

RZ/V2L, RZ/V2M, RZ/V2MA AI IMPLEMENTATION GUIDE Darknet YOLO

REV.7.20

SEPTEMBER 2022

RENESAS ELECTRONICS CORPORATION

R11AN0620EJ0720

Overview

This document explains the contents of AI Implementation Guide Get Started document with [YOLOv3](#), [YOLOv2](#), [Tiny YOLOv3](#) and [Tiny YOLOv2](#) pre-trained model provided by Darknet framework (hereafter, [Darknet YOLO](#)).

Please read Get Started document in advance.

This document uses following documents and files.

Name	Filename	Details
Get Started Document	r11an0616ej0720-rzv-ai-imp-getstarted.pdf	Document for guiding how to make AI Implementation Guide environment and how to develop AI application.
Get Started Source Code	rzv_ai-implementation-guide_ver7.20.tar.gz	Source code used throughout the overall AI Implementation Guide.
Document for Darknet YOLO	r11an0620ej0720-rzv-ai-imp-yolo.pdf	This document. Document for guiding the instruction for Darknet YOLO model.
Source Code for Darknet YOLO	darknet_yolo_ver7.20.tar.gz	Source code and example output used in the Document for Darknet YOLO.

Flow of Guide

Program made in the Step

Output of previous step

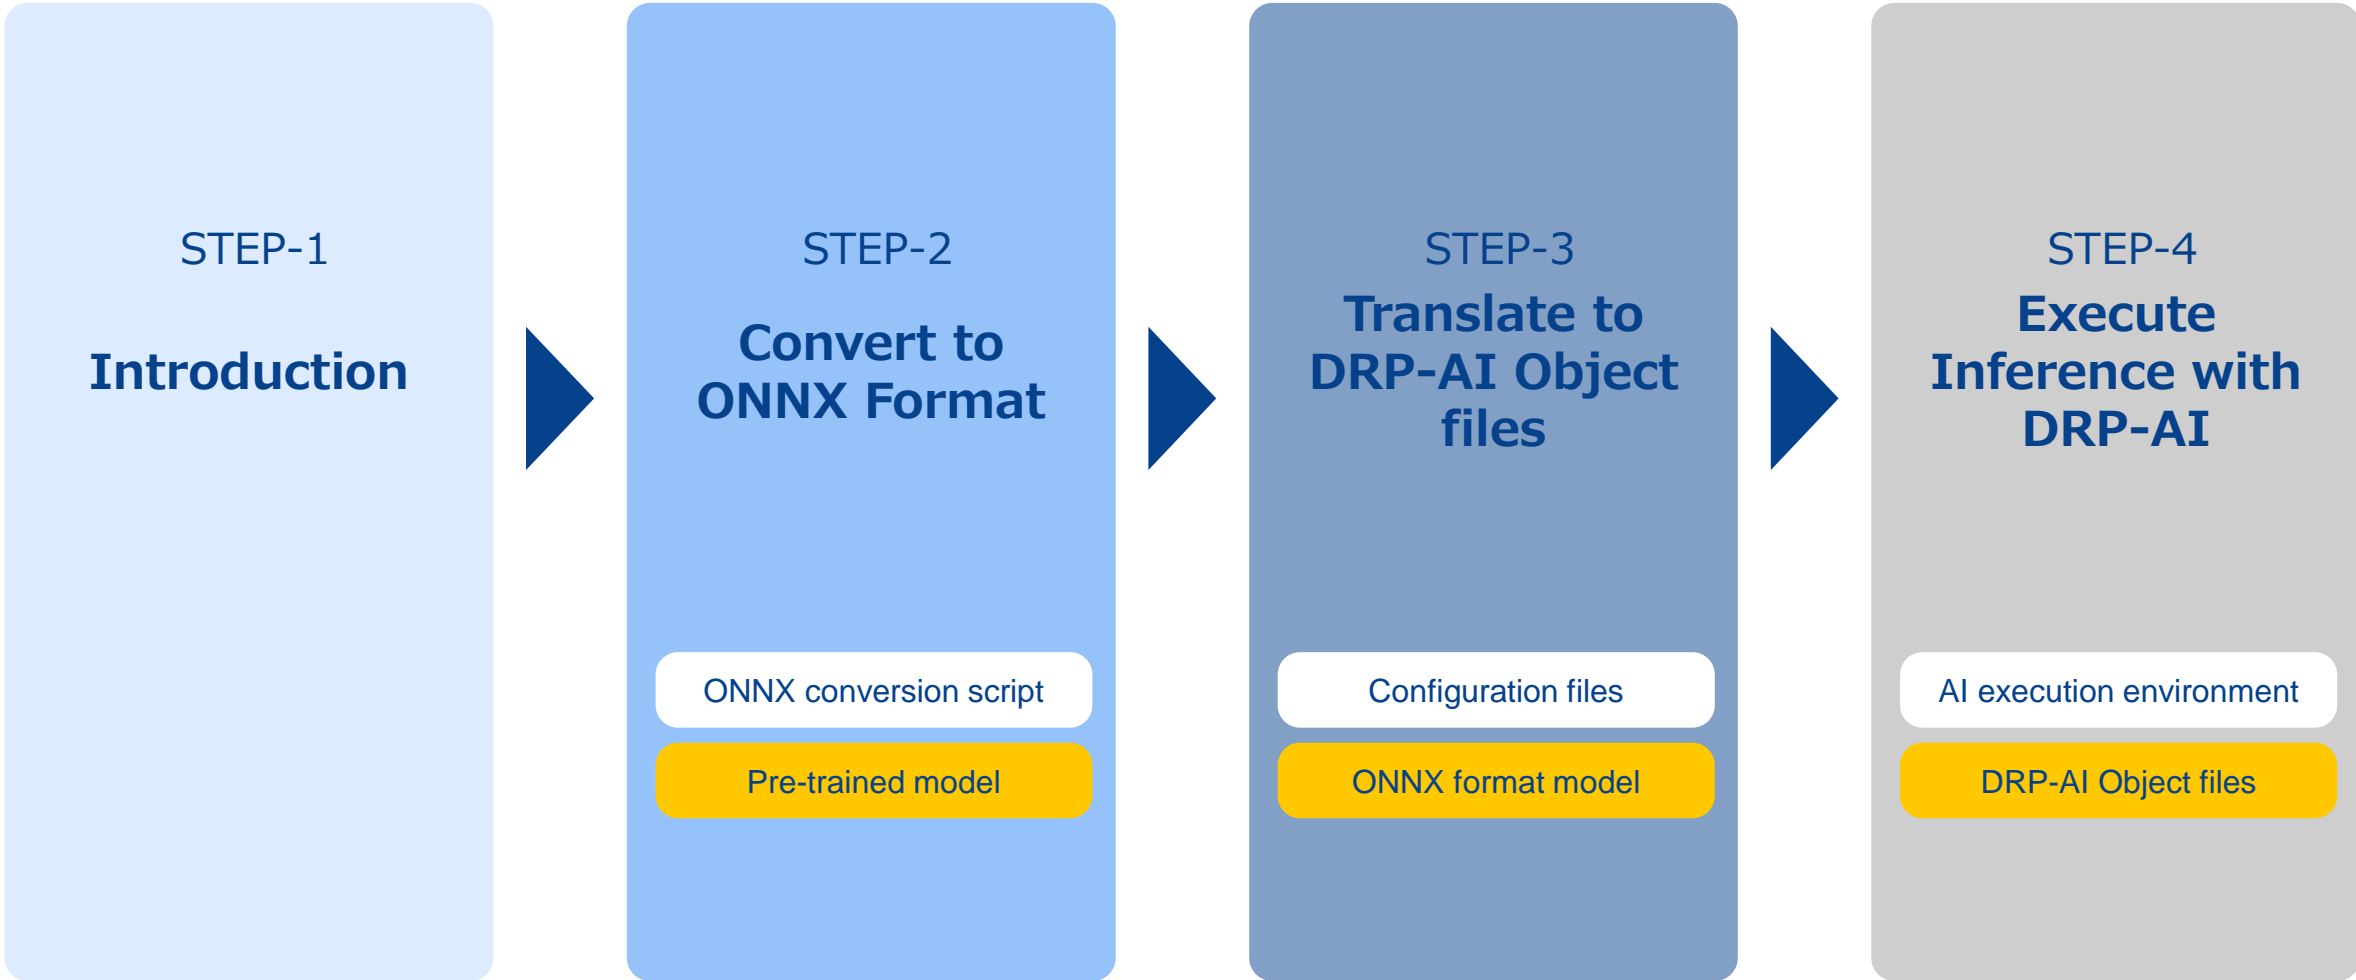

Table of Contents

STEP-1 Introduction

- Neural Network
- AI Framework
- Necessary Environment
- Necessary Files

STEP-2 Convert to ONNX Format

- 2.1: Convert to ONNX Format
- 2.2: Make the ONNX Conversion Environment
- 2.3: Prepare the Necessary Files
- 2.4: Convert AI Model to ONNX Format

