_api_t**

struct elc_api_t

ELC driver structure. General ELC functions implemented at the HAL layer follow this API.

Data Fieldsfsp_err_t(*) [open](#))(elc_ctrl_t *const p_ctrl, elc_cfg_t const *const p_cfg)fsp_err_t(*) [close](#))(elc_ctrl_t *const p_ctrl)fsp_err_t(*) [softwareEventGenerate](#))(elc_ctrl_t *const p_ctrl,
elc_software_event_t event_num)fsp_err_t(*) [linkSet](#))(elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral,
elc_event_t signal)fsp_err_t(*) [linkBreak](#))(elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral)fsp_err_t(*) [enable](#))(elc_ctrl_t *const p_ctrl)fsp_err_t(*) [disable](#))(elc_ctrl_t *const p_ctrl)**Field Documentation**◆ **open**fsp_err_t(*) [elc_api_t::open](#))(elc_ctrl_t *const p_ctrl, elc_cfg_t const *const p_cfg)

Initialize all links in the Event Link Controller.

Implemented as

- [R_ELC_Open\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ **close**

```
fsp_err_t(* elc_api_t::close) (elc_ctrl_t *const p_ctrl)
```

Disable all links in the Event Link Controller and close the API.

Implemented as

- [R_ELC_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **softwareEventGenerate**

```
fsp_err_t(* elc_api_t::softwareEventGenerate) (elc_ctrl_t *const p_ctrl, elc_software_event_t event_num)
```

Generate a software event in the Event Link Controller.

Implemented as

- [R_ELC_SoftwareEventGenerate\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	eventNum	Software event number to be generated.

◆ **linkSet**

```
fsp_err_t(* elc_api_t::linkSet) (elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral, elc_event_t signal)
```

Create a single event link.

Implemented as

- [R_ELC_LinkSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	peripheral	The peripheral block that will receive the event signal.
[in]	signal	The event signal.

◆ linkBreak

```
fsp_err_t(* elc_api_t::linkBreak) (elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral)
```

Break an event link.

Implemented as

- R_ELC_LinkBreak()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	peripheral	The peripheral that should no longer be linked.

◆ enable

```
fsp_err_t(* elc_api_t::enable) (elc_ctrl_t *const p_ctrl)
```

Enable the operation of the Event Link Controller.

Implemented as

- R_ELC_Enable()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ disable

```
fsp_err_t(* elc_api_t::disable) (elc_ctrl_t *const p_ctrl)
```

Disable the operation of the Event Link Controller.

Implemented as

- R_ELC_Disable()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ elc_instance_t

```
struct elc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

elc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
elc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.

`elc_api_t` const *`p_api`

Pointer to the API structure for this instance.

Typedef Documentation

◆ `elc_ctrl_t`

typedef void `elc_ctrl_t`

ELC control block. Allocate an instance specific control block to pass into the ELC API calls.

Implemented as

- `elc_instance_ctrl_t`

Enumeration Type Documentation

◆ `elc_peripheral_t`

enum `elc_peripheral_t`

Possible peripherals to be linked to event signals (not all available on all MCUs)

◆ `elc_software_event_t`

enum `elc_software_event_t`

Software event number

Enumerator

ELC_SOFTWARE_EVENT_0

Software event 0.

ELC_SOFTWARE_EVENT_1

Software event 1.

4.3.14 Ethernet Interface

Interfaces

Detailed Description

Interface for Ethernet functions.

Summary

The Ethernet interface provides Ethernet functionality. The Ethernet interface supports the following

features:

- Transmit/receive processing (Blocking and Non-Blocking)
- Callback function with returned event code
- Magic packet detection mode support
- Auto negotiation support
- Flow control support
- Multicast filtering support

Implemented by:

- [Ethernet \(r_ether\)](#)

Data Structures

struct [ether_instance_descriptor_t](#)

struct [ether_callback_args_t](#)

struct [ether_cfg_t](#)

struct [ether_api_t](#)

struct [ether_instance_t](#)

Typedefs

typedef void [ether_ctrl_t](#)

Enumerations

enum [ether_wake_on_lan_t](#)

enum [ether_flow_control_t](#)

enum [ether_multicast_t](#)

enum [ether_promiscuous_t](#)

enum [ether_zerocopy_t](#)

enum [ether_event_t](#)

Data Structure Documentation

◆ [ether_instance_descriptor_t](#)

struct [ether_instance_descriptor_t](#)

EDMAC descriptor as defined in the hardware manual. Structure must be packed at 1 byte.

◆ [ether_callback_args_t](#)

struct ether_callback_args_t		
Callback function parameter data		
Data Fields		
uint32_t	channel	Device channel number.
ether_event_t	event	Event code.
uint32_t	status_ecsr	ETHERC status register for interrupt handler.
uint32_t	status_eesr	ETHERC/EDMAC status register for interrupt handler.
void const *	p_context	Placeholder for user data. Set in ether_api_t::open function in ether_cfg_t .

◆ **ether_cfg_t**

struct ether_cfg_t		
Configuration parameters.		
Data Fields		
uint8_t	channel	
		Channel.
ether_zerocopy_t	zerocopy	
		Zero copy enable or disable in Read/Write function.
ether_multicast_t	multicast	
		Multicast enable or disable.
ether_promiscuous_t	promiscuous	
		Promiscuous mode enable or disable.
ether_flow_control_t	flow_control	
		Flow control functionally enable or disable.
ether_padding_t	padding	

	Padding length inserted into the received Ethernet frame.
uint32_t	padding_offset
	Offset of the padding inserted into the received Ethernet frame.
uint32_t	broadcast_filter
	Limit of the number of broadcast frames received continuously.
uint8_t *	p_mac_address
	Pointer of MAC address.
ether_instance_descriptor_t *	p_rx_descriptors
	Receive descriptor buffer pool.
ether_instance_descriptor_t *	p_tx_descriptors
	Transmit descriptor buffer pool.
uint8_t	num_tx_descriptors
	Number of transmission descriptor.
uint8_t	num_rx_descriptors
	Number of receive descriptor.
uint8_t **	pp_ether_buffers
	Transmit and receive buffer.
uint32_t	ether_buffer_size

	Size of transmit and receive buffer.
IRQn_Type	irq
	NVIC interrupt number.
uint32_t	interrupt_priority
	NVIC interrupt priority.
void(*	p_callback)(ether_callback_args_t *p_args)
	Callback provided when an ISR occurs.
ether_phy_instance_t const *	p_ether_phy_instance
	Pointer to ETHER_PHY instance.
void const *	p_context
	Placeholder for user data. More...
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ p_context

void const* ether_cfg_t::p_context

Placeholder for user data.

Placeholder for user data. Passed to the user callback in [ether_callback_args_t](#).

◆ ether_api_t

struct ether_api_t

Functions implemented at the HAL layer will follow this API.

Data Fields		
fsp_err_t(*)	open)(ether_ctrl_t *const p_api_ctrl, ether_cfg_t const *const p_cfg)	
fsp_err_t(*)	close)(ether_ctrl_t *const p_api_ctrl)	
fsp_err_t(*)	read)(ether_ctrl_t *const p_api_ctrl, void *const p_buffer, uint32_t *const length_bytes)	
fsp_err_t(*)	bufferRelease)(ether_ctrl_t *const p_api_ctrl)	
fsp_err_t(*)	rxBufferUpdate)(ether_ctrl_t *const p_api_ctrl, void *const p_buffer)	
fsp_err_t(*)	write)(ether_ctrl_t *const p_api_ctrl, void *const p_buffer, uint32_t const frame_length)	
fsp_err_t(*)	linkProcess)(ether_ctrl_t *const p_api_ctrl)	
fsp_err_t(*)	wakeOnLANEnable)(ether_ctrl_t *const p_api_ctrl)	
fsp_err_t(*)	txStatusGet)(ether_ctrl_t *const p_api_ctrl, void *const p_buffer_address)	
Field Documentation		
◆ open		
fsp_err_t(*) ether_api_t::open (ether_ctrl_t *const p_api_ctrl, ether_cfg_t const *const p_cfg)		
Open driver.		
Implemented as		
◦ R_ETHER_Open()		
Parameters		
[in]	p_api_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ **close**

```
fsp_err_t(* ether_api_t::close) (ether_ctrl_t *const p_api_ctrl)
```

Close driver.

Implemented as

- R_ETHER_Close()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **read**

```
fsp_err_t(* ether_api_t::read) (ether_ctrl_t *const p_api_ctrl, void *const p_buffer, uint32_t *const length_bytes)
```

Read packet if data is available.

Implemented as

- R_ETHER_Read()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buffer	Pointer to where to store read data.
[in]	length_bytes	Number of bytes in buffer

◆ **bufferRelease**

```
fsp_err_t(* ether_api_t::bufferRelease) (ether_ctrl_t *const p_api_ctrl)
```

Release rx buffer from buffer pool process in zero-copy read operation.

Implemented as

- R_ETHER_BufferRelease()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **rxBufferUpdate**

```
fsp_err_t(* ether_api_t::rxBufferUpdate) (ether_ctrl_t *const p_api_ctrl, void *const p_buffer)
```

Update the buffer pointer in the current receive descriptor.

Implemented as

- R_ETHER_RxBufferUpdate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buffer	New address to write into the rx buffer descriptor.

◆ **write**

```
fsp_err_t(* ether_api_t::write) (ether_ctrl_t *const p_api_ctrl, void *const p_buffer, uint32_t const frame_length)
```

Write packet.

Implemented as

- R_ETHER_Write()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buffer	Pointer to data to write.
[in]	frame_length	Send ethernet frame size (without 4 bytes of CRC data size).

◆ **linkProcess**

```
fsp_err_t(* ether_api_t::linkProcess) (ether_ctrl_t *const p_api_ctrl)
```

Process link.

Implemented as

- R_ETHER_LinkProcess()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **wakeOnLANEnable**

```
fsp_err_t(* ether_api_t::wakeOnLANEnable) (ether_ctrl_t *const p_api_ctrl)
```

Enable magic packet detection.

Implemented as

- [R_ETHER_WakeOnLANEnable\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **txStatusGet**

```
fsp_err_t(* ether_api_t::txStatusGet) (ether_ctrl_t *const p_api_ctrl, void *const p_buffer_address)
```

Get the address of the most recently sent buffer.

Implemented as

- [R_ETHER_TxStatusGet\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[out]	p_buffer_address	Pointer to the address of the most recently sent buffer.

◆ **ether_instance_t**

```
struct ether_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

ether_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
ether_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
ether_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ **ether_ctrl_t**typedef void [ether_ctrl_t](#)

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- [ether_instance_ctrl_t](#)

Enumeration Type Documentation◆ **ether_wake_on_lan_t**enum [ether_wake_on_lan_t](#)

Wake on LAN

Enumerator

ETHER_WAKE_ON_LAN_DISABLE

Disable Wake on LAN.

ETHER_WAKE_ON_LAN_ENABLE

Enable Wake on LAN.

◆ **ether_flow_control_t**enum [ether_flow_control_t](#)

Flow control functionality

Enumerator

ETHER_FLOW_CONTROL_DISABLE

Disable flow control functionality.

ETHER_FLOW_CONTROL_ENABLE

Enable flow control functionality with pause frames.

◆ **ether_multicast_t**enum [ether_multicast_t](#)

Multicast Filter

Enumerator

ETHER_MULTICAST_DISABLE

Disable reception of multicast frames.

ETHER_MULTICAST_ENABLE

Enable reception of multicast frames.

◆ ether_promiscuous_t

enum ether_promiscuous_t	
Promiscuous Mode	
Enumerator	
ETHER_PROMISCUOUS_DISABLE	Only receive packets with current MAC address, multicast, and broadcast.
ETHER_PROMISCUOUS_ENABLE	Receive all packets.

◆ ether_zerocopy_t

enum ether_zerocopy_t	
Zero copy	
Enumerator	
ETHER_ZEROCOPY_DISABLE	Disable zero copy in Read/Write function.
ETHER_ZEROCOPY_ENABLE	Enable zero copy in Read/Write function.

◆ ether_event_t

enum ether_event_t	
Event code of callback function	
Enumerator	
ETHER_EVENT_WAKEON_LAN	Magic packet detection event.
ETHER_EVENT_LINK_ON	Link up detection event.
ETHER_EVENT_LINK_OFF	Link down detection event.
ETHER_EVENT_INTERRUPT	Interrupt event.

4.3.15 Ethernet PHY Interface

Interfaces

Detailed Description

Interface for Ethernet PHY functions.

Summary

The Ethernet PHY module (`r_ether_phy`) provides an API for standard Ethernet PHY communications applications that use the ETHERC peripheral.

The Ethernet PHY interface supports the following features:

- Auto negotiation support
- Flow control support
- Link status check support

Implemented by:

- [Ethernet PHY \(`r_ether_phy`\)](#)

Data Structures

struct [ether_phy_cfg_t](#)

struct [ether_phy_api_t](#)

struct [ether_phy_instance_t](#)

Typedefs

typedef void [ether_phy_ctrl_t](#)

Enumerations

enum [ether_phy_flow_control_t](#)

enum [ether_phy_link_speed_t](#)

enum [ether_phy_mii_type_t](#)

Data Structure Documentation

◆ `ether_phy_cfg_t`

struct <code>ether_phy_cfg_t</code>		
Configuration parameters.		
Data Fields		
<code>uint8_t</code>	<code>channel</code>	Channel.
<code>uint8_t</code>	<code>phy_lsi_address</code>	Address of PHY-LSI.
<code>uint32_t</code>	<code>phy_reset_wait_time</code>	Wait time for PHY-LSI reboot.
<code>int32_t</code>	<code>mii_bit_access_wait_time</code>	Wait time for MII/RMII access.

ether_phy_flow_control_t	flow_control	Flow control functionally enable or disable.
ether_phy_mii_type_t	mii_type	Interface type is MII or RMII.
void const *	p_context	Placeholder for user data. Passed to the user callback in ether_phy_callback_args_t.
void const *	p_extend	Placeholder for user extension.

◆ ether_phy_api_t

struct ether_phy_api_t		
Functions implemented at the HAL layer will follow this API.		
Data Fields		
fsp_err_t (*	open)(ether_phy_ctrl_t *const p_api_ctrl, ether_phy_cfg_t const *const p_cfg)	
fsp_err_t (*	close)(ether_phy_ctrl_t *const p_api_ctrl)	
fsp_err_t (*	startAutoNegotiate)(ether_phy_ctrl_t *const p_api_ctrl)	
fsp_err_t (*	linkPartnerAbilityGet)(ether_phy_ctrl_t *const p_api_ctrl, uint32_t *const p_line_speed_duplex, uint32_t *const p_local_pause, uint32_t *const p_partner_pause)	
fsp_err_t (*	linkStatusGet)(ether_phy_ctrl_t *const p_api_ctrl)	
Field Documentation		
◆ open		
fsp_err_t (* ether_phy_api_t::open) (ether_phy_ctrl_t *const p_api_ctrl, ether_phy_cfg_t const *const p_cfg)		
Open driver.		
Implemented as		
◦ R_ETHER_PHY_Open ()		
Parameters		
[in]	p_api_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ **close**

```
fsp_err_t(* ether_phy_api_t::close) (ether_phy_ctrl_t *const p_api_ctrl)
```

Close driver.

Implemented as

- R_ETHER_PHY_Close()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **startAutoNegotiate**

```
fsp_err_t(* ether_phy_api_t::startAutoNegotiate) (ether_phy_ctrl_t *const p_api_ctrl)
```

Start auto negotiation.

Implemented as

- R_ETHER_PHY_StartAutoNegotiate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **linkPartnerAbilityGet**

```
fsp_err_t(* ether_phy_api_t::linkPartnerAbilityGet) (ether_phy_ctrl_t *const p_api_ctrl, uint32_t *const p_line_speed_duplex, uint32_t *const p_local_pause, uint32_t *const p_partner_pause)
```

Get the partner ability.

Implemented as

- R_ETHER_PHY_LinkPartnerAbilityGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[out]	p_line_speed_duplex	Pointer to the location of both the line speed and the duplex.
[out]	p_local_pause	Pointer to the location to store the local pause bits.
[out]	p_partner_pause	Pointer to the location to store the partner pause bits.

◆ **linkStatusGet**

```
fsp_err_t(* ether_phy_api_t::linkStatusGet) (ether_phy_ctrl_t *const p_api_ctrl)
```

Get Link status from PHY-LSI interface.

Implemented as

- [R_ETHER_PHY_LinkStatusGet\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **ether_phy_instance_t**

```
struct ether_phy_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

ether_phy_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
ether_phy_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
ether_phy_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **ether_phy_ctrl_t**

```
typedef void ether_phy_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- [ether_phy_instance_ctrl_t](#)

Enumeration Type Documentation

◆ ether_phy_flow_control_t

enum ether_phy_flow_control_t	
Flow control functionality	
Enumerator	
ETHER_PHY_FLOW_CONTROL_DISABLE	Disable flow control functionality.
ETHER_PHY_FLOW_CONTROL_ENABLE	Enable flow control functionality with pause frames.

◆ ether_phy_link_speed_t

enum ether_phy_link_speed_t	
Link speed	
Enumerator	
ETHER_PHY_LINK_SPEED_NO_LINK	Link is not established.
ETHER_PHY_LINK_SPEED_10H	Link status is 10Mbit/s and half duplex.
ETHER_PHY_LINK_SPEED_10F	Link status is 10Mbit/s and full duplex.
ETHER_PHY_LINK_SPEED_100H	Link status is 100Mbit/s and half duplex.
ETHER_PHY_LINK_SPEED_100F	Link status is 100Mbit/s and full duplex.

◆ ether_phy_mii_type_t

enum ether_phy_mii_type_t	
Media-independent interface	
Enumerator	
ETHER_PHY_MII_TYPE_MII	MII.
ETHER_PHY_MII_TYPE_RMII	RMII.

4.3.16 External IRQ Interface

Interfaces

Detailed Description

Interface for detecting external interrupts.

Summary

The External IRQ Interface is for configuring interrupts to fire when a trigger condition is detected on an external IRQ pin.

The External IRQ Interface can be implemented by:

- [Interrupt Controller Unit \(r_icu\)](#)

Data Structures

struct [external_irq_callback_args_t](#)

struct [external_irq_cfg_t](#)

struct [external_irq_api_t](#)

struct [external_irq_instance_t](#)

Typedefs

typedef void [external_irq_ctrl_t](#)

Enumerations

enum [external_irq_trigger_t](#)

enum [external_irq_pclk_div_t](#)

Data Structure Documentation

◆ external_irq_callback_args_t

struct external_irq_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data. Set in external_irq_api_t::open function in external_irq_cfg_t .
uint32_t	channel	The physical hardware channel that caused the interrupt.

◆ external_irq_cfg_t

struct external_irq_cfg_t
User configuration structure, used in open function

Data Fields	
uint8_t	channel
	Hardware channel used.
uint8_t	ipl
	Interrupt priority.
IRQn_Type	irq
	NVIC interrupt number assigned to this instance.
external_irq_trigger_t	trigger
	Trigger setting.
external_irq_pclk_div_t	pclk_div
	Digital filter clock divisor setting.
bool	filter_enable
	Digital filter enable/disable setting.
void(*	p_callback)(external_irq_callback_args_t *p_args)
void const *	p_context
void const *	p_extend
	External IRQ hardware dependent configuration.
Field Documentation	

◆ **p_callback**

```
void(* external_irq_cfg_t::p_callback) (external_irq_callback_args_t *p_args)
```

Callback provided external input trigger occurs.

◆ **p_context**

```
void const* external_irq_cfg_t::p_context
```

Placeholder for user data. Passed to the user callback in [external_irq_callback_args_t](#).

◆ **external_irq_api_t**

```
struct external_irq_api_t
```

External interrupt driver structure. External interrupt functions implemented at the HAL layer will follow this API.

Data Fields

<code>fsp_err_t(*</code>	<code>open</code>)(external_irq_ctrl_t *const p_ctrl, external_irq_cfg_t const *const p_cfg)
--------------------------	---

<code>fsp_err_t(*</code>	<code>enable</code>)(external_irq_ctrl_t *const p_ctrl)
--------------------------	--

<code>fsp_err_t(*</code>	<code>disable</code>)(external_irq_ctrl_t *const p_ctrl)
--------------------------	---

<code>fsp_err_t(*</code>	<code>callbackSet</code>)(external_irq_ctrl_t *const p_api_ctrl, void(*p_callback)(external_irq_callback_args_t *), void const *const p_context, external_irq_callback_args_t *const p_callback_memory)
--------------------------	--

<code>fsp_err_t(*</code>	<code>close</code>)(external_irq_ctrl_t *const p_ctrl)
--------------------------	---

Field Documentation

◆ **open**

```
fsp_err_t(* external_irq_api_t::open) (external_irq_ctrl_t *const p_ctrl, external_irq_cfg_t const *const p_cfg)
```

Initial configuration.

Implemented as

- R_ICU_ExtrenalIrqOpen()

Parameters

[out]	p_ctrl	Pointer to control block. Must be declared by user. Value set here.
[in]	p_cfg	Pointer to configuration structure. All elements of the structure must be set by user.

◆ **enable**

```
fsp_err_t(* external_irq_api_t::enable) (external_irq_ctrl_t *const p_ctrl)
```

Enable callback when an external trigger condition occurs.

Implemented as

- R_ICU_ExtrenalIrqEnable()

Parameters

[in]	p_ctrl	Control block set in Open call for this external interrupt.
------	--------	---

◆ **disable**

```
fsp_err_t(* external_irq_api_t::disable) (external_irq_ctrl_t *const p_ctrl)
```

Disable callback when external trigger condition occurs.

Implemented as

- R_ICU_ExtrenalIrqDisable()

Parameters

[in]	p_ctrl	Control block set in Open call for this external interrupt.
------	--------	---

◆ **callbackSet**

```
fsp_err_t(* external_irq_api_t::callbackSet) (external_irq_ctrl_t *const p_api_ctrl, void(
*p_callback)(external_irq_callback_args_t *), void const *const p_context,
external_irq_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_ICU_ExtrenalIrqCallbackSet()

Parameters

[in]	p_ctrl	Pointer to the External IRQ control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* external_irq_api_t::close) (external_irq_ctrl_t *const p_ctrl)
```

Allow driver to be reconfigured. May reduce power consumption.

Implemented as

- R_ICU_ExtrenalIrqClose()

Parameters

[in]	p_ctrl	Control block set in Open call for this external interrupt.
------	--------	---

◆ **external_irq_instance_t**

```
struct external_irq_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

external_irq_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
external_irq_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.

<code>external_irq_api_t</code> const *	<code>p_api</code>	Pointer to the API structure for this instance.
---	--------------------	---

Typedef Documentation

◆ `external_irq_ctrl_t`

typedef void `external_irq_ctrl_t`

External IRQ control block. Allocate an instance specific control block to pass into the external IRQ API calls.

Implemented as

- `icu_instance_ctrl_t`

Enumeration Type Documentation

◆ `external_irq_trigger_t`

enum `external_irq_trigger_t`

Condition that will trigger an interrupt when detected.

Enumerator

<code>EXTERNAL_IRQ_TRIG_FALLING</code>	Falling edge trigger.
<code>EXTERNAL_IRQ_TRIG_RISING</code>	Rising edge trigger.
<code>EXTERNAL_IRQ_TRIG_BOTH_EDGE</code>	Both edges trigger.
<code>EXTERNAL_IRQ_TRIG_LEVEL_LOW</code>	Low level trigger.

◆ `external_irq_pclk_div_t`

enum `external_irq_pclk_div_t`

External IRQ input pin digital filtering sample clock divisor settings. The digital filter rejects trigger conditions that are shorter than 3 periods of the filter clock.

Enumerator

<code>EXTERNAL_IRQ_PCLK_DIV_BY_1</code>	Filter using PCLK divided by 1.
<code>EXTERNAL_IRQ_PCLK_DIV_BY_8</code>	Filter using PCLK divided by 8.
<code>EXTERNAL_IRQ_PCLK_DIV_BY_32</code>	Filter using PCLK divided by 32.
<code>EXTERNAL_IRQ_PCLK_DIV_BY_64</code>	Filter using PCLK divided by 64.

4.3.17 Flash Interface

Interfaces

Detailed Description

Interface for the Flash Memory.

Summary

The Flash interface provides the ability to read, write, erase, and blank check the code flash and data flash regions.

The Flash interface is implemented by:

- Low-Power Flash Driver (`r_flash_lp`)

Data Structures

struct `flash_block_info_t`

struct `flash_regions_t`

struct `flash_info_t`

struct `flash_callback_args_t`

struct `flash_cfg_t`

struct `flash_api_t`

struct `flash_instance_t`

Typedefs

typedef void `flash_ctrl_t`

Enumerations

enum `flash_result_t`

enum `flash_startup_area_swap_t`

enum `flash_event_t`

enum `flash_id_code_mode_t`

enum `flash_status_t`

Data Structure Documentation

◆ flash_block_info_t

struct flash_block_info_t		
Flash block details stored in factory flash.		
Data Fields		
uint32_t	block_section_st_addr	Starting address for this block section (blocks of this size)
uint32_t	block_section_end_addr	Ending address for this block section (blocks of this size)
uint32_t	block_size	Flash erase block size.
uint32_t	block_size_write	Flash write block size.

◆ flash_regions_t

struct flash_regions_t		
Flash block details		
Data Fields		
uint32_t	num_regions	Length of block info array.
flash_block_info_t const *	p_block_array	Block info array base address.

◆ flash_info_t

struct flash_info_t		
Information about the flash blocks		
Data Fields		
flash_regions_t	code_flash	Information about the code flash regions.
flash_regions_t	data_flash	Information about the code flash regions.

◆ flash_callback_args_t

struct flash_callback_args_t		
Callback function parameter data		
Data Fields		
flash_event_t	event	Event can be used to identify what caused the callback (flash ready or error).
void const *	p_context	Placeholder for user data. Set in flash_api_t::open function in in::flash_cfg_t .

◆ flash_cfg_t

struct flash_cfg_t	
FLASH Configuration	
Data Fields	
bool	data_flash_bgo
	True if BGO (Background Operation) is enabled for Data Flash.
void(*)	p_callback (flash_callback_args_t *p_args)
	Callback provided when a Flash interrupt ISR occurs.
void const *	p_extend
	FLASH hardware dependent configuration.
void const *	p_context
	Placeholder for user data. Passed to user callback in flash_callback_args_t .
uint8_t	ipl
	Flash ready interrupt priority.
IRQn_Type	irq
	Flash ready interrupt number.
uint8_t	err_ipl
	Flash error interrupt priority (unused in r_flash_lp)
IRQn_Type	err_irq
	Flash error interrupt number (unused in r_flash_lp)

◆ flash_api_t

struct flash_api_t	
Shared Interface definition for FLASH	
Data Fields	
fsp_err_t(*)	open)(flash_ctrl_t *const p_ctrl, flash_cfg_t const *const p_cfg)
fsp_err_t(*)	write)(flash_ctrl_t *const p_ctrl, uint32_t const src_address, uint32_t const flash_address, uint32_t const num_bytes)
fsp_err_t(*)	erase)(flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_blocks)
fsp_err_t(*)	blankCheck)(flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_bytes, flash_result_t *const p_blank_check_result)
fsp_err_t(*)	infoGet)(flash_ctrl_t *const p_ctrl, flash_info_t *const p_info)
fsp_err_t(*)	close)(flash_ctrl_t *const p_ctrl)
fsp_err_t(*)	statusGet)(flash_ctrl_t *const p_ctrl, flash_status_t *const p_status)
fsp_err_t(*)	accessWindowSet)(flash_ctrl_t *const p_ctrl, uint32_t const start_addr, uint32_t const end_addr)
fsp_err_t(*)	accessWindowClear)(flash_ctrl_t *const p_ctrl)
fsp_err_t(*)	idCodeSet)(flash_ctrl_t *const p_ctrl, uint8_t const *const p_id_bytes, flash_id_code_mode_t mode)
fsp_err_t(*)	reset)(flash_ctrl_t *const p_ctrl)
fsp_err_t(*)	updateFlashClockFreq)(flash_ctrl_t *const p_ctrl)
fsp_err_t(*)	startupAreaSelect)(flash_ctrl_t *const p_ctrl, flash_startup_area_swap_t swap_type, bool is_temporary)

<code>fsp_err_t(*</code>	<code>bankSwap)(flash_ctrl_t *const p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>callbackSet)(flash_ctrl_t *const p_api_ctrl,</code> <code>void(*p_callback)(flash_callback_args_t *), void const *const</code> <code>p_context, flash_callback_args_t *const p_callback_memory)</code>

Field Documentation

◆ open

`fsp_err_t(* flash_api_t::open) (flash_ctrl_t *const p_ctrl, flash_cfg_t const *const p_cfg)`

Open FLASH device.

Implemented as

- `R_FLASH_LP_Open()`
- `R_FLASH_HP_Open()`

Parameters

[out]	<code>p_ctrl</code>	Pointer to FLASH device control. Must be declared by user. Value set here.
[in]	<code>flash_cfg_t</code>	Pointer to FLASH configuration structure. All elements of this structure must be set by the user.

◆ **write**

```
fsp_err_t(* flash_api_t::write) (flash_ctrl_t *const p_ctrl, uint32_t const src_address, uint32_t const flash_address, uint32_t const num_bytes)
```

Write FLASH device.

Implemented as

- R_FLASH_LP_Write()
- R_FLASH_HP_Write()

Parameters

[in]	p_ctrl	Control for the FLASH device context.
[in]	src_address	Address of the buffer containing the data to write to Flash.
[in]	flash_address	Code Flash or Data Flash address to write. The address must be on a programming line boundary.
[in]	num_bytes	The number of bytes to write. This number must be a multiple of the programming size. For Code Flash this is FLASH_MIN_PGM_SIZE_CF. For Data Flash this is FLASH_MIN_PGM_SIZE_DF.

Warning

Specifying a number that is not a multiple of the programming size will result in SF_FLASH_ERR_BYTES being returned and no data written.

◆ **erase**

```
fsp_err_t(* flash_api_t::erase) (flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_blocks)
```

Erase FLASH device.

Implemented as

- R_FLASH_LP_Erase()
- R_FLASH_HP_Erase()

Parameters

[in]	p_ctrl	Control for the FLASH device.
[in]	address	The block containing this address is the first block erased.
[in]	num_blocks	Specifies the number of blocks to be erased, the starting block determined by the block_erase_address.

◆ blankCheck

```
fsp_err_t(* flash_api_t::blankCheck) (flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_bytes, flash_result_t *const p_blank_check_result)
```

Blank check FLASH device.

Implemented as

- R_FLASH_LP_BlankCheck()
- R_FLASH_HP_BlankCheck()

Parameters

[in]	p_ctrl	Control for the FLASH device context.
[in]	address	The starting address of the Flash area to blank check.
[in]	num_bytes	Specifies the number of bytes that need to be checked. See the specific handler for details.
[out]	p_blank_check_result	Pointer that will be populated by the API with the results of the blank check operation in non-BGO (blocking) mode. In this case the blank check operation completes here and the result is returned. In Data Flash BGO mode the blank check operation is only started here and the result obtained later when the supplied callback routine is called. In this case FLASH_RESULT_BGO_ACTIVE will be returned in p_blank_check_result.

◆ infoGet

```
fsp_err_t(* flash_api_t::infoGet) (flash_ctrl_t *const p_ctrl, flash_info_t *const p_info)
```

Close FLASH device.

Implemented as

- R_FLASH_LP_InfoGet()
- R_FLASH_HP_InfoGet()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
[out]	p_info	Pointer to FLASH info structure.

◆ close

```
fsp_err_t(* flash_api_t::close) (flash_ctrl_t *const p_ctrl)
```

Close FLASH device.

Implemented as

- R_FLASH_LP_Close()
- R_FLASH_HP_Close()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
------	--------	----------------------------------

◆ statusGet

```
fsp_err_t(* flash_api_t::statusGet) (flash_ctrl_t *const p_ctrl, flash_status_t *const p_status)
```

Get Status for FLASH device.

Implemented as

- R_FLASH_LP_StatusGet()
- R_FLASH_HP_StatusGet()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
[out]	p_status	Pointer to the current flash status.

◆ **accessWindowSet**

```
fsp_err_t(* flash_api_t::accessWindowSet) (flash_ctrl_t *const p_ctrl, uint32_t const start_addr,
uint32_t const end_addr)
```

Set Access Window for FLASH device.

Implemented as

- R_FLASH_LP_AccessWindowSet()
- R_FLASH_HP_AccessWindowSet()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
[in]	start_addr	Determines the Starting block for the Code Flash access window.
[in]	end_addr	Determines the Ending block for the Code Flash access window. This address will not be within the access window.

◆ **accessWindowClear**

```
fsp_err_t(* flash_api_t::accessWindowClear) (flash_ctrl_t *const p_ctrl)
```

Clear any existing Code Flash access window for FLASH device.

Implemented as

- R_FLASH_LP_AccessWindowClear()
- R_FLASH_HP_AccessWindowClear()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
[in]	start_addr	Determines the Starting block for the Code Flash access window.
[in]	end_addr	Determines the Ending block for the Code Flash access window.

◆ **idCodeSet**

```
fsp_err_t(* flash_api_t::idCodeSet) (flash_ctrl_t *const p_ctrl, uint8_t const *const p_id_bytes,
flash_id_code_mode_t mode)
```

Set ID Code for FLASH device. Setting the ID code can restrict access to the device. The ID code will be required to connect to the device. Bits 126 and 127 are set based on the mode.

For example, `uint8_t id_bytes[] = {0x00, 0x11, 0x22, 0x33, 0x44, 0x55, 0x66, 0x77, 0x88, 0x99, 0xaa, 0xbb, 0xcc, 0xdd, 0xee, 0x00};` with mode `FLASH_ID_CODE_MODE_LOCKED_WITH_ALL_ERASE_SUPPORT` will result in an ID code of `00112233445566778899aabbccddeec0`

With mode `FLASH_ID_CODE_MODE_LOCKED`, it will result in an ID code of `00112233445566778899aabbccdee80`

Implemented as

- `R_FLASH_LP_IdCodeSet()`
- `R_FLASH_HP_IdCodeSet()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to FLASH device control.
[in]	<code>p_id_bytes</code>	Ponter to the ID Code to be written.
[in]	<code>mode</code>	Mode used for checking the ID code.

◆ **reset**

```
fsp_err_t(* flash_api_t::reset) (flash_ctrl_t *const p_ctrl)
```

Reset function for FLASH device.

Implemented as

- `R_FLASH_LP_Reset()`
- `R_FLASH_HP_Reset()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to FLASH device control.
------	---------------------	----------------------------------

◆ updateFlashClockFreq

`fsp_err_t(* flash_api_t::updateFlashClockFreq) (flash_ctrl_t *const p_ctrl)`

Update Flash clock frequency (FCLK) and recalculate timeout values

Implemented as

- `R_FLASH_LP_UpdateFlashClockFreq()`
- `R_FLASH_HP_UpdateFlashClockFreq()`

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
------	--------	----------------------------------

◆ startupAreaSelect

`fsp_err_t(* flash_api_t::startupAreaSelect) (flash_ctrl_t *const p_ctrl, flash_startup_area_swap_t swap_type, bool is_temporary)`

Select which block - Default (Block 0) or Alternate (Block 1) is used as the start-up area block.

Implemented as

- `R_FLASH_LP_StartUpAreaSelect()`
- `R_FLASH_HP_StartUpAreaSelect()`

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
[in]	swap_type	FLASH_STARTUP_AREA_BLOCK0, FLASH_STARTUP_AREA_BLOCK1 or FLASH_STARTUP_AREA_BTFLG.
[in]	is_temporary	True or false. See table below.

swap_type	is_temporary	Operation
FLASH_STARTUP_AREA_BLOCK0	false	On next reset Startup area will be Block 0.
FLASH_STARTUP_AREA_BLOCK1	true	Startup area is immediately, but temporarily switched to Block 1.
FLASH_STARTUP_AREA_BTFLG	true	Startup area is immediately, but temporarily switched to the Block determined by the Configuration BTFLG.

◆ **bankSwap**

```
fsp_err_t(* flash_api_t::bankSwap) (flash_ctrl_t *const p_ctrl)
```

Swap the bank used as the startup area. Only valid in dual bank mode.

Implemented as

- [R_FLASH_HP_BankSwap\(\)](#)

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
------	--------	----------------------------------

◆ **callbackSet**

```
fsp_err_t(* flash_api_t::callbackSet) (flash_ctrl_t *const p_api_ctrl,
void(*p_callback)(flash_callback_args_t *), void const *const p_context, flash_callback_args_t *const
p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- [R_FLASH_HP_CallbackSet\(\)](#)

Parameters

[in]	p_ctrl	Control block set in flash_api_t::open call for this timer.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **flash_instance_t**

```
struct flash_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

flash_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
flash_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.

<code>flash_api_t</code> const *	<code>p_api</code>	Pointer to the API structure for this instance.
----------------------------------	--------------------	---

Typedef Documentation

◆ `flash_ctrl_t`

typedef void `flash_ctrl_t`

Flash control block. Allocate an instance specific control block to pass into the flash API calls.

Implemented as

- `flash_lp_instance_ctrl_t`
- `flash_hp_instance_ctrl_t`

Enumeration Type Documentation

◆ `flash_result_t`

enum `flash_result_t`

Result type for certain operations

Enumerator

<code>FLASH_RESULT_BLANK</code>	Return status for Blank Check Function.
<code>FLASH_RESULT_NOT_BLANK</code>	Return status for Blank Check Function.
<code>FLASH_RESULT_BGO_ACTIVE</code>	Flash is configured for BGO mode. Result is returned in callback.

◆ `flash_startup_area_swap_t`

enum `flash_startup_area_swap_t`

Parameter for specifying the startup area swap being requested by `startupAreaSelect()`

Enumerator

<code>FLASH_STARTUP_AREA_BTFLG</code>	Startup area will be set based on the value of the BTFLG.
<code>FLASH_STARTUP_AREA_BLOCK0</code>	Startup area will be set to Block 0.
<code>FLASH_STARTUP_AREA_BLOCK1</code>	Startup area will be set to Block 1.

◆ **flash_event_t**

enum flash_event_t	
Event types returned by the ISR callback when used in Data Flash BGO mode	
Enumerator	
FLASH_EVENT_ERASE_COMPLETE	Erase operation successfully completed.
FLASH_EVENT_WRITE_COMPLETE	Write operation successfully completed.
FLASH_EVENT_BLANK	Blank check operation successfully completed. Specified area is blank.
FLASH_EVENT_NOT_BLANK	Blank check operation successfully completed. Specified area is NOT blank.
FLASH_EVENT_ERR_DF_ACCESS	Data Flash operation failed. Can occur when writing an unerased section.
FLASH_EVENT_ERR_CF_ACCESS	Code Flash operation failed. Can occur when writing an unerased section.
FLASH_EVENT_ERR_CMD_LOCKED	Operation failed, FCU is in Locked state (often result of an illegal command)
FLASH_EVENT_ERR_FAILURE	Erase or Program Operation failed.
FLASH_EVENT_ERR_ONE_BIT	A 1-bit error has been corrected when reading the flash memory area by the sequencer.

◆ **flash_id_code_mode_t**

enum flash_id_code_mode_t	
ID Code Modes for writing to ID code registers	
Enumerator	
FLASH_ID_CODE_MODE_UNLOCKED	ID code is ignored.
FLASH_ID_CODE_MODE_LOCKED_WITH_ALL_ERASE_SUPPORT	ID code is checked. All erase is available.
FLASH_ID_CODE_MODE_LOCKED	ID code is checked.

◆ **flash_status_t**

enum flash_status_t	
Flash status	
Enumerator	
FLASH_STATUS_IDLE	The flash is idle.
FLASH_STATUS_BUSY	The flash is currently processing a command.

4.3.18 I2C Master Interface**Interfaces****Detailed Description**

Interface for I2C master communication.

Summary

The I2C master interface provides a common API for I2C HAL drivers. The I2C master interface supports:

- Interrupt driven transmit/receive processing
- Callback function support which can return an event code

Implemented by:

- I2C Master on IIC (r_iic_master)
- Serial Communications Interface (SCI) I2C (r_sci_i2c)
- I2C Master on IIC/I3C (r_iic_b_master)
- Serial Communications Interface (SCI) I2C (r_sci_b_i2c)

Data Structures

struct [i2c_master_callback_args_t](#)

struct [i2c_master_status_t](#)

struct [i2c_master_cfg_t](#)

struct [i2c_master_api_t](#)

struct [i2c_master_instance_t](#)

Typedefs

```
typedef void i2c_master_ctrl_t
```

Enumerations

```
enum i2c_master_rate_t
```

```
enum i2c_master_addr_mode_t
```

```
enum i2c_master_event_t
```

Data Structure Documentation

◆ i2c_master_callback_args_t

struct i2c_master_callback_args_t		
I2C callback parameter definition		
Data Fields		
void const *	p_context	Pointer to user-provided context.
i2c_master_event_t	event	Event code.

◆ i2c_master_status_t

struct i2c_master_status_t		
I2C status indicators		
Data Fields		
bool	open	True if driver is open.

◆ i2c_master_cfg_t

struct i2c_master_cfg_t		
I2C configuration block		
Data Fields		
uint8_t	channel	Identifier recognizable by implementation. More...
i2c_master_rate_t	rate	Device's maximum clock rate from enum i2c_rate_t .
uint32_t	slave	

	The address of the slave device.
<code>i2c_master_addr_mode_t</code>	<code>addr_mode</code>
	Indicates how slave fields should be interpreted.
<code>uint8_t</code>	<code>ipl</code>
	Interrupt priority level. Same for RXI, TXI, TEI and ERI.
<code>IRQn_Type</code>	<code>rx_irq</code>
	Receive IRQ number.
<code>IRQn_Type</code>	<code>tx_irq</code>
	Transmit IRQ number.
<code>IRQn_Type</code>	<code>tei_irq</code>
	Transmit end IRQ number.
<code>IRQn_Type</code>	<code>eri_irq</code>
	Error IRQ number.
<code>transfer_instance_t const *</code>	<code>p_transfer_tx</code>
	DTC instance for I2C transmit. Set to NULL if unused. More...
<code>transfer_instance_t const *</code>	<code>p_transfer_rx</code>
	DTC instance for I2C receive. Set to NULL if unused.
<code>void(*)</code>	<code>p_callback</code> <code>(i2c_master_callback_args_t *p_args)</code>
	Pointer to callback function. More...

void const *	p_context
	Pointer to the user-provided context.
void const *	p_extend
	Any configuration data needed by the hardware. More...

Field Documentation

◆ channel

`uint8_t i2c_master_cfg_t::channel`

Identifier recognizable by implementation.

Generic configuration

◆ p_transfer_tx

`transfer_instance_t const* i2c_master_cfg_t::p_transfer_tx`

DTC instance for I2C transmit. Set to NULL if unused.

DTC support

◆ p_callback

`void(* i2c_master_cfg_t::p_callback) (i2c_master_callback_args_t *p_args)`

Pointer to callback function.

Parameters to control software behavior

◆ p_extend

`void const* i2c_master_cfg_t::p_extend`

Any configuration data needed by the hardware.

Implementation-specific configuration

◆ i2c_master_api_t

`struct i2c_master_api_t`

Interface definition for I2C access as master

Data Fields

<code>fsp_err_t(*</code>	<code>open)(i2c_master_ctrl_t *const p_ctrl, i2c_master_cfg_t const *const p_cfg)</code>
--------------------------	--

<code>fsp_err_t(*</code>	<code>read)(i2c_master_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes, bool const restart)</code>
<code>fsp_err_t(*</code>	<code>write)(i2c_master_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes, bool const restart)</code>
<code>fsp_err_t(*</code>	<code>abort)(i2c_master_ctrl_t *const p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>slaveAddressSet)(i2c_master_ctrl_t *const p_ctrl, uint32_t const slave, i2c_master_addr_mode_t const addr_mode)</code>
<code>fsp_err_t(*</code>	<code>callbackSet)(i2c_master_ctrl_t *const p_api_ctrl, void(*p_callback)(i2c_master_callback_args_t *), void const *const p_context, i2c_master_callback_args_t *const p_callback_memory)</code>
<code>fsp_err_t(*</code>	<code>statusGet)(i2c_master_ctrl_t *const p_api_ctrl, i2c_master_status_t *p_status)</code>
<code>fsp_err_t(*</code>	<code>close)(i2c_master_ctrl_t *const p_ctrl)</code>

Field Documentation

◆ open

`fsp_err_t(* i2c_master_api_t::open) (i2c_master_ctrl_t *const p_ctrl, i2c_master_cfg_t const *const p_cfg)`

Opens the I2C Master driver and initializes the hardware.

Implemented as

- `R_IIC_MASTER_Open()`
- `R_SCI_I2C_Open()`
- `R_IIC_B_MASTER_Open()`
- `R_SCI_B_I2C_Open()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control block. Must be declared by user. Elements are set here.
[in]	<code>p_cfg</code>	Pointer to configuration structure.

◆ read

```
fsp_err_t(* i2c_master_api_t::read) (i2c_master_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes, bool const restart)
```

Performs a read operation on an I2C Master device.

Implemented as

- R_SCI_I2C_Read()
- R_IIC_MASTER_Read()
- R_IIC_B_MASTER_Read()
- R_SCI_B_I2C_Read()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_api_master_t::open call.
[in]	p_dest	Pointer to the location to store read data.
[in]	bytes	Number of bytes to read.
[in]	restart	Specify if the restart condition should be issued after reading.

◆ write

```
fsp_err_t(* i2c_master_api_t::write) (i2c_master_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes, bool const restart)
```

Performs a write operation on an I2C Master device.

Implemented as

- R_IIC_MASTER_Write()
- R_SCI_I2C_Write()
- R_IIC_B_MASTER_Write()
- R_SCI_B_I2C_Write()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_api_master_t::open call.
[in]	p_src	Pointer to the location to get write data from.
[in]	bytes	Number of bytes to write.
[in]	restart	Specify if the restart condition should be issued after writing.

◆ **abort**

```
fsp_err_t(* i2c_master_api_t::abort) (i2c_master_ctrl_t *const p_ctrl)
```

Performs a reset of the peripheral.

Implemented as

- R_IIC_MASTER_Abort()
- R_SCI_I2C_Abort()
- R_IIC_B_MASTER_Abort()
- R_SCI_B_I2C_Abort()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_api_master_t::open call.
------	--------	--

◆ **slaveAddressSet**

```
fsp_err_t(* i2c_master_api_t::slaveAddressSet) (i2c_master_ctrl_t *const p_ctrl, uint32_t const slave, i2c_master_addr_mode_t const addr_mode)
```

Sets address of the slave device without reconfiguring the bus.

Implemented as

- R_IIC_MASTER_SlaveAddressSet()
- R_SCI_I2C_SlaveAddressSet()
- R_IIC_B_MASTER_SlaveAddressSet()
- R_SCI_B_I2C_SlaveAddressSet()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_api_master_t::open call.
[in]	slave_address	Address of the slave device.
[in]	address_mode	Addressing mode.

◆ **callbackSet**

```
fsp_err_t(* i2c_master_api_t::callbackSet) (i2c_master_ctrl_t *const p_api_ctrl,
void(*p_callback)(i2c_master_callback_args_t*), void const *const p_context,
i2c_master_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_IIC_MASTER_CallbackSet()
- R_SCI_I2C_CallbackSet()
- R_IIC_B_MASTER_CallbackSet()
- R_SCI_B_I2C_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the IIC Master control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **statusGet**

```
fsp_err_t(* i2c_master_api_t::statusGet) (i2c_master_ctrl_t *const p_api_ctrl, i2c_master_status_t *p_status)
```

Gets the status of the configured I2C device.

Implemented as

- R_IIC_MASTER_StatusGet()
- R_SCI_I2C_StatusGet()
- R_IIC_B_MASTER_StatusGet()
- R_SCI_B_I2C_StatusGet()

Parameters

[in]	p_ctrl	Pointer to the IIC Master control block.
[out]	p_status	Pointer to store current status.

◆ **close**

```
fsp_err_t(* i2c_master_api_t::close) (i2c_master_ctrl_t *const p_ctrl)
```

Closes the driver and releases the I2C Master device.

Implemented as

- R_IIC_MASTER_Close()
- R_SCI_I2C_Close()
- R_IIC_B_MASTER_Close()
- R_SCI_B_I2C_Close()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_api_master_t::open call.
------	--------	--

◆ **i2c_master_instance_t**

```
struct i2c_master_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

i2c_master_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
i2c_master_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
i2c_master_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **i2c_master_ctrl_t**

```
typedef void i2c_master_ctrl_t
```

I2C control block. Allocate an instance specific control block to pass into the I2C API calls.

Implemented as

- iic_master_instance_ctrl_t

Enumeration Type Documentation

◆ **i2c_master_rate_t**

enum i2c_master_rate_t	
Communication speed options	
Enumerator	
I2C_MASTER_RATE_STANDARD	100 kHz
I2C_MASTER_RATE_FAST	400 kHz
I2C_MASTER_RATE_FASTPLUS	1 MHz

◆ **i2c_master_addr_mode_t**

enum i2c_master_addr_mode_t	
Addressing mode options	
Enumerator	
I2C_MASTER_ADDR_MODE_7BIT	Use 7-bit addressing mode.
I2C_MASTER_ADDR_MODE_10BIT	Use 10-bit addressing mode.

◆ **i2c_master_event_t**

enum i2c_master_event_t	
Callback events	
Enumerator	
I2C_MASTER_EVENT_ABORTED	A transfer was aborted.
I2C_MASTER_EVENT_RX_COMPLETE	A receive operation was completed successfully.
I2C_MASTER_EVENT_TX_COMPLETE	A transmit operation was completed successfully.

4.3.19 I2C Slave Interface[Interfaces](#)**Detailed Description**

Interface for I2C slave communication.

Summary

The I2C slave interface provides a common API for I2C HAL drivers. The I2C slave interface supports:

- Interrupt driven transmit/receive processing
- Callback function support which returns a event codes

Implemented by:

- [I2C Slave on IIC \(r_iic_slave\)](#)
- [I2C Slave on IIC/I3C \(r_iic_b_slave\)](#)

Data Structures

struct [i2c_slave_callback_args_t](#)

struct [i2c_slave_cfg_t](#)

struct [i2c_slave_api_t](#)

struct [i2c_slave_instance_t](#)

Typedefs

typedef void [i2c_slave_ctrl_t](#)

Enumerations

enum [i2c_slave_rate_t](#)

enum [i2c_slave_addr_mode_t](#)

enum [i2c_slave_event_t](#)

Data Structure Documentation

◆ [i2c_slave_callback_args_t](#)

struct i2c_slave_callback_args_t		
I2C callback parameter definition		
Data Fields		
void const *	p_context	Pointer to user-provided context.
uint32_t	bytes	Number of received/transmitted bytes in buffer.
i2c_slave_event_t	event	Event code.

◆ **i2c_slave_cfg_t**

struct i2c_slave_cfg_t	
I2C configuration block	
Data Fields	
uint8_t	channel
	Identifier recognizable by implementation. More...
i2c_slave_rate_t	rate
	Device's maximum clock rate from enum i2c_rate_t .
uint16_t	slave
	The address of the slave device.
i2c_slave_addr_mode_t	addr_mode
	Indicates how slave fields should be interpreted.
bool	general_call_enable
	Allow a General call from master.
IRQn_Type	rx_irq
	Receive IRQ number.
IRQn_Type	tx_irq
	Transmit IRQ number.
IRQn_Type	tei_irq
	Transmit end IRQ number.
IRQn_Type	eri_irq

	Error IRQ number.
uint8_t	ipl
	Interrupt priority level for RXI, TXI and TER interrupts.
uint8_t	eri_ipl
	Interrupt priority level for ERI interrupt.
bool	clock_stretching_enable
	Low Hold SCL during reception for the period between the 9th and the 1st clock cycle.
void(*	p_callback)(i2c_slave_callback_args_t *p_args)
	Pointer to callback function. More...
void const *	p_context
	Pointer to the user-provided context.
void const *	p_extend
	Any configuration data needed by the hardware. More...

Field Documentation

◆ channel

uint8_t i2c_slave_cfg_t::channel

Identifier recognizable by implementation.

Generic configuration

◆ **p_callback**

```
void(* i2c_slave_cfg_t::p_callback) (i2c_slave_callback_args_t *p_args)
```

Pointer to callback function.

Parameters to control software behavior

◆ **p_extend**

```
void const* i2c_slave_cfg_t::p_extend
```

Any configuration data needed by the hardware.

Implementation-specific configuration

◆ **i2c_slave_api_t**

```
struct i2c_slave_api_t
```

Interface definition for I2C access as slave

Data Fields

<code>fsp_err_t(*</code>	<code>open)(i2c_slave_ctrl_t *const p_ctrl, i2c_slave_cfg_t const *const p_cfg)</code>
--------------------------	---

<code>fsp_err_t(*</code>	<code>read)(i2c_slave_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)</code>
--------------------------	--

<code>fsp_err_t(*</code>	<code>write)(i2c_slave_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes)</code>
--------------------------	--

<code>fsp_err_t(*</code>	<code>callbackSet)(i2c_slave_ctrl_t *const p_api_ctrl, void(*p_callback)(i2c_slave_callback_args_t *), void const *const p_context, i2c_slave_callback_args_t *const p_callback_memory)</code>
--------------------------	---

<code>fsp_err_t(*</code>	<code>close)(i2c_slave_ctrl_t *const p_ctrl)</code>
--------------------------	--

Field Documentation

◆ **open**

```
fsp_err_t(* i2c_slave_api_t::open) (i2c_slave_ctrl_t *const p_ctrl, i2c_slave_cfg_t const *const p_cfg)
```

Opens the I2C Slave driver and initializes the hardware.

Implemented as

- R_IIC_SLAVE_Open()
- R_IIC_B_SLAVE_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements are set here.
[in]	p_cfg	Pointer to configuration structure.

◆ **read**

```
fsp_err_t(* i2c_slave_api_t::read) (i2c_slave_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)
```

Performs a read operation on an I2C Slave device.

Implemented as

- R_IIC_SLAVE_Read()
- R_IIC_B_SLAVE_Read()

Parameters

[in]	p_ctrl	Pointer to control block set in <code>i2c_slave_api_t::open</code> call.
[in]	p_dest	Pointer to the location to store read data.
[in]	bytes	Number of bytes to read.

◆ **write**

```
fsp_err_t(* i2c_slave_api_t::write) (i2c_slave_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes)
```

Performs a write operation on an I2C Slave device.

Implemented as

- R_IIC_SLAVE_Write()
- R_IIC_B_SLAVE_Write()

Parameters

[in]	p_ctrl	Pointer to control block set in <code>i2c_slave_api_t::open</code> call.
[in]	p_src	Pointer to the location to get write data from.
[in]	bytes	Number of bytes to write.

◆ **callbackSet**

```
fsp_err_t(* i2c_slave_api_t::callbackSet) (i2c_slave_ctrl_t *const p_api_ctrl, void(*p_callback)(i2c_slave_callback_args_t *), void const *const p_context, i2c_slave_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_IIC_SLAVE_CallbackSet()
- R_IIC_B_SLAVE_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the IIC Slave control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* i2c_slave_api_t::close) (i2c_slave_ctrl_t *const p_ctrl)
```

Closes the driver and releases the I2C Slave device.

Implemented as

- R_IIC_SLAVE_Close()
- R_IIC_B_SLAVE_Close()

Parameters

[in]	p_ctrl	Pointer to control block set in <code>i2c_slave_api_t::open</code> call.
------	--------	--

◆ **i2c_slave_instance_t**

```
struct i2c_slave_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

<code>i2c_slave_ctrl_t *</code>	<code>p_ctrl</code>	Pointer to the control structure for this instance.
<code>i2c_slave_cfg_t const *</code>	<code>p_cfg</code>	Pointer to the configuration structure for this instance.
<code>i2c_slave_api_t const *</code>	<code>p_api</code>	Pointer to the API structure for this instance.

Typedef Documentation◆ **i2c_slave_ctrl_t**

```
typedef void i2c_slave_ctrl_t
```

I2C control block. Allocate an instance specific control block to pass into the I2C API calls.

Implemented as

- `iic_slave_instance_ctrl_t`

Enumeration Type Documentation

◆ **i2c_slave_rate_t**

enum i2c_slave_rate_t	
Communication speed options	
Enumerator	
I2C_SLAVE_RATE_STANDARD	100 kHz
I2C_SLAVE_RATE_FAST	400 kHz
I2C_SLAVE_RATE_FASTPLUS	1 MHz

◆ **i2c_slave_addr_mode_t**

enum i2c_slave_addr_mode_t	
Addressing mode options	
Enumerator	
I2C_SLAVE_ADDR_MODE_7BIT	Use 7-bit addressing mode.
I2C_SLAVE_ADDR_MODE_10BIT	Use 10-bit addressing mode.

◆ **i2c_slave_event_t**

enum i2c_slave_event_t	
Callback events	
Enumerator	
I2C_SLAVE_EVENT_ABORTED	A transfer was aborted.
I2C_SLAVE_EVENT_RX_COMPLETE	A receive operation was completed successfully.
I2C_SLAVE_EVENT_TX_COMPLETE	A transmit operation was completed successfully.
I2C_SLAVE_EVENT_RX_REQUEST	A read operation expected from slave. Detected a write from master.
I2C_SLAVE_EVENT_TX_REQUEST	A write operation expected from slave. Detected a read from master.
I2C_SLAVE_EVENT_RX_MORE_REQUEST	A read operation expected from slave. Master sends out more data than configured to be read in slave.
I2C_SLAVE_EVENT_TX_MORE_REQUEST	A write operation expected from slave. Master requests more data than configured to be written by slave.
I2C_SLAVE_EVENT_GENERAL_CALL	General Call address received from Master. Detected a write from master.

4.3.20 I2S Interface[Interfaces](#)**Detailed Description**

Interface for I2S audio communication.

Summary

The I2S (Inter-IC Sound) interface provides APIs and definitions for I2S audio communication.

Known Implementations

Serial Sound Interface (r_ssi)

Data Structuresstruct [i2s_callback_args_t](#)struct [i2s_status_t](#)struct [i2s_cfg_t](#)struct [i2s_api_t](#)struct [i2s_instance_t](#)**Typedefs**typedef void [i2s_ctrl_t](#)**Enumerations**enum [i2s_pcm_width_t](#)enum [i2s_word_length_t](#)enum [i2s_event_t](#)enum [i2s_mode_t](#)enum [i2s_mute_t](#)enum [i2s_ws_continue_t](#)enum [i2s_state_t](#)**Data Structure Documentation**◆ **[i2s_callback_args_t](#)**

struct i2s_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data. Set in i2s_api_t::open function in i2s_cfg_t .
i2s_event_t	event	The event can be used to identify what caused the callback (overflow or error).

◆ **[i2s_status_t](#)**

struct i2s_status_t		
I2S status.		
Data Fields		
i2s_state_t	state	Current I2S state.

◆ i2s_cfg_t

struct i2s_cfg_t		
User configuration structure, used in open function		
Data Fields		
uint32_t	channel	
i2s_pcm_width_t	pcm_width	Audio PCM data width.
i2s_word_length_t	word_length	Audio word length, bits must be \geq i2s_cfg_t::pcm_width bits.
i2s_ws_continue_t	ws_continue	Whether to continue WS transmission during idle state.
i2s_mode_t	operating_mode	Master or slave mode.
transfer_instance_t const *	p_transfer_tx	
transfer_instance_t const *	p_transfer_rx	
void(*	p_callback	(i2s_callback_args_t *p_args)
void const *	p_context	
void const *	p_extend	

	Extension parameter for hardware specific settings.
uint8_t	rx_ipl
	Receive interrupt priority.
uint8_t	tx_ipl
	Transmit interrupt priority.
uint8_t	idle_err_ipl
	Idle/Error interrupt priority.
IRQn_Type	tx_irq
	Transmit IRQ number.
IRQn_Type	rx_irq
	Receive IRQ number.
IRQn_Type	int_irq
	Idle/Error IRQ number.

Field Documentation

◆ channel

uint32_t i2s_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.

◆ p_transfer_tx

transfer_instance_t const* i2s_cfg_t::p_transfer_tx

To use DTC during write, link a DTC instance here. Set to NULL if unused.

◆ **p_transfer_rx**

```
transfer_instance_t const* i2s_cfg_t::p_transfer_rx
```

To use DTC during read, link a DTC instance here. Set to NULL if unused.

◆ **p_callback**

```
void(* i2s_cfg_t::p_callback)(i2s_callback_args_t *p_args)
```

Callback provided when an I2S ISR occurs. Set to NULL for no CPU interrupt.

◆ **p_context**

```
void const* i2s_cfg_t::p_context
```

Placeholder for user data. Passed to the user callback in `i2s_callback_args_t`.

◆ **i2s_api_t**

```
struct i2s_api_t
```

I2S functions implemented at the HAL layer will follow this API.

Data Fields

<code>fsp_err_t(*</code>	<code>open</code>)(<code>i2s_ctrl_t *const p_ctrl, i2s_cfg_t const *const p_cfg</code>)
--------------------------	--

<code>fsp_err_t(*</code>	<code>stop</code>)(<code>i2s_ctrl_t *const p_ctrl</code>)

i2s_callback_args_t *const p_callback_memory)

Field Documentation

◆ open

fsp_err_t(* i2s_api_t::open) (i2s_ctrl_t *const p_ctrl, i2s_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_SSI_Open()

Precondition

Peripheral clocks and any required output pins should be configured prior to calling this function.

Note

To reconfigure after calling this function, call `i2s_api_t::close` first.

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ stop

fsp_err_t(* i2s_api_t::stop) (i2s_ctrl_t *const p_ctrl)

Stop communication. Communication is stopped when callback is called with I2S_EVENT_IDLE.

Implemented as

- R_SSI_Stop()

Parameters

[in]	p_ctrl	Control block set in <code>i2s_api_t::open</code> call for this instance.
------	--------	---

◆ **mute**

```
fsp_err_t(* i2s_api_t::mute) (i2s_ctrl_t *const p_ctrl, i2s_mute_t const mute_enable)
```

Enable or disable mute.

Implemented as

- R_SSI_Mute()

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.
[in]	mute_enable	Whether to enable or disable mute.

◆ **write**

```
fsp_err_t(* i2s_api_t::write) (i2s_ctrl_t *const p_ctrl, void const *const p_src, uint32_t const bytes)
```

Write I2S data. All transmit data is queued when callback is called with I2S_EVENT_TX_EMPTY. Transmission is complete when callback is called with I2S_EVENT_IDLE.

Implemented as

- R_SSI_Write()

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.
[in]	p_src	Buffer of PCM samples. Must be 4 byte aligned.
[in]	bytes	Number of bytes in the buffer. Recommended requesting a multiple of 8 bytes. If not a multiple of 8, padding 0s will be added to transmission to make it a multiple of 8.

◆ read

```
fsp_err_t(* i2s_api_t::read) (i2s_ctrl_t *const p_ctrl, void *const p_dest, uint32_t const bytes)
```

Read I2S data. Reception is complete when callback is called with I2S_EVENT_RX_EMPTY.

Implemented as

- R_SSI_Read()

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.
[in]	p_dest	Buffer to store PCM samples. Must be 4 byte aligned.
[in]	bytes	Number of bytes in the buffer. Recommended requesting a multiple of 8 bytes. If not a multiple of 8, receive will stop at the multiple of 8 below requested bytes.

◆ **writeRead**

```
fsp_err_t(* i2s_api_t::writeRead) (i2s_ctrl_t *const p_ctrl, void const *const p_src, void *const p_dest, uint32_t const bytes)
```

Simultaneously write and read I2S data. Transmission and reception are complete when callback is called with I2S_EVENT_IDLE.

Implemented as

- [R_SSI_WriteRead\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.
[in]	p_src	Buffer of PCM samples. Must be 4 byte aligned.
[in]	p_dest	Buffer to store PCM samples. Must be 4 byte aligned.
[in]	bytes	Number of bytes in the buffers. Recommended requesting a multiple of 8 bytes. If not a multiple of 8, padding 0s will be added to transmission to make it a multiple of 8, and receive will stop at the multiple of 8 below requested bytes.

◆ **statusGet**

```
fsp_err_t(* i2s_api_t::statusGet) (i2s_ctrl_t *const p_ctrl, i2s_status_t *const p_status)
```

Get current status and store it in provided pointer p_status.

Implemented as

- [R_SSI_StatusGet\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.
[out]	p_status	Current status of the driver.

◆ **close**

```
fsp_err_t(* i2s_api_t::close) (i2s_ctrl_t *const p_ctrl)
```

Allows driver to be reconfigured and may reduce power consumption.

Implemented as

- [R_SSI_Close\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.
------	--------	--

◆ **callbackSet**

```
fsp_err_t(* i2s_api_t::callbackSet) (i2s_ctrl_t *const p_api_ctrl, void(*p_callback)(i2s_callback_args_t *), void const *const p_context, i2s_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- [R_SSI_CallbackSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to the I2S control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **i2s_instance_t**

```
struct i2s_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

i2s_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
i2s_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
i2s_api_t const *	p_api	Pointer to the API structure for

		this instance.
--	--	----------------

Typedef Documentation

◆ i2s_ctrl_t

```
typedef void i2s_ctrl_t
```

I2S control block. Allocate an instance specific control block to pass into the I2S API calls.

Implemented as

- [ssi_instance_ctrl_t](#)

Enumeration Type Documentation

◆ i2s_pcm_width_t

```
enum i2s_pcm_width_t
```

Audio PCM width

Enumerator

I2S_PCM_WIDTH_8_BITS	Using 8-bit PCM.
I2S_PCM_WIDTH_16_BITS	Using 16-bit PCM.
I2S_PCM_WIDTH_18_BITS	Using 18-bit PCM.
I2S_PCM_WIDTH_20_BITS	Using 20-bit PCM.
I2S_PCM_WIDTH_22_BITS	Using 22-bit PCM.
I2S_PCM_WIDTH_24_BITS	Using 24-bit PCM.
I2S_PCM_WIDTH_32_BITS	Using 24-bit PCM.

◆ **i2s_word_length_t**

enum i2s_word_length_t	
Audio system word length.	
Enumerator	
I2S_WORD_LENGTH_8_BITS	Using 8-bit system word length.
I2S_WORD_LENGTH_16_BITS	Using 16-bit system word length.
I2S_WORD_LENGTH_24_BITS	Using 24-bit system word length.
I2S_WORD_LENGTH_32_BITS	Using 32-bit system word length.
I2S_WORD_LENGTH_48_BITS	Using 48-bit system word length.
I2S_WORD_LENGTH_64_BITS	Using 64-bit system word length.
I2S_WORD_LENGTH_128_BITS	Using 128-bit system word length.
I2S_WORD_LENGTH_256_BITS	Using 256-bit system word length.

◆ **i2s_event_t**

enum i2s_event_t	
Events that can trigger a callback function	
Enumerator	
I2S_EVENT_IDLE	Communication is idle.
I2S_EVENT_TX_EMPTY	Transmit buffer is below FIFO trigger level.
I2S_EVENT_RX_FULL	Receive buffer is above FIFO trigger level.

◆ **i2s_mode_t**

enum <code>i2s_mode_t</code>	
I2S communication mode	
Enumerator	
<code>I2S_MODE_SLAVE</code>	Slave mode.
<code>I2S_MODE_MASTER</code>	Master mode.

◆ **i2s_mute_t**

enum <code>i2s_mute_t</code>	
Mute audio samples.	
Enumerator	
<code>I2S_MUTE_OFF</code>	Disable mute.
<code>I2S_MUTE_ON</code>	Enable mute.

◆ **i2s_ws_continue_t**

enum <code>i2s_ws_continue_t</code>	
Whether to continue WS (word select line) transmission during idle state.	
Enumerator	
<code>I2S_WS_CONTINUE_ON</code>	Enable WS continue mode.
<code>I2S_WS_CONTINUE_OFF</code>	Disable WS continue mode.

◆ **i2s_state_t**

enum <code>i2s_state_t</code>	
Possible status values returned by <code>i2s_api_t::statusGet</code> .	
Enumerator	
<code>I2S_STATE_IN_USE</code>	I2S is in use.
<code>I2S_STATE_STOPPED</code>	I2S is stopped.

4.3.21 I3C Interface

Interfaces

Detailed Description

Interface for I3C.

Summary

The I3C interface provides APIs and definitions for I3C communication.

Known Implementations

I3C Bus Interface (r_i3c)

enum [i3c_device_type_t](#)

enum [i3c_device_protocol_t](#)

enum [i3c_address_assignment_mode_t](#)

enum [i3c_ibi_type_t](#)**Data Structure Documentation**◆ **i3c_device_status_t**

struct i3c_device_status_t		
The current status of the slave device (See GETSTATUS in the MIPI I3C Specification v1.0).		
Data Fields		
uint8_t	pending_interrupt	Contains the interrupt number of any pending interrupt, or 0 if no interrupts are pending.
uint8_t	vendor_status	Reserved for vendor-specific meaning.

◆ **i3c_slave_info_t**

struct i3c_slave_info_t		
Device characteristics that define the I3C capabilities of a slave.		
Data Fields		
uint8_t	pid[6]	Provisional ID.
union i3c_slave_info_t	__unnamed__	
uint8_t	dcr	Device Characteristics Register.

◆ **i3c_device_table_cfg_t**

struct i3c_device_table_cfg_t		
Structure for configuring an entry in the device table when the driver is in master mode (See i3c_api_t::masterDeviceTableSet).		
Data Fields		
uint8_t	static_address	I3C Static address / I2C address for this device.
uint8_t	dynamic_address	Dynamic address for the device. This address will be assigned during Dynamic Address Assignment.
i3c_device_protocol_t	device_protocol	The protocol used to communicate with this device (I3C / I2C Legacy).
bool	ibi_accept	Accept or reject IBI requests from this device.
bool	master_request_accept	Accept mastership requests from this device.
bool	ibi_payload	IBI requests from this device

		have a data payload.
--	--	----------------------

		Note: When the device is configured using ENTDAAs, the <code>ibi_payload</code> will automatically be updated based on the value of BCR.
--	--	--

◆ `i3c_device_cfg_t`

struct <code>i3c_device_cfg_t</code>		
Structure for configuring a slave address when the driver is in slave mode (See i3c_api_t::deviceCfgSet).		
Data Fields		
<code>uint8_t</code>	<code>static_address</code>	I3C Static address / I2C address for this device.
<code>uint8_t</code>	<code>dynamic_address</code>	Dynamic address for this device. Note that the dynamic address will automatically be updated when ENTDAAs is completed.
i3c_slave_info_t	<code>slave_info</code>	PID, BCR, and DCR registers for the device (Slave mode only).

◆ `i3c_command_descriptor_t`

struct <code>i3c_command_descriptor_t</code>		
Descriptor for completing CCC transfers.		
Data Fields		
<code>uint8_t</code>	<code>command_code</code>	Common Command Code for the transfer.
<code>uint8_t*</code>	<code>p_buffer</code>	Buffer for reading or writing data.
<code>uint32_t</code>	<code>length</code>	Length of the data portion of the command.
<code>bool</code>	<code>restart</code>	If true, issue a repeated-start after the transfer is completed.
<code>bool</code>	<code>rnw</code>	Set to true if the command type is Direct Get.

◆ `i3c_callback_args_t`

struct <code>i3c_callback_args_t</code>		
Arguments that are passed to the user callback when an event occurs.		
Data Fields		
i3c_event_t	<code>event</code>	The type of event that has

		occurred.
uint32_t	event_status	Status flags associated with the event.
uint32_t	transfer_size	Number of bytes transferred.
i3c_slave_info_t const *	p_slave_info	A pointer to the Characteristics Registers read during ENTDAAs.
uint8_t	dynamic_address	The dynamic address that was assigned to the slave during ENTDAAs.
i3c_ibi_type_t	ibi_type	The type of IBI that has been received.
uint8_t	ibi_address	The address of the device that sent the IBI.
uint8_t	command_code	The command code of the received command.
void const *	p_context	User defined context.

◆ i3c_cfg_t

struct i3c_cfg_t	
User configuration structure, used in open function	
Data Fields	
uint32_t	channel
i3c_device_type_t	device_type
void(*	p_callback)(i3c_callback_args_t const *const p_args)
void const *	p_context
	Pointer to the user-provided context.
void const *	p_extend
Field Documentation	
◆ channel	
uint32_t i3c_cfg_t::channel	
Select a channel corresponding to the channel number of the hardware.	

◆ **device_type**

i3c_device_type_t i3c_cfg_t::device_type

The type of device.

◆ **p_callback**

void(* i3c_cfg_t::p_callback) (i3c_callback_args_t const *const p_args)

Pointer to the user callback.

◆ **p_extend**

void const* i3c_cfg_t::p_extend

Pointer to extended configuration.

◆ **i3c_api_t**

struct i3c_api_t

I3C functions implemented at the HAL layer will follow this API.

Data Fieldsfsp_err_t(* [open](#))(i3c_ctrl_t *const p_ctrl, i3c_cfg_t const *const p_cfg)fsp_err_t(* [enable](#))(i3c_ctrl_t *const p_ctrl)fsp_err_t(* [deviceCfgSet](#))(i3c_ctrl_t *const p_ctrl, i3c_device_cfg_t const *const p_device_cfg)fsp_err_t(* [masterDeviceTableSet](#))(i3c_ctrl_t *const p_ctrl, uint32_t device_index, i3c_device_table_cfg_t const *const p_device_table_cfg)fsp_err_t(* [deviceSelect](#))(i3c_ctrl_t *const p_ctrl, uint32_t device_index, uint32_t bitrate_mode)fsp_err_t(* [dynamicAddressAssignmentStart](#))(i3c_ctrl_t *const p_ctrl, i3c_address_assignment_mode_t address_assignment_mode, uint32_t starting_device_index, uint32_t device_count)fsp_err_t(* [slaveStatusSet](#))(i3c_ctrl_t *const p_ctrl, i3c_device_status_t device_status)fsp_err_t(* [commandSend](#))(i3c_ctrl_t *const p_ctrl, i3c_command_descriptor_t

<code>fsp_err_t(*</code>	<code>close</code>)(i3c_ctrl_t *const p_ctrl)

Field Documentation

◆ open

`fsp_err_t(* i3c_api_t::open) (i3c_ctrl_t *const p_ctrl, i3c_cfg_t const *const p_cfg)`

Initial configuration.

Implemented as

- `R_I3C_Open()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control block. Must be declared by user. Elements set here.
[in]	<code>p_cfg</code>	Pointer to configuration structure. All elements of this structure must be set by user.

◆ **enable**

```
fsp_err_t(* i3c_api_t::enable) (i3c_ctrl_t *const p_ctrl)
```

Enable the I3C device.

