The Open function provides initial configuration for the PDC module. It powers on the module and enables the PCLKO output and the PIXCLK input. Further initialization requires the PIXCLK input to be running in order to be able to reset the PDC as part of its initialization. This clock is input from a camera module and so the reset and further initialization is performed in captureStart. This function should be called once prior to calling any other PDC API functions. After the PDC is opened the Open function should not be called again without first calling the Close function.

Table 1712:Return values

Name	Description
SSP_SUCCESS	Initialization was successful.
SSP_ERR_ASSERTION	One of the following parameters is incorrect. Either • p_cfg is NULL, OR • p_api_ctrl is NULL, OR • The pointer to the transfer interface in the p_cfg parameter is NULL
SSP_ERR_INVALID_ARGUMENT	One of the following configuration parameters is incorrect. Either • bytes_per_pixel is zero, OR • x_capture_pixels is zero, OR • y_capture_pixels is zero, OR • x_capture_start_pixel + x_capture_pixels is greater than 4095, OR • y_capture_start_pixel + y_capture_pixels is greater than 4095
SSP_ERR_HW_LOCKED	Unable to reserve BSP hardware lock for this module.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- productFeatureGet
- eventInfoGet

NOTE: This function is not reentrant.

9.41.4.3 Function steps

- Lock the PDC Hardware Resource
- Disable module stop mode for PDC
- Set PCLKB divider
- Enable PCLKO output
- Enable the PIXCLK input
- Mark driver as open by initializing it to "PDC" in its ASCII equivalent

9.41.5 R_PDC_Close

```
ssp_err_t R_PDC_Close ( pdc_ctrl_t  *const p_api_ctrl )
```

9.41.5.1 Brief description

Stops and closes the transfer interface, disables the PDC, powers off the PDC, clears internal driver data and disables interrupts. Implements close.

9.41.5.2 Detailed description

Table 1713:Return values

Name	Description
SSP_SUCCESS	Successful close.
SSP_ERR_ASSERTION	One of the following parameters is incorrect. Either • p_api_ctrl is NULL, OR • low level transfer is not assigned, OR • low level transfer APIs are not assigned
SSP_ERR_NOT_OPEN	Open has not been successfully called.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- disable
- close

NOTE: This API will close the PDC driver. If a capture is in progress it will be stopped. This function is reentrant.

9.41.5.3 Function steps

- Disable all interrupts.
- Enable module stop mode for PDC
- Unlock the PDC Hardware Resource

9.41.6 R_PDC_CaptureStart

```
ssp_err_t R_PDC_CaptureStart ( pdc_ctrl_t  *const p_api_ctrl ,   uint8_t
*const p_buffer )
```

9.41.6.1 Brief description

Starts a capture. Enables interrupts. Implements captureStart.

9.41.6.2 Detailed description

Sets up the transfer interface to transfer data from the PDC into the specified buffer. Configures the PDC settings as previously set by the open API. These settings are configured here as the PIXCLK input must be active for the PDC reset operation. When a capture is complete the callback registered during open API call will be called.

Table 1714:Return values

Name	Description
SSP_SUCCESS	Capture start successful.
SSP_ERR_ASSERTION	One of the following parameters is incorrect. Either • p_api_ctrl is NULL, OR • low level transfer is not assigned, OR • low level transfer APIs are not assigned • buffer is not assigned, assign buffer
SSP_ERR_NOT_OPEN	Open has not been successfully called.
SSP_ERR_IN_USE	Pdc transfer is already in progress, wait for transfer to complete.
SSP_ERR_TIMEOUT	Reset operation timed out.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- open
- enable

NOTE: If the PIXCLK is being generated by a camera module the camera must be configured after the call to open and before the call to captureStart. This function is not reentrant.

The user is responsible to ensuring that the memory pointed to by p_buffer is both valid and large enough to store a complete image. The amount of space required, in bytes can be calculated as shown:

size (bytes) = image width (pixels) * image height (lines) * number of bytes per pixel

9.41.6.3 Function steps

- Set up transfer interface

- Configure the transfer interface
- Open transfer interface
- Wait for reset to complete
- Set horizontal capture range
- Set horizontal capture size
- Set vertical capture range
- Set vertical capture size
- Set VSYNC polarity
- Set HSYNC polarity
- Set endianess of capture data
- Enable interrupts: Receive data ready interrupt, Underrun interrupt, Overrun interrupt, Frame end interrupt, Vertical line number setting error interrupt, Horizontal byte number setting error interrupt

9.41.7 R_PDC_StateGet

```
ssp_err_t R_PDC_StateGet ( pdc_ctrl_t  *const p_api_ctrl ,  pdc_state_t
* p_state )
```

9.41.7.1 Brief description

Returns the state of the VSYNC and HSYNC pins.Implements stateGet.

9.41.7.2 Detailed description

Table 1715:Return values

Name	Description
SSP_SUCCESS	State read successful.
SSP_ERR_ASSERTION	p_api_ctrl is NULL OR p_state is NULL
SSP_ERR_NOT_OPEN	Open has not been successfully called.

NOTE: This function is reentrant.

9.41.8 R_PDC_VersionGet

```
ssp_err_t R_PDC_VersionGet ( ssp_version_t  *const p_data )
```

9.41.8.1 Brief description

Return PDC HAL driver version. Implements versionGet.

9.41.8.2 Detailed description

Table 1716:Return values

Name	Description
SSP_SUCCESS	Version information successfully read.
SSP_ERR_ASSERTION	Null pointer passed as a parameter

NOTE: This function is reentrant.

9.41.9 Extensions

9.41.9.1 pdc_instance_ctrl_t

pdc_instance_ctrl_t

Detailed description

PDC instance control block. DO NOT INITIALIZE. Initialization occurs when open is called.

Variables

- R_PDC_Type * p_reg

  Pointer to PDC base address.
- uint32_t open

  Indicates whether or not the driver is open called.
- uint8_t bytes_per_pixel

  Number of bytes per pixel.
- uint16_t x_resolution_pixels

  Total number of horizontal pixels input to PDC.

- uint16_t y_resolution_pixels

  Total number of lines input to the PDC.
- uint16_t x_capture_start_pixel

  Horizontal position to start capture.
- uint16_t x_capture_pixels

  Number of horizontal pixels to capture.
- uint16_t y_capture_start_pixel

  Vertical position to start capture.
- uint16_t y_capture_pixels

  Number of vertical lines/pixels to capture.
- pdc_endian_t endian

  Endian of capture data.
- pdc_hsync_polarity_t hsync_polarity

  Polarity of HSYNC input.
- pdc_vsync_polarity_t vsync_polarity

  Polarity of VSYNC input.
- uint8_t * p_current_buffer

  Pointer to buffer currently in use.
- bool transfer_in_progress

  Indicates if a PDC transfer is already in progress.
- transfer_instance_t const * p_lower_lvl_transfer

  Pointer to the transfer instance the PDC should use.
- transfer_info_t info_transfer

  Transfer info structure for low level Transfer interface.
- void const * p_context

  Placeholder for user data. Passed to the user callback in pdc_callback_args_t.
- void(* p_callback)(*p_args)

  Callback provided when a PDC transfer ISR occurs.
- IRQn_Type frame_end_irq

  Frame end interrupt number.
- IRQn_Type irq

  PDC interrupt number.

9.42 QSPI

Driver for the Quad Serial Peripheral Interface (QSPI).

This is a driver for the Quad-SPI module (QSPI) which is a memory controller for connecting a serial ROM (non-volatile memory such as a serial flash memory, serial EEPROM, or serial FeRAM) that has an SPI-compatible interface.

9.42.1 Summary

Extends Quad SPI Flash Interface.

9.42.2 Functions

- R_QSPI_Open
- R_QSPI_Close
- R_QSPI_Read
- R_QSPI_PageProgram
- R_QSPI_Erase
- R_QSPI_InfoGet
- R_QSPI_SectorErase
- R_QSPI_StatusGet
- R_QSPI_BankSelect
- R_QSPI_VersionGet

9.42.3 Variables

- g_qspi_on_qspi

9.42.4 Defines

- #define QSPI_CODE_VERSION_MAJOR

  Initial value: `(1U)`
- #define QSPI_CODE_VERSION_MINOR

  Initial value: `(6U)`

9.42.5 R_QSPI_Open

```
ssp_err_t R_QSPI_Open ( qspi_ctrl_t * p_api_ctrl , qspi_cfg_t const
*const p_cfg )
```

9.42.5.1 Brief description

Open the QSPI driver module.

9.42.5.2 Detailed description

Open the QSPI module driver in direct communication mode for the purposes of reading and writing flash memory via SPI protocols.

Table 1717:Return values

Name	Description
SSP_SUCCESS	Configuration was successful.
SSP_ERR_ASSERTION	The parameter p_ctrl or p_cfg is NULL.
SSP_ERR_UNSUPPORTED	Driver not able to query the following information from the flash manufacturer id,memory capacity and memory type.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- productFeatureGet

9.42.6 R_QSPI_Close

```
ssp_err_t R_QSPI_Close ( qspi_ctrl_t  * p_api_ctrl )
```

9.42.6.1 Brief description

Close the QSPI driver module.

9.42.6.2 Detailed description

Return the QSPI module back to ROM access mode.

Table 1718:Return values

Name	Description
SSP_SUCCESS	Configuration was successful.
SSP_ERR_ASSERTION	p_ctrl is NULL.
SSP_ERR_NOT_OPEN	Driver is not opened.

9.42.7 R_QSPI_Read

```
ssp_err_t R_QSPI_Read ( qspi_ctrl_t  * p_api_ctrl ,   uint8_t
* p_device_address ,   uint8_t * p_memory_address ,   uint32_t byte_count )
```

9.42.7.1 Brief description

Read data from the flash.