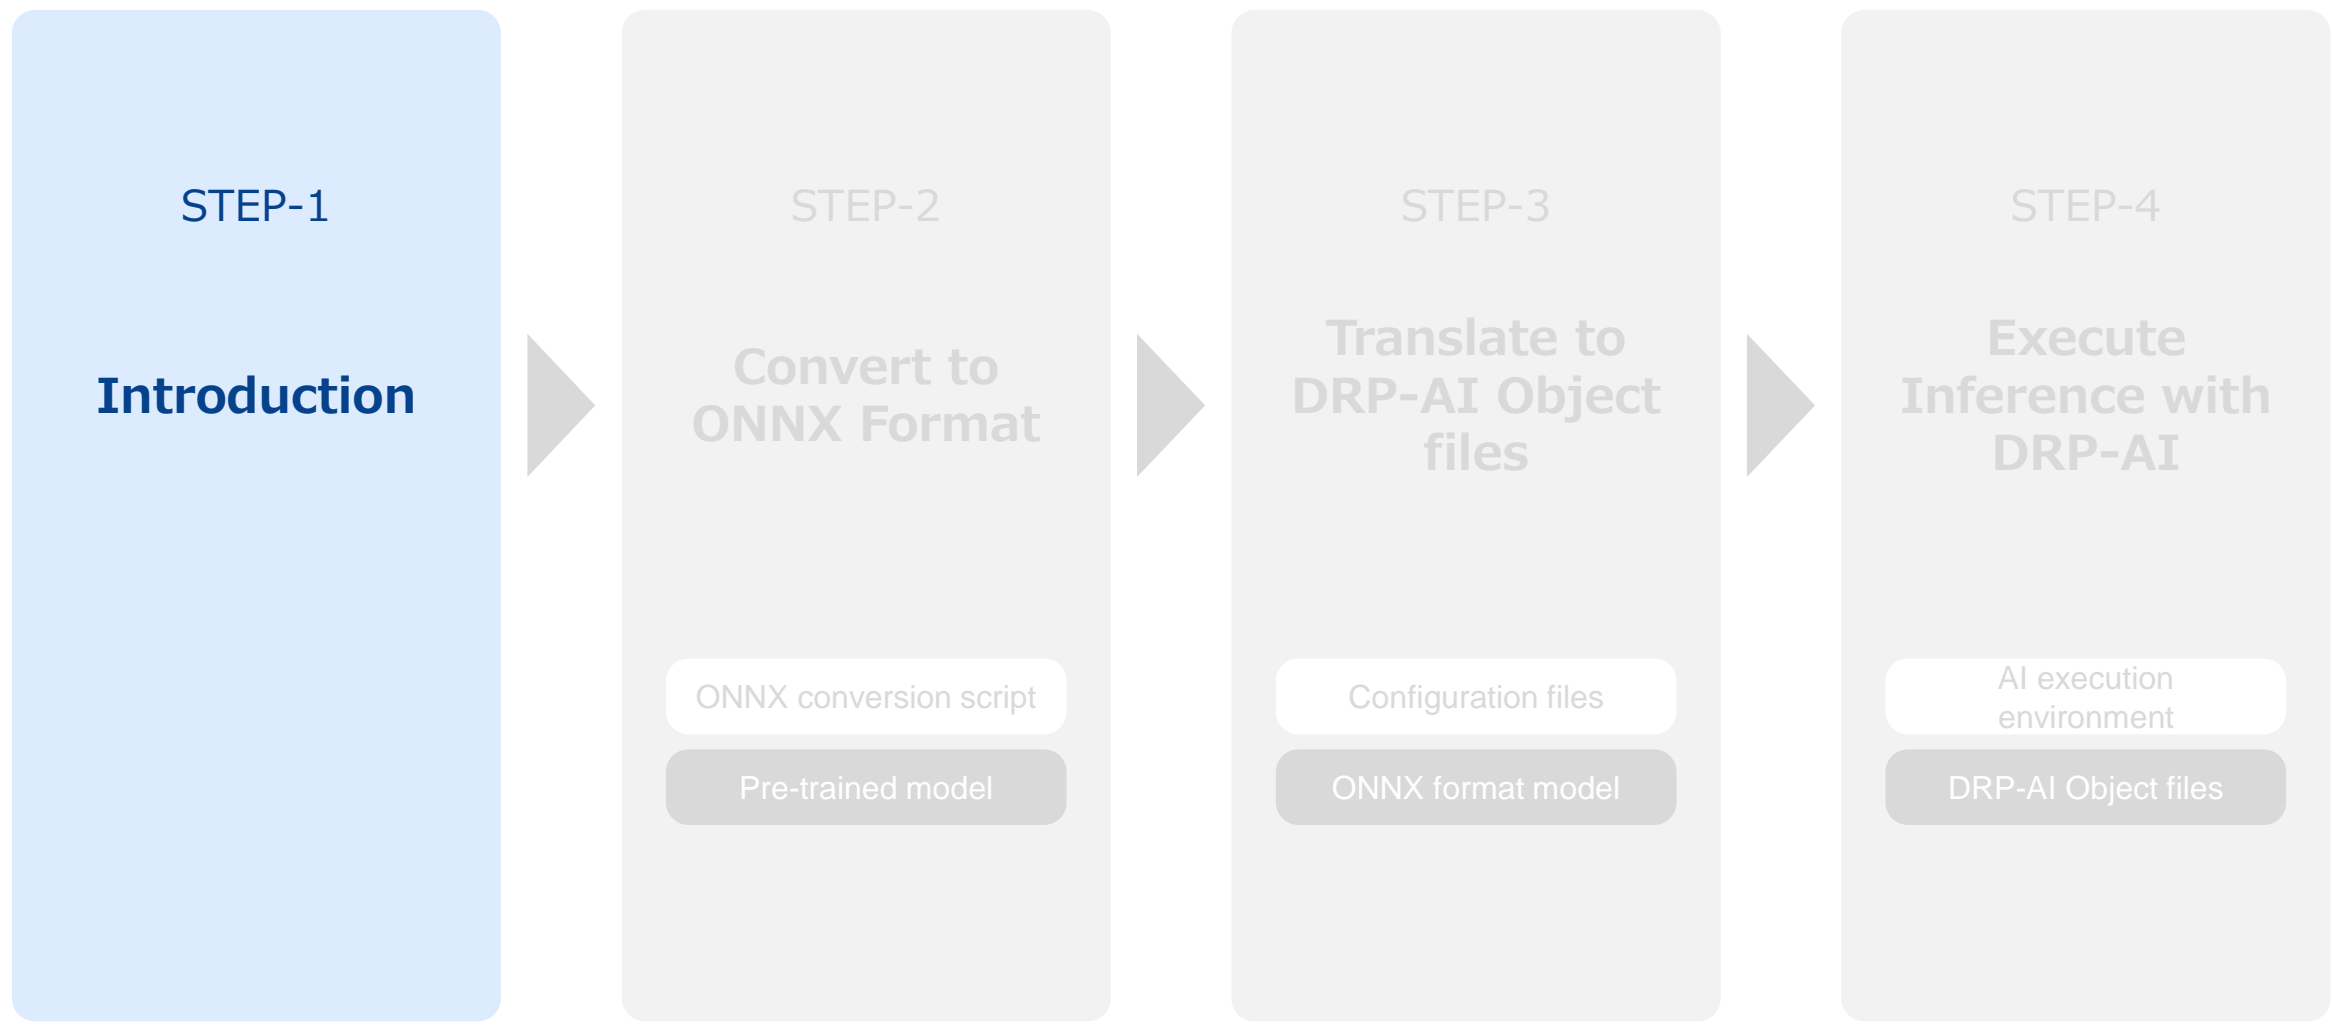

STEP-3 Translate to DRP-AI Object files

- 3.1: Make the DRP-AI Translator Environment
- 3.2: Check the File Configuration
- 3.3: Prepare the ONNX File
- 3.4: Prepare the Address Map Definition File
- 3.5: Prepare the Pre/Postprocessing Definition File
- 3.6: Translate the Model Using DRP-AI Translator
- 3.7: Confirm the Translation Result

