

# e<sup>2</sup> studio 6.2.0

**Release Note** 

R20UT4237EE0100 Rev.1.00 January 5<sup>th</sup>, 2018

## Introduction

This document outlines the device support, new features added in 6.2.0, fixed issues and open issues in e<sup>2</sup> studio 6.2.0.

### Contents

Int	roduction1
1.	Product Information2
1.1	1 Supported Operating Systems2
1.2	2 Supported Toolchains
2.	Device Support
2.′	1 Project Generator Support
2.2	2 Code Generator Support
3.	Smart Manual Support11
4.	What is new in 6.2.0?
5.	What is new in 6.1.0?
6.	What is new in 6.0.0?
7.	Useful workarounds and information for 6.2.0
8.	Open Issues in 6.2.047
9.	Appendix48
9.1	1 Website and Support

## 1. Product Information

## **1.1 Supported Operating Systems**

These operating systems are officially supported by e<sup>2</sup> studio:

- Windows 7 32-bit
- Windows 7 64-bit
- Windows 8.1 32-bit
- Windows 8.1 64-bit
- Windows 10 32-bit
- Windows 10 64-bit

# 1.2 Supported Toolchains

The following toolchains are supported in e<sup>2</sup> studio 6.2.0.

		Renesas	Launchpad GCC (*2)	Renesas GCC/ KPIT GCC (*3)	IAR (*4)	Green Hills (*5)
Device Family	RL78	Yes (CC-RL)	No	Yes	Yes	No
	RX	Yes (CC-RX)	No	Yes	Yes	No
	RH850	No	No	No	Yes	Yes
	RZ/ARM	No	No (*1)	Yes	Yes	No
-	Synergy/ARM	No	Yes	No	Yes	No

#### Note:

\*1: Converter is now available to convert RZ ARM-none GCC toolchain to use Launchpad GCC.

\*2: The GNU Launchpad toolchain is distributed via the www.launchpad.net website and is available here: <u>https://launchpad.net/gcc-arm-embedded</u>.

\*3: Legacy KPIT GCC toolchains are now available from <a href="https://gcc-renesas.com/">https://gcc-renesas.com/</a>. In addition, the latest RX and RL Renesas GCC toolchains are available from this website.

\*4: The IAR toolchain plugins are available via the "Help"->"IAR Embedded Workbench plugin manager" menu in e<sup>2</sup> studio. These Eclipse plugins are provided by IAR and are not supported by Renesas.

\*5: The Green Hills toolchain plugins are available within the e<sup>2</sup> studio product. These plugins are provided by Green Hills and are not supported by Renesas.

# 2. Device Support

## 2.1 **Project Generator Support**

Note: The Renesas SH device family is no longer supported in e<sup>2</sup> studio.

# 3. Smart Manual Support

Smart manual support is delivered independently of  $e^2$  studio releases when available. The following devices are available as of the 5<sup>th</sup> of January, 2018.

- RX62G
- RX62T
- RX63N
- RX63T
- RX64M
- RX71M
- RX110
- RX111
- RX113
- RX210

RENESAS

		In 6.2 a warning will be shown giving you a chance to not lose your source code edits.		
Code Generator	RZ	The following enhancements have been made to the RZ/T1 code generator feature:		
		<ol> <li>You can now select the following signal in the ELC of the RZ/T1's code generator.</li> </ol>		
		EtherMAC IEEE1588 SYNCOUT		
		<ul> <li>All RZ/T1 products have this menu.</li> </ul>		
		EtherCAT Sync0 and EtherCAT Sync1		
		<ul> <li>The products that support EtherCAT have this menu.</li> </ul>		
		<ol> <li>The Code Generator can generate the code of MPC.PxxPFS and PORTn.PMR for ENCIF08, ENCIF09, ENCIF10, ENCIF11 and ENCIF12 of RZ/T1.</li> </ol>		
		<ol> <li>You can now specify a time value for the GPT on the RZ/T1 code generator. In the past, you had to input a register value on the input box for "Compare match value" of the RZ/T1 code generator. This should improve usability.</li> </ol>		
		<ol> <li>The code generator now supports the 32-bit Phase Counting Mode of RZ/T1's MTU3a.</li> </ol>		
Code Generator	RL78	The code generator now has data flash library support for the following devices.		
		• For RL78/G13		
		<ul> <li>R5F1006E, R5F1007E, R5F1008E, R5F100AE, R5F100BE, R5F100CE, R5F100EE, R5F100FE, R5F100GE, R5F100JE, R5F100LE, R5F100FJ, R5F100GJ, R5F100JJ, R5F100LJ, R5F100MJ, R5F100PJ, R5F100FL, R5F100GL, R5F100JL, R5F100LL, R5F100ML, R5F100PL, R5F100SL</li> </ul>		
		• For RL78/F13		
		<ul> <li>R5F10A6E, R5F10AAE, R5F10ABE, R5F10AGE, R5F10ALE, R5F10AGG, R5F10ALG, R5F10AMG,R5F10BAG, R5F10BBG, R5F10BGG,R5F10BLG, R5F10BMG</li> </ul>		
		• For RL78/F14		
		<ul> <li>R5F10PGF, R5F10PLF, R5F10PMF, R5F10PGJ, R5F10PLJ, R5F10PMJ, R5F10PPJ</li> </ul>		