9.42.7.2 Detailed description

Read a block of data from a particular address on the SPI flash device.

Table 1719:Return values

Name	Description
SSP_SUCCESS	The flash was programmed successfully.
SSP_ERR_ASSERTION	p_ctrl,p_device_address or p_memory_address is NULL.
SSP_ERR_NOT_OPEN	Driver is not opened.
SSP_ERR_TRANSFER_BUSY	Another serial communications transfer is in progress.

9.42.8 R_QSPI_PageProgram

```
ssp_err_t R_QSPI_PageProgram ( qspi_ctrl_t  * p_api_ctrl ,   uint8_t
* p_device_address ,   uint8_t * p_memory_address ,   uint32_t byte_count )
```

9.42.8.1 Brief description

Program a page of data to the flash.

9.42.8.2 Detailed description

Table 1720:Return values

Name	Description
SSP_SUCCESS	The flash was programmed successfully.
SSP_ERR_ASSERTION	p_ctrl,p_device_address or p_memory_address is NULL.

Table 1720:Return values (Continued)

Name	Description
SSP_ERR_INVALID_ARGUMENT	Invalid parameter is passed.
SSP_ERR_NOT_OPEN	Driver is not opened.

9.42.9 R_QSPI_Erase

```
ssp_err_t R_QSPI_Erase ( qspi_ctrl_t  * p_api_ctrl ,   uint8_t
* p_device_address ,   uint32_t byte_count )
```

9.42.9.1 Brief description

Erase a number of byte from the flash.

9.42.9.2 Detailed description

Table 1721:Return values

Name	Description
SSP_SUCCESS	The command to erase the flash was executed successfully.
SSP_ERR_ASSERTION	p_ctrl or p_device_address is NULL.
SSP_ERR_INVALID_ARGUMENT	Invalid byte_count entered.
SSP_ERR_NOT_OPEN	Driver is not opened.

9.42.9.3 Function steps

- Get the information of underline flash
- If requested byte_count is supported by underline flash, assign the value of size_index to cmd_index for searching the command
- Send command to enable writing
- Close the SPI bus cycle
- Get the erase command
- Send command to erase
- Send command to write data

- Close the SPI bus cycle
- Send command to disable writing
- Close the SPI bus cycle

9.42.10 R_QSPI_InfoGet

```
ssp_err_t R_QSPI_InfoGet ( qspi_ctrl_t  * p_api_ctrl ,  qspi_info_t
*const p_info )
```

9.42.10.1 Brief description

Returns the information about the flash.

9.42.10.2 Detailed description

Table 1722:Return values

Name	Description
SSP_SUCCESS	
SSP_ERR_ASSERTION	p_ctrl or p_info is NULL.
SSP_ERR_NOT_OPEN	Driver is not opened.

9.42.10.3 Function steps

- Get the information of underline flash

9.42.11 R_QSPI_SectorErase

```
ssp_err_t R_QSPI_SectorErase ( qspi_ctrl_t  * p_api_ctrl ,   uint8_t
* p_device_address )
```

9.42.11.1 Brief description

Erase a sector on the flash.

9.42.11.2 Detailed description

Erase one sector on the SPI flash device. Any passed in address within the sector to be erased is acceptable.

Table 1723:Return values

Name	Description
SSP_SUCCESS	The command to erase the sector of flash was executed successfully.
SSP_ERR_ASSERTION	p_ctrl or p_device_address is NULL.
SSP_ERR_NOT_OPEN	Driver is not opened.

9.42.12 R_QSPI_StatusGet

```
ssp_err_t R_QSPI_StatusGet ( qspi_ctrl_t  * p_api_ctrl ,   bool
* p_write_in_progress )
```

9.42.12.1 Brief description

Get the write or erase status of the flash.

9.42.12.2 Detailed description

Return the write status of the flash. This is most useful for determining if erases are complete.

Table 1724:Return values

Name	Description
SSP_SUCCESS	The write status is correct.
SSP_ERR_ASSERTION	p_ctrl or p_write_in_progress is NULL.
SSP_ERR_NOT_OPEN	Driver is not opened.

9.42.13 R_QSPI_BankSelect

```
ssp_err_t R_QSPI_BankSelect (  uint32_t bank )
```

9.42.13.1 Brief description

Select the bank to access.

9.42.13.2 Detailed description

A bank is a 64MB sliding access window into the flash memory space. This function sets the current bank.

Table 1725:Return values

Name	Description
SSP_SUCCESS	Bank successfully selected.

9.42.14 R_QSPI_VersionGet

```
ssp_err_t R_QSPI_VersionGet ( ssp_version_t  *const p_version )
```

9.42.14.1 Brief description

Get the driver version based on compile time macros.

9.42.14.2 Detailed description

Table 1726:Return values

Name	Description
SSP_SUCCESS	Successful close.
SSP_ERR_ASSERTION	p_version is NULL.

9.42.15 g_qspi_on_qspi

```
qspi_api_t::g_qspi_on_qspi
```

9.42.15.1 Initialized as

```
g_qspi_on_qspi=
{
    .open           = R_QSPI_Open,
    .close          = R_QSPI_Close,
    .read           = R_QSPI_Read,
    .pageProgram    = R_QSPI_PageProgram,
    .erase          = R_QSPI_Erase,
    .infoGet        = R_QSPI_InfoGet,
    .sectorErase    = R_QSPI_SectorErase,
    .statusGet      = R_QSPI_StatusGet,
```

```
    .bankSelect      = R_QSPI_BankSelect,
    .versionGet      = R_QSPI_VersionGet
}
```

9.42.16 Extensions

9.42.16.1 qspi_instance_ctrl_t

qspi_instance_ctrl_t

Detailed description

Instance control block. DO NOT INITIALIZE. Initialization occurs when open is called

Variables

- R_QSPI_Type * p_reg

  Pointer to QSPI base register.
- uint32_t max_eraseable_size

  Largest eraseable sector size in kbytes. Used to determine buffer size for.
- uint32_t num_address_bytes

  Number of bytes used to represent the address.
- uint32_t spi_mode

  SPI mode - 0 = Extended, 1 = Dual, 2 = Quad.
- uint32_t page_size

  Number of bytes in a programmable page.
- uint8_t manufacturer_id

  Manufacturer ID.
- uint8_t memory_type

  Memory type.
- uint8_t memory_capacity

  Memory capacity (in MByte)
- bool xip_mode

  0 = run in read mode, 1 = run in XIP mode

9.43 IIC

Driver for the I2C Bus Interface (IIC).

This module supports the Renesas Inter-Integrated Circuit (IIC) peripheral. It implements the following interfaces:

- I2C Master Interface r_i2c_api.h

9.43.1 Functions

- riic_notify
- riic_clock_settings
- riic_abort_seq_master
- riic_transfer_open
- r_riic_irq_cfg
- riic_param_check
- riic_open_hw_master
- riic_close_hw_master
- riic_configure_interrupts_master
- riic_abort_hw_master
- riic_enable_transfer_support_tx
- riic_enable_transfer_support_rx
- riic_run_hw_master
- riic_rxi_read_data
- riic_txi_send_address
- riic_set_valid_interrupts_priority
- riic_transfer_configure_rx
- riic_transfer_configure_tx
- riic_rxi_master
- riic_txi_master
- riic_tei_master
- riic_err_master
- R_RIIC_MasterVersionGet
- R_RIIC_MasterOpen
- R_RIIC_MasterClose
- R_RIIC_MasterRead
- R_RIIC_MasterWrite
- R_RIIC_MasterReset
- R_RIIC_MasterSlaveAddressSet

9.43.2 Variables

- g_riic_master_version
- g_i2c_master_on_riic

9.43.3 Defines

- #define RIIC_MASTER_CODE_VERSION_MAJOR

  Initial value: `(1U)`
- #define RIIC_MASTER_CODE_VERSION_MINOR

  Initial value: `(9U)`
- #define RIIC_OPEN

  Initial value: `(0x52494943ULL)`

  "RIIC" in ASCII, used to determine if channel is open.
- #define VARIANT_FMPLUS_MASK

  Initial value:`0x04U`
- #define RIIC_ERROR_RETURN

  Initial value:`#define SSP_ERROR_RETURN((a), (err), &g_module_name[0], &g_riic_master_version)`

  Macro for error logger.
- #define I2C_CODE_READ

  Initial value: `(0x01U)`
- #define I2C_CODE_10BIT

  Initial value: `(0xF0U)`

9.43.4 riic_notify

```
riic_notify ( riic_instance_ctrl_t  *const p_ctrl ,  i2c_event_t  const event )
```

9.43.4.1 Brief description

Single point for managing the logic around notifying a transfer has finished.

9.43.4.2 Detailed description

Internal helper functions

(end addtogroup RIIC)

Table 1727:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to transfer that is ending.
event	in	The event code to pass to the callback.

9.43.4.3 Function steps

- Set the flag indicating that the transaction is completed

9.43.5 riic_clock_settings

```
ssp_err_t riic_clock_settings ( riic_instance_ctrl_t  *const p_ctrl )
```

9.43.5.1 Brief description

Configures the clock and filter settings.

9.43.5.2 Detailed description

Table 1728:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to RIIC software control block.

Table 1729:Return values

Name	Description
SSP_SUCCESS	Successfully configured the clock
SSP_ERR_INVALID_RATE	Failed to configure the clock settings for this rate

9.43.6 riic_abort_seq_master

```
ssp_err_t riic_abort_seq_master ( riic_instance_ctrl_t  *const p_ctrl )
```

9.43.6.1 Brief description

Single point for managing the logic around aborting a transfer when operating as a master.