STEP-4 Execute Inference with DRP-AI

- Execute Inference with DRP-AI

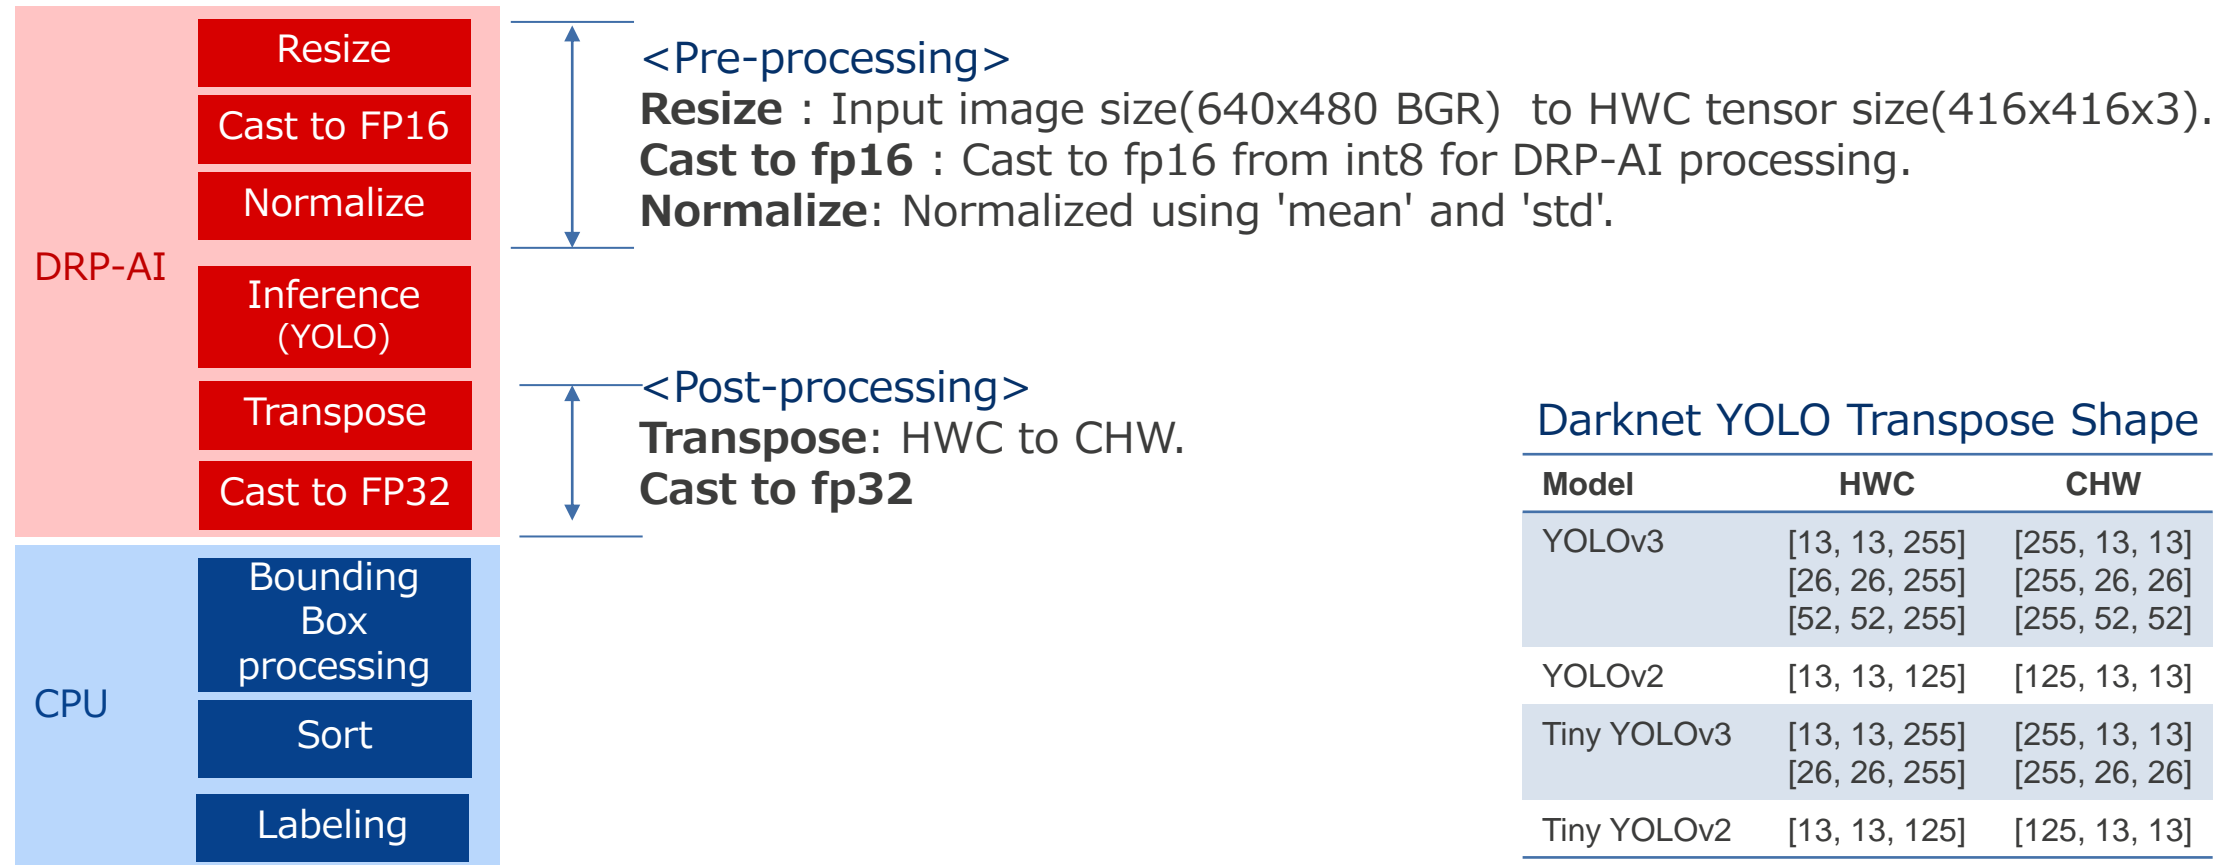

Program made in the Step
Output of previous step

[Reference] YOLO on DRP-AI

Following is the example of YOLO model inference on DRP-AI. The input image is 640x480 in BGR.

Operators that are not supported by DRP-AI need to be computed by CPU.

STEP-1

STEP-2

STEP-3

STEP-4

[Reference] Darknet

This document uses pre-trained model provided by Darknet framework.

Darknet implements the YOLO network by C language and has not only the training functions and inference functions, but also the pre-trained model and mAP (accuracy) functions.

For more details of Darknet, please refer to the Darknet official site (<https://pjreddie.com/darknet/yolo>).

However, Darknet does not contain ONNX conversion function. Therefore, this guide will prepare the ONNX format model for the DRP-AI Translator from the Darknet Pascal VOC Dataset pre-trained model by using the PyTorch ONNX conversion functionality.

STEP-1

STEP-2

STEP-3

STEP-4

[Reference] PyTorch

Since PyTorch has the pre-trained model and the onnx conversion function (torch.onnx) as well as the training functions, it is easy to convert the PyTorch model into the ONNX format model.

Please refer to the PyTorch official document (<https://pytorch.org/docs/1.12/>) to learn more about the various features of PyTorch.

Necessary Environment

Following are the necessary environment for each STEP.

See the Get Started Document for how to build the environment.

Note: This document uses Darknet pre-trained model, which does not require Darknet framework. Instead, we use PyTorch framework for ONNX conversion.

2.1: Convert to the ONNX Format

Darknet framework provides the pre-trained model structure and its weight parameter.

This chapter will explain the contents of Get Started Document "STEP-2 Convert to the ONNX Format" with YOLO model provided by Darknet framework.

Since Darknet does not have ONNX conversion function, this document will convert Darknet into PyTorch format first, and then convert it to the ONNX format.

2.4 Convert to ONNX

STEP-3

STEP-4

2.2: Make the ONNX Conversion Environment

This section will explain the instruction with the following assumption

- Constructed the ONNX conversion environment according to Get Started Document "[STEP-2.2: Make the ONNX Conversion Environment](#)".

Please check the following item.

1. Confirm the environment variable is registered properly. **Green is the environment variable.**

```
$ printenv WORK
```

If displayed as follows, the variable is correctly set.

```
<path to the working directory>/rzv_ai_work
```

STEP-1

STEP-2

2.1 Overview

2.2 Make Environment