Implemented as

- [R_I3C_Enable\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
------	--------	--

◆ **deviceCfgSet**

```
fsp_err_t(* i3c_api_t::deviceCfgSet) (i3c_ctrl_t *const p_ctrl, i3c_device_cfg_t const *const p_device_cfg)
```

Set the configuration of this device.

Implemented as

- [R_I3C_DeviceCfgSet\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_device_cfg	Pointer to device configuration.

◆ masterDeviceTableSet

```
fsp_err_t(* i3c_api_t::masterDeviceTableSet) (i3c_ctrl_t *const p_ctrl, uint32_t device_index,
i3c_device_table_cfg_t const *const p_device_table_cfg)
```

Set the configuration for the device at the given index in the device table. The configuration will be used by transfers when it is selected by [deviceSelect](#).

Note: This function is not used in slave mode.

Implemented as

- [R_I3C_MasterDeviceTableSet\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	device_index	Index into the device table.
[in]	p_device_table_cfg	Pointer to the table settings for the entry in the master device table.

◆ deviceSelect

```
fsp_err_t(* i3c_api_t::deviceSelect) (i3c_ctrl_t *const p_ctrl, uint32_t device_index, uint32_t
bitrate_mode)
```

In master mode, select the device for the next transfer.

Note: This function is not used in slave mode.

Implemented as

- [R_I3C_DeviceSelect\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	device_index	Index into the device table.
[in]	bitrate_setting	The bitrate settings for the selected device.

◆ dynamicAddressAssignmentStart

```
fsp_err_t(* i3c_api_t::dynamicAddressAssignmentStart) (i3c_ctrl_t *const p_ctrl,
i3c_address_assignment_mode_t address_assignment_mode, uint32_t starting_device_index,
uint32_t device_count)
```

Start Dynamic Address Assignment by sending either the ENTDAAs or SETDASA command See [i3c_address_assignment_mode_t](#) for more information.

Note: This function is not used in slave mode.

Implemented as

- [R_I3C_DynamicAddressAssignmentStart\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	address_assignment_mode	The command to use for Dynamic Address Assignment.
[in]	starting_device_index	The device index that will be used to assign the first device during Dynamic Address Assignment.
[in]	device_count	The number of devices to assign (Only used with I3C_ADDRESS_ASSIGNMENT_MODE_ENTDAA).

◆ slaveStatusSet

```
fsp_err_t(* i3c_api_t::slaveStatusSet) (i3c_ctrl_t *const p_ctrl, i3c_device_status_t device_status)
```

Set the status returned to the master in response to a GETSTATUS command.

Note: This function is not used in master mode.

Implemented as

- [R_I3C_SlaveStatusSet\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	device_status	New status settings for responding to the GETSTATUS command code.

◆ commandSend

```
fsp_err_t(* i3c_api_t::commandSend) (i3c_ctrl_t *const p_ctrl, i3c_command_descriptor_t *p_command_descriptor)
```

Send a broadcast or directed command to slave devices on the bus.

Note: This function is not used in slave mode.

Implemented as

- [R_I3C_CommandSend\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_command_descriptor	A descriptor for executing the command.

◆ write

```
fsp_err_t(* i3c_api_t::write) (i3c_ctrl_t *const p_ctrl, uint8_t const *const p_data, uint32_t length, bool restart)
```

In master mode: Start a write transfer. When the transfer is completed send a stop condition or a repeated-start. In slave mode: Set the write buffer and configure the number of bytes that will be transferred before the the transfer is ended by the slave via the 'T' bit or by the master issuing a stop condition.

Implemented as

- [R_I3C_Write\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_data	Pointer to a buffer to write.
[in]	length	Number of bytes to transfer.
[in]	restart	If true, issue a repeated-start after the transfer is completed (Master only).

◆ read

```
fsp_err_t(* i3c_api_t::read) (i3c_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t length, bool restart)
```

In master mode: Start a read transfer. When the transfer is completed, send a stop condition or a repeated-start. In slave mode: Set the read buffer for storing data read during the transfer. When the buffer is full, the application will receive a callback requesting a new read buffer. If no buffer is provided by the application, the driver will discard any remaining bytes read during the transfer.

Implemented as

- [R_I3C_Read\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_data	Pointer to a buffer to store the bytes read during the transfer.
[in]	length	Number of bytes to transfer.
[in]	restart	If true, issue a repeated-start after the transfer is completed (Master only).

◆ ibiWrite

```
fsp_err_t(* i3c_api_t::ibiWrite) (i3c_ctrl_t *const p_ctrl, i3c_ibi_type_t ibi_type, uint8_t const *const p_data, uint32_t length)
```

Initiate an IBI write operation.

Note: This function is not used in master mode.

Implemented as

- [R_I3C_IbiWrite\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_data	Pointer to a buffer to start the bytes read during the transfer.
[in]	length	Number of bytes to transfer.

◆ **ibiRead**

```
fsp_err_t(* i3c_api_t::ibiRead) (i3c_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t length)
```

Set the read buffer for storing received IBI data (This function is not used in slave mode).

Implemented as

- [R_I3C_IbiRead\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_data	Pointer to a buffer to store the bytes read during the transfer.
[in]	length	Number of bytes to transfer.

◆ **close**

```
fsp_err_t(* i3c_api_t::close) (i3c_ctrl_t *const p_ctrl)
```

Allows driver to be reconfigured and may reduce power consumption.

Implemented as

- [R_I3C_Close\(\)](#)

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
------	--------	--

◆ **i3c_instance_t**

```
struct i3c_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

i3c_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
i3c_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
i3c_api_t const *	p_api	Pointer to the API structure for this instance.

Enumeration Type Documentation

◆ **i3c_common_command_code_t**

enum i3c_common_command_code_t	
Common Command Codes defined by MIPI I3C Specification v1.1.	
Enumerator	
I3C_CCC_BROADCAST_ENEC	Enable Slave initiated events.
I3C_CCC_BROADCAST_DISEC	Disable Slave initiated events.
I3C_CCC_BROADCAST_ENTAS0	Enter Activity State 0.
I3C_CCC_BROADCAST_ENTAS1	Enter Activity State 1.
I3C_CCC_BROADCAST_ENTAS2	Enter Activity State 2.
I3C_CCC_BROADCAST_ENTAS3	Enter Activity State 3.
I3C_CCC_BROADCAST_RSTDAA	Reset Dynamic Address Assignment.
I3C_CCC_BROADCAST_ENTDAA	Enter Dynamic Address Assignment.
I3C_CCC_BROADCAST_DEFSVLS	Define List of Slaves.
I3C_CCC_BROADCAST_SETMWL	Set Max Write Length.
I3C_CCC_BROADCAST_SETMRL	Set Max Read Length.
I3C_CCC_BROADCAST_ENTTM	Enter Test Mode.
I3C_CCC_BROADCAST_ENTHDR0	Enter HDR Mode 0.
I3C_CCC_BROADCAST_ENTHDR1	Enter HDR Mode 1.
I3C_CCC_BROADCAST_ENTHDR2	Enter HDR Mode 2.
I3C_CCC_BROADCAST_ENTHDR3	Enter HDR Mode 3.
I3C_CCC_BROADCAST_ENTHDR4	Enter HDR Mode 4 (Reserved for future definition).
I3C_CCC_BROADCAST_ENTHDR5	Enter HDR Mode 5 (Reserved for future definition).
I3C_CCC_BROADCAST_ENTHDR6	Enter HDR Mode 6 (Reserved for future definition).
I3C_CCC_BROADCAST_ENTHDR7	Enter HDR Mode 7 (Reserved for future

	definition).
I3C_CCC_BROADCAST_SETXTIME	Set Exchange Timing Info.
I3C_CCC_BROADCAST_SETAASA	Set All Addresses to Static Address.
I3C_CCC_DIRECT_ENEC	Enable Slave initiated events.
I3C_CCC_DIRECT_DISEC	Disable Slave initiated events.
I3C_CCC_DIRECT_ENTAS0	Enter Activity State 0.
I3C_CCC_DIRECT_ENTAS1	Enter Activity State 1.
I3C_CCC_DIRECT_ENTAS2	Enter Activity State 2.
I3C_CCC_DIRECT_ENTAS3	Enter Activity State 3.
I3C_CCC_DIRECT_RSTDAA	Reset Dynamic Address Assignment.
I3C_CCC_DIRECT_SETDASA	Set Dynamic Address from Static Address.
I3C_CCC_DIRECT_SETNEWDA	Set New Dynamic Address.
I3C_CCC_DIRECT_SETMWL	Set Max Write Length.
I3C_CCC_DIRECT_SETMRL	Set Max Read Length.
I3C_CCC_DIRECT_GETMWL	Get Max Write Length.
I3C_CCC_DIRECT_GETMRL	Get Max Read Length.
I3C_CCC_DIRECT_GETPID	Get Provisional ID.
I3C_CCC_DIRECT_GETBCR	Get Bus Characteristic Register.
I3C_CCC_DIRECT_GETDCR	Get Device Characteristic Register.
I3C_CCC_DIRECT_GETSTATUS	Get Device Status.
I3C_CCC_DIRECT_GETACCMST	Get Accept Mastership.
I3C_CCC_DIRECT_GETMXDS	Get Max Data Speed.
I3C_CCC_DIRECT_SETXTIME	Set Exchange Timing Information.
I3C_CCC_DIRECT_GETXTIME	Get Exchange Timing Information.

◆ **i3c_event_t**

enum <code>i3c_event_t</code>	
I3C Events that result in a callback.	
Enumerator	
<code>I3C_EVENT_ENTDAA_ADDRESS_PHASE</code>	Events that only occur in Master mode. A Slave device has finished writing its PID, BCR, and DCR. This information is provided in <code>i3c_callback_args_t::p_slave_info</code> .
<code>I3C_EVENT_IBI_READ_COMPLETE</code>	An IBI has successfully been read.
<code>I3C_EVENT_IBI_READ_BUFFER_FULL</code>	There is no more space in the IBI read buffer. The application may provide another buffer by calling <code>i3c_api_t::ibiRead</code> .
<code>I3C_EVENT_READ_BUFFER_FULL</code>	Events that only occur in Slave mode. There is no more space in the read buffer. The application may provide another buffer by calling <code>i3c_api_t::read</code> .
<code>I3C_EVENT_IBI_WRITE_COMPLETE</code>	A IBI was written successfully.
<code>I3C_EVENT_HDR_EXIT_PATTERN_DETECTED</code>	The HDR exit pattern was detected on the bus.
<code>I3C_EVENT_ADDRESS_ASSIGNMENT_COMPLETE</code>	Dynamic Address Assignment has completed. Events that are common to Master and Slave mode.
<code>I3C_EVENT_COMMAND_COMPLETE</code>	A command was completed.
<code>I3C_EVENT_WRITE_COMPLETE</code>	A write transfer has completed.
<code>I3C_EVENT_READ_COMPLETE</code>	A read transfer has completed.
<code>I3C_EVENT_TIMEOUT_DETECTED</code>	SCL is stuck at the logic high or logic low level during a transfer.
<code>I3C_EVENT_INTERNAL_ERROR</code>	An internal error occurred.

◆ **i3c_device_type_t**

enum i3c_device_type_t	
The type of device.	
Enumerator	
I3C_DEVICE_TYPE_MAIN_MASTER	The main master starts in master mode and is responsible for configuring the bus.
I3C_DEVICE_TYPE_SLAVE	A slave device listens to the bus for relevant I3C Commands (CCCs) sent by the current master, and responds accordingly. Slave devices may also initiate In-band interrupts and Hot-Join requests.

◆ **i3c_device_protocol_t**

enum i3c_device_protocol_t	
Identifies the protocol for transferring data with the device on the bus.	
Enumerator	
I3C_DEVICE_PROTOCOL_I2C	Transfers will use legacy I2C protocol with open-drain output at a reduced baudrate.
I3C_DEVICE_PROTOCOL_I3C	Transfers will use I3C SDR mode.

◆ **i3c_address_assignment_mode_t**

enum i3c_address_assignment_mode_t	
Address Assignment Mode.	
Enumerator	
I3C_ADDRESS_ASSIGNMENT_MODE_ENTDAA	Send the ENTDAA command to enter Dynamic Address Assignment mode and assign dynamic addresses in order, starting with the starting device index. The procedure is completed after the specified number of devices have been configured. The callback will be called after the PID, DCR, and BCR registers have been read for each device.

◆ **i3c_ibi_type_t**

enum i3c_ibi_type_t	
The type of In-Band Interrupt.	
Enumerator	
I3C_IBI_TYPE_INTERRUPT	Application specific In-Band Interrupt for notifying the master when an event occurs.
I3C_IBI_TYPE_HOT_JOIN	Request the master to perform the Dynamic Address Assignment process.
I3C_IBI_TYPE_MASTERSHIP_REQUEST	Request the master to give up control of the bus.

4.3.22 I/O Port Interface[Interfaces](#)**Detailed Description**

Interface for accessing I/O ports and configuring I/O functionality.

Summary

The IOPort shared interface provides the ability to access the IOPorts of a device at both bit and port level. Port and pin direction can be changed.

IOPORT Interface description: [I/O Ports \(r_ioport\)](#)

Data Structures

struct [ioport_pin_cfg_t](#)

struct [ioport_cfg_t](#)

struct [ioport_api_t](#)

struct [ioport_instance_t](#)

Typedefs

typedef uint16_t [ioport_size_t](#)

IO port size on this device. [More...](#)

```
typedef void ioport_ctrl_t
```

Enumerations

```
enum ioport_peripheral_t
```

```
enum ioport_ethernet_channel_t
```

```
enum ioport_ethernet_mode_t
```

```
enum ioport_cfg_options_t
```

```
enum ioport_pwpr_t
```

Data Structure Documentation

◆ ioport_pin_cfg_t

struct ioport_pin_cfg_t		
Pin identifier and pin PFS pin configuration value		
Data Fields		
uint32_t	pin_cfg	Pin PFS configuration - Use ioport_cfg_options_t parameters to configure.
bsp_io_port_pin_t	pin	Pin identifier.

◆ ioport_cfg_t

struct ioport_cfg_t		
Multiple pin configuration data for loading into PFS registers by R_IOPORT_Init()		
Data Fields		
uint16_t	number_of_pins	Number of pins for which there is configuration data.
ioport_pin_cfg_t const *	p_pin_cfg_data	Pin configuration data.

◆ ioport_api_t

struct ioport_api_t		
IOPort driver structure. IOPort functions implemented at the HAL layer will follow this API.		
Data Fields		
fsp_err_t(*	open)(ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg)
fsp_err_t(*	close)(ioport_ctrl_t *const p_ctrl)

<code>fsp_err_t(*</code>	<code>pinsCfg)(ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg)</code>
<code>fsp_err_t(*</code>	<code>pinCfg)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, uint32_t cfg)</code>
<code>fsp_err_t(*</code>	<code>pinEventInputRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_event)</code>
<code>fsp_err_t(*</code>	<code>pinEventOutputWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t pin_value)</code>
<code>fsp_err_t(*</code>	<code>pinRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_value)</code>
<code>fsp_err_t(*</code>	<code>pinWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t level)</code>
<code>fsp_err_t(*</code>	<code>portDirectionSet)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t direction_values, ioport_size_t mask)</code>
<code>fsp_err_t(*</code>	<code>portEventInputRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_event_data)</code>
<code>fsp_err_t(*</code>	<code>portEventOutputWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t event_data, ioport_size_t mask_value)</code>
<code>fsp_err_t(*</code>	<code>portRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_port_value)</code>
<code>fsp_err_t(*</code>	<code>portWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t value, ioport_size_t mask)</code>

Field Documentation

◆ **open**

```
fsp_err_t(* ioport_api_t::open) (ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg)
```

Initialize internal driver data and initial pin configurations. Called during startup. Do not call this API during runtime. Use `ioport_api_t::pinsCfg` for runtime reconfiguration of multiple pins.

Implemented as

- `R_IOPORT_Open()`

Parameters

[in]	p_cfg	Pointer to pin configuration data array.
------	-------	--

◆ **close**

```
fsp_err_t(* ioport_api_t::close) (ioport_ctrl_t *const p_ctrl)
```

Close the API.

Implemented as

- `R_IOPORT_Close()`

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **pinsCfg**

```
fsp_err_t(* ioport_api_t::pinsCfg) (ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg)
```

Configure multiple pins.

Implemented as

- `R_IOPORT_PinsCfg()`

Parameters

[in]	p_cfg	Pointer to pin configuration data array.
------	-------	--

◆ **pinCfg**

```
fsp_err_t(* ioport_api_t::pinCfg) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, uint32_t cfg)
```

Configure settings for an individual pin.

Implemented as

- [R_IOPORT_PinCfg\(\)](#)

Parameters

[in]	pin	Pin to be read.
[in]	cfg	Configuration options for the pin.

◆ **pinEventInputRead**

```
fsp_err_t(* ioport_api_t::pinEventInputRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_event)
```

Read the event input data of the specified pin and return the level.

Implemented as

- [R_IOPORT_PinEventInputRead\(\)](#)

Parameters

[in]	pin	Pin to be read.
[in]	p_pin_event	Pointer to return the event data.

◆ **pinEventOutputWrite**

```
fsp_err_t(* ioport_api_t::pinEventOutputWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t pin_value)
```

Write pin event data.

Implemented as

- [R_IOPORT_PinEventOutputWrite\(\)](#)

Parameters

[in]	pin	Pin event data is to be written to.
[in]	pin_value	Level to be written to pin output event.

◆ **pinRead**

```
fsp_err_t(* ioport_api_t::pinRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_value)
```

Read level of a pin.

Implemented as

- [R_IOPORT_PinRead\(\)](#)

Parameters

[in]	pin	Pin to be read.
[in]	p_pin_value	Pointer to return the pin level.

◆ **pinWrite**

```
fsp_err_t(* ioport_api_t::pinWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t level)
```

Write specified level to a pin.

Implemented as

- [R_IOPORT_PinWrite\(\)](#)

Parameters

[in]	pin	Pin to be written to.
[in]	level	State to be written to the pin.

◆ **portDirectionSet**

```
fsp_err_t(* ioport_api_t::portDirectionSet) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t direction_values, ioport_size_t mask)
```

Set the direction of one or more pins on a port.

Implemented as

- [R_IOPORT_PortDirectionSet\(\)](#)

Parameters

[in]	port	Port being configured.
[in]	direction_values	Value controlling direction of pins on port (1 - output, 0 - input).
[in]	mask	Mask controlling which pins on the port are to be configured.

◆ portEventInputRead

```
fsp_err_t(* ioport_api_t::portEventInputRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port,
ioport_size_t *p_event_data)
```

Read captured event data for a port.

Implemented as

- R_IOPORT_PortEventInputRead()

Parameters

[in]	port	Port to be read.
[in]	p_event_data	Pointer to return the event data.

◆ portEventOutputWrite

```
fsp_err_t(* ioport_api_t::portEventOutputWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port,
ioport_size_t event_data, ioport_size_t mask_value)
```

Write event output data for a port.

Implemented as

- R_IOPORT_PortEventOutputWrite()

Parameters

[in]	port	Port event data will be written to.
[in]	event_data	Data to be written as event data to specified port.
[in]	mask_value	Each bit set to 1 in the mask corresponds to that bit's value in event data. being written to port.

◆ **portRead**

```
fsp_err_t(* ioport_api_t::portRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_port_value)
```

Read states of pins on the specified port.

Implemented as

- R_IOPORT_PortRead()

Parameters

[in]	port	Port to be read.
[in]	p_port_value	Pointer to return the port value.

◆ **portWrite**

```
fsp_err_t(* ioport_api_t::portWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t value, ioport_size_t mask)
```

Write to multiple pins on a port.

Implemented as

- R_IOPORT_PortWrite()

Parameters

[in]	port	Port to be written to.
[in]	value	Value to be written to the port.
[in]	mask	Mask controlling which pins on the port are written to.

◆ **ioport_instance_t**

```
struct ioport_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

<code>ioport_ctrl_t *</code>	p_ctrl	Pointer to the control structure for this instance.
<code>ioport_cfg_t const *</code>	p_cfg	Pointer to the configuration structure for this instance.
<code>ioport_api_t const *</code>	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ ioport_size_t

```
typedef uint16_t ioport_size_t
```

IO port size on this device.

IO port type used with ports

◆ ioport_ctrl_t

```
typedef void ioport_ctrl_t
```

IOPORT control block. Allocate an instance specific control block to pass into the IOPORT API calls.

Implemented as

- [ioport_instance_ctrl_t](#)

Enumeration Type Documentation

◆ **ioport_peripheral_t**

enum ioport_peripheral_t	
Superset of all peripheral functions.	
Enumerator	
IOPORT_PERIPHERAL_IO	Pin will functions as an IO pin
IOPORT_PERIPHERAL_DEBUG	Pin will function as a DEBUG pin
IOPORT_PERIPHERAL_AGT	Pin will function as an AGT peripheral pin
IOPORT_PERIPHERAL_GPT0	Pin will function as a GPT peripheral pin
IOPORT_PERIPHERAL_GPT1	Pin will function as a GPT peripheral pin
IOPORT_PERIPHERAL_SCI0_2_4_6_8	Pin will function as an SCI peripheral pin
IOPORT_PERIPHERAL_SCI1_3_5_7_9	Pin will function as an SCI peripheral pin
IOPORT_PERIPHERAL_SPI	Pin will function as a SPI peripheral pin
IOPORT_PERIPHERAL_IIC	Pin will function as a IIC peripheral pin
IOPORT_PERIPHERAL_KEY	Pin will function as a KEY peripheral pin
IOPORT_PERIPHERAL_CLKOUT_COMP_RTC	Pin will function as a clock/comparator/RTC peripheral pin
IOPORT_PERIPHERAL_CAC_AD	Pin will function as a CAC/ADC peripheral pin
IOPORT_PERIPHERAL_BUS	Pin will function as a BUS peripheral pin
IOPORT_PERIPHERAL_CTSU	Pin will function as a CTSU peripheral pin
IOPORT_PERIPHERAL_ACMPHS	Pin will function as a CMPHS peripheral pin
IOPORT_PERIPHERAL_LCDC	Pin will function as a segment LCD peripheral pin
IOPORT_PERIPHERAL_DE_SCI1_3_5_7_9	Pin will function as an SCI peripheral DEn pin
IOPORT_PERIPHERAL_DALI	Pin will function as a DALI peripheral pin
IOPORT_PERIPHERAL_DE_SCI0_2_4_6_8	Pin will function as an SCI DEn peripheral pin
IOPORT_PERIPHERAL_CAN	Pin will function as a CAN peripheral pin

IOPORT_PERIPHERAL_QSPI	Pin will function as a QSPI peripheral pin
IOPORT_PERIPHERAL_SSI	Pin will function as an SSI peripheral pin
IOPORT_PERIPHERAL_USB_FS	Pin will function as a USB full speed peripheral pin
IOPORT_PERIPHERAL_USB_HS	Pin will function as a USB high speed peripheral pin
IOPORT_PERIPHERAL_GPT2	Pin will function as a GPT peripheral pin
IOPORT_PERIPHERAL_SDHI_MMC	Pin will function as an SD/MMC peripheral pin
IOPORT_PERIPHERAL_GPT3	Pin will function as a GPT peripheral pin
IOPORT_PERIPHERAL_ETHER_MII	Pin will function as an Ethernet MII peripheral pin
IOPORT_PERIPHERAL_GPT4	Pin will function as a GPT peripheral pin
IOPORT_PERIPHERAL_ETHER_RMII	Pin will function as an Ethernet RMII peripheral pin
IOPORT_PERIPHERAL_PDC	Pin will function as a PDC peripheral pin
IOPORT_PERIPHERAL_LCD_GRAPHICS	Pin will function as a graphics LCD peripheral pin
IOPORT_PERIPHERAL_CAC	Pin will function as a CAC peripheral pin
IOPORT_PERIPHERAL_TRACE	Pin will function as a debug trace peripheral pin
IOPORT_PERIPHERAL_OSPI	Pin will function as a OSPI peripheral pin
IOPORT_PERIPHERAL_CEC	Pin will function as a CEC peripheral pin
IOPORT_PERIPHERAL_PGAOUT0	Pin will function as a PGAOUT peripheral pin
IOPORT_PERIPHERAL_PGAOUT1	Pin will function as a PGAOUT peripheral pin

◆ **ioport_ethernet_channel_t**

enum ioport_ethernet_channel_t	
Enumerator	
IOPORT_ETHERNET_CHANNEL_0	Used to select Ethernet channel 0.
IOPORT_ETHERNET_CHANNEL_1	Used to select Ethernet channel 1.
IOPORT_ETHERNET_CHANNEL_END	Marks end of enum - used by parameter checking.

◆ **ioport_ethernet_mode_t**

enum ioport_ethernet_mode_t	
Enumerator	
IOPORT_ETHERNET_MODE_RMII	Ethernet PHY mode set to MII.
IOPORT_ETHERNET_MODE_MII	Ethernet PHY mode set to RMII.
IOPORT_ETHERNET_MODE_END	Marks end of enum - used by parameter checking.

◆ **ioport_cfg_options_t**

enum <code>ioport_cfg_options_t</code>	
Options to configure pin functions	
Enumerator	
<code>IOPORT_CFG_PORT_DIRECTION_INPUT</code>	Sets the pin direction to input (default)
<code>IOPORT_CFG_PORT_DIRECTION_OUTPUT</code>	Sets the pin direction to output.
<code>IOPORT_CFG_PORT_OUTPUT_LOW</code>	Sets the pin level to low.
<code>IOPORT_CFG_PORT_OUTPUT_HIGH</code>	Sets the pin level to high.
<code>IOPORT_CFG_PULLUP_ENABLE</code>	Enables the pin's internal pull-up.
<code>IOPORT_CFG_PIM_TTL</code>	Enables the pin's input mode.
<code>IOPORT_CFG_NMOS_ENABLE</code>	Enables the pin's NMOS open-drain output.
<code>IOPORT_CFG_PMOS_ENABLE</code>	Enables the pin's PMOS open-drain output.
<code>IOPORT_CFG_DRIVE_MID</code>	Sets pin drive output to medium.
<code>IOPORT_CFG_DRIVE_HS_HIGH</code>	Sets pin drive output to high along with supporting high speed.
<code>IOPORT_CFG_DRIVE_MID_IIC</code>	Sets pin to drive output needed for IIC on a 20mA port.
<code>IOPORT_CFG_DRIVE_HIGH</code>	Sets pin drive output to high.
<code>IOPORT_CFG_EVENT_RISING_EDGE</code>	Sets pin event trigger to rising edge.
<code>IOPORT_CFG_EVENT_FALLING_EDGE</code>	Sets pin event trigger to falling edge.
<code>IOPORT_CFG_EVENT_BOTH_EDGES</code>	Sets pin event trigger to both edges.
<code>IOPORT_CFG_IRQ_ENABLE</code>	Sets pin as an IRQ pin.
<code>IOPORT_CFG_ANALOG_ENABLE</code>	Enables pin to operate as an analog pin.
<code>IOPORT_CFG_PERIPHERAL_PIN</code>	Enables pin to operate as a peripheral pin.

◆ **ioport_pwpr_t**

enum ioport_pwpr_t	
Enumerator	
IOPORT_PFS_WRITE_DISABLE	Disable PFS write access.
IOPORT_PFS_WRITE_ENABLE	Enable PFS write access.

4.3.23 JPEG Codec Interface[Interfaces](#)**Detailed Description**

Interface for JPEG functions.

Data Structures

struct [jpeg_encode_image_size_t](#)

struct [jpeg_callback_args_t](#)

struct [jpeg_cfg_t](#)

struct [jpeg_api_t](#)

struct [jpeg_instance_t](#)

Typedefs

typedef void [jpeg_ctrl_t](#)

Enumerations

enum [jpeg_color_space_t](#)

enum [jpeg_data_order_t](#)

enum [jpeg_status_t](#)

enum [jpeg_decode_pixel_format_t](#)

enum [jpeg_decode_subsampling_t](#)

Data Structure Documentation

◆ jpeg_encode_image_size_t

struct jpeg_encode_image_size_t		
Image parameter structure		
Data Fields		
uint16_t	horizontal_stride_pixels	Horizontal stride.
uint16_t	horizontal_resolution	Horizontal Resolution in pixels.
uint16_t	vertical_resolution	Vertical Resolution in pixels.

◆ jpeg_callback_args_t

struct jpeg_callback_args_t		
Callback status structure		
Data Fields		
jpeg_status_t	status	JPEG status.
uint32_t	image_size	JPEG image size.
void const *	p_context	Pointer to user-provided context.

◆ jpeg_cfg_t

struct jpeg_cfg_t		
User configuration structure, used in open function.		
Data Fields		
IRQn_Type	jedi_irq	
		Data transfer interrupt IRQ number.
IRQn_Type	jdti_irq	
		Decompression interrupt IRQ number.
uint8_t	jdti_ipl	
		Data transfer interrupt priority.
uint8_t	jedi_ipl	
		Decompression interrupt priority.

<code>jpeg_mode_t</code>	default_mode
	Mode to use at startup.
<code>jpeg_data_order_t</code>	decode_input_data_order
	Input data stream byte order.
<code>jpeg_data_order_t</code>	decode_output_data_order
	Output data stream byte order.
<code>jpeg_decode_pixel_format_t</code>	pixel_format
	Pixel format.
<code>uint8_t</code>	alpha_value
	Alpha value to be applied to decoded pixel data. Only valid for ARGB8888 format.
<code>void(*</code>	p_decode_callback)(jpeg_callback_args_t *p_args)
	User-supplied callback functions.
<code>void const *</code>	p_decode_context
	Placeholder for user data. Passed to user callback in jpeg_callback_args_t .
<code>jpeg_data_order_t</code>	encode_input_data_order
	Input data stream byte order.
<code>jpeg_data_order_t</code>	encode_output_data_order
	Output data stream byte order.

uint16_t	dri_marker
	DRI Marker setting (0 = No DRI or RST marker)
uint16_t	horizontal_resolution
	Horizontal resolution of input image.
uint16_t	vertical_resolution
	Vertical resolution of input image.
uint16_t	horizontal_stride_pixels
	Horizontal stride of input image.
uint8_t const *	p_quant_luma_table
	Luma quantization table.
uint8_t const *	p_quant_chroma_table
	Chroma quantization table.
uint8_t const *	p_huffman_luma_ac_table
	Huffman AC table for luma.
uint8_t const *	p_huffman_luma_dc_table
	Huffman DC table for luma.
uint8_t const *	p_huffman_chroma_ac_table
	Huffman AC table for chroma.

uint8_t const *	p_huffman_chroma_dc_table
	Huffman DC table for chroma.
void(*	p_encode_callback)(jpeg_callback_args_t *p_args)
	User-supplied callback functions.
void const *	p_encode_context
	Placeholder for user data. Passed to user callback in jpeg_callback_args_t .

◆ **jpeg_api_t**

struct jpeg_api_t	
JPEG functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(jpeg_ctrl_t *const p_ctrl, jpeg_cfg_t const *const p_cfg)
fsp_err_t(*	inputBufferSet)(jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)
fsp_err_t(*	outputBufferSet)(jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)
fsp_err_t(*	statusGet)(jpeg_ctrl_t *const p_ctrl, jpeg_status_t *const p_status)
fsp_err_t(*	close)(jpeg_ctrl_t *const p_ctrl)
fsp_err_t(*	horizontalStrideSet)(jpeg_ctrl_t *const p_ctrl, uint32_t horizontal_stride)
fsp_err_t(*	pixelFormatGet)(jpeg_ctrl_t *const p_ctrl, jpeg_color_space_t *const p_color_space)
fsp_err_t(*	imageSubsampleSet)(jpeg_ctrl_t *const p_ctrl, jpeg_decode_subsample_t horizontal_subsample,

	<code>jpeg_decode_subsample_t vertical_subsample)</code>
<code>fsp_err_t(*</code>	<code>linesDecodedGet)(jpeg_ctrl_t *const p_ctrl, uint32_t *const p_lines)</code>
<code>fsp_err_t(*</code>	<code>imageSizeGet)(jpeg_ctrl_t *const p_ctrl, uint16_t *p_horizontal_size, uint16_t *p_vertical_size)</code>
<code>fsp_err_t(*</code>	<code>imageSizeSet)(jpeg_ctrl_t *const p_ctrl, jpeg_encode_image_size_t *p_image_size)</code>
<code>fsp_err_t(*</code>	<code>modeSet)(jpeg_ctrl_t *const p_ctrl, jpeg_mode_t mode)</code>

Field Documentation

◆ open

`fsp_err_t(* jpeg_api_t::open) (jpeg_ctrl_t *const p_ctrl, jpeg_cfg_t const *const p_cfg)`

Initial configuration

Implemented as

- `R_JPEG_Open()`

Precondition

none

Parameters

[in,out]	<code>p_ctrl</code>	Pointer to control block. Must be declared by user. Elements set here.
[in]	<code>p_cfg</code>	Pointer to configuration structure. All elements of this structure must be set by user.

◆ inputBufferSet

```
fsp_err_t(* jpeg_api_t::inputBufferSet) (jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)
```

Assign input data buffer to JPEG codec.

Implemented as

- R_JPEG_InputBufferSet()

Precondition

the JPEG codec module must have been opened properly.

Note

The buffer starting address must be 8-byte aligned.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[in]	p_buffer	Pointer to the input buffer space
[in]	buffer_size	Size of the input buffer

◆ outputBufferSet

```
fsp_err_t(* jpeg_api_t::outputBufferSet) (jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)
```

Assign output buffer to JPEG codec for storing output data.

Implemented as

- R_JPEG_OutputBufferSet()

Precondition

The JPEG codec module must have been opened properly.

Note

The buffer starting address must be 8-byte aligned. For the decoding process, the HLD driver automatically computes the number of lines of the image to decoded so the output data fits into the given space. If the supplied output buffer is not able to hold the entire frame, the application should call the Output Full Callback function so it can be notified when additional buffer space is needed.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[in]	p_buffer	Pointer to the output buffer space
[in]	buffer_size	Size of the output buffer

◆ **statusGet**

```
fsp_err_t(* jpeg_api_t::statusGet) (jpeg_ctrl_t *const p_ctrl, jpeg_status_t *const p_status)
```

Retrieve current status of the JPEG codec module.

Implemented as

- R_JPEG_StatusGet()

Precondition

the JPEG codec module must have been opened properly.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[out]	p_status	JPEG module status

◆ **close**

```
fsp_err_t(* jpeg_api_t::close) (jpeg_ctrl_t *const p_ctrl)
```

Cancel an outstanding operation.

Implemented as

- R_JPEG_Close()

Precondition

the JPEG codec module must have been opened properly.

Note

If the encoding or the decoding operation is finished without errors, the HLD driver automatically closes the device. In this case, application does not need to explicitly close the JPEG device.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
------	--------	---

◆ horizontalStrideSet

```
fsp_err_t(* jpeg_api_t::horizontalStrideSet) (jpeg_ctrl_t *const p_ctrl, uint32_t horizontal_stride)
```

Configure the horizontal stride value.

Implemented as

- [R_JPEG_DecodeHorizontalStrideSet\(\)](#)

Precondition

The JPEG codec module must have been opened properly.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[in]	horizontal_stride	Horizontal stride value to be used for the decoded image data.
[in]	buffer_size	Size of the output buffer

◆ pixelFormatGet

```
fsp_err_t(* jpeg_api_t::pixelFormatGet) (jpeg_ctrl_t *const p_ctrl, jpeg_color_space_t *const p_color_space)
```

Get the input pixel format.

Implemented as

- [R_JPEG_DecodePixelFormatGet\(\)](#)

Precondition

the JPEG codec module must have been opened properly.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[out]	p_color_space	JPEG input format.

◆ imageSubsampleSet

```
fsp_err_t(* jpeg_api_t::imageSubsampleSet) (jpeg_ctrl_t *const p_ctrl, jpeg_decode_subsample_t
horizontal_subsample, jpeg_decode_subsample_t vertical_subsample)
```

Configure the horizontal and vertical subsample settings.

Implemented as

- R_JPEG_DecodeImageSubsampleSet()

Precondition

The JPEG codec module must have been opened properly.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[in]	horizontal_subsample	Horizontal subsample value
[in]	vertical_subsample	Vertical subsample value

◆ linesDecodedGet

```
fsp_err_t(* jpeg_api_t::linesDecodedGet) (jpeg_ctrl_t *const p_ctrl, uint32_t *const p_lines)
```

Return the number of lines decoded into the output buffer.

Implemented as

- R_JPEG_DecodeLinesDecodedGet()

Precondition

the JPEG codec module must have been opened properly.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[out]	p_lines	Number of lines decoded

◆ **imageSizeGet**

```
fsp_err_t(* jpeg_api_t::imageSizeGet) (jpeg_ctrl_t *const p_ctrl, uint16_t *p_horizontal_size, uint16_t *p_vertical_size)
```

Retrieve image size during decoding operation.

Implemented as

- [R_JPEG_DecodeImageSizeGet\(\)](#)

Precondition

the JPEG codec module must have been opened properly.

Note

If the encoding or the decoding operation is finished without errors, the HLD driver automatically closes the device. In this case, application does not need to explicitly close the JPEG device.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[out]	p_horizontal_size	Image horizontal size, in number of pixels.
[out]	p_vertical_size	Image vertical size, in number of pixels.

◆ **imageSizeSet**

```
fsp_err_t(* jpeg_api_t::imageSizeSet) (jpeg_ctrl_t *const p_ctrl, jpeg_encode_image_size_t *p_image_size)
```

Set image parameters to JPEG Codec

Implemented as

- [R_JPEG_EncodeImageSizeSet\(\)](#)

Precondition

The JPEG codec module must have been opened properly.

Parameters

[in,out]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_image_size	Pointer to the RAW image parameters

◆ **modeSet**

```
fsp_err_t(* jpeg_api_t::modeSet) (jpeg_ctrl_t *const p_ctrl, jpeg_mode_t mode)
```

Switch between encode and decode mode or vice-versa.

Implemented as

- [R_JPEG_ModeSet\(\)](#)

Precondition

The JPEG codec module must have been opened properly. The JPEG Codec can only perform one operation at a time and requires different configuration for encode and decode. This function facilitates easy switching between the two modes in case both are needed in an application.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[in]	mode	Mode to switch to

◆ **jpeg_instance_t**

```
struct jpeg_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

jpeg_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
jpeg_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
jpeg_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **jpeg_ctrl_t**

```
typedef void jpeg_ctrl_t
```

JPEG decode control block. Allocate an instance specific control block to pass into the JPEG decode API calls.

Implemented as

- [jpeg_instance_ctrl_t](#)

Enumeration Type Documentation

◆ jpeg_color_space_t

enum jpeg_color_space_t	
Configuration for this module Image color space definitions	
Enumerator	
JPEG_COLOR_SPACE_YCBCR444	Color Space YCbCr 444.
JPEG_COLOR_SPACE_YCBCR422	Color Space YCbCr 422.
JPEG_COLOR_SPACE_YCBCR420	Color Space YCbCr 420.
JPEG_COLOR_SPACE_YCBCR411	Color Space YCbCr 411.

◆ jpeg_data_order_t

enum jpeg_data_order_t	
Multi-byte Data Format	
Enumerator	
JPEG_DATA_ORDER_NORMAL	(1)(2)(3)(4)(5)(6)(7)(8) Normal byte order
JPEG_DATA_ORDER_BYTE_SWAP	(2)(1)(4)(3)(6)(5)(8)(7) Byte Swap
JPEG_DATA_ORDER_WORD_SWAP	(3)(4)(1)(2)(7)(8)(5)(6) Word Swap
JPEG_DATA_ORDER_WORD_BYTE_SWAP	(4)(3)(2)(1)(8)(7)(6)(5) Word-Byte Swap
JPEG_DATA_ORDER_LONGWORD_SWAP	(5)(6)(7)(8)(1)(2)(3)(4) Longword Swap
JPEG_DATA_ORDER_LONGWORD_BYTE_SWAP	(6)(5)(8)(7)(2)(1)(4)(3) Longword Byte Swap
JPEG_DATA_ORDER_LONGWORD_WORD_SWAP	(7)(8)(5)(6)(3)(4)(1)(2) Longword Word Swap
JPEG_DATA_ORDER_LONGWORD_WORD_BYTE_SWAP	(8)(7)(6)(5)(4)(3)(2)(1) Longword Word Byte Swap

◆ jpeg_status_t

enum jpeg_status_t	
JPEG HLD driver internal status information. The driver can simultaneously be in more than any one status at the same time. Parse the status bit-fields using the definitions in this enum to determine driver status	
Enumerator	
JPEG_STATUS_NONE	JPEG codec module is not initialized.
JPEG_STATUS_IDLE	JPEG Codec module is open but not running.
JPEG_STATUS_RUNNING	JPEG Codec is running.
JPEG_STATUS_HEADER_PROCESSING	JPEG Codec module is reading the JPEG header information.
JPEG_STATUS_INPUT_PAUSE	JPEG Codec paused waiting for more input data.
JPEG_STATUS_OUTPUT_PAUSE	JPEG Codec paused after it decoded the number of lines specified by user.
JPEG_STATUS_IMAGE_SIZE_READY	JPEG decoding operation obtained image size, and paused.
JPEG_STATUS_ERROR	JPEG Codec module encountered an error.
JPEG_STATUS_OPERATION_COMPLETE	JPEG Codec has completed the operation.

◆ jpeg_decode_pixel_format_t

enum jpeg_decode_pixel_format_t	
Pixel Data Format	
Enumerator	
JPEG_DECODE_PIXEL_FORMAT_ARGB8888	Pixel Data ARGB8888 format.
JPEG_DECODE_PIXEL_FORMAT_RGB565	Pixel Data RGB565 format.

◆ jpeg_decode_subsample_t

enum jpeg_decode_subsample_t	
Data type for horizontal and vertical subsample settings. This setting applies only to the decoding operation.	
Enumerator	
JPEG_DECODE_OUTPUT_NO_SUBSAMPLE	No subsample. The image is decoded with no reduction in size.
JPEG_DECODE_OUTPUT_SUBSAMPLE_HALF	The output image size is reduced by half.
JPEG_DECODE_OUTPUT_SUBSAMPLE_ONE_QUARTER	The output image size is reduced to one-quarter.
JPEG_DECODE_OUTPUT_SUBSAMPLE_ONE_EIGHTH	The output image size is reduced to one-eighth.

4.3.24 Key Matrix Interface

Interfaces

Detailed Description

Interface for key matrix functions.

Summary

The KEYMATRIX interface provides standard Key Matrix functionality including event generation on a rising or falling edge for one or more channels at the same time. The generated event indicates all channels that are active in that instant via a bit mask. This allows the interface to be used with a matrix configuration or a one-to-one hardware implementation that is triggered on either a rising or a falling edge.

Implemented by:

- [Key Interrupt \(r_kint\)](#)

Data Structures

struct [keymatrix_callback_args_t](#)

struct [keymatrix_cfg_t](#)

struct [keymatrix_api_t](#)

```
struct keymatrix_instance_t
```

Typedefs

```
typedef void keymatrix_ctrl_t
```

Enumerations

```
enum keymatrix_trigger_t
```

Data Structure Documentation

◆ keymatrix_callback_args_t

struct keymatrix_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Holder for user data. Set in keymatrix_api_t::open function in keymatrix_cfg_t .
uint32_t	channel_mask	Bit vector representing the physical hardware channel(s) that caused the interrupt.

◆ keymatrix_cfg_t

struct keymatrix_cfg_t		
User configuration structure, used in open function		
Data Fields		
uint32_t	channel_mask	
		Key Input channel(s). Bit mask of channels to open.
keymatrix_trigger_t	trigger	
		Key Input trigger setting.
uint8_t	ipl	
		Interrupt priority level.
IRQn_Type	irq	
		NVIC IRQ number.

void(*	p_callback)(keymatrix_callback_args_t *p_args)
	Callback for key interrupt ISR.
void const *	p_context
	Holder for user data. Passed to callback in keymatrix_user_cb_data_t.
void const *	p_extend
	Extension parameter for hardware specific settings.

◆ keymatrix_api_t

struct keymatrix_api_t	
Key Matrix driver structure. Key Matrix functions implemented at the HAL layer will use this API.	
Data Fields	
fsp_err_t(*	open)(keymatrix_ctrl_t *const p_ctrl, keymatrix_cfg_t const *const p_cfg)
fsp_err_t(*	enable)(keymatrix_ctrl_t *const p_ctrl)
fsp_err_t(*	disable)(keymatrix_ctrl_t *const p_ctrl)
fsp_err_t(*	close)(keymatrix_ctrl_t *const p_ctrl)
Field Documentation	

◆ **open**

```
fsp_err_t(* keymatrix_api_t::open) (keymatrix_ctrl_t *const p_ctrl, keymatrix_cfg_t const *const p_cfg)
```

Initial configuration.

Implemented as

- R_KINT_Open()

Parameters

[out]	p_ctrl	Pointer to control block. Must be declared by user. Value set in this function.
[in]	p_cfg	Pointer to configuration structure. All elements of the structure must be set by user.

◆ **enable**

```
fsp_err_t(* keymatrix_api_t::enable) (keymatrix_ctrl_t *const p_ctrl)
```

Enable Key interrupt

Implemented as

- R_KINT_Enable()

Parameters

[in]	p_ctrl	Control block pointer set in Open call for this Key interrupt.
------	--------	--

◆ **disable**

```
fsp_err_t(* keymatrix_api_t::disable) (keymatrix_ctrl_t *const p_ctrl)
```

Disable Key interrupt.

Implemented as

- R_KINT_Disable()

Parameters

[in]	p_ctrl	Control block pointer set in Open call for this Key interrupt.
------	--------	--

◆ **close**

```
fsp_err_t(* keymatrix_api_t::close) (keymatrix_ctrl_t *const p_ctrl)
```

Allow driver to be reconfigured. May reduce power consumption.

Implemented as

- R_KINT_Close()

Parameters

[in]	p_ctrl	Control block pointer set in Open call for this Key interrupt.
------	--------	--

◆ **keymatrix_instance_t**

```
struct keymatrix_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

keymatrix_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
keymatrix_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
keymatrix_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **keymatrix_ctrl_t**

```
typedef void keymatrix_ctrl_t
```

Key matrix control block. Allocate an instance specific control block to pass into the key matrix API calls.

Implemented as

- kint_instance_ctrl_t

Enumeration Type Documentation

◆ **keymatrix_trigger_t**

enum <code>keymatrix_trigger_t</code>	
Trigger type: rising edge, falling edge	
Enumerator	
<code>KEYMATRIX_TRIG_FALLING</code>	Falling edge trigger.
<code>KEYMATRIX_TRIG_RISING</code>	Rising edge trigger.

4.3.25 Low Power Modes Interface

Interfaces

Detailed Description

Interface for accessing low power modes.

Summary

This section defines the API for the LPM (Low Power Mode) Driver. The LPM Driver provides functions for controlling power consumption by configuring and transitioning to a low power mode. The LPM driver supports configuration of MCU low power modes using the LPM hardware peripheral. The LPM driver supports low power modes deep standby, standby, sleep, and snooze.

Note

Not all low power modes are available on all MCUs.

The LPM interface is implemented by:

- [Low Power Modes \(r_lpm\)](#)

Data Structures

struct `lpm_cfg_t`

struct `lpm_api_t`

struct `lpm_instance_t`

Typedefs

typedef void `lpm_ctrl_t`

Enumerations

enum `lpm_mode_t`

enum [lpm_snooze_request_t](#)enum [lpm_snooze_end_t](#)enum [lpm_snooze_cancel_t](#)enum [lpm_snooze_dtc_t](#)enum [lpm_standby_wake_source_t](#)enum [lpm_io_port_t](#)enum [lpm_power_supply_t](#)enum [lpm_deep_standby_cancel_edge_t](#)enum [lpm_deep_standby_cancel_source_t](#)enum [lpm_output_port_enable_t](#)

Data Structure Documentation

◆ [lpm_cfg_t](#)

struct lpm_cfg_t		
User configuration structure, used in open function		
Data Fields		
lpm_mode_t	low_power_mode	Low Power Mode
lpm_standby_wake_source_bits_t	standby_wake_sources	Bitwise list of sources to wake from standby
lpm_snooze_request_t	snooze_request_source	Snooze request source
lpm_snooze_end_bits_t	snooze_end_sources	Bitwise list of snooze end sources
lpm_snooze_cancel_t	snooze_cancel_sources	List of snooze cancel sources
lpm_snooze_dtc_t	dtc_state_in_snooze	State of DTC in snooze mode, enabled or disabled
void const *	p_extend	Placeholder for extension.

◆ [lpm_api_t](#)

struct lpm_api_t	
LPM driver structure. General LPM functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t (*	open)(lpm_ctrl_t *const p_api_ctrl, lpm_cfg_t const *const p_cfg)

<code>fsp_err_t(*</code>	<code>close)(lpm_ctrl_t *const p_api_ctrl)</code>
<code>fsp_err_t(*</code>	<code>lowPowerReconfigure)(lpm_ctrl_t *const p_api_ctrl, lpm_cfg_t const *const p_cfg)</code>
<code>fsp_err_t(*</code>	<code>lowPowerModeEnter)(lpm_ctrl_t *const p_api_ctrl)</code>
<code>fsp_err_t(*</code>	<code>ioKeepClear)(lpm_ctrl_t *const p_api_ctrl)</code>

Field Documentation

◆ open

`fsp_err_t(* lpm_api_t::open) (lpm_ctrl_t *const p_api_ctrl, lpm_cfg_t const *const p_cfg)`

Initialization function

Implemented as

- `R_LPM_Open()`

◆ close

`fsp_err_t(* lpm_api_t::close) (lpm_ctrl_t *const p_api_ctrl)`

Initialization function

Implemented as

- `R_LPM_Close()`

◆ lowPowerReconfigure

`fsp_err_t(* lpm_api_t::lowPowerReconfigure) (lpm_ctrl_t *const p_api_ctrl, lpm_cfg_t const *const p_cfg)`

Configure a low power mode.

Implemented as

- `R_LPM_LowPowerReconfigure()`

Parameters

[in]	<code>p_cfg</code>	Pointer to configuration structure. All elements of this structure must be set by user.
------	--------------------	---

◆ **lowPowerModeEnter**

```
fsp_err_t(* lpm_api_t::lowPowerModeEnter) (lpm_ctrl_t *const p_api_ctrl)
```

Enter low power mode (sleep/standby/deep standby) using WFI macro. Function will return after waking from low power mode.

Implemented as

- [R_LPM_LowPowerModeEnter\(\)](#)

◆ **ioKeepClear**

```
fsp_err_t(* lpm_api_t::ioKeepClear) (lpm_ctrl_t *const p_api_ctrl)
```

Clear the IOKEEP bit after deep software standby.

◦ **Implemented as**

- [R_LPM_IoKeepClear\(\)](#)

◆ **lpm_instance_t**

```
struct lpm_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

lpm_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
lpm_cfg_t const *const	p_cfg	Pointer to the configuration structure for this instance.
lpm_api_t const *const	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **lpm_ctrl_t**

```
typedef void lpm_ctrl_t
```

LPM control block. Allocate an instance specific control block to pass into the LPM API calls.

Implemented as

- [lpm_instance_ctrl_t](#)

Enumeration Type Documentation

◆ **lpm_mode_t**

enum <code>lpm_mode_t</code>	
Low power modes	
Enumerator	
<code>LPM_MODE_SLEEP</code>	Sleep mode.
<code>LPM_MODE_STANDBY</code>	Software Standby mode.
<code>LPM_MODE_STANDBY_SNOOZE</code>	Software Standby mode with Snooze mode enabled.
<code>LPM_MODE_DEEP</code>	Deep Software Standby mode.

◆ **lpm_snooze_request_t**

enum <code>lpm_snooze_request_t</code>	
Snooze request sources	
Enumerator	
<code>LPM_SNOOZE_REQUEST_RXD0_FALLING</code>	Enable RXD0 falling edge snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ0</code>	Enable IRQ0 pin snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ1</code>	Enable IRQ1 pin snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ2</code>	Enable IRQ2 pin snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ3</code>	Enable IRQ3 pin snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ4</code>	Enable IRQ4 pin snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ5</code>	Enable IRQ5 pin snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ6</code>	Enable IRQ6 pin snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ7</code>	Enable IRQ7 pin snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ8</code>	Enable IRQ8 pin snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ9</code>	Enable IRQ9 pin snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ10</code>	Enable IRQ10 pin snooze request.
<code>LPM_SNOOZE_REQUEST_IRQ11</code>	Enable IRQ11 pin snooze request.

LPM_SNOOZE_REQUEST_IRQ12	Enable IRQ12 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ13	Enable IRQ13 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ14	Enable IRQ14 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ15	Enable IRQ15 pin snooze request.
LPM_SNOOZE_REQUEST_KEY	Enable KR snooze request.
LPM_SNOOZE_REQUEST_ACMPS0	Enable High-speed analog comparator 0 snooze request.
LPM_SNOOZE_REQUEST_RTC_ALARM	Enable RTC alarm snooze request.
LPM_SNOOZE_REQUEST_RTC_PERIOD	Enable RTC period snooze request.
LPM_SNOOZE_REQUEST_AGT1_UNDERFLOW	Enable AGT1 underflow snooze request.
LPM_SNOOZE_REQUEST_AGT1_COMPARE_A	Enable AGT1 compare match A snooze request.
LPM_SNOOZE_REQUEST_AGT1_COMPARE_B	Enable AGT1 compare match B snooze request.
LPM_SNOOZE_REQUEST_AGT3_UNDERFLOW	Enable AGT3 underflow snooze request.
LPM_SNOOZE_REQUEST_AGT3_COMPARE_A	Enable AGT3 compare match A snooze request.
LPM_SNOOZE_REQUEST_AGT3_COMPARE_B	Enable AGT3 compare match B snooze request.

◆ **lpm_snooze_end_t**

enum lpm_snooze_end_t	
Snooze end control	
Enumerator	
LPM_SNOOZE_END_STANDBY_WAKE_SOURCES	Transition from Snooze to Normal mode directly.
LPM_SNOOZE_END_AGT1_UNDERFLOW	AGT1 underflow.
LPM_SNOOZE_END_DTC_TRANS_COMPLETE	Last DTC transmission completion.
LPM_SNOOZE_END_DTC_TRANS_COMPLETE_NEGATED	Not Last DTC transmission completion.
LPM_SNOOZE_END_ADC0_COMPARE_MATCH	ADC Channel 0 compare match.
LPM_SNOOZE_END_ADC0_COMPARE_MISMATCH	ADC Channel 0 compare mismatch.
LPM_SNOOZE_END_ADC1_COMPARE_MATCH	ADC 1 compare match.
LPM_SNOOZE_END_ADC1_COMPARE_MISMATCH	ADC 1 compare mismatch.
LPM_SNOOZE_END_SCI0_ADDRESS_MATCH	SCI0 address mismatch.
LPM_SNOOZE_END_AGT3_UNDERFLOW	AGT3 underflow.

◆ **lpm_snooze_cancel_t**

enum lpm_snooze_cancel_t	
Snooze cancel control	
Enumerator	
LPM_SNOOZE_CANCEL_SOURCE_NONE	No snooze cancel source.
LPM_SNOOZE_CANCEL_SOURCE_ADC0_WCMMPM	ADC Channel 0 window compare match.
LPM_SNOOZE_CANCEL_SOURCE_ADC0_WCMPUM	ADC Channel 0 window compare mismatch.
LPM_SNOOZE_CANCEL_SOURCE_DTC_COMPLETE	DTC transfer completion.
LPM_SNOOZE_CANCEL_SOURCE_DOC_DOPCI	Data operation circuit interrupt.

◆ **lpm_snooze_dtc_t**

enum <code>lpm_snooze_dtc_t</code>	
DTC Enable in Snooze Mode	
Enumerator	
<code>LPM_SNOOZE_DTC_DISABLE</code>	Disable DTC operation.
<code>LPM_SNOOZE_DTC_ENABLE</code>	Enable DTC operation.

◆ **lpm_standby_wake_source_t**

enum <code>lpm_standby_wake_source_t</code>	
Wake from standby mode sources, does not apply to sleep or deep standby modes	
Enumerator	
<code>LPM_STANDBY_WAKE_SOURCE_IRQ0</code>	IRQ0.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ1</code>	IRQ1.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ2</code>	IRQ2.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ3</code>	IRQ3.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ4</code>	IRQ4.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ5</code>	IRQ5.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ6</code>	IRQ6.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ7</code>	IRQ7.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ8</code>	IRQ8.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ9</code>	IRQ9.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ10</code>	IRQ10.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ11</code>	IRQ11.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ12</code>	IRQ12.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ13</code>	IRQ13.
<code>LPM_STANDBY_WAKE_SOURCE_IRQ14</code>	IRQ14.

LPM_STANDBY_WAKE_SOURCE_IRQ15	IRQ15.
LPM_STANDBY_WAKE_SOURCE_IWDT	Independent watchdog interrupt.
LPM_STANDBY_WAKE_SOURCE_KEY	Key interrupt.
LPM_STANDBY_WAKE_SOURCE_LVD1	Low Voltage Detection 1 interrupt.
LPM_STANDBY_WAKE_SOURCE_LVD2	Low Voltage Detection 2 interrupt.
LPM_STANDBY_WAKE_SOURCE_VBATT	VBATT Monitor interrupt.
LPM_STANDBY_WAKE_SOURCE_ACMPS0	Analog Comparator High-speed 0 interrupt.
LPM_STANDBY_WAKE_SOURCE_ACMPLP0	Analog Comparator Low-speed 0 interrupt.
LPM_STANDBY_WAKE_SOURCE_RTCALM	RTC Alarm interrupt.
LPM_STANDBY_WAKE_SOURCE_RTCPRD	RTC Period interrupt.
LPM_STANDBY_WAKE_SOURCE_USBHS	USB High-speed interrupt.
LPM_STANDBY_WAKE_SOURCE_USBFS	USB Full-speed interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT1UD	AGT1 underflow interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT1CA	AGT1 compare match A interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT1CB	AGT1 compare match B interrupt.
LPM_STANDBY_WAKE_SOURCE_IIC0	I2C 0 interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT3UD	AGT3 underflow interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT3CA	AGT3 compare match A interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT3CB	AGT3 compare match B interrupt.

◆ **lpm_io_port_t**

enum <code>lpm_io_port_t</code>	
I/O port state after Deep Software Standby mode	
Enumerator	
<code>LPM_IO_PORT_RESET</code>	When the Deep Software Standby mode is canceled, the I/O ports are in the reset state
<code>LPM_IO_PORT_NO_CHANGE</code>	When the Deep Software Standby mode is canceled, the I/O ports are in the same state as in the Deep Software Standby mode

◆ **lpm_power_supply_t**

enum <code>lpm_power_supply_t</code>	
Power supply control	
Enumerator	
<code>LPM_POWER_SUPPLY_DEEPCUT0</code>	Power to the standby RAM, Low-speed on-chip oscillator, AGTn, and USBFS/HS resume detecting unit is supplied in deep software standby mode
<code>LPM_POWER_SUPPLY_DEEPCUT1</code>	Power to the standby RAM, Low-speed on-chip oscillator, AGTn, and USBFS/HS resume detecting unit is not supplied in deep software standby mode
<code>LPM_POWER_SUPPLY_DEEPCUT3</code>	Power to the standby RAM, Low-speed on-chip oscillator, AGTn, and USBFS/HS resume detecting unit is not supplied in deep software standby mode. In addition, LVD is disabled and the low power function in a poweron reset circuit is enabled

◆ **lpm_deep_standby_cancel_edge_t**

enum <code>lpm_deep_standby_cancel_edge_t</code>	
Deep Standby Interrupt Edge	
Enumerator	
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_EDGE_NONE</code>	No options for a deep standby cancel source.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ0_RIS</code>	

ING	IRQ0-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ0_FALLING	IRQ0-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ1_RISING	IRQ1-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ1_FALLING	IRQ1-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ2_RISING	IRQ2-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ2_FALLING	IRQ2-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ3_RISING	IRQ3-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ3_FALLING	IRQ3-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ4_RISING	IRQ4-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ4_FALLING	IRQ4-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ5_RISING	IRQ5-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ5_FALLING	IRQ5-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ6_RISING	IRQ6-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ6_FALLING	IRQ6-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ7_RISING	IRQ7-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ7_FALLING	IRQ7-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ8_RISING	IRQ8-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ8_FALLING	IRQ8-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ9_RISING	IRQ9-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ9_FALLING	IRQ9-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ10_RISING	IRQ10-DS Pin Rising Edge.

LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ10_FALLING	IRQ10-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ11_RISING	IRQ11-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ11_FALLING	IRQ11-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ12_RISING	IRQ12-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ12_FALLING	IRQ12-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ13_RISING	IRQ13-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ13_FALLING	IRQ13-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ14_RISING	IRQ14-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ14_FALLING	IRQ14-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ15_RISING	IRQ14-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ15_FALLING	IRQ14-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD1_RISING	LVD1 Rising Slope.
LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD1_FALLING	LVD1 Falling Slope.
LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD2_RISING	LVD2 Rising Slope.
LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD2_FALLING	LVD2 Falling Slope.
LPM_DEEP_STANDBY_CANCEL_SOURCE_NMI_RISING	NMI Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_NMI_FALLING	NMI Pin Falling Edge.

◆ **lpm_deep_standby_cancel_source_t**

enum <code>lpm_deep_standby_cancel_source_t</code>	
Deep Standby cancel sources	
Enumerator	
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_RESET_ONLY</code>	Cancel deep standby only by reset.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ0</code>	IRQ0.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ1</code>	IRQ1.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ2</code>	IRQ2.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ3</code>	IRQ3.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ4</code>	IRQ4.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ5</code>	IRQ5.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ6</code>	IRQ6.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ7</code>	IRQ7.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ8</code>	IRQ8.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ9</code>	IRQ9.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ10</code>	IRQ10.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ11</code>	IRQ11.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ12</code>	IRQ12.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ13</code>	IRQ13.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ14</code>	IRQ14.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ15</code>	IRQ15.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD1</code>	LVD1.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD2</code>	LVD2.
<code>LPM_DEEP_STANDBY_CANCEL_SOURCE_RTC_INTERVAL</code>	RTC Interval Interrupt.

LPM_DEEP_STANDBY_CANCEL_SOURCE_RTC_ALARM	RTC Alarm Interrupt.
LPM_DEEP_STANDBY_CANCEL_SOURCE_NMI	NMI.
LPM_DEEP_STANDBY_CANCEL_SOURCE_USBFS	USBFS Suspend/Resume.
LPM_DEEP_STANDBY_CANCEL_SOURCE_USBHS	USBHS Suspend/Resume.
LPM_DEEP_STANDBY_CANCEL_SOURCE_AGT1	AGT1 Underflow.

◆ lpm_output_port_enable_t

enum lpm_output_port_enable_t	
Output port enable	
Enumerator	
LPM_OUTPUT_PORT_ENABLE_HIGH_IMPEDANCE	0: In Software Standby Mode or Deep Software Standby Mode, the address output pins, data output pins, and other bus control signal output pins are set to the high-impedance state. In Snooze, the status of the address bus and bus control signals are same as before entering Software Standby Mode.
LPM_OUTPUT_PORT_ENABLE_RETAIN	1: In Software Standby Mode, the address output pins, data output pins, and other bus control signal output pins retain the output state.

4.3.26 Low Voltage Detection Interface

Interfaces

Detailed Description

Interface for Low Voltage Detection.

Summary

The LVD driver provides functions for configuring the LVD voltage monitors and detectors.

Implemented by:

- [Low Voltage Detection \(r_lvd\)](#)

Data Structures

struct [lvd_status_t](#)

struct [lvd_callback_args_t](#)

struct [lvd_cfg_t](#)

struct [lvd_api_t](#)

struct [lvd_instance_t](#)

Typedefs

typedef void [lvd_ctrl_t](#)

Enumerations

enum [lvd_threshold_t](#)

enum [lvd_response_t](#)

enum [lvd_voltage_slope_t](#)

enum [lvd_sample_clock_t](#)

enum [lvd_negation_delay_t](#)

enum [lvd_threshold_crossing_t](#)

enum [lvd_current_state_t](#)

Data Structure Documentation

◆ [lvd_status_t](#)

struct lvd_status_t		
Current state of a voltage monitor.		
Data Fields		
lvd_threshold_crossing_t	crossing_detected	Threshold crossing detection (latched)
lvd_current_state_t	current_state	Instantaneous status of monitored voltage (above or below threshold)

◆ [lvd_callback_args_t](#)

struct lvd_callback_args_t
LVD callback parameter definition

Data Fields		
uint32_t	monitor_number	Monitor number.
lvd_current_state_t	current_state	Current state of the voltage monitor.
void const *	p_context	Placeholder for user data.

◆ **lvd_cfg_t**

struct lvd_cfg_t		
LVD configuration structure		
Data Fields		
uint32_t	monitor_number	
lvd_threshold_t	voltage_threshold	
lvd_response_t	detection_response	
lvd_voltage_slope_t	voltage_slope	
lvd_negation_delay_t	negation_delay	
lvd_sample_clock_t	sample_clock_divisor	
IRQn_Type	irq	
uint8_t	monitor_ipl	
void(*	p_callback)(lvd_callback_args_t *p_args)	
void const *	p_context	
void const *	p_extend	
Field Documentation		

◆ **monitor_number**

uint32_t lvd_cfg_t::monitor_number

Monitor number, 1, 2, ...

◆ **voltage_threshold**

lvd_threshold_t lvd_cfg_t::voltage_threshold

Threshold for out of range voltage detection

◆ **detection_response**

lvd_response_t lvd_cfg_t::detection_response

Response on detecting a threshold crossing

◆ **voltage_slope**

lvd_voltage_slope_t lvd_cfg_t::voltage_slope

Direction of voltage crossing that will trigger a detection (Rising Edge, Falling Edge, Both).

◆ **negation_delay**

lvd_negation_delay_t lvd_cfg_t::negation_delay

Negation of LVD signal follows reset or voltage in range

◆ **sample_clock_divisor**

lvd_sample_clock_t lvd_cfg_t::sample_clock_divisor

Sample clock divider, use LVD_SAMPLE_CLOCK_DISABLED to disable digital filtering

◆ **irq**

IRQn_Type lvd_cfg_t::irq

Interrupt number.

◆ **monitor_ipl**

uint8_t lvd_cfg_t::monitor_ipl

Interrupt priority level.

◆ **p_callback**

void(* lvd_cfg_t::p_callback) (lvd_callback_args_t *p_args)

User function to be called from interrupt

◆ **p_context**

void const* lvd_cfg_t::p_context

Placeholder for user data. Passed to the user callback in

◆ **p_extend**

void const* lvd_cfg_t::p_extend

Extension parameter for hardware specific settings

◆ **lvd_api_t**

struct lvd_api_t

LVD driver API structure. LVD driver functions implemented at the HAL layer will adhere to this API.

Data Fields

fsp_err_t(* open)(lvd_ctrl_t *const p_ctrl, lvd_cfg_t const *const p_cfg)

fsp_err_t(* statusGet)(lvd_ctrl_t *const p_ctrl, lvd_status_t *p_lvd_status)

fsp_err_t(* statusClear)(lvd_ctrl_t *const p_ctrl)

fsp_err_t(* callbackSet)(lvd_ctrl_t *const p_api_ctrl, void(*p_callback)(lvd_callback_args_t *), void const *const p_context, lvd_callback_args_t *const p_callback_memory)

fsp_err_t(* close)(lvd_ctrl_t *const p_ctrl)

Field Documentation◆ **open**

fsp_err_t(* lvd_api_t::open) (lvd_ctrl_t *const p_ctrl, lvd_cfg_t const *const p_cfg)

Initializes a low voltage detection driver according to the passed-in configuration structure.

Implemented as

- R_LVD_Open()

Parameters

[in]	p_ctrl	Pointer to control structure for the driver instance
[in]	p_cfg	Pointer to the configuration structure for the driver instance

◆ **statusGet**

```
fsp_err_t(* lvd_api_t::statusGet) (lvd_ctrl_t *const p_ctrl, lvd_status_t *p_lvd_status)
```

Get the current state of the monitor, (threshold crossing detected, voltage currently above or below threshold). Must be used if the peripheral was initialized with `lvd_response_t` set to `LVD_RESPONSE_NONE`.

Implemented as

- `R_LVD_StatusGet()`

Parameters

[in]	p_ctrl	Pointer to the control structure for the driver instance
[in,out]	p_lvd_status	Pointer to a <code>lvd_status_t</code> structure

◆ **statusClear**

```
fsp_err_t(* lvd_api_t::statusClear) (lvd_ctrl_t *const p_ctrl)
```

Clears the latched status of the monitor. Must be used if the peripheral was initialized with `lvd_response_t` set to `LVD_RESPONSE_NONE`.

Implemented as

- `R_LVD_StatusClear()`

Parameters

[in]	p_ctrl	Pointer to the control structure for the driver instance
------	--------	--

◆ **callbackSet**

```
fsp_err_t(* lvd_api_t::callbackSet) (lvd_ctrl_t*const p_api_ctrl, void(*p_callback)(lvd_callback_args_t*), void const*const p_context, lvd_callback_args_t*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_LVD_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the LVD control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* lvd_api_t::close) (lvd_ctrl_t*const p_ctrl)
```

Disables the LVD peripheral. Closes the driver instance.

Implemented as

- R_LVD_Close()

Parameters

[in]	p_ctrl	Pointer to the control structure for the driver instance
------	--------	--

◆ **lvd_instance_t**

```
struct lvd_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

lvd_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
lvd_cfg_t const *	p_cfg	Pointer to the configuration structure for this interface instance.

`lvd_api_t` const *`p_api`

Pointer to the API structure for this interface instance.

Typedef Documentation

◆ `lvd_ctrl_t`

typedef void `lvd_ctrl_t`

LVD control block. Allocate an instance specific control block to pass into the LVD API calls.

Implemented as

- `lvd_instance_ctrl_t`

Enumeration Type Documentation

◆ `lvd_threshold_t`

enum `lvd_threshold_t`Register definitions, common services, and error codes. Voltage detection level The thresholds supported by each MCU are in the MCU User's Manual as well as in the `r_lvd` module description on the stack tab of the RA project.

Enumerator

<code>LVD_THRESHOLD_MONITOR_1_LEVEL_4_29V</code>	4.29V
<code>LVD_THRESHOLD_MONITOR_1_LEVEL_4_14V</code>	4.14V
<code>LVD_THRESHOLD_MONITOR_1_LEVEL_4_02V</code>	4.02V
<code>LVD_THRESHOLD_MONITOR_1_LEVEL_3_84V</code>	3.84V
<code>LVD_THRESHOLD_MONITOR_1_LEVEL_3_10V</code>	3.10V
<code>LVD_THRESHOLD_MONITOR_1_LEVEL_3_00V</code>	3.00V
<code>LVD_THRESHOLD_MONITOR_1_LEVEL_2_90V</code>	2.90V
<code>LVD_THRESHOLD_MONITOR_1_LEVEL_2_79V</code>	2.79V
<code>LVD_THRESHOLD_MONITOR_1_LEVEL_2_68V</code>	2.68V
<code>LVD_THRESHOLD_MONITOR_1_LEVEL_2_58V</code>	2.58V
<code>LVD_THRESHOLD_MONITOR_1_LEVEL_2_48V</code>	2.48V
<code>LVD_THRESHOLD_MONITOR_1_LEVEL_2_20V</code>	2.20V

LVD_THRESHOLD_MONITOR_1_LEVEL_1_96V	1.96V
LVD_THRESHOLD_MONITOR_1_LEVEL_1_86V	1.86V
LVD_THRESHOLD_MONITOR_1_LEVEL_1_75V	1.75V
LVD_THRESHOLD_MONITOR_1_LEVEL_1_65V	1.65V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_99V	2.99V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_92V	2.92V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_85V	2.85V
LVD_THRESHOLD_MONITOR_2_LEVEL_4_29V	4.29V
LVD_THRESHOLD_MONITOR_2_LEVEL_4_14V	4.14V
LVD_THRESHOLD_MONITOR_2_LEVEL_4_02V	4.02V
LVD_THRESHOLD_MONITOR_2_LEVEL_3_84V	3.84V
LVD_THRESHOLD_MONITOR_2_LEVEL_2_99V	2.99V
LVD_THRESHOLD_MONITOR_2_LEVEL_2_92V	2.92V
LVD_THRESHOLD_MONITOR_2_LEVEL_2_85V	2.85V

◆ lvd_response_t

enum lvd_response_t	
Response types for handling threshold crossing event.	
Enumerator	
LVD_RESPONSE_NMI	Non-maskable interrupt.
LVD_RESPONSE_INTERRUPT	Maskable interrupt.
LVD_RESPONSE_RESET	Reset.
LVD_RESPONSE_NONE	No response, status must be requested via statusGet function.

◆ **lvd_voltage_slope_t**

enum <code>lvd_voltage_slope_t</code>	
The direction from which Vcc must cross the threshold to trigger a detection (rising, falling, or both).	
Enumerator	
<code>LVD_VOLTAGE_SLOPE_RISING</code>	When VCC \geq Vdet2 (rise) is detected.
<code>LVD_VOLTAGE_SLOPE_FALLING</code>	When VCC $<$ Vdet2 (drop) is detected.
<code>LVD_VOLTAGE_SLOPE_BOTH</code>	When drop and rise are detected.

◆ **lvd_sample_clock_t**

enum <code>lvd_sample_clock_t</code>	
Sample clock divider, use <code>LVD_SAMPLE_CLOCK_DISABLED</code> to disable digital filtering	
Enumerator	
<code>LVD_SAMPLE_CLOCK_LOCO_DIV_2</code>	Digital filter sample clock is LOCO divided by 2.
<code>LVD_SAMPLE_CLOCK_LOCO_DIV_4</code>	Digital filter sample clock is LOCO divided by 4.
<code>LVD_SAMPLE_CLOCK_LOCO_DIV_8</code>	Digital filter sample clock is LOCO divided by 8.
<code>LVD_SAMPLE_CLOCK_LOCO_DIV_16</code>	Digital filter sample clock is LOCO divided by 16.
<code>LVD_SAMPLE_CLOCK_DISABLED</code>	Digital filter is disabled.

◆ **lvd_negation_delay_t**

enum <code>lvd_negation_delay_t</code>	
Negation delay of LVD reset signal follows reset or voltage in range	
Enumerator	
<code>LVD_NEGATION_DELAY_FROM_VOLTAGE</code>	Negation follows a stabilization time (t_{LVDn}) after $VCC > V_{det1}$ is detected. If a transition to software standby or deep software standby is to be made, the only possible value for the RN bit is <code>LVD_NEGATION_DELAY_FROM_VOLTAGE</code>
<code>LVD_NEGATION_DELAY_FROM_RESET</code>	Negation follows a stabilization time (t_{LVDn}) after assertion of the LVDn reset. If a transition to software standby or deep software standby is to be made, the only possible value for the RN bit is <code>LVD_NEGATION_DELAY_FROM_VOLTAGE</code>

◆ **lvd_threshold_crossing_t**

enum <code>lvd_threshold_crossing_t</code>	
Threshold crossing detection (latched)	
Enumerator	
<code>LVD_THRESHOLD_CROSSING_NOT_DETECTED</code>	Threshold crossing has not been detected.
<code>LVD_THRESHOLD_CROSSING_DETECTED</code>	Threshold crossing has been detected.