9.43.6.2 Detailed description

Table 1730:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control struct of specific device

Table 1731:Return values

Name	Description
SSP_SUCCESS	Stopped any DTC assisted transfer.
SSP_ERR_ABORTED	If a transfer is in-progress.

9.43.7 riic_transfer_open

```
ssp_err_t riic_transfer_open ( riic_instance_ctrl_t * p_ctrl , i2c_cfg_t const
*const p_cfg )
```

9.43.7.1 Brief description

Configures RIIC related transfer drivers (if enabled).

9.43.7.2 Detailed description

Table 1732:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to IIC specific control structure
p_cfg	in	Pointer to IIC specific configuration structure

Table 1733:Return values

Name	Description
SSP_SUCCESS	Transfer interface initialized successfully.
SSP_ERR_ASSERTION	Pointer to transfer instance for I2C receive in p_cfg is NULL.
SSP_ERR_IRQ_BSP_DISABLED	Interrupt does not exist in the vector table.

See Common Error Codes for other possible return codes. This function internally calls

- productFeatureGet

9.43.8 r_riic_irq_cfg

```
ssp_err_t r_riic_irq_cfg (  ssp_feature_t * p_feature ,   ssp_signal_t signal ,
  uint8_t ipl ,   void * p_ctrl ,   IRQn_Type * p_irq )
```

9.43.8.1 Brief description

Sets interrupt priority and initializes vector info.

9.43.8.2 Detailed description

Table 1734:Parameters

Name	Direction	Description
p_feature	in	SSP feature
signal	in	SSP signal ID
ipl	in	Interrupt priority level
p_ctrl	in	Pointer to driver control block
p_irq	out	Pointer to IRQ for this signal, set here

Table 1735:Return values

Name	Description
SSP_SUCCESS	Interrupt enabled
SSP_ERR_IRQ_BSP_DISABLED	Interrupt does not exist in the vector table

See Common Error Codes for other possible return codes. This function calls

- eventInfoGet

9.43.9 riic_param_check

```
ssp_err_t riic_param_check ( riic_instance_ctrl_t  *const p_ctrl ,  i2c_cfg_t
const *const p_cfg )
```

9.43.9.1 Brief description

Parameter check.

9.43.9.2 Detailed description

Functions that manipulate hardware

Table 1736:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to IIC specific control structure
p_cfg	in	Pointer to IIC specific configuration structure

Table 1737:Return values

Name	Description
SSP_SUCCESS	Provided parameters not NULL.
SSP_ERR_ASSERTION	The parameter p_api_ctrl or p_cfg is NULL or clock rate is greater than 1MHz. or p_cfg->p_extend not equal to NULL.

9.43.9.3 Function steps

- p_extend not supported currently

9.43.10 riic_open_hw_master

```
ssp_err_t riic_open_hw_master ( riic_instance_ctrl_t  *const p_ctrl ,
  ssp_feature_t * p_feature )
```

9.43.10.1 Brief description

Performs the hardware initialization sequence when operating as a master.

9.43.10.2 Detailed description

Table 1738:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control struct of specific device
p_feature	in	SSP Feature

Table 1739:Return values

Name	Description
SSP_SUCCESS	Hardware initialized with proper configurations.
SSP_ERR_INVALID_RATE	The requested rate could not be set.

9.43.11 riic_close_hw_master

```
riic_close_hw_master ( riic_instance_ctrl_t  *const p_ctrl )
```

9.43.11.1 Brief description

Performs the hardware initialization sequence when operating as a master.

9.43.11.2 Detailed description

Table 1740:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control struct of specific device

9.43.12 riic_configure_interrupts_master

```
riic_configure_interrupts_master ( riic_instance_ctrl_t  *const p_ctrl )
```

9.43.12.1 Brief description

Enables and assigns the interrupts to be used in master mode.

9.43.12.2 Detailed description

Table 1741:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control struct of specific device

9.43.13 riic_abort_hw_master

```
riic_abort_hw_master ( riic_instance_ctrl_t  *const p_ctrl )
```

9.43.13.1 Brief description

Safely stops the current data transfer when operating as a master.

9.43.13.2 Detailed description

Table 1742:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control struct of specific device

9.43.14 riic_enable_transfer_support_tx

```
riic_enable_transfer_support_tx ( riic_instance_ctrl_t  *const p_ctrl )
```

9.43.14.1 Brief description

Enables the dtc transfer interface for the transmit operation.

9.43.14.2 Detailed description

Table 1743:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to transfer control block

9.43.15 riic_enable_transfer_support_rx

```
riic_enable_transfer_support_rx ( riic_instance_ctrl_t  *const p_ctrl )
```

9.43.15.1 Brief description

Enables the dtc transfer interface for the receive operation.

9.43.15.2 Detailed description

Table 1744:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to transfer control block

9.43.16 riic_run_hw_master

```
ssp_err_t riic_run_hw_master ( riic_instance_ctrl_t  *const p_ctrl )
```

9.43.16.1 Brief description

Performs the data transfer described by the parameters when operating as a master.

9.43.16.2 Detailed description

Table 1745:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control struct of specific device.

Table 1746:Return values

Name	Description
SSP_SUCCESS	Data transfer success.
SSP_ERR_IN_USE	If data transfer is in progress.
SSP_ERR_ABORTED	If an error occurred while data transfer.

9.43.17 riic_rxi_read_data

```
riic_rxi_read_data ( riic_instance_ctrl_t  *const p_ctrl )
```

9.43.17.1 Brief description

Check valid receive data and set WAIT, NACK and STOP/RESTART bit in RXI handler.

9.43.17.2 Detailed description

Table 1747:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to transfer control block

9.43.18 riic_txi_send_address

```
riic_txi_send_address ( riic_instance_ctrl_t  *const p_ctrl )
```

9.43.18.1 Brief description

Write the address byte to the riic bus.

9.43.18.2 Detailed description

Table 1748:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to transfer control block

9.43.19 riic_set_valid_interrupts_priority

```
ssp_err_t riic_set_valid_interrupts_priority ( riic_instance_ctrl_t  * p_ctrl ,
 i2c_cfg_t  const *const p_cfg )
```

9.43.19.1 Brief description

Set valid interrupts priority.

9.43.19.2 Detailed description

Name	Direction	Description
p_ctrl	in	Pointer to control struct of specific device

Table 1749:Parameters (Continued)

Name	Direction	Description
p_cfg	in	Pointer to IIC specific configuration structure

Table 1750:Return values

Name	Description
SSP_SUCCESS	Interrupts enabled.
SSP_ERR_IRQ_BSP_DISABLED	Interrupt does not exist in the vector table.

See Common Error Codes for other possible return codes. This function calls

- productFeatureGet

9.43.20 riic_transfer_configure_rx

```
ssp_err_t riic_transfer_configure_rx ( riic_instance_ctrl_t  * p_ctrl ,
 i2c_cfg_t  const *const p_cfg )
```

9.43.20.1 Brief description

Configures RIIC RX related transfer.

9.43.20.2 Detailed description

Table 1751:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to IIC specific control structure
p_cfg	in	Pointer to IIC specific configuration structure

Table 1752:Return values

Name	Description
SSP_SUCCESS	rx transfer interface in configured with valid parameters.
SSP_ERR_ASSERTION	Pointer to transfer instance for I2C receive in p_cfg is NULL.
SSP_ERR_IRQ_BSP_DISABLED	Interrupt does not exist in the vector table.

See Common Error Codes for other possible return codes. This function calls

- productFeatureGet

9.43.20.3 Function steps

- Set default transfer info and open receive transfer module, if enabled.

9.43.21 riic_transfer_configure_tx

```
ssp_err_t riic_transfer_configure_tx ( riic_instance_ctrl_t  * p_ctrl ,
 i2c_cfg_t  const *const p_cfg )
```

9.43.21.1 Brief description

Configures RIIC TX related transfer.

9.43.21.2 Detailed description

Table 1753:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to IIC specific control structure
p_cfg	in	Pointer to IIC specific configuration structure

Table 1754:Return values

Name	Description
SSP_SUCCESS	tx transfer interface in configured with valid parameters.
SSP_ERR_ASSERTION	Pointer to transfer instance for I2C transmit in p_cfg is NULL.
SSP_ERR_IRQ_BSP_DISABLED	Interrupt does not exist in the vector table.

See Common Error Codes for other possible return codes. This function calls

- productFeatureGet

9.43.21.3 Function steps

- Set default transfer info and open transmit transfer module, if enabled.

9.43.22 riic_rxi_master

```
riic_rxi_master ( riic_instance_ctrl_t  * p_ctrl )
```

9.43.22.1 Brief description

Handles the receive data full interrupt when operating as a master.

9.43.22.2 Detailed description

Interrupt handlers

Table 1755:Parameters

Name	Direction	Description
p_ctrl	in	The target RIIC block's control block.

9.43.23 riic_txi_master

```
riic_txi_master ( riic_instance_ctrl_t  * p_ctrl )
```

9.43.23.1 Brief description

Handles the transmit data empty interrupt when operating as a master.

9.43.23.2 Detailed description

Table 1756:Parameters

Name	Direction	Description
p_ctrl	in	The target RIIC block's control block.

9.43.24 riic_tei_master

```
riic_tei_master ( riic_instance_ctrl_t  * p_ctrl )
```

9.43.24.1 Brief description

Handles the transmit end interrupt when operating as a master.

9.43.24.2 Detailed description

NOTE: This interrupt is configured to be generated at the end of last byte of the requested transfer.

Table 1757:Parameters

Name	Direction	Description
p_ctrl	in	The target RIIC block's control block.