2.3 Necessary Files

2.4 Convert to ONNX

STEP-3

STEP-4

2.3: Prepare the Necessary Files

This section will explain the instruction with the following assumption

- Extracted the necessary files according to Get Started Document "[STEP-2.3: Prepare the Necessary Files](#)".

Please run the following commands to prepare the necessary files for this document.

1. Move to the working directory. **Green is the environment variable.**

```
$ cd $WORK
```

2. Extract tar.gz file under the working directory.

```
$ tar xvzf <File path>/darknet_yolo_ver7.20.tar.gz -C $WORK
```

3. Check the working directory.

```
$ ls $WORK
```

If displayed as follows, the package is correctly extracted.

```
drpai_samples  darknet
```

"drpai_samples" includes sample codes and example output of DPR-AI Translator.

"darknet" includes PyTorch sample code for Darknet model.

2.2 Make Environment

2.3 Necessary Files

2.4 Convert to ONNX

STEP-3

STEP-4

2.4: Convert AI Model to ONNX Format

File format of Neural Network model differs depending on Deep Learning framework.

Since Darknet does not have ONNX conversion function, this document will convert Darknet into PyTorch format first, and then convert it to the ONNX format.

The flow of ONNX conversion for Darknet Neural Network model will be as follows.

*1 PyTorch, the PyTorch logo and any related marks are trademarks of Facebook, Inc.

Darknet provides pre-trained Neural Network structure and its weight parameter.

We will convert these files to PyTorch format, and then convert it to ONNX format.

- STEP-1
- STEP-2
 - 2.1 Overview
 - 2.2 Make Environment
 - 2.3 Necessary Files
 - 2.4 Convert to ONNX
- STEP-3
- STEP-4

2.4: Convert AI Model to ONNX Format

As explained in the Get Started Document "STEP-2.4: Convert AI Model to ONNX Format", to convert AI model to ONNX format, NN model structure and its weight parameter are required.

- STEP-1
- STEP-2
 - 2.1 Overview
 - 2.2 Make Environment
 - 2.3 Necessary Files
 - 2.4 Convert to ONNX
- STEP-3
- STEP-4

*1 PyTorch, the PyTorch logo and any related marks are trademarks of Facebook, Inc.

This document will convert Darknet model structure and weight parameter to PyTorch format and convert it to ONNX format using the following PyTorch function.

```
torch.onnx.export(model, ...)
```

ONNX tutorials: <https://github.com/onnx/tutorials>
PyTorch official tutorial: https://pytorch.org/tutorials/advanced/super_resolution_with_onnxruntime.html

For more details, please refer to the PyTorch and ONNX official website.

2.4: Convert AI Model to ONNX Format

This guide will use the following scripts to convert YOLO model provided by Darknet into ONNX format.

Note: All scripts are included in the darknet_yolo_ver7.20.tar.gz.

