RENESAS Tool News

A Note on Using
the High-performance Embedded Workshop V.4.00.00
--On Docked View of the C Watch Window--

Please take note of the following problem in using the High-performance Embedded Workshop V.4.00.00, an integrated development environment:

- On docked view of the C Watch window

---

1. **Product and Version Concerned**
   High-performance Embedded Workshop V.4.00.00

   To check for the version number of your High-performance Embedded Workshop, open the Help menu and select the About High-performance Embedded Workshop command.

2. **Description**
   If any of the following operations is performed with the C Watch window being undocked*, the High-performance Embedded Workshop abnormally shut down:
   - Switching between sessions
   - Closing a workspace
   - Terminating an application program

   * If the C Watch window is undocked, the Allow Docking
     check box, which appears in the pop-up menu opened by
     right-clicking an unoccupied portion of the window, stays
     unchecked. For details, see the illustration.

3. **Workaround**
   Use the C Watch window in the docked state. To make the window docked, right-click an unoccupied portion of the window to open a pop-up menu, and then check the Allow Docking check box.

4. Schedule of Fixing the Problem

We plan to fix this problem in the next release of the product.