9.43.25 riic_err_master

```
riic_err_master ( riic_instance_ctrl_t  * p_ctrl )
```

9.43.25.1 Brief description

Handles the error interrupts when operating as a master.

9.43.25.2 Detailed description

Table 1758:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to transfer control block

9.43.26 R_RIIC_MasterVersionGet

```
ssp_err_t R_RIIC_MasterVersionGet ( ssp_version_t  *const p_version )
```

9.43.26.1 Brief description

Gets version information and stores it in the provided version struct.

9.43.26.2 Detailed description

Table 1759:Return values

Name	Description
SSP_SUCCESS	Successful version get.
SSP_ERR_ASSERTION	p_version is NULL.

9.43.27 R_RIIC_MasterOpen

```
ssp_err_t R_RIIC_MasterOpen ( i2c_ctrl_t  *const p_api_ctrl ,  i2c_cfg_t  const
*const p_cfg )
```

9.43.27.1 Brief description

Opens the I2C device. May power on IIC peripheral and perform initialization described in hardware manual.

9.43.27.2 Detailed description

This function will reconfigure the clock settings of the peripheral when a device with a lower rate than previously configured is opened.

Table 1760:Return values

Name	Description
SSP_SUCCESS	Requested clock rate was set exactly.
SSP_ERR_ASSERTION	The parameter p_api_ctrl or p_cfg is NULL or clock rate is greater than 1MHz. or p_cfg->p_extend not equal to NULL.
SSP_ERR_IN_USE	Attempted to open an already open device instance.
SSP_ERR_INVALID_ARGUMENT	If fast mode plus is configured and the channel does not support it
SSP_ERR_INVALID_RATE	The requested rate cannot be set.

See Common Error Codes for other possible return codes. This function calls

- productFeatureGet
- g_cgc_on_cgc.systemClockFreqGet

9.43.28 R_RIIC_MasterClose

```
ssp_err_t R_RIIC_MasterClose ( i2c_ctrl_t  *const p_api_ctrl )
```

9.43.28.1 Brief description

Closes the I2C device. May power down IIC peripheral.

9.43.28.2 Detailed description

This function will safely terminate any in-progress I2C transfer with the device. If a transfer is aborted, the user will be notified via callback with an abort event. Since the callback is optional, this function will also return a specific error code in this situation.

Table 1761:Return values

Name	Description
SSP_SUCCESS	Device closed without issue.
SSP_ERR_ASSERTION	p_api_ctrl is NULL.
SSP_ERR_ABORTED	Device was closed while a transfer was in progress.

9.43.29 R_RIIC_MasterRead

```
ssp_err_t R_RIIC_MasterRead ( i2c_ctrl_t  *const p_api_ctrl ,   uint8_t
*const p_dest ,   uint32_t const bytes ,   bool const restart )
```

9.43.29.1 Brief description

Performs a read from the I2C device.

9.43.29.2 Detailed description

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C read operation will begin. When no callback is provided by the user, this function performs a blocking read. Otherwise, the read operation is non-blocking and the caller will be notified when the operation has finished by an I2C_EVENT_RX_COMPLETE in the callback.

Table 1762:Return values

Name	Description
SSP_SUCCESS	Function executed without issue, if no callback was provided, the process was kicked off.
SSP_ERR_ASSERTION	p_api_ctrl, p_dest or bytes is NULL.
SSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size(65535) while DTC is used for data transfer.
SSP_ERR_IN_USE	Another transfer was in progress.
SSP_ERR_ABORTED	The transfer failed.

9.43.30 R_RIIC_MasterWrite

```
ssp_err_t R_RIIC_MasterWrite ( i2c_ctrl_t  *const p_api_ctrl ,   uint8_t
*const p_src ,   uint32_t const bytes ,   bool const restart )
```

9.43.30.1 Brief description

Performs a write to the I2C device.

9.43.30.2 Detailed description

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C write operation will begin. When no callback is provided by the user, this function performs a blocking write. Otherwise, the write operation is non-blocking and the caller will be notified when the operation has finished by an I2C_EVENT_TX_COMPLETE in the callback.

Table 1763:Return values

Name	Description
SSP_SUCCESS	Function executed without issue, if no callback was provided, the process was kicked off.
SSP_ERR_ASSERTION	p_api_ctrl or p_src is NULL.
SSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size(65535) while DTC is used for data transfer.
SSP_ERR_IN_USE	Another transfer was in progress.
SSP_ERR_ABORTED	The transfer failed.

9.43.31 R_RIIC_MasterReset

```
ssp_err_t R_RIIC_MasterReset ( i2c_ctrl_t  *const p_api_ctrl )
```

9.43.31.1 Brief description

Aborts any in-progress transfer and forces the IIC peripheral into a ready state.

9.43.31.2 Detailed description

This function will safely terminate any in-progress I2C transfer with the device. If a transfer is aborted, the user will be notified via callback with an abort event. Since the callback is optional, this function will also return a specific error code in this situation.

Table 1764:Return values

Name	Description
SSP_SUCCESS	Channel was reset without issue.
SSP_ERR_ASSERTION	p_api_ctrl is NULL.
SSP_ERR_ABORTED	A transfer was aborted while resetting the hardware.

9.43.32 R_RIIC_MasterSlaveAddressSet

```
ssp_err_t R_RIIC_MasterSlaveAddressSet ( i2c_ctrl_t  *const p_api_ctrl ,
  uint16_t const slave ,  i2c_addr_mode_t  const addr_mode )
```

9.43.32.1 Brief description

Sets address and addressing mode of the slave device.

9.43.32.2 Detailed description

This function is used to set the device address and addressing mode of the slave without reconfiguring the entire bus.

Table 1765:Return values

Name	Description
SSP_SUCCESS	Address of the slave is set correctly.
SSP_ERR_ASSERTION	Pointer to control structure is NULL.
SSP_ERR_IN_USE	Another transfer was in-progress.
SSP_ERR_NOT_OPEN	Device was not even opened.

9.43.33 g_riic_master_version

ssp_version_t::g_riic_master_version

9.43.33.1 Detailed description

Name of module used by error logger macro Version data structure used by error logger macro.

}
```

9.43.35 Extensions

9.43.35.1 riic_instance_ctrl_t

riic_instance_ctrl_t

Detailed description

I2C control structure. DO NOT INITIALIZE.

Variables

- i2c_cfg_t info

  Information describing I2C device.
- uint32_t open

  Flag to determine if the device is open.
- void * p_reg

  Base register for this channel.
- IRQn_Type rxi_irq

  Receive IRQ number.
- IRQn_Type txi_irq

  Transmit IRQ number.
- IRQn_Type tei_irq

  Transmit end IRQ number.
- IRQn_Type eri_irq

  Error IRQ number.
- uint8_t * p_buff

  Holds the data associated with the transfer
- uint32_t total

  Holds the total number of data bytes to transfer
- uint32_t remain

  Tracks the remaining data bytes to transfer
- uint32_t loaded

  Tracks the number of data bytes written to the register

- uint8_t addr_low

  Holds the last address byte to issue
- uint8_t addr_high

  Holds the first address byte to issue in 10-bit mode
- uint8_t addr_total

  Holds the total number of address bytes to transfer
- uint8_t addr_remain

  Tracks the remaining address bytes to transfer
- uint8_t addr_loaded

  Tracks the number of address bytes written to the register
- bool read

  Holds the direction of the data byte transfer
- bool restart

  Holds whether or not the restart should be issued when done
- bool err

  Tracks whether or not an error occurred during processing
- bool restarted

  Tracks whether or not a restart was issued during the previous transfer
- bool transaction_completed

  Tracks if the transaction started earlier was completed
- bool dummy_read_completed

  Tracks whether the dummy read is performed
- bool activation_on_rxi

  < Tracks whether the transfer is activated on RXI interrupt
- bool activation_on_txi

  < Tracks whether the transfer is activated on TXI interrupt
- bool address_restarted

  < Tracks whether the restart condition is send on 10 bit read

9.44 IIC Slave

Driver for the I2C Bus Slave Interface (IIC Slave).

This module supports the Renesas Inter-Integrated Circuit (IIC) peripheral. It implements the following interfaces:

- I2C Master Interface r_i2c_api.h

9.44.1 Functions

- riic_notify
- riic_slave_set_irq_parameters
- riic_open_hw_slave
- riic_close_hw_slave
- riic_run_hw_slave
- riic_slave_clock_settings
- riic_clear_all_pending_interrupts
- riic_slave_configure_interrupts
- riic_rxi_slave
- riic_txi_slave
- riic_err_slave
- R_RIIC_SlaveVersionGet
- R_RIIC_SlaveOpen
- R_RIIC_SlaveClose
- R_RIIC_MasterWriteSlaveRead
- R_RIIC_MasterReadSlaveWrite

9.44.2 Variables

- g_riic_slave_version
- g_i2c_slave_on_riic

9.44.3 Defines

- #define RIIC_SLAVE_CODE_VERSION_MAJOR

  Initial value: `(1U)`
- #define RIIC_SLAVE_CODE_VERSION_MINOR

  Initial value: `(3U)`
- #define RIIC_SLAVE_ERROR_RETURN

  Initial value:`#define SSP_ERROR_RETURN((a), (err), &g_module_name[0], &g_riic_slave_version)`

  Macro for error logger.

- #define RIIC_SLAVE_OPEN

  Initial value: `(0x49324353ULL)`

  "I2CS" in ASCII, used to determine if channel is open.
- #define MAX_CKS_DIVISOR

  Initial value:`7U`
- #define MAX_BRCL_VALUE

  Initial value:`31U`

9.44.4 riic_notify