Name	Filename	Source	Usage
Darknet YOLO model structure and configuration	*.cfg	Darknet yolov3: https://github.com/pjreddie/darknet/blob/master/cfg/yolov3.cfg yolov2: https://github.com/pjreddie/darknet/blob/master/cfg/yolov2-voc.cfg tinyyolov3: https://github.com/pjreddie/darknet/blob/master/cfg/yolov3-tiny.cfg tinyyolov2: https://github.com/pjreddie/darknet/blob/master/cfg/yolov2-tiny-voc.cfg

PyTorch-ONNX conversion

ONNX

*1 PyTorch, the PyTorch logo and any related marks are trademarks of Facebook, Inc.

2.4: Convert AI Model to ONNX Format

When running the conversion script, please specify the name of model as shown below with BLUE.

Note: If not specified, YOLOv3 model will be selected by default.

```
$ python3 convert_to_*.py yolov3
```

Parameter	Model
yolov3	YOLOv3 (Default)
yolov2	YOLOv2
tinyyolov3	Tiny YOLOv3
tinyyolov2	Tiny YOLOv2

- STEP-1
- STEP-2
 - 2.1 概要
 - 2.2 環境構築
 - 2.3 必要ファイル
 - 2.4 ONNX変換
- STEP-3
- STEP-4

The conversion script load the filename and parameters listed in *yolo.ini* file and use them in the conversion. Please write the parameters to the *yolo.ini* file as shown below.

Parameter	Details
cfg	Darknet YOLO model structure and configuration filename (*.cfg)
weights	Darknet YOLO model parameter (weight) filename (*.weights)
pth	Intermediate PyTorch format weight filename. Specify any arbitrary name.
input	Input layer name of ONNX model (Will be used in STEP-3)
output	Output layer name of ONNX model (Will be used in STEP-3)
onnx	ONNX model filename, which will be generated after conversion. Specify any arbitrary name.

```
<yolo.ini>
1 [yolov3]
2   cfg      =yolov3.cfg
3   weights  =yolov3.weights
4   pth      =yolov3.pth
5   input    =["input1"]
6   output   =["output1", "output2", "output3"]
7   onnx     =d-yolov3.onnx
8
9 [yolov2]
10  cfg      =yolov2-voc.cfg
11  weights  =yolov2-voc.weights
12  :
13
```

<ONNX conversion env.>

PyTorch

1. Convert from Darknet to PyTorch

2. Prepare the Darknet-PyTorch conversion script. If STEP-2.3 are executed, the script is in the following location

Path: `$WORK/darknet/yolo/convert_to_pytorch.py`

```
<convert_to_pytorch.py>
:
11 def convert(darknet_cfg_path, darknet_weights_path, save_model_path, model):
12     # Load cfg file
13     cfg = DarknetConfig(darknet_cfg_path)
:
76     # Save pth file
77     torch.save(model.state_dict(), save_model_path)
78
79 if __name__ == '__main__':
80     # Load YOLO neural network parameters
81     ini = IniFile("yolo.ini")
82     model_dict = ini.model_dict
:
91     # Get the model information
92     model_params = ini.architecture[model_dict[model_name]].params
93
94     # Load YOLO neural network structure
95     model = yolo.Yolo(model_params.get('cfg'))
96     # Convert Darknet to PyTorch
97     convert(model_params.get('cfg'), model_params.get('weights'), model_params.get('pth'), model)
```

Get the model structure

2.4: Convert AI Model to ONNX Format

Darknet-
PyTorch

PyTorch¹¹

¹¹ PyTorch, the PyTorch logo and any related marks are trademarks of Facebook, Inc.

<ONNX conversion env.>

2. Move to the ONNX conversion working directory.

```
$ cd $WORK/darknet/yolo
```

3. Run the script to convert from Darknet YOLO model to the *pth* file (PyTorch format).

Following command is for YOLOv3 model conversion. **BLUE** is the conversion target model name.

```
$ python3 convert_to_pytorch.py yolov3
```

If displayed as follows without any errors, the script is succeeded.

```
...  
REST 0
```

4. Check that *pth* file is generated under *darknet* directory.

```
$ ls $WORK/darknet/yolo
```

Please confirm that *pth* file exists as follows.

Here, YOLOv3 model has been converted, therefore *yolov3.pth* is generated.

```
convert_to_pytorch.py convert_to_onnx.py yolov3.pth
```

STEP-4

3.5: Prepare the Pre/Postprocessing Definition File

It is easier to make the pre/postprocessing definition file based on the sample file included in DRP-AI Translator.

The sample file is under the *UserConfig/sample* directory.

Pre/postprocessing for Darknet YOLO is similar to the definition stated in the *prepost_tiny_yolov2.yaml*. Modify this file to prepare the pre/postprocessing definition file for Darknet YOLO.

NOTE:

Please store all customized yaml files under the *UserConfig* directory

1. Copy *prepost_tiny_yolov2.yaml* to the *UserConfig* directory.

```
$ cd $DRPAI/UserConfig
```

```
$ cp -v ./sample/prepost_tiny_yolov2.yaml ./
```

3.7 Result

STEP-4

3.5: Prepare the Pre/Postprocessing Definition File

Since DRP-AI Translator finds the pre/postprocessing definition file based on the ONNX file name, rename the sample pre/postprocessing definition file.

d-yoloV3.onnx
↙
prepost_d-yoloV3.yaml

2. Rename *prepost_tiny_yolov2.yaml* to *prepost_d-yolov3.yaml*.

```
$ cd $DRPAI/UserConfig
```

```
$ mv -v ./prepost_tiny_yolov2.yaml ./prepost_d-yolov3.yaml
```

3.5: Prepare the Pre/Postprocessing Definition File

Each Darknet YOLO model has its own output format.

Please change the `output_from_body` and relative items in pre/postprocessing definition file according to the table below.

For other items, follow the instructions explained in this chapter.

Model	name	shape (HWC)
YOLOv3	output1	[13, 13, 255]
	output2	[26, 26, 255]
	output3	[52, 52, 255]
YOLOv2	output1	[13, 13, 125]
Tiny YOLOv3	output1	[13, 13, 255]
	output2	[26, 26, 255]
Tiny YOLOv2	output1	[13, 13, 125]

Note: "name" is defined when it is converted to the ONNX format in STEP-2.

3.5: Prepare the Pre/Postprocessing Definition File

prepost_tiny_yolov2.yaml included in DRP-AI Translator is defined as shown in the left figure.

This section will explain how to rewrite the pre/postprocessing definition file for YOLOv3 of Darknet shown in the right figure, which includes the modification of input data format from YUV to BGR.

STEP-4

3.5: Prepare the Pre/Postprocessing Definition File

<For YOLOv3 of Darknet>
prepost_d-yolov3.yaml

Following items need to be rewritten to change the format based on the left figure.

- (1) Change the number of model output data to 3.
- (2) Set the input/output name of the model to the same name as the input/output layer name of the model named in STEP-2.
- (3) Change the input data format for the preprocessing from YUY2 to RGB.
- (4) Set the parameters of normalize to the training value.

The correspondence of rewriting information and each definition is shown below.