◆ **lvd_current_state_t**

enum <code>lvd_current_state_t</code>	
Instantaneous status of VCC (above or below threshold)	
Enumerator	
<code>LVD_CURRENT_STATE_BELOW_THRESHOLD</code>	$VCC < \text{threshold}$.
<code>LVD_CURRENT_STATE_ABOVE_THRESHOLD</code>	$VCC \geq \text{threshold}$ or monitor is disabled.

4.3.27 OPAMP Interface

Interfaces

Detailed Description

Interface for Operational Amplifiers.

Summary

The OPAMP interface provides standard operational amplifier functionality, including starting and stopping the amplifier.

Implemented by: [Operational Amplifier \(r_opamp\)](#)

Data Structures

struct [opamp_trim_args_t](#)

struct [opamp_info_t](#)

struct [opamp_status_t](#)

struct [opamp_cfg_t](#)

struct [opamp_api_t](#)

struct [opamp_instance_t](#)

Typedefs

typedef void [opamp_ctrl_t](#)

Enumerations

enum [opamp_trim_cmd_t](#)

enum [opamp_trim_input_t](#)

Data Structure Documentation

◆ [opamp_trim_args_t](#)

struct opamp_trim_args_t		
OPAMP trim arguments.		
Data Fields		
uint8_t	channel	Channel.
opamp_trim_input_t	input	Which input of the channel above.

◆ [opamp_info_t](#)

struct opamp_info_t		
OPAMP information.		
Data Fields		
uint32_t	min_stabilization_wait_us	Minimum stabilization wait time in microseconds.

◆ opamp_status_t

struct opamp_status_t		
OPAMP status.		
Data Fields		
uint32_t	operating_channel_mask	Bitmask of channels currently operating.

◆ opamp_cfg_t

struct opamp_cfg_t		
OPAMP general configuration.		
Data Fields		
void const *	p_extend	Extension parameter for hardware specific settings.

◆ opamp_api_t

struct opamp_api_t		
OPAMP functions implemented at the HAL layer will follow this API.		
Data Fields		
fsp_err_t(*)	open	(opamp_ctrl_t *const p_ctrl, opamp_cfg_t const *const p_cfg)
fsp_err_t(*)	start	(opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)
fsp_err_t(*)	stop	(opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)
fsp_err_t(*)	trim	(opamp_ctrl_t *const p_ctrl, opamp_trim_cmd_t const cmd, opamp_trim_args_t const *const p_args)
fsp_err_t(*)	infoGet	(opamp_ctrl_t *const p_ctrl, opamp_info_t *const p_info)
fsp_err_t(*)	statusGet	(opamp_ctrl_t *const p_ctrl, opamp_status_t *const p_status)

```
fsp_err_t(* close )(opamp_ctrl_t *const p_ctrl)
```

Field Documentation

◆ open

```
fsp_err_t(* opamp_api_t::open) (opamp_ctrl_t *const p_ctrl, opamp_cfg_t const *const p_cfg)
```

Initialize the operational amplifier.

Implemented as

- R_OPAMP_Open()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	p_cfg	Pointer to configuration

◆ start

```
fsp_err_t(* opamp_api_t::start) (opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)
```

Start the op-amp(s).

Implemented as

- R_OPAMP_Start()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	channel_mask	Bitmask of channels to start

◆ stop

```
fsp_err_t(* opamp_api_t::stop) (opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)
```

Stop the op-amp(s).

Implemented as

- R_OPAMP_Stop()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	channel_mask	Bitmask of channels to stop

◆ trim

```
fsp_err_t(* opamp_api_t::trim) (opamp_ctrl_t *const p_ctrl, opamp_trim_cmd_t const cmd,
opamp_trim_args_t const *const p_args)
```

Trim the op-amp(s). Not supported on all MCUs. See implementation for procedure details.

Implemented as

- R_OPAMP_Trim()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	cmd	Trim command
[in]	p_args	Pointer to arguments for the command

◆ infoGet

```
fsp_err_t(* opamp_api_t::infoGet) (opamp_ctrl_t *const p_ctrl, opamp_info_t *const p_info)
```

Provide information such as the recommended minimum stabilization wait time.

Implemented as

- R_OPAMP_InfoGet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[out]	p_info	OPAMP information stored here

◆ statusGet

```
fsp_err_t(* opamp_api_t::statusGet) (opamp_ctrl_t *const p_ctrl, opamp_status_t *const p_status)
```

Provide status of each op-amp channel.

Implemented as

- R_OPAMP_StatusGet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[out]	p_status	Status stored here

◆ **close**

```
fsp_err_t(* opamp_api_t::close) (opamp_ctrl_t *const p_ctrl)
```

Close the specified OPAMP unit by ending any scan in progress, disabling interrupts, and removing power to the specified A/D unit.

Implemented as

- R_OPAMP_Close()

Parameters

[in]	p_ctrl	Pointer to instance control block
------	--------	-----------------------------------

◆ **opamp_instance_t**

```
struct opamp_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

opamp_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
opamp_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
opamp_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **opamp_ctrl_t**

```
typedef void opamp_ctrl_t
```

OPAMP control block. Allocate using driver instance control structure from driver instance header file.

Enumeration Type Documentation

◆ **opamp_trim_cmd_t**

enum <code>opamp_trim_cmd_t</code>	
Includes board and MCU related header files. Trim command.	
Enumerator	
OPAMP_TRIM_CMD_START	Initialize trim state machine.
OPAMP_TRIM_CMD_NEXT_STEP	Move to next step in state machine.
OPAMP_TRIM_CMD_CLEAR_BIT	Clear trim bit.

◆ **opamp_trim_input_t**

enum <code>opamp_trim_input_t</code>	
Trim input.	
Enumerator	
OPAMP_TRIM_INPUT_PCH	Trim non-inverting (+) input.
OPAMP_TRIM_INPUT_NCH	Trim inverting (-) input.

4.3.28 PDC Interface

Interfaces

Detailed Description

Interface for PDC functions.

Summary

The PDC interface provides the functionality for capturing an image from an image sensor/camera. When a capture is complete a transfer complete interrupt is triggered.

Implemented by:

- [Parallel Data Capture \(r_pdc\)](#)

Data Structures

struct `pdc_callback_args_t`

struct `pdc_cfg_t`

struct [pdc_api_t](#)

struct [pdc_instance_t](#)

Typedefs

typedef void [pdc_ctrl_t](#)

Enumerations

enum [pdc_clock_division_t](#)

enum [pdc_endian_t](#)

enum [pdc_hsync_polarity_t](#)

enum [pdc_vsync_polarity_t](#)

enum [pdc_event_t](#)

Data Structure Documentation

◆ [pdc_callback_args_t](#)

struct pdc_callback_args_t		
Callback function parameter data		
Data Fields		
pdc_event_t	event	Event causing the callback.
uint8_t *	p_buffer	Pointer to buffer containing the captured data.
void const *	p_context	Placeholder for user data. Set in pdc_api_t::open function in pdc_cfg_t .

◆ [pdc_cfg_t](#)

struct pdc_cfg_t		
PDC configuration parameters.		
Data Fields		
uint16_t	x_capture_start_pixel	
		Horizontal position to start capture.
uint16_t	x_capture_pixels	
		Number of horizontal pixels to capture.

uint16_t	y_capture_start_pixel
	Vertical position to start capture.
uint16_t	y_capture_pixels
	Number of vertical lines/pixels to capture.
pdc_clock_division_t	clock_division
	Clock divider.
pdc_endian_t	endian
	Endian of capture data.
pdc_hsync_polarity_t	hsync_polarity
	Polarity of HSYNC input.
pdc_vsync_polarity_t	vsync_polarity
	Polarity of VSYNC input.
uint8_t *	p_buffer
	Pointer to buffer to write image into.
uint8_t	bytes_per_pixel
	Number of bytes per pixel.
uint8_t	pdc_ipl
	PDC interrupt priority.

uint8_t	transfer_req_ipl
	Transfer interrupt priority.
IRQn_Type	pdc_irq
	PDC IRQ number.
IRQn_Type	transfer_req_irq
	Transfer request IRQ number.
transfer_instance_t const *	p_lower_lvl_transfer
	Pointer to the transfer instance the PDC should use.
void(*	p_callback)(pdc_callback_args_t *p_args)
	Callback provided when a PDC transfer ISR occurs.
void const *	p_context
	User defined context passed to callback function.
void const *	p_extend
	Placeholder for user data.

◆ pdc_api_t

struct pdc_api_t	
PDC functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t (*	open)(pdc_ctrl_t *const p_ctrl, pdc_cfg_t const *const p_cfg)
fsp_err_t (*	close)(pdc_ctrl_t *const p_ctrl)

`fsp_err_t(* captureStart)(pdc_ctrl_t *const p_ctrl, uint8_t *const p_buffer)`

Field Documentation

◆ open

`fsp_err_t(* pdc_api_t::open) (pdc_ctrl_t *const p_ctrl, pdc_cfg_t const *const p_cfg)`

Initial configuration.

Implemented as

- `R_PDC_Open()`

Note

To reconfigure after calling this function, call `pdc_api_t::close` first.

Parameters

[in]	<code>p_ctrl</code>	Pointer to control structure.
[in]	<code>p_cfg</code>	Pointer to pin configuration structure.

◆ close

`fsp_err_t(* pdc_api_t::close) (pdc_ctrl_t *const p_ctrl)`

Closes the driver and allows reconfiguration. May reduce power consumption.

Implemented as

- `R_PDC_Close()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control structure.
------	---------------------	-------------------------------

◆ captureStart

`fsp_err_t(* pdc_api_t::captureStart) (pdc_ctrl_t *const p_ctrl, uint8_t *const p_buffer)`

Start a capture.

Implemented as

- `R_PDC_CaptureStart()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control structure.
[in]	<code>p_buffer</code>	Pointer to store captured image data.

◆ pdc_instance_t

struct pdc_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
pdc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
pdc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
pdc_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ [pdc_ctrl_t](#)

typedef void pdc_ctrl_t
PDC control block. Allocate an instance specific control block to pass into the PDC API calls.
Implemented as
◦ pdc_instance_ctrl_t

Enumeration Type Documentation

◆ [pdc_clock_division_t](#)

enum pdc_clock_division_t	
Clock divider applied to PDC clock to provide PCKO output frequency	
Enumerator	
PDC_CLOCK_DIVISION_2	CLK / 2.
PDC_CLOCK_DIVISION_4	CLK / 4.
PDC_CLOCK_DIVISION_6	CLK / 6.
PDC_CLOCK_DIVISION_8	CLK / 8.
PDC_CLOCK_DIVISION_10	CLK / 10.
PDC_CLOCK_DIVISION_12	CLK / 12.
PDC_CLOCK_DIVISION_14	CLK / 14.
PDC_CLOCK_DIVISION_16	CLK / 16.

◆ **pdc_endian_t**

enum pdc_endian_t	
Endian of captured data	
Enumerator	
PDC_ENDIAN_LITTLE	Data is in little endian format.
PDC_ENDIAN_BIG	Data is in big endian format.

◆ **pdc_hsync_polarity_t**

enum pdc_hsync_polarity_t	
Polarity of input HSYNC signal	
Enumerator	
PDC_HSYNC_POLARITY_HIGH	HSYNC signal is active high.
PDC_HSYNC_POLARITY_LOW	HSYNC signal is active low.

◆ **pdc_vsync_polarity_t**

enum pdc_vsync_polarity_t	
Polarity of input VSYNC signal	
Enumerator	
PDC_VSYNC_POLARITY_HIGH	VSYNC signal is active high.
PDC_VSYNC_POLARITY_LOW	VSYNC signal is active low.

◆ **pdc_event_t**

enum <code>pdc_event_t</code>	
PDC events	
Enumerator	
<code>PDC_EVENT_TRANSFER_COMPLETE</code>	Complete frame transferred by DMAC/DTC.
<code>PDC_EVENT_RX_DATA_READY</code>	Receive data ready interrupt.
<code>PDC_EVENT_FRAME_END</code>	Frame end interrupt.
<code>PDC_EVENT_ERR_OVERRUN</code>	Overrun interrupt.
<code>PDC_EVENT_ERR_UNDERRUN</code>	Underrun interrupt.
<code>PDC_EVENT_ERR_V_SET</code>	Vertical line setting error interrupt.
<code>PDC_EVENT_ERR_H_SET</code>	Horizontal byte number setting error interrupt.

4.3.29 POEG Interface[Interfaces](#)**Detailed Description**

Interface for the Port Output Enable for GPT.

Defines the API and data structures for the Port Output Enable for GPT (POEG) interface.

Summary

The POEG disables GPT output pins based on configurable events.

Implemented by: [Port Output Enable for GPT \(r_poeg\)](#)

Data Structures

struct [poeg_status_t](#)

struct [poeg_callback_args_t](#)

struct [poeg_cfg_t](#)

struct [poeg_api_t](#)

struct [poeg_instance_t](#)

Typedefs

typedef void [poeg_ctrl_t](#)

Enumerations

enum [poeg_state_t](#)

enum [poeg_trigger_t](#)

enum [poeg_gtetrg_polarity_t](#)

enum [poeg_gtetrg_noise_filter_t](#)

Data Structure Documentation

◆ [poeg_status_t](#)

struct poeg_status_t		
POEG status		
Data Fields		
poeg_state_t	state	Current state of POEG.

◆ [poeg_callback_args_t](#)

struct poeg_callback_args_t		
Callback function parameter data.		
Data Fields		
void const *	p_context	Placeholder for user data, set in poeg_cfg_t .

◆ [poeg_cfg_t](#)

struct poeg_cfg_t		
User configuration structure, used in the open function.		
Data Fields		
poeg_trigger_t	trigger	
		Select one or more triggers for the POEG.
poeg_gtetrg_polarity_t	polarity	
		Select the polarity for the GTETRG pin.

<code>poeg_gtetrg_noise_filter_t</code>	<code>noise_filter</code>
	Configure the GTETRG noise filter.
<code>void(*</code>	<code>p_callback</code> <code>)(poeg_callback_args_t *p_args)</code>
<code>void const *</code>	<code>p_context</code>
<code>uint32_t</code>	<code>channel</code>
	Channel 0 corresponds to GTETRGA, 1 to GTETRGA, etc.
<code>IRQn_Type</code>	<code>irq</code>
	NVIC interrupt number assigned to this instance.
<code>uint8_t</code>	<code>ipl</code>
	POEG interrupt priority.

Field Documentation

◆ `p_callback`

`void(* poeg_cfg_t::p_callback) (poeg_callback_args_t *p_args)`

Callback called when a POEG interrupt occurs.

◆ `p_context`

`void const* poeg_cfg_t::p_context`

Placeholder for user data. Passed to the user callback in `poeg_callback_args_t`.

◆ `poeg_api_t`

`struct poeg_api_t`

Port Output Enable for GPT (POEG) API structure. POEG functions implemented at the HAL layer will follow this API.

Data Fields

`fsp_err_t(*` `open` `)(poeg_ctrl_t *const p_ctrl, poeg_cfg_t const *const p_cfg)`

<code>fsp_err_t(*</code>	<code>statusGet)(poeg_ctrl_t *const p_ctrl, poeg_status_t *p_status)</code>
<code>fsp_err_t(*</code>	<code>callbackSet)(poeg_ctrl_t *const p_api_ctrl, void(*p_callback)(poeg_callback_args_t *), void const *const p_context, poeg_callback_args_t *const p_callback_memory)</code>
<code>fsp_err_t(*</code>	<code>outputDisable)(poeg_ctrl_t *const p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>reset)(poeg_ctrl_t *const p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>close)(poeg_ctrl_t *const p_ctrl)</code>

Field Documentation

◆ open

`fsp_err_t(* poeg_api_t::open) (poeg_ctrl_t *const p_ctrl, poeg_cfg_t const *const p_cfg)`

Initial configuration.

Implemented as

- `R_POEG_Open()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control block. Must be declared by user. Elements set here.
[in]	<code>p_cfg</code>	Pointer to configuration structure. All elements of this structure must be set by user.

◆ **statusGet**

```
fsp_err_t(* poeg_api_t::statusGet) (poeg_ctrl_t *const p_ctrl, poeg_status_t *p_status)
```

Gets the current driver state.

Implemented as

- R_POEG_StatusGet()

Parameters

[in]	p_ctrl	Control block set in poeg_api_t::open call.
[out]	p_status	Provides the current state of the POEG.

◆ **callbackSet**

```
fsp_err_t(* poeg_api_t::callbackSet) (poeg_ctrl_t *const p_api_ctrl,
void(*p_callback)(poeg_callback_args_t *), void const *const p_context, poeg_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_POEG_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in poeg_api_t::open call for this timer.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **outputDisable**

```
fsp_err_t(* poeg_api_t::outputDisable) (poeg_ctrl_t *const p_ctrl)
```

Disables GPT output pins by software request.

Implemented as

- [R_POEG_OutputDisable\(\)](#)

Parameters

[in]	p_ctrl	Control block set in poeg_api_t::open call.
------	--------	---

◆ **reset**

```
fsp_err_t(* poeg_api_t::reset) (poeg_ctrl_t *const p_ctrl)
```

Attempts to clear status flags to reenable GPT output pins. Confirm all status flags are cleared after calling this function by calling [poeg_api_t::statusGet\(\)](#).

Implemented as

- [R_POEG_Reset\(\)](#)

Parameters

[in]	p_ctrl	Control block set in poeg_api_t::open call.
------	--------	---

◆ **close**

```
fsp_err_t(* poeg_api_t::close) (poeg_ctrl_t *const p_ctrl)
```

Disables POEG interrupt.

Implemented as

- [R_POEG_Close\(\)](#)

Parameters

[in]	p_ctrl	Control block set in poeg_api_t::open call.
------	--------	---

◆ **poeg_instance_t**

```
struct poeg_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

poeg_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
poeg_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.

<code>poeg_api_t</code> const *	<code>p_api</code>	Pointer to the API structure for this instance.
---------------------------------	--------------------	---

Typedef Documentation

◆ `poeg_ctrl_t`

typedef void <code>poeg_ctrl_t</code>
DOC control block. Allocate an instance specific control block to pass into the DOC API calls.
Implemented as
<ul style="list-style-type: none"> ◦ <code>poeg_instance_ctrl_t</code>

Enumeration Type Documentation

◆ `poeg_state_t`

enum <code>poeg_state_t</code>	
POEG states.	
Enumerator	
<code>POEG_STATE_NO_DISABLE_REQUEST</code>	GPT output is not disabled by POEG.
<code>POEG_STATE_PIN_DISABLE_REQUEST</code>	GPT output disabled due to GTETRGM pin level.
<code>POEG_STATE_GPT_OR_COMPARATOR_DISABLE_REQUEST</code>	GPT output disabled due to high speed analog comparator or GPT.
<code>POEG_STATE_OSCILLATION_STOP_DISABLE_REQUEST</code>	GPT output disabled due to main oscillator stop.
<code>POEG_STATE_SOFTWARE_STOP_DISABLE_REQUEST</code>	GPT output disabled due to <code>poeg_api_t::outputDisable()</code>
<code>POEG_STATE_PIN_DISABLE_REQUEST_ACTIVE</code>	GPT output disable request active from the GTETRGM pin. If a filter is used, this flag represents the state of the filtered input.

◆ poeg_trigger_t

enum poeg_trigger_t	
Triggers that will disable GPT output pins.	
Enumerator	
POEG_TRIGGER_SOFTWARE	Software disable is always supported with POEG. Select this option if no other triggers are used.
POEG_TRIGGER_PIN	Disable GPT output based on GTETRIG input level.
POEG_TRIGGER_GPT_OUTPUT_LEVEL	Disable GPT output based on GPT output pin levels.
POEG_TRIGGER_OSCILLATION_STOP	Disable GPT output based on main oscillator stop.
POEG_TRIGGER_ACMPHS0	Disable GPT output based on ACMPHS0 comparator result.
POEG_TRIGGER_ACMPHS1	Disable GPT output based on ACMPHS1 comparator result.
POEG_TRIGGER_ACMPHS2	Disable GPT output based on ACMPHS2 comparator result.
POEG_TRIGGER_ACMPHS3	Disable GPT output based on ACMPHS3 comparator result.
POEG_TRIGGER_ACMPHS4	Disable GPT output based on ACMPHS4 comparator result.
POEG_TRIGGER_ACMPHS5	Disable GPT output based on ACMPHS5 comparator result.

◆ **poeg_gtetrg_polarity_t**

enum poeg_gtetrg_polarity_t	
GTETRG polarity.	
Enumerator	
POEG_GTETRG_POLARITY_ACTIVE_HIGH	Disable GPT output based when GTETRG input level is high.
POEG_GTETRG_POLARITY_ACTIVE_LOW	Disable GPT output based when GTETRG input level is low.

◆ **poeg_gtetrg_noise_filter_t**

enum poeg_gtetrg_noise_filter_t	
GTETRG noise filter. For the input signal to pass through the noise filter, the active level set in poeg_gtetrg_polarity_t must be read 3 consecutive times at the sampling clock selected.	
Enumerator	
POEG_GTETRG_NOISE_FILTER_DISABLED	No noise filter applied to GTETRG input.
POEG_GTETRG_NOISE_FILTER_PCLKB_DIV_1	Apply noise filter with sample clock PCLKB.
POEG_GTETRG_NOISE_FILTER_PCLKB_DIV_8	Apply noise filter with sample clock PCLKB/8.
POEG_GTETRG_NOISE_FILTER_PCLKB_DIV_32	Apply noise filter with sample clock PCLKB/32.
POEG_GTETRG_NOISE_FILTER_PCLKB_DIV_128	Apply noise filter with sample clock PCLKB/128.

4.3.30 PTP Interface[Interfaces](#)**Detailed Description**

Interface for PTP functions.

Summary

The PTP interface provides the functionality for using PTP.

Data Structure Documentation

◆ ptp_clock_properties_t

```
struct ptp_clock_properties_t
```

Clock properties used in the best master clock algorithm (BMCA) in order to determine the grandmaster clock.

In master mode, these properties will be advertised in announce messages.

Note: The final property used in BMCA is the clock ID. This is usually configured at runtime because it is often based on the hardware address.

Data Fields		
uint8_t	priority1	Priority1 value used in best master calculation.
uint8_t	cclass	Class value.
uint8_t	accuracy	Accuracy of the clock.
uint16_t	variance	Variance of the clock.
uint8_t	priority2	Priority2 value used as secondary priority in best master calculation.

◆ ptp_time_t

Data Fields		
uint16_t	seconds_upper	Upper 16 bits of the seconds.
uint32_t	seconds_lower	Lower 32 bits of the seconds.
uint32_t	nanoseconds	Nanoseconds.

◆ ptp_message_flags_t

Data Fields		
uint8_t	message_type: 4	The message type.
uint8_t	sdoid_major: 4	Standard Organization ID Major.
uint8_t	version: 4	PTP Version.
uint8_t	minor_version: 4	PTP Minor Version.
uint16_t	message_length	The total message length (Including the header).
uint8_t	domain	The clock domain.

◆ ptp_message_header_t

Data Fields		
uint8_t	message_type: 4	The message type.
uint8_t	sdoid_major: 4	Standard Organization ID Major.
uint8_t	version: 4	PTP Version.
uint8_t	minor_version: 4	PTP Minor Version.
uint16_t	message_length	The total message length (Including the header).
uint8_t	domain	The clock domain.

uint8_t	sdoid_minor: 8	Standard Organization ID minor.
ptp_message_flags_t	flags	Flags set in the message.
uint64_t	correction_field	Correction Field that is updated when a message passes through a transparent clock.
uint32_t	reserved	
uint8_t	clock_id[8]	Clock ID that the message was sent from.
uint16_t	source_port_id	Port ID that the message was sent from.
uint16_t	sequence_id	Sequence ID of the message.
ptp_ctrl_field_t	control_field	Control field (Message specific).
uint8_t	log_message_interval	Logbase2 of the message period.

◆ **ptp_message_sync_t**

struct ptp_message_sync_t		
Sync Message Type (0x00).		
Data Fields		
ptp_time_t	origin_timestamp	Timestamp when the message was transmitted.

◆ **ptp_message_pdelay_req_t**

struct ptp_message_pdelay_req_t		
PDelay_req Message Type (0x02).		
Data Fields		
ptp_time_t	origin_timestamp	Timestamp when the message was transmitted.
uint8_t	reserved[10]	

◆ **ptp_message_pdelay_resp_t**

struct ptp_message_pdelay_resp_t		
PDelay_resp Message Type (0x03).		
Data Fields		
ptp_time_t	origin_timestamp	Timestamp when the message was transmitted.
uint8_t	source_port_identity[10]	Clock ID + sourcePortId.

◆ **ptp_message_announce_t**

--	--	--

struct ptp_message_announce_t		
Announce Message Type (0x0B).		
Data Fields		
ptp_time_t	origin_timestamp	Timestamp when the message was transmitted.
uint16_t	current_utc_offset	Offset from UTC in seconds.
uint8_t	reserved	
ptp_clock_properties_t	clock_properties	Clock properties used in Best Master Clock Algorithm.
uint8_t	clock_id[8]	Clock ID that the message was sent from.
uint16_t	steps_removed	The number of boundary clocks between the clock and the grand master clock.
uint8_t	time_source	The source of time (Eg. INTERNAL_OSC).

◆ ptp_message_signaling_t

struct ptp_message_signaling_t		
Signaling Message Type (0x0C).		
Data Fields		
uint8_t	target_clock_id[8]	ID of the target PTP instance.
uint16_t	target_port_id	Port of the target PTP instance.

◆ ptp_message_management_t

struct ptp_message_management_t		
Management Message Type (0x0D).		
Data Fields		
uint8_t	target_clock_id[8]	ID of the target PTP instance.
uint16_t	target_port_id	Port of the target PTP instance.
uint8_t	starting_boundary_hops	The starting number of times the message is retransmitted by boundary clocks.
uint8_t	boundary_hops	The remaining number of retransmissions.
uint8_t	action	The action that will be taken on reception of the message.
uint8_t	reserved	

◆ ptp_message_t

struct ptp_message_t		
Complete PTP Message.		
Data Fields		
ptp_message_header_t	header	Header of the message.
union ptp_message_t	__unnamed__	

◆ ptp_callback_args_t

struct ptp_callback_args_t		
Arguments passed to p_ptp_callback.		
Data Fields		
ptp_event_t	event	Event that caused the callback.
ptp_message_t const *	p_message	The message received (PTP message fields will be little endian).
uint8_t const *	p_tlv_data	Start of TLV data (TLV data will be big endian).
uint16_t	tlv_data_size	Total bytes of TLV data.
uint32_t	pulse_timer_channel	Channel of the pulse timer that caused ptp_event_t::PTP_EVENT_PULSE_TIMER_MINT_RISING_EDGE .
void const *	p_context	Context value set in the configuration.

◆ ptp_pulse_timer_common_cfg_t

struct ptp_pulse_timer_common_cfg_t		
Structure for configuring the IPLS IRQ settings that are common to all pulse timer channels.		
Data Fields		
ptp_enable_t	ipls_rising_irq	Enable the IPLS IRQ when a rising edge is detected.
ptp_enable_t	ipls_falling_irq	Enable the IPLS IRQ when a falling edge is detected.
ptp_enable_t	ipls_rising_irq_auto_clear	Auto disable the rising edge IRQ after the first rising edge is detected.
ptp_enable_t	ipls_falling_irq_auto_clear	Auto disable the falling edge IRQ after the first falling edge is detected.

◆ ptp_pulse_timer_cfg_t

struct ptp_pulse_timer_cfg_t		
------------------------------	--	--

Structure for configuring a pulse timer channel.		
Data Fields		
ptp_time_t	start_time	The exact time when the timer will start.
uint32_t	period	The period of the timer in nanoseconds.
uint32_t	pulse	The pulse width of the timer in nanoseconds.
ptp_enable_t	mint_rising_irq	Enable MINT rising edge IRQ.
ptp_enable_t	ipls_rising_event	Enable IPLS rising edge ELC event.
ptp_enable_t	ipls_falling_event	Enable IPLS falling edge ELC event.
ptp_enable_t	ipls_rising_event_auto_clear	Enable IPLS rising edge ELC event.
ptp_enable_t	ipls_falling_event_auto_clear	Enable IPLS falling edge ELC event.
ptp_enable_t	ipls_irq_source	Enable using this channel as a source for the IPLS IRQ.

◆ ptp_sync_state_cfg_t

struct ptp_sync_state_cfg_t		
Configuration settings for determining when the PTP clock is synchronized.		
Data Fields		
uint64_t	threshold	The maximum clock offset required to transition between synchronization states.
uint8_t	count	The number of times the clock must be above the threshold in order to transition between synchronization states.

◆ ptp_synfp_cfg_t

struct ptp_synfp_cfg_t		
Configuration settings for the SYNFP.		
Data Fields		
ptp_ethernet_phy_interface_t	ethernet_phy_interface	The type of interface used to communicate with the PHY.
ptp_frame_format_t	frame_format	Frame format used to transport PTP messages.
ptp_frame_filter_mode_t	frame_filter	Frame filter mode.

uint8_t	clock_domain	Clock domain that the clock operates in.
ptp_enable_t	clock_domain_filter	Filter out messages from other clock domains.
ptp_message_interval_t	announce_interval	Interval for transmitting announce messages.
ptp_message_interval_t	sync_interval	Interval for transmitting sync messages.
ptp_message_interval_t	delay_req_interval	Interval for transmitting delay_req messages.
uint32_t	message_timeout	Timeout in milliseconds for receiving PTP messages.
ptp_clock_properties_t	clock_properties	Clock properties used in announce messages.
uint8_t	timesource	TimeSource field used in announce messages.
uint8_t *	p_multicast_addr_filter	Filter for multicast packets.
struct ptp_synfp_cfg_t	ether	Valid if frame_format is set to Ethernet II or IEEE 802.3.
struct ptp_synfp_cfg_t	ipv4	Valid if frame_format is set to IPV4_UDP.

◆ ptp_synfp_cfg_t.ether

struct ptp_synfp_cfg_t.ether		
Valid if frame_format is set to Ethernet II or IEEE 802.3.		
Data Fields		
uint8_t *	p_primary_mac_addr	The MAC address to send primary messages.
uint8_t *	p_pdelay_mac_addr	The MAC address to send p2p messages.

◆ ptp_synfp_cfg_t.ipv4

struct ptp_synfp_cfg_t.ipv4		
Valid if frame_format is set to IPV4_UDP.		
Data Fields		
uint32_t	primary_ip_addr	The IP address to send primary messages.
uint32_t	pdelay_ip_addr	The IP address to send pdelay messages.
uint8_t	event_tos	Type of service for event messages.

uint8_t	general_tos	Type of service for general messages.
uint8_t	primary_ttl	Time to live for primary messages.
uint8_t	pdelay_ttl	Time to live for pdelay messages.
uint16_t	event_udp_port	The port to send event messages.
uint16_t	general_udp_port	The port to send general messages.

◆ ptp_stca_cfg_t

struct ptp_stca_cfg_t		
Configuration settings for the STCA.		
Data Fields		
ptp_stca_clock_freq_t	clock_freq	Select the clock frequency of the STCA.
ptp_stca_clock_sel_t	clock_sel	Select the input clock to the STCA.
ptp_clock_correction_mode_t	clock_correction_mode	Select the clock correction mode.
uint8_t	gradient_worst10_interval	Select the interval for the gradient worst10 acquisition.
ptp_sync_state_cfg_t	sync_threshold	Configure the synchronization threshold.
ptp_sync_state_cfg_t	sync_loss_threshold	Configure the SYNchronization lost threshold.

◆ ptp_cfg_t

struct ptp_cfg_t		
User configuration structure, used in open function		
Data Fields		
ptp_synfp_cfg_t	synfp	Configuration settings for the SYNFP.
ptp_stca_cfg_t	stca	Configuration settings for the STCA.

edmac_instance_t *	p_edmac_instance
	Pointer to PTP edmac instance.
uint16_t	buffer_size
	The maximum Ethernet packet size that can be transmitted or received.
uint8_t **	p_rx_buffers
	Pointer to list of buffers used to receive PTP packets.
uint8_t **	p_tx_buffers
	Pointer to list of buffers used to transmit PTP packets.
IRQn_Type	mint_irq
	Interrupt number for PTP event IRQ.
IRQn_Type	ipls_irq
	Interrupt number for PTP timer IRQ.
uint8_t	mint_ipl
	Interrupt priority of the PTP event IRQ.
uint8_t	ipls_ipl
	Interrupt priority of the PTP timer IRQ.
void(*	p_callback)(ptp_callback_args_t *p_args)

Field Documentation

◆ **p_callback**

```
void(* ptp_cfg_t::p_callback) (ptp_callback_args_t *p_args)
```

Callback for handling received PTP events.

◆ **ptp_api_t**

```
struct ptp_api_t
```

Timer API structure. General timer functions implemented at the HAL layer follow this API.

Field Documentation

◆ open

`fsp_err_t(* ptp_api_t::open) (ptp_ctrl_t *const p_ctrl, ptp_cfg_t const *const p_cfg)`

Initial configuration.

Implemented as

- `R_PTP_Open()`

Note

To reconfigure after calling this function, call `ptp_api_t::close` first.

Parameters

[in]	<code>p_ctrl</code>	Pointer to control structure.
[in]	<code>p_cfg</code>	Pointer to pin configuration structure.

◆ macAddrSet

`fsp_err_t(* ptp_api_t::macAddrSet) (ptp_ctrl_t *const p_ctrl, uint8_t const *const p_mac_addr)`

Set the MAC address for the PTP.

Implemented as

- `R_PTP_MacAddrSet()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control structure.
[in]	<code>p_hw_addr</code>	Pointer to the 6 byte MAC address.

◆ **ipAddrSet**

```
fsp_err_t(* ptp_api_t::ipAddrSet) (ptp_ctrl_t *const p_ctrl, uint32_t ip_addr)
```

Set the IP address for the PTP.

Implemented as

- [R_PTP_IpAddrSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	ip_addr	32 bit IPv4 address of the PTP.

◆ **localClockIdSet**

```
fsp_err_t(* ptp_api_t::localClockIdSet) (ptp_ctrl_t *const p_ctrl, uint8_t const *const p_clock_id)
```

Set the local clock ID (Usually based off of the PTP MAC address).

Implemented as

- [R_PTP_LocalClockIdSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_clock_id	Pointer to 8 byte clock ID.

◆ **masterClockIdSet**

```
fsp_err_t(* ptp_api_t::masterClockIdSet) (ptp_ctrl_t *const p_ctrl, uint8_t const *const p_clock_id, uint16_t port_id)
```

Set the master clock ID (Usually obtained from previously received announce message).

Implemented as

- [R_PTP_MasterClockIdSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_clock_id	Pointer to 8 byte clock ID.
[in]	port_id	The port on the master clock.

◆ messageFlagsSet

```
fsp_err_t(* ptp_api_t::messageFlagsSet) (ptp_ctrl_t *const p_ctrl, ptp_message_type_t message_type, ptp_message_flags_t flags)
```

Set the flags field for the given message type.

Implemented as

- R_PTP_MessageFlagsSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	message_type	The message type.
[in]	flags	Flags to set.

◆ currentUtcOffsetSet

```
fsp_err_t(* ptp_api_t::currentUtcOffsetSet) (ptp_ctrl_t *const p_ctrl, uint16_t offset)
```

Sets the offsetFromMaster field in announce messages.

Implemented as

- R_PTP_CurrentUtcOffsetSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	offset	New currentUtcOffset value.

◆ portStateSet

```
fsp_err_t(* ptp_api_t::portStateSet) (ptp_ctrl_t *const p_ctrl, uint32_t state)
```

Transition to a new clock state.

Implemented as

- R_PTP_PortStateSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	state	The state to transition into.

◆ messageSend

```
fsp_err_t(* ptp_api_t::messageSend) (ptp_ctrl_t *const p_ctrl, ptp_message_t const *const p_message, uint8_t const *const p_tlv_data, uint16_t tlv_data_size)
```

Send a PTP message. Appropriate fields in the PTP message will be endian swapped. The application must ensure that the TLV data is in big endian format.

Implemented as

- R_PTP_MessageSend()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_message	Pointer to a PTP message.
[in]	p_tlv_data	Pointer to TLV data that is appended to the end of the PTP message.
[in]	tlv_data_size	Size of the TLV data in bytes.

◆ localClockValueSet

```
fsp_err_t(* ptp_api_t::localClockValueSet) (ptp_ctrl_t *const p_ctrl, ptp_time_t const *const p_time)
```

Set the local clock value.

Implemented as

- R_PTP_LocalClockValueSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_time	Pointer to the new time setting.

◆ localClockValueGet

```
fsp_err_t(* ptp_api_t::localClockValueGet) (ptp_ctrl_t *const p_ctrl, ptp_time_t *const p_time)
```

Get the local clock value.

Implemented as

- R_PTP_LocalClockValueGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_time	Pointer to store the current time setting.

◆ pulseTimerCommonConfig

```
fsp_err_t(* ptp_api_t::pulseTimerCommonConfig) (ptp_ctrl_t *const p_ctrl,
ptp_pulse_timer_common_cfg_t *p_timer_cfg)
```

Configuration that is common to all of the pulse timers.

Implemented as

- R_PTP_PulseTimerCommonConfig()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_timer_cfg	Pointer to the pulse timer common configuration.

◆ pulseTimerEnable

```
fsp_err_t(* ptp_api_t::pulseTimerEnable) (ptp_ctrl_t *const p_ctrl, uint32_t channel,
ptp_pulse_timer_cfg_t *const p_timer_cfg)
```

Setup a pulse timer.

Implemented as

- R_PTP_PulseTimerEnable()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	channel	The pulse timer channel to setup.
[in]	p_timer_cfg	Pointer to the pulse timer configuration.

◆ pulseTimerDisable

```
fsp_err_t(* ptp_api_t::pulseTimerDisable) (ptp_ctrl_t *const p_ctrl, uint32_t channel)
```

Stop a pulse timer.

Implemented as

- R_PTP_PulseTimerDisable()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	channel	The pulse timer channel to stop.

◆ **close**

```
fsp_err_t(* ptp_api_t::close) (ptp_ctrl_t *const p_ctrl)
```

Stop PTP operation.

Implemented as

- R_PTP_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **ptp_instance_t**

```
struct ptp_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

ptp_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
ptp_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
ptp_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **ptp_ctrl_field_t**

```
typedef enum PTP_PACKED e_ptp_ctrl_field ptp_ctrl_field_t
```

The control field for PTP message header.

◆ **ptp_message_delay_req_t**

```
typedef ptp_message_sync_t ptp_message_delay_req_t
```

Delay_req Message Type (0x01).

◆ **ptp_message_follow_up_t**

```
typedef ptp_message_sync_t ptp_message_follow_up_t
```

Follow_up Message Type (0x08).

◆ **ptp_message_delay_resp_t**typedef [ptp_message_pdelay_resp_t](#) [ptp_message_delay_resp_t](#)

Delay_resp Message Type (0x09).

◆ **ptp_message_pdelay_resp_follow_up_t**typedef [ptp_message_delay_resp_t](#) [ptp_message_pdelay_resp_follow_up_t](#)

PDelay_resp_follow_up Message Type (0x0A).

Enumeration Type Documentation◆ **ptp_message_type_t**enum [ptp_message_type_t](#)

Standard PTP message types.

Enumerator

PTP_MESSAGE_TYPE_SYNC	Sync Message Type.
PTP_MESSAGE_TYPE_DELAY_REQ	Delay_req Message Type.
PTP_MESSAGE_TYPE_PDELAY_REQ	PDelay_req Message Type.
PTP_MESSAGE_TYPE_PDELAY_RESP	PDelay_resp Message Type.
PTP_MESSAGE_TYPE_FOLLOW_UP	Follow_up Message Type.
PTP_MESSAGE_TYPE_DELAY_RESP	Delay_resp Message Type.
PTP_MESSAGE_TYPE_PDELAY_RESP_FOLLOW_UP	PDelay_resp_follow_up Message Type.
PTP_MESSAGE_TYPE_ANNOUNCE	Announce Message Type.
PTP_MESSAGE_TYPE_SIGNALING	Signaling Message Type.
PTP_MESSAGE_TYPE_MANAGEMENT	Management Message Type.

◆ **ptp_port_state_t**

enum ptp_port_state_t	
Possible states that the PTP instance can be in.	
Enumerator	
PTP_PORT_STATE_GENERATE_ANNOUNCE	Generate Announce Messages.
PTP_PORT_STATE_GENERATE_SYNC	Generate Sync Messages.
PTP_PORT_STATE_GENERATE_DELAY_REQ	Generate Delay_req Messages.
PTP_PORT_STATE_GENERATE_PDELAY_REQ	Generate PDelay_req Messages.
PTP_PORT_STATE_RECEIVE_ANNOUNCE	Receive Announce Messages from ptp_cfg_t::p_callback .
PTP_PORT_STATE_RECEIVE_SYNC	Receive Sync Messages from ptp_cfg_t::p_callback .
PTP_PORT_STATE_RECEIVE_FOLLOW_UP	Receive Follow_up Messages from ptp_cfg_t::p_callback .
PTP_PORT_STATE_RECEIVE_DELAY_REQ	Receive Delay_req Messages from ptp_cfg_t::p_callback .
PTP_PORT_STATE_RECEIVE_DELAY_RESP	Receive Delay_resp Messages from ptp_cfg_t::p_callback .
PTP_PORT_STATE_RECEIVE_PDELAY_REQ	Receive PDelay_req Messages from ptp_cfg_t::p_callback .
PTP_PORT_STATE_RECEIVE_PDELAY_RESP	Receive PDelay_resp Messages from ptp_cfg_t::p_callback .
PTP_PORT_STATE_RECEIVE_PDELAY_RESP_FOLLOW_UP	Receive PDelay_resp_follow_up Messages from ptp_cfg_t::p_callback .
PTP_PORT_STATE_RECEIVE_MANAGEMENT	Receive Management Messages from ptp_cfg_t::p_callback .
PTP_PORT_STATE_RECEIVE_SIGNALING	Receive Signaling Messages from ptp_cfg_t::p_callback .
PTP_PORT_STATE_PROCESS_SYNC	Enable Sync Message processing.
PTP_PORT_STATE_PROCESS_FOLLOW_UP	Enable Follow_up Message processing.

PTP_PORT_STATE_PROCESS_DELAY_REQ	Enable Delay_req Message processing.
PTP_PORT_STATE_PROCESS_DELAY_RESP	Enable Delay_resp Message processing.
PTP_PORT_STATE_PROCESS_PDELAY_REQ	Enable PDelay_req Message processing.
PTP_PORT_STATE_PROCESS_PDELAY_RESP	Enable PDelay_resp Message processing.
PTP_PORT_STATE_PROCESS_PDELAY_RESP_FOLLOW_UP	Enable PDelay_resp_follow_up Message processing.
PTP_PORT_STATE_PASSIVE	Configure the PTP instance to only receive Announce, Management, and Signaling Messages.
PTP_PORT_STATE_E2E_MASTER	Configure the PTP instance to operate as a E2E Master.
PTP_PORT_STATE_E2E_SLAVE	Configure the PTP instance to operate as a E2E Slave.
PTP_PORT_STATE_P2P_MASTER	Configure the PTP instance to operate as a P2P Master.
PTP_PORT_STATE_P2P_SLAVE	Configure the PTP instance to operate as a P2P Slave.
PTP_PORT_STATE_RECEIVE_ALL	Configure the PTP instance to receive all messages.
PTP_PORT_STATE_DISABLE	Disable all PTP message generation, processing, and reception.

◆ ptp_clock_delay_mechanism_t

enum ptp_clock_delay_mechanism_t	
The mechanism used for delay messages.	
Enumerator	
PTP_CLOCK_DELAY_MECHANISM_E2E	End to end delay mechanism.
PTP_CLOCK_DELAY_MECHANISM_P2P	Peer to peer delay mechanism.

◆ **ptp_frame_format_t**

enum <code>ptp_frame_format_t</code>	
Frame formats that PTP messages can be encapsulated in.	
Enumerator	
<code>PTP_FRAME_FORMAT_ETHERII</code>	Send PTP messages using Ethernet II frames.
<code>PTP_FRAME_FORMAT_IEEE802_3</code>	Send PTP messages using IEEE802_3 frames.
<code>PTP_FRAME_FORMAT_ETHERII_IPV4_UDP</code>	Send PTP messages using Ethernet II frames with an IP and UDP header.
<code>PTP_FRAME_FORMAT_IEEE802_3_IPV4_UDP</code>	Send PTP messages using IEEE802.3 frames with an IP and UDP header.

◆ **ptp_frame_filter_mode_t**

enum <code>ptp_frame_filter_mode_t</code>	
Filter PTP messages based on destination MAC address. Messages that pass the filter will be transferred to the ETHERC EDMAC.	
Enumerator	
<code>PTP_FRAME_FILTER_MODE_EXT_PROMISCUOUS_MODE</code>	Receive all packets.
<code>PTP_FRAME_FILTER_MODE_UNICAST_MULTICAST</code>	Receive all unicast packets destined for the PTP and all multicast packets.
<code>PTP_FRAME_FILTER_MODE_UNICAST_MULTICAST_FILTERED</code>	Receive Unicast packets destined for the PTP and filter configured multicast packets.
<code>PTP_FRAME_FILTER_MODE_UNICAST</code>	Receive unicast packets destined for the PTP.

◆ **ptp_stca_clock_freq_t**

enum <code>ptp_stca_clock_freq_t</code>	
STCA input clock frequency.	
Enumerator	
<code>PTP_STCA_CLOCK_FREQ_20MHZ</code>	20 Mhz Input Clock
<code>PTP_STCA_CLOCK_FREQ_25MHZ</code>	25 Mhz Input Clock
<code>PTP_STCA_CLOCK_FREQ_50MHZ</code>	50 Mhz Input Clock
<code>PTP_STCA_CLOCK_FREQ_100MHZ</code>	100 Mhz Input Clock

◆ **ptp_stca_clock_sel_t**

enum <code>ptp_stca_clock_sel_t</code>	
STCA input clock selection.	
Enumerator	
<code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_1</code>	PCLKA.
<code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_2</code>	PCLKA Divided by 2.
<code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_3</code>	PCLKA Divided by 3.
<code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_4</code>	PCLKA Divided by 4.
<code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_5</code>	PCLKA Divided by 5.
<code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_6</code>	PCLKA Divided by 6.
<code>PTP_STCA_CLOCK_SEL_REF50CK0</code>	50-MHz Reference Signal for timing in RMII mode (STCA clock frequency is 25 Mhz when REF50CK0 is used).

◆ **ptp_message_interval_t**

enum <code>ptp_message_interval_t</code>	
Message interval for transmitting PTP messages.	
Enumerator	
<code>PTP_MESSAGE_INTERVAL_1_128</code>	1 / 128 seconds
<code>PTP_MESSAGE_INTERVAL_1_64</code>	1 / 64 seconds
<code>PTP_MESSAGE_INTERVAL_1_32</code>	1 / 32 seconds
<code>PTP_MESSAGE_INTERVAL_1_16</code>	1 / 16 seconds
<code>PTP_MESSAGE_INTERVAL_1_8</code>	1 / 8 seconds
<code>PTP_MESSAGE_INTERVAL_1_4</code>	1 / 4 seconds
<code>PTP_MESSAGE_INTERVAL_1_2</code>	1 / 2 seconds
<code>PTP_MESSAGE_INTERVAL_1</code>	1 seconds
<code>PTP_MESSAGE_INTERVAL_2</code>	2 seconds
<code>PTP_MESSAGE_INTERVAL_4</code>	4 seconds
<code>PTP_MESSAGE_INTERVAL_8</code>	8 seconds
<code>PTP_MESSAGE_INTERVAL_16</code>	16 seconds
<code>PTP_MESSAGE_INTERVAL_32</code>	32 seconds
<code>PTP_MESSAGE_INTERVAL_64</code>	64 seconds

◆ **ptp_clock_correction_mode_t**

enum <code>ptp_clock_correction_mode_t</code>	
Clock correction mode.	
Enumerator	
<code>PTP_CLOCK_CORRECTION_MODE1</code>	Correct the local clock using the current <code>offsetFromMaster</code> value.
<code>PTP_CLOCK_CORRECTION_MODE2</code>	Correct the local clock using the calculated clock gradient.

◆ **ptp_event_t**

enum <code>ptp_event_t</code>	
PTP events provided by <code>ptp_cfg_t::p_callback</code> .	
Enumerator	
<code>PTP_EVENT_SYNC_ACQUIRED</code>	The local clock is synchronized to the master clock.
<code>PTP_EVENT_SYNC_LOST</code>	The local clock is not synchronized to the master clock.
<code>PTP_EVENT_SYNC_MESSAGE_TIMEOUT</code>	A sync message has not been received for the configured time.
<code>PTP_EVENT_WORST10_ACQUIRED</code>	Gradient worst10 values has been calculated.
<code>PTP_EVENT_OFFSET_FROM_MASTER_UPDATED</code>	The offset from the master clock has been updated.
<code>PTP_EVENT_LOG_MESSAGE_INT_CHANGED</code>	The message interval was changed.
<code>PTP_EVENT_MEAN_PATH_DELAY_UPDATED</code>	The mean path delay has been updated.
<code>PTP_EVENT_DELAY_RESP_TIMEOUT</code>	A <code>delay_resp</code> has not been received for the configured time.
<code>PTP_EVENT_LOG_MESSAGE_INT_OUT_OF_RANGE</code>	The updated message interval is out of range.
<code>PTP_EVENT_DELAY_REQ_FIFO_OVERFLOW</code>	The FIFO buffer for storing information from received <code>Delay_Req</code> messages holds 32 or more entries.
<code>PTP_EVENT_LOOP_RECEPTION_DETECTED</code>	A packet with the same sourcePortIdendity as the local clock was received.
<code>PTP_EVENT_CTRL_INFO_ABNORMALITY</code>	A malformed frame was received (EDMAC, ETHERC, and EPTPC must be reset).
<code>PTP_EVENT_DELAY_RESP_PROCESSING_HALTED</code>	Processing of <code>delay_resp</code> messages has been halted.
<code>PTP_EVENT_MESSAGE_GENERATION_HALTED</code>	Generation of messages has been halted.
<code>PTP_EVENT_MESSAGE_RECEIVED</code>	A PTP message was received from the EDMAC.
<code>PTP_EVENT_MESSAGE_TRANSMIT_COMPLETE</code>	A PTP message has been transmitted.

PTP_EVENT_PULSE_TIMER_MINT_RISING_EDGE	A rising edge occurred on a pulse timer channel.
PTP_EVENT_PULSE_TIMER_IPLS_COMMON	A rising or falling edge occurred on any pulse timer channel.

◆ ptp_ethernet_phy_interface_t

enum ptp_ethernet_phy_interface_t	
The Ethernet PHY interface type.	
Enumerator	
PTP_ETHERNET_PHY_INTERFACE_MII	Media-independant interface.
PTP_ETHERNET_PHY_INTERFACE_RMII	Reduced media-independant interface.

Variable Documentation

◆ e_ptp_ctrl_field

enum PTP_PACKED e_ptp_ctrl_field
The control field for PTP message header.

4.3.31 RTC Interface

Interfaces

Detailed Description

Interface for accessing the Realtime Clock.

Summary

The RTC Interface is for configuring Real Time Clock (RTC) functionality including alarm, periodic notification and error adjustment.

The Real Time Clock Interface can be implemented by:

- [Realtime Clock \(r_rtc\)](#)

Data Structures

```
struct rtc_callback_args_t
```

struct [rtc_error_adjustment_cfg_t](#)

struct [rtc_alarm_time_t](#)

struct [rtc_info_t](#)

struct [rtc_cfg_t](#)

struct [rtc_api_t](#)

struct [rtc_instance_t](#)

Typedefs

typedef struct tm [rtc_time_t](#)

typedef void [rtc_ctrl_t](#)

Enumerations

enum [rtc_event_t](#)

enum [rtc_clock_source_t](#)

enum [rtc_status_t](#)

enum [rtc_error_adjustment_t](#)

enum [rtc_error_adjustment_mode_t](#)

enum [rtc_error_adjustment_period_t](#)

enum [rtc_periodic_irq_select_t](#)

Data Structure Documentation

◆ [rtc_callback_args_t](#)

struct rtc_callback_args_t		
Callback function parameter data		
Data Fields		
rtc_event_t	event	The event can be used to identify what caused the callback (compare match or error).
void const *	p_context	Placeholder for user data.

◆ [rtc_error_adjustment_cfg_t](#)

struct rtc_error_adjustment_cfg_t		
Time error adjustment value configuration		
Data Fields		
rtc_error_adjustment_mode_t	adjustment_mode	Automatic Adjustment Enable/Disable.
rtc_error_adjustment_period_t	adjustment_period	Error Adjustment period.
rtc_error_adjustment_t	adjustment_type	Time error adjustment setting.
uint32_t	adjustment_value	Value of the prescaler for error adjustment.

◆ **rtc_alarm_time_t**

struct rtc_alarm_time_t		
Alarm time setting structure		
Data Fields		
rtc_time_t	time	Time structure.
bool	sec_match	Enable the alarm based on a match of the seconds field.
bool	min_match	Enable the alarm based on a match of the minutes field.
bool	hour_match	Enable the alarm based on a match of the hours field.
bool	mday_match	Enable the alarm based on a match of the days field.
bool	mon_match	Enable the alarm based on a match of the months field.
bool	year_match	Enable the alarm based on a match of the years field.
bool	dayofweek_match	Enable the alarm based on a match of the dayofweek field.

◆ **rtc_info_t**

struct rtc_info_t		
RTC Information Structure for information returned by infoGet()		
Data Fields		
rtc_clock_source_t	clock_source	Clock source for the RTC block.
rtc_status_t	status	RTC run status.

◆ **rtc_cfg_t**

struct rtc_cfg_t		
User configuration structure, used in open function		

Data Fields	
<code>rtc_clock_source_t</code>	<code>clock_source</code>
	Clock source for the RTC block.
<code>uint32_t</code>	<code>freq_compare_value_loco</code>
	The frequency comparison value for LOCO.
<code>rtc_error_adjustment_cfg_t</code> <code>const *const</code>	<code>p_err_cfg</code>
	Pointer to Error Adjustment configuration.
<code>uint8_t</code>	<code>alarm_ipl</code>
	Alarm interrupt priority.
<code>IRQn_Type</code>	<code>alarm_irq</code>
	Alarm interrupt vector.
<code>uint8_t</code>	<code>periodic_ipl</code>
	Periodic interrupt priority.
<code>IRQn_Type</code>	<code>periodic_irq</code>
	Periodic interrupt vector.
<code>uint8_t</code>	<code>carry_ipl</code>
	Carry interrupt priority.
<code>IRQn_Type</code>	<code>carry_irq</code>
	Carry interrupt vector.

void(*	p_callback)(rtc_callback_args_t *p_args)
	Called from the ISR.
void const *	p_context
	User defined context passed into callback function.
void const *	p_extend
	RTC hardware dependant configuration.

◆ rtc_api_t

struct rtc_api_t	
RTC driver structure. General RTC functions implemented at the HAL layer follow this API.	
Data Fields	
fsp_err_t(*	open)(rtc_ctrl_t *const p_ctrl, rtc_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rtc_ctrl_t *const p_ctrl)
fsp_err_t(*	calendarTimeSet)(rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time)
fsp_err_t(*	calendarTimeGet)(rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time)
fsp_err_t(*	calendarAlarmSet)(rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm)
fsp_err_t(*	calendarAlarmGet)(rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm)
fsp_err_t(*	periodicIrqRateSet)(rtc_ctrl_t *const p_ctrl, rtc_periodic_irq_select_t const rate)
fsp_err_t(*	errorAdjustmentSet)(rtc_ctrl_t *const p_ctrl, rtc_error_adjustment_cfg_t const *const err_adj_cfg)

<code>fsp_err_t</code> (*	<code>callbackSet</code>)(<code>rtc_ctrl_t</code> *const p_ctrl, void(*p_callback)(<code>rtc_callback_args_t</code> *), void const *const p_context, <code>rtc_callback_args_t</code> *const p_callback_memory)
---------------------------	--

<code>fsp_err_t</code> (*	<code>infoGet</code>)(<code>rtc_ctrl_t</code> *const p_ctrl, <code>rtc_info_t</code> *const p_rtc_info)
---------------------------	---

Field Documentation

◆ open

<code>fsp_err_t</code> (* <code>rtc_api_t::open</code>)(<code>rtc_ctrl_t</code> *const p_ctrl, <code>rtc_cfg_t</code> const *const p_cfg)

Open the RTC driver.

Implemented as

- [R_RTC_Open\(\)](#)

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[in]	p_cfg	Pointer to the configuration structure

◆ close

<code>fsp_err_t</code> (* <code>rtc_api_t::close</code>)(<code>rtc_ctrl_t</code> *const p_ctrl)

Close the RTC driver.

Implemented as

- [R_RTC_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to RTC device handle.
------	--------	-------------------------------

◆ **calendarTimeSet**

```
fsp_err_t(* rtc_api_t::calendarTimeSet) (rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time)
```

Set the calendar time and start the calendar counter

Implemented as

- [R_RTC_CalendarTimeSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[in]	p_time	Pointer to a time structure that contains the time to set
[in]	clock_start	Flag that starts the clock right after it is set

◆ **calendarTimeGet**

```
fsp_err_t(* rtc_api_t::calendarTimeGet) (rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time)
```

Get the calendar time.

Implemented as

- [R_RTC_CalendarTimeGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[out]	p_time	Pointer to a time structure that contains the time to get

◆ **calendarAlarmSet**

```
fsp_err_t(* rtc_api_t::calendarAlarmSet) (rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm)
```

Set the calendar alarm time and enable the alarm interrupt.

Implemented as

- [R_RTC_CalendarAlarmSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[in]	p_alarm	Pointer to an alarm structure that contains the alarm time to set
[in]	irq_enable_flag	Enable the ALARM irq if set

◆ **calendarAlarmGet**

```
fsp_err_t(* rtc_api_t::calendarAlarmGet) (rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm)
```

Get the calendar alarm time.

Implemented as

- [R_RTC_CalendarAlarmGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[out]	p_alarm	Pointer to an alarm structure to fill up with the alarm time

◆ **periodicIrqRateSet**

```
fsp_err_t(* rtc_api_t::periodicIrqRateSet) (rtc_ctrl_t *const p_ctrl, rtc_periodic_irq_select_t const rate)
```

Set the periodic irq rate

Implemented as

- [R_RTC_PeriodicIrqRateSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[in]	rate	Rate of periodic interrupts

◆ **errorAdjustmentSet**

```
fsp_err_t(* rtc_api_t::errorAdjustmentSet) (rtc_ctrl_t *const p_ctrl, rtc_error_adjustment_cfg_t const *const err_adj_cfg)
```

Set time error adjustment.

Implemented as

- [R_RTC_ErrorAdjustmentSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	err_adj_cfg	Pointer to the Error Adjustment Config

◆ **callbackSet**

```
fsp_err_t(* rtc_api_t::callbackSet) (rtc_ctrl_t *const p_ctrl, void(*p_callback)(rtc_callback_args_t *),
void const *const p_context, rtc_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- [R_RTC_CallbackSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to the RTC control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated

◆ **infoGet**

```
fsp_err_t(* rtc_api_t::infoGet) (rtc_ctrl_t *const p_ctrl, rtc_info_t *const p_rtc_info)
```

Return the currently configure clock source for the RTC

Implemented as

- [R_RTC_InfoGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control handle structure
[out]	p_rtc_info	Pointer to RTC information structure

◆ **rtc_instance_t**

```
struct rtc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rtc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rtc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rtc_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rtc_time_t

```
typedef struct tm rtc_time_t
```

Date and time structure defined in C standard library <time.h>

◆ rtc_ctrl_t

```
typedef void rtc_ctrl_t
```

RTC control block. Allocate an instance specific control block to pass into the RTC API calls.

Implemented as

- [rtc_instance_ctrl_t](#)

Enumeration Type Documentation

◆ rtc_event_t

```
enum rtc_event_t
```

Events that can trigger a callback function

Enumerator

RTC_EVENT_ALARM_IRQ

Real Time Clock ALARM IRQ.

RTC_EVENT_PERIODIC_IRQ

Real Time Clock PERIODIC IRQ.

◆ rtc_clock_source_t

```
enum rtc_clock_source_t
```

Clock source for the RTC block

Enumerator

RTC_CLOCK_SOURCE_SUBCLK

Sub-clock oscillator.

RTC_CLOCK_SOURCE_LOCO

Low power On Chip Oscillator.

◆ **rtc_status_t**

enum <code>rtc_status_t</code>	
RTC run state	
Enumerator	
<code>RTC_STATUS_STOPPED</code>	RTC counter is stopped.
<code>RTC_STATUS_RUNNING</code>	RTC counter is running.

◆ **rtc_error_adjustment_t**

enum <code>rtc_error_adjustment_t</code>	
Time error adjustment settings	
Enumerator	
<code>RTC_ERROR_ADJUSTMENT_NONE</code>	Adjustment is not performed.
<code>RTC_ERROR_ADJUSTMENT_ADD_PRESCALER</code>	Adjustment is performed by the addition to the prescaler.
<code>RTC_ERROR_ADJUSTMENT_SUBTRACT_PRESCALER</code>	Adjustment is performed by the subtraction from the prescaler.

◆ **rtc_error_adjustment_mode_t**

enum <code>rtc_error_adjustment_mode_t</code>	
Time error adjustment mode settings	
Enumerator	
<code>RTC_ERROR_ADJUSTMENT_MODE_MANUAL</code>	Adjustment mode is set to manual.
<code>RTC_ERROR_ADJUSTMENT_MODE_AUTOMATIC</code>	Adjustment mode is set to automatic.

◆ **rtc_error_adjustment_period_t**

enum rtc_error_adjustment_period_t	
Time error adjustment period settings	
Enumerator	
RTC_ERROR_ADJUSTMENT_PERIOD_1_MINUTE	Adjustment period is set to every one minute.
RTC_ERROR_ADJUSTMENT_PERIOD_10_SECOND	Adjustment period is set to every ten second.
RTC_ERROR_ADJUSTMENT_PERIOD_NONE	Adjustment period not supported in manual mode.

◆ **rtc_periodic_irq_select_t**

enum rtc_periodic_irq_select_t	
Periodic Interrupt select	
Enumerator	
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_256_SECONDS	A periodic irq is generated every 1/256 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_128_SECONDS	A periodic irq is generated every 1/128 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_64_SECONDS	A periodic irq is generated every 1/64 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_32_SECONDS	A periodic irq is generated every 1/32 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_16_SECONDS	A periodic irq is generated every 1/16 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_8_SECONDS	A periodic irq is generated every 1/8 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_4_SECONDS	A periodic irq is generated every 1/4 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_2_SECONDS	A periodic irq is generated every 1/2 second.
RTC_PERIODIC_IRQ_SELECT_1_SECOND	A periodic irq is generated every 1 second.
RTC_PERIODIC_IRQ_SELECT_2_SECONDS	A periodic irq is generated every 2 seconds.

4.3.32 SD/MMC Interface

Interfaces

Detailed Description

Interface for accessing SD, eMMC, and SDIO devices.

Summary

The `r_sdhi` interface provides standard SD and eMMC media functionality. This interface also supports SDIO.

The SD/MMC interface is implemented by:

- [SD/MMC Host Interface \(`r_sdhi`\)](#)

Data Structures

struct [sdmmc_status_t](#)

struct [sdmmc_device_t](#)

struct [sdmmc_callback_args_t](#)

struct [sdmmc_cfg_t](#)

struct [sdmmc_api_t](#)

struct [sdmmc_instance_t](#)

Typedefs

typedef void [sdmmc_ctrl_t](#)

Enumerations

enum [sdmmc_card_type_t](#)

enum [sdmmc_bus_width_t](#)

enum [sdmmc_io_transfer_mode_t](#)

enum [sdmmc_io_address_mode_t](#)

enum [sdmmc_io_write_mode_t](#)

enum [sdmmc_event_t](#)

enum [sdmmc_card_detect_t](#)

enum [sdmmc_write_protect_t](#)enum [sdmmc_r1_state_t](#)

Data Structure Documentation

◆ [sdmmc_status_t](#)

struct sdmmc_status_t		
Current status.		
Data Fields		
bool	initialized	False if card was removed (only applies if MCU supports card detection and SDnCD pin is connected), true otherwise. If ready is false, call sdmmc_api_t::medialnit to reinitialize it
bool	transfer_in_progress	true = Card is busy
bool	card_inserted	Card detect status, true if card detect is not used.

◆ [sdmmc_device_t](#)

struct sdmmc_device_t		
Information obtained from the media device.		
Data Fields		
sdmmc_card_type_t	card_type	SD, eMMC, or SDIO.
bool	write_protected	true = Card is write protected
uint32_t	clock_rate	Current clock rate.
uint32_t	sector_count	Sector count.
uint32_t	sector_size_bytes	Sector size.
uint32_t	erase_sector_count	Minimum erasable unit (in 512 byte sectors)

◆ [sdmmc_callback_args_t](#)

struct sdmmc_callback_args_t		
Callback function parameter data		
Data Fields		
sdmmc_event_t	event	The event can be used to identify what caused the callback.

sdmmc_response_t	response	Response from card, only valid if SDMMC_EVENT_RESPONSE is set in event.
void const *	p_context	Placeholder for user data.

◆ **sdmmc_cfg_t**

struct sdmmc_cfg_t		
SD/MMC Configuration		
Data Fields		
uint8_t	channel	
		Channel of SD/MMC host interface.
sdmmc_bus_width_t	bus_width	
		Device bus width is 1, 4 or 8 bits wide.
transfer_instance_t const *	p_lower_lvl_transfer	
		Transfer instance used to move data with DMA or DTC.
void(*	p_callback)(sdmmc_callback_args_t *p_args)	
		Pointer to callback function.
void const *	p_context	
		User defined context passed into callback function.
void const *	p_extend	
		SD/MMC hardware dependent configuration.
uint32_t	block_size	
sdmmc_card_detect_t	card_detect	

<code>sdmcc_write_protect_t</code>	<code>write_protect</code>
<code>IRQn_Type</code>	<code>access_irq</code>
	Access IRQ number.
<code>IRQn_Type</code>	<code>sdio_irq</code>
	SDIO IRQ number.
<code>IRQn_Type</code>	<code>card_irq</code>
	Card IRQ number.
<code>IRQn_Type</code>	<code>dma_req_irq</code>
	DMA request IRQ number.
<code>uint8_t</code>	<code>access_ipl</code>
	Access interrupt priority.
<code>uint8_t</code>	<code>sdio_ipl</code>
	SDIO interrupt priority.
<code>uint8_t</code>	<code>card_ipl</code>
	Card interrupt priority.
<code>uint8_t</code>	<code>dma_req_ipl</code>
	DMA request interrupt priority.
Field Documentation	

◆ **block_size**

uint32_t sdmmc_cfg_t::block_size

Block size in bytes. Block size must be 512 bytes for SD cards and eMMC devices. Block size can be 1-512 bytes for SDIO.

◆ **card_detect**

sdmmc_card_detect_t sdmmc_cfg_t::card_detect

Whether or not card detection is used.

◆ **write_protect**

sdmmc_write_protect_t sdmmc_cfg_t::write_protect

Select whether or not to use the write protect pin. Select Not Used if the MCU or device does not have a write protect pin.

◆ **sdmmc_api_t**

struct sdmmc_api_t

SD/MMC functions implemented at the HAL layer API.

Data Fields

fsp_err_t(*)	open)(sdmmc_ctrl_t *const p_ctrl, sdmmc_cfg_t const *const p_cfg)
fsp_err_t(*)	mediaInit)(sdmmc_ctrl_t *const p_ctrl, sdmmc_device_t *const p_device)

Field Documentation

◆ open

`fsp_err_t(* sdmmc_api_t::open) (sdmmc_ctrl_t *const p_ctrl, sdmmc_cfg_t const *const p_cfg)`

Open the SD/MMC driver.

Implemented as

- `R_SDHI_Open()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to SD/MMC instance control block.
[in]	<code>p_cfg</code>	Pointer to SD/MMC instance configuration structure.

◆ **medialnit**

```
fsp_err_t(* sdmmc_api_t::medialnit) (sdmmc_ctrl_t *const p_ctrl, sdmmc_device_t *const p_device)
```

Initializes an SD/MMC device. If the device is a card, the card must be plugged in prior to calling this API. This API blocks until the device initialization procedure is complete.

Implemented as

- [R_SDHI_Medialnit\(\)](#)

Parameters

[in]	p_ctrl	Pointer to SD/MMC instance control block.
[out]	p_device	Pointer to store device information.

◆ **read**

```
fsp_err_t(* sdmmc_api_t::read) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const start_sector, uint32_t const sector_count)
```

Read data from an SD/MMC channel. This API is not supported for SDIO devices.

Implemented as

- [R_SDHI_Read\(\)](#)

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[out]	p_dest	Pointer to data buffer to read data to.
[in]	start_sector	First sector address to read.
[in]	sector_count	Number of sectors to read. All sectors must be in the range of sdmmc_device_t::sector_count .

◆ write

```
fsp_err_t(*sdmmc_api_t::write)(sdmmc_ctrl_t*const p_ctrl, uint8_t const*const p_source, uint32_t const start_sector, uint32_t const sector_count)
```

Write data to SD/MMC channel. This API is not supported for SDIO devices.

Implemented as

- R_SDHI_Write()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[in]	p_source	Pointer to data buffer to write data from.
[in]	start_sector	First sector address to write to.
[in]	sector_count	Number of sectors to write. All sectors must be in the range of <code>sdmmc_device_t::sector_count</code> .

◆ readlo

```
fsp_err_t(*sdmmc_api_t::readlo)(sdmmc_ctrl_t*const p_ctrl, uint8_t*const p_data, uint32_t const function, uint32_t const address)
```

Read one byte of I/O data from an SDIO device. This API is not supported for SD or eMMC memory devices.

Implemented as

- R_SDHI_Readlo()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[out]	p_data	Pointer to location to store data byte.
[in]	function	SDIO Function Number.
[in]	address	SDIO register address.

◆ **writel0**

```
fsp_err_t(* sdmmc_api_t::writel0) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t const
function, uint32_t const address, sdmmc_io_write_mode_t const read_after_write)
```

Write one byte of I/O data to an SDIO device. This API is not supported for SD or eMMC memory devices.

Implemented as

- R_SDHI_Writel0()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[in,out]	p_data	Pointer to data byte to write. Read data is also provided here if read_after_write is true.
[in]	function	SDIO Function Number.
[in]	address	SDIO register address.
[in]	read_after_write	Whether or not to read back the same register after writing

◆ **readloExt**

```
fsp_err_t(* sdmmc_api_t::readloExt) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t
const function, uint32_t const address, uint32_t *const count, sdmmc_io_transfer_mode_t
transfer_mode, sdmmc_io_address_mode_t address_mode)
```

Read multiple bytes or blocks of I/O data from an SDIO device. This API is not supported for SD or eMMC memory devices.

Implemented as

- R_SDHI_ReadloExt()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[out]	p_dest	Pointer to data buffer to read data to.
[in]	function	SDIO Function Number.
[in]	address	SDIO register address.
[in]	count	Number of bytes or blocks to read, maximum 512 bytes or 511 blocks.
[in]	transfer_mode	Byte or block mode
[in]	address_mode	Fixed or incrementing address mode

◆ **writeloExt**

```
fsp_err_t(* sdmmc_api_t::writeloExt) (sdmmc_ctrl_t *const p_ctrl, uint8_t const *const p_source,
uint32_t const function, uint32_t const address, uint32_t const count, sdmmc_io_transfer_mode_t
transfer_mode, sdmmc_io_address_mode_t address_mode)
```

Write multiple bytes or blocks of I/O data to an SDIO device. This API is not supported for SD or eMMC memory devices.

Implemented as

- R_SDHI_WriteloExt()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[in]	p_source	Pointer to data buffer to write data from.
[in]	function_number	SDIO Function Number.
[in]	address	SDIO register address.
[in]	count	Number of bytes or blocks to write, maximum 512 bytes or 511 blocks.
[in]	transfer_mode	Byte or block mode
[in]	address_mode	Fixed or incrementing address mode

◆ **ioIntEnable**

```
fsp_err_t(* sdmmc_api_t::ioIntEnable) (sdmmc_ctrl_t *const p_ctrl, bool enable)
```

Enables SDIO interrupt for SD/MMC instance. This API is not supported for SD or eMMC memory devices.

Implemented as

- R_SDHI_IoIntEnable

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[in]	enable	Interrupt enable = true, interrupt disable = false.

◆ **statusGet**

```
fsp_err_t(* sdmmc_api_t::statusGet) (sdmmc_ctrl_t *const p_ctrl, sdmmc_status_t *const p_status)
```

Get SD/MMC device status.

Implemented as

- [R_SDHI_StatusGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[out]	p_status	Pointer to current driver status.

◆ **erase**

```
fsp_err_t(* sdmmc_api_t::erase) (sdmmc_ctrl_t *const p_ctrl, uint32_t const start_sector, uint32_t const sector_count)
```

Erase SD/MMC sectors. The sector size for erase is fixed at 512 bytes. This API is not supported for SDIO devices.

Implemented as

- [R_SDHI_Erase](#)

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[in]	start_sector	First sector to erase. Must be a multiple of sdmmc_device_t::erase_sector_count .
[in]	sector_count	Number of sectors to erase. Must be a multiple of sdmmc_device_t::erase_sector_count . All sectors must be in the range of sdmmc_device_t::sector_count .

◆ **callbackSet**

```
fsp_err_t(* sdmmc_api_t::callbackSet) (sdmmc_ctrl_t *const p_api_ctrl,
void(*p_callback)(sdmmc_callback_args_t *), void const *const p_context, sdmmc_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_SDHI_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in sdmmc_api_t::open call.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* sdmmc_api_t::close) (sdmmc_ctrl_t *const p_ctrl)
```

Close open SD/MMC device.