RENESAS

Consumption Current	RX, RL78	Various improvements have been made to the current consumption view to remedy the problems below:
		<ul> <li>Current Consumption settings were not being saved correctly when terminating e<sup>2</sup> studio while still connected to the debugger.</li> <li>Zooming in or out of the Consumption Current view or dragging the scrollbar when the plugin is "Getting Consumption Current data" could cause the view to hang and no data to be displayed.</li> <li>When setting monitor points and opening the acquisition dialog, it was not possible to specify 'between monitor points'. This is now enabled before measurement. When the address is not fixed the monitor point will have the source file and line number to identify its position.</li> <li>It was not possible to remove multiple monitor points in one operation.</li> <li>The recently used find information is now synchronized between the combo box on the view and the find dialog.</li> </ul>
RH850 Debugging	RH850	RH850 P1x-C is now supported.
		Specifically the following devices are added:
		<ul> <li>P1H-C         <ul> <li>R7F701370AEEBG, R7F701371EABG, R7F701372EABG, R7F701396EABG</li> </ul> </li> <li>P1M-C         <ul> <li>R7F701373xABG, R7F701374xAFP, R7F701397xABG</li> </ul> </li> <li>P1L-C         <ul> <li>R7F701388, R7F701389, R7F701390, R7F701391</li> </ul> </li> </ul>
Debug Configuration	All	When launching the debugger in $e^2$ studio 6.2 the selected device in the debug configuration is now compared to that selected in the project. When these devices do not match it may cause problems and confusion when you are debugging.
		So in this case a warning message is now displayed informing you of this situation. You can then decide to cancel or proceed as normal.
Linux Debugging	RZ	It is now possible to attach to an already running process on the target board and then start a debugging session for this process. This is available via the "Attach Only" check box on the "Main" tab of the Debug Configuration.

#### Linux RZ Debugging

Files needed for debugging can now be transferred as part of the connection process. This can be done from the Debugger tab and specifically the "Downloads" sub-tab.

The user interface allows you to specify the file, the path on the host machine and the path to copy to on the target.

RL78 Debugging	RL78	New device groups have been added to e <sup>2</sup> studio: • RL78/G11(10pin/16pin)
		Updated group: • RL78/I1C:
		The following IO register has been moved from the SYSTEM module to OTHER module: MULBL[FFF3Ch] / MULBH[FFF3Eh] / MUL32UL[F0280h] / MUL32UH[F0282h] / MUL32SL[F0284h] / MUL32SH[F0286h] / MAC32UL[F0288h] / MAC32UH[F028Ah] / MAC32SL[F028Ch] / MAC32SH[F028Eh] / MULR0[F0290h] / MULR1[F0292h] / MULR2[F0294h] / MULR3[F0296h] / MULC[F029Ah] / MULST[F029Ah] / MACSF[F029Ah] /

MACOF[F029Ah] / MULFRAC[F029Ah] / MULSM[F029Ah] / MACMODE[F029Ah]

• RL78/G1D:

		• RL78/G1D:
		The following IO register has been added: P8[FFF08h] / P10[FFF0Ah] / P11[FFF0Bh] / P15[FFF0Fh] / PM8[FFF28h] / PM10[FFF2Ah] / PM11[FFF2Bh] / PM15[FFF2Fh]
		The following IO register has been removed: KRM[FFF37h] / MULA[FFFF0h] / MULB[FFFF2h] / MUL0H[FFFh4] / MUL0L[FFFF6h] / TEMPCAL0[F00ACh] / TEMPCAL1[F00ADh] / TEMPCAL2[F00AEh] / TEMPCAL3[F00AFh] / RMC[F00F4h] / PAENB[F00F4h] / WDVOL[F00F4h]
		The following IO register name has been changed: FRA2H -> DRA2H [F0203h]
		• RL78/G11
		The following IO register has been bit information added: TMR.TKBTRG0[F0412]
		• RL78/G10
		The version number has been updated. There are no other changes. E1.03a -> V1.03
RX Debugging	RX	The IO register related files have been updated for RX651 and RX65N.
Image view	All	The Raw Image rendering feature now supports new image formats:
		The view now also supports the Y10, Y12, Y14, Y16, Y12-UV8 image formats.
		Y10, Y12, Y14, Y16 image formats has been added into the Monochrome format group:
		Raw Image Format X
		Dimensions Width:
		Height: Encoding @ Monochrome: Tbpp ~
		O RGB:         1bpp Bbpp           O BGR:         16bpp (Y10) 16bpp (Y12)
		O YCbCr:     16bpp (Y14) 16bpp (Y16)       Line alignment:     4 bytes
		Start Position Top Bottom
		OK         Cancel

Y12-UV8 semi-planar image format has been added into the YCbCr format group:

e <sup>2</sup> Raw Image Forr	nat	×
Dimensions Width: Height:		
Encoding		
O Monochrome:	1bpp	$\sim$
O RGB:	32bpp (8:8:8:8)	$\sim$
O BGR:	32bpp (8:8:8:8)	$\sim$
YCbCr:	32bpp (Y12-UV8 semi-planar)	$\sim$
Line alignment:	32bpp (Y12-UV8 semi-planar) 24bpp (4:4:4 chunky) (y0, Cb, Cr)	
Start Position Top Bottom	24bpp (4:4:4 planar) (y0, Cb, Cr) 16bpp (4:2:2 chunky) (y0, y1, Cb, Cr) 16bpp (4:2:2 chunky) (Cb, y0, Cr, y1) 16bpp (4:2:2 chunky) (y0, Cb, y1, Cr) 16bpp (4:2:2 chunky) (y0, Cr, y1, Cb)	
?	16bpp (4:2:2 planar) (y0, y1, Cb, Cr) 12bpp (4:1:1 chunky) (y0, y1, y2, y3, Cb, Cr) 12bpp (4:1:1 planar) (y0, y1, y2, y3, Cb, Cr)	

#### Linker Script All Editor

The Linker script editor for GCC has been enhanced to include a visual representation of the linker script.

This should allow easier manipulation and editing of the script file. It is available from the "Graphical Editor" tab when opening an ".ld" file in the e<sup>2</sup> studio environment.

Clicking the "Arrow icons" expands and collapses the graphical interface to show section details.

There is no guarantee that the project once converted will build and operate perfectly. For a list of known issues with the conversion please see the latest open issue list <u>here</u>:

MISRA-C Settings	RX, RL	The MISRA-C plugin settings have been moved from the workspace location to the project location.
		This enables the settings to be shared among users of the same project.
Visual Expressions	All	The Visual Expressions plugin settings have been moved from the workspace location to the project location.
		This enables the settings to be shared among users of the same project.
Memory Usage	RZ	The memory usage view has been enhanced to support GCC ARM Embedded toolchain.

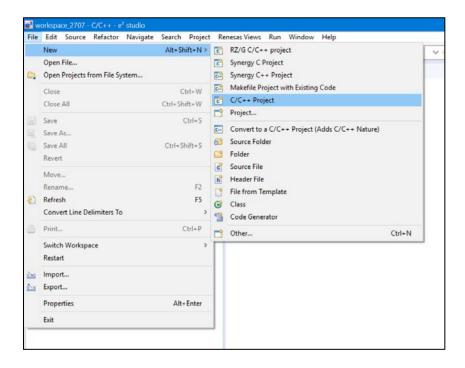

### 6. What is new in 6.0.0?

Note: This section is reserved for the new users migrated to 6.0/6.1 from 5.x or earlier versions of  $e^2$  studio.

Component	Device	Description
Project	All	The project generation tools in 6.0 have been revised and the look and
Generation		feel improved.

The new generator is accessed via the C/C++ Project.

The RZ/G project generator is accessed from the RZ/G C/C++ Project menu item in the same manner as 5.x.

The Synergy project generators are accessed from Synergy C Project or Synergy C++ Project in the same manner as 5.x.