```
 riic_notify ( riic_slave_instance_ctrl_t  *const p_ctrl ,  i2c_event_t
const event )
```

9.44.4.1 Brief description

Single point for managing the logic around notifying a transfer has finished.

9.44.4.2 Detailed description

Internal helper functions

(end addtogroup RIIC_SLAVE)

Table 1766:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to transfer that is ending.
event	in	The event code to pass to the callback.

9.44.5 riic_slave_set_irq_parameters

```
ssp_err_t riic_slave_set_irq_parameters (  ssp_feature_t * p_feature ,
  ssp_signal_t signal ,   uint8_t ipl ,   void * p_ctrl ,   IRQn_Type * p_irq )
```

9.44.5.1 Detailed description

Sets interrupt priority and initializes vector info

Table 1767:Parameters

Name	Direction	Description
p_feature	in	SSP feature
signal	in	SSP signal ID
ipl	in	Interrupt priority level
p_ctrl	in	Pointer to driver control block
p_irq	out	Pointer to IRQ for this signal, set here

Table 1768:Return values

Name	Description
SSP_SUCCESS	Interrupt enabled
SSP_ERR_IRQ_BSP_DISABLED	Interrupt does not exist in the vector table

See Common Error Codes for other possible return codes. This function calls

- eventInfoGet

9.44.6 riic_open_hw_slave

```
riic_open_hw_slave ( riic_slave_instance_ctrl_t  *const p_ctrl ,
 ssp_feature_t * p_feature )
```

9.44.6.1 Brief description

Performs the hardware initialization sequence when operating as a slave.

9.44.6.2 Detailed description

Functions that manipulate hardware

Table 1769:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control struct of specific device
p_feature	in	

9.44.7 riic_close_hw_slave

```
riic_close_hw_slave ( riic_slave_instance_ctrl_t  *const p_ctrl )
```

9.44.7.1 Brief description

Performs the hardware initialization sequence when operating as a slave.

9.44.7.2 Detailed description

Table 1770:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control struct of specific device

9.44.8 riic_run_hw_slave

```
ssp_err_t riic_run_hw_slave ( riic_slave_instance_ctrl_t  *const p_ctrl )
```

9.44.8.1 Brief description

Performs the data transfer described by the parameters when operating as a slave.

9.44.8.2 Detailed description

Table 1771:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to transfer that needs to be done.

Table 1772:Return values

Name	Description
SSP_SUCCESS	Transaction completed successfully.
SSP_ERR_ABORTED	If transaction encounter an error.

9.44.9 riic_slave_clock_settings

```
riic_slave_clock_settings ( riic_slave_instance_ctrl_t  *const p_ctrl )
```

9.44.9.1 Brief description

Sets the I2C clock and BRCL counter to a value greater than the operation mode setup time.

9.44.9.2 Detailed description

Table 1773:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to driver control block

9.44.10 riic_clear_all_pending_interrupts

```
riic_clear_all_pending_interrupts ( riic_slave_instance_ctrl_t  *const p_ctrl )
```

9.44.10.1 Brief description

Enables and assigns the interrupts to be used in slave mode.

9.44.10.2 Detailed description

Table 1774:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control struct of specific device

9.44.11 riic_slave_configure_interrupts

```
ssp_err_t riic_slave_configure_interrupts (  ssp_feature_t * ssp_feature ,
 riic_slave_instance_ctrl_t  *const p_api_ctrl ,  i2c_cfg_t  const *const p_cfg )
```

9.44.11.1 Detailed description

Sets interrupt priority and initializes vector info

Table 1775:Parameters

Name	Direction	Description
ssp_feature	in	SSP feature
p_ctrl	in	Pointer to driver control block
p_cfg	out	Pointer to driver configuration block

Table 1776:Return values

Name	Description
SSP_SUCCESS	Interrupt enabled.
SSP_ERR_IRQ_BSP_DISABLED	Interrupt does not exist in the vector table.

9.44.12 riic_rxi_slave

```
riic_rxi_slave ( riic_slave_instance_ctrl_t  * p_ctrl )
```

9.44.12.1 Brief description

Handles the receive data full interrupt when operating as a slave.

9.44.12.2 Detailed description

Interrupt handlers

Table 1777:Parameters

Name	Direction	Description
p_ctrl	in	The target RIIC block's control block.

9.44.13 riic_txi_slave

```
riic_txi_slave ( riic_slave_instance_ctrl_t  * p_ctrl )
```

9.44.13.1 Brief description

Handles the transmit data empty interrupt when operating as a slave.

9.44.13.2 Detailed description

Table 1778:Parameters

Name	Direction	Description
p_ctrl	in	The target RIIC block's control block.

9.44.14 riic_err_slave

```
riic_err_slave ( riic_slave_instance_ctrl_t  * p_ctrl )
```

9.44.14.1 Brief description

Handles the error interrupts when operating as a slave.

9.44.14.2 Detailed description

Table 1779:Parameters

Name	Direction	Description
p_ctrl	in	The target RIIC block's control block.

9.44.15 R_RIIC_SlaveVersionGet

```
ssp_err_t R_RIIC_SlaveVersionGet ( ssp_version_t  *const p_version )
```

9.44.15.1 Brief description

Gets version information and stores it in the provided version struct.

9.44.15.2 Detailed description

Table 1780:Return values

Name	Description
SSP_SUCCESS	Successful version get.
SSP_ERR_ASSERTION	p_version is NULL.

9.44.16 R_RIIC_SlaveOpen

```
ssp_err_t R_RIIC_SlaveOpen ( i2c_ctrl_t  *const p_api_ctrl ,  i2c_cfg_t  const
*const p_cfg )
```

9.44.16.1 Brief description

Opens the I2C device. May power on IIC peripheral and perform initialization described in hardware manual.

9.44.16.2 Detailed description

Table 1781:Return values

Name	Description
SSP_SUCCESS	Opened identical configuration of already open instance.
SSP_ERR_ASSERTION	p_api_ctrl or p_cfg is NULL.
SSP_ERR_IN_USE	Attempted to open an already open device instance.
SSP_ERR_IRQ_BSP_DISABLED	Interrupt does not exist in the vector table.
SSP_ERR_INVALID_ARGUMENT	If fast mode plus is configured and the channel does not support it

See Common Error Codes for other possible return codes. This function calls

- productFeatureGet
- g_cgc_on_cgc.systemClockFreqGet

9.44.17 R_RIIC_SlaveClose

```
ssp_err_t R_RIIC_SlaveClose ( i2c_ctrl_t  *const p_api_ctrl )
```

9.44.17.1 Brief description

Closes the I2C device. Power down IIC peripheral.

9.44.17.2 Detailed description

Table 1782:Return values

Name	Description
SSP_SUCCESS	Device closed without issue.
SSP_ERR_NOT_OPEN	Device not opened.
SSP_ERR_ASSERTION	p_api_ctrl is NULL.
SSP_ERR_ABORTED	Device was closed while a transfer was in progress.

9.44.18 R_RIIC_MasterWriteSlaveRead

```
ssp_err_t R_RIIC_MasterWriteSlaveRead ( i2c_ctrl_t  *const p_api_ctrl ,
  uint8_t *const p_dest ,   uint32_t const bytes )
```

9.44.18.1 Brief description

Performs a read from the I2C Master device.

9.44.18.2 Detailed description

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C read operation will begin. When no callback is provided by the user, this function performs a blocking read. Otherwise, the read operation is non-blocking and the caller will be notified when the operation has finished by an I2C_EVENT_RX_COMPLETE in the callback.

Table 1783:Return values

Name	Description
SSP_SUCCESS	Function executed without issue; if no callback was provided, the process was kicked off
SSP_ERR_ASSERTION	p_api_ctrl, bytes or p_dest is NULL.
SSP_ERR_IN_USE	Another transfer was in progress.
SSP_ERR_NOT_OPEN	device is not open.
SSP_ERR_ABORTED	If transaction encounter an error.

9.44.19 R_RIIC_MasterReadSlaveWrite

```
ssp_err_t R_RIIC_MasterReadSlaveWrite ( i2c_ctrl_t  *const p_api_ctrl ,
  uint8_t *const p_src ,   uint32_t const bytes )
```

9.44.19.1 Brief description

Performs a write to the I2C Master device.

9.44.19.2 Detailed description

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C write operation will begin. When no callback is provided by the user, this function performs a blocking write. Otherwise, the write operation is non-blocking and the caller will be notified when the operation has finished by an I2C_EVENT_TX_COMPLETE in the callback.

Table 1784:Return values

Name	Description
SSP_SUCCESS	Function executed without issue; if no callback was provided, the process was kicked off
SSP_ERR_ASSERTION	p_api_ctrl or p_src is NULL.
SSP_ERR_IN_USE	Another transfer was in progress.
SSP_ERR_NOT_OPEN	device is not open.
SSP_ERR_ABORTED	If transaction encounter an error.

  Tracks the actual number of transactions
- bool read

  Holds the direction of the data byte transfer
- bool err

  Tracks whether or not an error occurred during processing
- bool slave_busy

  Tracks if the slave is busy performing a transaction
- bool do_dummy_read
- bool start_interrupt_enabled

  << Tracks whether a dummy read is issued on the first RX < Tracks whether the start interrupt is enabled
- bool restarted

9.45 SPI

Driver for the Serial Peripheral Interface (SPI).

This module supports SPI serial communication for the SPI module. The SPI Interface is defined in r_spi_api.h

9.45.1 Functions

- R_RSPI_Open
- R_RSPI_Read
- R_RSPI_Write
- R_RSPI_WriteRead
- rspi_write_read_common
- R_RSPI_Close
- rspi_baud_set
- R_RSPI_VersionGet

9.45.2 Defines

- #define RSPI_CODE_VERSION_MAJOR

  Initial value: `(1U)`
- #define RSPI_CODE_VERSION_MINOR

  Initial value: `(8U)`

9.45.3 R_RSPI_Open

