E8a Emulator Software Revised to V.1.00 Release 00A

We have revised the emulator software for the E8a on-chip debugging emulator from V.1.00 Release 00 to V.1.00 Release 00A.

1. Description of Revision

The following problem has been resolved.

If the evaluation version of the C/C++ compiler package V.6.01 Release 03 for the H8SX, H8S, and H8 families of MCUs bundled with E8a Emulator Software V.1.00 Release 00 has been installed, an assembler source file (vecttbl.src) commented in the C-language may be created, causing an assemble error to arise.

2. How to Update Your Product

Free-of-charge online update is available.

Download the update program of the software from the Web site at

http://www.renesas.com/en/e8a_download

and execute it. This Web site will be opened from August 6 on.

You are also able to update yours using the AutoUpdate Utility.

NOTICE:

If the update program is executed in the system where High-performance Embedded Workshop V.4.01.01 or earlier resides, the IDE will be updated to V.4.02.00.

Attention:

Change in Download Function and Product Information Pages

Since June 1st, 2007, download data and product information have only been updated on the Renesas global web site (<http://www.renesas.com/homepage.jsp>), not our regional web sites. For the latest versions of download data and product information, please visit our global web site.

This is a temporary situation and regional web sites will be updated once again by the end of August.

Technical documentation and Tool News newsletter are not effected by this temporary situation and you can still find the latest support information on both our regional and global web sites.

Thank you for your understanding.