Implemented as

- R_SDHI_Close()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
------	--------	---

◆ **sdmmc_instance_t**

```
struct sdmmc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

sdmmc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
sdmmc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
sdmmc_api_t const *	p_api	Pointer to the API structure for

		this instance.
--	--	----------------

Typedef Documentation

◆ `sdmmc_ctrl_t`

```
typedef void sdmmc_ctrl_t
```

SD/MMC control block. Allocate an instance specific control block to pass into the SD/MMC API calls.

Implemented as

- `sdmmc_instance_ctrl_t`

Enumeration Type Documentation

◆ `sdmmc_card_type_t`

```
enum sdmmc_card_type_t
```

SD/MMC media uses SD protocol or MMC protocol.

Enumerator

<code>SDMMC_CARD_TYPE_MMC</code>	The media is an eMMC device.
<code>SDMMC_CARD_TYPE_SD</code>	The media is an SD card.
<code>SDMMC_CARD_TYPE_SDIO</code>	The media is an SDIO card.

◆ `sdmmc_bus_width_t`

```
enum sdmmc_bus_width_t
```

SD/MMC data bus is 1, 4 or 8 bits wide.

Enumerator

<code>SDMMC_BUS_WIDTH_1_BIT</code>	Data bus is 1 bit wide.
<code>SDMMC_BUS_WIDTH_4_BITS</code>	Data bus is 4 bits wide.
<code>SDMMC_BUS_WIDTH_8_BITS</code>	Data bus is 8 bits wide.

◆ **sdmmc_io_transfer_mode_t**

enum sdmmc_io_transfer_mode_t	
SDIO transfer mode, configurable in SDIO read/write extended commands.	
Enumerator	
SDMMC_IO_MODE_TRANSFER_BYTE	SDIO byte transfer mode.
SDMMC_IO_MODE_TRANSFER_BLOCK	SDIO block transfer mode.

◆ **sdmmc_io_address_mode_t**

enum sdmmc_io_address_mode_t	
SDIO address mode, configurable in SDIO read/write extended commands.	
Enumerator	
SDMMC_IO_ADDRESS_MODE_FIXED	Write all data to the same address.
SDMMC_IO_ADDRESS_MODE_INCREMENT	Increment destination address after each write.

◆ **sdmmc_io_write_mode_t**

enum sdmmc_io_write_mode_t	
Controls the RAW (read after write) flag of CMD52. Used to read back the status after writing a control register.	
Enumerator	
SDMMC_IO_WRITE_MODE_NO_READ	Write only (do not read back)
SDMMC_IO_WRITE_READ_AFTER_WRITE	Read back the register after write.

◆ **sdmmc_event_t**

enum sdmmc_event_t	
Events that can trigger a callback function	
Enumerator	
SDMMC_EVENT_CARD_REMOVED	Card removed event.
SDMMC_EVENT_CARD_INSERTED	Card inserted event.
SDMMC_EVENT_RESPONSE	Response event.
SDMMC_EVENT_SDIO	IO event.
SDMMC_EVENT_TRANSFER_COMPLETE	Read or write complete.
SDMMC_EVENT_TRANSFER_ERROR	Read or write failed.
SDMMC_EVENT_ERASE_COMPLETE	Erase completed.
SDMMC_EVENT_ERASE_BUSY	Erase timeout, poll sdmmc_api_t::statusGet .

◆ **sdmmc_card_detect_t**

enum sdmmc_card_detect_t	
Card detection configuration options.	
Enumerator	
SDMMC_CARD_DETECT_NONE	Card detection unused.
SDMMC_CARD_DETECT_CD	Card detection using the CD pin.

◆ **sdmmc_write_protect_t**

enum sdmmc_write_protect_t	
Write protection configuration options.	
Enumerator	
SDMMC_WRITE_PROTECT_NONE	Write protection unused.
SDMMC_WRITE_PROTECT_WP	Write protection using WP pin.

◆ **sdmmc_r1_state_t**

enum <code>sdmmc_r1_state_t</code>	
Card state when receiving the prior command.	
Enumerator	
<code>SDMMC_R1_STATE_IDLE</code>	Idle State.
<code>SDMMC_R1_STATE_READY</code>	Ready State.
<code>SDMMC_R1_STATE_IDENT</code>	Identification State.
<code>SDMMC_R1_STATE_STBY</code>	Stand-by State.
<code>SDMMC_R1_STATE_TRAN</code>	Transfer State.
<code>SDMMC_R1_STATE_DATA</code>	Sending-data State.
<code>SDMMC_R1_STATE_RCV</code>	Receive-data State.
<code>SDMMC_R1_STATE_PRG</code>	Programming State.
<code>SDMMC_R1_STATE_DIS</code>	Disconnect State (between programming and stand-by)
<code>SDMMC_R1_STATE_IO</code>	This is an I/O card and memory states do not apply.

4.3.33 SLCDC Interface[Interfaces](#)**Detailed Description**

Interface for Segment LCD controllers.

Data Structures

struct [slcdc_cfg_t](#)

struct [slcdc_api_t](#)

struct [slcdc_instance_t](#)

Typedefs

```
typedef void slcdc_ctrl_t
```

Enumerations

```
enum slcdc_bias_method_t
```

```
enum slcdc_time_slice_t
```

```
enum slcdc_waveform_t
```

```
enum slcdc_drive_volt_gen_t
```

```
enum slcdc_display_area_control_blink_t
```

```
enum slcdc_display_area_t
```

```
enum slcdc_contrast_t
```

```
enum slcdc_display_on_off_t
```

```
enum slcdc_display_enable_disable_t
```

```
enum slcdc_display_clock_t
```

```
enum slcdc_clk_div_t
```

Data Structure Documentation

◆ slcdc_cfg_t

struct slcdc_cfg_t		
SLCDC configuration block		
Data Fields		
slcdc_display_clock_t	slcdc_clock	LCD clock source (LCDSCKSEL)
slcdc_clk_div_t	slcdc_clock_setting	LCD clock setting (LCDC0)
slcdc_bias_method_t	bias_method	LCD display bias method select (LBAS bit)
slcdc_time_slice_t	time_slice	Time slice of LCD display select (LDTY bit)
slcdc_waveform_t	waveform	LCD display waveform select (LWAVE bit)
slcdc_drive_volt_gen_t	drive_volt_gen	LCD Drive Voltage Generator Select (MDSET bit)
slcdc_contrast_t	contrast	LCD Boost Level (contrast setting)

◆ **slcdc_api_t**

struct slcdc_api_t

SLCDC functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*)	<code>open</code>)(slcdc_ctrl_t *const p_ctrl, slcdc_cfg_t const *const p_cfg)
fsp_err_t(*)	<code>write</code>)(slcdc_ctrl_t *const p_ctrl, uint8_t const start_segment, uint8_t const *p_data, uint8_t const segment_count)
fsp_err_t(*)	<code>modify</code>)(slcdc_ctrl_t *const p_ctrl, uint8_t const segment, uint8_t const data_mask, uint8_t const data)
fsp_err_t(*)	<code>start</code>)(slcdc_ctrl_t *const p_ctrl)
fsp_err_t(*)	<code>stop</code>)(slcdc_ctrl_t *const p_ctrl)
fsp_err_t(*)	<code>setContrast</code>)(slcdc_ctrl_t *const p_ctrl, slcdc_contrast_t const contrast)
fsp_err_t(*)	<code>setDisplayArea</code>)(slcdc_ctrl_t *const p_ctrl, slcdc_display_area_t const display_area)
fsp_err_t(*)	<code>close</code>)(slcdc_ctrl_t *const p_ctrl)

Field Documentation

◆ **open**

```
fsp_err_t(* slcdc_api_t::open) (slcdc_ctrl_t *const p_ctrl, slcdc_cfg_t const *const p_cfg)
```

Open SLCDC.

Implemented as

- R_SLCDC_Open()

Parameters

[in,out]	p_ctrl	Pointer to display interface control block. Must be declared by user.
[in]	p_cfg	Pointer to display configuration structure. All elements of this structure must be set by the user.

◆ **write**

```
fsp_err_t(* slcdc_api_t::write) (slcdc_ctrl_t *const p_ctrl, uint8_t const start_segment, uint8_t const *p_data, uint8_t const segment_count)
```

Write data to the SLCDC segment data array. Specifies the initial display data. Except when using 8-time slice mode, store values in the lower 4 bits when writing to the A-pattern area and in the upper 4 bits when writing to the B-pattern area.

Implemented as

- R_SLCDC_Write()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	start_segment	Specify the start segment number to be written.
[in]	p_data	Pointer to the display data to be written to the specified segments.
[in]	segment_count	Number of segments to be written.

◆ **modify**

```
fsp_err_t(* slcdc_api_t::modify) (slcdc_ctrl_t *const p_ctrl, uint8_t const segment, uint8_t const data_mask, uint8_t const data)
```

Rewrite data in the SLCDC segment data array. Rewrites the LCD display data in 1-bit units. If a bit is not specified for rewriting, the value stored in the bit is held as it is.

Implemented as

- [R_SLCDC_Modify\(\)](#)

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	segment	The segment to be written.
[in]	data_mask	Mask the data being displayed. Set 0 to the bit to be rewritten and set 1 to the other bits. Multiple bits can be rewritten.
[in]	data	Specify display data to rewrite to the specified segment.

◆ **start**

```
fsp_err_t(* slcdc_api_t::start) (slcdc_ctrl_t *const p_ctrl)
```

Enable display signal output. Displays the segment data on the LCD.

Implemented as

- [R_SLCDC_Start\(\)](#)

Parameters

[in]	p_ctrl	Pointer to display interface control block.
------	--------	---

◆ **stop**

```
fsp_err_t(* slcdc_api_t::stop) (slcdc_ctrl_t *const p_ctrl)
```

Disable display signal output. Stops displaying data on the LCD.

Implemented as

- [R_SLCDC_Stop\(\)](#)

Parameters

[in]	p_ctrl	Pointer to display interface control block.
------	--------	---

◆ **setContrast**

```
fsp_err_t(* slcdc_api_t::setContrast) (slcdc_ctrl_t *const p_ctrl, slcdc_contrast_t const contrast)
```

Set the display contrast. This function can be used only when the internal voltage boosting method is used for drive voltage generation.

Implemented as

- [R_SLCDC_SetContrast\(\)](#)

Parameters

[in]	p_ctrl	Pointer to display interface control block.
------	--------	---

◆ **setDisplayArea**

```
fsp_err_t(* slcdc_api_t::setDisplayArea) (slcdc_ctrl_t *const p_ctrl, slcdc_display_area_t const display_area)
```

Set LCD display area. This function sets a specified display area, A-pattern or B-pattern. This function can be used to 'blink' the display between A-pattern and B-pattern area data.

When using blinking, the RTC is required to operate before this function is executed. To configure the RTC, follow the steps below. 1) Open RTC 2) Set Periodic IRQ 3) Start RTC counter 4) Enable IRQ, RTC_EVENT_PERIODIC_IRQ Refer to the User's Manual for the detailed procedure.

Implemented as

- [R_SLCDC_SetDisplayArea\(\)](#)

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	display_area	Display area to be used, A-pattern or B-pattern area.

◆ **close**

```
fsp_err_t(* slcdc_api_t::close) (slcdc_ctrl_t *const p_ctrl)
```

Close SLCDC.

Implemented as

- [R_SLCDC_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to display interface control block.
------	--------	---

◆ **slcdc_instance_t**

```
struct slcdc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

<code>slcdc_ctrl_t *</code>	<code>p_ctrl</code>	Pointer to the control structure for this instance.
<code>slcdc_cfg_t const *</code>	<code>p_cfg</code>	Pointer to the configuration structure for this instance.
<code>slcdc_api_t const *</code>	<code>p_api</code>	Pointer to the API structure for this instance.

Typedef Documentation

◆ `slcdc_ctrl_t`

```
typedef void slcdc_ctrl_t
```

SLCDC control block. Allocate an instance specific control block to pass into the SLCDC API calls.

Implemented as

- `slcdc_instance_ctrl_t` SLCDC control block

Enumeration Type Documentation

◆ `slcdc_bias_method_t`

```
enum slcdc_bias_method_t
```

LCD display bias method.

Enumerator

<code>SLCDC_BIAS_2</code>	1/2 bias method
<code>SLCDC_BIAS_3</code>	1/3 bias method
<code>SLCDC_BIAS_4</code>	1/4 bias method

◆ **slcdc_time_slice_t**

enum slcdc_time_slice_t	
Time slice of LCD display.	
Enumerator	
SLCDC_STATIC	Static.
SLCDC_SLICE_2	2-time slice
SLCDC_SLICE_3	3-time slice
SLCDC_SLICE_4	4-time slice
SLCDC_SLICE_8	8-time slice

◆ **slcdc_waveform_t**

enum slcdc_waveform_t	
LCD display waveform select.	
Enumerator	
SLCDC_WAVE_A	Waveform A.
SLCDC_WAVE_B	Waveform B.

◆ **slcdc_drive_volt_gen_t**

enum slcdc_drive_volt_gen_t	
LCD Drive Voltage Generator Select.	
Enumerator	
SLCDC_VOLT_EXTERNAL	External resistance division method.
SLCDC_VOLT_INTERNAL	Internal voltage boosting method.
SLCDC_VOLT_CAPACITOR	Capacitor split method.

◆ **slcdc_display_area_control_blink_t**

enum <code>slcdc_display_area_control_blink_t</code>	
Display Data Area Control	
Enumerator	
SLCDC_NOT_BLINKING	Display either A-pattern or B-pattern data.
SLCDC_BLINKING	Alternately display A-pattern and B-pattern data.

◆ **slcdc_display_area_t**

enum <code>slcdc_display_area_t</code>	
Display Area data	
Enumerator	
SLCDC_DISP_A	Display A-pattern data.
SLCDC_DISP_B	Display B-pattern data.
SLCDC_DISP_BLINK	Blink between A- and B-pattern.

◆ **slcdc_contrast_t**

enum <code>slcdc_contrast_t</code>	
LCD Boost Level (contrast) settings	
Enumerator	
<code>SLCDC_CONTRAST_0</code>	Contrast level 0.
<code>SLCDC_CONTRAST_1</code>	Contrast level 1.
<code>SLCDC_CONTRAST_2</code>	Contrast level 2.
<code>SLCDC_CONTRAST_3</code>	Contrast level 3.
<code>SLCDC_CONTRAST_4</code>	Contrast level 4.
<code>SLCDC_CONTRAST_5</code>	Contrast level 5.
<code>SLCDC_CONTRAST_6</code>	Contrast level 6.
<code>SLCDC_CONTRAST_7</code>	Contrast level 7.
<code>SLCDC_CONTRAST_8</code>	Contrast level 8.
<code>SLCDC_CONTRAST_9</code>	Contrast level 9.
<code>SLCDC_CONTRAST_10</code>	Contrast level 10.
<code>SLCDC_CONTRAST_11</code>	Contrast level 11.
<code>SLCDC_CONTRAST_12</code>	Contrast level 12.
<code>SLCDC_CONTRAST_13</code>	Contrast level 13.
<code>SLCDC_CONTRAST_14</code>	Contrast level 14.
<code>SLCDC_CONTRAST_15</code>	Contrast level 15.

◆ **slcdc_display_on_off_t**

enum <code>slcdc_display_on_off_t</code>	
LCD Display Enable/Disable	
Enumerator	
SLCDC_DISP_OFF	Display off.
SLCDC_DISP_ON	Display on.

◆ **slcdc_display_enable_disable_t**

enum <code>slcdc_display_enable_disable_t</code>	
LCD Display output enable	
Enumerator	
SLCDC_DISP_DISABLE	Output ground level to segment/common pins.
SLCDC_DISP_ENABLE	Output enable.

◆ **slcdc_display_clock_t**

enum <code>slcdc_display_clock_t</code>	
LCD Display clock selection	
Enumerator	
SLCDC_CLOCK_LOCO	Display clock source LOCO.
SLCDC_CLOCK_SOSC	Display clock source SOSC.
SLCDC_CLOCK_MOSC	Display clock source MOSC.
SLCDC_CLOCK_HOCO	Display clock source HOCO.

◆ **slcdc_clk_div_t**

enum <code>slcdc_clk_div_t</code>	
LCD clock settings	
Enumerator	
SLCDC_CLK_DIVISOR_LOCO_4	LOCO Clock/4.

SLCDC_CLK_DIVISOR_LOCO_8	LOCO Clock/8.
SLCDC_CLK_DIVISOR_LOCO_16	LOCO Clock/16.
SLCDC_CLK_DIVISOR_LOCO_32	LOCO Clock/32.
SLCDC_CLK_DIVISOR_LOCO_64	LOCO Clock/64.
SLCDC_CLK_DIVISOR_LOCO_128	LOCO Clock/128.
SLCDC_CLK_DIVISOR_LOCO_256	LOCO Clock/256.
SLCDC_CLK_DIVISOR_LOCO_512	LOCO Clock/512.
SLCDC_CLK_DIVISOR_LOCO_1024	LOCO Clock/1024.
SLCDC_CLK_DIVISOR_HOCO_256	HOCO Clock/256.
SLCDC_CLK_DIVISOR_HOCO_512	HOCO Clock/512.
SLCDC_CLK_DIVISOR_HOCO_1024	HOCO Clock/1024.
SLCDC_CLK_DIVISOR_HOCO_2048	HOCO Clock/2048.
SLCDC_CLK_DIVISOR_HOCO_4096	HOCO Clock/4096.
SLCDC_CLK_DIVISOR_HOCO_8192	HOCO Clock/8192.
SLCDC_CLK_DIVISOR_HOCO_16384	HOCO Clock/16384.
SLCDC_CLK_DIVISOR_HOCO_32768	HOCO Clock/32768.
SLCDC_CLK_DIVISOR_HOCO_65536	HOCO Clock/65536.
SLCDC_CLK_DIVISOR_HOCO_131072	HOCO Clock/131072.
SLCDC_CLK_DIVISOR_HOCO_262144	HOCO Clock/262144.
SLCDC_CLK_DIVISOR_HOCO_524288	HOCO Clock/524288.

4.3.34 SPI Interface

Interfaces

Detailed Description

Interface for SPI communications.

Summary

Provides a common interface for communication using the SPI Protocol.

Implemented by:

- [Serial Peripheral Interface \(r_spi\)](#)
- [Serial Communications Interface \(SCI\) SPI \(r_sci_spi\)](#)

Data Structures

struct [spi_callback_args_t](#)

struct [spi_write_read_guard_args_t](#)

struct [spi_cfg_t](#)

struct [spi_api_t](#)

struct [spi_instance_t](#)

Typedefs

typedef void [spi_ctrl_t](#)

Enumerations

enum [spi_bit_width_t](#)

enum [spi_mode_t](#)

enum [spi_clk_phase_t](#)

enum [spi_clk_polarity_t](#)

enum [spi_mode_fault_t](#)

enum [spi_bit_order_t](#)

enum [spi_event_t](#)

Data Structure Documentation

◆ [spi_callback_args_t](#)

struct [spi_callback_args_t](#)

Common callback parameter definition

Data Fields		
uint32_t	channel	Device channel number.
spi_event_t	event	Event code.
void const *	p_context	Context provided to user during callback.

◆ [spi_write_read_guard_args_t](#)

struct spi_write_read_guard_args_t
Non-secure arguments for write-read guard function

◆ [spi_cfg_t](#)

struct spi_cfg_t	
SPI interface configuration	
Data Fields	
uint8_t	channel
	Channel number to be used.
IRQn_Type	rx_irq
	Receive Buffer Full IRQ number.
IRQn_Type	tx_irq
	Transmit Buffer Empty IRQ number.
IRQn_Type	tei_irq
	Transfer Complete IRQ number.
IRQn_Type	eri_irq
	Error IRQ number.
uint8_t	rx_ipl
	Receive Interrupt priority.

uint8_t	txi_ipl
	Transmit Interrupt priority.
uint8_t	tei_ipl
	Transfer Complete Interrupt priority.
uint8_t	eri_ipl
	Error Interrupt priority.
spi_mode_t	operating_mode
	Select master or slave operating mode.
spi_clk_phase_t	clk_phase
	Data sampling on odd or even clock edge.
spi_clk_polarity_t	clk_polarity
	Clock level when idle.
spi_mode_fault_t	mode_fault
	Mode fault error (master/slave conflict) flag.
spi_bit_order_t	bit_order
	Select to transmit MSB/LSB first.
transfer_instance_t const *	p_transfer_tx
	To use SPI DTC/DMA write transfer, link a DTC/DMA instance here. Set to NULL if unused.

<code>transfer_instance_t</code> const *	<code>p_transfer_rx</code>
	To use SPI DTC/DMA read transfer, link a DTC/DMA instance here. Set to NULL if unused.
<code>void</code> (* <code>p_callback</code>)(<code>spi_callback_args_t</code> * <code>p_args</code>)	
	Pointer to user callback function.
<code>void</code> const *	<code>p_context</code>
	User defined context passed to callback function.
<code>void</code> const *	<code>p_extend</code>
	Extended SPI hardware dependent configuration.

◆ **spi_api_t**

struct <code>spi_api_t</code>	
Shared Interface definition for SPI	
Data Fields	
<code>fsp_err_t</code> (* <code>open</code>)(<code>spi_ctrl_t</code> * <code>p_ctrl</code> , <code>spi_cfg_t</code> const * <code>const p_cfg</code>)	
<code>fsp_err_t</code> (* <code>read</code>)(<code>spi_ctrl_t</code> * <code>const p_ctrl</code> , void * <code>p_dest</code> , <code>uint32_t</code> const <code>length</code> , <code>spi_bit_width_t</code> const <code>bit_width</code>)	
<code>fsp_err_t</code> (* <code>write</code>)(<code>spi_ctrl_t</code> * <code>const p_ctrl</code> , void const * <code>p_src</code> , <code>uint32_t</code> const <code>length</code> , <code>spi_bit_width_t</code> const <code>bit_width</code>)	
<code>fsp_err_t</code> (* <code>writeRead</code>)(<code>spi_ctrl_t</code> * <code>const p_ctrl</code> , void const * <code>p_src</code> , void * <code>p_dest</code> , <code>uint32_t</code> const <code>length</code> , <code>spi_bit_width_t</code> const <code>bit_width</code>)	
<code>fsp_err_t</code> (* <code>callbackSet</code>)(<code>spi_ctrl_t</code> * <code>const p_api_ctrl</code> , void(* <code>p_callback</code>)(<code>spi_callback_args_t</code> *), void const * <code>const p_context</code> , <code>spi_callback_args_t</code> * <code>const p_callback_memory</code>)	

`fsp_err_t(* close)(spi_ctrl_t *const p_ctrl)`

Field Documentation

◆ open

`fsp_err_t(* spi_api_t::open) (spi_ctrl_t *p_ctrl, spi_cfg_t const *const p_cfg)`

Initialize a channel for SPI communication mode.

Implemented as

- `R_SPI_Open()`
- `R_SPI_B_Open()`
- `R_SCI_SPI_Open()`

Parameters

[in,out]	p_ctrl	Pointer to user-provided storage for the control block.
[in]	p_cfg	Pointer to SPI configuration structure.

◆ read

```
fsp_err_t(* spi_api_t::read) (spi_ctrl_t *const p_ctrl, void *p_dest, uint32_t const length,
spi_bit_width_t const bit_width)
```

Receive data from a SPI device.

Implemented as

- R_SPI_Read()
- R_SPI_B_Read()
- R_SCI_SPI_Read()

Parameters

[in]	p_ctrl	Pointer to the control block for the channel.
[in]	length	Number of units of data to be transferred (unit size specified by the bit_width).
[in]	bit_width	Data bit width to be transferred.
[out]	p_dest	Pointer to destination buffer into which data will be copied that is received from a SPI device. It is the responsibility of the caller to ensure that adequate space is available to hold the requested data count.

◆ write

```
fsp_err_t(* spi_api_t::write) (spi_ctrl_t *const p_ctrl, void const *p_src, uint32_t const length,
spi_bit_width_t const bit_width)
```

Transmit data to a SPI device.

Implemented as

- R_SPI_Write()
- R_SPI_B_Write()
- R_SCI_SPI_Write()

Parameters

[in]	p_ctrl	Pointer to the control block for the channel.
[in]	p_src	Pointer to a source data buffer from which data will be transmitted to a SPI device. The argument must not be NULL.
[in]	length	Number of units of data to be transferred (unit size specified by the bit_width).
[in]	bit_width	Data bit width to be transferred.

◆ **writeRead**

```
fsp_err_t(* spi_api_t::writeRead) (spi_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t
const length, spi_bit_width_t const bit_width)
```

Simultaneously transmit data to a SPI device while receiving data from a SPI device (full duplex).

Implemented as

- R_SPI_WriteRead()
- R_SPI_B_WriteRead()
- R_SCI_SPI_WriteRead()

Parameters

[in]	p_ctrl	Pointer to the control block for the channel.
[in]	p_src	Pointer to a source data buffer from which data will be transmitted to a SPI device. The argument must not be NULL.
[out]	p_dest	Pointer to destination buffer into which data will be copied that is received from a SPI device. It is the responsibility of the caller to ensure that adequate space is available to hold the requested data count. The argument must not be NULL.
[in]	length	Number of units of data to be transferred (unit size specified by the bit_width).
[in]	bit_width	Data bit width to be transferred.

◆ **callbackSet**

```
fsp_err_t(* spi_api_t::callbackSet) (spi_ctrl_t *const p_api_ctrl, void(*p_callback)(spi_callback_args_t *), void const *const p_context, spi_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_SPI_CallbackSet()
- R_SPI_B_CallbackSet()
- R_SCI_SPI_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the SPI control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* spi_api_t::close) (spi_ctrl_t *const p_ctrl)
```

Remove power to the SPI channel designated by the handle and disable the associated interrupts.

Implemented as

- R_SPI_Close()
- R_SPI_B_Close()
- R_SCI_SPI_Close()

Parameters

[in]	p_ctrl	Pointer to the control block for the channel.
------	--------	---

◆ **spi_instance_t**

```
struct spi_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

spi_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
spi_cfg_t const *	p_cfg	Pointer to the configuration

		structure for this instance.
<code>spi_api_t</code> const *	<code>p_api</code>	Pointer to the API structure for this instance.

Typedef Documentation

◆ `spi_ctrl_t`

typedef void `spi_ctrl_t`

SPI control block. Allocate an instance specific control block to pass into the SPI API calls.

Implemented as

- `spi_instance_ctrl_t`
- `spi_b_instance_ctrl_t`
- `sci_spi_instance_ctrl_t`

Enumeration Type Documentation

◆ `spi_bit_width_t`

enum `spi_bit_width_t`

Data bit width

Enumerator

<code>SPI_BIT_WIDTH_4_BITS</code>	Data bit width is 4 bits (byte)
<code>SPI_BIT_WIDTH_5_BITS</code>	Data bit width is 5 bits (byte)
<code>SPI_BIT_WIDTH_6_BITS</code>	Data bit width is 6 bits (byte)
<code>SPI_BIT_WIDTH_7_BITS</code>	Data bit width is 7 bits (byte)
<code>SPI_BIT_WIDTH_8_BITS</code>	Data bit width is 8 bits (byte)
<code>SPI_BIT_WIDTH_9_BITS</code>	Data bit width is 9 bits (word)
<code>SPI_BIT_WIDTH_10_BITS</code>	Data bit width is 10 bits (word)
<code>SPI_BIT_WIDTH_11_BITS</code>	Data bit width is 11 bits (word)
<code>SPI_BIT_WIDTH_12_BITS</code>	Data bit width is 12 bits (word)
<code>SPI_BIT_WIDTH_13_BITS</code>	Data bit width is 13 bits (word)
<code>SPI_BIT_WIDTH_14_BITS</code>	Data bit width is 14 bits (word)

SPI_BIT_WIDTH_15_BITS	Data bit width is 15 bits (word)
SPI_BIT_WIDTH_16_BITS	Data bit width is 16 bits (word)
SPI_BIT_WIDTH_17_BITS	Data bit width is 17 bits (word)
SPI_BIT_WIDTH_18_BITS	Data bit width is 18 bits (word)
SPI_BIT_WIDTH_19_BITS	Data bit width is 19 bits (word)
SPI_BIT_WIDTH_20_BITS	Data bit width is 20 bits (longword)
SPI_BIT_WIDTH_21_BITS	Data bit width is 21 bits (word)
SPI_BIT_WIDTH_22_BITS	Data bit width is 22 bits (word)
SPI_BIT_WIDTH_23_BITS	Data bit width is 23 bits (longword)
SPI_BIT_WIDTH_24_BITS	Data bit width is 24 bits (longword)
SPI_BIT_WIDTH_25_BITS	Data bit width is 25 bits (longword)
SPI_BIT_WIDTH_26_BITS	Data bit width is 26 bits (word)
SPI_BIT_WIDTH_27_BITS	Data bit width is 27 bits (word)
SPI_BIT_WIDTH_28_BITS	Data bit width is 28 bits (word)
SPI_BIT_WIDTH_29_BITS	Data bit width is 29 bits (word)
SPI_BIT_WIDTH_30_BITS	Data bit width is 30 bits (longword)
SPI_BIT_WIDTH_31_BITS	Data bit width is 31 bits (longword)
SPI_BIT_WIDTH_32_BITS	Data bit width is 32 bits (longword)

◆ spi_mode_t

enum spi_mode_t	
Master or slave operating mode	
Enumerator	
SPI_MODE_MASTER	Channel operates as SPI master.
SPI_MODE_SLAVE	Channel operates as SPI slave.

◆ spi_clk_phase_t

enum spi_clk_phase_t	
Clock phase	
Enumerator	
SPI_CLK_PHASE_EDGE_ODD	0: Data sampling on odd edge, data variation on even edge
SPI_CLK_PHASE_EDGE_EVEN	1: Data variation on odd edge, data sampling on even edge

◆ spi_clk_polarity_t

enum spi_clk_polarity_t	
Clock polarity	
Enumerator	
SPI_CLK_POLARITY_LOW	0: Clock polarity is low when idle
SPI_CLK_POLARITY_HIGH	1: Clock polarity is high when idle

◆ spi_mode_fault_t

enum spi_mode_fault_t	
Mode fault error flag. This error occurs when the device is setup as a master, but the SS/SA line does not seem to be controlled by the master. This usually happens when the connecting device is also acting as master. A similar situation can also happen when configured as a slave.	
Enumerator	
SPI_MODE_FAULT_ERROR_ENABLE	Mode fault error flag on.
SPI_MODE_FAULT_ERROR_DISABLE	Mode fault error flag off.

◆ **spi_bit_order_t**

enum <code>spi_bit_order_t</code>	
Bit order	
Enumerator	
<code>SPI_BIT_ORDER_MSB_FIRST</code>	Send MSB first in transmission.
<code>SPI_BIT_ORDER_LSB_FIRST</code>	Send LSB first in transmission.

◆ **spi_event_t**

enum <code>spi_event_t</code>	
SPI events	
Enumerator	
<code>SPI_EVENT_TRANSFER_COMPLETE</code>	The data transfer was completed.
<code>SPI_EVENT_TRANSFER_ABORTED</code>	The data transfer was aborted.
<code>SPI_EVENT_ERR_MODE_FAULT</code>	Mode fault error.
<code>SPI_EVENT_ERR_READ_OVERFLOW</code>	Read overflow error.
<code>SPI_EVENT_ERR_PARITY</code>	Parity error.
<code>SPI_EVENT_ERR_OVERRUN</code>	Overrun error.
<code>SPI_EVENT_ERR_FRAMING</code>	Framing error.
<code>SPI_EVENT_ERR_MODE_UNDERRUN</code>	Underrun error.

4.3.35 SPI Flash Interface

Interfaces

Detailed Description

Interface for accessing external SPI flash devices.

Summary

The SPI flash API provides an interface that configures, writes, and erases sectors in SPI flash devices.

Implemented by:

- Octa Serial Peripheral Interface for Flash and RAM devices (r_ospfi)
- Quad Serial Peripheral Interface Flash (r_qsfi)

Data Structures

struct [spi_flash_erase_command_t](#)

struct [spi_flash_direct_transfer_t](#)

struct [spi_flash_cfg_t](#)

struct [spi_flash_status_t](#)

struct [spi_flash_api_t](#)

struct [spi_flash_instance_t](#)

Typedefs

typedef void [spi_flash_ctrl_t](#)

Enumerations

enum [spi_flash_read_mode_t](#)

enum [spi_flash_protocol_t](#)

enum [spi_flash_address_bytes_t](#)

enum [spi_flash_data_lines_t](#)

enum [spi_flash_dummy_clocks_t](#)

enum [spi_flash_direct_transfer_dir_t](#)

Data Structure Documentation

◆ [spi_flash_erase_command_t](#)

struct [spi_flash_erase_command_t](#)

Structure to define an erase command and associated erase size.

Data Fields

uint16_t	command	Erase command.
uint32_t	size	Size of erase for associated

		command, set to SPI_FLASH_ERASE_SIZE_CHIP_ERASE for chip erase.
--	--	---

◆ spi_flash_direct_transfer_t

struct spi_flash_direct_transfer_t		
Structure to define a direct transfer.		
Data Fields		
uint32_t	address	Starting address.
uint32_t	data	Data.
uint16_t	command	Transfer command.
uint8_t	dummy_cycles	Number of dummy cycles.
uint8_t	command_length	Command length.
uint8_t	address_length	Address length.
uint8_t	data_length	Data length.

◆ spi_flash_cfg_t

struct spi_flash_cfg_t		
User configuration structure used by the open function		
Data Fields		
spi_flash_protocol_t	spi_protocol	Initial SPI protocol. SPI protocol can be changed in spi_flash_api_t::spiProtocolSet .
spi_flash_read_mode_t	read_mode	Read mode.
spi_flash_address_bytes_t	address_bytes	Number of bytes used to represent the address.
spi_flash_dummy_clocks_t	dummy_clocks	Number of dummy clocks to use for fast read operations.
spi_flash_data_lines_t	page_program_address_lines	Number of lines used to send address for page program command. This should either be 1 or match the number of lines used in the selected read mode.
uint8_t	write_status_bit	Which bit determines write status.
uint8_t	write_enable_bit	Which bit determines write status.
uint32_t	page_size_bytes	Page size in bytes (maximum number of bytes for page program). Used to specify single continuous write size

		(bytes) in case of OSPI RAM.
uint8_t	page_program_command	Page program command.
uint8_t	write_enable_command	Command to enable write or erase, typically 0x06.
uint8_t	status_command	Command to read the write status.
uint8_t	read_command	Read command - OSPI SPI mode only.
uint8_t	xip_enter_command	Command to enter XIP mode.
uint8_t	xip_exit_command	Command to exit XIP mode.
uint8_t	erase_command_list_length	Length of erase command list.
spi_flash_erase_command_t const *	p_erase_command_list	List of all erase commands and associated sizes.
void const *	p_extend	Pointer to implementation specific extended configurations.

◆ spi_flash_status_t

struct spi_flash_status_t		
Status.		
Data Fields		
bool	write_in_progress	Whether or not a write is in progress. This is determined by reading the spi_flash_cfg_t::write_status_bit from the spi_flash_cfg_t::status_command .

◆ spi_flash_api_t

struct spi_flash_api_t		
SPI flash implementations follow this API.		
Data Fields		
fsp_err_t (*	open)(spi_flash_ctrl_t *p_ctrl, spi_flash_cfg_t const *const p_cfg)	
fsp_err_t (*	directWrite)(spi_flash_ctrl_t *p_ctrl, uint8_t const *const p_src, uint32_t const bytes, bool const read_after_write)	
fsp_err_t (*	directRead)(spi_flash_ctrl_t *p_ctrl, uint8_t *const p_dest, uint32_t const bytes)	

<code>fsp_err_t(*</code>	<code>directTransfer)(spi_flash_ctrl_t *p_ctrl, spi_flash_direct_transfer_t *const p_transfer, spi_flash_direct_transfer_dir_t direction)</code>
<code>fsp_err_t(*</code>	<code>spiProtocolSet)(spi_flash_ctrl_t *p_ctrl, spi_flash_protocol_t spi_protocol)</code>
<code>fsp_err_t(*</code>	<code>write)(spi_flash_ctrl_t *p_ctrl, uint8_t const *const p_src, uint8_t *const p_dest, uint32_t byte_count)</code>
<code>fsp_err_t(*</code>	<code>erase)(spi_flash_ctrl_t *p_ctrl, uint8_t *const p_device_address, uint32_t byte_count)</code>
<code>fsp_err_t(*</code>	<code>statusGet)(spi_flash_ctrl_t *p_ctrl, spi_flash_status_t *const p_status)</code>
<code>fsp_err_t(*</code>	<code>xipEnter)(spi_flash_ctrl_t *p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>xipExit)(spi_flash_ctrl_t *p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>bankSet)(spi_flash_ctrl_t *p_ctrl, uint32_t bank)</code>
<code>fsp_err_t(*</code>	<code>autoCalibrate)(spi_flash_ctrl_t *p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>close)(spi_flash_ctrl_t *p_ctrl)</code>

Field Documentation

◆ **open**

```
fsp_err_t(* spi_flash_api_t::open) (spi_flash_ctrl_t *p_ctrl, spi_flash_cfg_t const *const p_cfg)
```

Open the SPI flash driver module.

Implemented as

- R_OSPI_Open()
- R_QSPI_Open()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	p_cfg	Pointer to a configuration structure

◆ **directWrite**

```
fsp_err_t(* spi_flash_api_t::directWrite) (spi_flash_ctrl_t *p_ctrl, uint8_t const *const p_src, uint32_t const bytes, bool const read_after_write)
```

Write raw data to the SPI flash.

Implemented as

- R_OSPI_DirectWrite()
- R_QSPI_DirectWrite()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	p_src	Pointer to raw data to write, must include any required command/address
[in]	bytes	Number of bytes to write
[in]	read_after_write	If true, the slave select remains asserted and the peripheral does not return to direct communications mode. If false, the slave select is deasserted and memory mapped access is possible after this function returns if the device is not busy.

◆ directRead

`fsp_err_t(* spi_flash_api_t::directRead) (spi_flash_ctrl_t *p_ctrl, uint8_t *const p_dest, uint32_t const bytes)`

Read raw data from the SPI flash. Must follow a call to `spi_flash_api_t::directWrite`.

Implemented as

- `R_OSPI_DirectRead()`
- `R_QSPI_DirectRead()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to a driver handle
[out]	<code>p_dest</code>	Pointer to read raw data into
[in]	<code>bytes</code>	Number of bytes to read

◆ directTransfer

`fsp_err_t(* spi_flash_api_t::directTransfer) (spi_flash_ctrl_t *p_ctrl, spi_flash_direct_transfer_t *const p_transfer, spi_flash_direct_transfer_dir_t direction)`

Direct Read/Write raw data to the SPI flash.

Implemented as

- `R_OSPI_DirectTransfer()`
- `R_QSPI_DirectTransfer()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to a driver handle
[in]	<code>p_data</code>	Pointer to command, address and data values and lengths
[in]	<code>direction</code>	Direct Read/Write

◆ spiProtocolSet

`fsp_err_t(* spi_flash_api_t::spiProtocolSet) (spi_flash_ctrl_t *p_ctrl, spi_flash_protocol_t spi_protocol)`

Change the SPI protocol in the driver. The application must change the SPI protocol on the device.

Implemented as

- `R_OSPI_SpiProtocolSet()`
- `R_QSPI_SpiProtocolSet()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to a driver handle
[in]	<code>spi_protocol</code>	Desired SPI protocol

◆ write

```
fsp_err_t(* spi_flash_api_t::write) (spi_flash_ctrl_t *p_ctrl, uint8_t const *const p_src, uint8_t *const p_dest, uint32_t byte_count)
```

Program a page of data to the flash.

Implemented as

- R_OSPI_Write()
- R_QSPI_Write()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	p_src	The memory address of the data to write to the flash device
[in]	p_dest	The location in the flash device address space to write the data to
[in]	byte_count	The number of bytes to write

◆ erase

```
fsp_err_t(* spi_flash_api_t::erase) (spi_flash_ctrl_t *p_ctrl, uint8_t *const p_device_address, uint32_t byte_count)
```

Erase a certain number of bytes of the flash.

Implemented as

- R_OSPI_Erase()
- R_QSPI_Erase()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	p_device_address	The location in the flash device address space to start the erase from
[in]	byte_count	The number of bytes to erase. Set to SPI_FLASH_ERASE_SIZE_CHIP_ERASE to erase entire chip.

◆ **statusGet**

```
fsp_err_t(* spi_flash_api_t::statusGet) (spi_flash_ctrl_t *p_ctrl, spi_flash_status_t *const p_status)
```

Get the write or erase status of the flash.

Implemented as

- R_OSPI_StatusGet()
- R_QSPI_StatusGet()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[out]	p_status	Current status of the SPI flash device stored here.

◆ **xipEnter**

```
fsp_err_t(* spi_flash_api_t::xipEnter) (spi_flash_ctrl_t *p_ctrl)
```

Enter XIP mode.

Implemented as

- R_OSPI_XipEnter()
- R_QSPI_XipEnter()

Parameters

[in]	p_ctrl	Pointer to a driver handle
------	--------	----------------------------

◆ **xipExit**

```
fsp_err_t(* spi_flash_api_t::xipExit) (spi_flash_ctrl_t *p_ctrl)
```

Exit XIP mode.

Implemented as

- R_OSPI_XipExit()
- R_QSPI_XipExit()

Parameters

[in]	p_ctrl	Pointer to a driver handle
------	--------	----------------------------

◆ **bankSet**

```
fsp_err_t(* spi_flash_api_t::bankSet) (spi_flash_ctrl_t *p_ctrl, uint32_t bank)
```

Select the bank to access. See implementation for details.

Implemented as

- R_OSPI_BankSet()
- R_QSPI_BankSet()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	bank	The bank number

◆ **autoCalibrate**

```
fsp_err_t(* spi_flash_api_t::autoCalibrate) (spi_flash_ctrl_t *p_ctrl)
```

AutoCalibrate the SPI flash driver module. Expected to be used when auto-calibrating OSPI RAM device.

Implemented as

- R_OSPI_AutoCalibrate()
- R_QSPI_AutoCalibrate()

Parameters

[in]	p_ctrl	Pointer to a driver handle
------	--------	----------------------------

◆ **close**

```
fsp_err_t(* spi_flash_api_t::close) (spi_flash_ctrl_t *p_ctrl)
```

Close the SPI flash driver module.

Implemented as

- R_OSPI_Close()
- R_QSPI_Close()

Parameters

[in]	p_ctrl	Pointer to a driver handle
------	--------	----------------------------

◆ **spi_flash_instance_t**

```
struct spi_flash_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

spi_flash_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
--------------------	--------	---

<code>spi_flash_cfg_t</code> const *	<code>p_cfg</code>	Pointer to the configuration structure for this instance.
<code>spi_flash_api_t</code> const *	<code>p_api</code>	Pointer to the API structure for this instance.

Typedef Documentation

◆ `spi_flash_ctrl_t`

typedef void <code>spi_flash_ctrl_t</code>
SPI flash control block. Allocate an instance specific control block to pass into the SPI flash API calls.
Implemented as
<ul style="list-style-type: none"> ◦ <code>qspi_instance_ctrl_t</code> ◦ <code>ospi_instance_ctrl_t</code>

Enumeration Type Documentation

◆ `spi_flash_read_mode_t`

enum <code>spi_flash_read_mode_t</code>	
Read mode.	
Enumerator	
<code>SPI_FLASH_READ_MODE_STANDARD</code>	Standard Read Mode (no dummy cycles)
<code>SPI_FLASH_READ_MODE_FAST_READ</code>	Fast Read Mode (dummy cycles between address and data)
<code>SPI_FLASH_READ_MODE_FAST_READ_DUAL_OUTPUT</code>	Fast Read Dual Output Mode (data on 2 lines)
<code>SPI_FLASH_READ_MODE_FAST_READ_DUAL_IO</code>	Fast Read Dual I/O Mode (address and data on 2 lines)
<code>SPI_FLASH_READ_MODE_FAST_READ_QUAD_OUTPUT</code>	Fast Read Quad Output Mode (data on 4 lines)
<code>SPI_FLASH_READ_MODE_FAST_READ_QUAD_IO</code>	Fast Read Quad I/O Mode (address and data on 4 lines)

◆ **spi_flash_protocol_t**

enum <code>spi_flash_protocol_t</code>	
SPI protocol.	
Enumerator	
<code>SPI_FLASH_PROTOCOL_EXTENDED_SPI</code>	Extended SPI mode (commands on 1 line)
<code>SPI_FLASH_PROTOCOL_QPI</code>	QPI mode (commands on 4 lines). Note that the application must ensure the device is in QPI mode.
<code>SPI_FLASH_PROTOCOL_SOPI</code>	SOPI mode (command and data on 8 lines). Note that the application must ensure the device is in SOPI mode.
<code>SPI_FLASH_PROTOCOL_DOPI</code>	DOPI mode (command and data on 8 lines, dual data rate). Note that the application must ensure the device is in DOPI mode.

◆ **spi_flash_address_bytes_t**

enum <code>spi_flash_address_bytes_t</code>	
Number of bytes in the address.	
Enumerator	
<code>SPI_FLASH_ADDRESS_BYTES_3</code>	3 address bytes
<code>SPI_FLASH_ADDRESS_BYTES_4</code>	4 address bytes with standard commands. If this option is selected, the application must issue the EN4B command using <code>spi_flash_api_t::directWrite()</code> if required by the device.
<code>SPI_FLASH_ADDRESS_BYTES_4_4BYTE_READ_CODE</code>	4 address bytes using standard 4-byte command set.

◆ **spi_flash_data_lines_t**

enum <code>spi_flash_data_lines_t</code>	
Number of data lines used.	
Enumerator	
<code>SPI_FLASH_DATA_LINES_1</code>	1 data line
<code>SPI_FLASH_DATA_LINES_2</code>	2 data lines
<code>SPI_FLASH_DATA_LINES_4</code>	4 data lines

◆ spi_flash_dummy_clocks_t

enum spi_flash_dummy_clocks_t	
Number of dummy cycles for fast read operations.	
Enumerator	
SPI_FLASH_DUMMY_CLOCKS_DEFAULT	Default is 6 clocks for Fast Read Quad I/O, 4 clocks for Fast Read Dual I/O, and 8 clocks for other fast read instructions including Fast Read Quad Output, Fast Read Dual Output, and Fast Read.
SPI_FLASH_DUMMY_CLOCKS_3	3 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_4	4 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_5	5 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_6	6 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_7	7 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_8	8 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_9	9 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_10	10 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_11	11 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_12	12 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_13	13 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_14	14 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_15	15 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_16	16 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_17	17 dummy clocks

◆ spi_flash_direct_transfer_dir_t

```
enum spi_flash_direct_transfer_dir_t
```

```
Direct Read and Write direction
```

4.3.36 Three-Phase Interface

Interfaces

Detailed Description

Interface for three-phase timer functions.

Summary

The Three-Phase interface provides functionality for synchronous start/stop/reset control of three timer channels for use in 3-phase motor control applications.

Implemented by:

- General PWM Timer Three-Phase Motor Control Driver (`r_gpt_three_phase`)

Data Structures

```
struct three_phase_duty_cycle_t
```

```
struct three_phase_cfg_t
```

```
struct three_phase_api_t
```

```
struct three_phase_instance_t
```

Typedefs

```
typedef void three_phase_ctrl_t
```

Enumerations

```
enum three_phase_channel_t
```

```
enum three_phase_buffer_mode_t
```

Data Structure Documentation

◆ three_phase_duty_cycle_t

```
struct three_phase_duty_cycle_t
```

Struct for passing duty cycle values to three_phase_api_t::dutyCycleSet		
Data Fields		
uint32_t	duty[3]	Duty cycle. Note: When the GPT instances are configured in <code>TIMER_MODE_TRIANGLE_WAVE_AS_YMMETRIC_PWM_MODE3</code> , this value sets the duty cycle count that is transferred to GTCCRA/B at the trough.
uint32_t	duty_buffer[3]	Double-buffer for duty cycle values. Note: When the GPT instances are configured in <code>TIMER_MODE_TRIANGLE_WAVE_AS_YMMETRIC_PWM_MODE3</code> , this value sets the duty cycle count that is transferred to GTCCRA/B at the crest.

◆ [three_phase_cfg_t](#)

struct three_phase_cfg_t		
User configuration structure, used in <code>open</code> function		
Data Fields		
three_phase_buffer_mode_t	buffer_mode	Single or double-buffer mode.
timer_instance_t const *	p_timer_instance[3]	Pointer to the timer instance structs.
three_phase_channel_t	callback_ch	Channel to enable callback when using three_phase_api_t::callbackSet .
uint32_t	channel_mask	Bitmask of timer channels used by this module.
void const *	p_context	Placeholder for user data. Passed to the user callback in timer_callback_args_t .
void const *	p_extend	Extension parameter for hardware specific settings.

◆ [three_phase_api_t](#)

struct three_phase_api_t		
Three-Phase API structure.		
Data Fields		
fsp_err_t (*	<code>open</code>)(three_phase_ctrl_t *const p_ctrl, three_phase_cfg_t const *const p_cfg)	

<code>fsp_err_t(*</code>	<code>start)(three_phase_ctrl_t *const p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>stop)(three_phase_ctrl_t *const p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>reset)(three_phase_ctrl_t *const p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>dutyCycleSet)(three_phase_ctrl_t *const p_ctrl, three_phase_duty_cycle_t *const p_duty_cycle)</code>
<code>fsp_err_t(*</code>	<code>callbackSet)(three_phase_ctrl_t *const p_api_ctrl, void(*p_callback)(timer_callback_args_t *), void const *const p_context, timer_callback_args_t *const p_callback_memory)</code>
<code>fsp_err_t(*</code>	<code>close)(three_phase_ctrl_t *const p_ctrl)</code>

Field Documentation

◆ open

`fsp_err_t(* three_phase_api_t::open) (three_phase_ctrl_t *const p_ctrl, three_phase_cfg_t const *const p_cfg)`

Initial configuration.

Implemented as

- `R_GPT_THREE_PHASE_Open()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control block. Must be declared by user. Elements set here.
[in]	<code>p_cfg</code>	Pointer to configuration structure. All elements of this structure must be set by user.

◆ **start**

```
fsp_err_t(* three_phase_api_t::start) (three_phase_ctrl_t *const p_ctrl)
```

Start all three timers synchronously.

Implemented as

- [R_GPT_THREE_PHASE_Start\(\)](#)

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call for this timer.
------	--------	---

◆ **stop**

```
fsp_err_t(* three_phase_api_t::stop) (three_phase_ctrl_t *const p_ctrl)
```

Stop all three timers synchronously.

Implemented as

- [R_GPT_THREE_PHASE_Stop\(\)](#)

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call for this timer.
------	--------	---

◆ **reset**

```
fsp_err_t(* three_phase_api_t::reset) (three_phase_ctrl_t *const p_ctrl)
```

Reset all three timers synchronously.

Implemented as

- [R_GPT_THREE_PHASE_Reset\(\)](#)

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call for this timer.
------	--------	---

◆ **dutyCycleSet**

```
fsp_err_t(* three_phase_api_t::dutyCycleSet) (three_phase_ctrl_t *const p_ctrl,
three_phase_duty_cycle_t *const p_duty_cycle)
```

Sets the duty cycle match values. If the timer is counting, the updated duty cycle is reflected after the next timer expiration.

Implemented as

- [R_GPT_THREE_PHASE_DutyCycleSet\(\)](#)

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call for this timer.
[in]	p_duty_cycle	Duty cycle values for all three timer channels.

◆ **callbackSet**

```
fsp_err_t(* three_phase_api_t::callbackSet) (three_phase_ctrl_t *const p_api_ctrl,
void(*p_callback)(timer_callback_args_t *), void const *const p_context, timer_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- [R_GPT_THREE_PHASE_CallbackSet\(\)](#)

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call.
[in]	p_callback	Callback function to register with GPT U-channel
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* three_phase_api_t::close) (three_phase_ctrl_t *const p_ctrl)
```

Allows driver to be reconfigured and may reduce power consumption.

Implemented as

- [R_GPT_THREE_PHASE_Close\(\)](#)

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call for this timer.
------	--------	---

◆ **three_phase_instance_t**

```
struct three_phase_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

three_phase_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
three_phase_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
three_phase_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **three_phase_ctrl_t**

```
typedef void three_phase_ctrl_t
```

Three-Phase control block. Allocate an instance specific control block to pass into the timer API calls.

Implemented as

- [gpt_three_phase_instance_ctrl_t](#)

Enumeration Type Documentation

◆ **three_phase_channel_t**

enum <code>three_phase_channel_t</code>	
Timer channel indices	
Enumerator	
<code>THREE_PHASE_CHANNEL_U</code>	U-channel index.
<code>THREE_PHASE_CHANNEL_V</code>	V-channel index.
<code>THREE_PHASE_CHANNEL_W</code>	W-channel index.

◆ **three_phase_buffer_mode_t**

enum <code>three_phase_buffer_mode_t</code>	
Buffering mode	
Enumerator	
<code>THREE_PHASE_BUFFER_MODE_SINGLE</code>	Single-buffer mode.
<code>THREE_PHASE_BUFFER_MODE_DOUBLE</code>	Double-buffer mode.

4.3.37 Timer Interface

Interfaces

Detailed Description

Interface for timer functions.

Summary

The general timer interface provides standard timer functionality including periodic mode, one-shot mode, PWM output, and free-running timer mode. After each timer cycle (overflow or underflow), an interrupt can be triggered.

If an instance supports output compare mode, it is provided in the extension configuration `timer_on_<instance>_cfg_t` defined in `r_<instance>.h`.

Implemented by:

- [General PWM Timer \(`r_gpt`\)](#)
- [Asynchronous General Purpose Timer \(`r_agt`\)](#)

Data Structure Documentation

◆ timer_callback_args_t

struct timer_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data. Set in timer_api_t::open function in timer_cfg_t .
timer_event_t	event	The event can be used to identify what caused the callback.
uint32_t	capture	Most recent capture, only valid if event is TIMER_EVENT_CAPTURE_A or TIMER_EVENT_CAPTURE_B .

◆ timer_info_t

struct timer_info_t		
Timer information structure to store various information for a timer resource		
Data Fields		
timer_direction_t	count_direction	Clock counting direction of the timer.
uint32_t	clock_frequency	Clock frequency of the timer counter.
uint32_t	period_counts	Period in raw timer counts. <i>Note</i> <i>For triangle wave PWM modes, the full period is double this value.</i>

◆ timer_status_t

struct timer_status_t		
Current timer status.		
Data Fields		
uint32_t	counter	Current counter value.
timer_state_t	state	Current timer state (running or stopped)

◆ timer_cfg_t

struct timer_cfg_t		
User configuration structure, used in open function		
Data Fields		
timer_mode_t	mode	
		Select enumerated value from timer_mode_t.
uint32_t	period_counts	
		Period in raw timer counts.
timer_source_div_t	source_div	
		Source clock divider.
uint32_t	duty_cycle_counts	

	Duty cycle in counts.
uint8_t	channel
uint8_t	cycle_end_ipr
	Cycle end interrupt priority.
IRQn_Type	cycle_end_irq
	Cycle end interrupt.
void(*	p_callback)(timer_callback_args_t *p_args)
void const *	p_context
void const *	p_extend
	Extension parameter for hardware specific settings.

Field Documentation

◆ channel

uint8_t timer_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.

◆ p_callback

void(* timer_cfg_t::p_callback) ([timer_callback_args_t](#) *p_args)

Callback provided when a timer ISR occurs. Set to NULL for no CPU interrupt.

◆ p_context

void const* timer_cfg_t::p_context

Placeholder for user data. Passed to the user callback in [timer_callback_args_t](#).

◆ timer_api_t

struct timer_api_t

Timer API structure. General timer functions implemented at the HAL layer follow this API.

Data Fields

<code>fsp_err_t(*</code>	<code>open</code>)(<code>timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg</code>)
<code>fsp_err_t(*</code>	<code>start</code>)(<code>timer_ctrl_t *const p_ctrl</code>)
<code>fsp_err_t(*</code>	<code>stop</code>)(<code>timer_ctrl_t *const p_ctrl</code>)
<code>fsp_err_t(*</code>	<code>reset</code>)(<code>timer_ctrl_t *const p_ctrl</code>)
<code>fsp_err_t(*</code>	<code>enable</code>)(<code>timer_ctrl_t *const p_ctrl</code>)
<code>fsp_err_t(*</code>	<code>disable</code>)(<code>timer_ctrl_t *const p_ctrl</code>)
<code>fsp_err_t(*</code>	<code>periodSet</code>)(<code>timer_ctrl_t *const p_ctrl, uint32_t const period</code>)
<code>fsp_err_t(*</code>	<code>dutyCycleSet</code>)(<code>timer_ctrl_t *const p_ctrl, uint32_t const duty_cycle_counts, uint32_t const pin</code>)
<code>fsp_err_t(*</code>	<code>infoGet</code>)(<code>timer_ctrl_t *const p_ctrl, timer_info_t *const p_info</code>)
<code>fsp_err_t(*</code>	<code>statusGet</code>)(<code>timer_ctrl_t *const p_ctrl, timer_status_t *const p_status</code>)
<code>fsp_err_t(*</code>	<code>callbackSet</code>)(<code>timer_ctrl_t *const p_api_ctrl, void(*p_callback)(timer_callback_args_t*), void const *const p_context, timer_callback_args_t *const p_callback_memory</code>)
<code>fsp_err_t(*</code>	<code>close</code>)(<code>timer_ctrl_t *const p_ctrl</code>)

Field Documentation

◆ **open**

```
fsp_err_t(* timer_api_t::open) (timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg)
```

Initial configuration.

Implemented as

- R_GPT_Open()
- R_AGT_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ **start**

```
fsp_err_t(* timer_api_t::start) (timer_ctrl_t *const p_ctrl)
```

Start the counter.

Implemented as

- R_GPT_Start()
- R_AGT_Start()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
------	--------	---

◆ **stop**

```
fsp_err_t(* timer_api_t::stop) (timer_ctrl_t *const p_ctrl)
```

Stop the counter.

Implemented as

- R_GPT_Stop()
- R_AGT_Stop()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
------	--------	---

◆ **reset**

```
fsp_err_t(* timer_api_t::reset) (timer_ctrl_t *const p_ctrl)
```

Reset the counter to the initial value.

Implemented as

- R_GPT_Reset()
- R_AGT_Reset()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
------	--------	---

◆ **enable**

```
fsp_err_t(* timer_api_t::enable) (timer_ctrl_t *const p_ctrl)
```

Enables input capture.

Implemented as

- R_GPT_Enable()
- R_AGT_Enable()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
------	--------	---

◆ **disable**

```
fsp_err_t(* timer_api_t::disable) (timer_ctrl_t *const p_ctrl)
```

Disables input capture.

Implemented as

- R_GPT_Disable()
- R_AGT_Disable()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
------	--------	---

◆ **periodSet**

```
fsp_err_t(* timer_api_t::periodSet) (timer_ctrl_t *const p_ctrl, uint32_t const period)
```

Set the time until the timer expires. See implementation for details of period update timing.

Implemented as

- R_GPT_PeriodSet()
- R_AGT_PeriodSet()

Note

Timer expiration may or may not generate a CPU interrupt based on how the timer is configured in `timer_api_t::open`.

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
[in]	p_period	Time until timer should expire.

◆ **dutyCycleSet**

```
fsp_err_t(* timer_api_t::dutyCycleSet) (timer_ctrl_t *const p_ctrl, uint32_t const duty_cycle_counts, uint32_t const pin)
```

Sets the number of counts for the pin level to be high. If the timer is counting, the updated duty cycle is reflected after the next timer expiration.

Implemented as

- R_GPT_DutyCycleSet()
- R_AGT_DutyCycleSet()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
[in]	duty_cycle_counts	Time until duty cycle should expire.
[in]	pin	Which output pin to update. See implementation for details.

◆ infoGet

```
fsp_err_t(* timer_api_t::infoGet) (timer_ctrl_t *const p_ctrl, timer_info_t *const p_info)
```

Stores timer information in p_info.

Implemented as

- R_GPT_InfoGet()
- R_AGT_InfoGet()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
[out]	p_info	Collection of information for this timer.

◆ statusGet

```
fsp_err_t(* timer_api_t::statusGet) (timer_ctrl_t *const p_ctrl, timer_status_t *const p_status)
```

Get the current counter value and timer state and store it in p_status.

Implemented as

- R_GPT_StatusGet()
- R_AGT_StatusGet()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
[out]	p_status	Current status of this timer.

◆ **callbackSet**

```
fsp_err_t(* timer_api_t::callbackSet) (timer_ctrl_t *const p_api_ctrl,
void(*p_callback)(timer_callback_args_t *), void const *const p_context, timer_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_GPT_CallbackSet()
- R_AGT_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* timer_api_t::close) (timer_ctrl_t *const p_ctrl)
```

Allows driver to be reconfigured and may reduce power consumption.

Implemented as

- R_GPT_Close()
- R_AGT_Close()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
------	--------	---

◆ **timer_instance_t**

```
struct timer_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

timer_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
--------------------------------	--------	---

<code>timer_cfg_t</code> const *	<code>p_cfg</code>	Pointer to the configuration structure for this instance.
<code>timer_api_t</code> const *	<code>p_api</code>	Pointer to the API structure for this instance.

Typedef Documentation

◆ `timer_ctrl_t`

typedef void <code>timer_ctrl_t</code>
Timer control block. Allocate an instance specific control block to pass into the timer API calls.
Implemented as <ul style="list-style-type: none"> ◦ <code>gpt_instance_ctrl_t</code> ◦ <code>agt_instance_ctrl_t</code>

Enumeration Type Documentation

◆ `timer_event_t`

enum <code>timer_event_t</code>	
Events that can trigger a callback function	
Enumerator	
TIMER_EVENT_CYCLE_END	Requested timer delay has expired or timer has wrapped around.
TIMER_EVENT_CREST	Timer crest event (counter is at a maximum, triangle-wave PWM only)
TIMER_EVENT_CAPTURE_A	A capture has occurred on signal A.
TIMER_EVENT_CAPTURE_B	A capture has occurred on signal B.
TIMER_EVENT_TROUGH	Timer trough event (counter is 0, triangle-wave PWM only).

◆ **timer_variant_t**

enum timer_variant_t	
Timer variant types.	
Enumerator	
TIMER_VARIANT_32_BIT	32-bit timer
TIMER_VARIANT_16_BIT	16-bit timer

◆ **timer_state_t**

enum timer_state_t	
Possible status values returned by timer_api_t::statusGet .	
Enumerator	
TIMER_STATE_STOPPED	Timer is stopped.
TIMER_STATE_COUNTING	Timer is running.

◆ **timer_mode_t**

enum timer_mode_t	
Timer operational modes	
Enumerator	
TIMER_MODE_PERIODIC	Timer restarts after period elapses.
TIMER_MODE_ONE_SHOT	Timer stops after period elapses.
TIMER_MODE_PWM	Timer generates saw-wave PWM output.
TIMER_MODE_TRIANGLE_WAVE_SYMMETRIC_PWM	Timer generates symmetric triangle-wave PWM output.
TIMER_MODE_TRIANGLE_WAVE_ASYMMETRIC_PWM	Timer generates asymmetric triangle-wave PWM output.
TIMER_MODE_TRIANGLE_WAVE_ASYMMETRIC_PWM_MODE3	Timer generates Asymmetric Triangle-wave PWM output. In PWM mode 3, the duty cycle does not need to be updated at each trough/crest interrupt. Instead, the trough and crest duty cycle values can be set once and only need to be updated when the application needs to change the duty cycle.

◆ **timer_direction_t**

enum timer_direction_t	
Direction of timer count	
Enumerator	
TIMER_DIRECTION_DOWN	Timer count goes up.
TIMER_DIRECTION_UP	Timer count goes down.

◆ **timer_source_div_t**

enum timer_source_div_t	
PCLK divisors	
Enumerator	
TIMER_SOURCE_DIV_1	Timer clock source divided by 1.
TIMER_SOURCE_DIV_2	Timer clock source divided by 2.
TIMER_SOURCE_DIV_4	Timer clock source divided by 4.
TIMER_SOURCE_DIV_8	Timer clock source divided by 8.
TIMER_SOURCE_DIV_16	Timer clock source divided by 16.
TIMER_SOURCE_DIV_32	Timer clock source divided by 32.
TIMER_SOURCE_DIV_64	Timer clock source divided by 64.
TIMER_SOURCE_DIV_128	Timer clock source divided by 128.
TIMER_SOURCE_DIV_256	Timer clock source divided by 256.
TIMER_SOURCE_DIV_512	Timer clock source divided by 512.
TIMER_SOURCE_DIV_1024	Timer clock source divided by 1024.

4.3.38 Transfer Interface[Interfaces](#)**Detailed Description**

Interface for data transfer functions.

Summary

The transfer interface supports background data transfer (no CPU intervention).

Implemented by:

- [Data Transfer Controller \(r_dtc\)](#)
- [Direct Memory Access Controller \(r_dmac\)](#)

Data Structures

struct [transfer_properties_t](#)

struct [transfer_info_t](#)

struct [transfer_cfg_t](#)

struct [transfer_api_t](#)

struct [transfer_instance_t](#)

Typedefs

typedef void [transfer_ctrl_t](#)

Enumerations

enum [transfer_mode_t](#)

enum [transfer_size_t](#)

enum [transfer_addr_mode_t](#)

enum [transfer_repeat_area_t](#)

enum [transfer_chain_mode_t](#)

enum [transfer_irq_t](#)

enum [transfer_start_mode_t](#)

Data Structure Documentation

◆ [transfer_properties_t](#)

struct transfer_properties_t		
Driver specific information.		
Data Fields		
uint32_t	block_count_max	Maximum number of blocks.
uint32_t	block_count_remaining	Number of blocks remaining.
uint32_t	transfer_length_max	Maximum number of transfers.
uint32_t	transfer_length_remaining	Number of transfers remaining.

◆ [transfer_info_t](#)

struct transfer_info_t
This structure specifies the properties of the transfer.

Warning

When using DTC, this structure corresponds to the descriptor block registers required by the DTC. The following components may be modified by the driver: `p_src`, `p_dest`, `num_blocks`, and `length`.

When using DTC, do NOT reuse this structure to configure multiple transfers. Each transfer must have a unique [transfer_info_t](#).

When using DTC, this structure must not be allocated in a temporary location. Any instance of this structure must remain in scope until the transfer it is used for is closed.

Note

When using DTC, consider placing instances of this structure in a protected section of memory.

Data Fields		
union transfer_info_t	<code>__unnamed__</code>	
void const *volatile	<code>p_src</code>	Source pointer.
void *volatile	<code>p_dest</code>	Destination pointer.
volatile uint16_t	<code>num_blocks</code>	Number of blocks to transfer when using TRANSFER_MODE_BLOCK (both DTC and DMAC) or TRANSFER_MODE_REPEAT (DMAC only) or TRANSFER_MODE_REPEAT_BLOCK (DMAC only), unused in other modes.
volatile uint16_t	<code>length</code>	Length of each transfer. Range limited for TRANSFER_MODE_BLOCK , TRANSFER_MODE_REPEAT , and TRANSFER_MODE_REPEAT_BLOCK see HAL driver for details.

◆ **transfer_cfg_t**

Data Fields		
transfer_info_t *	<code>p_info</code>	Pointer to transfer configuration options. If using chain transfer (DTC only), this can be a pointer to an array of chained transfers that will be completed in order.
void const *	<code>p_extend</code>	Extension parameter for hardware specific settings.

◆ **transfer_api_t**

Data Fields		
<code>struct transfer_api_t</code>		

Transfer functions implemented at the HAL layer will follow this API.

Data Fields

<code>fsp_err_t(*</code>	<code>open</code>)(<code>transfer_ctrl_t *const p_ctrl, transfer_cfg_t const *const p_cfg</code>)
<code>fsp_err_t(*</code>	<code>reconfigure</code>)(<code>transfer_ctrl_t *const p_ctrl, transfer_info_t *p_info</code>)
<code>fsp_err_t(*</code>	<code>reset</code>)(<code>transfer_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint16_t const num_transfers</code>)
<code>fsp_err_t(*</code>	<code>enable</code>)(<code>transfer_ctrl_t *const p_ctrl</code>)
<code>fsp_err_t(*</code>	<code>disable</code>)(<code>transfer_ctrl_t *const p_ctrl</code>)
<code>fsp_err_t(*</code>	<code>softwareStart</code>)(<code>transfer_ctrl_t *const p_ctrl, transfer_start_mode_t mode</code>)
<code>fsp_err_t(*</code>	<code>softwareStop</code>)(<code>transfer_ctrl_t *const p_ctrl</code>)
<code>fsp_err_t(*</code>	<code>infoGet</code>)(<code>transfer_ctrl_t *const p_ctrl, transfer_properties_t *const p_properties</code>)
<code>fsp_err_t(*</code>	<code>close</code>)(<code>transfer_ctrl_t *const p_ctrl</code>)

Field Documentation

◆ **open**

```
fsp_err_t(* transfer_api_t::open) (transfer_ctrl_t *const p_ctrl, transfer_cfg_t const *const p_cfg)
```

Initial configuration.

Implemented as

- R_DTC_Open()
- R_DMACE_Open()

Parameters

[in,out]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ **reconfigure**

```
fsp_err_t(* transfer_api_t::reconfigure) (transfer_ctrl_t *const p_ctrl, transfer_info_t *p_info)
```

Reconfigure the transfer. Enable the transfer if p_info is valid.

Implemented as

- R_DTC_Reconfigure()
- R_DMACE_Reconfigure()

Parameters

[in,out]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_info	Pointer to a new transfer info structure.

◆ **reset**

```
fsp_err_t(* transfer_api_t::reset) (transfer_ctrl_t *const p_ctrl, void const *p_src, void *p_dest,
uint16_t const num_transfers)
```

Reset source address pointer, destination address pointer, and/or length, keeping all other settings the same. Enable the transfer if p_src, p_dest, and length are valid.

Implemented as

- R_DTC_Reset()
- R_DMACE_Reset()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.
[in]	p_src	Pointer to source. Set to NULL if source pointer should not change.
[in]	p_dest	Pointer to destination. Set to NULL if destination pointer should not change.
[in]	num_transfers	Transfer length in normal mode or number of blocks in block mode. In DMACE only, resets number of repeats (initially stored in transfer_info_t::num_blocks) in repeat mode. Not used in repeat mode for DTC.

◆ **enable**

```
fsp_err_t(* transfer_api_t::enable) (transfer_ctrl_t *const p_ctrl)
```

Enable transfer. Transfers occur after the activation source event (or when [transfer_api_t::softwareStart](#) is called if ELC_EVENT_ELC_NONE is chosen as activation source).

Implemented as

- R_DTC_Enable()
- R_DMACE_Enable()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.
------	--------	---

◆ **disable**

`fsp_err_t(* transfer_api_t::disable) (transfer_ctrl_t *const p_ctrl)`

Disable transfer. Transfers do not occur after the activation source event (or when `transfer_api_t::softwareStart` is called if `ELC_EVENT_ELC_NONE` is chosen as the DMAC activation source).

Note

If a transfer is in progress, it will be completed. Subsequent transfer requests do not cause a transfer.

Implemented as

- `R_DTC_Disable()`
- `R_DMACE_Disable()`

Parameters

[in]	p_ctrl	Control block set in <code>transfer_api_t::open</code> call for this transfer.
------	--------	--

◆ **softwareStart**

`fsp_err_t(* transfer_api_t::softwareStart) (transfer_ctrl_t *const p_ctrl, transfer_start_mode_t mode)`

Start transfer in software.

Warning

Only works if `ELC_EVENT_ELC_NONE` is chosen as the DMAC activation source.

Note

Not supported for DTC.

Implemented as

- `R_DMACE_SoftwareStart()`

Parameters

[in]	p_ctrl	Control block set in <code>transfer_api_t::open</code> call for this transfer.
[in]	mode	Select mode from <code>transfer_start_mode_t</code> .

◆ softwareStop

`fsp_err_t(* transfer_api_t::softwareStop) (transfer_ctrl_t *const p_ctrl)`

Stop transfer in software. The transfer will stop after completion of the current transfer.

Note

Not supported for DTC.

Only applies for transfers started with TRANSFER_START_MODE_REPEAT.

Warning

Only works if ELC_EVENT_ELC_NONE is chosen as the DMAC activation source.

Implemented as

- R_DMAMAC_SoftwareStop()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.
------	--------	---

◆ infoGet

`fsp_err_t(* transfer_api_t::infoGet) (transfer_ctrl_t *const p_ctrl, transfer_properties_t *const p_properties)`

Provides information about this transfer.

Implemented as

- R_DTC_InfoGet()
- R_DMAMAC_InfoGet()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.
[out]	p_properties	Driver specific information.

◆ close

`fsp_err_t(* transfer_api_t::close) (transfer_ctrl_t *const p_ctrl)`

Releases hardware lock. This allows a transfer to be reconfigured using [transfer_api_t::open](#).

Implemented as

- R_DTC_Close()
- R_DMAMAC_Close()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.
------	--------	---

◆ **transfer_instance_t**

struct transfer_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
transfer_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
transfer_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
transfer_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **transfer_ctrl_t**

typedef void transfer_ctrl_t
Transfer control block. Allocate an instance specific control block to pass into the transfer API calls.
Implemented as
<ul style="list-style-type: none"> ◦ dte_instance_ctrl_t ◦ dmac_instance_ctrl_t

Enumeration Type Documentation

◆ **transfer_mode_t**

enum <code>transfer_mode_t</code>	
Transfer mode describes what will happen when a transfer request occurs.	
Enumerator	
<code>TRANSFER_MODE_NORMAL</code>	In normal mode, each transfer request causes a transfer of <code>transfer_size_t</code> from the source pointer to the destination pointer. The transfer length is decremented and the source and address pointers are updated according to <code>transfer_addr_mode_t</code> . After the transfer length reaches 0, transfer requests will not cause any further transfers.
<code>TRANSFER_MODE_REPEAT</code>	Repeat mode is like normal mode, except that when the transfer length reaches 0, the pointer to the repeat area and the transfer length will be reset to their initial values. If DMAC is used, the transfer repeats only <code>transfer_info_t::num_blocks</code> times. After the transfer repeats <code>transfer_info_t::num_blocks</code> times, transfer requests will not cause any further transfers. If DTC is used, the transfer repeats continuously (no limit to the number of repeat transfers).
<code>TRANSFER_MODE_BLOCK</code>	In block mode, each transfer request causes <code>transfer_info_t::length</code> transfers of <code>transfer_size_t</code> . After each individual transfer, the source and destination pointers are updated according to <code>transfer_addr_mode_t</code> . After the block transfer is complete, <code>transfer_info_t::num_blocks</code> is decremented. After the <code>transfer_info_t::num_blocks</code> reaches 0, transfer requests will not cause any further transfers.
<code>TRANSFER_MODE_REPEAT_BLOCK</code>	In addition to block mode features, repeat-block mode supports a ring buffer of blocks and offsets within a block (to split blocks into arrays of their first data, second data, etc.)