When selecting the C/C++ Project wizard the following dialog is shown

esas Debug esas RL78	C Managed Build A C Project build using the CDT's managed build system.
esas RL78 esas RX	<ul> <li>A C Project build using the CDT 1 managed build system.</li> </ul>
esas RZ	C++ Managed Build
	A C++ Project build using the CDT's managed build system.
	GCC for Renesas RL78 C/C+ - Executable Project
	Gen. The A C/C++ Executable Project for Renesos RL78 using the GCC for Renesos RL78 Toolchain.
	GCC for Renesas RL78 C/C++ Library Project
	A C/C++ Library Project for Renesas RL78 using the GCC for Renesas RL78 Toolchain.
	GCC for Renesas RX C/C++ Executable Project
	A C/C++ Executable Project for Renesos RX using the GCC for Renesos RX Toolchain.
	GCC for Renesas RX C/C++ Library Project
	A C/C++ Library Project for Renesas RX using the GCC for Renesas RX Toolchain.
	GCC for Renesas RZ C/C++ Executable Project
	A C/C++ Executable Project for Renesas RZ using the GCC ARM Embedded toolchain.
	GCC for Renesas RZ C/C++ Library Project
	A C/C++ Library Project for Renesas RZ using the GCC ARM Embedded toolchain.
	Renesas CC-RL C Executable Project
	A C Executable Project for Renesas RL78 using the CCRL toolchain.
	Renesas CC-RL C Library Project
	A C Library Project for Renesas RL78 using the CCRL toolchain.
	Renesas CC-RX C/C++ Executable Project
	A C/C++ Project for Renesos RX using the Renesos CCRX toolchain.
	Renesas CC-RX C/C++ Library Project
	A C/C++ Library Project for Renesos RX using the Renesos CCRX toolchain.
	Renesas Debug Only Project
	Contra Renesas Debug Only Project
	6

Note the C Managed Build and C++ Managed Build types are default CDT projects. Please use the Renesas project types for the device you wish to use. There are separate entries for each device, toolchain and project type (Executable or Library) combination.

The actual wizard to create the projects also has an updated look and feel. The functionality provided is very similar to 5.x.

Toolchain Settin Language:	@ C ○ C++	
Toolchain:	Renesas CCRX ~	
Toolchain Versio		
	Manage Toolchains	
Device Settings		Configurations
Target Device:		Create Hardware Debug Configuration
200220	Unlock Devices	E1 (RX) ~
Endian: L	ittle ~	Create Debug Configuration
Project Type: E	lefault ~	RX Simulator 🗸 🗸
		Create Release Configuration

When the project is created all generated files are stored within the project in the "generate" folder. This is to make it clearer which files within the project were provided by the project generator.

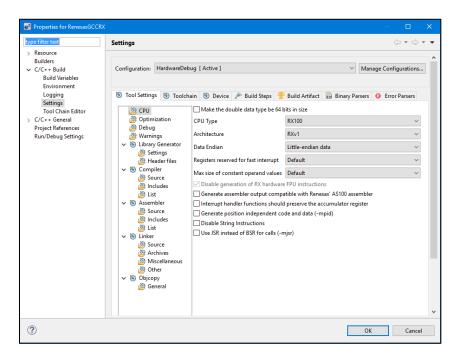

Revised	The builder components within e <sup>2</sup> studio 6.0 have been overhauled and
Builder	updated to work well with the latest CDT.
components	
·	The affected toolchains are CCRX, CCRL, GCC RX and GCC RL. For

The affected toolchains are CCRX, CCRL, GCC RX and GCC RL. For information on migration of old projects please see the useful information and workarounds section.

In addition the GCC ARM toolchain being used for RZ development has been migrated to now use the gnuarmeclipse open source plugins that are already in use for Synergy.

The new settings dialog are available from the C/C++ Build, Settings page within the project properties. See below:

The look and feel for each toolchain is similar to before but there are some considerations worth noting:

- 1. The Toolchain tab
  - This tab controls the selected toolchain and version. The "Change toolchain version" functionality present previous e<sup>2</sup> studio versions has been removed and replaced with this.
  - In addition extra tools such as "Objcpy" or "Libgen" can be enabled on this tab. When enabling the checkbox for the tools they will only then appear in the builder settings.

	Settings	0.1.0.1

- 2. The Device tab
  - Previous versions of e<sup>2</sup> studio had a special preference page for the currently selected device. This has been removed and an additional tab named "Device" has been added to the build settings.
  - Here it is possible to change the device, re-generate project generation files and update the build settings accordingly.