```
ssp_err_t R_RSPI_Open ( spi_ctrl_t  * p_api_ctrl ,  spi_cfg_t  const
*const p_cfg )
```

9.45.3.1 Brief description

This functions initializes a channel for SPI communication mode.

9.45.3.2 Detailed description

Implements open This function performs the following tasks: Performs parameter checking and processes error conditions. Applies power to the SPI channel. Disables interrupts. Initializes the associated registers with some default value and the user-configurable options. Provides the channel control for use with other API functions. Updates user-configurable file if necessary.

Table 1785:Return values

Name	Description
SSP_SUCCESS	Channel initialized successfully.

Table 1785:Return values (Continued)

Name	Description
SSP_ERR_ASSERTION	NULL pointer to following parameters p_ctrl, p_cfg, p_cfg::p_transfer_rx::p_api, p_cfg::p_transfer_rx::p_ctrl, p_cfg::p_transfer_rx::p_cfg, p_cfg::p_transfer_rx::p_cfg::p_info. or failed to set the baud rate,
SSP_ERR_INVALID_ARGUMENT	An element of the r_spi_cfg_t structure contains an invalid value. The parameters is out of range. Both transfer modules need to be present or absent.
SSP_ERR_HW_LOCKED	The lock could not be acquired. The channel is busy.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- open
- productFeatureGet
- eventInfoGet

NOTE: This function is reentrant.

9.45.4 R_RSPI_Read

```
ssp_err_t R_RSPI_Read ( spi_ctrl_t  *const p_api_ctrl ,   void const * p_dest ,
  uint32_t const length ,  spi_bit_width_t  const bit_width )
```

9.45.4.1 Brief description

This function receives data from a SPI device.

9.45.4.2 Detailed description

Implements read The function performs the following tasks: Performs parameter checking and processes error conditions. Disable Interrupts. Disable the SPI bus. Setup data bit width per user request. Enable the SPI bus. Enable interrupts. Start data transmission with dummy data via transmit buffer empty interrupt. Copy data from source buffer to the SPI data register for transmission. Receive data from receive buffer full interrupt occurs and copy data to the buffer of destination. Complete data reception via receive buffer full interrupt and transmitting dummy data.

Table 1786:Return values

Name	Description
SSP_SUCCESS	Read operation successfully completed.
SSP_ERR_ASSERTION	NULL pointer to control or destination parameters or transfer length is zero.
SSP_ERR_UNSUPPORTED	With DTC transfer mode, bit_width must match configured DTC transfer width
SSP_ERR_HW_LOCKED	The lock could not be acquired. The channel is busy.
SSP_ERR_NOT_OPEN	The channel has not been opened. Open channel first.
SSP_ERR_INVALID_HW_CONDITION	Failed to clear errors in the module

NOTE: This function is reentrant.

9.45.5 R_RSPI_Write

```
ssp_err_t R_RSPI_Write ( spi_ctrl_t  *const p_api_ctrl ,   void const * p_src ,
  uint32_t const length ,  spi_bit_width_t  const bit_width )
```

9.45.5.1 Brief description

This function transmits data to a SPI device using the TX Only Communications Operation Mode.

9.45.5.2 Detailed description

Implements write The function performs the following tasks: Performs parameter checking and processes error conditions. Disable Interrupts. Disable the SPI bus. Setup data bit width per user request. Enable the SPI bus. Enable interrupts. Start data transmission with dummy data via transmit buffer empty interrupt. Copy data from source buffer to the SPI data register for transmission. Receive data from receive buffer full interrupt occurs and do nothing with the received data. Complete data transmission via receive buffer full interrupt.

Table 1787:Return values

Name	Description
SSP_SUCCESS	Write operation successfully completed.

Table 1787:Return values (Continued)

Name	Description
SSP_ERR_ASSERTION	NULL pointer to control or source parameters or transfer length is zero.
SSP_ERR_UNSUPPORTED	With DTC transfer mode, bit_width must match configured DTC transfer width
SSP_ERR_HW_LOCKED	The lock could not be acquired. The channel is busy.
SSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
SSP_ERR_INVALID_HW_CONDITION	Failed to clear errors in the module

NOTE: This function is reentrant.

9.45.6 R_RSPI_WriteRead

```
ssp_err_t R_RSPI_WriteRead ( spi_ctrl_t  *const p_api_ctrl ,   void const
* p_src ,   void const * p_dest ,   uint32_t const length ,  spi_bit_width_t
const bit_width )
```

9.45.6.1 Brief description

This function simultaneously transmits data to a SPI device while receiving data from a SPI device (full duplex).

9.45.6.2 Detailed description

Implements spi_api_t::writeread The function performs the following tasks: Performs parameter checking and processes error conditions. Disable Interrupts. Disable the SPI bus. Setup data bit width per user request. Enable the SPI bus. Enable interrupts. Start data transmission using transmit buffer empty interrupt. Copy data from source buffer to the SPI data register for transmission. Receive data from receive buffer full interrupt occurs and copy data to the buffer of destination. Complete data transmission and reception via receive buffer full interrupt.

Table 1788:Return values

Name	Description
SSP_SUCCESS	Write operation successfully completed.
SSP_ERR_ASSERTION	NULL pointer to control, source or destination parameters or transfer length is zero.

Table 1788:Return values (Continued)

Name	Description
SSP_ERR_UNSUPPORTED	With DTC transfer mode, bit_width must match configured DTC transfer width
SSP_ERR_HW_LOCKED	The lock could not be acquired. The channel is busy.
SSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
SSP_ERR_INVALID_HW_CONDITION	Failed to clear errors in the module

NOTE: This function is reentrant.

9.45.7 rspi_write_read_common

```
ssp_err_t rspi_write_read_common ( rspi_instance_ctrl_t  *const p_ctrl ,   void
const * p_src ,   void const * p_dest ,   uint32_t const length ,
 spi_bit_width_t  const bit_width ,  spi_operation_t  tx_rx_mode )
```

9.45.8 R_RSPI_Close

```
ssp_err_t R_RSPI_Close ( spi_ctrl_t  *const p_api_ctrl )
```

9.45.8.1 Brief description

This function manages the closing of a channel by the following task.

9.45.8.2 Detailed description

Implements close Disables SPI operations by disabling the SPI bus. Power off the channel. Disables all the associated interrupts. Update channel status.

Table 1789:Return values

Name	Description
SSP_SUCCESS	Channel successfully closed.
SSP_ERR_ASSERTION	A required pointer argument is NULL.

Table 1789:Return values (Continued)

Name	Description
SSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.

NOTE: This function is reentrant.

9.45.9 rspi_baud_set

```
rspi_baud_set ( rspi_instance_ctrl_t  * p_ctrl ,  uint32_t baud_target )
```

9.45.10 R_RSPI_VersionGet

```
ssp_err_t R_RSPI_VersionGet ( ssp_version_t  * p_version )
```

9.45.10.1 Brief description

This function gets the version information of the underlying driver.

9.45.10.2 Detailed description

Implements spi_api_t::versionget

Table 1790:Return values

Name	Description
void	

NOTE: This function is reentrant.

9.45.11 API Data

9.45.11.1 rspi_spcmd_bit_length_t