◆ **transfer_size_t**

enum transfer_size_t	
Transfer size specifies the size of each individual transfer. Total transfer length = <code>transfer_size_t * transfer_length_t</code>	
Enumerator	
TRANSFER_SIZE_1_BYTE	Each transfer transfers a 8-bit value.
TRANSFER_SIZE_2_BYTE	Each transfer transfers a 16-bit value.
TRANSFER_SIZE_4_BYTE	Each transfer transfers a 32-bit value.

◆ **transfer_addr_mode_t**

enum transfer_addr_mode_t	
Address mode specifies whether to modify (increment or decrement) pointer after each transfer.	
Enumerator	
TRANSFER_ADDR_MODE_FIXED	Address pointer remains fixed after each transfer.
TRANSFER_ADDR_MODE_OFFSET	Offset is added to the address pointer after each transfer.
TRANSFER_ADDR_MODE_INCREMENTED	Address pointer is incremented by associated transfer_size_t after each transfer.
TRANSFER_ADDR_MODE_DECREMENTED	Address pointer is decremented by associated transfer_size_t after each transfer.

◆ **transfer_repeat_area_t**

enum transfer_repeat_area_t	
Repeat area options (source or destination). In TRANSFER_MODE_REPEAT , the selected pointer returns to its original value after transfer_info_t::length transfers. In TRANSFER_MODE_BLOCK and TRANSFER_MODE_REPEAT_BLOCK , the selected pointer returns to its original value after each transfer.	
Enumerator	
TRANSFER_REPEAT_AREA_DESTINATION	Destination area repeated in TRANSFER_MODE_REPEAT or TRANSFER_MODE_BLOCK or TRANSFER_MODE_REPEAT_BLOCK .
TRANSFER_REPEAT_AREA_SOURCE	Source area repeated in TRANSFER_MODE_REPEAT or TRANSFER_MODE_BLOCK or TRANSFER_MODE_REPEAT_BLOCK .

◆ **transfer_chain_mode_t**

enum transfer_chain_mode_t	
Chain transfer mode options.	
<i>Note</i> <i>Only applies for DTC.</i>	
Enumerator	
TRANSFER_CHAIN_MODE_DISABLED	Chain mode not used.
TRANSFER_CHAIN_MODE_EACH	Switch to next transfer after a single transfer from this transfer_info_t .
TRANSFER_CHAIN_MODE_END	Complete the entire transfer defined in this transfer_info_t before chaining to next transfer.

◆ **transfer_irq_t**

enum <code>transfer_irq_t</code>	
Interrupt options.	
Enumerator	
TRANSFER_IRQ_END	<p>Interrupt occurs only after last transfer. If this transfer is chained to a subsequent transfer, the interrupt will occur only after subsequent chained transfer(s) are complete.</p> <p>Warning DTC triggers the interrupt of the activation source. Choosing TRANSFER_IRQ_END with DTC will prevent activation source interrupts until the transfer is complete.</p>
TRANSFER_IRQ_EACH	<p>Interrupt occurs after each transfer.</p> <p><i>Note</i> <i>Not available in all HAL drivers. See HAL driver for details.</i></p>

◆ **transfer_start_mode_t**

enum <code>transfer_start_mode_t</code>	
Select whether to start single or repeated transfer with software start.	
Enumerator	
TRANSFER_START_MODE_SINGLE	Software start triggers single transfer.
TRANSFER_START_MODE_REPEAT	Software start transfer continues until transfer is complete.

4.3.39 UART Interface

Interfaces

Detailed Description

Interface for UART communications.

Summary

The UART interface provides common APIs for UART HAL drivers. The UART interface supports the following features:

- Full-duplex UART communication
- Interrupt driven transmit/receive processing
- Callback function with returned event code
- Runtime baud-rate change
- Hardware resource locking during a transaction
- CTS/RTS hardware flow control support (with an associated IOPORT pin)

Implemented by:

- [Serial Communications Interface \(SCI\) UART \(r_sci_uart\)](#)
- [Serial Communications Interface \(SCI\) UART \(r_sci_b_uart\)](#)

Data Structure Documentation

◆ [uart_info_t](#)

```
struct uart\_info\_t
```

UART driver specific information

Data Fields		
uint32_t	write_bytes_max	Maximum bytes that can be written at this time. Only applies if uart_cfg_t::p_transfer_tx is not NULL.
uint32_t	read_bytes_max	Maximum bytes that are available to read at one time. Only applies if uart_cfg_t::p_transfer_rx is not NULL.

◆ **uart_callback_args_t**

struct uart_callback_args_t		
UART Callback parameter definition		
Data Fields		
uint32_t	channel	Device channel number.
uart_event_t	event	Event code.
uint32_t	data	Contains the next character received for the events <code>UART_EVENT_RX_CHAR</code> , <code>UART_EVENT_ERR_PARITY</code> , <code>UART_EVENT_ERR_FRAMING</code> , or <code>UART_EVENT_ERR_OVERFLOW</code> . Otherwise unused.
void const *	p_context	Context provided to user during callback.

◆ **uart_cfg_t**

struct uart_cfg_t		
UART Configuration		
Data Fields		
uint8_t	channel	
		Select a channel corresponding to the channel number of the hardware.
uart_data_bits_t	data_bits	
		Data bit length (8 or 7 or 9)
uart_parity_t	parity	

	Parity type (none or odd or even)
<code>uart_stop_bits_t</code>	<code>stop_bits</code>
	Stop bit length (1 or 2)
<code>uint8_t</code>	<code>rx_ipl</code>
	Receive interrupt priority.
<code>IRQn_Type</code>	<code>rx_irq</code>
	Receive interrupt IRQ number.
<code>uint8_t</code>	<code>tx_ipl</code>
	Transmit interrupt priority.
<code>IRQn_Type</code>	<code>tx_irq</code>
	Transmit interrupt IRQ number.
<code>uint8_t</code>	<code>tei_ipl</code>
	Transmit end interrupt priority.
<code>IRQn_Type</code>	<code>tei_irq</code>
	Transmit end interrupt IRQ number.
<code>uint8_t</code>	<code>eri_ipl</code>
	Error interrupt priority.
<code>IRQn_Type</code>	<code>eri_irq</code>
	Error interrupt IRQ number.

<code>transfer_instance_t const *</code>	<code>p_transfer_rx</code>
<code>transfer_instance_t const *</code>	<code>p_transfer_tx</code>
<code>void(*</code>	<code>p_callback)(uart_callback_args_t *p_args)</code>
	Pointer to callback function.
<code>void const *</code>	<code>p_context</code>
	User defined context passed into callback function.
<code>void const *</code>	<code>p_extend</code>
	UART hardware dependent configuration.

Field Documentation

◆ `p_transfer_rx`

`transfer_instance_t const* uart_cfg_t::p_transfer_rx`

Optional transfer instance used to receive multiple bytes without interrupts. Set to NULL if unused. If NULL, the number of bytes allowed in the read API is limited to one byte at a time.

◆ `p_transfer_tx`

`transfer_instance_t const* uart_cfg_t::p_transfer_tx`

Optional transfer instance used to send multiple bytes without interrupts. Set to NULL if unused. If NULL, the number of bytes allowed in the write APIs is limited to one byte at a time.

◆ `uart_api_t`

`struct uart_api_t`

Shared Interface definition for UART

Data Fields

`fsp_err_t(*` `open)(uart_ctrl_t *const p_ctrl, uart_cfg_t const *const p_cfg)`

`fsp_err_t(*` `read)(uart_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)`

<code>fsp_err_t(*</code>	<code>write</code>)(<code>uart_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes</code>)
<code>fsp_err_t(*</code>	<code>baudSet</code>)(<code>uart_ctrl_t *const p_ctrl, void const *const p_baudrate_info</code>)
<code>fsp_err_t(*</code>	<code>infoGet</code>)(<code>uart_ctrl_t *const p_ctrl, uart_info_t *const p_info</code>)
<code>fsp_err_t(*</code>	<code>communicationAbort</code>)(<code>uart_ctrl_t *const p_ctrl, uart_dir_t communication_to_abort</code>)
<code>fsp_err_t(*</code>	<code>callbackSet</code>)(<code>uart_ctrl_t *const p_api_ctrl, void(*p_callback)(uart_callback_args_t *), void const *const p_context, uart_callback_args_t *const p_callback_memory</code>)
<code>fsp_err_t(*</code>	<code>close</code>)(<code>uart_ctrl_t *const p_ctrl</code>)
<code>fsp_err_t(*</code>	<code>readStop</code>)(<code>uart_ctrl_t *const p_ctrl, uint32_t *remaining_bytes</code>)

Field Documentation

◆ open

`fsp_err_t(* uart_api_t::open)` (`uart_ctrl_t *const p_ctrl, uart_cfg_t const *const p_cfg`)

Open UART device.

Implemented as

- `R_SCI_UART_Open()`
- `R_SCI_B_UART_Open()`

Parameters

[in,out]	<code>p_ctrl</code>	Pointer to the UART control block. Must be declared by user. Value set here.
[in]	<code>uart_cfg_t</code>	Pointer to UART configuration structure. All elements of this structure must be set by user.

◆ read

`fsp_err_t(* uart_api_t::read) (uart_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)`

Read from UART device. The read buffer is used until the read is complete. When a transfer is complete, the callback is called with event `UART_EVENT_RX_COMPLETE`. Bytes received outside an active transfer are received in the callback function with event `UART_EVENT_RX_CHAR`. The maximum transfer size is reported by `infoGet()`.

Implemented as

- `R_SCI_UART_Read()`
- `R_SCI_B_UART_Read()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to the UART control block for the channel.
[in]	<code>p_dest</code>	Destination address to read data from.
[in]	<code>bytes</code>	Read data length.

◆ write

`fsp_err_t(* uart_api_t::write) (uart_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes)`

Write to UART device. The write buffer is used until write is complete. Do not overwrite write buffer contents until the write is finished. When the write is complete (all bytes are fully transmitted on the wire), the callback called with event `UART_EVENT_TX_COMPLETE`. The maximum transfer size is reported by `infoGet()`.

Implemented as

- `R_SCI_UART_Write()`
- `R_SCI_B_UART_Write()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to the UART control block.
[in]	<code>p_src</code>	Source address to write data to.
[in]	<code>bytes</code>	Write data length.

◆ **baudSet**

```
fsp_err_t(* uart_api_t::baudSet) (uart_ctrl_t *const p_ctrl, void const *const p_baudrate_info)
```

Change baud rate.

Warning

Calling this API aborts any in-progress transmission and disables reception until the new baud settings have been applied.

Implemented as

- R_SCI_UART_BaudSet()
- R_SCI_B_UART_BaudSet()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
[in]	p_baudrate_info	Pointer to module specific information for configuring baud rate.

◆ **infoGet**

```
fsp_err_t(* uart_api_t::infoGet) (uart_ctrl_t *const p_ctrl, uart_info_t *const p_info)
```

Get the driver specific information.

Implemented as

- R_SCI_UART_InfoGet()
- R_SCI_B_UART_InfoGet()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
[in]	baudrate	Baud rate in bps.

◆ communicationAbort

```
fsp_err_t(* uart_api_t::communicationAbort) (uart_ctrl_t *const p_ctrl, uart_dir_t
communication_to_abort)
```

Abort ongoing transfer.

Implemented as

- R_SCI_UART_Abort()
- R_SCI_B_UART_Abort()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
[in]	communication_to_abort	Type of abort request.

◆ callbackSet

```
fsp_err_t(* uart_api_t::callbackSet) (uart_ctrl_t *const p_api_ctrl,
void(*p_callback)(uart_callback_args_t *), void const *const p_context, uart_callback_args_t *const
p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_SCI_Uart_CallbackSet()
- R_SCI_B_Uart_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* uart_api_t::close) (uart_ctrl_t *const p_ctrl)
```

Close UART device.

Implemented as

- R_SCI_UART_Close()
- R_SCI_B_UART_Close()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
------	--------	------------------------------------

◆ **readStop**

```
fsp_err_t(* uart_api_t::readStop) (uart_ctrl_t *const p_ctrl, uint32_t *remaining_bytes)
```

Stop ongoing read and return the number of bytes remaining in the read.

Implemented as

- R_SCI_UART_ReadStop()
- R_SCI_B_UART_ReadStop()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
[in,out]	remaining_bytes	Pointer to location to store remaining bytes for read.

◆ **uart_instance_t**

```
struct uart_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

uart_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
uart_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
uart_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ **uart_ctrl_t**typedef void [uart_ctrl_t](#)

UART control block. Allocate an instance specific control block to pass into the UART API calls.

Implemented as

- [sci_uart_instance_ctrl_t](#)

Enumeration Type Documentation◆ **uart_event_t**enum [uart_event_t](#)

UART Event codes

Enumerator

UART_EVENT_RX_COMPLETE	Receive complete event.
UART_EVENT_TX_COMPLETE	Transmit complete event.
UART_EVENT_RX_CHAR	Character received.
UART_EVENT_ERR_PARITY	Parity error event.
UART_EVENT_ERR_FRAMING	Mode fault error event.
UART_EVENT_ERR_OVERFLOW	FIFO Overflow error event.
UART_EVENT_BREAK_DETECT	Break detect error event.
UART_EVENT_TX_DATA_EMPTY	Last byte is transmitting, ready for more data.

◆ **uart_data_bits_t**enum [uart_data_bits_t](#)

UART Data bit length definition

Enumerator

UART_DATA_BITS_9	Data bits 9-bit.
UART_DATA_BITS_8	Data bits 8-bit.
UART_DATA_BITS_7	Data bits 7-bit.

◆ **uart_parity_t**

enum uart_parity_t	
UART Parity definition	
Enumerator	
UART_PARITY_OFF	No parity.
UART_PARITY_EVEN	Even parity.
UART_PARITY_ODD	Odd parity.

◆ **uart_stop_bits_t**

enum uart_stop_bits_t	
UART Stop bits definition	
Enumerator	
UART_STOP_BITS_1	Stop bit 1-bit.
UART_STOP_BITS_2	Stop bits 2-bit.

◆ **uart_dir_t**

enum uart_dir_t	
UART transaction definition	
Enumerator	
UART_DIR_RX_TX	Both RX and TX.
UART_DIR_RX	Only RX.
UART_DIR_TX	Only TX.

4.3.40 USB Interface[Interfaces](#)**Detailed Description**

Interface for USB functions.

Summary

The USB interface provides USB functionality.

The USB interface can be implemented by:

- [USB \(r_usb_basic\)](#)

Data Structures

```
struct usb\_cfg\_t
```

```
struct usb\_api\_t
```

```
struct usb\_instance\_t
```

Macros

```
#define USB\_BREQUEST  
b15-8
```

```
#define USB\_GET\_STATUS  
USB Standard request Get Status.
```

```
#define USB\_CLEAR\_FEATURE  
USB Standard request Clear Feature.
```

```
#define USB\_REQRESERVED  
USB Standard request Reqreserved.
```

```
#define USB\_SET\_FEATURE  
USB Standard request Set Feature.
```

```
#define USB\_REQRESERVED1  
USB Standard request Reqreserved1.
```

```
#define USB\_SET\_ADDRESS  
USB Standard request Set Address.
```

```
#define USB_GET_DESCRIPTOR
        USB Standard request Get Descriptor.
```

```
#define USB_SET_DESCRIPTOR
        USB Standard request Set Descriptor.
```

```
#define USB_GET_CONFIGURATION
        USB Standard request Get Configuration.
```

```
#define USB_SET_CONFIGURATION
        USB Standard request Set Configuration.
```

```
#define USB_GET_INTERFACE
        USB Standard request Get Interface.
```

```
#define USB_SET_INTERFACE
        USB Standard request Set Interface.
```

```
#define USB_SYNCH_FRAME
        USB Standard request Synch Frame.
```

```
#define USB_HOST_TO_DEV
        From host to device.
```

#define USB_IFCLS_DIAG
```

Diagnostic Device.

```
#define USB_IFCLS_WIRE
```

Wireless Controller.

```
#define USB_IFCLS_APL
```

Application-Specific.

```
#define USB_IFCLS_VEN
```

Vendor-Specific Class.

```
#define USB_EP_IN
```

In Endpoint.

```
#define USB_EP_OUT
```

Out Endpoint.

```
#define USB_EP_ISO
```

Isochronous Transfer.

```
#define USB_EP_BULK
```

Bulk Transfer.

```
#define USB_EP_INT
Interrupt Transfer.
```

```
#define USB_CF_RESERVED
Reserved(set to 1)
```

```
#define USB_CF_SELFP
Self Powered.
```

```
#define USB_CF_BUSP
Bus Powered.
```

```
#define USB_CF_RWUPON
Remote Wake up ON.
```

```
#define USB_CF_RWUPOFF
Remote Wake up OFF.
```

```
#define USB_DD_BLENGTH
Device Descriptor Length.
```

```
#define USB_CD_BLENGTH
Configuration Descriptor Length.
```

```
#define USB_ID_BLENGTH
Interface Descriptor Length.
```

```
#define USB_ED_BLENGTH
Endpoint Descriptor Length.
```

Typedefs

```
typedef void usb_ctrl_t
```

Enumerations

enum [usb_speed_t](#)enum [usb_setup_status_t](#)enum [usb_status_t](#)enum [usb_class_t](#)enum [usb_bcport_t](#)enum [usb_onoff_t](#)enum [usb_transfer_t](#)enum [usb_transfer_type_t](#)enum [usb_mode_t](#)enum [usb_compliancetest_status_t](#)

Data Structure Documentation

◆ [usb_cfg_t](#)

struct usb_cfg_t		
USB configuration.		
Data Fields		
usb_mode_t	usb_mode	USB_MODE_HOST/USB_MODE_P ERI.
usb_speed_t	usb_speed	USB speed (USB_HS/USB_FS/USB_LS)
uint8_t	module_number	USB module number (USB_IP0/USB_IP1)
usb_class_t	type	USB device class etc.
usb_descriptor_t *	p_usb_reg	Pointer to the usb_descriptor_t structure area.
usb_compliance_cb_t *	usb_compliance_cb	
IRQn_Type	irq	USBI dedicated interrupt number storage variable.
IRQn_Type	irq_r	USBR dedicated interrupt number storage variable.
IRQn_Type	irq_d0	FS D0FIFO dedicated interrupt

		number storage variable.
IRQn_Type	irq_d1	FS D1FIFO dedicated interrupt number storage variable.
IRQn_Type	hsirq	USBIR dedicated interrupt number storage variable.
IRQn_Type	hsirq_d0	HS D0FIFO dedicated interrupt number storage variable.
IRQn_Type	hsirq_d1	HS D1FIFO dedicated interrupt number storage variable.
uint8_t	ipl	Variable to store the interrupt priority of USBI.
uint8_t	ipl_r	Variable to store the interrupt priority of USBR.
uint8_t	ipl_d0	Variable to store the interrupt priority of FS D0FIFO.
uint8_t	ipl_d1	Variable to store the interrupt priority of FS D1FIFO.
uint8_t	hsipl	Variable to store the interrupt priority of USBIR.
uint8_t	hsipl_d0	Variable to store the interrupt priority of HS D0FIFO.
uint8_t	hsipl_d1	Variable to store the interrupt priority of HS D1FIFO.
usb_callback_t *	p_usb_apl_callback	Application Callback.
void const *	p_context	Other Context.
const transfer_instance_t *	p_transfer_tx	Send context.
const transfer_instance_t *	p_transfer_rx	Receive context.

◆ usb_api_t

struct usb_api_t	
Functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*)	open)(usb_ctrl_t *const p_api_ctrl, usb_cfg_t const *const p_cfg)
fsp_err_t(*)	close)(usb_ctrl_t *const p_api_ctrl)
fsp_err_t(*)	read)(usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t destination)

<code>fsp_err_t(*)</code>	<code>write</code> <code>(usb_ctrl_t *const p_api_ctrl, uint8_t const *const p_buf, uint32_t size, uint8_t destination)</code>

<code>fsp_err_t(*</code>	<code>setupGet)(usb_ctrl_t *const p_api_ctrl, usb_setup_t *setup)</code>

Field Documentation

◆ **open**

```
fsp_err_t(* usb_api_t::open) (usb_ctrl_t *const p_api_ctrl, usb_cfg_t const *const p_cfg)
```

Start the USB module

Implemented as

- R_USB_Open()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ **close**

```
fsp_err_t(* usb_api_t::close) (usb_ctrl_t *const p_api_ctrl)
```

Stop the USB module

Implemented as

- R_USB_Close()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **read**

```
fsp_err_t(* usb_api_t::read) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t destination)
```

Request USB data read

Implemented as

- R_USB_Read()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buf	Pointer to area that stores read data.
[in]	size	Read request size.
[in]	destination	In Host mode, it represents the device address, and in Peripheral mode, it represents the device class.

◆ write

```
fsp_err_t(* usb_api_t::write) (usb_ctrl_t *const p_api_ctrl, uint8_t const *const p_buf, uint32_t size,
uint8_t destination)
```

Request USB data write

Implemented as

- R_USB_Write()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buf	Pointer to area that stores write data.
[in]	size	Read request size.
[in]	destination	In Host mode, it represents the device address, and in Peripheral mode, it represents the device class.

◆ stop

```
fsp_err_t(* usb_api_t::stop) (usb_ctrl_t *const p_api_ctrl, usb_transfer_t direction, uint8_t
destination)
```

Stop USB data read/write processing

Implemented as

- R_USB_Stop()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	direction	Receive (USB_TRANSFER_READ) or send (USB_TRANSFER_WRITE).
[in]	destination	In Host mode, it represents the device address, and in Peripheral mode, it represents the device class.

◆ **suspend**

```
fsp_err_t(* usb_api_t::suspend) (usb_ctrl_t *const p_api_ctrl)
```

Request suspend

Implemented as

- R_USB_Suspend()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **resume**

```
fsp_err_t(* usb_api_t::resume) (usb_ctrl_t *const p_api_ctrl)
```

Request resume

Implemented as

- R_USB_Resume()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **vbusSet**

```
fsp_err_t(* usb_api_t::vbusSet) (usb_ctrl_t *const p_api_ctrl, uint16_t state)
```

Sets VBUS supply start/stop.

Implemented as

- R_USB_VbusSet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	state	VBUS supply start/stop specification

◆ infoGet

```
fsp_err_t(* usb_api_t::infoGet) (usb_ctrl_t *const p_api_ctrl, usb_info_t *p_info, uint8_t destination)
```

Get information on USB device.

Implemented as

- R_USB_InfoGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_info	Pointer to usb_info_t structure area.
[in]	destination	Device address for Host.

◆ pipeRead

```
fsp_err_t(* usb_api_t::pipeRead) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t pipe_number)
```

Request data read from specified pipe

Implemented as

- R_USB_PipeRead()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buf	Pointer to area that stores read data.
[in]	size	Read request size.
[in]	pipe_number	Pipe Number.

◆ pipeWrite

```
fsp_err_t(* usb_api_t::pipeWrite) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t pipe_number)
```

Request data write to specified pipe

Implemented as

- R_USB_PipeWrite()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buf	Pointer to area that stores write data.
[in]	size	Read request size.
[in]	pipe_number	Pipe Number.

◆ pipeStop

```
fsp_err_t(* usb_api_t::pipeStop) (usb_ctrl_t *const p_api_ctrl, uint8_t pipe_number)
```

Stop USB data read/write processing to specified pipe

Implemented as

- R_USB_PipeStop()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	pipe_number	Pipe Number.

◆ usedPipesGet

```
fsp_err_t(* usb_api_t::usedPipesGet) (usb_ctrl_t *const p_api_ctrl, uint16_t *p_pipe, uint8_t destination)
```

Get pipe number

Implemented as

- R_USB_UsedPipesGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_pipe	Pointer to area that stores the selected pipe number (bit map information).
[in]	destination	Device address for Host.

◆ **pipeInfoGet**

```
fsp_err_t(* usb_api_t::pipeInfoGet) (usb_ctrl_t *const p_api_ctrl, usb_pipe_t *p_info, uint8_t pipe_number)
```

Get pipe information

Implemented as

- [R_USB_PipeInfoGet\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_info	Pointer to usb_pipe_t structure area.
[in]	pipe_number	Pipe Number.

◆ **eventGet**

```
fsp_err_t(* usb_api_t::eventGet) (usb_ctrl_t *const p_api_ctrl, usb_status_t *event)
```

Return USB-related completed events (OS less only)

Implemented as

- [R_USB_EventGet\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[out]	event	Pointer to event.

◆ **callback**

```
fsp_err_t(* usb_api_t::callback) (usb_callback_t *p_callback)
```

Register a callback function to be called upon completion of a USB related event. (RTOS only)

Implemented as

- [R_USB_Callback\(\)](#)

Parameters

[in]	p_callback	Pointer to Callback function.
------	------------	-------------------------------

◆ pullUp

```
fsp_err_t(* usb_api_t::pullUp) (usb_ctrl_t *const p_api_ctrl, uint8_t state)
```

Pull-up enable/disable setting of D+/D- line.

Implemented as

- R_USB_PullUp()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	state	Pull-up enable/disable setting.

◆ hostControlTransfer

```
fsp_err_t(* usb_api_t::hostControlTransfer) (usb_ctrl_t *const p_api_ctrl, usb_setup_t *p_setup, uint8_t *p_buf, uint8_t device_address)
```

Performs settings and transmission processing when transmitting a setup packet.

Implemented as

- R_USB_HostControlTransfer()

Parameters

[in]	p_api_ctrl	USB control structure.
[in]	p_setup	Setup packet information.
[in]	p_buf	Transfer area information.
[in]	device_address	Device address information.

◆ periControlDataGet

```
fsp_err_t(* usb_api_t::periControlDataGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size)
```

Receives data sent by control transfer.

Implemented as

- R_USB_PeriControlDataGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[in]	p_buf	Data reception area information.
[in]	size	Data reception size information.

◆ **periControlDataSet**

```
fsp_err_t(* usb_api_t::periControlDataSet) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size)
```

Performs transfer processing for control transfer.

Implemented as

- [R_USB_PeriControlDataSet\(\)](#)

Parameters

[in]	p_api_ctrl	USB control structure.
[in]	p_buf	Area information for data transfer.
[in]	size	Transfer size information.

◆ **periControlStatusSet**

```
fsp_err_t(* usb_api_t::periControlStatusSet) (usb_ctrl_t *const p_api_ctrl, usb_setup_status_t status)
```

Set the response to the setup packet.

Implemented as

- [R_USB_PeriControlStatusSet\(\)](#)

Parameters

[in]	p_api_ctrl	USB control structure.
[in]	status	USB port startup information.

◆ **remoteWakeup**

```
fsp_err_t(* usb_api_t::remoteWakeup) (usb_ctrl_t *const p_api_ctrl)
```

Sends a remote wake-up signal to the connected Host.

Implemented as

- [R_USB_RemoteWakeup\(\)](#)

Parameters

[in]	p_api_ctrl	USB control structure.
------	------------	------------------------

◆ **moduleNumberGet**

```
fsp_err_t(* usb_api_t::moduleNumberGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *module_number)
```

This API gets the module number.

Implemented as

- [R_USB_ModuleNumberGet\(\)](#)

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	module_number	Module number to get.

◆ **classTypeGet**

```
fsp_err_t(* usb_api_t::classTypeGet) (usb_ctrl_t *const p_api_ctrl, usb_class_t *class_type)
```

This API gets the module number.

Implemented as

- [R_USB_ClassTypeGet\(\)](#)

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	class_type	Class type to get.

◆ **deviceAddressGet**

```
fsp_err_t(* usb_api_t::deviceAddressGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *device_address)
```

This API gets the device address.

Implemented as

- [R_USB_DeviceAddressGet\(\)](#)

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	device_address	Device address to get.

◆ **pipeNumberGet**

```
fsp_err_t(* usb_api_t::pipeNumberGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *pipe_number)
```

This API gets the pipe number.

Implemented as

- R_USB_PipeNumberGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	pipe_number	Pipe number to get.

◆ **deviceStateGet**

```
fsp_err_t(* usb_api_t::deviceStateGet) (usb_ctrl_t *const p_api_ctrl, uint16_t *state)
```

This API gets the state of the device.

Implemented as

- R_USB_DeviceStateGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	state	Device state to get.

◆ **dataSizeGet**

```
fsp_err_t(* usb_api_t::dataSizeGet) (usb_ctrl_t *const p_api_ctrl, uint32_t *data_size)
```

This API gets the data size.

Implemented as

- R_USB_DataSizeGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	data_size	Data size to get.

◆ **setupGet**

```
fsp_err_t(* usb_api_t::setupGet) (usb_ctrl_t *const p_api_ctrl, usb_setup_t *setup)
```

This API gets the setup type.

Implemented as

- R_USB_SetupGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	setup	Setup type to get.

◆ **usb_instance_t**

```
struct usb_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

usb_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
usb_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
usb_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **usb_ctrl_t**

```
typedef void usb_ctrl_t
```

USB control block. Allocate an instance specific control block to pass into the USB API calls.

Implemented as

- usb_instance_ctrl_t

Enumeration Type Documentation

◆ **usb_speed_t**

enum <code>usb_speed_t</code>	
USB speed type	
Enumerator	
<code>USB_SPEED_LS</code>	Low speed operation.
<code>USB_SPEED_FS</code>	Full speed operation.
<code>USB_SPEED_HS</code>	Hi speed operation.

◆ **usb_setup_status_t**

enum <code>usb_setup_status_t</code>	
USB request result	
Enumerator	
<code>USB_SETUP_STATUS_ACK</code>	ACK response.
<code>USB_SETUP_STATUS_STALL</code>	STALL response.

◆ **usb_status_t**

enum <code>usb_status_t</code>	
USB driver status	
Enumerator	
<code>USB_STATUS_POWERED</code>	Powered State.
<code>USB_STATUS_DEFAULT</code>	Default State.
<code>USB_STATUS_ADDRESS</code>	Address State.
<code>USB_STATUS_CONFIGURED</code>	Configured State.
<code>USB_STATUS_SUSPEND</code>	Suspend State.
<code>USB_STATUS_RESUME</code>	Resume State.
<code>USB_STATUS_DETACH</code>	Detach State.
<code>USB_STATUS_REQUEST</code>	Request State.
<code>USB_STATUS_REQUEST_COMPLETE</code>	Request Complete State.
<code>USB_STATUS_READ_COMPLETE</code>	Read Complete State.
<code>USB_STATUS_WRITE_COMPLETE</code>	Write Complete State.
<code>USB_STATUS_BC</code>	battery Charge State
<code>USB_STATUS_OVERCURRENT</code>	Over Current state.
<code>USB_STATUS_NOT_SUPPORT</code>	Device Not Support.
<code>USB_STATUS_NONE</code>	None Status.
<code>USB_STATUS_MSC_CMD_COMPLETE</code>	MSC_CMD Complete.

◆ **usb_class_t**

enum <code>usb_class_t</code>	
USB class type	
Enumerator	
<code>USB_CLASS_PCDC</code>	PCDC Class.
<code>USB_CLASS_PCDCC</code>	PCDCC Class.
<code>USB_CLASS_PCDC2</code>	PCDC2 Class.
<code>USB_CLASS_PCDCC2</code>	PCDCC2 Class.
<code>USB_CLASS_PHID</code>	PHID Class.
<code>USB_CLASS_PAUD</code>	PAUD Class.
<code>USB_CLASS_PVND</code>	PVND Class.
<code>USB_CLASS_HCDC</code>	HCDC Class.
<code>USB_CLASS_HCDCC</code>	HCDCC Class.
<code>USB_CLASS_HHID</code>	HHID Class.
<code>USB_CLASS_HVND</code>	HVND Class.
<code>USB_CLASS_HMSC</code>	HMSC Class.
<code>USB_CLASS_PMSC</code>	PMSC Class.
<code>USB_CLASS_REQUEST</code>	USB Class Request.
<code>USB_CLASS_END</code>	USB Class End Code.

◆ **usb_bcport_t**

enum usb_bcport_t	
USB battery charging type	
Enumerator	
USB_BCPORT_SDP	SDP port settings.
USB_BCPORT_CDP	CDP port settings.
USB_BCPORT_DCP	DCP port settings.

◆ **usb_onoff_t**

enum usb_onoff_t	
USB status	
Enumerator	
USB_OFF	USB Off State.
USB_ON	USB On State.

◆ **usb_transfer_t**

enum usb_transfer_t	
USB read/write type	
Enumerator	
USB_TRANSFER_READ	Data Receive communication.
USB_TRANSFER_WRITE	Data transmission communication.

◆ **usb_transfer_type_t**

enum <code>usb_transfer_type_t</code>	
USB transfer type	
Enumerator	
<code>USB_TRANSFER_TYPE_BULK</code>	Bulk communication.
<code>USB_TRANSFER_TYPE_INT</code>	Interrupt communication.
<code>USB_TRANSFER_TYPE_ISO</code>	Isochronous communication.

◆ **usb_mode_t**

enum <code>usb_mode_t</code>	
Enumerator	
<code>USB_MODE_HOST</code>	Host mode.
<code>USB_MODE_PERI</code>	Peripheral mode.

◆ **usb_compliancetest_status_t**

enum <code>usb_compliancetest_status_t</code>	
Enumerator	
<code>USB_COMPLIANCETEST_ATTACH</code>	Device Attach Detection.
<code>USB_COMPLIANCETEST_DETACH</code>	Device Detach Detection.
<code>USB_COMPLIANCETEST_TPL</code>	TPL device connect.
<code>USB_COMPLIANCETEST_NOTTPL</code>	Not TPL device connect.
<code>USB_COMPLIANCETEST_HUB</code>	USB Hub connect.
<code>USB_COMPLIANCETEST_OVRC</code>	Over current.
<code>USB_COMPLIANCETEST_NORES</code>	Response Time out for Control Read Transfer.
<code>USB_COMPLIANCETEST_SETUP_ERR</code>	Setup Transaction Error.

4.3.41 USB HCDC Interface

Interfaces

Detailed Description

Interface for USB HCDC functions.

Summary

The USB HCDC interface provides USB HCDC functionality.

The USB HCDC interface can be implemented by:

- [USB Host Communications Device Class Driver \(r_usb_hcdc\)](#)

Data Structures

struct [usb_hcdc_encapsulated_t](#)

struct [usb_hcdc_abstractstate_t](#)

struct [usb_hcdc_countrysetting_t](#)

union [usb_hcdc_commfeature_t](#)

struct [usb_hcdc_linecoding_t](#)

struct [usb_hcdc_controllinestate_t](#)

struct [usb_hcdc_serialstate_t](#)

struct [usb_hcdc_breakduration_t](#)

Enumerations

enum [usb_hcdc_data_bit_t](#)

enum [usb_hcdc_stop_bit_t](#)

enum [usb_hcdc_parity_bit_t](#)

enum [usb_hcdc_line_speed_t](#)

enum [usb_hcdc_feature_selector_t](#)

Data Structure Documentation

◆ **usb_hcdc_encapsulated_t**

struct usb_hcdc_encapsulated_t		
Encapsulated data		
Data Fields		
uint8_t *	p_data	Protocol dependent data.
uint16_t	wlength	Data length in bytes.

◆ **usb_hcdc_abstractstate_t**

struct usb_hcdc_abstractstate_t		
Abstract Control Model (ACM) settings bitmap		
Data Fields		
uint16_t	bis: 1	Idle enable.
uint16_t	bdms: 1	Data multiplexing enable.
uint16_t	rsv: 14	Reserved.

◆ **usb_hcdc_countrysetting_t**

struct usb_hcdc_countrysetting_t		
Country code data		
Data Fields		
uint16_t	country_code	Country code.

◆ **usb_hcdc_commfeature_t**

union usb_hcdc_commfeature_t		
Feature setting data		
Data Fields		
usb_hcdc_abstractstate_t	abstract_state	ACM settings bitmap.
usb_hcdc_countrysetting_t	country_setting	Country code.

◆ **usb_hcdc_linecoding_t**

struct usb_hcdc_linecoding_t		
Virtual UART configuration (line coding)		
Data Fields		
usb_hcdc_line_speed_t	dwkte_rate	Data terminal rate in bits per second.
usb_hcdc_stop_bit_t	bchar_format	Stop bits.
usb_hcdc_parity_bit_t	bparity_type	Parity.
usb_hcdc_data_bit_t	bdata_bits	Data bits.

uint8_t	rsv	Reserved.
---------	-----	-----------

◆ usb_hcdc_controllinestate_t

struct usb_hcdc_controllinestate_t		
Virtual UART control signal bitmap		
Data Fields		
uint16_t	bdtr: 1	DTR.
uint16_t	brts: 1	RTS.
uint16_t	rsv: 14	Reserved.

◆ usb_hcdc_serialstate_t

struct usb_hcdc_serialstate_t		
Virtual UART state bitmap		
Data Fields		
uint16_t	brx_carrier: 1	DCD signal.
uint16_t	btx_carrier: 1	DSR signal.
uint16_t	bbreak: 1	Break detection status.
uint16_t	bring_signal: 1	Ring signal.
uint16_t	bframing: 1	Framing error.
uint16_t	bparity: 1	Parity error.
uint16_t	bover_run: 1	Over Run error.
uint16_t	rsv: 9	Reserved.

◆ usb_hcdc_breakduration_t

struct usb_hcdc_breakduration_t		
Break duration data		
Data Fields		
uint16_t	wtime_ms	Duration of Break.

Enumeration Type Documentation

◆ **usb_hcdc_data_bit_t**

enum <code>usb_hcdc_data_bit_t</code>	
Virtual UART data length	
Enumerator	
USB_HCDC_DATA_BIT_7	7 bits
USB_HCDC_DATA_BIT_8	8 bits

◆ **usb_hcdc_stop_bit_t**

enum <code>usb_hcdc_stop_bit_t</code>	
Virtual UART stop bit length	
Enumerator	
USB_HCDC_STOP_BIT_1	1 bit
USB_HCDC_STOP_BIT_15	1.5 bits
USB_HCDC_STOP_BIT_2	2 bits

◆ **usb_hcdc_parity_bit_t**

enum <code>usb_hcdc_parity_bit_t</code>	
Virtual UART parity bit setting	
Enumerator	
USB_HCDC_PARITY_BIT_NONE	No parity bit.
USB_HCDC_PARITY_BIT_ODD	Odd parity.
USB_HCDC_PARITY_BIT_EVEN	Even parity.

◆ **usb_hcdc_line_speed_t**

enum <code>usb_hcdc_line_speed_t</code>	
Virtual UART bitrate	

◆ usb_hcdc_feature_selector_t

```
enum usb_hcdc_feature_selector_t
```

```
Feature Selector
```

4.3.42 USB HHID Interface

Interfaces

Detailed Description

Interface for USB HHID functions.

Summary

The USB HHID interface provides USB HHID functionality.

The USB HHID interface can be implemented by:

- USB Host Human Interface Device Class Driver (r_usb_hhid)

Data Structures

```
struct usb_hhid_api_t
```

```
struct usb_hhid_instance_t
```

Macros

```
#define USB_HID_OTHER  
Other.
```

```
#define USB_HID_KEYBOARD  
Keyboard.
```

```
#define USB_HID_MOUSE  
Mouse.
```

```
#define USB_HID_IN  
In Transfer.
```

```
#define USB_HID_OUT
Out Transfer.
```

Data Structure Documentation

◆ usb_hhid_api_t

struct usb_hhid_api_t

USB HHID functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*)	typeGet)(usb_ctrl_t *const p_api_ctrl, uint8_t *p_type, uint8_t device_address)
--------------	--

fsp_err_t(*)	maxPacketSizeGet)(usb_ctrl_t *const p_api_ctrl, uint16_t *p_size, uint8_t direction, uint8_t device_address)
--------------	---

Field Documentation

◆ typeGet

fsp_err_t(* usb_hhid_api_t::typeGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_type, uint8_t device_address)

Get HID protocol.(USB Mouse/USB Keyboard/Other Type.)

Implemented as

- R_USB_HHID_TypeGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_type	Pointer to store HID protocol value.
[in]	device_address	Device Address.

◆ maxPacketSizeGet

```
fsp_err_t(* usb_hhid_api_t::maxPacketSizeGet) (usb_ctrl_t *const p_api_ctrl, uint16_t *p_size,
uint8_t direction, uint8_t device_address)
```

Obtains max packet size for the connected HID device. The max packet size is set to the area. Set the direction (USB_HID_IN/USB_HID_OUT).

Implemented as

- R_USB_HHID_MaxPacketSizeGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_size	Pointer to the area to store the max package size.
[in]	direction	Transfer direction.
[in]	device_address	Device Address.

◆ usb_hhid_instance_t

```
struct usb_hhid_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

usb_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
usb_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
usb_hhid_api_t const *	p_api	Pointer to the API structure for this instance.

4.3.43 USB HMSC Interface

Interfaces

Detailed Description

Interface for USB HMSC functions.

Summary

The USB HMSC interface provides USB HMSC functionality.

The USB HMSC interface can be implemented by:

- USB Host Mass Storage Class Driver (r_usb_hmsc)

Data Structures

struct [usb_hmsc_api_t](#)

Enumerations

enum [usb_atapi_t](#)

enum [usb_csw_result_t](#)

Data Structure Documentation

◆ usb_hmsc_api_t

struct [usb_hmsc_api_t](#)

USB HMSC functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t (*	storageCommand)(usb_ctrl_t *const p_api_ctrl, uint8_t *buf, uint8_t command, uint8_t destination)
------------------------------	--

fsp_err_t (*	driveNumberGet)(usb_ctrl_t *const p_api_ctrl, uint8_t *p_drive, uint8_t destination)
------------------------------	---

fsp_err_t (*	storageReadSector)(uint16_t drive_number, uint8_t *const buff, uint32_t sector_number, uint16_t sector_count)
------------------------------	--

fsp_err_t (*	storageWriteSector)(uint16_t drive_number, uint8_t const *const buff, uint32_t sector_number, uint16_t sector_count)
------------------------------	---

fsp_err_t (*	semaphoreGet)(void)
------------------------------	--------------------------------------

fsp_err_t (*	semaphoreRelease)(void)
------------------------------	--

Field Documentation

◆ storageCommand

`fsp_err_t(* usb_hmsc_api_t::storageCommand) (usb_ctrl_t *const p_api_ctrl, uint8_t *buf, uint8_t command, uint8_t destination)`

Processing for MassStorage(ATAPI) command.

Implemented as

- [R_USB_HMSC_StorageCommand\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	*buf	Pointer to the buffer area to store the transfer data.
[in]	command	ATAPI command.
[in]	destination	Represents a device address.

◆ driveNumberGet

`fsp_err_t(* usb_hmsc_api_t::driveNumberGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_drive, uint8_t destination)`

Get number of Storage drive.

Implemented as

- [R_USB_HMSC_DriveNumberGet\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[out]	p_drive	Store address for Drive No.
[in]	destination	Represents a device address.

◆ storageReadSector

`fsp_err_t(* usb_hmsc_api_t::storageReadSector) (uint16_t drive_number, uint8_t *const buff, uint32_t sector_number, uint16_t sector_count)`

Read sector information.

Implemented as

- [R_USB_HMSC_StorageReadSector\(\)](#)

Parameters

[in]	drive_number	Drive number.
[out]	*buff	Pointer to the buffer area to store the transfer data.
[in]	sector_number	The sector number to start with.
[in]	sector_count	Transmit with the sector size of the number of times.

◆ storageWriteSector

`fsp_err_t(* usb_hmsc_api_t::storageWriteSector) (uint16_t drive_number, uint8_t const *const buff, uint32_t sector_number, uint16_t sector_count)`

Write sector information.

Implemented as

- [R_USB_HMSC_StorageWriteSector\(\)](#)

Parameters

[in]	drive_number	Drive number.
[in]	*buff	Pointer to the buffer area to store the transfer data.
[in]	sector_number	The sector number to start with.
[in]	sector_count	Transmit with the sector size of the number of times.

◆ semaphoreGet

`fsp_err_t(* usb_hmsc_api_t::semaphoreGet) (void)`

Get Semaphore.

Implemented as

- [R_USB_HMSC_SemaphoreGet\(\)](#)

◆ semaphoreRelease`fsp_err_t(* usb_hmsc_api_t::semaphoreRelease) (void)`

Release Semaphore.

Implemented as

- `R_USB_HMSC_SemaphoreRelease()`

Enumeration Type Documentation

◆ **usb_atapi_t**

enum <code>usb_atapi_t</code>	
ATAPI commands	
Enumerator	
<code>USB_ATAPI_TEST_UNIT_READY</code>	Test Unit Ready.
<code>USB_ATAPI_REQUEST_SENSE</code>	Request Sense.
<code>USB_ATAPI_FORMAT_UNIT</code>	Format Unit.
<code>USB_ATAPI_INQUIRY</code>	Inquiry.
<code>USB_ATAPI_MODE_SELECT6</code>	Mode Select6.
<code>USB_ATAPI_MODE_SENSE6</code>	Mode Sense6.
<code>USB_ATAPI_START_STOP_UNIT</code>	Start Stop Unit.
<code>USB_ATAPI_PREVENT_ALLOW</code>	Prevent Allow.
<code>USB_ATAPI_READ_FORMAT_CAPACITY</code>	Read Format Capacity.
<code>USB_ATAPI_READ_CAPACITY</code>	Read Capacity.
<code>USB_ATAPI_READ10</code>	Read10.
<code>USB_ATAPI_WRITE10</code>	Write10.
<code>USB_ATAPI_SEEK</code>	Seek.
<code>USB_ATAPI_WRITE_AND_VERIFY</code>	Write and Verify.
<code>USB_ATAPI_VERIFY10</code>	Verify10.
<code>USB_ATAPI_MODE_SELECT10</code>	Mode Select10.
<code>USB_ATAPI_MODE_SENSE10</code>	Mode Sense10.

◆ **usb_csw_result_t**

enum usb_csw_result_t	
Command Status Wrapper (CSW)	
Enumerator	
USB_CSW_RESULT_SUCCESS	CSW was successful.
USB_CSW_RESULT_FAIL	CSW failed.
USB_CSW_RESULT_PHASE	CSW has phase error.

4.3.44 USB PCDC Interface[Interfaces](#)**Detailed Description**

Interface for USB PCDC functions.

Summary

The USB PCDC interface provides USB PCDC functionality.

The USB PCDC interface can be implemented by:

- [USB Peripheral Communications Device Class \(r_usb_pcdc\)](#)

Data Structures

```
struct usb_serial_state_bitmap_t
```

```
union usb_sci_serialstate_t
```

```
struct usb_pcdc_linecoding_t
```

```
struct usb_pcdc_ctrllinestate_t
```

Macros

```
#define USB_PCDC_SET_LINE_CODING
Set Line Coding.
```

```
#define USB_PCDC_GET_LINE_CODING
```

Get Line Coding.

```
#define USB_PCDC_SET_CONTROL_LINE_STATE
```

Control Line State.

```
#define USB_PCDC_SERIAL_STATE
```

Serial State Code.

```
#define USB_PCDC_SETUP_TBL_BSIZE
```

Setup packet table size (uint16_t * 5)

Data Structure Documentation

◆ usb_serial_state_bitmap_t

struct usb_serial_state_bitmap_t		
Virtual UART signal state		
Data Fields		
uint16_t	b_rx_carrier: 1	DCD signal.
uint16_t	b_tx_carrier: 1	DSR signal.
uint16_t	b_break: 1	Break signal.
uint16_t	b_ring_signal: 1	Ring signal.
uint16_t	b_framing: 1	Framing error.
uint16_t	b_parity: 1	Parity error.
uint16_t	b_over_run: 1	Overrun error.
uint16_t	rsv: 9	Reserved.

◆ usb_sci_serialstate_t

union usb_sci_serialstate_t		
Class Notification Serial State		
Data Fields		
uint32_t	word	Word Access.
usb_serial_state_bitmap_t	bit	Bit Access.

◆ usb_pcdc_linecoding_t

struct usb_pcdc_linecoding_t

Virtual UART communication settings		
Data Fields		
uint32_t	dw_dte_rate	Bitrate.
uint8_t	b_char_format	Stop bits.
uint8_t	b_parity_type	Parity.
uint8_t	b_data_bits	Data bits.
uint8_t	rsv	Reserved.

◆ usb_pcdc_ctrllinestate_t

struct usb_pcdc_ctrllinestate_t		
Virtual UART control line state		
Data Fields		
uint16_t	bdtr: 1	DTR.
uint16_t	brts: 1	RTS.
uint16_t	rsv: 14	Reserved.

4.3.45 USB PHID Interface

Interfaces

Detailed Description

Interface for USB PHID functions.

Summary

The USB interface provides USB functionality.

The USB PHID interface can be implemented by:

- [USB Peripheral Human Interface Device Class \(r_usb_phid\)](#)

4.3.46 USB PMSC Interface

Interfaces

Detailed Description

Interface for USB PMSC functions.

Summary

The USB PMSC interface provides USB PMSC functionality.

The USB PMSC interface can be implemented by:

- [USB Peripheral Mass Storage Class \(r_usb_pmsc\)](#)

Macros

```
#define USB_MASS_STORAGE_RESET  
    Mass storage reset request code.
```

```
#define USB_GET_MAX_LUN  
    Get max logical unit number request code.
```

4.3.47 WDT Interface

[Interfaces](#)

Detailed Description

Interface for watch dog timer functions.

Summary

The WDT interface for the Watchdog Timer (WDT) peripheral provides watchdog functionality including resetting the device or generating an interrupt.

The watchdog timer interface can be implemented by:

- [Watchdog Timer \(r_wdt\)](#)
- [Independent Watchdog Timer \(r_iwdt\)](#)

Data Structures

```
struct wdt_callback_args_t
```

```
struct wdt_timeout_values_t
```

```
struct wdt_cfg_t
```

```
struct wdt_api_t
```

```
struct wdt_instance_t
```

Typedefs

```
typedef void wdt_ctrl_t
```

Enumerations

```
enum wdt_timeout_t
```

```
enum wdt_clock_division_t
```

```
enum wdt_window_start_t
```

```
enum wdt_window_end_t
```

```
enum wdt_reset_control_t
```

```
enum wdt_stop_control_t
```

```
enum wdt_status_t
```

Data Structure Documentation

◆ wdt_callback_args_t

struct wdt_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data. Set in wdt_api_t::open function in wdt_cfg_t .

◆ wdt_timeout_values_t

struct wdt_timeout_values_t		
WDT timeout data. Used to return frequency of WDT clock and timeout period		
Data Fields		
uint32_t	clock_frequency_hz	Frequency of watchdog clock after divider.
uint32_t	timeout_ticks	Timeout period in units of watchdog clock ticks.

◆ wdt_cfg_t

struct wdt_cfg_t		
WDT configuration parameters.		

Data Fields	
<code>wdt_timeout_t</code>	<code>timeout</code>
	Timeout period.
<code>wdt_clock_division_t</code>	<code>clock_division</code>
	Clock divider.
<code>wdt_window_start_t</code>	<code>window_start</code>
	Refresh permitted window start position.
<code>wdt_window_end_t</code>	<code>window_end</code>
	Refresh permitted window end position.
<code>wdt_reset_control_t</code>	<code>reset_control</code>
	Select NMI or reset generated on underflow.
<code>wdt_stop_control_t</code>	<code>stop_control</code>
	Select whether counter operates in sleep mode.
<code>void(*</code>	<code>p_callback</code>)(<code>wdt_callback_args_t</code> * <code>p_args</code>)
	Callback provided when a WDT NMI ISR occurs.
<code>void const *</code>	<code>p_context</code>
<code>void const *</code>	<code>p_extend</code>
	Placeholder for user extension.
Field Documentation	

◆ **p_context**

```
void const* wdt_cfg_t::p_context
```

Placeholder for user data. Passed to the user callback in [wdt_callback_args_t](#).

◆ **wdt_api_t**

```
struct wdt_api_t
```

WDT functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t (*	open)(wdt_ctrl_t *const p_ctrl, wdt_cfg_t const *const p_cfg)
------------------------------	--

fsp_err_t (*	refresh)(wdt_ctrl_t *const p_ctrl)
------------------------------	---

fsp_err_t (*	statusGet)(wdt_ctrl_t *const p_ctrl, wdt_status_t *const p_status)
------------------------------	---

fsp_err_t (*	statusClear)(wdt_ctrl_t *const p_ctrl, const wdt_status_t status)
------------------------------	--

fsp_err_t (*	counterGet)(wdt_ctrl_t *const p_ctrl, uint32_t *const p_count)
------------------------------	---

fsp_err_t (*	timeoutGet)(wdt_ctrl_t *const p_ctrl, wdt_timeout_values_t *const p_timeout)
------------------------------	---

fsp_err_t (*	callbackSet)(wdt_ctrl_t *const p_api_ctrl, void(*p_callback)(wdt_callback_args_t *), void const *const p_context, wdt_callback_args_t *const p_callback_memory)
------------------------------	--

Field Documentation

◆ **open**

```
fsp_err_t(* wdt_api_t::open) (wdt_ctrl_t *const p_ctrl, wdt_cfg_t const *const p_cfg)
```

Initialize the WDT in register start mode. In auto-start mode with NMI output it registers the NMI callback.

Implemented as

- R_WDT_Open()
- R_IWDT_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ **refresh**

```
fsp_err_t(* wdt_api_t::refresh) (wdt_ctrl_t *const p_ctrl)
```

Refresh the watchdog timer.

Implemented as

- R_WDT_Refresh()
- R_IWDT_Refresh()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **statusGet**

```
fsp_err_t(* wdt_api_t::statusGet) (wdt_ctrl_t *const p_ctrl, wdt_status_t *const p_status)
```

Read the status of the WDT.

Implemented as

- R_WDT_StatusGet()
- R_IWDT_StatusGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_status	Pointer to variable to return status information through.

◆ **statusClear**

```
fsp_err_t(* wdt_api_t::statusClear) (wdt_ctrl_t *const p_ctrl, const wdt_status_t status)
```

Clear the status flags of the WDT.

Implemented as

- R_WDT_StatusClear()
- R_IWDT_StatusClear()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	status	Status condition(s) to clear.

◆ **counterGet**

```
fsp_err_t(* wdt_api_t::counterGet) (wdt_ctrl_t *const p_ctrl, uint32_t *const p_count)
```

Read the current WDT counter value.

Implemented as

- R_WDT_CounterGet()
- R_IWDT_CounterGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_count	Pointer to variable to return current WDT counter value.

◆ **timeoutGet**

```
fsp_err_t(* wdt_api_t::timeoutGet) (wdt_ctrl_t *const p_ctrl, wdt_timeout_values_t *const p_timeout)
```

Read the watchdog timeout values.

Implemented as

- R_WDT_TimeoutGet()
- R_IWDT_TimeoutGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_timeout	Pointer to structure to return timeout values.

◆ **callbackSet**

```
fsp_err_t(* wdt_api_t::callbackSet) (wdt_ctrl_t *const p_api_ctrl,
void(*p_callback)(wdt_callback_args_t *), void const *const p_context, wdt_callback_args_t *const
p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_WDT_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the WDT control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **wdt_instance_t**

```
struct wdt_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

wdt_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
wdt_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
wdt_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **wdt_ctrl_t**

```
typedef void wdt_ctrl_t
```

WDT control block. Allocate an instance specific control block to pass into the WDT API calls.

Implemented as

- wdt_instance_ctrl_t
- iwdt_instance_ctrl_t

Enumeration Type Documentation

◆ wdt_timeout_t

enum wdt_timeout_t	
WDT time-out periods.	
Enumerator	
WDT_TIMEOUT_128	128 clock cycles
WDT_TIMEOUT_512	512 clock cycles
WDT_TIMEOUT_1024	1024 clock cycles
WDT_TIMEOUT_2048	2048 clock cycles
WDT_TIMEOUT_4096	4096 clock cycles
WDT_TIMEOUT_8192	8192 clock cycles
WDT_TIMEOUT_16384	16384 clock cycles

◆ **wdt_clock_division_t**

enum <code>wdt_clock_division_t</code>	
WDT clock division ratio.	
Enumerator	
<code>WDT_CLOCK_DIVISION_1</code>	CLK/1.
<code>WDT_CLOCK_DIVISION_4</code>	CLK/4.
<code>WDT_CLOCK_DIVISION_16</code>	CLK/16.
<code>WDT_CLOCK_DIVISION_32</code>	CLK/32.
<code>WDT_CLOCK_DIVISION_64</code>	CLK/64.
<code>WDT_CLOCK_DIVISION_128</code>	CLK/128.
<code>WDT_CLOCK_DIVISION_256</code>	CLK/256.
<code>WDT_CLOCK_DIVISION_512</code>	CLK/512.
<code>WDT_CLOCK_DIVISION_2048</code>	CLK/2048.
<code>WDT_CLOCK_DIVISION_8192</code>	CLK/8192.

◆ **wdt_window_start_t**

enum <code>wdt_window_start_t</code>	
WDT refresh permitted period window start position.	
Enumerator	
<code>WDT_WINDOW_START_25</code>	Start position = 25%.
<code>WDT_WINDOW_START_50</code>	Start position = 50%.
<code>WDT_WINDOW_START_75</code>	Start position = 75%.
<code>WDT_WINDOW_START_100</code>	Start position = 100%.

◆ **wdt_window_end_t**

enum wdt_window_end_t	
WDT refresh permitted period window end position.	
Enumerator	
WDT_WINDOW_END_75	End position = 75%.
WDT_WINDOW_END_50	End position = 50%.
WDT_WINDOW_END_25	End position = 25%.
WDT_WINDOW_END_0	End position = 0%.

◆ **wdt_reset_control_t**

enum wdt_reset_control_t	
WDT Counter underflow and refresh error control.	
Enumerator	
WDT_RESET_CONTROL_NMI	NMI request when counter underflows.
WDT_RESET_CONTROL_RESET	Reset request when counter underflows.

◆ **wdt_stop_control_t**

enum wdt_stop_control_t	
WDT Counter operation in sleep mode.	
Enumerator	
WDT_STOP_CONTROL_DISABLE	Count will not stop when device enters sleep mode.
WDT_STOP_CONTROL_ENABLE	Count will automatically stop when device enters sleep mode.

◆ **wdt_status_t**

enum <code>wdt_status_t</code>	
WDT status	
Enumerator	
<code>WDT_STATUS_NO_ERROR</code>	No status flags set.
<code>WDT_STATUS_UNDERFLOW_ERROR</code>	Underflow flag set.
<code>WDT_STATUS_REFRESH_ERROR</code>	Refresh error flag set. Refresh outside of permitted window.
<code>WDT_STATUS_UNDERFLOW_AND_REFRESH_ERROR</code>	Underflow and refresh error flags set.

4.3.48 ADPCM Decoder Interface[Interfaces](#)**Detailed Description**

Interface for ADPCM decoder.

Summary

The ADPCM decoder interface provides functionality to decode the 4bit ADPCM data to 16bit PCM output.

Implemented by: [ADPCM Decoder \(rm_adpcm_decoder\)](#)

Data Structures

struct [adpcm_decoder_cfg_t](#)

struct [adpcm_decoder_api_t](#)

struct [adpcm_decoder_instance_t](#)

Typedefs

typedef void [adpcm_decoder_ctrl_t](#)

Data Structure Documentation◆ **adpcm_decoder_cfg_t**

```
struct adpcm_decoder_cfg_t
```

Audio Decoder general configuration

◆ adpcm_decoder_api_t

```
struct adpcm_decoder_api_t
```

Audio Decoder interface API.

Data Fields

<code>fsp_err_t(*</code>	<code>open</code>)(<code>adpcm_decoder_ctrl_t *const p_ctrl, adpcm_decoder_cfg_t const *const p_cfg</code>)
--------------------------	--

<code>fsp_err_t(*</code>	<code>decode</code>)(<code>adpcm_decoder_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t src_len_bytes</code>)
--------------------------	---

<code>fsp_err_t(*</code>	<code>reset</code>)(<code>adpcm_decoder_ctrl_t *const p_ctrl</code>)
--------------------------	---

<code>fsp_err_t(*</code>	<code>close</code>)(<code>adpcm_decoder_ctrl_t *const p_ctrl</code>)
--------------------------	---

Field Documentation

◆ open

```
fsp_err_t(* adpcm_decoder_api_t::open) (adpcm_decoder_ctrl_t *const p_ctrl, adpcm_decoder_cfg_t const *const p_cfg)
```

Initialize Audio Decoder device.

Implemented as

- `RM_ADPCM_DECODER_Open()`

Note

To reconfigure after calling this function, call `adpcm_decoder_api_t::close` first.

Parameters

[in]	<code>p_ctrl</code>	Pointer to control handle structure
[in]	<code>p_cfg</code>	Pointer to configuration structure

◆ **decode**

```
fsp_err_t(* adpcm_decoder_api_t::decode) (adpcm_decoder_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t src_len_bytes)
```

Decodes the compressed data and stores it in output buffer.

Implemented as

- [RM_ADPCM_DECODER_Decode\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	p_src	Pointer to a source data buffer from which data will be picked up for decode operation. The argument must not be NULL.
[out]	p_dest	Pointer to the location to store the decoded data.
[in]	p_dest	Number of bytes to be decoded.

◆ **reset**

```
fsp_err_t(* adpcm_decoder_api_t::reset) (adpcm_decoder_ctrl_t *const p_ctrl)
```

Resets the ADPCM driver.

Implemented as

- [RM_ADPCM_DECODER_Reset\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control handle structure
------	--------	-------------------------------------

◆ **close**

```
fsp_err_t(* adpcm_decoder_api_t::close) (adpcm_decoder_ctrl_t *const p_ctrl)
```

Close the specified Audio decoder modules.

Implemented as

- [RM_ADPCM_DECODER_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control handle structure
------	--------	-------------------------------------

◆ **adpcm_decoder_instance_t**

struct adpcm_decoder_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
adpcm_decoder_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
adpcm_decoder_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
adpcm_decoder_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **adpcm_decoder_ctrl_t**

typedef void adpcm_decoder_ctrl_t
Audio Decoder control block. Allocate an instance specific control block to pass into the Audio Decoder API calls.
Implemented as
◦ adpcm_decoder_instance_ctrl_t

4.3.49 AUDIO PLAYBACK Interface[Interfaces](#)**Detailed Description**

Interface for the Audio Playback.

Defines the API and data structures for the Audio Playback implementation.

Summary

This module provides common interface for Audio Playback.

Implemented by: [Audio Playback with PWM \(rm_audio_playback_pwm\)](#)

Data Structures

struct [audio_playback_callback_args_t](#)

struct [audio_playback_cfg_t](#)

```
struct audio_playback_api_t
```

```
struct audio_playback_instance_t
```

Typedefs

```
typedef void audio_playback_ctrl_t
```

Enumerations

```
enum audio_playback_event_t
```

Data Structure Documentation

◆ audio_playback_callback_args_t

struct audio_playback_callback_args_t		
Callback function parameter data		
Data Fields		
void *	p_context	Placeholder for user data.
audio_playback_event_t	event	Event that triggered the callback.

◆ audio_playback_cfg_t

struct audio_playback_cfg_t		
Audio Playback configuration parameters.		
Data Fields		
void const *	p_extend	Hardware dependent configuration.
void(*	p_callback	(audio_playback_callback_args_t *p_args)
void *	p_context	

Field Documentation

◆ p_callback

```
void(* audio_playback_cfg_t::p_callback) (audio_playback_callback_args_t *p_args)
```

Callback called when play is complete.

◆ **p_context**

void* audio_playback_cfg_t::p_context

Placeholder for user data. Passed to the user callback in [audio_playback_callback_args_t](#).◆ **audio_playback_api_t**

struct audio_playback_api_t

Audio Playback functions implemented by the Audio Playback drivers will follow this API.

Data Fields

fsp_err_t(*)	open)(audio_playback_ctrl_t *const p_ctrl, audio_playback_cfg_t const *const p_cfg)
--------------	--

fsp_err_t(*)	start)(audio_playback_ctrl_t *const p_ctrl)
--------------	--

fsp_err_t(*)	stop)(audio_playback_ctrl_t *const p_ctrl)
--------------	---

fsp_err_t(*)	play)(audio_playback_ctrl_t *const p_ctrl, void const *const p_buffer, uint32_t length)
--------------	--

fsp_err_t(*)	close)(audio_playback_ctrl_t *const p_ctrl)
--------------	--

Field Documentation◆ **open**

fsp_err_t(*)	audio_playback_api_t::open)(audio_playback_ctrl_t *const p_ctrl, audio_playback_cfg_t const *const p_cfg)
--------------	--

Open a audio playback module.

Implemented as

- [RM_AUDIO_PLAYBACK_PWM_Open\(\)](#)

Parameters

[in]	p_ctrl	Pointer to memory allocated for control block.
[in]	p_cfg	Pointer to the hardware configurations.

◆ **start**

```
fsp_err_t(* audio_playback_api_t::start) (audio_playback_ctrl_t *const p_ctrl)
```

Start audio playback hardware.

Implemented as

- [RM_AUDIO_PLAYBACK_PWM_Start\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control block.
------	--------	---------------------------

◆ **stop**

```
fsp_err_t(* audio_playback_api_t::stop) (audio_playback_ctrl_t *const p_ctrl)
```

Stop audio playback hardware.

Implemented as

- [RM_AUDIO_PLAYBACK_PWM_Stop\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control block.
------	--------	---------------------------

◆ **play**

```
fsp_err_t(* audio_playback_api_t::play) (audio_playback_ctrl_t *const p_ctrl, void const *const p_buffer, uint32_t length)
```

Play audio buffer.

Implemented as

- [RM_AUDIO_PLAYBACK_PWM_Play\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	p_buffer	Pointer to buffer with PCM samples to play. Data must be scaled for audio playback hardware.
[in]	length	Length of data in p_buffer.

◆ **close**

```
fsp_err_t(* audio_playback_api_t::close) (audio_playback_ctrl_t *const p_ctrl)
```

Close the audio driver.

Implemented as

- [RM_AUDIO_PLAYBACK_PWM_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control block initialized in audio_playback_api_t::open .
------	--------	--

◆ **audio_playback_instance_t**

```
struct audio_playback_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

audio_playback_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
audio_playback_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
audio_playback_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **audio_playback_ctrl_t**

```
typedef void audio_playback_ctrl_t
```

Audio Playback control block. Allocate an instance specific control block to pass into the AUDIO_PLAYBACK API calls.

Implemented as

- [audio_playback_pwm_instance_ctrl_t](#)

Enumeration Type Documentation

◆ audio_playback_event_t

enum <code>audio_playback_event_t</code>	
Callback event types.	
Enumerator	
<code>AUDIO_PLAYBACK_EVENT_PLAYBACK_COMPLETE</code>	Audio playback complete event.

4.3.50 BLE ABS Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Abstraction functions.

Summary

The BLE ABS interface for the Bluetooth Low Energy Abstraction (BLE ABS) peripheral provides Bluetooth Low Energy Abstraction functionality.

The Bluetooth Low Energy Abstraction interface can be implemented by:

- [Bluetooth Low Energy Abstraction \(rm_ble_abs\)](#)

Data Structures

struct [ble_device_address_t](#)

struct [ble_gap_connection_parameter_t](#)

struct [ble_gap_connection_phy_parameter_t](#)

struct [ble_gap_scan_phy_parameter_t](#)

struct [ble_gap_scan_on_t](#)

struct [ble_abs_callback_args_t](#)

struct [ble_abs_pairing_parameter_t](#)

struct [ble_abs_gatt_server_callback_set_t](#)

struct [ble_abs_gatt_client_callback_set_t](#)

```
struct ble_abs_legacy_advertising_parameter_t
```

```
struct ble_abs_extend_advertising_parameter_t
```

```
struct ble_abs_non_connectable_advertising_parameter_t
```

```
struct ble_abs_periodic_advertising_parameter_t
```

```
struct ble_abs_scan_phy_parameter_t
```

```
struct ble_abs_scan_parameter_t
```

```
struct ble_abs_connection_phy_parameter_t
```

```
struct ble_abs_connection_parameter_t
```

```
struct ble_abs_cfg_t
```

```
struct ble_abs_api_t
```

```
struct ble_abs_instance_t
```

Macros

```
#define BLE_ABS_ADVERTISING_PHY_LEGACY
Non-Connectable Legacy Advertising phy setting.
```

Typedefs

```
typedef void(* ble_gap_application_callback_t) (uint16_t event_type, ble_status_t
event_result, st_ble_evt_data_t *p_event_data)
```

```

Data Structure Documentation

◆ [ble_device_address_t](#)

struct ble_device_address_t		
st_ble_device_address is the type of bluetooth device address(BD_ADDR).		
Data Fields		
uint8_t	addr[BLE_BD_ADDR_LEN]	bluetooth device address.
uint8_t	type	the type of bluetooth device address.

◆ [ble_gap_connection_parameter_t](#)

struct ble_gap_connection_parameter_t		
ble_gap_connection_parameter_t is Connection parameters included in connection interval, slave latency, supervision timeout, ce length.		
Data Fields		
uint16_t	conn_intv_min	Minimum connection interval.
uint16_t	conn_intv_max	Maximum connection interval.
uint16_t	conn_latency	Slave latency.
uint16_t	sup_to	Supervision timeout.
uint16_t	min_ce_length	Minimum CE Length.
uint16_t	max_ce_length	Maximum CE Length.

◆ [ble_gap_connection_phy_parameter_t](#)

struct ble_gap_connection_phy_parameter_t		
ble_gap_connection_phy_parameter_t is Connection parameters per PHY.		
Data Fields		
uint16_t	scan_intv	Scan interval.
uint16_t	scan_window	Scan window.
ble_gap_connection_parameter_t *	p_conn_param	Connection interval, slave latency, supervision timeout, and CE length.

◆ [ble_gap_scan_phy_parameter_t](#)

struct ble_gap_scan_phy_parameter_t

Scan parameters per scan PHY.		
Data Fields		
uint8_t	scan_type	Scan type.
uint16_t	scan_intv	Scan interval.
uint16_t	scan_window	Scan window.

◆ ble_gap_scan_on_t

struct ble_gap_scan_on_t		
Parameters configured when scanning starts.		
Data Fields		
uint8_t	proc_type	Procedure type.
uint8_t	filter_dups	Filter duplicates.
uint16_t	duration	Scan duration.
uint16_t	period	Scan period.

◆ ble_abs_callback_args_t

struct ble_abs_callback_args_t		
Callback function parameter data		
Data Fields		
uint32_t	channel	Select a channel corresponding to the channel number of the hardware.
ble_event_cb_t	ble_abs_event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data. Set in ble_abs_api_t::open function in ble_abs_cfg_t .

◆ ble_abs_pairing_parameter_t

struct ble_abs_pairing_parameter_t		
st_ble_abs_pairing_parameter_t includes the pairing parameters.		
Data Fields		
uint8_t	io_capability_local_device	IO capabilities of local device.
uint8_t	mitm_protection_policy	MITM protection policy.
uint8_t	secure_connection_only	Determine whether to accept only Secure Connections or not.
uint8_t	local_key_distribute	Type of keys to be distributed from local device.

uint8_t	remote_key_distribute	Type of keys which local device requests a remote device to distribute.
uint8_t	maximum_key_size	Maximum LTK size.
uint8_t	padding[2]	padding

◆ ble_abs_gatt_server_callback_set_t

struct ble_abs_gatt_server_callback_set_t		
GATT Server callback function and the priority.		
Data Fields		
ble_gatt_server_application_callback_t	gatt_server_callback_function	GATT Server callback function.
uint8_t	gatt_server_callback_priority	The priority number of GATT Server callback function.

◆ ble_abs_gatt_client_callback_set_t

struct ble_abs_gatt_client_callback_set_t		
GATT Client callback function and the priority.		
Data Fields		
ble_gatt_client_application_callback_t	gatt_client_callback_function	GATT Client callback function.
uint8_t	gatt_client_callback_priority	The priority number of GATT Client callback function.