- 3. Linker section changes
  - For CCRX and CCRL the linker sections are represented as a single string. The section editor is not shown on the settings page. To access the graphical section editor press the "..." button.
  - For all GCC tools there is no longer a graphical section editor integrated into the settings user interface for the GCC build plugins.

 Instead it uses the .ld linker script directly. A special graphical editor of .ld files has been integrated within the e<sup>2</sup> studio. Simply double click the .ld file in the project and you can again edit the sections graphically.

#### 4. Renesas Quick Settings menu item

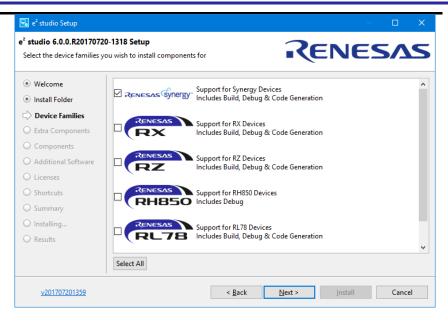

- In previous versions of e<sup>2</sup> studio there has been a menu named "Renesas Quick Settings".
- This menu item used to take you directly to the build settings for the selected project.
- This functionality cannot be implemented in e<sup>2</sup> studio 6.0 so the menu item has been removed.

Installer All The e<sup>2</sup> studio product structure has been enhanced so that each device can be installed in its own independent way.

Each device's support is versioned independently from the main 6.0 product. It means that updates to one device will not affect the other devices.

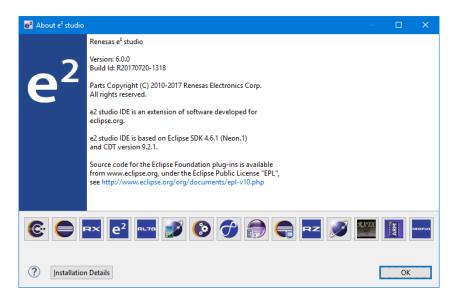

The installer allows you to select this at installation time.

The above example shows a user only installing the Synergy device family. Subsequent updates of other device families will not affect this installation unless the main core of the product is also updated.

To see the version of your installed device feature you can visit the About Box.

Clicking on the device will give the installed versions of components for this device. e.g. In the example below RX was clicked:

Provider	Feature Name	Version	Feature Id

This version information will be valuable if you need to discuss problems you encounter with Renesas technical support contacts.

Updated user interface	All	Some changes have been made to the e <sup>2</sup> studio 6.0 user interface to improve the usability of the user interface. The most major improvement is the introduction of the Launch Bar.						
		<u>File Edit Source Refactor Navigate Search Project Renesas Views Run W</u> indow <u>H</u> e						
		K 📕 k Debug v E Synergy_Test Debug v 🄅						
		This launch bar allows you to very clearly understand what will happen when the build and debug buttons are pressed. The selected project and debug configuration in the drop list will provide the context for the operation. In addition the debug toolbar buttons have been switched off from the debug view and added to the main debug toolbar.						
RZ Semi hosting	RZ	When using the RZ debugger in previous e <sup>2</sup> studio semi hosting was supported but did not fully support the SYS mode. This mode of operation is now supported in the e <sup>2</sup> studio 6.0 RZ debugger when using the Segger J-link emulator.						

Smart Browser	All	The Smart Browser has been enhanced to show when updates are available for items shown within the user interface.

XML Comparison	Synergy and RX, RZ	e <sup>2</sup> studio now has a XML file comparison tool built i be used for the configuration.xml files in the Synerg Smart Configurator.				
				paris		

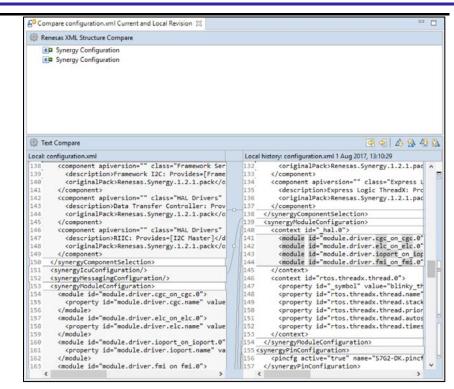

The following dialog is then displayed:

🕹 📚 🛃 🖧 📲 🖻 🖻 🚰 🔍 🗆

These are the list of revisions of the file that was selected in the project tree. Double clicking an instance of the file will then compare with the current version on disk. A difference window is shown showing the differences:

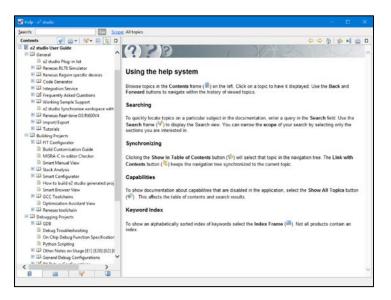

Help System

All

The help system in previous versions of e<sup>2</sup> studio was not well organised which meant finding topics was not easy.