Definition of *prepost_d-yolov3.yaml*

Input data definition	(2), (3)
Output data definition	(1), (2)
Preprocessing definition	(2), (3), (4)
Postprocessing definition	(1), (2)

 - 3.5 Pre/Post-processing**
 - 3.6 Conversion
 - 3.7 Result
- STEP-4

3.5: Prepare the Pre/Postprocessing Definition File

First, change the number of model output data to 3.

In the YOLOv3 model, there are 3 output layers, and each output layer size can be calculated as follows.

$$[H \times W \times (3 * (4 + 1 + N_{class}))]$$

N_{class} = Number of detection class

H, W = Height and width of each output layer.

Note: Please refer to the following website for more information of model output.

YOLOv3: An Incremental Improvement <https://arxiv.org/pdf/1804.02767.pdf>

YOLOv3: Real-Time Object Detection (Joseph Redmon) <https://pjreddie.com/darknet/yolo/>

The Darknet YOLOv3 model used in this document outputs the result in the following format.

Output 1: $[13 \times 13 \times (3 * (4 + 1 + 80))]$ \longrightarrow $[13 \times 13 \times 255]$

Output 2: $[26 \times 26 \times (3 * (4 + 1 + 80))]$ \longrightarrow $[26 \times 26 \times 255]$

Output 3: $[52 \times 52 \times (3 * (4 + 1 + 80))]$ \longrightarrow $[52 \times 52 \times 255]$

This chapter explains how to rewrite the pre/postprocessing definition file for above output information.

Note: For Tiny YOLOv3, please use appropriate number of output layers, their names and shapes.

For YOLOv2 and Tiny YOLOv2, since the number of output layer is 1, this procedure is unnecessary.

STEP-4

3.5: Prepare the Pre/Postprocessing Definition File

1. Open the *prepost_d-yolov3.yaml* with the editor.

```
$ vi $DRPAI/UserConfig/prepost_d-yolov3.yaml
```

2. Change the output data from the model in the output data definition.

Rewrite the output format from the model according to the YOLOv3 output information described in previous page.

<pre>23 output_from_body: 24 - 25 name: "grid" 26 shape: [13, 13, 125] 27 order: "HWC" 28 type: "fp16"</pre>	<pre>23 output_from_body: 24 - 25 name: "grid" 26 shape: [13, 13, 125] 27 order: "HWC" 28 type: "fp16" 29 - 30 name: "grid" 31 shape: [13, 13, 125] 32 order: "HWC" 33 type: "fp16" 34 - 35 name: "grid" 36 shape: [13, 13, 125] 37 order: "HWC" 38 type: "fp16"</pre>	<pre>23 output_from_body: 24 - 25 name: "grid" 26 shape: [13, 13, 255] 27 order: "HWC" 28 type: "fp16" 29 - 30 name: "grid" 31 shape: [26, 26, 255] 32 order: "HWC" 33 type: "fp16" 34 - 35 name: "grid" 36 shape: [52, 52, 255] 37 order: "HWC" 38 type: "fp16"</pre>
--	--	--

Annotations in the image: Blue arrows point from the original shape [13, 13, 125] to the new shapes [13, 13, 255], [26, 26, 255], and [52, 52, 255]. Blue text labels 'Output format from model (output 1)', 'Output format from model (output 2)', and 'Output format from model (output 3)' are placed above the corresponding rows in the middle column. A blue text label 'Copy the output data' is placed next to the original code in the first column.

Note: How to change the output name from the model will be explained in "set the input/output name of the model to the same name as the input/output layer name of the model named in STEP-2."

STEP-4

3.5: Prepare the Pre/Postprocessing Definition File

Next, set the input/output name of the model to the same name as the input/output layer name of the model named in STEP-2.

The input name to the first layer of the model and the output name from the final layer of the model were defined by *convert_to_onnx.py* in "STEP-2.4: Convert AI Model to ONNX Format".

```
<convert_to_onnx.py>
:
30 # Define the input tensor and output tensor name of the converted onnx neural network
31 input_names = model_params.get('input')
32 output_names = model_params.get('output')
33
34 # Starts the pytorch to onnx conversion
35 torch.onnx.export(model, dummy_input, model_params.get('onnx'), verbose=True, opset_version=12, input_names=input_names, output_names=output_names)
```

Input name of first layer of the model (Will be used in STEP-3)

Output name of last layer of the model (Will be used in STEP-3)

The actual name is listed in the *yolo.ini* file.

We will set this input name (*input1*) and the output name (*output1*, *output2*, *output3*) in each definition.

```
<yolo.ini>
1 [yolov3]
2 cfg =yolov3.cfg
3 weights =yolov3.weights
4 path =yolov3.pth
5 input =["input1"]
6 output =["output1", "output2", "output3"]
7 onnx =d-yolov3.onnx
8
9 :
```

Defined here.

Input name : *input1*

Output name : *output1, output2, output3*

3.5 Pre/Post-
processing

3.6 Conversion

3.7 Result

STEP-4

3.5: Prepare the Pre/Postprocessing Definition File

Last, set the parameters of `normalize` to the training value.

Although normalization with mean and std (standard deviation) is not necessary for the Darknet pre-trained model, input data must be converted to floating point number between 0 and 1.

Therefore, we use `mean=[0, 0, 0]` and `std=[1, 1, 1]` to set the `normalize` parameter.

To compute, use the formulae explained in "STEP-3.5: Prepare the Pre/Postprocessing Definition File" in Get Started Document.

$$\text{add} = - (\text{mean} \times \text{range})$$

$$\text{mul} = 1 / (\text{std} \times \text{range})$$

To normalize the model input data to number between 0 and 1, use the maximum value of the input image dynamic range as "range", which is 255.

12. Rewrite `cof_add` and `cof_mul` in the `normalize` operation. (In this case, they are the same values as sample)

<pre> 84 - 85 op: normalize 86 param: 87 DOUT_RGB_ORDER: 1 88 cof_add: [0.0, 0.0, 0.0] 89 cof_mul: [0.00392157, 0.00392157, 0.00392157] </pre>		<pre> 84 - 85 op: normalize 86 param: 87 DOUT_RGB_ORDER: 1 88 cof_add: [0.0, 0.0, 0.0] 89 cof_mul: [0.00392157, 0.00392157, 0.00392157] </pre>

3.6 Conversion

3.7 Result

STEP-4

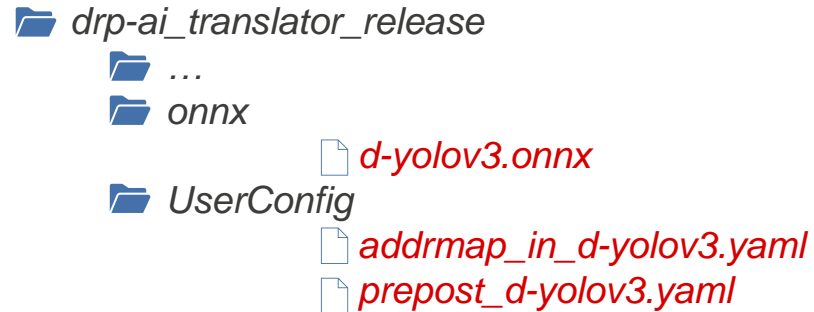

3.6: Translate the Model Using DRP-AI Translator

This section will explain how to run the DRP-AI Translator.