◆ ble_abs_legacy_advertising_parameter_t

struct ble_abs_legacy_advertising_parameter_t		
st_ble_abs_legacy_advertising_parameter_t is the parameters for legacy advertising.		
Data Fields		
ble_device_address_t *	p_peer_address	The remote device address. If the p_peer_address parameter is not NULL, Direct Connectable Advertising is performed to the remote address. If the p_peer_address parameter is NULL, Undirect Connectable Advertising is performed according to the advertising filter policy specified by the filter parameter.
uint8_t*	p_advertising_data	Advertising Data. If the p_advertising_data is specified as NULL, Advertising

		Data is not included in the advertising PDU.
uint8_t *	p_scan_response_data	Scan Response Data. If the p_scan_response_data is specified as NULL, Scan Response Data is not included in the advertising PDU.
uint32_t	fast_advertising_interval	Advertising with the fast_advertising_interval parameter continues for the period specified by the fast_period parameter. Time(ms) = fast_advertising_interval * 0.625. If the fast_period parameter is 0, this parameter is ignored. Valid range is 0x00000020 - 0x00FFFFFF.
uint32_t	slow_advertising_interval	After the elapse of the fast_period, advertising with the slow_advertising_interval parameter continues for the period specified by the slow_advertising_interval parameter. Time(ms) = slow_advertising_interval * 0.625. If the slow_advertising_interval parameter is 0, this parameter is ignored. Valid range is 0x00000020 - 0x00FFFFFF.
uint16_t	fast_advertising_period	The period which advertising with the fast_advertising_interval parameter continues for. Time = duration * 10ms. After the elapse of the fast_advertising_period, BLE_GAP_EVENT_ADV_OFF event notifies that the advertising has stopped. Valid range is 0x0000 - 0xFFFF. If the fast_advertising_period parameter is 0x0000, advertising with the fast_advertising_interval parameter is not performed.
uint16_t	slow_advertising_period	The period which advertising with the

		<p>slow_advertising_interval parameter continues for. Time = duration * 10ms.</p> <p>After the elapse of the slow_advertising_period, BLE_GAP_EVENT_ADV_OFF event notifies that the advertising has stopped.</p> <p>Valid range is 0x0000 - 0xFFFF.</p> <p>If the slow_advertising_period parameter is 0x0000, the advertising continues.</p>										
uint16_t	advertising_data_length	<p>Advertising data length(byte).</p> <p>Valid range is 0-31.</p> <p>If the advertising_data_length is 0, Advertising Data is not included in the advertising PDU.</p>										
uint16_t	scan_response_data_length	<p>Scan response data length (in bytes).</p> <p>Scan Response Data(byte).</p> <p>Valid range is 0-31.</p> <p>If the scan_response_data_length is 0, Scan Response Data is not included in the advertising PDU.</p>										
uint8_t	advertising_channel_map	<p>The channel map used for the advertising packet transmission.</p> <p>It is a bitwise OR of the following values.</p> <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_ADV_CH_37(0x01)</td> <td>Use 37 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_38(0x02)</td> <td>Use 38 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_39(0x04)</td> <td>Use 38 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_ALL(0x07)</td> <td>Use 37 - 39 CH.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_ADV_CH_37(0x01)	Use 37 CH.	BLE_GAP_ADV_CH_38(0x02)	Use 38 CH.	BLE_GAP_ADV_CH_39(0x04)	Use 38 CH.	BLE_GAP_ADV_CH_ALL(0x07)	Use 37 - 39 CH.
macro	description											
BLE_GAP_ADV_CH_37(0x01)	Use 37 CH.											
BLE_GAP_ADV_CH_38(0x02)	Use 38 CH.											
BLE_GAP_ADV_CH_39(0x04)	Use 38 CH.											
BLE_GAP_ADV_CH_ALL(0x07)	Use 37 - 39 CH.											
uint8_t	advertising_filter_policy	<p>Advertising filter policy.</p> <p>If the p_peer_address parameter is NULL, the advertising is performed according to the advertising filter policy.</p> <p>If the p_peer_address parameter is not NULL, this parameter is ignored.</p>										

		macro	description
		BLE_ABS_ADV ERTISING_FILTER_ALLOW_ANY(0x00)	Process scan and connection requests from all devices.
		BLE_ABS_ADV ERTISING_FILTER_ALLOW_WHITE_LIST(0x01)	Process scan and connection requests from only devices in the White List.
uint8_t	own_bluetooth_address_type	Own Bluetooth address type. Select one of the following.	
		macro	description
		BLE_GAP_ADD R_PUBLIC(0x00)	Public Address
		BLE_GAP_ADD R_RPA_ID_PUBLIC(0x02)	Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, public address is used.
uint8_t	own_bluetooth_address[6]	Own Bluetooth address.	
uint8_t	padding[3]	padding	

◆ ble_abs_extend_advertising_parameter_t

struct ble_abs_extend_advertising_parameter_t		
st_ble_abs_extend_advertising_parameter_t is the parameters for extended advertising.		
Data Fields		
ble_device_address_t *	p_peer_address	The remote device address. If the p_addr parameter is not NULL, Direct Connectable Advertising is performed to the remote address. If the p_addr parameter is NULL, Undirect Connectable Advertising is performed according to the advertising filter policy specified by the filter parameter.

uint8_t *	p_advertising_data	Advertising data. If p_adv_data is specified as NULL, advertising data is not set.
uint32_t	fast_advertising_interval	Advertising with the fast_advertising_interval parameter continues for the period specified by the fast_advertising_period parameter. Time(ms) = fast_advertising_interval * 0.625. If the fast_advertising_period parameter is 0, this parameter is ignored. Valid range is 0x00000020 - 0x00FFFFFF.
uint32_t	slow_advertising_interval	After the elapse of the fast_advertising_period, advertising with the slow_advertising_interval parameter continues for the period specified by the slow_advertising_period parameter. Time(ms) = fast_advertising_interval * 0.625. If the fast_advertising_period parameter is 0, this parameter is ignored. Valid range is 0x00000020 - 0x00FFFFFF.
uint16_t	fast_advertising_period	The period which advertising with the fast_advertising_interval parameter continues for. Time = duration * 10ms. After the elapse of the fast_advertising_period, BLE_GAP_EVENT_ADV_OFF event notifies that the advertising has stopped. Valid range is 0x0000 - 0xFFFF. If the fast_advertising_period parameter is 0x0000, the fast_advertising_interval parameter is ignored.
uint16_t	slow_advertising_period	The period which advertising with the slow_advertising_interval

		parameter continues for. Time = duration * 10ms. After the elapse of the slow_advertising_period, BLE_GAP_EVENT_ADV_OFF event notifies that the advertising has stopped. Valid range is 0x0000 - 0xFFFF. If the slow_advertising_period parameter is 0x0000, the advertising continues.										
uint16_t	advertising_data_length	Advertising data length (in bytes). Valid range is 0-229. If the adv_data_length is 0, Advertising Data is not included in the advertising PDU.										
uint8_t	advertising_channel_map	The channel map used for the advertising packet transmission. It is a bitwise OR of the following values. <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 50%;">macro</th> <th style="width: 50%;">description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_ADV_CH_37(0x01)</td> <td>Use 37 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_38(0x02)</td> <td>Use 38 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_39(0x04)</td> <td>Use 38 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_ALL(0x07)</td> <td>Use 37 - 39 CH.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_ADV_CH_37(0x01)	Use 37 CH.	BLE_GAP_ADV_CH_38(0x02)	Use 38 CH.	BLE_GAP_ADV_CH_39(0x04)	Use 38 CH.	BLE_GAP_ADV_CH_ALL(0x07)	Use 37 - 39 CH.
macro	description											
BLE_GAP_ADV_CH_37(0x01)	Use 37 CH.											
BLE_GAP_ADV_CH_38(0x02)	Use 38 CH.											
BLE_GAP_ADV_CH_39(0x04)	Use 38 CH.											
BLE_GAP_ADV_CH_ALL(0x07)	Use 37 - 39 CH.											
uint8_t	advertising_filter_policy	Advertising filter policy. If the p_peer_address parameter is NULL, the advertising is performed according to the advertising filter policy. If the p_peer_address parameter is not NULL, this parameter is ignored. <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 50%;">macro</th> <th style="width: 50%;">description</th> </tr> </thead> <tbody> <tr> <td>BLE_ABS_ADV_FILTER_ALLOW_ANY(0x00)</td> <td>Process scan and connection requests from all devices.</td> </tr> <tr> <td>BLE_ABS_ADV_FILTER_SCAN_ONLY(0x01)</td> <td>Process scan</td> </tr> </tbody> </table>	macro	description	BLE_ABS_ADV_FILTER_ALLOW_ANY(0x00)	Process scan and connection requests from all devices.	BLE_ABS_ADV_FILTER_SCAN_ONLY(0x01)	Process scan				
macro	description											
BLE_ABS_ADV_FILTER_ALLOW_ANY(0x00)	Process scan and connection requests from all devices.											
BLE_ABS_ADV_FILTER_SCAN_ONLY(0x01)	Process scan											

		ERTISING_FILTER_ALLOW_WHITE_LIST(0x01) and connection requests from only devices in the White List.						
uint8_t	own_bluetooth_address_type	Own Bluetooth address type. Select one of the following. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_ADD_R_PUBLIC(0x00)</td> <td>Public Address</td> </tr> <tr> <td>BLE_GAP_ADD_R_RPA_ID_PUBLIC(0x02)</td> <td>Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, public address is used.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_ADD_R_PUBLIC(0x00)	Public Address	BLE_GAP_ADD_R_RPA_ID_PUBLIC(0x02)	Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, public address is used.
macro	description							
BLE_GAP_ADD_R_PUBLIC(0x00)	Public Address							
BLE_GAP_ADD_R_RPA_ID_PUBLIC(0x02)	Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, public address is used.							
uint8_t	own_bluetooth_address[6]	Own Bluetooth address.						
uint8_t	primary_advertising_phy	Primary advertising PHY. In this parameter, only 1M PHY and Coded PHY can be specified, and 2M PHY cannot be specified. <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_ADV_PHY_1M(0x01)</td> <td>Use 1M PHY as Primary Advertising PHY. When the adv_prop_type field is Legacy Advertising PDU type, this field shall be set to BLE_GAP_ADV_PHY_1M.</td> </tr> <tr> <td>BLE_GAP_ADV_PHY_CD(0x03)</td> <td>Use Coded PHY as Primary Advertising PHY. Coding</td> </tr> </tbody> </table>	macro	description	BLE_GAP_ADV_PHY_1M(0x01)	Use 1M PHY as Primary Advertising PHY. uint8_t	padding[3]	padding								

◆ ble_abs_non_connectable_advertising_parameter_t

struct ble_abs_non_connectable_advertising_parameter_t		
st_ble_abs_non_connectable_advertising_parameter_t is the parameters for non-connectable advertising.		
Data Fields		
ble_device_address_t *	p_peer_address	The remote device address. If the p_peer_address parameter is not NULL, Direct Connectable Advertising is performed to the remote address. If the p_peer_address parameter is NULL, Undirect Connectable Advertising is performed according to the advertising filter policy specified by the filter parameter.
uint8_t*	p_advertising_data	Advertising data. If p_adv_data

		is specified as NULL, advertising data is not set.				
uint32_t	advertising_interval	Advertising with the advertising_interval parameter continues for the period specified by the duration parameter. Time(ms) = advertising_interval * 0.625. If the duration parameter is 0x0000, the advertising with the advertising_interval parameter continue. Valid range is 0x00000020 - 0x00FFFFFF.				
uint16_t	advertising_duration	The period which advertising with the advertising_interval parameter continues for. Time = advertising_duration * 10ms. After the elapse of the advertising_duration, BLE_GAP_EVENT_ADV_OFF event notifies that the advertising has stopped. Valid range is 0x0000 - 0xFFFF. If the advertising_duration parameter is 0x0000, the advertising continues.				
uint16_t	advertising_data_length	Advertising data length (in bytes). If the primary_advertising_phy parameter is BLE_ABS_ADVERTISING_PHY_LEGACY(0x00) , the valid range is 0-31. If the primary_advertising_phy parameter is the other values, the valid range is 0-1650. If the advertising_data_length parameter is 0, Advertising Data is not included in the advertising PDU.				
uint8_t	advertising_channel_map	The channel map used for the advertising packet transmission. It is a bitwise OR of the following values. <table border="1" data-bbox="1034 1883 1473 1939"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_ADV_CH_37(0x01)</td> <td>Use 37 CH.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_ADV_CH_37(0x01)	Use 37 CH.

◆ **ble_abs_periodic_advertising_parameter_t**

<code>struct ble_abs_periodic_advertising_parameter_t</code>
<code>st_ble_abs_periodic_advertising_parameter_t</code> is the parameters for periodic advertising.

Data Fields		
ble_abs_non_connectable_advertising_parameter_t	advertising_parameter	Advertising parameters.
uint8_t *	p_periodic_advertising_data	Periodic advertising data. If p_perd_adv_data is specified as NULL, periodic advertising data is not set.
uint16_t	periodic_advertising_interval	Periodic advertising interval. Time(ms) = periodic_advertising_interval * 1.25. Valid range is 0x0006 - 0xFFFF.
uint16_t	periodic_advertising_data_length	Periodic advertising data length (in bytes). Valid range is 0 - 1650. If the periodic_advertising_data_length is 0, Periodic Advertising Data is not included in the advertising PDU.

◆ ble_abs_scan_phy_parameter_t

Data Fields						
struct ble_abs_scan_phy_parameter_t						
st_ble_abs_scan_phy_parameter_t is the phy parameters for scan.						
Data Fields						
uint16_t	fast_scan_interval	Fast scan interval. Interval(ms) = fast_scan_interval * 0.625. Valid range is 0x0004 - 0xFFFF.				
uint16_t	slow_scan_interval	Slow Scan interval. Slow Scan interval(ms) = slow_scan_interval * 0.625. Valid range is 0x0004 - 0xFFFF.				
uint16_t	fast_scan_window	Fast Scan window. Fast Scan window(ms) = fast_scan_window * 0.625. Valid range is 0x0004 - 0xFFFF.				
uint16_t	slow_scan_window	Slow Scan window. Slow Scan window(ms) = slow_scan_window * 0.625. Valid range is 0x0004 - 0xFFFF.				
uint8_t	scan_type	Scan type. <table border="1" data-bbox="1029 1865 1473 2045"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_SCAN_PASSIVE(0x00)</td> <td>Passive Scan.</td> </tr> </tbody> </table>	macro	description	BLE_GAP_SCAN_PASSIVE(0x00)	Passive Scan.
macro	description					
BLE_GAP_SCAN_PASSIVE(0x00)	Passive Scan.					

		BLE_GAP_SCAN_ACTIVE_SCAN_N_ACTIVE(0x01)
uint8_t	padding[3]	padding.

◆ ble_abs_scan_parameter_t

struct ble_abs_scan_parameter_t		
st_ble_abs_scan_parameter_t is the parameters for scan.		
Data Fields		
ble_abs_scan_phy_parameter_t *	p_phy_parameter_1M	Scan parameters for receiving the advertising packets in 1M PHY. In case of not receiving the advertising packets in 1M PHY, this field is specified as NULL. p_phy_parameter_1M or p_phy_parameter_coded field shall be set to scan parameters.
ble_abs_scan_phy_parameter_t *	p_phy_parameter_coded	Scan parameters for receiving the advertising packets in Coded PHY. In case of not receiving the advertising packets in Coded PHY, this field is specified as NULL. p_phy_parameter_1M or p_phy_parameter_coded field shall be set to scan parameters.
uint8_t *	p_filter_data	Data for Advertising Data filtering. The p_filter_data parameter is used for the advertising data in single advertising report. The advertising data composed of multiple advertising reports is not filtered by this parameter. If the p_filter_data parameter is specified as NULL, the filtering is not done.
uint16_t	fast_scan_period	The period which scan with the fast scan interval/fast scan window continues for. Time(ms) = fast_scan_period * 10. Valid range is 0x0000 - 0xFFFF. If the fast_scan_period parameter is 0x0000, scan with the fast scan interval/fast scan

		<p>window is not performed. After the elapse of the fast_scan_period, BLE_GAP_EVENT_SCAN_TO event notifies that the scan has stopped.</p>								
uint16_t	slow_scan_period	<p>The period which scan with the slow scan interval/slow scan window continues for. Time = slow_scan_period * 10ms. Valid range is 0x0000 - 0xFFFF. If the slow_scan_period parameter is 0x0000, the scan continues. After the elapse of the slow_scan_period, BLE_GAP_EVENT_SCAN_TO event notifies that the scan has stopped.</p>								
uint16_t	filter_data_length	<p>The length of the data specified by the p_filter_data parameter. Valid range is 0x0000-0x0010. If the filter_data_length parameter is 0, the filtering is not done.</p>								
uint8_t	device_scan_filter_policy	<p>Scan Filter Policy. Select one of the following.</p> <ul style="list-style-type: none"> Address type setting (Field [7:4]) <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_ADDR_PUBLIC(0x00)</td> <td>Use Public Address.</td> </tr> <tr> <td>BLE_GAP_ADDR_RANDOM(0x01)</td> <td>Use Random Address.</td> </tr> <tr> <td>BLE_GAP_ADDR_PUBLIC(0x02)</td> <td>If the IRK of local device has been registered in Resolving list, use RPA. If not, use</td> </tr> </tbody> </table>	macro	description	BLE_GAP_ADDR_PUBLIC(0x00)	Use Public Address.	BLE_GAP_ADDR_RANDOM(0x01)	Use Random Address.	BLE_GAP_ADDR_PUBLIC(0x02)	If the IRK of local device has been registered in Resolving list, use RPA. If not, use
macro	description									
BLE_GAP_ADDR_PUBLIC(0x00)	Use Public Address.									
BLE_GAP_ADDR_RANDOM(0x01)	Use Random Address.									
BLE_GAP_ADDR_PUBLIC(0x02)	If the IRK of local device has been registered in Resolving list, use RPA. If not, use									

Public Address.

`BLE_GAP_ADDR_RPA_ID_RANDOM(0x03)`
 If the IRK of local device has been registered in Resolving list, use RPA. If not, use Random Address.

- White list setting (Field [3:0])

macro	description
-------	-------------

`BLE_GAP_SCAN_ALLOW_ADV_ALL(0x00)`
 Accept all advertising and scan response PDUs except directed advertising PDUs not addressed to local device.

`BLE_GAP_SCAN_ALLOW_ADV_WLST(0x01)`
 Accept only advertising and scan response PDUs from remote devices whose address is registered in the White List. Directed advertising PDUs which are not

		<p>addressed to local device is ignored.</p> <p>BLE_GAP_SCAN_ALL_OW_ADV_EXCEPT_DIRECTED(0x02) Accept all advertising and scan response PDUs except directed advertising PDUs whose the target address is identity address but doesn't address local device. However directed advertising PDUs whose the target address is the local resolvable private address are accepted.</p> <p>BLE_GAP_SCAN_ALL_OW_ADV_EXCEPT_DIRECTED_WLST(0x03) Accept all advertising and scan response PDUs. The following are excluded.</p> <ul style="list-style-type: none"> • Advertising an

macro	description									
BLE_GAP_SCANNING_FILTER_DUPLICATION_DISABLED(0x00)	Duplicate filter disabled.									
BLE_GAP_SCANNING_FILTER_DUPLICATION_ENABLED(0x01)	Duplicate filter enabled.									
BLE_GAP_SCANNING_FILTER_DUPLICATION_ENABLED_RESET_PERIOD(0x02)	Duplicate filtering enabled, reset for each scan period.									
uint8_t	filter_ad_type	<p>The AD type of the data specified by the p_filter_data parameter. The AD type identifier values are defined in Bluetooth SIG Assigned Number (https://www.bluetooth.com/specifications/assigned-numbers).</p>								
uint8_t	padding[3]	Padding.								

◆ ble_abs_connection_phy_parameter_t

struct ble_abs_connection_phy_parameter_t
st_ble_abs_connection_phy_parameter_t is the phy parameters for create connection.

Data Fields		
uint16_t	connection_interval	Connection interval. Time(ms) = connection_interval * 1.25. Valid range is 0x0006 - 0x0C80.
uint16_t	connection_slave_latency	Slave latency. Valid range is 0x0000 - 0x01F3.
uint16_t	supervision_timeout	Supervision timeout. Time(ms) = supervision_timeout * 10. Valid range is 0x000A - 0x0C80.
uint8_t	padding[2]	Padding.

◆ ble_abs_connection_parameter_t

struct ble_abs_connection_parameter_t		
st_ble_abs_connection_parameter_t is the parameters for create connection.		
Data Fields		
ble_abs_connection_phy_parameter_t *	p_connection_phy_parameter_1M	Connection interval, slave latency, supervision timeout for 1M PHY. The p_connection_phy_parameter_1M is specified as NULL, a connection request is not sent with 1M PHY.
ble_abs_connection_phy_parameter_t *	p_connection_phy_parameter_2M	Connection interval, slave latency, supervision timeout for 2M PHY. The p_connection_phy_parameter_2M is specified as NULL, a connection request is not sent with 2M PHY.
ble_abs_connection_phy_parameter_t *	p_connection_phy_parameter_coded	Connection interval, slave latency, supervision timeout for Coded PHY. The p_connection_phy_parameter_coded is specified as NULL, a connection request is not sent with Coded PHY.
ble_device_address_t *	p_device_address	Address of the device to be connected. If the filter field is BLE_GAP_INIT_FILTER_USE_WLST(0x01) , this parameter is ignored and please fill p_device_address.addr with 0x00.
uint8_t	filter_parameter	The filter field specifies whether

the White List is used or not, when connecting with a remote device.

- Address type setting (Field [7:4])

macro	description
-------	-------------

`BLE_GAP_ADDR_PUBLIC(0x00)` Use Public Address.

`BLE_GAP_ADDR_RANDOM(0x01)` Use Random Address.

`BLE_GAP_ADDR_PUBLIC(0x02)` If the IRK of local device has been registered in Resolving list, use RPA. If not, use Public Address.

`BLE_GAP_ADDR_RANDOM(0x03)` If the IRK of local device has been registered in Resolving list, use RPA. If not, use Random Address.

- White list setting (Field [3:0])

macro	description
-------	-------------

`BLE_GAP_WHITE_LIST_FILTER_ADD(0x00)` White List is not used. The remote device to

		<p>be connected is specified by the p_addr field is used.</p> <p>BLE_GAP_I NIT_FILTER USE_WLST (0x01) White List is used. The remote device registered in White List is connected with local device. The p_addr field is ignored.</p>
uint8_t	connection_timeout	The time(sec) to cancel the create connection request. Valid range is 0 <= connection_timeout <= 10. If the connection_timeout field is 0, the create connection request is not canceled.
uint8_t	padding[2]	Padding.

◆ ble_abs_cfg_t

struct ble_abs_cfg_t	
BLE ABS configuration parameters.	
Data Fields	
uint32_t	channel
	Select a channel corresponding to the channel number of the hardware. More...
ble_gap_application_callback_t	gap_callback
	GAP callback function.

<code>ble_vendor_specific_application_callback_t</code>	<code>vendor_specific_callback</code>
	Vendor Specific callback function.
<code>ble_abs_gatt_server_callback_set_t *</code>	<code>p_gatt_server_callback_list</code>
	GATT Server callback set.
<code>uint8_t</code>	<code>gatt_server_callback_list_number</code>
	The number of GATT Server callback functions.
<code>ble_abs_gatt_client_callback_set_t *</code>	<code>p_gatt_client_callback_list</code>
	GATT Client callback set.
<code>uint8_t</code>	<code>gatt_client_callback_list_number</code>
	The number of GATT Client callback functions.
<code>ble_abs_pairing_parameter_t *</code>	<code>p_pairing_parameter</code>
	Pairing parameters.
<code>flash_instance_t const *</code>	<code>p_flash_instance</code>
	Pointer to flash instance.
<code>timer_instance_t const *</code>	<code>p_timer_instance</code>
	Pointer to timer instance.
<code>void(*</code>	<code>p_callback)(ble_abs_callback_args_t *p_args)</code>

	Callback provided when a BLE ISR occurs.
void const *	p_context
	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t .
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ channel

uint32_t ble_abs_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.
the parameters for initialization.

◆ ble_abs_api_t

struct ble_abs_api_t

BLE ABS functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*)	open)(ble_abs_ctrl_t *const p_ctrl, ble_abs_cfg_t const *const p_cfg)
fsp_err_t(*)	close)(ble_abs_ctrl_t *const p_ctrl)

<code>fsp_err_t</code> (*	<code>importKeyInformation</code>)(ble_abs_ctrl_t *const p_ctrl, ble_device_address_t *p_local_identity_address, uint8_t *p_local_irk, uint8_t *p_local_csrk)
<code>fsp_err_t</code> (*	<code>exportKeyInformation</code>)(ble_abs_ctrl_t *const p_ctrl, ble_device_address_t *p_local_identity_address, uint8_t *p_local_irk, uint8_t *p_local_csrk)

Field Documentation

◆ **open**

```
fsp_err_t(* ble_abs_api_t::open) (ble_abs_ctrl_t *const p_ctrl, ble_abs_cfg_t const *const p_cfg)
```

Initialize the BLE ABS in register start mode.

Implemented as

- [RM_BLE_ABS_Open\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ **close**

```
fsp_err_t(* ble_abs_api_t::close) (ble_abs_ctrl_t *const p_ctrl)
```

Close the BLE ABS.

Implemented as

- [RM_BLE_ABS_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **reset**

```
fsp_err_t(* ble_abs_api_t::reset) (ble_abs_ctrl_t *const p_ctrl, ble_event_cb_t init_callback)
```

Close the BLE ABS.

Implemented as

- [RM_BLE_ABS_Reset\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	init_callback	callback function to initialize Host Stack.

◆ startLegacyAdvertising

```
fsp_err_t(* ble_abs_api_t::startLegacyAdvertising) (ble_abs_ctrl_t *const p_ctrl,
ble_abs_legacy_advertising_parameter_t const *const p_advertising_parameter)
```

Start Legacy Connectable Advertising.

Implemented as

- RM_BLE_ABS_StartLegacyAdvertising()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_advertising_parameter	Pointer to Advertising parameters for Legacy Advertising.

◆ startExtendedAdvertising

```
fsp_err_t(* ble_abs_api_t::startExtendedAdvertising) (ble_abs_ctrl_t *const p_ctrl,
ble_abs_extend_advertising_parameter_t const *const p_advertising_parameter)
```

Start Extended Connectable Advertising.

Implemented as

- RM_BLE_ABS_StartExtendedAdvertising()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_advertising_parameter	Pointer to Advertising parameters for extend Advertising.

◆ startNonConnectableAdvertising

```
fsp_err_t(* ble_abs_api_t::startNonConnectableAdvertising) (ble_abs_ctrl_t *const p_ctrl,
ble_abs_non_connectable_advertising_parameter_t const *const p_advertising_parameter)
```

Start Non-Connectable Advertising.

Implemented as

- RM_BLE_ABS_StartNonConnectableAdvertising()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_advertising_parameter	Pointer to Advertising parameters for non-connectable Advertising.

◆ startPeriodicAdvertising

```
fsp_err_t(* ble_abs_api_t::startPeriodicAdvertising) (ble_abs_ctrl_t *const p_ctrl,
ble_abs_periodic_advertising_parameter_t const *const p_advertising_parameter)
```

Start Periodic Advertising.

Implemented as

- RM_BLE_ABS_StartPeriodicAdvertising()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_advertising_parameter	Pointer to Advertising parameters for periodic Advertising.

◆ startScanning

```
fsp_err_t(* ble_abs_api_t::startScanning) (ble_abs_ctrl_t *const p_ctrl, ble_abs_scan_parameter_t
const *const p_scan_parameter)
```

Start scanning.

Implemented as

- RM_BLE_ABS_StartScanning()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_scan_parameter	Pointer to scan parameter.

◆ createConnection

```
fsp_err_t(* ble_abs_api_t::createConnection) (ble_abs_ctrl_t *const p_ctrl,
ble_abs_connection_parameter_t const *const p_connection_parameter)
```

Request create connection.

Implemented as

- RM_BLE_ABS_CreateConnection()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_connection_parameter	Pointer to connection parameter.

◆ setLocalPrivacy

```
fsp_err_t(* ble_abs_api_t::setLocalPrivacy) (ble_abs_ctrl_t *const p_ctrl, uint8_t const *const p_lc_irk, uint8_t privacy_mode)
```

Configure local device privacy.

Implemented as

- [RM_BLE_ABS_SetLocalPrivacy\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_lc_irk	Pointer to IRK to be registered in the resolving list.
[in]	privacy_mode	privacy_mode privacy mode.

◆ startAuthentication

```
fsp_err_t(* ble_abs_api_t::startAuthentication) (ble_abs_ctrl_t *const p_ctrl, uint16_t connection_handle)
```

Start pairing or encryption.

Implemented as

- [RM_BLE_ABS_StartAuthentication\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	connection_handle	Connection handle identifying the remote device.

◆ deleteBondInformation

```
fsp_err_t(* ble_abs_api_t::deleteBondInformation) (ble_abs_ctrl_t *const p_ctrl, ble_abs_bond_information_parameter_t const *const p_bond_information_parameter)
```

Delete bond information.

Implemented as

- [RM_BLE_ABS_DeleteBondInformation\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_bond_information_parameter	Pointer to bond information parameter.

◆ **importKeyInformation**

```
fsp_err_t(* ble_abs_api_t::importKeyInformation) (ble_abs_ctrl_t *const p_ctrl, ble_device_address_t *p_local_identity_address, uint8_t *p_local_irk, uint8_t *p_local_csrk)
```

Import local identity address, keys information to local storage.

Implemented as

- [RM_BLE_ABS_ImportKeyInformation\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_local_identity_address	Pointer to local identity address.
[in]	uint8_t	p_local_irk Pointer to local IRK
[in]	uint8_t	p_local_csrk Pointer to local CSRK

◆ **exportKeyInformation**

```
fsp_err_t(* ble_abs_api_t::exportKeyInformation) (ble_abs_ctrl_t *const p_ctrl, ble_device_address_t *p_local_identity_address, uint8_t *p_local_irk, uint8_t *p_local_csrk)
```

Export local identity address, keys information from local storage.

Implemented as

- [RM_BLE_ABS_ExportKeyInformation\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_local_identity_address	Pointer to local identity address.
[out]	uint8_t	p_local_irk Pointer to local IRK
[out]	uint8_t	p_local_csrk Pointer to local CSRK

◆ **ble_abs_instance_t**

```
struct ble_abs_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

ble_abs_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
ble_abs_cfg_t const *	p_cfg	Pointer to the configuration

		structure for this instance.
<code>ble_abs_api_t</code> const *	<code>p_api</code>	Pointer to the API structure for this instance.

Typedef Documentation

◆ `ble_gap_application_callback_t`

```
typedef void(* ble_gap_application_callback_t) (uint16_t event_type, ble_status_t event_result,
st_ble_evt_data_t *p_event_data)
```

`ble_gap_application_callback_t` is the GAP Event callback function type.

◆ `ble_vendor_specific_application_callback_t`

```
typedef void(* ble_vendor_specific_application_callback_t) (uint16_t event_type, ble_status_t
event_result, st_ble_vs_evt_data_t *p_event_data)
```

`ble_vendor_specific_application_callback_t` is the Vendor Specific Event callback function type.

◆ `ble_gatt_server_application_callback_t`

```
typedef void(* ble_gatt_server_application_callback_t) (uint16_t event_type, ble_status_t
event_result, st_ble_gatts_evt_data_t *p_event_data)
```

`ble_gatt_server_application_callback_t` is the GATT Server Event callback function type.

◆ `ble_gatt_client_application_callback_t`

```
typedef void(* ble_gatt_client_application_callback_t) (uint16_t event_type, ble_status_t
event_result, st_ble_gattc_evt_data_t *p_event_data)
```

`ble_gatt_client_application_callback_t` is the GATT Server Event callback function type.

◆ `ble_abs_delete_bond_application_callback_t`

```
typedef void(* ble_abs_delete_bond_application_callback_t) (st_ble_dev_addr_t *p_addr)
```

`ble_abs_delete_bond_application_callback_t` is the delete bond information Event callback function type.

◆ **ble_abs_ctrl_t**typedef void [ble_abs_ctrl_t](#)

BLE ABS control block. Allocate an instance specific control block to pass into the BLE ABS API calls.

Implemented as

- [ble_abs_instance_ctrl_t](#)

Enumeration Type Documentation◆ **ble_abs_advertising_filter_t**enum [ble_abs_advertising_filter_t](#)

Advertising Filter Policy

Enumerator

BLE_ABS_ADVERTISING_FILTER_ALLOW_ANY

Receive a connect request from all devices.

BLE_ABS_ADVERTISING_FILTER_ALLOW_WHITE_LIST

Receive a connect request from only the devices registered in White List.

◆ **ble_abs_local_bond_information_t**enum [ble_abs_local_bond_information_t](#)

Local keys delete policy

Enumerator

BLE_ABS_LOCAL_BOND_INFORMATION_NONE

Delete no local keys.

BLE_ABS_LOCAL_BOND_INFORMATION_ALL

Delete all local keys.

◆ **ble_abs_remote_bond_information_t**

enum ble_abs_remote_bond_information_t	
Remote keys delete policy	
Enumerator	
BLE_ABS_REMOTE_BOND_INFORMATION_NONE	Delete no remote device keys.
BLE_ABS_REMOTE_BOND_INFORMATION_SPECIFIED	Delete the keys specified by the device address.
BLE_ABS_REMOTE_BOND_INFORMATION_ALL	Delete all remote device keys.

◆ **ble_abs_delete_non_volatile_area_t**

enum ble_abs_delete_non_volatile_area_t	
Deletion policy for non-volatile memory	
Enumerator	
BLE_ABS_DELETE_NON_VOLATILE_AREA_DISABLE	Delete no keys stored in storage.
BLE_ABS_DELETE_NON_VOLATILE_AREA_ENABLE	Delete the keys stored in storage.

4.3.51 Block Media Interface

Interfaces

Detailed Description

Interface for block media memory access.

Summary

The block media interface supports reading, writing, and erasing media devices. All functions are non-blocking if possible. The callback is used to determine when an operation completes.

Implemented by:

- [SD/MMC Block Media Implementation \(rm_block_media_sdmmc\)](#)
- [SPI Block Media Implementation \(rm_block_media_spi\)](#)
- [USB HMSC Block Media Implementation \(rm_block_media_usb\)](#)

Data Structures

```
struct rm_block_media_info_t
```

```
struct rm_block_media_callback_args_t
```

```
struct rm_block_media_cfg_t
```

```
struct rm_block_media_status_t
```

```
struct rm_block_media_api_t
```

```
struct rm_block_media_instance_t
```

Typedefs

```
typedef void rm_block_media_ctrl_t
```

Enumerations

```
enum rm_block_media_event_t
```

Data Structure Documentation

◆ rm_block_media_info_t

struct rm_block_media_info_t		
Block media device information supported by the instance		
Data Fields		
uint32_t	sector_size_bytes	Sector size in bytes.
uint32_t	num_sectors	Total number of sectors.
bool	reentrant	True if connected block media driver is reentrant.
bool	write_protected	True if connected block media device is write protected.

◆ rm_block_media_callback_args_t

struct rm_block_media_callback_args_t		
Callback function parameter data		
Data Fields		
rm_block_media_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data.

◆ rm_block_media_cfg_t

--	--	--

struct rm_block_media_cfg_t		
User configuration structure, used in open function		
Data Fields		
void(*	p_callback)(rm_block_media_callback_args_t *p_args)	
	DEPRECATED - Block size, must be a power of 2 multiple of sector_size_bytes. More...	
void const *	p_context	
	User defined context passed into callback function.	
void const *	p_extend	
	Extension parameter for hardware specific settings.	
Field Documentation		
◆ p_callback		
void(* rm_block_media_cfg_t::p_callback) (rm_block_media_callback_args_t *p_args)		
DEPRECATED - Block size, must be a power of 2 multiple of sector_size_bytes.		
Pointer to callback function		
◆ rm_block_media_status_t		
struct rm_block_media_status_t		
Current status		
Data Fields		
bool	initialized	False if rm_block_media_api_t::mediaInsert has not been called since media was inserted, true otherwise.
bool	busy	True if media is busy with a previous write/erase operation.
bool	media_inserted	Media insertion status, true if media is not removable.
◆ rm_block_media_api_t		
struct rm_block_media_api_t		

Block media interface API.

Data Fields

fsp_err_t(*)	<code>open</code>)(rm_block_media_ctrl_t *const p_ctrl, rm_block_media_cfg_t const *const p_cfg)
fsp_err_t(*)	<code>mediaInit</code>)(rm_block_media_ctrl_t *const p_ctrl)
fsp_err_t(*)	<code>read</code>)(rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest_address, uint32_t const block_address, uint32_t const num_blocks)
fsp_err_t(*)	<code>write</code>)(rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const p_src_address, uint32_t const block_address, uint32_t const num_blocks)

fsp_err_t(*)	<code>infoGet</code>)(rm_block_media_ctrl_t *const p_ctrl, rm_block_media_info_t *const p_info)
fsp_err_t(*)	<code>close</code>)(rm_block_media_ctrl_t *const p_ctrl)

Field Documentation

◆ **open**

```
fsp_err_t(* rm_block_media_api_t::open) (rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_cfg_t const *const p_cfg)
```

Initialize block media device. `rm_block_media_api_t::medialnit` must be called to complete the initialization procedure.

Implemented as

- `RM_BLOCK_MEDIA_SDMMC_Open`
- `RM_BLOCK_MEDIA_SPI_Open`
- `RM_BLOCK_MEDIA_USB_Open`

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ **medialnit**

```
fsp_err_t(* rm_block_media_api_t::medialnit) (rm_block_media_ctrl_t *const p_ctrl)
```

Initializes a media device. If the device is removable, it must be plugged in prior to calling this API. This function blocks until media initialization is complete.

Implemented as

- `RM_BLOCK_MEDIA_SDMMC_Medialnit`
- `RM_BLOCK_MEDIA_SPI_Medialnit`
- `RM_BLOCK_MEDIA_USB_Medialnit`

Parameters

[in]	p_ctrl	Control block set in <code>rm_block_media_api_t::open</code> call.
------	--------	--

◆ read

```
fsp_err_t(* rm_block_media_api_t::read) (rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest_address, uint32_t const block_address, uint32_t const num_blocks)
```

Reads blocks of data from the specified memory device address to the location specified by the caller.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_Read
- RM_BLOCK_MEDIA_SPI_Read
- RM_BLOCK_MEDIA_USB_Read

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[out]	p_dest_address	Destination to read the data into.
[in]	block_address	Block address to read the data from.
[in]	num_blocks	Number of blocks of data to read.

◆ write

```
fsp_err_t(* rm_block_media_api_t::write) (rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const p_src_address, uint32_t const block_address, uint32_t const num_blocks)
```

Writes blocks of data to the specified device memory address.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_Write
- RM_BLOCK_MEDIA_SPI_Write
- RM_BLOCK_MEDIA_USB_Write

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[in]	p_src_address	Address to read the data to be written.
[in]	block_address	Block address to write the data to.
[in]	num_blocks	Number of blocks of data to write.

◆ **erase**

```
fsp_err_t(* rm_block_media_api_t::erase) (rm_block_media_ctrl_t *const p_ctrl, uint32_t const
block_address, uint32_t const num_blocks)
```

Erases blocks of data from the memory device.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_Erase
- RM_BLOCK_MEDIA_SPI_Erase
- RM_BLOCK_MEDIA_USB_Erase

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[in]	block_address	Block address to start the erase process at.
[in]	num_blocks	Number of blocks of data to erase.

◆ **callbackSet**

```
fsp_err_t(* rm_block_media_api_t::callbackSet) (rm_block_media_ctrl_t *const p_ctrl, void(
*p_callback)(rm_block_media_callback_args_t *), void const *const p_context,
rm_block_media_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **statusGet**

```
fsp_err_t(* rm_block_media_api_t::statusGet) (rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_status_t *const p_status)
```

Get status of connected device.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_StatusGet
- RM_BLOCK_MEDIA_SPI_StatusGet
- RM_BLOCK_MEDIA_USB_StatusGet

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[out]	p_status	Pointer to store current status.

◆ **infoGet**

```
fsp_err_t(* rm_block_media_api_t::infoGet) (rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_info_t *const p_info)
```

Returns information about the block media device.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_InfoGet
- RM_BLOCK_MEDIA_SPI_InfoGet
- RM_BLOCK_MEDIA_USB_InfoGet

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[out]	p_info	Pointer to information structure. All elements of this structure will be set by the function.

◆ **close**

```
fsp_err_t(* rm_block_media_api_t::close) (rm_block_media_ctrl_t *const p_ctrl)
```

Closes the module.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_Close
- RM_BLOCK_MEDIA_SPI_Close
- RM_BLOCK_MEDIA_USB_Close

Parameters

[in]	p_ctrl	Control block set in <code>rm_block_media_api_t::open</code> call.
------	--------	--

◆ **rm_block_media_instance_t**

```
struct rm_block_media_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

<code>rm_block_media_ctrl_t *</code>	p_ctrl	Pointer to the control structure for this instance.
<code>rm_block_media_cfg_t const *</code>	p_cfg	Pointer to the configuration structure for this instance.
<code>rm_block_media_api_t const *</code>	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **rm_block_media_ctrl_t**

```
typedef void rm_block_media_ctrl_t
```

Block media API control block. Allocate an instance specific control block to pass into the block media API calls.

Implemented as

- `rm_block_media_sdmmc_instance_ctrl_t`
- `rm_block_media_spi_instance_ctrl_t`
- `rm_block_media_usb_instance_ctrl_t`

Enumeration Type Documentation

◆ **rm_block_media_event_t**

enum rm_block_media_event_t	
Events that can trigger a callback function	
Enumerator	
RM_BLOCK_MEDIA_EVENT_MEDIA_REMOVED	Media removed event.
RM_BLOCK_MEDIA_EVENT_MEDIA_INSERTED	Media inserted event.
RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE	Read, write, or erase completed.
RM_BLOCK_MEDIA_EVENT_ERROR	Error on media operation.
RM_BLOCK_MEDIA_EVENT_POLL_STATUS	Poll rm_block_media_api_t::statusGet for write/erase completion.
RM_BLOCK_MEDIA_EVENT_MEDIA_SUSPEND	Media suspended event.
RM_BLOCK_MEDIA_EVENT_MEDIA_RESUME	Media resumed event.
RM_BLOCK_MEDIA_EVENT_WAIT	Indication to user that they should wait for an interrupt on a pending operation.
RM_BLOCK_MEDIA_EVENT_WAIT_END	Indication to user that interrupt has been received and waiting can end.

4.3.52 Communications Middleware Interface[Interfaces](#)**Detailed Description**

Interface for Communications Middleware functions.

Summary

The Communications interface provides multiple communications functionality.

The Communications interface can be implemented by:

- [I2C Communications Middleware \(rm_comms_i2c\)](#)

Data Structures

struct [rm_comms_write_read_params_t](#)

struct [rm_comms_callback_args_t](#)

struct [rm_comms_cfg_t](#)

struct [rm_comms_api_t](#)

struct [rm_comms_instance_t](#)

Typedefs

typedef void [rm_comms_ctrl_t](#)

Enumerations

enum [rm_comms_event_t](#)

Data Structure Documentation

◆ [rm_comms_write_read_params_t](#)

struct [rm_comms_write_read_params_t](#)

Struct to pack params for writeRead

◆ [rm_comms_callback_args_t](#)

struct [rm_comms_callback_args_t](#)

Communications middleware callback parameter definition

◆ [rm_comms_cfg_t](#)

struct [rm_comms_cfg_t](#)

Communications middleware configuration block

Data Fields

uint32_t [semaphore_timeout](#)

timeout for callback.

void(* [p_callback](#))(rm_comms_callback_args_t *p_args)

Pointer to callback function, mostly used if using non-blocking functionality.

void const * [p_lower_level_cfg](#)

	Pointer to lower level driver configuration structure.
void const *	p_extend
	Pointer to extended configuration by instance of interface.
void const *	p_context
	Pointer to the user-provided context.

◆ [rm_comms_api_t](#)

struct rm_comms_api_t	
COMM APIs	
Data Fields	
fsp_err_t (*	open)(rm_comms_ctrl_t *const p_ctrl, rm_comms_cfg_t const *const p_cfg)
fsp_err_t (*	close)(rm_comms_ctrl_t *const p_ctrl)
fsp_err_t (*	read)(rm_comms_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)
fsp_err_t (*	write)(rm_comms_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes)
fsp_err_t (*	writeRead)(rm_comms_ctrl_t *const p_ctrl, rm_comms_write_read_params_t write_read_params)
Field Documentation	

◆ **open**

```
fsp_err_t(* rm_comms_api_t::open) (rm_comms_ctrl_t *const p_ctrl, rm_comms_cfg_t const *const p_cfg)
```

Open driver.

Implemented as

- [RM_COMMS_I2C_Open\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ **close**

```
fsp_err_t(* rm_comms_api_t::close) (rm_comms_ctrl_t *const p_ctrl)
```

Close driver.

Implemented as

- [RM_COMMS_I2C_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **read**

```
fsp_err_t(* rm_comms_api_t::read) (rm_comms_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)
```

Read data.

Implemented as

- [RM_COMMS_I2C_Read\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_dest	Pointer to the location to store read data.
[in]	bytes	Number of bytes to read.

◆ **write**

```
fsp_err_t(* rm_comms_api_t::write) (rm_comms_ctrl_t*const p_ctrl, uint8_t*const p_src, uint32_t const bytes)
```

Write data.

Implemented as

- [RM_COMMS_I2C_Write\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_src	Pointer to the location to get write data from.
[in]	bytes	Number of bytes to write.

◆ **writeRead**

```
fsp_err_t(* rm_comms_api_t::writeRead) (rm_comms_ctrl_t*const p_ctrl, rm_comms_write_read_params_t write_read_params)
```

Write bytes over comms followed by a read, will have a struct for params.

Implemented as

- [RM_COMMS_I2C_WriteRead\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	write_read_params	Parameters structure.

◆ **rm_comms_instance_t**

```
struct rm_comms_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Typedef Documentation◆ **rm_comms_ctrl_t**

```
typedef void rm_comms_ctrl_t
```

Communications control block. Allocate an instance specific control block to pass into the Communications API calls.

Implemented as

- [rm_comms_i2c_instance_ctrl_t](#)

Enumeration Type Documentation

◆ `rm_comms_event_t`

enum <code>rm_comms_event_t</code>
Event in the callback function

4.3.53 FileX Block Media Port Interface

Interfaces

Detailed Description

Interface for FileX Block Media port.

Summary

The FileX block media port provides notifications for insertion and removal of removable media and provides initialization functions required by FileX.

The FileX Block media interface can be implemented by: [Azure RTOS FileX Block Media I/O Driver \(`rm_filex_block_media`\)](#)

Data Structures

struct	<code>rm_filex_block_media_callback_args_t</code>
--------	---

struct	<code>rm_filex_block_media_cfg_t</code>
--------	---

struct	<code>rm_filex_block_media_api_t</code>
--------	---

struct	<code>rm_filex_block_media_instance_t</code>
--------	--

Typedefs

typedef void	<code>rm_filex_block_media_ctrl_t</code>
--------------	--

Enumerations

enum	<code>rm_filex_block_media_partition_t</code>
------	---

Data Structure Documentation

◆ `rm_filex_block_media_callback_args_t`

struct <code>rm_filex_block_media_callback_args_t</code>
--

Callback function parameter data		
Data Fields		
rm_block_media_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data.

◆ [rm_filex_block_media_cfg_t](#)

struct rm_filex_block_media_cfg_t		
Block media configuration structure		
Data Fields		
rm_block_media_instance_t *	p_lower_lvl_block_media	
		Lower level block media pointer.
rm_filex_block_media_partition_t	partition	
		Partition to use for partitioned media.
void(*	p_callback)(rm_filex_block_media_callback_args_t *p_args)	
		Pointer to callback function.

◆ [rm_filex_block_media_api_t](#)

struct rm_filex_block_media_api_t		
FileX block media functions implemented at the HAL layer will follow this API.		
Data Fields		
fsp_err_t (*	open)(rm_filex_block_media_ctrl_t *const p_ctrl, rm_filex_block_media_cfg_t const *const p_cfg)	
fsp_err_t (*	close)(rm_filex_block_media_ctrl_t *const p_ctrl)	
Field Documentation		

◆ **open**

```
fsp_err_t(* rm_filex_block_media_api_t::open) (rm_filex_block_media_ctrl_t *const p_ctrl,
rm_filex_block_media_cfg_t const *const p_cfg)
```

Open media device.

Implemented as

- [RM_FILEX_BLOCK_MEDIA_Open\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ **close**

```
fsp_err_t(* rm_filex_block_media_api_t::close) (rm_filex_block_media_ctrl_t *const p_ctrl)
```

Close media device.

Implemented as

- [RM_FILEX_BLOCK_MEDIA_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **rm_filex_block_media_instance_t**

```
struct rm_filex_block_media_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_filex_block_media_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_filex_block_media_cfg_t const *const	p_cfg	Pointer to the configuration structure for this instance.
rm_filex_block_media_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **rm_filex_block_media_ctrl_t**

```
typedef void rm_filex_block_media_ctrl_t
```

Block media control structure

Enumeration Type Documentation

◆ `rm_filex_block_media_partition_t`

enum <code>rm_filex_block_media_partition_t</code>	
Partitions that can be selected to use FileX with	
Enumerator	
<code>RM_FILEX_BLOCK_MEDIA_PARTITION0</code>	Partition 0 (0x01BE) in Master Boot Record Partition Table.
<code>RM_FILEX_BLOCK_MEDIA_PARTITION1</code>	Partition 1 (0x01CE) in Master Boot Record Partition Table.
<code>RM_FILEX_BLOCK_MEDIA_PARTITION2</code>	Partition 2 (0x01DE) in Master Boot Record Partition Table.
<code>RM_FILEX_BLOCK_MEDIA_PARTITION3</code>	Partition 3 (0x01EE) in Master Boot Record Partition Table.

4.3.54 FreeRTOS+FAT Port Interface

Interfaces

Detailed Description

Interface for FreeRTOS+FAT port.

Summary

The FreeRTOS+FAT port provides notifications for insertion and removal of removable media and provides initialization functions required by FreeRTOS+FAT.

The FreeRTOS+FAT interface can be implemented by: [FreeRTOS+FAT Port \(`rm_freertos_plus_fat`\)](#)

Data Structures

struct [rm_freertos_plus_fat_callback_args_t](#)

struct [rm_freertos_plus_fat_device_t](#)

struct [rm_freertos_plus_fat_api_t](#)

struct [rm_freertos_plus_fat_instance_t](#)

Enumerations

```
enum rm_freertos_plus_fat_event_t
```

```
enum rm_freertos_plus_fat_type_t
```

Data Structure Documentation

◆ rm_freertos_plus_fat_callback_args_t

struct rm_freertos_plus_fat_callback_args_t		
Callback function parameter data		
Data Fields		
rm_freertos_plus_fat_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data.

◆ rm_freertos_plus_fat_device_t

struct rm_freertos_plus_fat_device_t		
Information obtained from the media device.		
Data Fields		
uint32_t	sector_count	Sector count.
uint32_t	sector_size_bytes	Sector size in bytes.

◆ rm_freertos_plus_fat_api_t

struct rm_freertos_plus_fat_api_t		
FreeRTOS plus Fat functions implemented at the HAL layer will follow this API.		
Data Fields		
fsp_err_t(*)	open	(rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_cfg_t const *const p_cfg)
fsp_err_t(*)	medialnit	(rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_device_t *const p_device)
fsp_err_t(*)	diskInit	(rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_disk_cfg_t const *const p_disk_cfg, FF_Disk_t *const p_disk)
fsp_err_t(*)	diskDeinit	(rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t *const p_disk)
fsp_err_t(*)	infoGet	(rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t *const

	p_disk, rm_freertos_plus_fat_info_t *const p_info)
--	--

fsp_err_t(*	close)(rm_freertos_plus_fat_ctrl_t *const p_ctrl)
-------------	--

Field Documentation

◆ open

fsp_err_t(* rm_freertos_plus_fat_api_t::open) (rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_cfg_t const *const p_cfg)

Open media device.

Implemented as

- RM_FREERTOS_PLUS_FAT_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ medialnit

fsp_err_t(* rm_freertos_plus_fat_api_t::medialnit) (rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_device_t *const p_device)

Initializes a media device. If the device is removable, it must be plugged in prior to calling this API. This function blocks until media initialization is complete.

Implemented as

- RM_FREERTOS_PLUS_FAT_Medialnit

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_device	Pointer to store device information.

◆ **diskInit**

```
fsp_err_t(* rm_freertos_plus_fat_api_t::diskInit) (rm_freertos_plus_fat_ctrl_t *const p_ctrl,
rm_freertos_plus_fat_disk_cfg_t const *const p_disk_cfg, FF_Disk_t *const p_disk)
```

Initializes a FreeRTOS+FAT FF_Disk_t structure.

Implemented as

- [RM_FREERTOS_PLUS_FAT_DiskInit](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_disk_cfg	Pointer to disk configurations
[out]	p_disk	Pointer to store FreeRTOS+FAT disk structure.

◆ **diskDeinit**

```
fsp_err_t(* rm_freertos_plus_fat_api_t::diskDeinit) (rm_freertos_plus_fat_ctrl_t *const p_ctrl,
FF_Disk_t *const p_disk)
```

Deinitializes a FreeRTOS+FAT FF_Disk_t structure.

Implemented as

- [RM_FREERTOS_PLUS_FAT_DiskDeinit](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_disk_cfg	Pointer to disk configurations
[out]	p_disk	Pointer to store FreeRTOS+FAT disk structure.

◆ infoGet

```
fsp_err_t(* rm_freertos_plus_fat_api_t::infoGet) (rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t *const p_disk, rm_freertos_plus_fat_info_t *const p_info)
```

Returns information about the media device.

Implemented as

- [RM_FREERTOS_PLUS_FAT_InfoGet](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_info	Pointer to information structure. All elements of this structure will be set by the function.

◆ close

```
fsp_err_t(* rm_freertos_plus_fat_api_t::close) (rm_freertos_plus_fat_ctrl_t *const p_ctrl)
```

Close media device.

Implemented as

- [RM_FREERTOS_PLUS_FAT_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ rm_freertos_plus_fat_instance_t

```
struct rm_freertos_plus_fat_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_freertos_plus_fat_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_freertos_plus_fat_cfg_t const *const	p_cfg	Pointer to the configuration structure for this instance.
rm_freertos_plus_fat_api_t const *	p_api	Pointer to the API structure for this instance.

Enumeration Type Documentation

◆ **rm_freertos_plus_fat_event_t**

enum rm_freertos_plus_fat_event_t	
Events that can trigger a callback function	
Enumerator	
RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_REMOVED	Media removed event.
RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_INSERTED	Media inserted event.
RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_SUSPENDED	Media suspended event.
RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_RESUMED	Media resumed event.

◆ **rm_freertos_plus_fat_type_t**

enum rm_freertos_plus_fat_type_t	
Enumerator	
RM_FREERTOS_PLUS_FAT_TYPE_FAT32	FAT32 disk.
RM_FREERTOS_PLUS_FAT_TYPE_FAT16	FAT16 disk.
RM_FREERTOS_PLUS_FAT_TYPE_FAT12	FAT12 disk.

4.3.55 FSXXXX Middleware Interface

Interfaces

Detailed Description

Interface for FSXXXX Middleware functions.

Summary

The FSXXXX interface provides FSXXXX functionality.

The FSXXXX interface can be implemented by:

- [FS2012 Sensor Middleware \(rm_fs2012\)](#)

Data Structures

```
struct rm_fsxxxx_callback_args_t
```

```
struct rm_fsxxxx_raw_data_t

```

```
integer_part
```

```
int16_t
```

```
decimal_part
```

To two decimal places.

◆ rm_fsxxxx_data_t

```
struct rm_fsxxxx_data_t
```

FSXXXX data block

◆ **rm_fsxxxx_cfg_t**

struct rm_fsxxxx_cfg_t	
FSXXXX Configuration	
Data Fields	
rm_comms_instance_t const *	p_instance
	Pointer to Communications Middleware instance.
void const *	p_context
	Pointer to the user-provided context.
void const *	p_extend
	Pointer to extended configuration by instance of interface.
void(*	p_callback)(rm_fsxxxx_callback_args_t *p_args)
	Pointer to callback function.

◆ **rm_fsxxxx_api_t**

struct rm_fsxxxx_api_t	
FSXXXX APIs	
Data Fields	
fsp_err_t(*	open)(rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_cfg_t const *const p_cfg)
fsp_err_t(*	read)(rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data)
fsp_err_t(*	dataCalculate)(rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data, rm_fsxxxx_data_t *const p_fsxxxx_data)
fsp_err_t(*	close)(rm_fsxxxx_ctrl_t *const p_ctrl)

Field Documentation

◆ open

```
fsp_err_t(* rm_fsxxxx_api_t::open) (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_cfg_t const *const p_cfg)
```

Open sensor.

Implemented as

- [RM_FS2012_Open\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ read

```
fsp_err_t(* rm_fsxxxx_api_t::read) (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data)
```

Read ADC data from FSXXXX.

Implemented as

- [RM_FS2012_Read\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data structure.

◆ dataCalculate

```
fsp_err_t(* rm_fsxxxx_api_t::dataCalculate) (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data, rm_fsxxxx_data_t *const p_fsxxxx_data)
```

Calculate flow values from ADC data.

Implemented as

- [RM_FS2012_DataCalculate\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_fsxxxx_data	Pointer to FSXXXX data structure.

◆ **close**

```
fsp_err_t(* rm_fsxxxx_api_t::close) (rm_fsxxxx_ctrl_t *const p_ctrl)
```

Close FSXXXX.

Implemented as

- RM_FS2012_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **rm_fsxxxx_instance_t**

```
struct rm_fsxxxx_instance_t
```

FSXXXX instance

Data Fields

rm_fsxxxx_ctrl_t *	p_ctrl	Pointer to the control structure for this instance
rm_fsxxxx_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance
rm_fsxxxx_api_t const *	p_api	Pointer to the API structure for this instance

Typedef Documentation◆ **rm_fsxxxx_ctrl_t**

```
typedef void rm_fsxxxx_ctrl_t
```

FSXXXX control block. Allocate an instance specific control block to pass into the FSXXXX API calls.

Implemented as

- rm_fsxxxx_instance_ctrl_t

Enumeration Type Documentation◆ **rm_fsxxxx_event_t**

```
enum rm_fsxxxx_event_t
```

Event in the callback function

4.3.56 HS300X Middleware Interface

Interfaces

Detailed Description

Interface for HS300X Middleware functions.

Summary

The HS300X interface provides HS300X functionality.

The HS300X interface can be implemented by:

- [HS300X Sensor Middleware \(rm_hs300x\)](#)

Data Structures

struct [rm_hs300x_callback_args_t](#)

struct [rm_hs300x_raw_data_t](#)

struct [rm_hs300x_sensor_data_t](#)

struct [rm_hs300x_data_t](#)

struct [rm_hs300x_cfg_t](#)

struct [rm_hs300x_api_t](#)

struct [rm_hs300x_instance_t](#)

Typedefs

typedef void [rm_hs300x_ctrl_t](#)

Enumerations

enum [rm_hs300x_event_t](#)

enum [rm_hs300x_data_type_t](#)

enum [rm_hs300x_resolution_t](#)

Data Structure Documentation

◆ [rm_hs300x_callback_args_t](#)

struct [rm_hs300x_callback_args_t](#)

HS300X callback parameter definition

◆ **rm_hs300x_raw_data_t**

struct rm_hs300x_raw_data_t		
HS300X raw data		
Data Fields		
uint8_t	humidity[2]	Upper 2 bits of 0th element are data status.
uint8_t	temperature[2]	Lower 2 bits of 1st element are mask.

◆ **rm_hs300x_sensor_data_t**

struct rm_hs300x_sensor_data_t		
HS300X sensor data block		
Data Fields		
int16_t	integer_part	
int16_t	decimal_part	To two decimal places.

◆ **rm_hs300x_data_t**

struct rm_hs300x_data_t		
HS300X data block		

◆ **rm_hs300x_cfg_t**

struct rm_hs300x_cfg_t		
HS300X Configuration		
Data Fields		
rm_comms_instance_t const *	p_instance	
		Pointer to Communications Middleware instance.
void const *	p_context	
		Pointer to the user-provided context.
void const *	p_extend	
		Pointer to extended configuration by instance of interface.

void(*	p_callback)(rm_hs300x_callback_args_t *p_args)
	Pointer to callback function.

◆ rm_hs300x_api_t

struct rm_hs300x_api_t	
HS300X APIs	
Data Fields	
fsp_err_t (*	open)(rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_cfg_t const *const p_cfg)
fsp_err_t (*	measurementStart)(rm_hs300x_ctrl_t *const p_ctrl)
fsp_err_t (*	read)(rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_raw_data_t *const p_raw_data)
fsp_err_t (*	dataCalculate)(rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_raw_data_t *const p_raw_data, rm_hs300x_data_t *const p_hs300x_data)
fsp_err_t (*	programmingModeEnter)(rm_hs300x_ctrl_t *const p_ctrl)
fsp_err_t (*	resolutionChange)(rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_data_type_t const data_type, rm_hs300x_resolution_t const resolution)
fsp_err_t (*	sensorIdGet)(rm_hs300x_ctrl_t *const p_ctrl, uint32_t *const p_sensor_id)
fsp_err_t (*	programmingModeExit)(rm_hs300x_ctrl_t *const p_ctrl)
fsp_err_t (*	close)(rm_hs300x_ctrl_t *const p_ctrl)
Field Documentation	

◆ **open**

```
fsp_err_t(* rm_hs300x_api_t::open) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_cfg_t const *const p_cfg)
```

Open sensor.

Implemented as

- [RM_HS300X_Open\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ **measurementStart**

```
fsp_err_t(* rm_hs300x_api_t::measurementStart) (rm_hs300x_ctrl_t *const p_ctrl)
```

Start a measurement.

Implemented as

- [RM_HS300X_MeasurementStart\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **read**

```
fsp_err_t(* rm_hs300x_api_t::read) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_raw_data_t *const p_raw_data)
```

Read ADC data from HS300X.

Implemented as

- [RM_HS300X_Read\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data structure.

◆ dataCalculate

```
fsp_err_t(* rm_hs300x_api_t::dataCalculate) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_raw_data_t *const p_raw_data, rm_hs300x_data_t *const p_hs300x_data)
```

Calculate humidity and temperature values from ADC data.

Implemented as

- RM_HS300X_DataCalculate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_hs300x_data	Pointer to HS300X data structure.

◆ programmingModeEnter

```
fsp_err_t(* rm_hs300x_api_t::programmingModeEnter) (rm_hs300x_ctrl_t *const p_ctrl)
```

Enter the programming mode.

Implemented as

- RM_HS300X_ProgrammingModeEnter()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ resolutionChange

```
fsp_err_t(* rm_hs300x_api_t::resolutionChange) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_data_type_t const data_type, rm_hs300x_resolution_t const resolution)
```

Change the sensor resolution.

Implemented as

- RM_HS300X_ResolutionChange()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	data_type	Data type of HS300X.
[in]	resolution	Resolution type of HS300X.

◆ **sensorIdGet**

```
fsp_err_t(* rm_hs300x_api_t::sensorIdGet) (rm_hs300x_ctrl_t *const p_ctrl, uint32_t *const p_sensor_id)
```

Get the sensor ID.

Implemented as

- [RM_HS300X_SensorIdGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_sensor_id	Pointer to sensor ID of HS300X.

◆ **programmingModeExit**

```
fsp_err_t(* rm_hs300x_api_t::programmingModeExit) (rm_hs300x_ctrl_t *const p_ctrl)
```

Exit the programming mode.

Implemented as

- [RM_HS300X_ProgrammingModeExit\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **close**

```
fsp_err_t(* rm_hs300x_api_t::close) (rm_hs300x_ctrl_t *const p_ctrl)
```

Close HS300X.

Implemented as

- [RM_HS300X_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **rm_hs300x_instance_t**

```
struct rm_hs300x_instance_t
```

HS300X instance

Data Fields

rm_hs300x_ctrl_t *	p_ctrl	Pointer to the control structure for this instance
rm_hs300x_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance

<code>rm_hs300x_api_t</code> const *	<code>p_api</code>	Pointer to the API structure for this instance
--------------------------------------	--------------------	--

Typedef Documentation

◆ `rm_hs300x_ctrl_t`

```
typedef void rm_hs300x_ctrl_t
```

HS300X control block. Allocate an instance specific control block to pass into the HS300X API calls.

Implemented as

- `rm_hs300x_instance_ctrl_t`

Enumeration Type Documentation

◆ `rm_hs300x_event_t`

```
enum rm_hs300x_event_t
```

Event in the callback function

◆ `rm_hs300x_data_type_t`

```
enum rm_hs300x_data_type_t
```

Data type of HS300X

◆ `rm_hs300x_resolution_t`

```
enum rm_hs300x_resolution_t
```

Resolution type of HS300X

4.3.57 LittleFS Interface

Interfaces

Detailed Description

Interface for LittleFS access.

Summary

The LittleFS Port configures a fail-safe filesystem designed for microcontrollers on top of a lower level storage device.

Implemented by: [LittleFS Flash Port \(rm_littlefs_flash\)](#)

Data Structures

```
struct rm_littlefs_cfg_t
```

```
struct rm_littlefs_api_t
```

```
struct rm_littlefs_instance_t
```

Typedefs

```
typedef void rm_littlefs_ctrl_t
```

Data Structure Documentation

◆ rm_littlefs_cfg_t

struct rm_littlefs_cfg_t		
User configuration structure, used in open function		
Data Fields		
struct lfs_config const *	p_lfs_cfg	Pointer LittleFS configuration structure.
void const *	p_extend	Pointer to hardware dependent configuration.

◆ rm_littlefs_api_t

struct rm_littlefs_api_t		
LittleFS Port interface API.		
Data Fields		
fsp_err_t(*	open)(rm_littlefs_ctrl_t *const p_ctrl, rm_littlefs_cfg_t const *const p_cfg)	
fsp_err_t(*	close)(rm_littlefs_ctrl_t *const p_ctrl)	

Field Documentation

◆ **open**

```
fsp_err_t(* rm_littlefs_api_t::open) (rm_littlefs_ctrl_t *const p_ctrl, rm_littlefs_cfg_t const *const p_cfg)
```

Initialize The lower level storage device.

Implemented as

- [RM_LITTLEFS_FLASH_Open](#)

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ **close**

```
fsp_err_t(* rm_littlefs_api_t::close) (rm_littlefs_ctrl_t *const p_ctrl)
```

Closes the module and lower level storage device.