In  $e^2$  studio 6.0 the help has been re-structured to make it easier to find what you are looking for. See below:

 Smart
 RX, RZ
 The main feature improvements for Smart Configurator in e<sup>2</sup> studio 6.0 include:

 • Code Generator driver support for RX64M [37 components]

CG driver support for RX65N/1 (+2MB devices) [37 components]

		<ul> <li>CG driver support for RX130 (+512KB devices) [35 components]</li> </ul>
2 Emulator	RL78	E2 emulator support has been added to $e^2$ studio 6.0. This emulator offers all the same functions as the E1 emulator.
		It also offers:
		<ul><li>Consumption current measurement support.</li><li>External trigger support.</li></ul>
		The Consumption current measurement shows graphically the current drawn by the board.
		It allows monitor points to be set which are shown on this view as markers. This allows you to tie the source code to specific power consumption.
		Image: Consumption Current 12         Im
Application	All	<ul> <li>e<sup>2</sup> studio has many debug views and not all are supported for all device families.</li> <li>This can cause confusion so a new feature has been added to close debug views that are not supported by the current debug session.</li> </ul>
		This is available from the Window menu under the Perspective menu. Selecting the device will close all windows not supported by that device.

Note this menu item is only available in the debug perspective.

### 7. Useful workarounds and information for 6.2.0

Please visit the Renesas FAQ for **e**<sup>2</sup> studio for the latest up to date information:

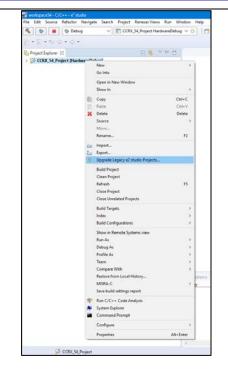

Online FAQ link.

Component	Workaround or information
Application	This version of e <sup>2</sup> studio is based on Eclipse Neon.1 and CDT 9.2.1. This release note does not describe the Eclipse framework and CDT plugin issues and fixes. You can find the detailed information on the sites below:
	For information on the Neon release see here: <u>https://projects.eclipse.org/releases/neon</u>
	CDT: Has been significantly improved and this version contains a major version up over 5.4: Please see New and Noteworthy for CDT here:
	https://wiki.eclipse.org/CDT/User/NewIn90 https://wiki.eclipse.org/CDT/User/NewIn91 https://wiki.eclipse.org/CDT/User/NewIn92
	The Eclipse bug tracker is here: https://bugs.eclipse.org/bugs/
SH support	The Renesas SH device family is no longer supported in e <sup>2</sup> studio.
	If you need to use the SH device support please use $e^2$ studio 5.4 or earlier.
Importing old projects into 6.x	All projects being migrated into e <sup>2</sup> studio 6.0 from previous e <sup>2</sup> studio versions were need to be migrated to the new builder plugins. The new builder plugins have different user interface pages and different option IDs.
	Upon opening an older workspace the following dialog would be displayed:
	e <sup>2</sup> Older Workspace Version
	Workspace '/C:/Users/b3800109/e2_studio/workspace54/' was written with an older version of the product and will be updated. Updating the workspace can make it incompatible with older versions of the product.
	Are you sure you want to continue with this workspace?
	Do not warn again about workspace versions

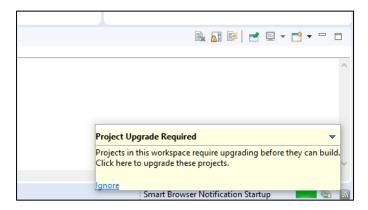

Importing an existing project to the workspace or opening a workspace with old projects will automatically start the legacy project upgrade procedure.

If for some reason this process does not start it is also possible to launch the "Upgrade Legacy of e2 studio Projects..." from the project context menu.

The automatic system pops up a message bubble in the bottom left of the  $e^2$  studio application window.