We use the YOLOv3 model as an example.

1. please confirm that there are following three files under *drp-ai_translator_release* directory.

STEP-1

STEP-2

STEP-3

3.1 Make Environment

3.2 File Configuration

3.3 ONNX File

3.4 Address Map

3.5 Pre/Post-processing

3.6 Conversion

3.7 Result

STEP-4

3.6: Translate the Model Using DRP-AI Translator

2. Move to the DRP-AI Translator working directory.

```
$ cd $DRPAI
```

3. Translate the model with the following commands. (Please execute it under the *drp-ai_translator_release* directory.)

Blue is PREFIX (output directory) name. Any name is available.

For RZ/V2M, RZ/V2MA:

```
$ ./run_DRP-AI_translator_V2M.sh yolov3 -onnx ./onnx/d-yolov3.onnx
```

For RZ/V2L:

```
$ ./run_DRP-AI_translator_V2L.sh yolov3 -onnx ./onnx/d-yolov3.onnx
```

If displayed as follows without any errors, translation is successful.

```
[Run DRP-AI Translator] Ver. 1.80
[Input file information]
PREFIX           : yolov3
ONNX Model       : ./onnx/d-yolov3.onnx
Prepost file     : ./UserConfig/prepost_d-yolov3.yaml
Address mapping file : ./UserConfig/addrmap_in_d-yolov3.yaml
...
```

```
-----
[Converter for DRP] Finish
```

3.3 ONNX File

3.4 Address Map

3.5 Pre/Post-processing

3.6 Conversion

3.7 Result

STEP-4

3.7: Confirm the Translation Result

- The translation result is stored in the output directory with **PREFIX** named at the time of translation.

```
$ ls -l $DRPAI/output/yolov3/
```

If displayed as follows, the model is correctly translated.

```
aimac_desc.bin
drp_desc.bin
drp_lib_info.txt
drp_param.bin
drp_param.txt
drp_param_info.txt
yolov3.json
yolov3_addrmap_intm.txt
yolov3_addrmap_intm.yaml
yolov3_data_in_list.txt
yolov3_data_out_list.txt
yolov3_drpcfg.mem
yolov3_prepost_opt.yaml
yolov3_summary.xlsx
yolov3_tbl_addr_data.txt
yolov3_tbl_addr_data_in.txt
yolov3_tbl_addr_data_out.txt
yolov3_tbl_addr_drp_config.txt
yolov3_tbl_addr_merge.txt
yolov3_tbl_addr_weight.txt
yolov3_tbl_addr_work.txt
yolov3_weight.dat
```

Yellow files are DRP-AI Object files required for actual operation.

Green file is a summary file for estimating the processing time.

Execute Inference with DRP-AI

This section will explain the instruction with the following assumption

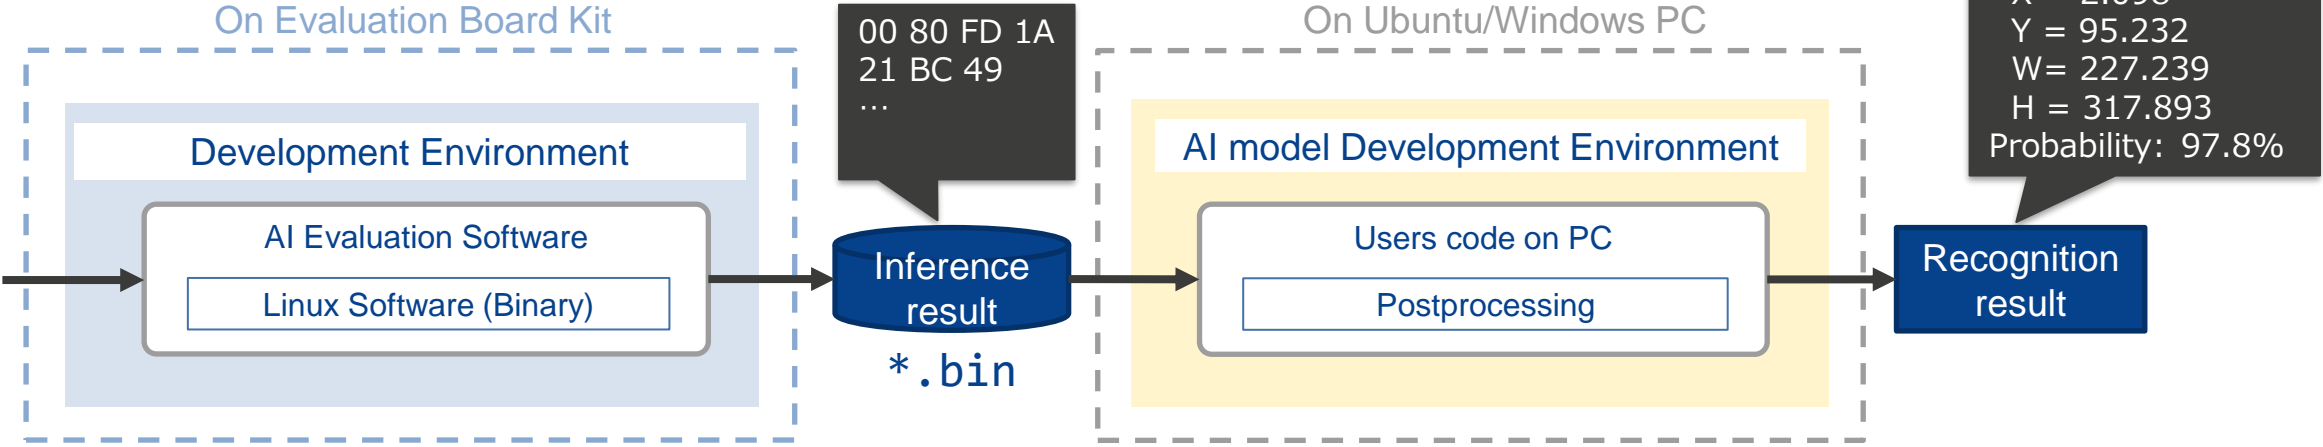

- Read "STEP-4 Execute Inference with DRP-AI" in the Get Started Document.

STEP-1
STEP-2
STEP-3
STEP-4

The DRP-AI Object files for YOLO created in STEP-3 can be executed by AI Evaluation Software.

AI Evaluation Software will generate a binary file that contains the DRP-AI inference result, which is not the recognition result.

To obtain recognition result, we need to apply the CPU post-processing specialized for YOLO.

Note: To see how to use AI Evaluation Software, please refer to AI Evaluation Software Guide.

Execute Inference with DRP-AI

This document provides the post-processing script for Darknet YOLO, which runs on Linux PC.

Path: `$WORK/darknet/yolo/postprocess_yolo.py`

Details of the script are as follow.