Implemented as

- [RM_LITTLEFS_FLASH_Close](#)

Parameters

[in]	p_ctrl	Control block set in rm_littlefs_api_t::open call.
------	--------	--

◆ **rm_littlefs_instance_t**

```
struct rm_littlefs_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_littlefs_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_littlefs_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_littlefs_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ `rm_littlefs_ctrl_t`

```
typedef void rm_littlefs_ctrl_t
```

LittleFS Port API control block. Allocate an instance specific control block to pass into the LittleFS Port API calls.

Implemented as

- `rm_littlefs_flash_instance_ctrl_t`

4.3.58 Interface

Interfaces

Detailed Description

Interface for motor 120 control functions.

Summary

The motor 120 control interface for speed calculation and setting, fixed cycle processing

The motor 120 control interface can be implemented by:

- Motor 120 Control Sensorless (`motor_120_control_sensorless`)
- Motor 120 Control Hall (`motor_120_control_hall`)

Data Structures

```
struct motor_120_control_callback_args_t
```

```
struct motor_120_control_motor_parameter_t
```

```
struct motor_120_control_cfg_t
```

```
struct motor_120_control_api_t
```

```
struct motor_120_control_instance_t
```

Typedefs

```
typedef void motor_120_control_ctrl_t
```

Enumerations

```
enum motor_120_control_event_t
```

```
enum motor_120_conduction_type_t
```

enum [motor_120_control_status_t](#)enum [motor_120_control_run_mode_t](#)enum [motor_120_control_rotation_direction_t](#)enum [motor_120_control_wait_stop_flag_t](#)enum [motor_120_control_timeout_error_flag_t](#)enum [motor_120_control_pattern_error_flag_t](#)enum [motor_120_control_speed_ref_t](#)enum [motor_120_control_voltage_ref_t](#)

Data Structure Documentation

◆ [motor_120_control_callback_args_t](#)

struct motor_120_control_callback_args_t		
Callback function parameter data		
Data Fields		
motor_120_control_event_t	event	Event trigger.
void const *	p_context	Placeholder for user data.

◆ [motor_120_control_motor_parameter_t](#)

struct motor_120_control_motor_parameter_t		
Motor parameter for motor 120 control		
Data Fields		
uint32_t	u4_motor_pp	Pole pairs.
float	f4_motor_r	Resistance (ohm)
float	f4_motor_ld	Inductance for d-axis (H)
float	f4_motor_lq	Inductance for q-axis (H)
float	f4_motor_m	Magnet flux (Wb)
float	f4_motor_j	Rotor inertia (kgm ²)

◆ [motor_120_control_cfg_t](#)

struct motor_120_control_cfg_t		
Configuration parameters.		
Data Fields		

<code>motor_120_conduction_type_t</code>	<code>conduction_type</code>
	0:First 60 degree PWM, 1:Complementary first 60 degree PWM
<code>uint32_t</code>	<code>u4_timeout_cnt</code>
	Undetected time.
<code>float</code>	<code>f4_max_drive_v</code>
	Max output voltage (V)
<code>float</code>	<code>f4_min_drive_v</code>
	Min output voltage (V)
<code>uint32_t</code>	<code>u4_speed_pi_decimation</code>
	Speed PI control decimation counter.
<code>uint32_t</code>	<code>u4_free_run_timer_freq</code>
	Speed calc free run timer frequency (MHz)
<code>float</code>	<code>f4_speed_lpf_k</code>
	Speed LPF parameter.
<code>float</code>	<code>f4_limit_speed_change</code>
	Speed ref change limit.
<code>float</code>	<code>f4_pi_ctrl_kp</code>
	PI control error.

float	f4_pi_ctrl_ki
	PI control buffer of integral term.
float	f4_pi_ctrl_ilimit
	PI control limit of integral term.
motor_120_control_motor_parameter_t	motor_param
	Motor parameter.
void(*	p_callback)(motor_120_control_callback_args_t *p_args)
	Callback function.
void const *	p_context
	Placeholder for user data.
void const *	p_extend
	Extended configurations.

◆ motor_120_control_api_t

struct motor_120_control_api_t	
Functions implemented at the HAL layer will follow these APIs.	
Data Fields	
fsp_err_t (*	open)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_cfg_t const *const p_cfg)
fsp_err_t (*	close)(motor_120_control_ctrl_t *const p_ctrl)
fsp_err_t (*	run)(motor_120_control_ctrl_t *const p_ctrl)
fsp_err_t (*	stop)(motor_120_control_ctrl_t *const p_ctrl)

fsp_err_t(*)	reset)(motor_120_control_ctrl_t *const p_ctrl)
fsp_err_t(*)	speedSet)(motor_120_control_ctrl_t *const p_ctrl, float const speed_rpm)
fsp_err_t(*)	speedGet)(motor_120_control_ctrl_t *const p_ctrl, float *const p_speed_rpm)
fsp_err_t(*)	currentGet)(motor_120_control_ctrl_t *const p_ctrl, motor_120_driver_current_status_t *const p_current_status)
fsp_err_t(*)	waitStopFlagGet)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_wait_stop_flag_t *const p_flag)
fsp_err_t(*)	timeoutErrorFlagGet)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_timeout_error_flag_t *const p_timeout_error_flag)
fsp_err_t(*)	patternErrorFlagGet)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_pattern_error_flag_t *const p_pattern_error_flag)
fsp_err_t(*)	voltageRefGet)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_voltage_ref_t *const p_voltage_ref)
fsp_err_t(*)	parameterUpdate)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_cfg_t const *const p_cfg)

Field Documentation

◆ **open**

```
fsp_err_t(* motor_120_control_api_t::open) (motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_cfg_t const *const p_cfg)
```

Initialize the motor 120 control module.

Implemented as

- [RM_MOTOR_120_CONTROL_SENSORLESS_Open\(\)](#)
- [RM_MOTOR_120_CONTROL_HALL_Open\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ **close**

```
fsp_err_t(* motor_120_control_api_t::close) (motor_120_control_ctrl_t *const p_ctrl)
```

Close the motor 120 control module

Implemented as

- [RM_MOTOR_120_CONTROL_SENSORLESS_Close\(\)](#)
- [RM_MOTOR_120_CONTROL_HALL_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **run**

```
fsp_err_t(* motor_120_control_api_t::run) (motor_120_control_ctrl_t *const p_ctrl)
```

Run the motor 120 control module

Implemented as

- [RM_MOTOR_120_CONTROL_SENSORLESS_Run\(\)](#)
- [RM_MOTOR_120_CONTROL_HALL_Run\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ stop

```
fsp_err_t(* motor_120_control_api_t::stop) (motor_120_control_ctrl_t *const p_ctrl)
```

Stop the motor 120 control module

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_Stop()
- RM_MOTOR_120_CONTROL_HALL_Stop()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ reset

```
fsp_err_t(* motor_120_control_api_t::reset) (motor_120_control_ctrl_t *const p_ctrl)
```

Reset variables of the motor 120 control module

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_Reset()
- RM_MOTOR_120_CONTROL_HALL_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ speedSet

```
fsp_err_t(* motor_120_control_api_t::speedSet) (motor_120_control_ctrl_t *const p_ctrl, float const speed_rpm)
```

Set speed[rpm]

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_SpeedSet()
- RM_MOTOR_120_CONTROL_HALL_SpeedSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	speed_rpm	Pointer to get speed data[rpm]

◆ speedGet

```
fsp_err_t(* motor_120_control_api_t::speedGet) (motor_120_control_ctrl_t *const p_ctrl, float *const p_speed_rpm)
```

Get speed.

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_SpeedGet()
- RM_MOTOR_120_CONTROL_HALL_SpeedGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_speed_rpm	Pointer to get speed data[rpm]

◆ currentGet

```
fsp_err_t(* motor_120_control_api_t::currentGet) (motor_120_control_ctrl_t *const p_ctrl, motor_120_driver_current_status_t *const p_current_status)
```

Get phase current, Vdc and Va_max data.

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_CurrentGet()
- RM_MOTOR_120_CONTROL_HALL_CurrentGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_current_status	Pointer to get data structure.

◆ waitStopFlagGet

```
fsp_err_t(* motor_120_control_api_t::waitStopFlagGet) (motor_120_control_ctrl_t *const p_ctrl, motor_120_control_wait_stop_flag_t *const p_flag)
```

Get wait stop flag.

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_WaitStopFlagGet()
- RM_MOTOR_120_CONTROL_HALL_WaitStopFlagGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_flag	Pointer to wait stop flag

◆ timeoutErrorFlagGet

```
fsp_err_t(* motor_120_control_api_t::timeoutErrorFlagGet) (motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_timeout_error_flag_t *const p_timeout_error_flag)
```

Get timerout error flag.

Implemented as

- [RM_MOTOR_120_CONTROL_SENSORLESS_TimeoutErrorFlagGet\(\)](#)
- [RM_MOTOR_120_CONTROL_HALL_TimeoutErrorFlagGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_timeout_error_flag	Pointer to timeout error flag

◆ patternErrorFlagGet

```
fsp_err_t(* motor_120_control_api_t::patternErrorFlagGet) (motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_pattern_error_flag_t *const p_pattern_error_flag)
```

Get pattern error flag.

Implemented as

- [RM_MOTOR_120_CONTROL_SENSORLESS_PatternErrorFlagGet\(\)](#)
- [RM_MOTOR_120_CONTROL_HALL_PatternErrorFlagGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_pattern_error_flag	Pointer to pattern error flag

◆ voltageRefGet

```
fsp_err_t(* motor_120_control_api_t::voltageRefGet) (motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_voltage_ref_t *const p_voltage_ref)
```

Get voltage ref.

Implemented as

- [RM_MOTOR_120_CONTROL_SENSORLESS_VoltageRefGet\(\)](#)
- [RM_MOTOR_120_CONTROL_HALL_VoltageRefGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_voltage_ref	Pointer to flag voltage ref

◆ **parameterUpdate**

```
fsp_err_t(* motor_120_control_api_t::parameterUpdate) (motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_cfg_t const *const p_cfg)
```

Update configuration parameters for the calculation in the motor 120 control module

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_ParameterUpdate()
- RM_MOTOR_120_CONTROL_HALL_ParameterUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ **motor_120_control_instance_t**

```
struct motor_120_control_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

motor_120_control_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_120_control_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_120_control_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **motor_120_control_ctrl_t**

```
typedef void motor_120_control_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- motor_120_control_sensorless_instance_ctrl_t
- motor_120_control_hall_instance_ctrl_t

Enumeration Type Documentation

◆ **motor_120_control_event_t**

enum motor_120_control_event_t	
Events that can trigger a callback function	
Enumerator	
MOTOR_120_CONTROL_EVENT_ADC_FORWARD	Event before motor 120 driver process.
MOTOR_120_CONTROL_EVENT_ADC_BACKWARD	Event after motor 120 driver process.
MOTOR_120_CONTROL_EVENT_CYCLE_FORWARD	Before cyclic process of speed control.
MOTOR_120_CONTROL_EVENT_CYCLE_BACKWARD	After cyclic process of speed control.

◆ **motor_120_conduction_type_t**

enum motor_120_conduction_type_t	
Enumerator	
MOTOR_120_CONDUCTION_TYPE_FIRST60	First 60 degree PWM.
MOTOR_120_CONDUCTION_TYPE_COMPLEMENTARY	Complementary first 60 degree PWM.

◆ **motor_120_control_status_t**

enum motor_120_control_status_t	
120 control status	
Enumerator	
MOTOR_120_CONTROL_STATUS_INACTIVE	120 control status inactive
MOTOR_120_CONTROL_STATUS_ACTIVE	120 control status active

◆ **motor_120_control_run_mode_t**

enum motor_120_control_run_mode_t	
Run mode	
Enumerator	
MOTOR_120_CONTROL_RUN_MODE_INIT	Run mode init.
MOTOR_120_CONTROL_RUN_MODE_BOOT	Run mode boot.
MOTOR_120_CONTROL_RUN_MODE_DRIVE	Run mode drive.

◆ **motor_120_control_rotation_direction_t**

enum motor_120_control_rotation_direction_t	
Rotation direction	
Enumerator	
MOTOR_120_CONTROL_ROTATION_DIRECTION_CW	Clockwise.
MOTOR_120_CONTROL_ROTATION_DIRECTION_CCW	Counter clockwise.
MOTOR_120_CONTROL_ROTATION_DIRECTION_MAX	Max value.

◆ **motor_120_control_wait_stop_flag_t**

enum motor_120_control_wait_stop_flag_t	
Flag for waiting for motor stop	
Enumerator	
MOTOR_120_CONTROL_WAIT_STOP_FLAG_CLEAR	Wait stop flag clear.
MOTOR_120_CONTROL_WAIT_STOP_FLAG_SET	Wait stop flag set.

◆ **motor_120_control_timeout_error_flag_t**

enum <code>motor_120_control_timeout_error_flag_t</code>	
Flag for timeout error status	
Enumerator	
<code>MOTOR_120_CONTROL_TIMEOUT_ERROR_FLAG_CLEAR</code>	Timeout error flag clear.
<code>MOTOR_120_CONTROL_TIMEOUT_ERROR_FLAG_SET</code>	Timeout error flag set.

◆ **motor_120_control_pattern_error_flag_t**

enum <code>motor_120_control_pattern_error_flag_t</code>	
Flag for pattern error status	
Enumerator	
<code>MOTOR_120_CONTROL_PATTERN_ERROR_FLAG_CLEAR</code>	Pattern error flag clear.
<code>MOTOR_120_CONTROL_PATTERN_ERROR_FLAG_SET</code>	Pattern error flag set.

◆ **motor_120_control_speed_ref_t**

enum <code>motor_120_control_speed_ref_t</code>	
Speed reference status	
Enumerator	
<code>MOTOR_120_CONTROL_SPEED_REF_ZERO_CONST</code>	Speed reference zero const.
<code>MOTOR_120_CONTROL_SPEED_REF_OPENLOOP_1</code>	Speed reference openloop 1.
<code>MOTOR_120_CONTROL_SPEED_REF_OPENLOOP_2</code>	Speed reference openloop 2.
<code>MOTOR_120_CONTROL_SPEED_REF_OPENLOOP_3</code>	Speed reference openloop 3.
<code>MOTOR_120_CONTROL_SPEED_REF_CHANGE</code>	Speed reference change.

◆ **motor_120_control_voltage_ref_t**

enum <code>motor_120_control_voltage_ref_t</code>	
Voltage reference status	
Enumerator	
<code>MOTOR_120_CONTROL_VOLTAGE_REF_ZERO_CONST</code>	Voltage reference zero const.
<code>MOTOR_120_CONTROL_VOLTAGE_REF_UP</code>	Voltage reference up.
<code>MOTOR_120_CONTROL_VOLTAGE_REF_CONST</code>	Voltage reference const.
<code>MOTOR_120_CONTROL_VOLTAGE_REF_OPENLOOP</code>	Voltage reference openloop.
<code>MOTOR_120_CONTROL_VOLTAGE_REF_PI_OUTPUT</code>	Voltage reference pi output.

4.3.59 Interface

Interfaces

Detailed Description

Interface for motor driver functions.

Summary

The `MOTOR_120_DRIVER` interface for setting the PWM modulation duty

The motor current control interface can be implemented by:

- [Motor 120 degree driver \(`rm_motor_120_driver`\)](#)

Data Structures

struct [motor_120_driver_callback_args_t](#)

struct [motor_120_driver_current_status_t](#)

struct [motor_120_driver_cfg_t](#)

struct [motor_120_driver_api_t](#)

struct [motor_120_driver_instance_t](#)

Typedefs

```
typedef void motor_120_driver_ctrl_t
```

Enumerations

```
enum motor_120_driver_event_t
```

```
enum motor_120_driver_flag_offset_calc_t
```

```
enum motor_120_driver_phase_pattern_t
```

Data Structure Documentation

◆ motor_120_driver_callback_args_t

struct motor_120_driver_callback_args_t		
Callback function parameter data		
Data Fields		
motor_120_driver_event_t	event	Event trigger.
void const *	p_context	Placeholder for user data.

◆ motor_120_driver_current_status_t

struct motor_120_driver_current_status_t		
Current data get structure		
Data Fields		
float	iu	U phase current (A)
float	iv	V phase current (A)
float	iw	W phase current (A)
float	vdc	Main line voltage (V)
float	vu	U phase voltage (V)
float	vv	V phase voltage (V)
float	vw	W phase voltage (V)

◆ motor_120_driver_cfg_t

struct motor_120_driver_cfg_t		
Configuration parameters.		
Data Fields		
void(*)	p_callback)(motor_120_driver_callback_args_t *p_args)	
	Callback function.	

void const *	p_context
	Placeholder for user data.
void const *	p_extend
	Placeholder for user extension.

◆ motor_120_driver_api_t

struct motor_120_driver_api_t	
Functions implemented at the HAL layer will follow these APIs.	
Data Fields	
fsp_err_t (*	open)(motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_cfg_t const *const p_cfg)
fsp_err_t (*	close)(motor_120_driver_ctrl_t *const p_ctrl)
fsp_err_t (*	run)(motor_120_driver_ctrl_t *const p_ctrl)
fsp_err_t (*	stop)(motor_120_driver_ctrl_t *const p_ctrl)
fsp_err_t (*	reset)(motor_120_driver_ctrl_t *const p_ctrl)
fsp_err_t (*	phaseVoltageSet)(motor_120_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage)
fsp_err_t (*	phasePatternSet)(motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_phase_pattern_t const pattern)
fsp_err_t (*	currentGet)(motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_current_status_t *const p_current_status)
fsp_err_t (*	currentOffsetCalc)(motor_120_driver_ctrl_t *const p_ctrl)
fsp_err_t (*	flagCurrentOffsetGet)(motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_flag_offset_calc_t *const p_flag_offset)

```
fsp_err_t(* parameterUpdate )(motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_cfg_t const *const p_cfg)
```

Field Documentation

◆ open

```
fsp_err_t(* motor_120_driver_api_t::open) (motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_cfg_t const *const p_cfg)
```

Initialize the motor 120 driver module.

Implemented as

- RM_MOTOR_120_DRIVER_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

```
fsp_err_t(* motor_120_driver_api_t::close) (motor_120_driver_ctrl_t *const p_ctrl)
```

Close the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ run

```
fsp_err_t(* motor_120_driver_api_t::run) (motor_120_driver_ctrl_t *const p_ctrl)
```

Run the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_Run()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ stop

```
fsp_err_t(* motor_120_driver_api_t::stop) (motor_120_driver_ctrl_t *const p_ctrl)
```

Stop the motor 120 driver module

Implemented as

- [RM_MOTOR_120_DRIVER_Stop\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ reset

```
fsp_err_t(* motor_120_driver_api_t::reset) (motor_120_driver_ctrl_t *const p_ctrl)
```

Reset variables of the motor 120 driver module

Implemented as

- [RM_MOTOR_120_DRIVER_Reset\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ phaseVoltageSet

```
fsp_err_t(* motor_120_driver_api_t::phaseVoltageSet) (motor_120_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage)
```

Set (Input) phase voltage data into the motor 120 driver module

Implemented as

- [RM_MOTOR_120_DRIVER_PhaseVoltageSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	u_voltage	U phase voltage [V]
[in]	v_voltage	V phase voltage [V]
[in]	w_voltage	W phase voltage [V]

◆ phasePatternSet

```
fsp_err_t(* motor_120_driver_api_t::phasePatternSet) (motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_phase_pattern_t const pattern)
```

Set phase voltage pattern the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_PhasePatternSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	pattern	Voltage pattern

◆ currentGet

```
fsp_err_t(* motor_120_driver_api_t::currentGet) (motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_current_status_t *const p_current_status)
```

Get phase current, Vdc and Va_max data from the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_CurrentGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_current_status	Pointer to get data structure.

◆ currentOffsetCalc

```
fsp_err_t(* motor_120_driver_api_t::currentOffsetCalc) (motor_120_driver_ctrl_t *const p_ctrl)
```

current offset detection from the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_CurrentOffsetCalc()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **flagCurrentOffsetGet**

```
fsp_err_t(* motor_120_driver_api_t::flagCurrentOffsetGet) (motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_flag_offset_calc_t *const p_flag_offset)
```

Get the flag of finish current offset detection from the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_FlagCurrentOffsetGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_flag_offset	Flag of finish current offset detection

◆ **parameterUpdate**

```
fsp_err_t(* motor_120_driver_api_t::parameterUpdate) (motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_cfg_t const *const p_cfg)
```

Update configuration parameters for the calculation in the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_ParameterUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ **motor_120_driver_instance_t**

```
struct motor_120_driver_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

motor_120_driver_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_120_driver_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_120_driver_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ **motor_120_driver_ctrl_t**

```
typedef void motor_120_driver_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- motor_120_driver_instance_ctrl_t

Enumeration Type Documentation◆ **motor_120_driver_event_t**

```
enum motor_120_driver_event_t
```

Events that can trigger a callback function

Enumerator

MOTOR_120_DRIVER_EVENT_FORWARD	Event before motor 120 driver process (before current control timing)
MOTOR_120_DRIVER_EVENT_120_CONTROL	Event 120 detection.
MOTOR_120_DRIVER_EVENT_BACKWARD	Event after motor 120 driver process (after PWM duty setting)

◆ **motor_120_driver_flag_offset_calc_t**

```
enum motor_120_driver_flag_offset_calc_t
```

The flag represents that the offset measurement is finished

Enumerator

MOTOR_120_DRIVER_FLAG_OFFSET_CALC_CLEAR	Offset calculation not finished.
MOTOR_120_DRIVER_FLAG_OFFSET_CALC_OFF_FINISH	Off voltage offset calculation finished.
MOTOR_120_DRIVER_FLAG_OFFSET_CALC_ALL_FINISH	All offset calculation finished.

◆ motor_120_driver_phase_pattern_t

enum motor_120_driver_phase_pattern_t	
Phase voltage pattern	
Enumerator	
MOTOR_120_DRIVER_PHASE_PATTERN_ERROR	Phase voltage pattern error.
MOTOR_120_DRIVER_PHASE_PATTERN_UP_PWM_VN_ON	Up(PWM) to Vn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_UP_PWM_WN_ON	Up(PWM) to Wn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_PWM_UN_ON	Vp(PWM) to Un(on)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_PWM_WN_ON	Vp(PWM) to Wn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_WP_PWM_UN_ON	Wp(PWM) to Un(on)
MOTOR_120_DRIVER_PHASE_PATTERN_WP_PWM_VN_ON	Wp(PWM) to Vn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_VN_PWM	Up(on) to Vn(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_WN_PWM	Up(on) to Wn(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_UN_PWM	Vp(on) to Un(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_WN_PWM	Vp(on) to Wn(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_UN_PWM	Wp(on) to Un(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_VN_PWM	Wp(on) to Vn(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_U_PWM_VN_ON	U(PWM) to Vn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_U_PWM_WN_ON	U(PWM) to Wn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_V_PWM_UN_ON	V(PWM) to Un(on)
MOTOR_120_DRIVER_PHASE_PATTERN_V_PWM_WN_ON	V(PWM) to Wn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_W_PWM_UN_ON	W(PWM) to Un(on)

MOTOR_120_DRIVER_PHASE_PATTERN_W_PWM_VN_ON	W(PWM) to Vn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_V_PWM	Up(on) to V(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_W_PWM	Up(on) to W(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_U_PWM	Vp(on) to U(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_W_PWM	Vp(on) to W(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_U_PWM	Wp(on) to U(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_V_PWM	Wp(on) to V(PWM)

4.3.60 Motor angle Interface

Interfaces

Detailed Description

Interface for motor angle and speed calculation functions.

Summary

The Motor angle interface calculates the rotor angle and rotational speed from other data.

The motor angle interface can be implemented by:

- [Motor Angle and Speed Estimation \(rm_motor_estimate\)](#)
- [Motor Angle and Speed Calculation with an Encoder \(rm_motor_sense_encoder\)](#)

Data Structures

struct [motor_angle_cfg_t](#)

struct [motor_angle_current_t](#)

struct [motor_angle_voltage_reference_t](#)

struct [motor_angle_encoder_info_t](#)

struct [motor_angle_api_t](#)

```
struct motor_angle_instance_t
```

Typedefs

```
typedef void motor_angle_ctrl_t
```

Enumerations

```
enum motor_sense_encoder_angle_adjust_t
```

Data Structure Documentation

◆ motor_angle_cfg_t

```
struct motor_angle_cfg_t
```

Configuration parameters.

◆ motor_angle_current_t

```
struct motor_angle_current_t
```

Interface structure

Data Fields

float	id	d-axis current
float	iq	q-axis current

◆ motor_angle_voltage_reference_t

```
struct motor_angle_voltage_reference_t
```

Motor angle voltage reference

Data Fields

float	vd	d-axis voltage reference
float	vq	q-axis voltage reference

◆ motor_angle_encoder_info_t

```
struct motor_angle_encoder_info_t
```

Motor angle encoder adjustment info

Data Fields

motor_sense_encoder_angle_adjust_t	e_adjust_status	Encoder Adjustment Status.
uint8_t	u1_adjust_count_full	Adjustment count became full.

◆ motor_angle_api_t

```
struct motor_angle_api_t
```

Functions implemented as application interface will follow these APIs.

Data Fields	
fsp_err_t(*)	open)(motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *const p_cfg)
fsp_err_t(*)	close)(motor_angle_ctrl_t *const p_ctrl)
fsp_err_t(*)	reset)(motor_angle_ctrl_t *const p_ctrl)
fsp_err_t(*)	currentSet)(motor_angle_ctrl_t *const p_ctrl, motor_angle_current_t *const p_st_current, motor_angle_voltage_reference_t *const p_st_voltage)
fsp_err_t(*)	speedSet)(motor_angle_ctrl_t *const p_ctrl, float const speed_ctrl, float const damp_speed)
fsp_err_t(*)	flagPiCtrlSet)(motor_angle_ctrl_t *const p_ctrl, uint32_t const flag_pi)
fsp_err_t(*)	internalCalculate)(motor_angle_ctrl_t *const p_ctrl)
fsp_err_t(*)	angleSpeedGet)(motor_angle_ctrl_t *const p_ctrl, float *const p_angle, float *const p_speed, float *const p_phase_err)
fsp_err_t(*)	angleAdjust)(motor_angle_ctrl_t *const p_ctrl)
fsp_err_t(*)	encoderCyclic)(motor_angle_ctrl_t *const p_ctrl)
fsp_err_t(*)	estimatedComponentGet)(motor_angle_ctrl_t *const p_ctrl, float *const p_ed, float *const p_eq)
fsp_err_t(*)	infoGet)(motor_angle_ctrl_t *const p_ctrl, motor_angle_encoder_info_t *const p_info)
fsp_err_t(*)	parameterUpdate)(motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *p_cfg)
Field Documentation	

◆ **open**

```
fsp_err_t(* motor_angle_api_t::open) (motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *const p_cfg)
```

Initialize the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_Open()
- RM_MOTOR_SENSE_ENCODER_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ **close**

```
fsp_err_t(* motor_angle_api_t::close) (motor_angle_ctrl_t *const p_ctrl)
```

Close (Finish) the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_Close()
- RM_MOTOR_SENSE_ENCODER_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **reset**

```
fsp_err_t(* motor_angle_api_t::reset) (motor_angle_ctrl_t *const p_ctrl)
```

Reset the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_Reset()
- RM_MOTOR_SENSE_ENCODER_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ currentSet

```
fsp_err_t(* motor_angle_api_t::currentSet) (motor_angle_ctrl_t *const p_ctrl, motor_angle_current_t *const p_st_current, motor_angle_voltage_reference_t *const p_st_voltage)
```

Set (Input) Current & Voltage Reference data into the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_CurrentSet()
- RM_MOTOR_SENSE_ENCODER_CurrentSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_st_current	Pointer to current structure
[in]	p_st_voltage	Pointer to voltage Reference structure

◆ speedSet

```
fsp_err_t(* motor_angle_api_t::speedSet) (motor_angle_ctrl_t *const p_ctrl, float const speed_ctrl, float const damp_speed)
```

Set (Input) Speed Information into the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_SpeedSet()
- RM_MOTOR_SENSE_ENCODER_SpeedSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	speed_ctrl	Control reference of rotational speed [rad/s]
[in]	damp_speed	Damping rotational speed [rad/s]

◆ **flagPiCtrlSet**

```
fsp_err_t(* motor_angle_api_t::flagPiCtrlSet) (motor_angle_ctrl_t *const p_ctrl, uint32_t const flag_pi)
```

Set the flag of PI Control runs.

Implemented as

- RM_MOTOR_ESTIMATE_FlagPiCtrlSet()
- RM_MOTOR_SENSE_ENCODER_FlagPiCtrlSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	flag_pi	The flag of PI control runs

◆ **internalCalculate**

```
fsp_err_t(* motor_angle_api_t::internalCalculate) (motor_angle_ctrl_t *const p_ctrl)
```

Calculate internal parameters of encoder process.

Implemented as

- RM_MOTOR_ESTIMATE_InternalCalculate()
- RM_MOTOR_SENSE_ENCODER_InternalCalculate()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **angleSpeedGet**

```
fsp_err_t(* motor_angle_api_t::angleSpeedGet) (motor_angle_ctrl_t *const p_ctrl, float *const p_angle, float *const p_speed, float *const p_phase_err)
```

Get rotor angle and rotational speed from the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_AngleSpeedGet()
- RM_MOTOR_SENSE_ENCODER_AngleSpeedGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_angl	Memory address to get rotor angle data
[out]	p_speed	Memory address to get rotational speed data
[out]	p_phase_err	Memory address to get phase(angle) error data

◆ **angleAdjust**

```
fsp_err_t(* motor_angle_api_t::angleAdjust) (motor_angle_ctrl_t *const p_ctrl)
```

Angle Adjustment Process.

Implemented as

- RM_MOTOR_ESTIMATE_AngleAdjust()
- RM_MOTOR_SENSE_ENCODER_AngleAdjust()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **encoderCyclic**

```
fsp_err_t(* motor_angle_api_t::encoderCyclic) (motor_angle_ctrl_t *const p_ctrl)
```

Encoder Cyclic Process.

Implemented as

- RM_MOTOR_ESTIMATE_EncoderCyclic()
- RM_MOTOR_SENSE_ENCODER_EncoderCyclic()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **estimatedComponentGet**

```
fsp_err_t(* motor_angle_api_t::estimatedComponentGet) (motor_angle_ctrl_t *const p_ctrl, float *const p_ed, float *const p_eq)
```

Get estimated d/q-axis component from the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_EstimatedComponentGet()
- RM_MOTOR_SENSE_ENCODER_EstimatedComponentGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_ed	Memory address to get estimated d-axis component
[out]	p_eq	Memory address to get estimated q-axis component

◆ **infoGet**

```
fsp_err_t(* motor_angle_api_t::infoGet) (motor_angle_ctrl_t *const p_ctrl,
motor_angle_encoder_info_t *const p_info)
```

Get Encoder Calculate Information.

Implemented as

- RM_MOTOR_ESTIMATE_InfoGet()
- RM_MOTOR_SENSE_ENCODER_InfoGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_info	Memory address to get encoder calculate information

◆ **parameterUpdate**

```
fsp_err_t(* motor_angle_api_t::parameterUpdate) (motor_angle_ctrl_t *const p_ctrl,
motor_angle_cfg_t const *p_cfg)
```

Update Parameters for the calculation in the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_ParameterUpdate()
- RM_MOTOR_SENSE_ENCODER_ParameterUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ **motor_angle_instance_t**

```
struct motor_angle_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

motor_angle_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_angle_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_angle_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ **motor_angle_ctrl_t**typedef void [motor_angle_ctrl_t](#)

Motor Angle Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- [motor_angle_ctrl_t](#)

Enumeration Type Documentation◆ **motor_sense_encoder_angle_adjust_t**enum [motor_sense_encoder_angle_adjust_t](#)

Enumerator

MOTOR_SENSE_ENCODER_ANGLE_ADJUST_90_DEGREE	Roter Angle Adjustment to pull in 90degree.
MOTOR_SENSE_ENCODER_ANGLE_ADJUST_0_DEGREE	Roter Angle Adjustment to pull in 0degree.
MOTOR_SENSE_ENCODER_ANGLE_ADJUST_FINISH	Roter Angle Adjustment Finish.

4.3.61 Motor Interface[Interfaces](#)**Detailed Description**

Interface for Motor functions.

Summary

The Motor interface provides Motor functionality.

Implemented by:

- [Motor Sensorless Vector Control \(rm_motor_sensorless\)](#)
- [Motor encoder vector control \(rm_motor_encoder\)](#)
- [Motor 120 Degree \(rm_motor_120_degree\)](#)

Data Structuresstruct [motor_callback_args_t](#)

```
struct motor_cfg_t
```

```
struct motor_api_t
```

```
struct motor_instance_t
```

Typedefs

```
typedef void motor_ctrl_t
```

Enumerations

```
enum motor_error_t
```

```
enum motor_callback_event_t
```

```
enum motor_wait_stop_flag_t
```

Data Structure Documentation

◆ motor_callback_args_t

struct motor_callback_args_t		
callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data.
motor_callback_event_t	event	

◆ motor_cfg_t

struct motor_cfg_t		
Configuration parameters.		
Data Fields		
motor_speed_instance_t const *	p_motor_speed_instance	
		Speed Instance.
motor_current_instance_t const *	p_motor_current_instance	
		Current Instance.
void(*	p_callback)(motor_callback_args_t *p_args)	

void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ [p_callback](#)

`void(* motor_cfg_t::p_callback) (motor_callback_args_t *p_args)`

Placeholder for user data. Passed to the user callback in [motor_callback_args_t](#).

◆ [motor_api_t](#)

`struct motor_api_t`

Functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t (*	open)(motor_ctrl_t *const p_ctrl, motor_cfg_t const *const p_cfg)
fsp_err_t (*	close)(motor_ctrl_t *const p_ctrl)
fsp_err_t (*	run)(motor_ctrl_t *const p_ctrl)
fsp_err_t (*	stop)(motor_ctrl_t *const p_ctrl)
fsp_err_t (*	reset)(motor_ctrl_t *const p_ctrl)
fsp_err_t (*	errorSet)(motor_ctrl_t *const p_ctrl, motor_error_t const error)
fsp_err_t (*	speedSet)(motor_ctrl_t *const p_ctrl, float const speed_rpm)
fsp_err_t (*	positionSet)(motor_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position)
fsp_err_t (*	statusGet)(motor_ctrl_t *const p_ctrl, uint8_t *const p_status)
fsp_err_t (*	angleGet)(motor_ctrl_t *const p_ctrl, float *const p_angle_rad)

<code>fsp_err_t(*</code>	<code>speedGet)(motor_ctrl_t *const p_ctrl, float *const p_speed_rpm)</code>
--------------------------	---

<code>fsp_err_t(*</code>	<code>waitStopFlagGet)(motor_ctrl_t *const p_ctrl, motor_wait_stop_flag_t *const p_flag)</code>
--------------------------	--

<code>fsp_err_t(*</code>	<code>errorCheck)(motor_ctrl_t *const p_ctrl, uint16_t *const p_error)</code>
--------------------------	--

Field Documentation

◆ open

<code>fsp_err_t(* motor_api_t::open)</code>	<code>(motor_ctrl_t *const p_ctrl, motor_cfg_t const *const p_cfg)</code>
---	---

Open driver.

Implemented as

- `RM_MOTOR_SENSORLESS_Open()`
- `RM_MOTOR_ENCODER_Open()`
- `RM_MOTOR_120_DEGREE_Open()`

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

<code>fsp_err_t(* motor_api_t::close)</code>	<code>(motor_ctrl_t *const p_ctrl)</code>
--	---

Close driver.

Implemented as

- `RM_MOTOR_SENSORLESS_Close()`
- `RM_MOTOR_ENCODER_Close()`
- `RM_MOTOR_120_DEGREE_Close()`

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **run**

```
fsp_err_t(* motor_api_t::run) (motor_ctrl_t *const p_ctrl)
```

Run the motor. (Start the motor rotation.)

Implemented as

- RM_MOTOR_SENSORLESS_Run()
- RM_MOTOR_ENCODER_Run()
- RM_MOTOR_120_DEGREE_Run()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **stop**

```
fsp_err_t(* motor_api_t::stop) (motor_ctrl_t *const p_ctrl)
```

Stop the motor. (Stop the motor rotation.)

Implemented as

- RM_MOTOR_SENSORLESS_Stop()
- RM_MOTOR_ENCODER_Stop()
- RM_MOTOR_120_DEGREE_Stop()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **reset**

```
fsp_err_t(* motor_api_t::reset) (motor_ctrl_t *const p_ctrl)
```

Reset the motor control. (Recover from the error status.)

Implemented as

- RM_MOTOR_SENSORLESS_Reset()
- RM_MOTOR_ENCODER_Reset()
- RM_MOTOR_120_DEGREE_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **errorSet**

```
fsp_err_t(* motor_api_t::errorSet) (motor_ctrl_t *const p_ctrl, motor_error_t const error)
```

Set Error Information.

Implemented as

- RM_MOTOR_SENSORLESS_ErrorSet()
- RM_MOTOR_ENCODER_ErrorSet()
- RM_MOTOR_120_DEGREE_ErrorSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	error	Happend error code

◆ **speedSet**

```
fsp_err_t(* motor_api_t::speedSet) (motor_ctrl_t *const p_ctrl, float const speed_rpm)
```

Set rotation speed.

Implemented as

- RM_MOTOR_SENSORLESS_SpeedSet()
- RM_MOTOR_ENCODER_SpeedSet()
- RM_MOTOR_120_DEGREE_SpeedSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	speed_rpm	Required rotation speed [rpm]

◆ **positionSet**

```
fsp_err_t(* motor_api_t::positionSet) (motor_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position)
```

Set reference position.

Implemented as

- RM_MOTOR_SENSORLESS_PositionSet()
- RM_MOTOR_ENCODER_PositionSet()
- RM_MOTOR_120_DEGREE_PositionSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_position	Pointer to set required data

◆ **statusGet**

```
fsp_err_t(* motor_api_t::statusGet) (motor_ctrl_t *const p_ctrl, uint8_t *const p_status)
```

Get the motor control status.

Implemented as

- RM_MOTOR_SENSORLESS_StatusGet()
- RM_MOTOR_ENCODER_StatusGet()
- RM_MOTOR_120_DEGREE_StatusGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_status	Pointer to get the motor control status

◆ **angleGet**

```
fsp_err_t(* motor_api_t::angleGet) (motor_ctrl_t *const p_ctrl, float *const p_angle_rad)
```

Get the rotor angle.

Implemented as

- RM_MOTOR_SENSORLESS_AngleGet()
- RM_MOTOR_ENCODER_AngleGet()
- RM_MOTOR_120_DEGREE_AngleGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_angle_rad	Pointer to get the rotor angle [rad]

◆ **speedGet**

```
fsp_err_t(* motor_api_t::speedGet) (motor_ctrl_t *const p_ctrl, float *const p_speed_rpm)
```

Get the rotation speed.

Implemented as

- RM_MOTOR_SENSORLESS_SpeedGet()
- RM_MOTOR_ENCODER_SpeedGet()
- RM_MOTOR_120_DEGREE_SpeedGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_speed_rpm	Pointer to get the rotation speed [rpm]

◆ **waitStopFlagGet**

```
fsp_err_t(* motor_api_t::waitStopFlagGet) (motor_ctrl_t *const p_ctrl, motor_wait_stop_flag_t *const p_flag)
```

Get wait stop flag.

Implemented as

- RM_MOTOR_SENSORLESS_WaitStopFlagGet()
- RM_MOTOR_ENCODER_WaitStopFlagGet()
- RM_MOTOR_120_DEGREE_WaitStopFlagGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_flag	Pointer to wait stop flag

◆ **errorCheck**

```
fsp_err_t(* motor_api_t::errorCheck) (motor_ctrl_t *const p_ctrl, uint16_t *const p_error)
```

Check the error occurrence

Implemented as

- RM_MOTOR_SENSORLESS_ErrorCheck()
- RM_MOTOR_ENCODER_ErrorCheck()
- RM_MOTOR_120_DEGREE_ErrorCheck()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_error	Pointer to get occurred error

◆ **motor_instance_t**

```
struct motor_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

motor_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ **motor_ctrl_t**typedef void [motor_ctrl_t](#)

Motor Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- [motor_instance_ctrl_t](#)

Enumeration Type Documentation◆ **motor_error_t**enum [motor_error_t](#)

Error information

◆ **motor_callback_event_t**enum [motor_callback_event_t](#)

Events that can trigger a callback function

Enumerator

MOTOR_CALLBACK_EVENT_SPEED_FORWARD	Event forward speed control.
MOTOR_CALLBACK_EVENT_SPEED_BACKWARD	Event backward speed control.
MOTOR_CALLBACK_EVENT_CURRENT_FORWARD	Event forward current control.
MOTOR_CALLBACK_EVENT_CURRENT_BACKWARD	Event backward current control.
MOTOR_CALLBACK_EVENT_ADC_FORWARD	Event before motor 120 driver process.
MOTOR_CALLBACK_EVENT_ADC_BACKWARD	Event after motor 120 driver process.
MOTOR_CALLBACK_EVENT_CYCLE_FORWARD	Before cyclic process of speed control.
MOTOR_CALLBACK_EVENT_CYCLE_BACKWARD	After cyclic process of speed control.

◆ **motor_wait_stop_flag_t**

enum <code>motor_wait_stop_flag_t</code>	
Flag for waiting for motor stop	
Enumerator	
<code>MOTOR_WAIT_STOP_FLAG_CLEAR</code>	Wait stop flag clear.
<code>MOTOR_WAIT_STOP_FLAG_SET</code>	Wait stop flag set.

4.3.62 Motor current Interface[Interfaces](#)**Detailed Description**

Interface for motor current functions.

Summary

The Motor current interface for getting the PWM modulation duty from electric current and speed

The motor current control interface can be implemented by:

- [Motor Current \(rm_motor_current\)](#)

Data Structures

struct [motor_current_output_t](#)

struct [motor_current_input_current_t](#)

struct [motor_current_input_voltage_t](#)

struct [motor_current_get_voltage_t](#)

struct [motor_current_cfg_t](#)

struct [motor_current_api_t](#)

struct [motor_current_instance_t](#)

Typedefs

typedef void [motor_current_ctrl_t](#)

Enumerations

enum [motor_current_event_t](#)

Data Structure Documentation

◆ motor_current_output_t

struct motor_current_output_t		
Structure of interface to speed control Output parameters		
Data Fields		
float	f_id	D-axis current [A].
float	f_iq	Q-axis current [A].
float	f_vamax	
float	f_speed_rad	Speed value [rad/s].
float	f_speed_rpm	Speed value [rpm].
float	f_rotor_angle	Motor rotor angle [rad].
float	f_position_rad	Motor rotor position [rad].
float	f_ed	Estimated d-axis component[V] of flux due to the permanent magnet.
float	f_eq	Estimated q-axis component[V] of flux due to the permanent magnet.
float	f_phase_err_rad	Phase error [rad].
uint8_t	u1_flag_get_iref	Flag to set d/q-axis current reference.
uint8_t	u1_adjust_status	Angle adjustment satatus.
uint8_t	u1_adjust_count_full	Angle adjustment count full.

◆ motor_current_input_current_t

struct motor_current_input_current_t		
Three-phase input current		
Data Fields		
float	iu	U phase current[A].
float	iv	V phase current[A].
float	iw	W phase current[A].

◆ motor_current_input_voltage_t

struct motor_current_input_voltage_t		
--------------------------------------	--	--

Input voltage		
Data Fields		
float	vdc	Main line voltage[V].
float	va_max	Maximum magnitude of voltage vector[V].

◆ motor_current_get_voltage_t

struct motor_current_get_voltage_t		
Struct to get motor current		
Data Fields		
float	u_voltage	U phase voltage[V].
float	v_voltage	V phase voltage[V].
float	w_voltage	W phase voltage[V].
float	vd_reference	d-axis voltage reference
float	vq_reference	q-axis voltage reference

◆ motor_current_cfg_t

struct motor_current_cfg_t		
Configuration parameters.		

◆ motor_current_api_t

struct motor_current_api_t		
Functions implemented at the Motor Current Module will follow these APIs.		
Data Fields		
fsp_err_t(*)	open	(motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t const *const p_cfg)
fsp_err_t(*)	close	(motor_current_ctrl_t *const p_ctrl)
fsp_err_t(*)	reset	(motor_current_ctrl_t *const p_ctrl)
fsp_err_t(*)	run	(motor_current_ctrl_t *const p_ctrl)
fsp_err_t(*)	parameterSet	(motor_current_ctrl_t *const p_ctrl, motor_current_input_t const *const p_st_input)

<code>fsp_err_t(*</code>	<code>currentReferenceSet)(motor_current_ctrl_t *const p_ctrl, float const id_reference, float const iq_reference)</code>
<code>fsp_err_t(*</code>	<code>speedPhaseSet)(motor_current_ctrl_t *const p_ctrl, float const speed_rad, float const phase_rad)</code>
<code>fsp_err_t(*</code>	<code>currentSet)(motor_current_ctrl_t *const p_ctrl, motor_current_input_current_t const *const p_st_current, motor_current_input_voltage_t const *const p_st_voltage)</code>
<code>fsp_err_t(*</code>	<code>parameterGet)(motor_current_ctrl_t *const p_ctrl, motor_current_output_t *const p_st_output)</code>
<code>fsp_err_t(*</code>	<code>currentGet)(motor_current_ctrl_t *const p_ctrl, float *const p_id, float *const p_iq)</code>
<code>fsp_err_t(*</code>	<code>phaseVoltageGet)(motor_current_ctrl_t *const p_ctrl, motor_current_get_voltage_t *const p_voltage)</code>
<code>fsp_err_t(*</code>	<code>parameterUpdate)(motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t const *const p_cfg)</code>

Field Documentation

◆ open

`fsp_err_t(* motor_current_api_t::open) (motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t const *const p_cfg)`

Initialize the motor current module.

Implemented as

- `RM_MOTOR_CURRENT_Open()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control structure.
[in]	<code>p_cfg</code>	Pointer to configuration structure.

◆ **close**

```
fsp_err_t(* motor_current_api_t::close) (motor_current_ctrl_t *const p_ctrl)
```

Close (Finish) the motor current module.

Implemented as

- RM_MOTOR_CURRENT_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **reset**

```
fsp_err_t(* motor_current_api_t::reset) (motor_current_ctrl_t *const p_ctrl)
```

Reset variables for the motor current module.

Implemented as

- RM_MOTOR_CURRENT_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **run**

```
fsp_err_t(* motor_current_api_t::run) (motor_current_ctrl_t *const p_ctrl)
```

Activate the motor current control.

Implemented as

- RM_MOTOR_CURRENT_Run()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ parameterSet

```
fsp_err_t(* motor_current_api_t::parameterSet) (motor_current_ctrl_t *const p_ctrl,
motor_current_input_t const *const p_st_input)
```

Set (Input) parameters into the motor current module.

Implemented as

- RM_MOTOR_CURRENT_ParameterSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_st_input	Pointer to input data structure(speed control output data)

◆ currentReferenceSet

```
fsp_err_t(* motor_current_api_t::currentReferenceSet) (motor_current_ctrl_t *const p_ctrl, float
const id_reference, float const iq_reference)
```

Set (Input) Current reference into the motor current module.

Implemented as

- RM_MOTOR_CURRENT_CurrentReferenceSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	id_reference	D-axis current reference [A]
[in]	iq_reference	Q-axis current reference [A]

◆ speedPhaseSet

```
fsp_err_t(* motor_current_api_t::speedPhaseSet) (motor_current_ctrl_t *const p_ctrl, float const
speed_rad, float const phase_rad)
```

Set (Input) Speed & Phase data into the motor current module.

Implemented as

- RM_MOTOR_CURRENT_SpeedPhaseSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	speed_rad	Rotational speed [rad/s]
[in]	phase_rad	Rotor phase [rad]

◆ **currentSet**

```
fsp_err_t(* motor_current_api_t::currentSet) (motor_current_ctrl_t *const p_ctrl,
motor_current_input_current_t const *const p_st_current, motor_current_input_voltage_t const
*const p_st_voltage)
```

Set (Input) Current data into the motor current module.

Implemented as

- RM_MOTOR_CURRENT_CurrentSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_st_current	Pointer to input current structure
[in]	p_st_voltage	Pointer to input voltage structure

◆ **parameterGet**

```
fsp_err_t(* motor_current_api_t::parameterGet) (motor_current_ctrl_t *const p_ctrl,
motor_current_output_t *const p_st_output)
```

Get (output) parameters from the motor current module

Implemented as

- RM_MOTOR_CURRENT_ParameterGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_st_output	Pointer to output data structure(speed control input data)

◆ **currentGet**

```
fsp_err_t(* motor_current_api_t::currentGet) (motor_current_ctrl_t *const p_ctrl, float *const p_id, float *const p_iq)
```

Get d/q-axis current

Implemented as

- [RM_MOTOR_CURRENT_CurrentGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_id	Pointer to get d-axis current [A]
[out]	p_iq	Pointer to get q-axis current [A]

◆ **phaseVoltageGet**

```
fsp_err_t(* motor_current_api_t::phaseVoltageGet) (motor_current_ctrl_t *const p_ctrl, motor_current_get_voltage_t *const p_voltage)
```

Get phase output voltage

Implemented as

- [RM_MOTOR_CURRENT_PhaseVoltageGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_voltage	Pointer to get voltages

◆ **parameterUpdate**

```
fsp_err_t(* motor_current_api_t::parameterUpdate) (motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t const *const p_cfg)
```

Update parameters for the calculation in the motor current control.

Implemented as

- [RM_MOTOR_CURRENT_ParameterUpdate\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ **motor_current_instance_t**

struct motor_current_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
motor_current_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_current_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_current_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ motor_current_ctrl_t

typedef void motor_current_ctrl_t
Control block. Allocate an instance specific control block to pass into the API calls.
Implemented as
◦ motor_current_ctrl_t

Enumeration Type Documentation

◆ motor_current_event_t

enum motor_current_event_t	
Events that can trigger a callback function	
Enumerator	
MOTOR_CURRENT_EVENT_FORWARD	Event forward current control.
MOTOR_CURRENT_EVENT_DATA_SET	Event set speed control output data.
MOTOR_CURRENT_EVENT_BACKWARD	Event backward current control.

4.3.63 Motor driver Interface

Interfaces

Detailed Description

Interface for motor driver functions.

Summary

The Motor driver interface for setting the PWM modulation duty

The motor current control interface can be implemented by:

- [Motor Driver \(rm_motor_driver\)](#)

Data Structures

```
struct motor_driver_callback_args_t
```

```
struct motor_driver_current_get_t
```

```
struct motor_driver_cfg_t
```

```
struct motor_driver_api_t
```

```
struct motor_driver_instance_t
```

Typedefs

```
typedef void motor_driver_ctrl_t
```

Enumerations

```
enum motor_driver_event_t
```

```
enum motor_driver_shunt_type_t
```

Data Structure Documentation

◆ motor_driver_callback_args_t

struct motor_driver_callback_args_t		
Callback function parameter data		
Data Fields		
motor_driver_event_t	event	Event trigger.
void const *	p_context	Placeholder for user data.

◆ motor_driver_current_get_t

struct motor_driver_current_get_t		
Current Data Get Structure		
Data Fields		
float	iu	U phase current [A].
float	iv	V phase current [A].

float	iw	W phase current [A].
float	vdc	Main Line Voltage [V].
float	va_max	maximum magnitude of voltage vector

◆ motor_driver_cfg_t

struct motor_driver_cfg_t		
Configuration parameters.		
Data Fields		
adc_channel_t	iu_ad_ch	
		A/D Channel for U Phase Current.
adc_channel_t	iv_ad_ch	
		A/D Channel for V Phase Current.
adc_channel_t	iw_ad_ch	
		A/D Channel for W Phase Current.
adc_channel_t	vdc_ad_ch	
		A/D Channel for Main Line Voltage.
motor_driver_shunt_type_t	shunt	
		Selection of shunt type.
void const *	p_context	
		Placeholder for user data.

◆ motor_driver_api_t

struct motor_driver_api_t		
Functions implemented at the HAL layer will follow these APIs.		
Data Fields		

fsp_err_t(*)	open)(motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg)
fsp_err_t(*)	close)(motor_driver_ctrl_t *const p_ctrl)
fsp_err_t(*)	reset)(motor_driver_ctrl_t *const p_ctrl)
fsp_err_t(*)	phaseVoltageSet)(motor_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage)
fsp_err_t(*)	currentGet)(motor_driver_ctrl_t *const p_ctrl, motor_driver_current_get_t *const p_current_get)
fsp_err_t(*)	flagCurrentOffsetGet)(motor_driver_ctrl_t *const p_ctrl, uint8_t *const p_flag_offset)
fsp_err_t(*)	currentOffsetRestart)(motor_driver_ctrl_t *const p_ctrl)
fsp_err_t(*)	parameterUpdate)(motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg)

Field Documentation

◆ open

fsp_err_t(*) motor_driver_api_t::open) (motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg)

Initialize the Motor Driver Module.

Implemented as

- RM_MOTOR_DRIVER_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ **close**

```
fsp_err_t(* motor_driver_api_t::close) (motor_driver_ctrl_t *const p_ctrl)
```

Close the Motor Driver Module

Implemented as

- [RM_MOTOR_DRIVER_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **reset**

```
fsp_err_t(* motor_driver_api_t::reset) (motor_driver_ctrl_t *const p_ctrl)
```

Reset variables of the Motor Driver Module

Implemented as

- [RM_MOTOR_DRIVER_Reset\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **phaseVoltageSet**

```
fsp_err_t(* motor_driver_api_t::phaseVoltageSet) (motor_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage)
```

Set (Input) Phase Voltage data into the Motor Driver Module

Implemented as

- [RM_MOTOR_DRIVER_PhaseVoltageSet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	u_voltage	U phase voltage [V]
[in]	v_voltage	V phase voltage [V]
[in]	w_voltage	W phase voltage [V]

◆ currentGet

```
fsp_err_t(* motor_driver_api_t::currentGet) (motor_driver_ctrl_t *const p_ctrl,
motor_driver_current_get_t *const p_current_get)
```

Get Phase current, Vdc and Va_max data from the Motor Driver Module

Implemented as

- [RM_MOTOR_DRIVER_CurrentGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_current_get	Pointer to get data structure.

◆ flagCurrentOffsetGet

```
fsp_err_t(* motor_driver_api_t::flagCurrentOffsetGet) (motor_driver_ctrl_t *const p_ctrl, uint8_t
*const p_flag_offset)
```

Get the flag of finish current offset detection from the Motor Driver Module

Implemented as

- [RM_MOTOR_DRIVER_FlagCurrentOffsetGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_flag_offset	Flag of finish current offset detection

◆ currentOffsetRestart

```
fsp_err_t(* motor_driver_api_t::currentOffsetRestart) (motor_driver_ctrl_t *const p_ctrl)
```

Restart current offset detection

Implemented as

- [RM_MOTOR_DRIVER_CurrentOffsetRestart\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **parameterUpdate**

```
fsp_err_t(* motor_driver_api_t::parameterUpdate) (motor_driver_ctrl_t *const p_ctrl,
motor_driver_cfg_t const *const p_cfg)
```

Update Configuration Parameters for the calculation in the Motor Driver Module

Implemented as

- RM_MOTOR_DRIVER_ParameterUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ **motor_driver_instance_t**

```
struct motor_driver_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

motor_driver_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_driver_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_driver_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation◆ **motor_driver_ctrl_t**

```
typedef void motor_driver_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- motor_driver_ctrl_t

Enumeration Type Documentation

◆ **motor_driver_event_t**

enum motor_driver_event_t	
Events that can trigger a callback function	
Enumerator	
MOTOR_DRIVER_EVENT_FORWARD	Event before Motor Driver Process (before Current Control timing)
MOTOR_DRIVER_EVENT_CURRENT	Event Current Control timing.
MOTOR_DRIVER_EVENT_BACKWARD	Event after Motor Driver Process (after PWM duty setting)

◆ **motor_driver_shunt_type_t**

enum motor_driver_shunt_type_t	
Selection of shunt type	
Enumerator	
MOTOR_DRIVER_SHUNT_TYPE_1_SHUNT	Only use U phase current.
MOTOR_DRIVER_SHUNT_TYPE_2_SHUNT	Use U and W phase current.
MOTOR_DRIVER_SHUNT_TYPE_3_SHUNT	Use all phase current.

4.3.64 Motor position Interface

Interfaces

Detailed Description

Interface for motor position functions.

Summary

The Motor position interface for getting the speed references from Encoder Sensor

The motor position interface can be implemented by:

- [Motor Position \(rm_motor_position\)](#)

Data Structures

struct [motor_position_cfg_t](#)

struct [motor_position_api_t](#)

struct [motor_position_instance_t](#)

Typedefs

typedef void [motor_position_ctrl_t](#)

Enumerations

enum [motor_position_ctrl_mode_t](#)

Data Structure Documentation

◆ [motor_position_cfg_t](#)

struct motor_position_cfg_t		
Configuration parameters.		
Data Fields		
void const *	p_context	Placeholder for user data.
void const *	p_extend	

◆ [motor_position_api_t](#)

struct motor_position_api_t		
Functions implemented at the HAL layer will follow these APIs.		
Data Fields		
fsp_err_t (*	open)(motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg)	
fsp_err_t (*	close)(motor_position_ctrl_t *const p_ctrl)	
fsp_err_t (*	reset)(motor_position_ctrl_t *const p_ctrl)

<code>fsp_err_t(*</code>	<code>speedReferenceIpdcControlGet)(motor_position_ctrl_t *const p_ctrl, float const max_speed_rad, float *const p_speed_ref)</code>
<code>fsp_err_t(*</code>	<code>speedReferenceFeedforwardGet)(motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)</code>
<code>fsp_err_t(*</code>	<code>parameterUpdate)(motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg)</code>

Field Documentation

◆ open

`fsp_err_t(* motor_position_api_t::open) (motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg)`

Initialize the Motor Position Module.

Implemented as

- `RM_MOTOR_POSITION_Open()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control structure.
[in]	<code>p_cfg</code>	Pointer to configuration structure.

◆ **close**

```
fsp_err_t(* motor_position_api_t::close) (motor_position_ctrl_t *const p_ctrl)
```

Close (Finish) the Motor Position Module.

Implemented as

- [RM_MOTOR_POSITION_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **reset**

```
fsp_err_t(* motor_position_api_t::reset) (motor_position_ctrl_t *const p_ctrl)
```

Reset(Stop) the Motor Position Module.

Implemented as

- [RM_MOTOR_POSITION_Reset\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **positionGet**

```
fsp_err_t(* motor_position_api_t::positionGet) (motor_position_ctrl_t *const p_ctrl, int16_t *const p_position)
```

Get Position data.

Implemented as

- [RM_MOTOR_POSITION_PositionGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_position	Pointer to get position data

◆ **positionSet**

```
fsp_err_t(* motor_position_api_t::positionSet) (motor_position_ctrl_t *const p_ctrl, float const position_rad)
```

Set Position data from Encoder.

Implemented as

- RM_MOTOR_POSITION_PositionSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	position_rad	Position data [radian]

◆ **positionReferenceSet**

```
fsp_err_t(* motor_position_api_t::positionReferenceSet) (motor_position_ctrl_t *const p_ctrl, int16_t const position_reference_deg)
```

Set (Input) Position reference into the Motor Position Module.

Implemented as

- RM_MOTOR_POSITION_PositionReferenceSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	position_refernce_deg	Position reference [degree]

◆ **controlModeSet**

```
fsp_err_t(* motor_position_api_t::controlModeSet) (motor_position_ctrl_t *const p_ctrl, motor_position_ctrl_mode_t const mode)
```

Set (Input) Position Control Mode.

Implemented as

- RM_MOTOR_POSITION_ControlModeSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	mode	Position Control Mode

◆ **positionControl**

```
fsp_err_t(* motor_position_api_t::positionControl) (motor_position_ctrl_t *const p_ctrl)
```

Calculate internal position reference

Implemented as

- [RM_MOTOR_POSITION_PositionControl\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **ipdSpeedPControl**

```
fsp_err_t(* motor_position_api_t::ipdSpeedPControl) (motor_position_ctrl_t *const p_ctrl, float const ref_speed_rad, float const speed_rad, float *const p_iq_ref)
```

Calculate iq reference

Implemented as

- [RM_MOTOR_POSITION_IpdSpeedPControl\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	ref_speed_rad	Speed Reference [rad/sec]
[in]	speed_rad	Current Speed [rad/sec]
[out]	p_iq_ref	Pointer to get iq reference

◆ **speedReferencePControlGet**

```
fsp_err_t(* motor_position_api_t::speedReferencePControlGet) (motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)
```

Get Speed Reference by P Control

Implemented as

- [RM_MOTOR_POSITION_SpeedReferencePControlGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_speed_ref	Pointer to get speed reference

◆ speedReferenceIpdControlGet

`fsp_err_t(* motor_position_api_t::speedReferenceIpdControlGet) (motor_position_ctrl_t *const p_ctrl, float const max_speed_rad, float *const p_speed_ref)`

Get Speed Reference by IPD Control

Implemented as

- [RM_MOTOR_POSITION_SpeedReferenceIpdControlGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_speed_ref	Pointer to get speed reference

◆ speedReferenceFeedforwardGet

`fsp_err_t(* motor_position_api_t::speedReferenceFeedforwardGet) (motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)`

Get Speed Reference by Speed Feedforward

Implemented as

- [RM_MOTOR_POSITION_SpeedReferenceFeedforwardGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_speed_ref	Pointer to get speed reference

◆ parameterUpdate

`fsp_err_t(* motor_position_api_t::parameterUpdate) (motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg)`

Update Parameters for the calculation in the Motor Position Module.

Implemented as

- [RM_MOTOR_POSITION_ParameterUpdate\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ motor_position_instance_t

`struct motor_position_instance_t`

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

motor_position_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_position_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_position_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ [motor_position_ctrl_t](#)

```
typedef void motor\_position\_ctrl\_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- [motor_position_ctrl_t](#)

Enumeration Type Documentation

◆ [motor_position_ctrl_mode_t](#)

```
enum motor\_position\_ctrl\_mode\_t
```

Position Control Mode

4.3.65 Motor speed Interface

Interfaces

Detailed Description

Interface for motor speed functions.

Summary

The Motor speed interface for getting the current references from electric current and rotational speed

The motor speed interface can be implemented by:

- [Motor Speed \(rm_motor_speed\)](#)

Data Structures

struct [motor_speed_callback_args_t](#)

struct [motor_speed_position_data_t](#)

struct [motor_speed_cfg_t](#)

struct [motor_speed_api_t](#)

struct [motor_speed_instance_t](#)

Typedefs

typedef void [motor_speed_ctrl_t](#)

Enumerations

enum [motor_speed_event_t](#)

enum [motor_speed_loop_mode_t](#)

enum [motor_speed_step_t](#)

Data Structure Documentation

◆ [motor_speed_callback_args_t](#)

struct motor_speed_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data.
motor_speed_event_t	event	

◆ [motor_speed_position_data_t](#)

struct motor_speed_position_data_t		
Motor speed and position structure		
Data Fields		
motor_speed_step_t	e_step_mode	Select step mode.
motor_speed_loop_mode_t	e_loop_mode	Select control mode.
int16_t	position_reference_degree	Position reference [degree].

◆ [motor_speed_cfg_t](#)

struct motor_speed_cfg_t		
Configuration parameters.		

Data Fields	
motor_speed_input_t *	st_input
	Input data structure for automatic set.
motor_speed_output_t *	st_output
	Output data structure for automatic receive.
motor_position_instance_t const *	p_position_instance
	Position module instance.
void const *	p_context
	Placeholder for user data.

◆ motor_speed_api_t

struct motor_speed_api_t	
Functions implemented at the HAL layer will follow these APIs.	
Data Fields	
fsp_err_t(*	open)(motor_speed_ctrl_t *const p_ctrl, motor_speed_cfg_t const *const p_cfg)
fsp_err_t(*	close)(motor_speed_ctrl_t *const p_ctrl)
fsp_err_t(*	reset)(motor_speed_ctrl_t *const p_ctrl)
fsp_err_t(*	run)(motor_speed_ctrl_t *const p_ctrl)
fsp_err_t(*	speedReferenceSet)(motor_speed_ctrl_t *const p_ctrl, float const speed_reference_rpm)
fsp_err_t(*	positionReferenceSet)(motor_speed_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position_data)

<code>fsp_err_t(*</code>	<code>parameterSet)(motor_speed_ctrl_t *const p_ctrl, motor_speed_input_t const *const p_st_input)</code>
<code>fsp_err_t(*</code>	<code>speedControl)(motor_speed_ctrl_t *const p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>parameterGet)(motor_speed_ctrl_t *const p_ctrl, motor_speed_output_t *const p_st_output)</code>
<code>fsp_err_t(*</code>	<code>parameterUpdate)(motor_speed_ctrl_t *const p_ctrl, motor_speed_cfg_t const *const p_cfg)</code>

Field Documentation

◆ open

`fsp_err_t(* motor_speed_api_t::open) (motor_speed_ctrl_t *const p_ctrl, motor_speed_cfg_t const *const p_cfg)`

Initialize the motor speed module.

Implemented as

- `RM_MOTOR_SPEED_Open()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control structure.
[in]	<code>p_cfg</code>	Pointer to configuration structure.

◆ close

`fsp_err_t(* motor_speed_api_t::close) (motor_speed_ctrl_t *const p_ctrl)`

Close (Finish) the motor speed module.

Implemented as

- `RM_MOTOR_SPEED_Close()`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control structure.
------	---------------------	-------------------------------

◆ **reset**

```
fsp_err_t(* motor_speed_api_t::reset) (motor_speed_ctrl_t *const p_ctrl)
```

Reset(Stop) the motor speed module.

Implemented as

- RM_MOTOR_SPEED_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **run**

```
fsp_err_t(* motor_speed_api_t::run) (motor_speed_ctrl_t *const p_ctrl)
```

Activate the motor speed control.

Implemented as

- RM_MOTOR_SPEED_Run()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **speedReferenceSet**

```
fsp_err_t(* motor_speed_api_t::speedReferenceSet) (motor_speed_ctrl_t *const p_ctrl, float const speed_reference_rpm)
```

Set (Input) speed reference into the motor speed module.

Implemented as

- RM_MOTOR_SPEED_SpeedReferenceSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	speed_refernce_rpm	Speed reference [rpm]

◆ positionReferenceSet

```
fsp_err_t(* motor_speed_api_t::positionReferenceSet) (motor_speed_ctrl_t *const p_ctrl,
motor_speed_position_data_t const *const p_position_data)
```

Set (Input) position reference and control mode

Implemented as

- RM_MOTOR_SPEED_PositionReferenceSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_position_data	Pointer to structure position data

◆ parameterSet

```
fsp_err_t(* motor_speed_api_t::parameterSet) (motor_speed_ctrl_t *const p_ctrl,
motor_speed_input_t const *const p_st_input)
```

Set (Input) speed parameters into the motor speed module.

Implemented as

- RM_MOTOR_SPEED_ParameterSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_st_input	Pointer to structure to input parameters.

◆ speedControl

```
fsp_err_t(* motor_speed_api_t::speedControl) (motor_speed_ctrl_t *const p_ctrl)
```

Calculate current reference

Implemented as

- RM_MOTOR_SPEED_SpeedControl()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **parameterGet**

```
fsp_err_t(* motor_speed_api_t::parameterGet) (motor_speed_ctrl_t *const p_ctrl,
motor_speed_output_t *const p_st_output)
```

Get speed control output parameters

Implemented as

- [RM_MOTOR_SPEED_ParameterGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_st_output	Pointer to get speed control parameters

◆ **parameterUpdate**

```
fsp_err_t(* motor_speed_api_t::parameterUpdate) (motor_speed_ctrl_t *const p_ctrl,
motor_speed_cfg_t const *const p_cfg)
```

Update Parameters for the calculation in the motor speed module.

Implemented as

- [RM_MOTOR_SPEED_ParameterUpdate\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ **motor_speed_instance_t**

```
struct motor_speed_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

motor_speed_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_speed_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_speed_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ **motor_speed_ctrl_t**typedef void [motor_speed_ctrl_t](#)

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- [motor_speed_ctrl_t](#)

Enumeration Type Documentation◆ **motor_speed_event_t**enum [motor_speed_event_t](#)

Events that can trigger a callback function

Enumerator

MOTOR_SPEED_EVENT_FORWARD	Event forward speed control.
MOTOR_SPEED_EVENT_BACKWARD	Event backward speed control.
MOTOR_SPEED_EVENT_ENCODER_CYCLIC	Event encoder cyclic.
MOTOR_SPEED_EVENT_ENCODER_ADJUST	Event encoder adjust.

◆ **motor_speed_loop_mode_t**enum [motor_speed_loop_mode_t](#)

Enumerator

MOTOR_SPEED_LOOP_MODE_SPEED	Speed control mode.
MOTOR_SPEED_LOOP_MODE_POSITION	Position control mode.

◆ **motor_speed_step_t**enum [motor_speed_step_t](#)

Enumerator

MOTOR_SPEED_STEP_DISABLE	Position control works without step mode.
MOTOR_SPEED_STEP_ENABLE	Position control works with step mode.

4.3.66 Touch Middleware Interface

Interfaces

Detailed Description

Interface for Touch Middleware functions.

Summary

The TOUCH interface provides TOUCH functionality.

The TOUCH interface can be implemented by:

- [Capacitive Touch Middleware \(rm_touch\)](#)

Data Structures

struct [touch_button_cfg_t](#)

struct [touch_slider_cfg_t](#)

struct [touch_wheel_cfg_t](#)

struct [touch_pad_cfg_t](#)

struct [touch_cfg_t](#)

struct [touch_sensitivity_info_t](#)

struct [touch_api_t](#)

struct [touch_instance_t](#)

Macros

```
#define TOUCH_COUNT_MAX  
Value of Maximum count.
```

```
#define TOUCH_OFF_VALUE  
Value of Non-touch.
```

Typedefs

```
typedef void touch\_ctrl\_t
```

```
typedef struct touch_callback_args_t
st_ctsu_callback_args
```

Data Structure Documentation

◆ touch_button_cfg_t

struct touch_button_cfg_t		
Configuration of each button		
Data Fields		
uint8_t	elem_index	Element number used by this button.
uint16_t	threshold	Touch/non-touch judgment threshold.
uint16_t	hysteresis	Threshold hysteresis for chattering prevention.

◆ touch_slider_cfg_t

struct touch_slider_cfg_t		
Configuration of each slider		
Data Fields		
uint8_t const *	p_elem_index	Element number array used by this slider.
uint8_t	num_elements	Number of elements used by this slider.
uint16_t	threshold	Position calculation start threshold value.

◆ touch_wheel_cfg_t

struct touch_wheel_cfg_t		
Configuration of each wheel		
Data Fields		
uint8_t const *	p_elem_index	Element number array used by this wheel.
uint8_t	num_elements	Number of elements used by this wheel.
uint16_t	threshold	Position calculation start threshold value.

◆ touch_pad_cfg_t

struct touch_pad_cfg_t		
Configuration of each pads		

Data Fields		
uint8_t const *	p_elem_index_rx	RX of element number arrays used by this pad.
uint8_t const *	p_elem_index_tx	TX of element number arrays used by this pad.
uint8_t	num_elements	Number of elements used by this pad.
uint16_t	threshold	Coordinate calculation threshold value.
uint16_t	rx_pixel	rx coordinate resolution
uint16_t	tx_pixel	tx coordinate resolution
uint8_t	max_touch	Maximum number of touch judgments used by the pad.
uint8_t	num_drift	Number of pad drift.

◆ touch_cfg_t

Data Fields		
struct touch_cfg_t		
User configuration structure, used in open function		
Data Fields		
touch_button_cfg_t const *	p_buttons	Pointer to array of button configuration.
touch_slider_cfg_t const *	p_sliders	Pointer to array of slider configuration.
touch_wheel_cfg_t const *	p_wheels	Pointer to array of wheel configuration.
touch_pad_cfg_t const *	p_pad	Pointer of pad configuration.
uint8_t	num_buttons	Number of buttons.
uint8_t	num_sliders	Number of sliders.
uint8_t	num_wheels	Number of wheels.
uint8_t	on_freq	The cumulative number of determinations of ON.
uint8_t	off_freq	The cumulative number of determinations of OFF.
uint16_t	drift_freq	Base value drift frequency. [0 : no use].
uint16_t	cancel_freq	Maximum continuous ON. [0 : no use].
uint8_t	number	Configuration number for QE monitor.

<code>cts_u_instance_t</code> const *	<code>p_ctsu_instance</code>	Pointer to CTSU instance.
<code>uart_instance_t</code> const *	<code>p_uart_instance</code>	Pointer to UART instance.
void const *	<code>p_context</code>	User defined context passed into callback function.
void const *	<code>p_extend</code>	Pointer to extended configuration by instance of interface.

◆ touch_sensitivity_info_t

struct touch_sensitivity_info_t		
Configuration of each touch sensitivity information		
Data Fields		
<code>uint16_t</code> *	<code>p_touch_sensitivity_ratio</code>	Pointer to sensitivity ratio array.
<code>uint16_t</code>	<code>old_threshold_ratio</code>	Old threshold ratio.
<code>uint16_t</code>	<code>new_threshold_ratio</code>	New threshold ratio.
<code>uint8_t</code>	<code>new_hysteresis_ratio</code>	New hysteresis ratio.

◆ touch_api_t

struct touch_api_t	
Functions implemented at the HAL layer will follow this API.	
Data Fields	
<code>fsp_err_t</code> (*	<code>open</code>)(<code>touch_ctrl_t</code> *const p_ctrl, <code>touch_cfg_t</code> const *const p_cfg)
<code>fsp_err_t</code> (*	<code>scanStart</code>)(<code>touch_ctrl_t</code> *const p_ctrl)
<code>fsp_err_t</code> (*	<code>dataGet</code>)(<code>touch_ctrl_t</code> *const p_ctrl, <code>uint64_t</code> *p_button_status, <code>uint16_t</code> *p_slider_position, <code>uint16_t</code> *p_wheel_position)
<code>fsp_err_t</code> (*	<code>scanStop</code>)(<code>cts_u_ctrl_t</code> *const p_ctrl)
<code>fsp_err_t</code> (*	<code>padDataGet</code>)(<code>touch_ctrl_t</code> *const p_ctrl, <code>uint16_t</code> *p_pad_rx_coordinate, <code>uint16_t</code> *p_pad_tx_coordinate, <code>uint8_t</code> *p_pad_num_touch)
<code>fsp_err_t</code> (*	<code>callbackSet</code>)(<code>touch_ctrl_t</code> *const p_api_ctrl, void(*p_callback)(<code>touch_callback_args_t</code> *), void const *const p_context, <code>touch_callback_args_t</code> *const p_callback_memory)

fsp_err_t(*	close)(touch_ctrl_t *const p_ctrl)
fsp_err_t(*	sensitivityRatioGet)(touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info)
fsp_err_t(*	thresholdAdjust)(touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info)
fsp_err_t(*	driftControl)(touch_ctrl_t *const p_ctrl, uint16_t input_drift_freq)

Field Documentation

◆ open

fsp_err_t(* touch_api_t::open) (touch_ctrl_t *const p_ctrl, touch_cfg_t const *const p_cfg)

Open driver.

Implemented as

- RM_TOUCH_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ scanStart

fsp_err_t(* touch_api_t::scanStart) (touch_ctrl_t *const p_ctrl)

Scan start.

Implemented as

- RM_TOUCH_ScanStart()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **dataGet**

```
fsp_err_t(* touch_api_t::dataGet) (touch_ctrl_t *const p_ctrl, uint64_t *p_button_status, uint16_t *p_slider_position, uint16_t *p_wheel_position)
```

Data get.

Implemented as

- [RM_TOUCH_DataGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_button_status	Pointer to get data bitmap.
[out]	p_slider_position	Pointer to get data array.
[out]	p_wheel_position	Pointer to get data array.

◆ **scanStop**

```
fsp_err_t(* touch_api_t::scanStop) (ctsu_ctrl_t *const p_ctrl)
```

ScanStop.

Implemented as

- [RM_TOUCH_ScanStop\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **padDataGet**

```
fsp_err_t(* touch_api_t::padDataGet) (touch_ctrl_t *const p_ctrl, uint16_t *p_pad_rx_coordinate, uint16_t *p_pad_tx_coordinate, uint8_t *p_pad_num_touch)
```

pad data get.

Implemented as

- [RM_TOUCH_PadDataGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_pad_rx_coordinate	Pointer to get coordinate of receiver side.
[out]	p_pad_tx_coordinate	Pointer to get coordinate of transmitter side.
[out]	p_pad_num_touch	Pointer to get touch count.

◆ **callbackSet**

```
fsp_err_t(* touch_api_t::callbackSet) (touch_ctrl_t *const p_api_ctrl,
void(*p_callback)(touch_callback_args_t *), void const *const p_context, touch_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- RM_TOUCH_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the CTSU control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* touch_api_t::close) (touch_ctrl_t *const p_ctrl)
```

Close driver.

Implemented as

- RM_TOUCH_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ **sensitivityRatioGet**

```
fsp_err_t(* touch_api_t::sensitivityRatioGet) (touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info)
```

Sensitivity ratio get.

Implemented as

- [RM_TOUCH_SensitivityRatioGet\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in,out]	p_touch_sensitivity_info	Pointer to touch sensitivity structure.

◆ **thresholdAdjust**

```
fsp_err_t(* touch_api_t::thresholdAdjust) (touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info)
```

Threshold adjust.

Implemented as

- [RM_TOUCH_ThresholdAdjust\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_touch_sensitivity_info	Pointer to touch sensitivity structure.

◆ **driftControl**

```
fsp_err_t(* touch_api_t::driftControl) (touch_ctrl_t *const p_ctrl, uint16_t input_drift_freq)
```

Drift control.

Implemented as

- [RM_TOUCH_DriftControl\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	input_drift_freq	Drift frequency value.

◆ **touch_instance_t**

```
struct touch_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

<code>touch_ctrl_t *</code>	<code>p_ctrl</code>	Pointer to the control structure for this instance.
<code>touch_cfg_t const *</code>	<code>p_cfg</code>	Pointer to the configuration structure for this instance.
<code>touch_api_t const *</code>	<code>p_api</code>	Pointer to the API structure for this instance.

Typedef Documentation

◆ `touch_ctrl_t`

```
typedef void touch_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- `touch_instance_ctrl_t`

◆ `touch_callback_args_t`

```
typedef struct st_ctsu_callback_args touch_callback_args_t
```

Callback function parameter data

4.3.67 Virtual EEPROM Interface

Interfaces

Detailed Description

Interface for Virtual EEPROM access.

Summary

The Virtual EEPROM Port configures a fail-safe key value store designed for microcontrollers on top of a lower level storage device.

Implemented by: [Virtual EEPROM \(rm_vee_flash\)](#)

Data Structures

```
struct rm_vee_callback_args_t
```

```
struct rm_vee_cfg_t
```

```
struct rm\_vee\_api\_t
```

```
struct rm\_vee\_instance\_t
```

Typedefs

```
typedef void rm\_vee\_ctrl\_t
```

Enumerations

```
enum rm\_vee\_state\_t
```

Data Structure Documentation

◆ [rm_vee_callback_args_t](#)

struct rm_vee_callback_args_t		
User configuration structure, used in open function		
Data Fields		
rm_vee_state_t	state	State of the Virtual EEPROM.
void const *	p_context	Placeholder for user data. Set in rm_vee_api_t::open function in:: rm_vee_cfg_t .

◆ [rm_vee_cfg_t](#)

struct rm_vee_cfg_t		
User configuration structure, used in open function		
Data Fields		
uint32_t	start_addr	
		Start address to be used for Virtual EEPROM memory.
uint32_t	num_segments	
		Number of segments to divide the volume into.
uint32_t	total_size	
		Total size of the volume.
uint32_t	ref_data_size	
		Size of the reference data stored at the end of the segment.

uint32_t	record_max_id
	Maximum record ID that can be used.
uint16_t *	rec_offset
	Pointer to buffer used for record offset caching.
void(*	p_callback)(rm_vee_callback_args_t *p_args)
	Callback provided when a Virtual EEPROM event occurs.
void const *	p_context
	Placeholder for user data.
void const *	p_extend
	Pointer to hardware dependent configuration.

◆ rm_vee_api_t

struct rm_vee_api_t	
Virtual EEPROM interface API.	
Data Fields	
fsp_err_t(*	open)(rm_vee_ctrl_t *const p_ctrl, rm_vee_cfg_t const *const p_cfg)
fsp_err_t(*	recordWrite)(rm_vee_ctrl_t *const p_ctrl, uint32_t const rec_id, uint8_t const *const p_rec_data, uint32_t num_bytes)
fsp_err_t(*	recordPtrGet)(rm_vee_ctrl_t *const p_ctrl, uint32_t rec_id, uint8_t **const pp_rec_data, uint32_t *const p_num_bytes)
fsp_err_t(*	refDataWrite)(rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data)

<code>fsp_err_t(*</code>	<code>refDataPtrGet)(rm_vee_ctrl_t *const p_ctrl, uint8_t **const pp_ref_data)</code>
<code>fsp_err_t(*</code>	<code>statusGet)(rm_vee_ctrl_t *const p_ctrl, rm_vee_status_t *const p_status)</code>
<code>fsp_err_t(*</code>	<code>refresh)(rm_vee_ctrl_t *const p_ctrl)</code>
<code>fsp_err_t(*</code>	<code>format)(rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data)</code>
<code>fsp_err_t(*</code>	<code>callbackSet)(rm_vee_ctrl_t *const p_api_ctrl, void(*p_callback)(rm_vee_callback_args_t*), void const *const p_context, rm_vee_callback_args_t *const p_callback_memory)</code>
<code>fsp_err_t(*</code>	<code>close)(rm_vee_ctrl_t *const p_ctrl)</code>

Field Documentation

◆ open

`fsp_err_t(* rm_vee_api_t::open) (rm_vee_ctrl_t *const p_ctrl, rm_vee_cfg_t const *const p_cfg)`

Initializes the driver's internal structures and opens the Flash driver.

Implemented as

- `RM_VEE_FLASH_Open`

Parameters

[in]	<code>p_ctrl</code>	Pointer to control block. Must be declared by user. Elements set here.
[in]	<code>p_cfg</code>	Pointer to configuration structure. All elements of this structure must be set by user.

◆ recordWrite

```
fsp_err_t(* rm_vee_api_t::recordWrite) (rm_vee_ctrl_t *const p_ctrl, uint32_t const rec_id, uint8_t const *const p_rec_data, uint32_t num_bytes)
```

Writes a record to data flash.

Implemented as

- [RM_VEE_FLASH_RecordWrite](#)

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	rec_id	ID of record to write.
[in]	p_rec_data	Pointer to record data to write.
[in]	num_bytes	Length of data to write.

◆ recordPtrGet

```
fsp_err_t(* rm_vee_api_t::recordPtrGet) (rm_vee_ctrl_t *const p_ctrl, uint32_t rec_id, uint8_t **const pp_rec_data, uint32_t *const p_num_bytes)
```

This function gets the pointer to the most recent version of a record specified by ID.

Implemented as

- [RM_VEE_FLASH_RecordPtrGet](#)

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	rec_id	ID of record to locate.
[in]	pp_rec_data	Pointer to set to the most recent version of the record.
[in]	p_num_bytes	Variable to load with record length.

◆ refDataWrite

```
fsp_err_t(* rm_vee_api_t::refDataWrite) (rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data)
```

Writes new Reference data to the reference update area.

Implemented as

- [RM_VEE_FLASH_RefDataWrite](#)

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	p_ref_data	Pointer to data to write to the reference data update area.

◆ refDataPtrGet

```
fsp_err_t(* rm_vee_api_t::refDataPtrGet) (rm_vee_ctrl_t *const p_ctrl, uint8_t **const pp_ref_data)
```

Gets a pointer to the most recent reference data.

Implemented as

- [RM_VEE_FLASH_RefDataPtrGet](#)

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	pp_ref_data	Pointer to set to the most recent valid reference data.

◆ statusGet

```
fsp_err_t(* rm_vee_api_t::statusGet) (rm_vee_ctrl_t *const p_ctrl, rm_vee_status_t *const p_status)
```

Get the current status of the VEE driver.

Implemented as

- [RM_VEE_FLASH_StatusGet](#)

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	p_status	Pointer to store the current status of the VEE driver.

◆ refresh

```
fsp_err_t(* rm_vee_api_t::refresh) (rm_vee_ctrl_t *const p_ctrl)
```

Manually start a refresh operation.

Implemented as

- RM_VEE_FLASH_Refresh

Parameters

[in]	p_ctrl	Pointer to control block.
------	--------	---------------------------

◆ format

```
fsp_err_t(* rm_vee_api_t::format) (rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data)
```

Format the Virtual EEPROM.

Implemented as

- RM_VEE_FLASH_Format

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	p_ref_data	Optional pointer to reference data to write during format.

◆ **callbackSet**

```
fsp_err_t(* rm_vee_api_t::callbackSet) (rm_vee_ctrl_t *const p_api_ctrl,
void(*p_callback)(rm_vee_callback_args_t*), void const *const p_context, rm_vee_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- [RM_VEE_FLASH_CallbackSet\(\)](#)

Parameters

[in]	p_ctrl	Control block set in rm_vee_api_t::open call.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ **close**

```
fsp_err_t(* rm_vee_api_t::close) (rm_vee_ctrl_t *const p_ctrl)
```

Closes the module and lower level storage device.