```
rspi_spcmd_bit_length_t
```

Detailed description

Frame data length

Enumerated values

Name	Description
RSPI_SPCMD_BIT_LENGTH_8	0100 to 0111 = 8 bits data length
RSPI_SPCMD_BIT_LENGTH_16	1111 = 16 bits data length
RSPI_SPCMD_BIT_LENGTH_32	0011 = 32 bits data length

9.45.11.2 rspi_operation_t

`rspi_operation_t`

Detailed description

SPCR (RSPI Control register) SPMS (RSPI mode) select

Enumerated values

Name	Description
RSPI_OPERATION_SPI	SPI operation (4-wire method)
RSPI_OPERATION_CLK_SYN	Clock Synchronous operation (3-wire method)

9.45.11.3 rspi_communication_t

`rspi_communication_t`

Detailed description

SPCR (RSPI Control register) TXMD (communication operating mode) select

Enumerated values

Name	Description
RSPI_COMMUNICATION_FULL_DUPLEX	Full-Duplex synchronous serial communication
RSPI_COMMUNICATION_TRANSMIT_ONLY	Transit only serial communication

9.45.11.4 rspi_sslp_t

`rspi_sslp_t`

Detailed description

Definition for SSLP (RSPI Slave Select Polarity register) select

Enumerated values

Name	Description
RSPI_SSLP_LOW	SSLP signal polarity active low
RSPI_SSLP_HIGH	SSLP signal polarity active high

9.45.11.5 rspi_loopback1_t

`rspi_loopback1_t`

Detailed description

SPPCR (RSPI Pin Control Register) Loopback1 select

Enumerated values

Name	Description
RSPI_LOOPBACK1_NORMAL_DATA	Loopback1 normal mode
RSPI_LOOPBACK1_INVERTED_DATA	Loopback1 with inverted data

9.45.11.6 rspi_loopback2_t

`rspi_loopback2_t`

Detailed description

SPPCR (RSPI Pin Control Register) Loopback2 select

Enumerated values

Name	Description
RSPI_LOOPBACK2_NORMAL_DATA	Loopback2 normal mode
RSPI_LOOPBACK2_NOT_INVERTED_DATA	Loopback2 with not inverted data

9.45.11.7 rspi_mosi_idle_fixed_val_t

`rspi_mosi_idle_fixed_val_t`

Detailed description

SPPCR (RSPI Pin Control Register) MOIFV select

Enumerated values

Name	Description
RSPI_MOSI_IDLE_FIXED_VAL_LOW	MOSIn level low during MOSI idling
RSPI_MOSI_IDLE_FIXED_VAL_HIGH	MOSIn level high during MOSI idling

9.45.11.8 rspi_mosi_idle_val_fixing_t

`rspi_mosi_idle_val_fixing_t`

Detailed description

SPPCR (RSPI Pin Control Register) MOIFE (MOSI idle value fixing) select

Enumerated values

Name	Description
RSPI_MOSI_IDLE_VAL_FIXING_ENABLE	MOSI output value=final data from previous transfer
RSPI_MOSI_IDLE_VAL_FIXING_DISABLE	MOSI output value=value set in MOIFV bit

9.45.11.9 rspi_parity_state_t

`rspi_parity_state_t`

Detailed description

SPCR2 (RSPI Control Register 2) Parity Enable select

Enumerated values

Name	Description
RSPI_PARITY_STATE_DISABLE	Disable parity
RSPI_PARITY_STATE_ENABLE	Enable parity

9.45.11.10 rspi_parity_mode_t

`rspi_parity_mode_t`

Detailed description

SPCR2 (RSPI Control Register 2) Parity select

Enumerated values

Name	Description
RSPI_PARITY_MODE_ODD	Select even parity
RSPI_PARITY_MODE_EVEN	Select odd parity

9.45.11.11 rspi_ssl_select_t

`rspi_ssl_select_t`

Detailed description

SPCMD (RSPI Command) Register SSL Signal Assertion select

Enumerated values

Name	Description
RSPI_SSL_SELECT_SSL0	Select SSL0 as slave
RSPI_SSL_SELECT_SSL1	Select SSL1 as slave
RSPI_SSL_SELECT_SSL2	Select SSL2 as slave
RSPI_SSL_SELECT_SSL3	Select SSL3 as slave

9.45.11.12 rspi_ssl_level_keep_t

`rspi_ssl_level_keep_t`

Detailed description

SPCMD (RSPI Command) Register SSL Signal Level Keeping select

Enumerated values

Name	Description
RSPI_SSL_LEVEL_KEEP_NOT	Negates all SSL signals upon transfer completion
RSPI_SSL_LEVEL_KEEP	Keeps the SSL level upon transfer completion

9.45.11.13 rspi_clock_delay_count_t

`rspi_clock_delay_count_t`

Detailed description

SPCKD (RSPI Clock Delay) Register Clock Delay Count select

Enumerated values

Name	Description
RSPI_CLOCK_DELAY_COUNT_1	Set RSPCK Clock delay to 1 RSPCK
RSPI_CLOCK_DELAY_COUNT_2	Set RSPCK Clock delay to 2 RSPCK
RSPI_CLOCK_DELAY_COUNT_3	Set RSPCK Clock delay to 3 RSPCK
RSPI_CLOCK_DELAY_COUNT_4	Set RSPCK Clock delay to 4 RSPCK
RSPI_CLOCK_DELAY_COUNT_5	Set RSPCK Clock delay to 5 RSPCK
RSPI_CLOCK_DELAY_COUNT_6	Set RSPCK Clock delay to 6 RSPCK
RSPI_CLOCK_DELAY_COUNT_7	Set RSPCK Clock delay to 7 RSPCK
RSPI_CLOCK_DELAY_COUNT_8	Set RSPCK Clock delay to 8 RSPCK

9.45.11.14 rspi_clock_delay_state_t

`rspi_clock_delay_state_t`

Detailed description

SPCMD (RSPI Command) Register RSPCK Delay Enable/Disable select SCKDEN

Enumerated values

Name	Description
RSPI_CLOCK_DELAY_STATE_DISABLE	RSPCK delay=1 RSPCK
RSPI_CLOCK_DELAY_STATE_ENABLE	RSPCK delay=SPCKD register setting

9.45.11.15 rspi_ssl_negation_delay_count_t

`rspi_ssl_negation_delay_count_t`

Detailed description

SSLND (RSPI Slave Select Negation Delay) Register Slave Select Negation Delay Count select

Enumerated values

Name	Description
RSPI_SSL_NEGATION_DELAY_1	Set SSL negation delay to 1 RSPCK
RSPI_SSL_NEGATION_DELAY_2	Set SSL negation delay to 2 RSPCK
RSPI_SSL_NEGATION_DELAY_3	Set SSL negation delay to 3 RSPCK
RSPI_SSL_NEGATION_DELAY_4	Set SSL negation delay to 4 RSPCK
RSPI_SSL_NEGATION_DELAY_5	Set SSL negation delay to 5 RSPCK
RSPI_SSL_NEGATION_DELAY_6	Set SSL negation delay to 6 RSPCK
RSPI_SSL_NEGATION_DELAY_7	Set SSL negation delay to 7 RSPCK
RSPI_SSL_NEGATION_DELAY_8	Set SSL negation delay to 8 RSPCK

9.45.11.16 rspi_ssl_negation_delay_state_t

`rspi_ssl_negation_delay_state_t`

Detailed description

SPCMD (RSPI Command) Register SSL Negation Delay select SLNDEN

Enumerated values

Name	Description
RSPI_SSL_NEGATION_DELAY_DISABLE	SSL negation delay=1 RSPCK
RSPI_SSL_NEGATION_DELAY_ENABLE	SSL negation delay=SSLND register setting

9.45.11.17 rspi_next_access_delay_count_t

`rspi_next_access_delay_count_t`

Detailed description

SPND (RSPI Next-Access Delay) Register Next Access Delay Count select

Enumerated values

Name	Description
RSPI_NEXT_ACCESS_DELAY_COUNT_1	Set next access delay to 1 RSPCK+2PCLK

Name	Description
RSPI_NEXT_ACCESS_DELAY_COUNT_2	Set next access delay to 2 RSPCK+2PCLK
RSPI_NEXT_ACCESS_DELAY_COUNT_3	Set next access delay to 3 RSPCK+2PCLK
RSPI_NEXT_ACCESS_DELAY_COUNT_4	Set next access delay to 4 RSPCK+2PCLK
RSPI_NEXT_ACCESS_DELAY_COUNT_5	Set next access delay to 5 RSPCK+2PCLK
RSPI_NEXT_ACCESS_DELAY_COUNT_6	Set next access delay to 6 RSPCK+2PCLK
RSPI_NEXT_ACCESS_DELAY_COUNT_7	Set next access delay to 7 RSPCK+2PCLK
RSPI_NEXT_ACCESS_DELAY_COUNT_8	Set next access delay to 8 RSPCK+2PCLK

9.45.11.18 rspi_next_access_delay_state_t

`rspi_next_access_delay_state_t`

Detailed description

SPCMD (RSPI Command) Register Next Access Delay select SPNDEN

Enumerated values

Name	Description
RSPI_NEXT_ACCESS_DELAY_STATE_DISABLE	Next access delay=1 RSPCK + 2 PCLK
RSPI_NEXT_ACCESS_DELAY_STATE_ENABLE	Next access delay=SPND register setting

9.45.11.19 rspi_spcmd_br_div_t

`rspi_spcmd_br_div_t`

Enumerated values

Name	Description
RSPI_SPCMD_BR_DIV_1	
RSPI_SPCMD_BR_DIV_2	
RSPI_SPCMD_BR_DIV_4	
RSPI_SPCMD_BR_DIV_8	

9.45.11.20 rspi_spcmd_assert_ssl_t

`rspi_spcmd_assert_ssl_t`

Detailed description

Slave select to be asserted during transfer operation.

Enumerated values

Name	Description
RSPI_SPCMD_ASSERT_SSL0	
RSPI_SPCMD_ASSERT_SSL1	
RSPI_SPCMD_ASSERT_SSL2	
RSPI_SPCMD_ASSERT_SSL3	

9.45.12 Extensions

9.45.12.1 rspi_ssl_polarity_t

rspi_ssl_polarity_t

Detailed description

SSLP (RSPI Slave Select Polarity register) SSLnP select

Variables

- rspi_sslp_t rspi_ssl2
- rspi_sslp_t rspi_ssl3
- rspi_sslp_t rspi_ssl0
- rspi_sslp_t rspi_ssl1

9.45.12.2 rspi_loopback_t

rspi_loopback_t

Detailed description

SPPCR (RSPI Pin Control Register) Loopback select

Variables

- rspi_loopback1_t rspi_loopback1
- rspi_loopback2_t rspi_loopback2

9.45.12.3 rspi_mosi_idle_t

rspi_mosi_idle_t

Detailed description

SPPCR (RSPI Pin Control Register) MOIFV (mosi idle value) select

Variables

- rspi_mosi_idle_fixed_val_t rspi_mosi_idle_fixed_val
- rspi_mosi_idle_val_fixing_t rspi_mosi_idle_val_fixing

9.45.12.4 rspi_parity_t

rspi_parity_t

Detailed description

SPCR2 (RSPI Control Register 2) Parity select

Variables

- rspi_parity_state_t rspi_parity
- rspi_parity_mode_t rspi_parity_mode

9.45.12.5 rspi_clock_delay_t

rspi_clock_delay_t

Detailed description

Select RSPI Clock Delay Register (SPCKD) and SPCMD (RSPI Command) Register-Clock Delay state(SCKDEN)

Variables

- rspi_clock_delay_count_t rspi_clock_delay_count
- rspi_clock_delay_state_t rspi_clock_delay_state

9.45.12.6 rspi_ssl_negation_delay_t

rspi_ssl_negation_delay_t

Detailed description

Select SSL Negation Delay(SSLND) and SPCMD Register-SSL negation Delay state(SLNDEN)

Variables

- rspi_ssl_negation_delay_count_t rspi_ssl_neg_delay_count
- rspi_ssl_negation_delay_state_t rspi_ssl_neg_delay_state

9.45.12.7 rspi_access_delay_t

rspi_access_delay_t

Detailed description

Select Next Access Delay(SPND) and SPCMD Register-Next Access Delay state(SPNDEN)

Variables

- rspi_next_access_delay_count_t rspi_next_access_delay_count
- rspi_next_access_delay_state_t rspi_next_access_delay_state

9.45.12.8 spi_on_rspi_cfg_t

spi_on_rspi_cfg_t

Detailed description

Extended SPI interface configuration

Variables

- rspi_operation_t rspi_clksyn

  Select spi or clock syn mode operation
- rspi_communication_t rspi_comm

  Select full-duplex or transmit-only communication
- rspi_ssl_polarity_t ssl_polarity

  Select SSLn signal polarity
- rspi_loopback_t loopback

  Select loopback1 and loopback2
- rspi_mosi_idle_t mosi_idle

  Select mosi idle fixed value and selection
- rspi_parity_t parity

  Select parity and enable/disable parity
- rspi_ssl_select_t ssl_select

  Select which slave to use;0-SSL0;1-SSL1;2-SSL2;3-SSL3
- rspi_ssl_level_keep_t ssl_level_keep

  Select SSL level after transfer completion;0-negate;1-keeps
- rspi_clock_delay_t clock_delay

  Select clock delay from 0 to 7
- rspi_ssl_negation_delay_t ssl_neg_delay

  Select Slave elect negation delay from 0 to 7
- rspi_access_delay_t access_delay

  Select next access delay from 0 to 7

9.45.12.9 rspi_instance_ctrl_t

rspi_instance_ctrl_t

Detailed description

SPI instance control block. DO NOT INITIALIZE.

Variables

- uint8_t channel

  Channel number to be used.
- uint8_t current_slave

  Number of the currently assigned slave.
- uint32_t channel_opened

  Internal flag to indicate the peripheral was initialized.
- transfer_instance_t const * p_transfer_tx

  To use SPI DTC/DMA write transfer.
- transfer_instance_t const * p_transfer_rx

  To use SPI DTC/DMA read transfer.
- void(* p_callback)(*p_args)

  Pointer to user callback function.
- void const * p_context

  Pointer to the higher level device context.
- void * p_reg

  Base register for this channel.
- IRQn_Type rxi_irq

  Receive IRQ number.
- IRQn_Type txi_irq

  Transmit IRQ number.
- IRQn_Type tei_irq

  Transmit end IRQ number.
- IRQn_Type eri_irq

  Error IRQ number.
- void * p_src
- void * p_dest
- uint32_t tx_count
- uint32_t rx_count
- uint32_t xfr_length

- uint8_t bytes_per_transfer
- bool do_tx
- bool using_dtc
- transfer_addr_mode_t tx_dtc_addr_mode
- transfer_addr_mode_t rx_dtc_addr_mode
- spi_operation_t transfer_mode
- uint32_t rx_data
- bsp_lock_t resource_lock_tx_rx

  Resource lock for transmission/reception

9.46 RTC

Driver for the Realtime Clock (RTC).

This module supports the Real Time Clock (RTC). It implements the following interfaces:

- RTC Interface

9.46.1 Functions

- R_RTC_Open
- R_RTC_Close
- R_RTC_Configure
- R_RTC_CalendarTimeSet
- R_RTC_CalendarTimeGet
- R_RTC_CalendarAlarmSet
- R_RTC_CalendarAlarmGet
- R_RTC_CalendarCounterStart
- R_RTC_CalendarCounterStop
- R_RTC_IrqEnable
- R_RTC_IrqDisable
- R_RTC_PeriodicIrqRateSet
- R_RTC_InfoGet
- R_RTC_ErrorAdjustmentModeSet
- R_RTC_ErrorAdjustmentSet
- R_RTC_VersionGet

- r_rtc_start_bit_clear
- r_rtc_start_bit_set
- r_rtc_software_reset
- r_rtc_set_clock_source
- r_rtc_nvic_enable_irq
- r_rtc_config_rtc_interrupts
- r_rtc_enable_alarm_irq
- r_rtc_enable_irq
- r_rtc_disable_irq
- r_rtc_error_adjustment_mode_set_common
- r_rtc_error_adjustment_period_set
- rtc_dec_to_bcd
- rtc_bcd_to_dec

9.46.2 Defines

- #define RTC_CODE_VERSION_MAJOR

  Initial value: `(1U)`
- #define RTC_CODE_VERSION_MINOR

  Initial value: `(7U)`

9.46.3 R_RTC_Open