Notes

- ✓ Assumed to have run following postprocessing on DRP-AI
 - transpose
 - castFP16toFP32
- ✓ Install the necessary packages listed in Confirmed Operational Environment below appropriately.
- ✓ For more details of the algorithm, refer to the paper. (YOLOv3 <https://arxiv.org/pdf/1804.02767.pdf>, YOLOv2 <https://arxiv.org/pdf/1612.08242.pdf>.)
- ✓ The script specifies the result of DRP-AI Sample Application sample input image as the inference result binary file.
- ✓ The script draws the detected bounding boxes on the input image. Please specify the name of input image used when executing the AI Evaluation Software.
- ✓ Obtain the label list of detection class, `coco-labels-2014_2017.txt`, from the following URL.
https://github.com/amikelive/coco-labels/blob/master/coco-labels-2014_2017.txt

Confirmed Operational Environment

Ubuntu 20.04 LTS	Python	== 3.8.10
	pip	== 22.2.2
	torch	== 1.12.1+cpu
	numpy	== 1.23.1
	opencv-python	== 4.6.0.66
	Pillow	== 9.2.0

DRP-AI Inference Result Binary Data

Details of the DRP-AI inference result binary file are as follow.

- Number of data : 904995
(Depends on model output size. For YOLOv3, $(1 \times 255 \times 13 \times 13) + (1 \times 255 \times 26 \times 26) + (1 \times 255 \times 52 \times 52)$)
- Data width : 4byte (Because of castFP16toFP32, width is FP32=4byte)
- Byte order : Little endian

STEP-1

STEP-2

STEP-3

STEP-4

Execute Inference with DRP-AI

When running the postprocessing script, please specify the name of model as shown below with **BLUE**.

Note: If not specified, YOLOv3 model will be selected by default.

```
$ python3 postprocess_yolo.py yolov3
```

Parameter	Model
yolov3	YOLOv3 (Default)
yolov2	YOLOv2
tinyyolov3	Tiny YOLOv3
tinyyolov2	Tiny YOLOv2

- STEP-1
- STEP-2
- STEP-3
- STEP-4**

Execute Inference with DRP-AI

postprocess_yolo.py

```
261 if __name__ == '__main__':
262     if ( len(sys.argv) > 1 and sys.argv[1] in ["yolov3", "yolov2", "tinyyolov3", "tinyyolov2"]):
        :
277     if model_name=="yolov3":
278         anchors = anchors_yolov3
279         out_layer_num = 3
280         num_class = len(labels)
281         output_shape.append([1, 3*(5+num_class), 13, 13]) # [N, C, H, W]
282         output_shape.append([1, 3*(5+num_class), 26, 26]) # [N, C, H, W]
283         output_shape.append([1, 3*(5+num_class), 52, 52]) # [N, C, H, W]
284     elif model_name=="yolov2":
        :
        * sample.bmp.bin is the result of AI Evaluation Software
303     result_bin = open("sample.bmp.bin", 'rb') ] with DRP-AI Sample Application input image
        :
309     # Load DRP-AI output binary
310     for n in range(out_layer_num): # Output number
311         for c in range(output_shape[n][1]): # C
312             for h in range(output_shape[n][2]): # H
313                 for w in range(output_shape[n][3]): # W
314                     a = struct.unpack('<f', result_bin.read(4))
315                     data[n][0, c, h, w] = a[0]
316
317     # Read image to draw bounding boxes
318     im = Image.open("sample.bmp")
319     im = im.resize((model_in_size, model_in_size), resample=Image.BILINEAR) ] * sample.bmp is the sample input image
320     ] of DRP-AI Sample Application
321     # Post-processing
322     preds = {}
323     for i in range(out_layer_num):
324         preds[i] = torch.from_numpy(data[i]).clone()
325     detections = all_post_process(model_name, preds, anchors, input_size=model_in_size,
326     grid_size=output_shape, n_classes=num_class, obj_th=0.5, nms_th=0.5) ]
327
328     # Draw bounding box
329     img = np.asarray(im) # RGB
330     img = cv2.cvtColor(img, cv2.COLOR_RGB2BGR)# BGR
331     ret_img = draw_predictions(img, detections, labels) # BGR
332     cv2.imwrite("result.jpg", ret_img)
```

Obtain the target model from
command line argument.

STEP-1

Specify model dependent parameters.

STEP-2

1. Bounding Box anchor
2. Number of output layers
3. Number of detected class
4. Output shape

STEP-3

STEP-4

Load DRP-AI inference result file

Read the number from inference
result
Specify little endian

Load and resize the input image
for bounding boxes

Set the threshold for
Probability in *obj_th*,
and threshold for NMS in *nms_th*
* explained in next page

Draw the bounding boxes

Execute Inference with DRP-AI

Followings are the parameters used in the postprocessing script.

- obj_th** : Threshold for the probability of detected results.
Detected results with probability that is below this value will be ignored. Default value is 0.5.
- nms_th** : Threshold for Non-Maximum Suppression (NMS) algorithm, which can eliminate over detected results.
Default value is 0.5.

Following example is the result of *postprocess_yolo.py* when running YOLOv3 model with the sample input image provided in DRP-AI Sample Application for Darknet YOLO.

Terminal Log

```
Class: bicycle | Probability 98.5% | [X1, Y1, X2, Y2] = [61,93,311,313]
Class: truck | Probability 95.4% | [X1, Y1, X2, Y2] = [254,62,375,121]
Class: dog | Probability 99.9% | [X1, Y1, X2, Y2] = [69,165,171,388]
```

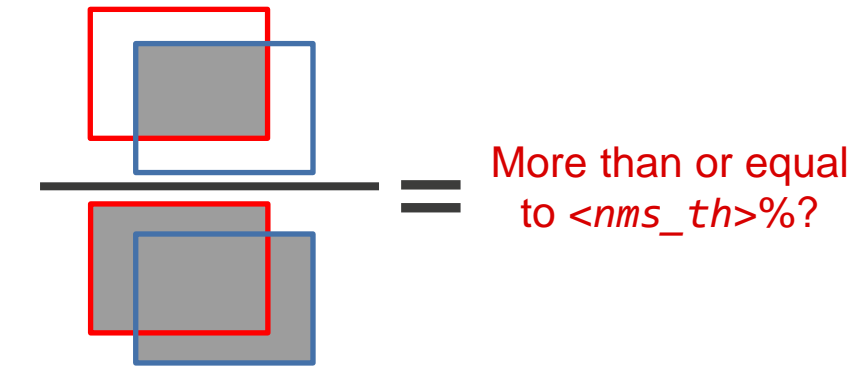

Class : Detected object
Probability : Objectness * Predictions(Class) of detected object

Non-Maximum Suppression

Sometimes, multiple bounding boxes are detected for single object. NMS will compute the percentage of intersection of two boxes over their union and eliminate the bounding box with lower probability if the percentage is more than or equal to value x.

(Shown in figure below)

The parameter *nms_th* will be this value x.

STEP-2

STEP-3

STEP-4

Output Image (result.jpg)

STEP-4 Summary

STEP-4 explained how to execute the AI inference using DRP-AI.

In the DRP-AI Sample Application, we provide the sample application that runs inference through CPU post-processing on the board with Darknet YOLO model explained in this document.

To see how to use the application, please refer to the DPR-AI Sample Application Note.

STEP-1

STEP-2

STEP-3

STEP-4

Conclusion

Throughout STEP-1 to STEP-4, we have explained how to run the YOLO model provided by Darknet on the RZ/V2x.

If you have any questions, please contact us.

Thank you for reading to the end.