After selecting the menu item or clicking the bubble the following dialog will be shown:

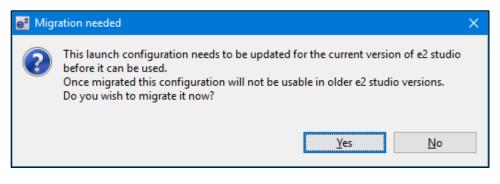

e <sup>2</sup>		—		×
Upgrade Legacy e2 studio Projects				
8 You must select at least 1 project				
🔲 🖉 CCRX_54_Project [HardwareDebug]				
?	<u>F</u> inish		Cancel	

To upgrade the project, click the corresponding check box and then click Finish. Note, this will update the project to the latest build plugins and options. Before doing this you should ensure your project is backed up as this operation is not reversible.

It is possible to upgrade multiple projects in a single operation.

For the GCC toolchains for RX ,RL and GNUARM-NONE have been made to the build options which mean we cannot guarantee the same binary output after upgrade. Please consider this before upgrading to 6.0.

Another consideration for migration is that debug configurations when opened in 6.0 will also need to be migrated. The following message will be displayed.

Please ensure that your projects are backed up or in revision control before migration allowing you to return to older versions if required.

Toolchain Before e<sup>2</sup> studio 6.0 the toolchain management facility automatically upgraded or downgraded the imported project to the latest tools installed on the host machine.

This no longer happens in  $e^2$  studio 6.0. Instead the toolchain remains the same and user operation is the only way to change the toolchain version.

This operation is now available within the build settings on the toolchain tab. An example of CCRX is shown below:

Properties for CCRX_54_Project	t – □ X
type filter text	Settings 🗢 🖛 🖒 👻 🖛
<ul> <li>Resource</li> <li>Builders</li> <li>C/C++ Build</li> <li>Build Variables</li> <li>Environment</li> </ul>	Configuration: HardwareDebug [ Active ]
Environment Logging Settings Tool Chain Editor > C/C++ General Project References Run/Debug Settings	Tool Settings Toolchain Device Pauld Steps Puild Artifact Binary Parsers O Error Parsers          Current Toolchain         Toolchain:         Toolchain:         Toolchain:         Toolchain:         Toolchain:         Toolchain:         Version:         V2.06.00
?	OK Cancel

If the particular toolchain version does not exist and build is performed then an error message is displayed and the build will fail.

RZ Toolchain The now legacy KPIT GNU ARM-NONE toolchain is still supported within the e<sup>2</sup> studio product but now using the gnuarmeclipse plugins.

In addition RZ within e<sup>2</sup> studio now supports the GNU ARM Launchpad toolchain. Available from <u>https://launchpad.net/gcc-arm-embedded</u>.

One drawback of this toolchain is that it does not have a standard library builder provided in the same manner as the legacy KPIT ARM-NONE toolchain. To use this feature for ARM Launchpad and gain access to the more efficient optlib libraries a further download is required.

This can be downloaded within the e<sup>2</sup> studio installer or directly from here: <u>https://gcc-renesas.com/rz/rz-download-toolchains/</u>

Once integrated it is possible to integrate the library generator from the toolchain tab of the build settings page.

RENESAS

		The system environment will attempt to find the make.exe tool via the system environment. If you ensure the directory make resides in is at the start of the path variable it will find it more quickly. Especially important if there are network drives in the path. In the project properties, C/C++ Build tab, behavior tab you can switch on
		parallel build. This will take advantage of the multi-cores on your host machine if it has them.
NA	RZ GCC	In 3.0 the KPIT GCC RZ toolchain was supported at version 14.01. This version is no longer supported within e <sup>2</sup> studio.
		KPIT modified the name of their ARM toolchain to be ARM-none-eabi to follow standard ARM naming convention like other GCC toolchain vendors.
		The ARM-none toolchain is available at versions 14.01, 14.02 and 16.01 from the www.gcc-renesas.com website. The binaries in the 14.01 version are identical to those used in the 14.01 RZ toolchain.
		Once the toolchain is installed your projects will be imported and ported to ensure there is as little disruption as possible due to this change.
NA	KPIT GCC	The KPIT toolchains are now no longer supported by the www.kpitgnutools.com website. Support is now available from the www.gcc-renesas.com website.
		In addition, there are two new releases for the GNU toolchains for RX and RL78. These are now named Renesas GCC for RX and Renesas GCC for RL78.
		Both integrate into e <sup>2</sup> studio and can be selected from the project wizard.
2010	HEW Importer	Symptoms: Project fails to build after importing a legacy project from HEW
		Conditions: If a long filename or path is used, and the HEW project importer is used, the project may fail to build.
		Workaround: Move the original HEW project to a shallow directory structure (i.e.) C:\Workspace and import from there. Also, ensure that the HEW project is relocated before importing into e <sup>2</sup> studio.
1922	Application	Symptoms: Project fails to build in first instance after archive project import (not from HEW)
		Conditions: If an archived project is imported, it may fail to build the first time, due to a residual .d file.
		Workaround: Clean and Build a second time.