Implemented as

- [RM_VEE_FLASH_Close](#)

Parameters

[in]	p_ctrl	Control block set in rm_vee_api_t::open call.
------	--------	---

◆ **rm_vee_instance_t**

```
struct rm_vee_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_vee_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_vee_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_vee_api_t const *	p_api	Pointer to the API structure for

	this instance.
--	----------------

Typedef Documentation

◆ `rm_vee_ctrl_t`

```
typedef void rm_vee_ctrl_t
```

Virtual EEPROM API control block. Allocate an instance specific control block to pass into the VEE API calls.

Implemented as

- `rm_vee_flash_instance_ctrl_t`

Enumeration Type Documentation

◆ `rm_vee_state_t`

```
enum rm_vee_state_t
```

Enumerator

Enumerator	
<code>RM_VEE_STATE_READY</code>	Ready.
<code>RM_VEE_STATE_BUSY</code>	Operation in progress.
<code>RM_VEE_STATE_REFRESH</code>	Refresh operation in progress.
<code>RM_VEE_STATE_OVERFLOW</code>	The amount of data written exceeds the space available.
<code>RM_VEE_STATE_HARDWARE_FAIL</code>	Lower level hardware failure.

4.3.68 ZMOD4XXX Middleware Interface

Interfaces

Detailed Description

Interface for ZMOD4XXX Middleware functions.

Summary

The ZMOD4XXX interface provides ZMOD4XXX functionality.

The ZMOD4XXX interface can be implemented by:

- ZMOD4XXX Sensor Middleware (rm_zmod4xxx)

Data Structures

struct [rm_zmod4xxx_callback_args_t](#)

struct [rm_zmod4xxx_raw_data_t](#)

struct [rm_zmod4xxx_iaq_1st_data_t](#)

struct [rm_zmod4xxx_iaq_2nd_data_t](#)

struct [rm_zmod4xxx_odor_data_t](#)

struct [rm_zmod4xxx_sulfur_odor_data_t](#)

struct [rm_zmod4xxx_oaq_1st_data_t](#)

struct [rm_zmod4xxx_oaq_2nd_data_t](#)

struct [rm_zmod4xxx_cfg_t](#)

struct [rm_zmod4xxx_api_t](#)

struct [rm_zmod4xxx_instance_t](#)

Typedefs

typedef void [rm_zmod4xxx_ctrl_t](#)

Enumerations

enum [rm_zmod4xxx_event_t](#)

enum [rm_zmod4xxx_sulfur_odor_t](#)

Data Structure Documentation

◆ [rm_zmod4xxx_callback_args_t](#)

struct [rm_zmod4xxx_callback_args_t](#)

ZMOD4XXX sensor API callback parameter definition

◆ [rm_zmod4xxx_raw_data_t](#)

struct [rm_zmod4xxx_raw_data_t](#)

ZMOD4XXX raw data structure

◆ [rm_zmod4xxx_iaq_1st_data_t](#)

struct rm_zmod4xxx_iaq_1st_data_t		
ZMOD4XXX IAQ 1st gen data structure		
Data Fields		
float	rmox	MOx resistance.
float	rcda	CDA resistance.
float	iaq	IAQ index.
float	tvoc	TVOC concentration (mg/m ³).
float	etoh	EtOH concentration (ppm).
float	eco2	eCO2 concentration (ppm).

◆ **rm_zmod4xxx_iaq_2nd_data_t**

struct rm_zmod4xxx_iaq_2nd_data_t		
ZMOD4XXX IAQ 2nd gen data structure		
Data Fields		
float	rmox[13]	MOx resistance.
float	log_rcda	log10 of CDA resistance.
float	iaq	IAQ index.
float	tvoc	TVOC concentration (mg/m ³).
float	etoh	EtOH concentration (ppm).
float	eco2	eCO2 concentration (ppm).

◆ **rm_zmod4xxx_odor_data_t**

struct rm_zmod4xxx_odor_data_t		
ZMOD4XXX Odor structure		
Data Fields		
bool	control_signal	Control signal input for odor lib.
float	odor	Concentration ratio for odor lib.

◆ **rm_zmod4xxx_sulfur_odor_data_t**

struct rm_zmod4xxx_sulfur_odor_data_t		
ZMOD4XXX Sulfur-Odor structure		
Data Fields		
float	rmox[9]	MOx resistance.
float	intensity	odor intensity rating ranges from 0.0 to 5.0 for sulfur lib
rm_zmod4xxx_sulfur_odor_t	odor	sulfur_odor classification for lib

◆ **rm_zmod4xxx_oaq_1st_data_t**

struct rm_zmod4xxx_oaq_1st_data_t		
ZMOD4XXX OAQ 1st gen data structure		
Data Fields		
float	rmox[15]	MOx resistance.
float	aiq	Air Quality.

◆ **rm_zmod4xxx_oaq_2nd_data_t**

struct rm_zmod4xxx_oaq_2nd_data_t		
ZMOD4XXX OAQ 2nd gen data structure		
Data Fields		
float	rmox[8]	MOx resistance.
float	ozone_concentration	The ozone concentration in part-per-billion.
uint16_t	fast_aqi	1-minute average of the Air Quality Index according to the EPA standard based on ozone
uint16_t	epa_aqi	The Air Quality Index according to the EPA standard based on ozone.

◆ **rm_zmod4xxx_cfg_t**

struct rm_zmod4xxx_cfg_t	
ZMOD4XXX configuration block	
Data Fields	
rm_comms_instance_t const *	p_comms_instance
	Pointer to Communications Middleware instance.
void const *	p_irq_instance
	Pointer to IRQ instance.
void const *	p_zmod4xxx_device
	[DEPRECATED] This will be removed in FSP v4.0.0. Please use rm_zmod4xxx_lib_extended_cfg_t in rm_zmod4xxx.h

void const *	p_zmod4xxx_handle
	[DEPRECATED] This will be removed in FSP v4.0.0. Please use <code>rm_zmod4xxx_lib_extended_cfg_t</code> in <code>rm_zmod4xxx.h</code>
void const *	p_zmod4xxx_results
	[DEPRECATED] This will be removed in FSP v4.0.0. Please use <code>rm_zmod4xxx_lib_extended_cfg_t</code> in <code>rm_zmod4xxx.h</code>
void const *	p_context
	Pointer to the user-provided context.
void const *	p_extend
	Pointer to extended configuration by instance of interface.
void(*	p_comms_callback)(rm_zmod4xxx_callback_args_t *p_args)
	I2C Communications callback.
void(*	p_irq_callback)(rm_zmod4xxx_callback_args_t *p_args)
	IRQ callback.

◆ **rm_zmod4xxx_api_t**

struct rm_zmod4xxx_api_t	
ZMOD4XXX APIs	
Data Fields	
fsp_err_t(*	open)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_cfg_t const *const p_cfg)
fsp_err_t(*	measurementStart)(rm_zmod4xxx_ctrl_t *const p_api_ctrl)

fsp_err_t(*)	iaq1stGenDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_1st_data_t *const p_zmod4xxx_data)
fsp_err_t(*)	iaq2ndGenDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_2nd_data_t *const p_zmod4xxx_data)
fsp_err_t(*)	odorDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_odor_data_t *const p_zmod4xxx_data)
fsp_err_t(*)	sulfurOdorDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_sulfur_odor_data_t *const p_zmod4xxx_data)
fsp_err_t(*)	oaq1stGenDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_1st_data_t *const p_zmod4xxx_data)
fsp_err_t(*)	oaq2ndGenDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_2nd_data_t *const p_zmod4xxx_data)
fsp_err_t(*)	temperatureAndHumiditySet)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, float temperature, float humidity)
fsp_err_t(*)	close)(rm_zmod4xxx_ctrl_t *const p_api_ctrl)

Field Documentation

◆ **open**

```
fsp_err_t(* rm_zmod4xxx_api_t::open) (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_cfg_t
const *const p_cfg)
```

Open sensor.

Implemented as

- [RM_ZMOD4XXX_Open\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ **measurementStart**

```
fsp_err_t(* rm_zmod4xxx_api_t::measurementStart) (rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

Start measurement

Implemented as

- [RM_ZMOD4XXX_MeasurementStart\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **measurementStop**

```
fsp_err_t(* rm_zmod4xxx_api_t::measurementStop) (rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

Stop measurement

Implemented as

- [RM_ZMOD4XXX_MeasurementStop\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **statusCheck**

```
fsp_err_t(* rm_zmod4xxx_api_t::statusCheck) (rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

Read status of the sensor

Implemented as

- [RM_ZMOD4XXX_StatusCheck\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ **read**

```
fsp_err_t(* rm_zmod4xxx_api_t::read) (rm_zmod4xxx_ctrl_t *const p_api_ctrl,  
rm_zmod4xxx_raw_data_t *const p_raw_data)
```

Read ADC data.

Implemented as

- [RM_ZMOD4XXX_Read\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data structure.

◆ **iaq1stGenDataCalculate**

```
fsp_err_t(* rm_zmod4xxx_api_t::iaq1stGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl,  
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_1st_data_t *const  
p_zmod4xxx_data)
```

Calculate IAQ 1st Gen. values from ADC data.

Implemented as

- [RM_ZMOD4XXX_Iaq1stGenDataCalculate\(\)](#)

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXXX data structure.

◆ iaq2ndGenDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::iaq2ndGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_2nd_data_t *const
p_zmod4xxx_data)
```

Calculate IAQ 2nd Gen. values from ADC data.

Implemented as

- RM_ZMOD4XXX_Iaq2ndGenDataCalculate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXX data structure.

◆ odorDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::odorDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_odor_data_t *const p_zmod4xxx_data)
```

Calculate Odor values from ADC data.

Implemented as

- RM_ZMOD4XXX_OdorDataCalculate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXX data structure.

◆ sulfurOdorDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::sulfurOdorDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_sulfur_odor_data_t *const
p_zmod4xxx_data)
```

Calculate Sulfur Odor values from ADC data.

Implemented as

- RM_ZMOD4XXX_SulfurOdorDataCalculate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXX data structure.

◆ oaq1stGenDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::oaq1stGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_1st_data_t *const
p_zmod4xxx_data)
```

Calculate OAQ 1st Gen. values from ADC data.

Implemented as

- RM_ZMOD4XXX_Oaq1stGenDataCalculate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXX data structure.

◆ oaq2ndGenDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::oaq2ndGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_2nd_data_t *const
p_zmod4xxx_data)
```

Calculate OAQ 2nd Gen. values from ADC data.

Implemented as

- RM_ZMOD4XXX_Oaq2ndGenDataCalculate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXX data structure.

◆ temperatureAndHumiditySet

```
fsp_err_t(* rm_zmod4xxx_api_t::temperatureAndHumiditySet) (rm_zmod4xxx_ctrl_t *const
p_api_ctrl, float temperature, float humidity)
```

Set temperature and humidity.

Implemented as

- RM_ZMOD4XXX_TemperatureAndHumiditySet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	temperature	Temperature (deg C).
[in]	humidity	Humidity (percent).

◆ close

```
fsp_err_t(* rm_zmod4xxx_api_t::close) (rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

Close the sensor

Implemented as

- RM_ZMOD4XXX_Close()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
------	------------	-------------------------------

◆ rm_zmod4xxx_instance_t

```
struct rm_zmod4xxx_instance_t
```

ZMOD4XXX instance

Data Fields		
<code>rm_zmod4xxx_ctrl_t *</code>	<code>p_ctrl</code>	Pointer to the control structure for this instance
<code>rm_zmod4xxx_cfg_t const *</code>	<code>p_cfg</code>	Pointer to the configuration structure for this instance
<code>rm_zmod4xxx_api_t const *</code>	<code>p_api</code>	Pointer to the API structure for this instance

Typedef Documentation

◆ `rm_zmod4xxx_ctrl_t`

```
typedef void rm_zmod4xxx_ctrl_t
```

ZMOD4xxx Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- `rm_zmod4xxx_instance_ctrl_t`

Enumeration Type Documentation

◆ `rm_zmod4xxx_event_t`

```
enum rm_zmod4xxx_event_t
```

Event in the callback function

◆ `rm_zmod4xxx_sulfur_odor_t`

```
enum rm_zmod4xxx_sulfur_odor_t
```

Sulfur-Odor status

4.3.69 SCE Interface

Interfaces

Detailed Description

Interface for Secure Crypto Engine (SCE) functions.

Summary

The SCE interface provides SCE functionality.

The SCE interface can be implemented by:

- [Secure Crypto Engine \(r_sce_protected\)](#)

Data Structures

Data Structure Documentation

◆ [sce_byte_data_t](#)

struct sce_byte_data_t		
Byte data structure		
Data Fields		
uint8_t *	pdata	pointer
uint32_t	data_length	data_length
uint32_t	data_type	data type

◆ [sce_aes_wrapped_key_t](#)

struct sce_aes_wrapped_key_t		
AES wrapped key data structure. DO NOT MODIFY.		
Data Fields		
uint32_t	type	key type
uint32_t	value[SCE_TLS_AES256_KEY_IN_DEX_WORD_SIZE]	wrapped key value

◆ **sce_hmac_sha_wrapped_key_t**

struct sce_hmac_sha_wrapped_key_t		
HMAC-SHA wrapped key data structure. DO NOT MODIFY.		
Data Fields		
uint32_t	type	key type
uint32_t	value[SCE_TLS_HMAC_KEY_INDEX_WORD_SIZE]	wrapped key value

◆ **sce_rsa1024_public_wrapped_key_t**

struct sce_rsa1024_public_wrapped_key_t		
RSA 1024bit public wrapped key data structure. DO NOT MODIFY.		
Data Fields		
uint32_t	type	key type
struct sce_rsa1024_public_wrapped_key_t	value	

◆ **sce_rsa1024_private_wrapped_key_t**

struct sce_rsa1024_private_wrapped_key_t		
RSA 1024bit private wrapped key data structure. DO NOT MODIFY.		
Data Fields		
uint32_t	type	key type
struct sce_rsa1024_private_wrapped_key_t	value	

◆ **sce_rsa2048_public_wrapped_key_t**

struct sce_rsa2048_public_wrapped_key_t		
RSA 2048bit public wrapped key data structure. DO NOT MODIFY.		
Data Fields		
uint32_t	type	Key type.
struct sce_rsa2048_public_wrapped_key_t	value	

◆ **sce_rsa2048_private_wrapped_key_t**

struct sce_rsa2048_private_wrapped_key_t		
RSA 2048bit private wrapped key data structure. DO NOT MODIFY.		
Data Fields		
uint32_t	type	key type

struct sce_rsa2048_private_wrapped_key_t	value	
---	-------	--

◆ [sce_rsa3072_public_wrapped_key_t](#)

struct sce_rsa3072_public_wrapped_key_t		
RSA 3072bit public wrapped key data structure. DO NOT MODIFY.		
Data Fields		
uint32_t	type	Key type.
struct sce_rsa3072_public_wrapped_key_t	value	

◆ [sce_rsa4096_public_wrapped_key_t](#)

struct sce_rsa4096_public_wrapped_key_t		
RSA 4096bit public wrapped key data structure. DO NOT MODIFY.		
Data Fields		
uint32_t	type	Key type.
struct sce_rsa4096_public_wrapped_key_t	value	

◆ [sce_rsa1024_wrapped_pair_key_t](#)

struct sce_rsa1024_wrapped_pair_key_t		
RSA 1024bit wrapped key pair structure. DO NOT MODIFY.		
Data Fields		
sce_rsa1024_private_wrapped_key_t	priv_key	RSA 1024-bit private wrapped key.
sce_rsa1024_public_wrapped_key_t	pub_key	RSA 1024-bit public wrapped key.

◆ [sce_rsa2048_wrapped_pair_key_t](#)

struct sce_rsa2048_wrapped_pair_key_t		
RSA 2048bit wrapped key pair structure. DO NOT MODIFY.		
Data Fields		
sce_rsa2048_private_wrapped_key_t	priv_key	RSA 2048-bit private wrapped key.
sce_rsa2048_public_wrapped_key_t	pub_key	RSA 2048-bit public wrapped key.

◆ [sce_ecc_public_wrapped_key_t](#)

--	--	--

struct sce_ecc_public_wrapped_key_t		
ECC P-192/224/256 public wrapped key data structure		
Data Fields		
uint32_t	type	key type
struct sce_ecc_public_wrapped_key_t	value	

◆ sce_ecc_private_wrapped_key_t

struct sce_ecc_private_wrapped_key_t		
ECC P-192/224/256 private wrapped key data structure		
Data Fields		
uint32_t	type	key type
uint32_t	value[HW_SCE_ECC_PRIVATE_KEY_MANAGEMENT_INFO_WORD_SIZE]	wrapped key value

◆ sce_ecc_wrapped_pair_key_t

struct sce_ecc_wrapped_pair_key_t		
ECC P-192/224/256 wrapped key pair structure		
Data Fields		
sce_ecc_private_wrapped_key_t	priv_key	ECC private wrapped key.
sce_ecc_public_wrapped_key_t	pub_key	ECC public wrapped key.

◆ sce_ecdh_wrapped_key_t

struct sce_ecdh_wrapped_key_t		
ECDH wrapped key data structure		
Data Fields		
uint32_t	type	key type
uint32_t	value[HW_SCE_SHARED_SECRET_KEY_INDEX_WORD_SIZE]	wrapped key value

◆ sce_key_update_key_t

struct sce_key_update_key_t		
Update key ring index data structure. DO NOT MODIFY.		
Data Fields		
uint32_t	type	key type
uint32_t	value[HW_SCE_UPDATE_KEY_RING_INDEX_WORD_SIZE]	wrapped key value

◆ sce_aes_handle_t

struct sce_aes_handle_t		
The work area for AES. DO NOT MODIFY.		
Data Fields		
uint32_t	id	serial number of this handle
sce_aes_wrapped_key_t	wrapped_key	wrapped key
uint32_t	current_input_data_size	text size under encryption / decryption
uint8_t	last_1_block_as_fraction[HW_SCE_AES_BLOCK_BYTE_SIZE]	text array less than the block long
uint8_t	last_2_block_as_fraction[HW_SCE_AES_BLOCK_BYTE_SIZE *2]	reserved
uint8_t	current_initial_vector[HW_SCE_AES_CBC_IV_BYTE_SIZE]	current initialization vector used in CBC mode
uint8_t	flag_call_init	control flag of calling function

◆ sce_gcm_handle_t

struct sce_gcm_handle_t		
The work area for GCM. DO NOT MODIFY.		
Data Fields		
uint32_t	id	serial number of this handle
sce_aes_wrapped_key_t	wrapped_key	wrapped key
uint8_t	gcm_buffer[HW_SCE_AES_BLOCK_BYTE_SIZE]	text array less than the block long
uint8_t	gcm_aad_buffer[HW_SCE_AES_GCM_AAD_BLOCK_BYTE_SIZE]	AAD array less than the block long.
uint32_t	all_received_length	entire length of text
uint32_t	all_received_aad_length	entire length of text
uint32_t	buffering_length	text array length less than the block long
uint32_t	buffering_aad_length	AAD array length less than the block long.
uint8_t	flag_call_init	control flag of calling function
uint8_t	flag_update_input_data	control flag of next input data

◆ sce_ccm_handle_t

struct sce_ccm_handle_t		
The work area for CCM. DO NOT MODIFY.		
Data Fields		

uint32_t	id	serial number of this handle
sce_aes_wrapped_key_t	wrapped_key	wrapped key
uint8_t	formatted_data[HW_SCE_AES_CCM_B_FORMAT_BYTE_SIZE]	formatted data area
uint8_t	counter[HW_SCE_AES_CCM_COUNTER_BYTE_SIZE]	counter of CTR mode
uint8_t	ccm_buffer[HW_SCE_AES_BLOCK_BYTE_SIZE]	text array less than the block long
uint32_t	all_received_length	entire length of text
uint32_t	buffering_length	text array length less than the block long
uint8_t	flag_call_init	control flag of calling function

◆ sce_cmac_handle_t

struct sce_cmac_handle_t		
The work area for CMAC. DO NOT MODIFY.		
Data Fields		
uint32_t	id	serial number of this handle
sce_aes_wrapped_key_t	wrapped_key	wrapped key
uint8_t	cmac_buffer[HW_SCE_AES_BLOCK_BYTE_SIZE]	message array less than the block long
uint32_t	all_received_length	entire length of message
uint32_t	buffering_length	message array length less than the block long
uint8_t	flag_call_init	control flag of calling function

◆ sce_sha_md5_handle_t

struct sce_sha_md5_handle_t		
The work area for SHA. DO NOT MODIFY.		
Data Fields		
uint32_t	id	serial number of this handle
uint8_t	sha_buffer[HW_SCE_SHA256_HASH_LENGTH_BYTE_SIZE *4]	message array length less than the block long
uint32_t	all_received_length	entire length of message
uint32_t	buffering_length	message array length less than the block long
uint8_t	current_hash[HW_SCE_SHA256_HASH_LENGTH_BYTE_SIZE]	last hash value
uint8_t	flag_call_init	control flag of calling function

◆ **sce_hmac_sha_handle_t**

struct sce_hmac_sha_handle_t		
The work area for HMAC-SHA. DO NOT MODIFY.		
Data Fields		
uint32_t	id	serial number of this handle
sce_hmac_sha_wrapped_key_t	wrapped_key	wrapped key
uint8_t	hmac_buffer[HW_SCE_SHA256_HASH_LENGTH_BYTE_SIZE *4]	message array length less than the block long
uint32_t	all_received_length	entire length of message
uint32_t	buffering_length	message array length less than the block long
uint8_t	flag_call_init	control flag of calling function

◆ **sce_ecdh_handle_t**

struct sce_ecdh_handle_t		
The work area for ECDH		
Data Fields		
uint32_t	id	serial number of this handle
uint32_t	flag_use_key_id	control frag that the key_id has already used or not
uint32_t	key_id	serial number of the wrapped key
uint32_t	key_type	key type
uint8_t	flag_call_init	control flag of calling function
uint8_t	flag_call_make_public	control flag of calling function
uint8_t	flag_call_read_public	control flag of calling function
uint8_t	flag_call_shared_secret	control flag of calling function

◆ **sce_cfg_t**

struct sce_cfg_t		
User configuration structure, used in open function		
Data Fields		
lifecycle_t	lifecycle	Data lifecycle.

◆ **sce_api_t**

struct sce_api_t		
Functions implemented at the HAL layer will follow this API.		

Data Fields	
fsp_err_t(*	open)(sce_ctrl_t *const p_ctrl, sce_cfg_t const *const p_cfg)
fsp_err_t(*	close)(sce_ctrl_t *const p_ctrl)
fsp_err_t(*	softwareReset)(void)
fsp_err_t(*	randomNumberGenerate)(uint32_t *random)
fsp_err_t(*	AES128_WrappedKeyGenerate)(sce_aes_wrapped_key_t *wrapped_key)
fsp_err_t(*	AES256_WrappedKeyGenerate)(sce_aes_wrapped_key_t *wrapped_key)

Field Documentation

◆ open

`fsp_err_t(* sce_api_t::open) (sce_ctrl_t *const p_ctrl, sce_cfg_t const *const p_cfg)`

Enables use of SCE functionality.

Implemented as

- [R_SCE_Open\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

`fsp_err_t(* sce_api_t::close) (sce_ctrl_t *const p_ctrl)`

Stops supply of power to the SCE.

Implemented as

- [R_SCE_Close\(\)](#)

Parameters

[in]	p_ctrl	Pointer to control structure.
------	--------	-------------------------------

◆ softwareReset

`fsp_err_t(* sce_api_t::softwareReset) (void)`

Software reset to SCE.

Implemented as

- [R_SCE_SoftwareReset\(\)](#)

◆ **randomNumberGenerate**

```
fsp_err_t(* sce_api_t::randomNumberGenerate) (uint32_t *random)
```

Generates 4 words random number.

Implemented as

- R_SCE_RandomNumberGenerate()

Parameters

[in,out]	random	Stores 4words (16 bytes) random data.
----------	--------	---------------------------------------

◆ **AES128_WrappedKeyGenerate**

```
fsp_err_t(* sce_api_t::AES128_WrappedKeyGenerate) (sce_aes_wrapped_key_t *wrapped_key)
```

This API outputs 128-bit AES wrapped key.

Implemented as

- R_SCE_AES128_WrappedKeyGenerate()

Parameters

[in,out]	wrapped_key	128-bit AES wrapped key
----------	-------------	-------------------------

◆ **AES256_WrappedKeyGenerate**

```
fsp_err_t(* sce_api_t::AES256_WrappedKeyGenerate) (sce_aes_wrapped_key_t *wrapped_key)
```

This API outputs 256-bit AES wrapped key.

Implemented as

- R_SCE_AES256_WrappedKeyGenerate()

Parameters

[in,out]	wrapped_key	256-bit AES wrapped key
----------	-------------	-------------------------

◆ AES128_EncryptedKeyWrap

```
fsp_err_t(* sce_api_t::AES128_EncryptedKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key,
sce_key_update_key_t *key_update_key, sce_aes_wrapped_key_t *wrapped_key)
```

This API outputs 128-bit AES wrapped key.

Implemented as

- R_SCE_AES128_EncryptedKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	128-bit AES wrapped key

◆ AES256_EncryptedKeyWrap

```
fsp_err_t(* sce_api_t::AES256_EncryptedKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key,
sce_key_update_key_t *key_update_key, sce_aes_wrapped_key_t *wrapped_key)
```

This API outputs 256-bit AES wrapped key.

Implemented as

- R_SCE_AES256_EncryptedKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	256-bit AES wrapped key

◆ AES128ECB_EncryptInit

```
fsp_err_t(* sce_api_t::AES128ECB_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)
```

Initialize AES128ECB encryption.

Implemented as

- R_SCE_AES128ECB_EncryptInit()

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

◆ AES128ECB_EncryptUpdate

```
fsp_err_t(* sce_api_t::AES128ECB_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)
```

Update AES128ECB encryption.

Implemented as

- R_SCE_AES128ECB_EncryptUpdate()

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

◆ AES128ECB_EncryptFinal

```
fsp_err_t(* sce_api_t::AES128ECB_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)
```

Finalize AES128ECB encryption.

Implemented as

- R_SCE_AES128ECB_EncryptFinal()

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

◆ AES128ECB_DecryptInit

`fsp_err_t(* sce_api_t::AES128ECB_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES128ECB decryption.

Implemented as

- `R_SCE_AES128ECB_DecryptInit()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

◆ AES128ECB_DecryptUpdate

`fsp_err_t(* sce_api_t::AES128ECB_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES128ECB decryption.

Implemented as

- `R_SCE_AES128ECB_DecryptUpdate()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

◆ AES128ECB_DecryptFinal

`fsp_err_t(* sce_api_t::AES128ECB_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)`

Finalize AES128ECB decryption.

Implemented as

- `R_SCE_AES128ECB_DecryptFinal()`

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

◆ AES256ECB_EncryptInit

`fsp_err_t(* sce_api_t::AES256ECB_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES256ECB encryption.

Implemented as

- `R_SCE_AES256ECB_EncryptInit()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	256-bit AES wrapped key

◆ AES256ECB_EncryptUpdate

`fsp_err_t(* sce_api_t::AES256ECB_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)`

Update AES256ECB encryption.

Implemented as

- `R_SCE_AES256ECB_EncryptUpdate()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

◆ AES256ECB_EncryptFinal

`fsp_err_t(* sce_api_t::AES256ECB_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)`

Finalize AES256ECB encryption.

Implemented as

- `R_SCE_AES256ECB_EncryptFinal()`

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

◆ AES256ECB_DecryptInit

`fsp_err_t(* sce_api_t::AES256ECB_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES256ECB decryption.

Implemented as

- `R_SCE_AES256ECB_DecryptInit()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	256-bit AES wrapped key

◆ AES256ECB_DecryptUpdate

`fsp_err_t(* sce_api_t::AES256ECB_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES256ECB decryption.

Implemented as

- `R_SCE_AES256ECB_DecryptUpdate()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

◆ AES256ECB_DecryptFinal

`fsp_err_t(* sce_api_t::AES256ECB_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)`

Finalize AES256ECB decryption.

Implemented as

- `R_SCE_AES256ECB_DecryptFinal()`

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

◆ AES128CBC_EncryptInit

`fsp_err_t(* sce_api_t::AES128CBC_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)`

Initialize AES128CBC encryption.

Implemented as

- `R_SCE_AES128CBC_EncryptInit()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initial vector area (16byte)

◆ AES128CBC_EncryptUpdate

`fsp_err_t(* sce_api_t::AES128CBC_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)`

Update AES128CBC encryption.

Implemented as

- `R_SCE_AES128CBC_EncryptUpdate()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

◆ AES128CBC_EncryptFinal

`fsp_err_t(* sce_api_t::AES128CBC_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)`

Finalize AES128CBC encryption.

Implemented as

- `R_SCE_AES128CBC_EncryptFinal()`

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

◆ AES128CBC_DecryptInit

`fsp_err_t(* sce_api_t::AES128CBC_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)`

Initialize AES128CBC decryption.

Implemented as

- `R_SCE_AES128CBC_DecryptInit()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initial vector area (16byte)

◆ AES128CBC_DecryptUpdate

`fsp_err_t(* sce_api_t::AES128CBC_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES128CBC decryption.

Implemented as

- `R_SCE_AES128CBC_DecryptUpdate()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

◆ AES128CBC_DecryptFinal

`fsp_err_t(* sce_api_t::AES128CBC_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)`

Finalize AES128CBC decryption.

Implemented as

- `R_SCE_AES128CBC_DecryptFinal()`

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

◆ AES256CBC_EncryptInit

`fsp_err_t(* sce_api_t::AES256CBC_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)`

Initialize AES256CBC encryption.

Implemented as

- `R_SCE_AES256CBC_EncryptInit()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initial vector area (16byte)

◆ AES256CBC_EncryptUpdate

`fsp_err_t(* sce_api_t::AES256CBC_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)`

Update AES256CBC encryption.

Implemented as

- `R_SCE_AES256CBC_EncryptUpdate()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

◆ AES256CBC_EncryptFinal

`fsp_err_t(* sce_api_t::AES256CBC_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)`

Finalize AES256CBC encryption.

Implemented as

- `R_SCE_AES256CBC_EncryptFinal()`

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

◆ AES256CBC_DecryptInit

`fsp_err_t(* sce_api_t::AES256CBC_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)`

Initialize AES256CBC decryption.

Implemented as

- `R_SCE_AES256CBC_DecryptInit()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initial vector area (16byte)

◆ AES256CBC_DecryptUpdate

`fsp_err_t(* sce_api_t::AES256CBC_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES256CBC decryption.

Implemented as

- `R_SCE_AES256CBC_DecryptUpdate()`

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

◆ AES256CBC_DecryptFinal

`fsp_err_t(* sce_api_t::AES256CBC_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)`

Finalize AES256CBC decryption.

Implemented as

- `R_SCE_AES256CBC_DecryptFinal()`

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

◆ AES128GCM_EncryptInit

`fsp_err_t(* sce_api_t::AES128GCM_EncryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)`

Initialize AES128GCM encryption.

Implemented as

- `R_SCE_AES128GCM_EncryptInit()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 or more bytes)

◆ AES128GCM_EncryptUpdate

`fsp_err_t(* sce_api_t::AES128GCM_EncryptUpdate) (sce_gcm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_data_length, uint8_t *aad, uint32_t aad_length)`

Update AES128GCM encryption.

Implemented as

- `R_SCE_AES128GCM_EncryptUpdate()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_data_length	plaintext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

◆ AES128GCM_EncryptFinal

`fsp_err_t(* sce_api_t::AES128GCM_EncryptFinal) (sce_gcm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_data_length, uint8_t *atag)`

Finalize AES128GCM encryption.

Implemented as

- `R_SCE_AES128GCM_EncryptFinal()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area (cipher_data_length byte)
[in,out]	cipher_data_length	ciphertext data length (0 always written here)
[in,out]	atag	authentication tag area

◆ AES128GCM_DecryptInit

`fsp_err_t(* sce_api_t::AES128GCM_DecryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)`

Initialize AES128GCM decryption.

Implemented as

- `R_SCE_AES128GCM_DecryptInit()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 ore more bytes)

◆ AES128GCM_DecryptUpdate

`fsp_err_t(* sce_api_t::AES128GCM_DecryptUpdate) (sce_gcm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_data_length, uint8_t *aad, uint32_t aad_length)`

Update AES128GCM decryption.

Implemented as

- `R_SCE_AES128GCM_DecryptUpdate()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area
[in]	plain	plaintext data area
[in]	cipher_data_length	ciphertext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

◆ AES128GCM_DecryptFinal

`fsp_err_t(* sce_api_t::AES128GCM_DecryptFinal) (sce_gcm_handle_t *handle, uint8_t *plain, uint32_t *plain_data_length, uint8_t *atag, uint32_t atag_length)`

Finalize AES128GCM decryption.

Implemented as

- `R_SCE_AES128GCM_DecryptFinal()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	plain	plaintext data area (cipher_data_length byte)
[in,out]	plain_data_length	plaintext data length (0 always written here)
[in,out]	atag	authentication tag area (atag_length byte)
[in]	atag_length	authentication tag length (4,8,12,13,14,15,16 bytes)

◆ AES256GCM_EncryptInit

`fsp_err_t(* sce_api_t::AES256GCM_EncryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)`

Initialize AES256GCM encryption.

Implemented as

- `R_SCE_AES256GCM_EncryptInit()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 or more bytes)

◆ AES256GCM_EncryptUpdate

`fsp_err_t(* sce_api_t::AES256GCM_EncryptUpdate) (sce_gcm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_data_length, uint8_t *aad, uint32_t aad_length)`

Update AES256GCM encryption.

Implemented as

- `R_SCE_AES256GCM_EncryptUpdate()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_data_length	plaintext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

◆ AES256GCM_EncryptFinal

`fsp_err_t(* sce_api_t::AES256GCM_EncryptFinal) (sce_gcm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_data_length, uint8_t *atag)`

Finalize AES256GCM encryption.

Implemented as

- `R_SCE_AES256GCM_EncryptFinal()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area (cipher_data_length byte)
[in,out]	cipher_data_length	ciphertext data length (0 always written here)
[in,out]	atag	authentication tag area

◆ AES256GCM_DecryptInit

`fsp_err_t(* sce_api_t::AES256GCM_DecryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)`

Initialize AES256GCM decryption.

Implemented as

- `R_SCE_AES256GCM_DecryptInit()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 ore more bytes)

◆ AES256GCM_DecryptUpdate

`fsp_err_t(* sce_api_t::AES256GCM_DecryptUpdate) (sce_gcm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_data_length, uint8_t *aad, uint32_t aad_length)`

Update AES256GCM decryption.

Implemented as

- `R_SCE_AES256GCM_DecryptUpdate()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area
[in]	plain	plaintext data area
[in]	cipher_data_length	ciphertext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

◆ AES256GCM_DecryptFinal

`fsp_err_t(* sce_api_t::AES256GCM_DecryptFinal) (sce_gcm_handle_t *handle, uint8_t *plain, uint32_t *plain_data_length, uint8_t *atag, uint32_t atag_length)`

Finalize AES256GCM decryption.

Implemented as

- `R_SCE_AES256GCM_DecryptFinal()`

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	plain	plaintext data area (cipher_data_length byte)
[in,out]	plain_data_length	plaintext data length (0 always written here)
[in,out]	atag	authentication tag area (atag_length byte)
[in]	atag_length	authentication tag length (4,8,12,13,14,15,16 bytes)

◆ AES128CCM_EncryptInit

`fsp_err_t(* sce_api_t::AES128CCM_EncryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)`

Initialize AES128CCM encryption.

Implemented as

- `R_SCE_AES128CCM_EncryptInit()`

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES128CCM_EncryptUpdate

`fsp_err_t(* sce_api_t::AES128CCM_EncryptUpdate) (sce_ccm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)`

Update AES128CCM encryption.

Implemented as

- `R_SCE_AES128CCM_EncryptUpdate()`

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_length	plaintext data length

◆ AES128CCM_EncryptFinal

`fsp_err_t(* sce_api_t::AES128CCM_EncryptFinal) (sce_ccm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length, uint8_t *mac, uint32_t mac_length)`

Finalize AES128CCM encryption.

Implemented as

- [R_SCE_AES128CCM_EncryptFinal\(\)](#)

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	cipher	ciphertext data area
[in,out]	cipher_length	ciphertext data length
[in,out]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES128CCM_DecryptInit

`fsp_err_t(* sce_api_t::AES128CCM_DecryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)`

Initialize AES128CCM decryption.

Implemented as

- [R_SCE_AES128CCM_DecryptInit\(\)](#)

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES128CCM_DecryptUpdate

`fsp_err_t(* sce_api_t::AES128CCM_DecryptUpdate) (sce_ccm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES128CCM decryption.

Implemented as

- `R_SCE_AES128CCM_DecryptUpdate()`

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in]	cipher_length	ciphertext data length

◆ AES128CCM_DecryptFinal

`fsp_err_t(* sce_api_t::AES128CCM_DecryptFinal) (sce_ccm_handle_t *handle, uint8_t *plain, uint32_t *plain_length, uint8_t *mac, uint32_t mac_length)`

Finalize AES128CCM decryption.

Implemented as

- `R_SCE_AES128CCM_DecryptFinal()`

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	plain	plaintext data area
[in,out]	plain_length	plaintext data length
[in]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES256CCM_EncryptInit

`fsp_err_t(* sce_api_t::AES256CCM_EncryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)`

Initialize AES256CCM encryption.

Implemented as

- `R_SCE_AES256CCM_EncryptInit()`

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES256CCM_EncryptUpdate

`fsp_err_t(* sce_api_t::AES256CCM_EncryptUpdate) (sce_ccm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)`

Update AES256CCM encryption.

Implemented as

- `R_SCE_AES256CCM_EncryptUpdate()`

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_length	plaintext data length

◆ AES256CCM_EncryptFinal

`fsp_err_t(* sce_api_t::AES256CCM_EncryptFinal) (sce_ccm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length, uint8_t *mac, uint32_t mac_length)`

Finalize AES256CCM encryption.

Implemented as

- [R_SCE_AES256CCM_EncryptFinal\(\)](#)

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	cipher	ciphertext data area
[in,out]	cipher_length	ciphertext data length
[in,out]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES256CCM_DecryptInit

`fsp_err_t(* sce_api_t::AES256CCM_DecryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)`

Initialize AES256CCM decryption.

Implemented as

- [R_SCE_AES256CCM_DecryptInit\(\)](#)

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES256CCM_DecryptUpdate

`fsp_err_t(* sce_api_t::AES256CCM_DecryptUpdate) (sce_ccm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES256CCM decryption.

Implemented as

- `R_SCE_AES256CCM_DecryptUpdate()`

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in]	cipher_length	ciphertext data length

◆ AES256CCM_DecryptFinal

`fsp_err_t(* sce_api_t::AES256CCM_DecryptFinal) (sce_ccm_handle_t *handle, uint8_t *plain, uint32_t *plain_length, uint8_t *mac, uint32_t mac_length)`

Finalize AES256CCM decryption.

Implemented as

- `R_SCE_AES256CCM_DecryptFinal()`

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	plain	plaintext data area
[in,out]	plain_length	plaintext data length
[in]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES128CMAC_GenerateInit

`fsp_err_t(* sce_api_t::AES128CMAC_GenerateInit) (sce_cmac_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES128CMAC generation.

Implemented as

- `R_SCE_AES128CMAC_GenerateInit()`

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

◆ AES128CMAC_GenerateUpdate

`fsp_err_t(* sce_api_t::AES128CMAC_GenerateUpdate) (sce_cmac_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update AES128CMAC generation.

Implemented as

- `R_SCE_AES128CMAC_GenerateUpdate()`

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

◆ AES128CMAC_GenerateFinal

`fsp_err_t(* sce_api_t::AES128CMAC_GenerateFinal) (sce_cmac_handle_t *handle, uint8_t *mac)`

Finalize AES128CMAC generation.

Implemented as

- `R_SCE_AES128CMAC_GenerateFinal()`

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (16byte)

◆ AES128CMAC_VerifyInit

```
fsp_err_t(* sce_api_t::AES128CMAC_VerifyInit) (sce_cmac_handle_t *handle,
sce_aes_wrapped_key_t *wrapped_key)
```

Initialize AES128CMAC verification.

Implemented as

- R_SCE_AES128CMAC_VerifyInit()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

◆ AES128CMAC_VerifyUpdate

```
fsp_err_t(* sce_api_t::AES128CMAC_VerifyUpdate) (sce_cmac_handle_t *handle, uint8_t *message,
uint32_t message_length)
```

Update AES128CMAC verification.

Implemented as

- R_SCE_AES128CMAC_VerifyUpdate()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

◆ AES128CMAC_VerifyFinal

`fsp_err_t(* sce_api_t::AES128CMAC_VerifyFinal) (sce_cmac_handle_t *handle, uint8_t *mac, uint32_t mac_length)`

Finalize AES128CMAC verification.

Implemented as

- `R_SCE_AES128CMAC_VerifyFinal()`

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (mac_length byte)
[in,out]	mac_length	MAC data length (2 to 16 bytes)

◆ AES256CMAC_GenerateInit

`fsp_err_t(* sce_api_t::AES256CMAC_GenerateInit) (sce_cmac_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES256CMAC generation.

Implemented as

- `R_SCE_AES256CMAC_GenerateInit()`

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	256-bit AES wrapped key

◆ AES256CMAC_GenerateUpdate

`fsp_err_t(* sce_api_t::AES256CMAC_GenerateUpdate) (sce_cmac_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update AES256CMAC generation.

Implemented as

- [R_SCE_AES256CMAC_GenerateUpdate\(\)](#)

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

◆ AES256CMAC_GenerateFinal

`fsp_err_t(* sce_api_t::AES256CMAC_GenerateFinal) (sce_cmac_handle_t *handle, uint8_t *mac)`

Finalize AES256CMAC generation.

Implemented as

- [R_SCE_AES256CMAC_GenerateFinal\(\)](#)

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (16byte)

◆ AES256CMAC_VerifyInit

`fsp_err_t(* sce_api_t::AES256CMAC_VerifyInit) (sce_cmac_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES256CMAC verification.

Implemented as

- [R_SCE_AES256CMAC_VerifyInit\(\)](#)

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	256-bit AES wrapped key

◆ AES256CMAC_VerifyUpdate

`fsp_err_t(* sce_api_t::AES256CMAC_VerifyUpdate) (sce_cmac_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update AES256CMAC verification.

Implemented as

- [R_SCE_AES256CMAC_VerifyUpdate\(\)](#)

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

◆ AES256CMAC_VerifyFinal

`fsp_err_t(* sce_api_t::AES256CMAC_VerifyFinal) (sce_cmac_handle_t *handle, uint8_t *mac, uint32_t mac_length)`

Finalize AES256CMAC verification.

Implemented as

- [R_SCE_AES256CMAC_VerifyFinal\(\)](#)

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (mac_length byte)
[in,out]	mac_length	MAC data length (2 to 16 bytes)

◆ SHA256_Init

`fsp_err_t(* sce_api_t::SHA256_Init) (sce_sha_md5_handle_t *handle)`

Initialize SHA-256 Calculation.

Implemented as

- [R_SCE_SHA256_Init\(\)](#)

Parameters

[in,out]	handle	SHA handler (work area)
----------	--------	-------------------------

◆ SHA256_Update

`fsp_err_t(* sce_api_t::SHA256_Update) (sce_sha_md5_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update SHA-256 Calculation.

Implemented as

- `R_SCE_SHA256_Update()`

Parameters

[in,out]	handle	SHA handler (work area)
[in]	message	message data area
[in]	message_length	message data length

◆ SHA256_Final

`fsp_err_t(* sce_api_t::SHA256_Final) (sce_sha_md5_handle_t *handle, uint8_t *digest, uint32_t *digest_length)`

Finalize SHA-256 Calculation.

Implemented as

- `R_SCE_SHA256_Final()`

Parameters

[in,out]	handle	SHA handler (work area)
[in,out]	digest	hasha data area
[in,out]	digest_length	hash data length (32bytes)

◆ RSA1024_WrappedKeyPairGenerate

`fsp_err_t(* sce_api_t::RSA1024_WrappedKeyPairGenerate) (sce_rsa1024_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs 1024-bit RSA wrapped pair key.

Implemented as

- `R_SCE_RSA1024_WrappedKeyPairGenerate()`

Parameters

[in,out]	wrapped_key	128-bit AES wrapped key
----------	-------------	-------------------------

◆ RSA2048_WrappedKeyPairGenerate

`fsp_err_t(* sce_api_t::RSA2048_WrappedKeyPairGenerate) (sce_rsa2048_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs 2048-bit RSA wrapped pair key.

Implemented as

- `R_SCE_RSA2048_WrappedKeyPairGenerate()`

Parameters

[in,out]	wrapped_key	128-bit AES wrapped key
----------	-------------	-------------------------

◆ RSA1024_EncryptedPublicKeyWrap

`fsp_err_t(* sce_api_t::RSA1024_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa1024_public_wrapped_key_t *wrapped_key)`

This API outputs 1024-bit RSA public wrapped key.

Implemented as

- `R_SCE_RSA1024_EncryptedPublicKeyWrap()`

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	1024-bit RSA public wrapped key

◆ RSA1024_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::RSA1024_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa1024_private_wrapped_key_t
*wrapped_key)
```

This API outputs 1024-bit RSA private wrapped key.

Implemented as

- R_SCE_RSA1024_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	1024-bit RSA private wrapped key

◆ RSA2048_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::RSA2048_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa2048_public_wrapped_key_t
*wrapped_key)
```

This API outputs 2048-bit RSA public wrapped key.

Implemented as

- R_SCE_RSA2048_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	2048-bit RSA public wrapped key

◆ RSA2048_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::RSA2048_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa2048_private_wrapped_key_t
*wrapped_key)
```

This API outputs 2048-bit RSA private wrapped key.

Implemented as

- R_SCE_RSA2048_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	2048-bit RSA private wrapped key

◆ RSA3072_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::RSA3072_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa3072_public_wrapped_key_t
*wrapped_key)
```

This API outputs 3072-bit RSA public wrapped key.

Implemented as

- R_SCE_RSA3072_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	3072-bit RSA public wrapped key

◆ RSA4096_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::RSA4096_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa4096_public_wrapped_key_t
*wrapped_key)
```

This API outputs 4096-bit RSA public wrapped key.

Implemented as

- R_SCE_RSA4096_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	4096-bit RSA public wrapped key

◆ RSASSA_PKCS1024_SignatureGenerate

```
fsp_err_t(* sce_api_t::RSASSA_PKCS1024_SignatureGenerate) (sce_rsa_byte_data_t *message_hash,
sce_rsa_byte_data_t *signature, sce_rsa1024_private_wrapped_key_t *wrapped_key, uint8_t
hash_type)
```

RSASSA-PKCS1-V1_5 signature generation.

Implemented as

- R_SCE_RSASSA_PKCS1024_SignatureGenerate()

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Inputs the 1024-bit RSA private wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSASSA_PKCS2048_SignatureGenerate

`fsp_err_t(* sce_api_t::RSASSA_PKCS2048_SignatureGenerate) (sce_rsa_byte_data_t *message_hash, sce_rsa_byte_data_t *signature, sce_rsa2048_private_wrapped_key_t *wrapped_key, uint8_t hash_type)`

RSASSA-PKCS1-V1_5 signature generation.

Implemented as

- `R_SCE_RSASSA_PKCS2048_SignatureGenerate()`

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Inputs the 2048-bit RSA private wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSASSA_PKCS1024_SignatureVerify

`fsp_err_t(* sce_api_t::RSASSA_PKCS1024_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa1024_public_wrapped_key_t *wrapped_key, uint8_t hash_type)`

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- `R_SCE_RSASSA_PKCS1024_SignatureVerify()`

Parameters

[in]	signature	Signature text information to verify
[in]	message_hash	Message text or hash value to verify
[in]	wrapped_key	Inputs the 1024-bit RSA public wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSASSA_PKCS2048_SignatureVerify

`fsp_err_t(* sce_api_t::RSASSA_PKCS2048_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa2048_public_wrapped_key_t *wrapped_key, uint8_t hash_type)`

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- `R_SCE_RSASSA_PKCS2048_SignatureVerify()`

Parameters

[in]	signature	Signature text information to verify
[in]	message_hash	Message text or hash value to verify
[in]	wrapped_key	Inputs the 2048-bit RSA public wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSASSA_PKCS3072_SignatureVerify

`fsp_err_t(* sce_api_t::RSASSA_PKCS3072_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa3072_public_wrapped_key_t *wrapped_key, uint8_t hash_type)`

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- `R_SCE_RSASSA_PKCS3072_SignatureVerify()`

Parameters

[in]	signature	Signature text information to verify
[in]	message_hash	Message text or hash value to verify
[in]	wrapped_key	Inputs the 3072-bit RSA public wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSASSA_PKCS4096_SignatureVerify

`fsp_err_t(* sce_api_t::RSASSA_PKCS4096_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa4096_public_wrapped_key_t *wrapped_key, uint8_t hash_type)`

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- `R_SCE_RSASSA_PKCS4096_SignatureVerify()`

Parameters

[in]	signature	Signature text information to verify
[in]	message_hash	Message text or hash value to verify
[in]	wrapped_key	Inputs the 4096-bit RSA public wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSAES_PKCS1024_Encrypt

`fsp_err_t(* sce_api_t::RSAES_PKCS1024_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa1024_public_wrapped_key_t *wrapped_key)`

RSAES-PKCS1-V1_5 encryption.

Implemented as

- `R_SCE_RSAES_PKCS1024_Encrypt()`

Parameters

[in]	plain	plaintext
[in,out]	cipher	ciphertext
[in]	wrapped_key	Inputs the 1024-bit RSA public wrapped key.

◆ RSAES_PKCS2048_Encrypt

`fsp_err_t(* sce_api_t::RSAES_PKCS2048_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa2048_public_wrapped_key_t *wrapped_key)`

RSAES-PKCS1-V1_5 encryption.

Implemented as

- `R_SCE_RSAES_PKCS2048_Encrypt()`

Parameters

[in]	plain	plaintext
[in,out]	cipher	ciphertext
[in]	wrapped_key	Inputs the 2048-bit RSA public wrapped key.

◆ RSAES_PKCS3072_Encrypt

`fsp_err_t(* sce_api_t::RSAES_PKCS3072_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa3072_public_wrapped_key_t *wrapped_key)`

RSAES-PKCS1-V1_5 encryption.

Implemented as

- `R_SCE_RSAES_PKCS3072_Encrypt()`

Parameters

[in]	plain	plaintext
[in,out]	cipher	ciphertext
[in]	wrapped_key	Inputs the 3072-bit RSA public wrapped key.

◆ RSAES_PKCS4096_Encrypt

`fsp_err_t(* sce_api_t::RSAES_PKCS4096_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa4096_public_wrapped_key_t *wrapped_key)`

RSAES-PKCS1-V1_5 encryption.

Implemented as

- `R_SCE_RSAES_PKCS4096_Encrypt()`

Parameters

[in]	plain	plaintext
[in,out]	cipher	ciphertext
[in]	wrapped_key	Inputs the 4096-bit RSA public wrapped key.

◆ RSAES_PKCS1024_Decrypt

`fsp_err_t(* sce_api_t::RSAES_PKCS1024_Decrypt) (sce_rsa_byte_data_t *cipher, sce_rsa_byte_data_t *plain, sce_rsa1024_private_wrapped_key_t *wrapped_key)`

RSAES-PKCS1-V1_5 decryption.

Implemented as

- `R_SCE_RSAES_PKCS1024_Decrypt()`

Parameters

[in]	cipher	ciphertext
[in,out]	plain	plaintext
[in]	wrapped_key	Inputs the 1024-bit RSA private wrapped key.

◆ RSAES_PKCS2048_Decrypt

`fsp_err_t(* sce_api_t::RSAES_PKCS2048_Decrypt) (sce_rsa_byte_data_t *cipher, sce_rsa_byte_data_t *plain, sce_rsa2048_private_wrapped_key_t *wrapped_key)`

RSAES-PKCS1-V1_5 decryption.

Implemented as

- `R_SCE_RSAES_PKCS2048_Decrypt()`

Parameters

[in]	cipher	ciphertext
[in,out]	plain	plaintext
[in]	wrapped_key	Inputs the 2048-bit RSA private wrapped key.

◆ SHA256HMAC_EncryptedKeyWrap

```
fsp_err_t(* sce_api_t::SHA256HMAC_EncryptedKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_hmac_sha_wrapped_key_t
*wrapped_key)
```

This API outputs HMAC-SHA256 wrapped key.

Implemented as

- R_SCE_SHA256HMAC_EncryptedKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	HMAC-SHA256 wrapped key

◆ SHA256HMAC_GenerateInit

```
fsp_err_t(* sce_api_t::SHA256HMAC_GenerateInit) (sce_hmac_sha_handle_t *handle,
sce_hmac_sha_wrapped_key_t *wrapped_key)
```

Initialize HMAC-SHA256 generation.

Implemented as

- R_SCE_SHA256HMAC_GenerateInit()

Parameters

[in,out]	handle	SHA-HMAC handler (work area)
[in]	wrapped_key	MAC wrapped key

◆ SHA256HMAC_GenerateUpdate

`fsp_err_t(* sce_api_t::SHA256HMAC_GenerateUpdate) (sce_hmac_sha_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update HMAC-SHA256 generation.

Implemented as

- `R_SCE_SHA256HMAC_GenerateUpdate()`

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in]	message	Message area
[in]	message_length	Message length

◆ SHA256HMAC_GenerateFinal

`fsp_err_t(* sce_api_t::SHA256HMAC_GenerateFinal) (sce_hmac_sha_handle_t *handle, uint8_t *mac)`

Finalize HMAC-SHA256 generation.

Implemented as

- `R_SCE_SHA256HMAC_GenerateFinal()`

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in,out]	mac	HMAC area (32 bytes)

◆ SHA256HMAC_VerifyInit

`fsp_err_t(* sce_api_t::SHA256HMAC_VerifyInit) (sce_hmac_sha_handle_t *handle, sce_hmac_sha_wrapped_key_t *wrapped_key)`

Initialize HMAC-SHA256 verification.

Implemented as

- `R_SCE_SHA256HMAC_VerifyInit()`

Parameters

[in,out]	handle	SHA-HMAC handler (work area)
[in]	wrapped_key	MAC wrapped key

◆ SHA256HMAC_VerifyUpdate

`fsp_err_t(* sce_api_t::SHA256HMAC_VerifyUpdate) (sce_hmac_sha_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update HMAC-SHA256 verification.

Implemented as

- `R_SCE_SHA256HMAC_VerifyUpdate()`

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in]	message	Message area
[in]	message_length	Message length

◆ SHA256HMAC_VerifyFinal

`fsp_err_t(* sce_api_t::SHA256HMAC_VerifyFinal) (sce_hmac_sha_handle_t *handle, uint8_t *mac, uint32_t mac_length)`

Finalize HMAC-SHA256 verification.

Implemented as

- `R_SCE_SHA256HMAC_VerifyFinal()`

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in]	mac	HMAC area
[in]	mac_length	HMAC length

◆ ECC_secp192r1_WrappedKeyPairGenerate

`fsp_err_t(* sce_api_t::ECC_secp192r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs secp192r1 wrapped pair key.

Implemented as

- `R_SCE_ECC_secp192r1_WrappedKeyPairGenerate()`

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp192r1 public key and private key pair
----------	------------------	--

◆ ECC_secp224r1_WrappedKeyPairGenerate

`fsp_err_t(* sce_api_t::ECC_secp224r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs secp224r1 wrapped pair key.

Implemented as

- [R_SCE_ECC_secp224r1_WrappedKeyPairGenerate\(\)](#)

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp224r1 public key and private key pair
----------	------------------	--

◆ ECC_secp256r1_WrappedKeyPairGenerate

`fsp_err_t(* sce_api_t::ECC_secp256r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs secp256r1 wrapped pair key.

Implemented as

- [R_SCE_ECC_secp256r1_WrappedKeyPairGenerate\(\)](#)

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp256r1 public key and private key pair
----------	------------------	--

◆ ECC_secp384r1_WrappedKeyPairGenerate

`fsp_err_t(* sce_api_t::ECC_secp384r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs secp384r1 wrapped pair key.

Implemented as

- [R_SCE_ECC_secp384r1_WrappedKeyPairGenerate\(\)](#)

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp384r1 public key and private key pair
----------	------------------	--

◆ ECC_secp192r1_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp192r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)
```

This API outputs secp192r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp192r1_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp192r1 public wrapped key

◆ ECC_secp224r1_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp224r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)
```

This API outputs secp224r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp224r1_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp224r1 public wrapped key

◆ ECC_secp256r1_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp256r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)
```

This API outputs secp256r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp256r1_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp256r1 public wrapped key

◆ ECC_secp384r1_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp384r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)
```

This API outputs secp384r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp384r1_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp384r1 public wrapped key

◆ ECC_secp192r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp192r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t
*wrapped_key)
```

This API outputs secp192r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp192r1_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp192r1 private wrapped key

◆ ECC_secp224r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp224r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t
*wrapped_key)
```

This API outputs secp224r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp224r1_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp224r1 private wrapped key

◆ ECC_secp256r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp256r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t
*wrapped_key)
```

This API outputs secp256r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp256r1_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp256r1 private wrapped key

◆ ECC_secp384r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp384r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t
*wrapped_key)
```

This API outputs secp384r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp384r1_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encrypted and MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp384r1 private wrapped key

◆ ECDSA_secp192r1_SignatureGenerate

`fsp_err_t(* sce_api_t::ECDSA_secp192r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)`

ECDSA signature generation.

Implemented as

- `R_SCE_ECDSA_secp192r1_SignatureGenerate()`

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Input wrapped key of secp192r1 private key.

◆ ECDSA_secp224r1_SignatureGenerate

`fsp_err_t(* sce_api_t::ECDSA_secp224r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)`

ECDSA signature generation.

Implemented as

- `R_SCE_ECDSA_secp224r1_SignatureGenerate()`

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Input wrapped key of secp224r1 private key.

◆ ECDSA_secp256r1_SignatureGenerate

`fsp_err_t(* sce_api_t::ECDSA_secp256r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)`

ECDSA signature generation.

Implemented as

- `R_SCE_ECDSA_secp256r1_SignatureGenerate()`

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Input wrapped key of secp256r1 private key.

◆ ECDSA_secp384r1_SignatureGenerate

`fsp_err_t(* sce_api_t::ECDSA_secp384r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)`

ECDSA signature generation.

Implemented as

- `R_SCE_ECDSA_secp384r1_SignatureGenerate()`

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Input wrapped key of secp384r1 private key.

◆ ECDSA_secp192r1_SignatureVerify

`fsp_err_t(* sce_api_t::ECDSA_secp192r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)`

ECDSA signature verification.

Implemented as

- `R_SCE_ECDSA_secp192r1_SignatureVerify()`

Parameters

[in]	signature	Signature text information to be verified
[in,out]	message_hash	Message or hash value to be verified
[in]	wrapped_key	Input wrapped key of secp192r1 public key.

◆ ECDSA_secp224r1_SignatureVerify

`fsp_err_t(* sce_api_t::ECDSA_secp224r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)`

ECDSA signature verification.

Implemented as

- `R_SCE_ECDSA_secp224r1_SignatureVerify()`

Parameters

[in]	signature	Signature text information to be verified
[in,out]	message_hash	Message or hash value to be verified
[in]	wrapped_key	Input wrapped key of secp224r1 public key.

◆ ECDSA_secp256r1_SignatureVerify

`fsp_err_t(* sce_api_t::ECDSA_secp256r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)`

ECDSA signature verification.

Implemented as

- `R_SCE_ECDSA_secp256r1_SignatureVerify()`

Parameters

[in]	signature	Signature text information to be verified
[in,out]	message_hash	Message or hash value to be verified
[in]	wrapped_key	Input wrapped key of secp256r1 public key.

◆ ECDSA_secp384r1_SignatureVerify

`fsp_err_t(* sce_api_t::ECDSA_secp384r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)`

ECDSA signature verification.

Implemented as

- `R_SCE_ECDSA_secp384r1_SignatureVerify()`

Parameters

[in]	signature	Signature text information to be verified
[in,out]	message_hash	Message or hash value to be verified
[in]	wrapped_key	Input wrapped key of secp384r1 public key.

◆ ECDH_secp256r1_Init

`fsp_err_t(* sce_api_t::ECDH_secp256r1_Init) (sce_ecdh_handle_t *handle, uint32_t key_type, uint32_t use_key_id)`

secp256r1 ECDH Initialization.

Implemented as

- `R_SCE_ECDH_secp256r1_Init()`

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	key_type	Key exchange type
[in]	use_key_id	use key_id or not

◆ ECDH_secp256r1_PublicKeySign

`fsp_err_t(* sce_api_t::ECDH_secp256r1_PublicKeySign) (sce_ecdh_handle_t *handle, sce_ecc_public_wrapped_key_t *ecc_public_wrapped_key, sce_ecc_private_wrapped_key_t *ecc_private_wrapped_key, uint8_t *public_key, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)`

secp256r1 ECDH public key Signature.

Implemented as

- `R_SCE_ECDH_secp256r1_PublicKeySign()`

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	ecc_public_wrapped_key	For ECDHE, input a null pointer. For ECDH, input the wrapped key of a secp256r1 public key.
[in]	ecc_private_wrapped_key	secp256r1 private key for signature generation
[in,out]	public_key	User secp256r1 public key (512-bit) for key exchange.
[in,out]	signature	Signature text storage destination information
[in,out]	wrapped_key	For ECDHE, a private wrapped key generated from a random number. Not output for ECDH.

◆ ECDH_secp256r1_PublicKeyVerify

```
fsp_err_t(* sce_api_t::ECDH_secp256r1_PublicKeyVerify) (sce_ecdh_handle_t *handle,
sce_ecc_public_wrapped_key_t *ecc_public_wrapped_key, uint8_t *public_key_data,
sce_ecdsa_byte_data_t *signature, sce_ecc_public_wrapped_key_t *wrapped_key)
```

secp256r1 ECDH public key verification.

Implemented as

- R_SCE_ECDH_secp256r1_PublicKeyVerify()

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	ecc_public_wrapped_key	Public wrapped key area for signature verification
[in]	public_key_data	secp256r1 public key (512-bit)
[in]	signature	ECDSA secp256r1 signature of ecc_public_wrapped_key
[in,out]	wrapped_key	wrapped key of ecc_public_wrapped_key

◆ ECDH_secp256r1_PublicKeyReadWithoutSignature

```
fsp_err_t(* sce_api_t::ECDH_secp256r1_PublicKeyReadWithoutSignature) (sce_ecdh_handle_t
*handle, uint8_t *public_key_data, sce_ecc_public_wrapped_key_t *wrapped_key)
```

Output the key index of QeU without signature verification.

Implemented as

- R_SCE_ECDH_secp256r1_PublicKeyReadWithoutSignature()

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	public_key_data	secp256r1 public key (512-bit). When key_id is used: key_id (8-bit) public key (512-bit)
[in,out]	wrapped_key	wrapped key of ecc_public_wrapped_key

◆ ECDH_secp256r1_SharedSecretCalculate

`fsp_err_t(* sce_api_t::ECDH_secp256r1_SharedSecretCalculate) (sce_ecdh_handle_t *handle, sce_ecc_public_wrapped_key_t *ecc_public_wrapped_key, sce_ecc_private_wrapped_key_t *ecc_private_wrapped_key, sce_ecdh_wrapped_key_t *shared_secret_wrapped_key)`

secp256r1 ECDH shared secret calculation.

Implemented as

- `R_SCE_ECDH_secp256r1_SharedSecretCalculate()`

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	ecc_public_wrapped_key	Public wrapped key
[in]	ecc_private_wrapped_key	Private wrapped key
[in,out]	shared_secret_wrapped_key	Wrapped key of shared secret Z calculated by ECDH key exchange

◆ ECDH_secp256r1_KeyDerivation

`fsp_err_t(* sce_api_t::ECDH_secp256r1_KeyDerivation) (sce_ecdh_handle_t *handle, sce_ecdh_wrapped_key_t *shared_secret_wrapped_key, uint32_t key_type, uint32_t kdf_type, uint8_t *other_info, uint32_t other_info_length, sce_hmac_sha_wrapped_key_t *salt_wrapped_key, sce_aes_wrapped_key_t *wrapped_key)`

secp256r1 ECDH key derivation.

Implemented as

- `R_SCE_ECDH_secp256r1_KeyDerivation()`

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	shared_secret_wrapped_key	Z wrapped key calculated by <code>R_SCE_ECDH_secp256r1_SharedSecretCalculate</code>
[in]	key_type	Derived key type
[in]	kdf_type	Algorithm used for key derivation calculation
[in]	other_info	Additional data used for key derivation calculation
[in]	other_info_length	Data length of other_info
[in]	salt_wrapped_key	Salt wrapped key
[in,out]	wrapped_key	Wrapped key corresponding to key_type.

◆ TLS_RootCertificateRSA2048PublicKeyInstall

```
fsp_err_t(* sce_api_t::TLS_RootCertificateRSA2048PublicKeyInstall) (uint8_t
*encrypted_provisioning_key, uint8_t *initial_vector, uint8_t *encrypted_key,
sce_tls_ca_certification_public_wrapped_key_t *wrapped_key)
```

Generate TLS RSA Public key index data

Implemented as

- R_SCE_TLS_RootCertificateRSA2048PublicKeyInstall()

Parameters

[in]	encrypted_provisioning_key	the provisioning key includes encrypted CBC/CBC-MAC key for user key
[in]	initial_vector	the initial_vector for user key CBC encrypt
[in]	encrypted_key	the user key encrypted with AES128-ECB mode
[out]	wrapped_key	the user Key Generation Information (141 words) of RSA2048 bit

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTOSCE_FAIL	An internal error occurred.

◆ TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate

```
fsp_err_t(* sce_api_t::TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate)
(sce_tls_p256_ecc_wrapped_key_t *tls_p256_ecc_wrapped_key, uint8_t
*ephemeral_ecdh_public_key)
```

Generate TLS ECC key pair

Implemented as

- R_SCE_TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate()

Parameters

[in]	tls_p256_ecc_wrapped_key	P256 ECC key index for TLS
[in]	ephemeral_ecdh_public_key	ephemeral ECDH public key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTOSCE_FAIL	An internal error occurred.

◆ TLS_RootCertificateVerify

```
fsp_err_t(* sce_api_t::TLS_RootCertificateVerify) (uint32_t public_key_type, uint8_t *certificate,
uint32_t certificate_length, uint32_t public_key_n_start_position, uint32_t
public_key_n_end_position, uint32_t public_key_e_start_position, uint32_t
public_key_e_end_position, uint8_t *signature, uint32_t *encrypted_root_public_key)
```

Verify root CA certificate.

Implemented as

- R_SCE_TLS_RootCertificateVerify()

Parameters

[in]	public_key_type	key type
[in]	certificate	certificates.
[in]	certificate_length	byte size of certificates.
[in]	public_key_n_start_position	start position of public key n.
[in]	public_key_n_end_position	end position of public key n.
[in]	public_key_e_start_position	start position of public key e.
[in]	public_key_e_end_position	end position of public key e.
[in]	signature	signature for certificates.
[out]	encrypted_root_public_key	public key for RSA 2048bit.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTOSCE_FAIL	An internal error occurred.

◆ TLS_CertificateVerify

```
fsp_err_t(* sce_api_t::TLS_CertificateVerify) (uint32_t public_key_type, uint32_t
*encrypted_input_public_key, uint8_t *certificate, uint32_t certificate_length, uint8_t *signature,
uint32_t public_key_n_start_position, uint32_t public_key_n_end_position, uint32_t
public_key_e_start_position, uint32_t public_key_e_end_position, uint32_t
*encrypted_output_public_key)
```

Verify server certificate and intermediate certificate.

Implemented as

- R_SCE_TLS_CertificateVerify()

Parameters

[in]	public_key_type	key type
[in]	input_public_key	public key.
[in]	certificate	certificates.
[in]	certificate_length	byte size of certificates.
[in]	signature	signature for certificates.
[in]	public_key_n_start_position	start position of public key n.
[in]	public_key_n_end_position	end position of public key n.
[in]	public_key_e_start_position	start position of public key e.
[in]	public_key_e_end_position	end position of public key e.
[out]	encrypted_output_public_key	public key for RSA 2048bit.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTOSCE_FAIL	An internal error occurred.

◆ TLS_PreMasterSecretGenerateForRSA2048

`fsp_err_t(* sce_api_t::TLS_PreMasterSecretGenerateForRSA2048) (uint32_t *sce_pre_master_secret)`

Generate encrypted pre-master secret.

Implemented as

- `R_SCE_TLS_PreMasterSecretGenerateForRSA2048()`

Parameters

[out]	sce_pre_master_secret	pre-master secret value for SCE.
-------	-----------------------	----------------------------------

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.

◆ TLS_MasterSecretGenerate

```
fsp_err_t(* sce_api_t::TLS_MasterSecretGenerate) (uint32_t select_cipher_suite, uint32_t
*sce_pre_master_secret, uint8_t *client_random, uint8_t *server_random, uint32_t
*sce_master_secret)
```

Generate encrypted master secret.

Implemented as

- R_SCE_TLS_MasterSecretGenerate()

Parameters

[in]	select_cipher_suite	cipher suite type
[in]	sce_pre_master_secret	pre-master secret value for SCE.
[in]	client_random	random value reported ClientHello.
[in]	server_random	random value reported ServerHello.
[out]	sce_master_secret	master secret value for SCE.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTTO_SCE_FAIL	An internal error occurred.

◆ TLS_PreMasterSecretEncryptWithRSA2048

`fsp_err_t(*sce_api_t::TLS_PreMasterSecretEncryptWithRSA2048)(uint32_t *encrypted_public_key, uint32_t *sce_pre_master_secret, uint8_t *encrypted_pre_master_secret)`

Output the result encrypted pre-master secret with RSA 2048bit

Implemented as

- [R_SCE_TLS_PreMasterSecretEncryptWithRSA2048\(\)](#)

Parameters

[in]	encrypted_public_key	public key data.
[in]	sce_pre_master_secret	pre-master secret value.
[out]	encrypted_pre_master_secret	the value encrypted pre-master secret.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ TLS_SessionKeyGenerate

`fsp_err_t(*sce_api_t::TLS_SessionKeyGenerate)(uint32_t select_cipher_suite, uint32_t *sce_master_secret, uint8_t *client_random, uint8_t *server_random, uint8_t *nonce_explicit, sce_hmac_sha_wrapped_key_t *client_mac_wrapped_key, sce_hmac_sha_wrapped_key_t *server_mac_wrapped_key, sce_aes_wrapped_key_t *client_crypto_wrapped_key, sce_aes_wrapped_key_t *server_crypto_wrapped_key, uint8_t *client_initial_vector, uint8_t *server_initial_vector)`

Output various key information.

Implemented as

- [R_SCE_TLS_SessionKeyGenerate\(\)](#)

Parameters

[in]	select_cipher_suite	Key suite information number.
[in]	sce_master_secret	master secret value.
[in]	client_random	random value reported ClientHello.
[in]	server_random	random value reported ServerHello.
[in]	nonce_explicit	nonce value

[out]	client_mac_wrapped_key	the mac key during communication from client to server.
[out]	server_mac_wrapped_key	the mac key during communication from server to client.
[out]	client_crypto_wrapped_key	the crypto key during communication from client to server.
[out]	server_crypto_wrapped_key	the crypto key during communication from server to client.
[in]	client_initial_vector	not use.
[in]	server_initial_vector	not use.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTOSCE_FAIL	An internal error occurred.

◆ TLS_VerifyDataGenerate

`fsp_err_t(* sce_api_t::TLS_VerifyDataGenerate) (uint32_t select_verify_data, uint32_t *sce_master_secret, uint8_t *hand_shake_hash, uint8_t *verify_data)`

Generate verify data.

Implemented as

- `R_SCE_TLS_VerifyDataGenerate()`

Parameters

[in]	select_verify_data	Select Client/Server data.
[in]	sce_master_secret	master secret data.
[in]	hand_shake_hash	TLS hand shake message SHA256 HASH value.
[out]	verify_data	verify data.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTOSCE_FAIL	An internal error occurred.

◆ TLS_ServerKeyExchangeVerify

```
fsp_err_t(* sce_api_t::TLS_ServerKeyExchangeVerify) (uint32_t public_key_type, uint8_t
*client_random, uint8_t *server_random, uint8_t *server_ephemeral_ecdh_public_key, uint8_t
*server_key_exchange_signature, uint32_t *encrypted_public_key, uint32_t
*encrypted_ephemeral_ecdh_public_key)
```

Retrives ECDH public key.

Implemented as

- R_SCE_TLS_ServerKeyExchangeVerify()

Parameters

[in]	public_key_type	key type
[in]	client_random	random value reported ClientHello.
[in]	server_random	random value reported ServerHello.
[in]	server_ephemeral_ecdh_public_key	Ephemeral ECDH public key from Server.
[in]	server_key_exchange_signature	Server Key Exchange signature.
[in]	encrypted_public_key	encrypted public key.
[out]	encrypted_ephemeral_ecdh_public_key	encrypted Ephemeral ECDH public key.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTOSCE_FAIL	An internal error occurred.

◆ TLS_PreMasterSecretGenerateForECC_secp256r1

```
fsp_err_t(* sce_api_t::TLS_PreMasterSecretGenerateForECC_secp256r1) (uint32_t
*encrypted_public_key, sce_tls_p256_ecc_wrapped_key_t *tls_p256_ecc_wrapped_key, uint32_t
*sce_pre_master_secret)
```

Generate encrypted pre-master secret.

Implemented as

- R_SCE_TLS_PreMasterSecretGenerateForECC_secp256r1()

Parameters

[in]	encrypted_public_key	encrypted public key
[in]	tls_p256_ecc_wrapped_key	P-256 ECC key index.
[out]	sce_pre_master_secret	encrypted pre-master secret value for SCE.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ sce_instance_t

```
struct sce_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

sce_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
sce_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
sce_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ sce_rsa_byte_data_t

```
typedef sce_byte_data_t sce_rsa_byte_data_t
```

byte data

RSA byte data structure

◆ sce_ecdsa_byte_data_t

```
typedef sce\_byte\_data\_t sce\_ecdsa\_byte\_data\_t
```

byte data

ECDSA byte data structure

◆ sce_ctrl_t

```
typedef void sce\_ctrl\_t
```

SCE Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- [sce_instance_ctrl_t](#)