e² stud	lio 6.2.0	Release Note
6184	RL78/CC-RL debugging	When the load module for RL78/G10 which created at CC-RL is debugged in E1, please specify the following option:
		[Linker] -> [Device] -> "Set enable/disable on-chip debug by link option
7217	Application	The restore default settings does not restore all of the options set during project generation. Instead, it sets the defaults to the base settings for the device family in use.
7524	RZ/T1	In a RZ/T1 RAM-based project, the "Reload" function does not work.
	Debugging	Reloading or re-downloading during debugging resets the device and the RAM content is erased.
		To continue the debugging, disconnect and connect the debugger again.
	Use spaces as tabs	Eclipse and CDT both have settings for use spaces as tabs. The option on the Editor preferences page conflicts with the CDT formatter settings.

To change the use spaces as tabs option in e<sup>2</sup> studio please use this page:

	Installer problems	In some situations, the AVG virus checker appears to interfere with the e <sup>2</sup> studio installation process. If you experience such a problem, please temporarily disable the AVG tool and try the installation again.
	Antivirus	In some situations, the Norton anti-virus tool can interfere with the building of Renesas Synergy projects. If possible, please disable the antivirus program when building Renesas Synergy projects on systems with Norton Antivirus installed.
	Green Hills RH850 Projects	When debugging the RH850 object built with the Green Hills compiler in e2 studio, specify the following option for the compiler option. -gtws
		The GUI setting menu is as follows.
		[GHS C Compiler for V800 Standalone]-[Debugging Option]
		"Generate Target-Walkable Stack" -> On
		If this option is not specified, Step Over and Step Return may not work properly.
17052	Debugging	When debugging using a project with duplicate filenames that are located in different source folders problems can be seen with breakpoint setting.
		When a breakpoint is set at a source line in this file it will also stop at the same source line in the other same named file when execution passes through.
18505	RZ debugging	When debugging with RZ/T1 in certain situations you may experience problems stepping:

RENESAS

	If the following conditions are met:
	<ol> <li>Code is located close to address 0x0</li> <li>There is very little library code included into the project</li> <li>There are unused functions in the program</li> </ol>
	The possibility arises that the code cannot be debugged. This due togc- sections linker option which removes the unused functions but not the related debug information.
	There are several solutions to this problem: a. disablegc-sections until those functions are used b. remove the unused functions
RZ GCC Build	In 6.2 the RZ import functionality has been improved. However there is still possibilities of older projects causing problems when imported into e <sup>2</sup> studio 6.2.
	In older versions of the RZ build plugins the FPU option was not being handled correctly. When setting the "Soft" Floating point ABI the command line was still receiving –mfpu=vfpv3 incorrectly. This can now cause problems with older start-up code in older RZ projects.
	After import if you see an error relating to this please add –mfpu=vfpv3 to the "Other Assembler Flags" page of the Assembler tool.
RZ DS-5 Project Import	When a DS-5 project is imported into e <sup>2</sup> studio the environment variables for Path and TCInstall are copied from the DS-5 environment.
	This is not correct. The way to correct this problem is to delete both of these paths and replace them with correct values to your toolchain. If you are unsure how to correct this please create a new project and copy the values from this to the converted project.
RX & RL78 GCC Project Import	When importing a KPIT RL78/RX Library C/C++ project from e <sup>2</sup> studio 5.4 or before the build artifact settings are not correct.
·	The output prefix should be set to "lib" but is in fact empty.
RZ Assembler build	Assembler object files with the extension ".s" or ".asm" are assembled to ".obj" correctly but not linked when using the RZ assembler tool.
	Files with the extension ".src" are managed correctly.

# 8. Open Issues in 6.2.0

Open issues in the e<sup>2</sup> studio 6.2 product will be kept up to date <u>here</u>:

#### Notice

- 1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
- Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
- 3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
- 4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
- 5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
  - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc. Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.

- 6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
- 7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and malfunction of the final products or systems manufactured by you.
- 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
- 9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
- 10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
- 11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics
- 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