```
ssp_err_t R_RTC_Open ( rtc_ctrl_t  *const p_api_ctrl ,  rtc_cfg_t  const
*const p_cfg )
```

9.46.3.1 Brief description

Open the RTC driver.

9.46.3.2 Detailed description

Implements open.

Opens and configures the RTC driver module. Configuration includes clock source, and interrupt callback function. If the sub-clock oscillator is the clock source it is started in this function.

Table 1791:Return values

Name	Description
SSP_SUCCESS	Initialization was successful and RTC has started.
SSP_ERR_ASSERTION	Invalid p_api_ctrl or p_cfg pointer.
SSP_ERR_HW_LOCKED	Hardware in use
SSP_ERR_TIMEOUT	Status check for counter mode or reset timed out

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- productFeatureGet

9.46.3.3 Function steps

- Mark driver as open by initializing it to "RTC" in its ASCII equivalent.

9.46.4 R_RTC_Close

```
ssp_err_t R_RTC_Close ( rtc_ctrl_t  *const p_api_ctrl )
```

9.46.4.1 Brief description

Close the RTC driver.

9.46.4.2 Detailed description

Implements close

Table 1792:Return values

Name	Description
SSP_SUCCESS	De-Initialization was successful and RTC driver closed.
SSP_ERR_ASSERTION	Invalid p_api_ctrl or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_NOT_OPEN	Driver not open already for close.

9.46.5 R_RTC_Configure

```
ssp_err_t R_RTC_Configure ( rtc_ctrl_t  *const p_api_ctrl ,   void
*const p_extend )
```

9.46.5.1 Brief description

Configure the RTC driver.

9.46.5.2 Detailed description

Implements configure

Table 1793:Return values

Name	Description
SSP_SUCCESS	RTC was successful configured.
SSP_ERR_ASSERTION	Invalid p_api_ctrl or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_NOT_OPEN	Driver not open already for operation.
SSP_ERR_TIMEOUT	Status check for counter mode or reset timed out

9.46.6 R_RTC_CalendarTimeSet

```
ssp_err_t R_RTC_CalendarTimeSet ( rtc_ctrl_t  *const p_api_ctrl ,  rtc_time_t
* p_time ,   bool clock_start )
```

9.46.6.1 Brief description

Set the calendar time.

9.46.6.2 Detailed description

Implements calendarTimeSet.

Table 1794:Return values

Name	Description
SSP_SUCCESS	Calendar time set operation was successful.

Table 1794:Return values (Continued)

Name	Description
SSP_ERR_ASSERTION	Invalid p_api_ctrl, p_time or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_NOT_OPEN	Driver not open already for operation.
SSP_ERR_INVALID_ARGUMENT	Invalid time parameter field.
SSP_ERR_TIMEOUT	Software reset status check failed.

9.46.7 R_RTC_CalendarTimeGet

```
ssp_err_t R_RTC_CalendarTimeGet ( rtc_ctrl_t  *const p_api_ctrl ,  rtc_time_t
* p_time )
```

9.46.7.1 Brief description

Get the calendar time.

9.46.7.2 Detailed description

Implements calendarTimeGet

Table 1795:Return values

Name	Description
SSP_SUCCESS	Calendar time get operation was successful.
SSP_ERR_ASSERTION	Invalid p_api_ctrl, p_time or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_NOT_OPEN	Driver not open already for operation.
SSP_ERR_TIMEOUT	IRQ enable operation timed out.

9.46.7.3 Function steps

- Store the carry IRQ status so it can be restored later.
- Restore the state of carry IRQ.

9.46.8 R_RTC_CalendarAlarmSet

```
ssp_err_t R_RTC_CalendarAlarmSet ( rtc_ctrl_t  *const p_api_ctrl ,
 rtc_alarm_time_t  * p_alarm ,   bool interrupt_enable_flag )
```

9.46.8.1 Brief description

Set the calendar alarm time.

9.46.8.2 Detailed description

Implements calendarAlarmSet.

NOTE: The calendar counter must be running before the alarm can be set.

Table 1796:Return values

Name	Description
SSP_SUCCESS	Calendar alarm time set operation was successful.
SSP_ERR_INVALID_ARGUMENT	Invalid time parameter field.
SSP_ERR_ASSERTION	Invalid p_api_ctrl, p_alarm or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_NOT_OPEN	Driver not open already for operation.

9.46.9 R_RTC_CalendarAlarmGet

```
ssp_err_t R_RTC_CalendarAlarmGet ( rtc_ctrl_t  *const p_api_ctrl ,
 rtc_alarm_time_t  * p_alarm )
```

9.46.9.1 Brief description

Get the calendar alarm time.

9.46.9.2 Detailed description

Implements calendarAlarmGet

Table 1797:Return values

Name	Description
SSP_SUCCESS	Calendar alarm time get operation was successful.
SSP_ERR_ASSERTION	Invalid p_api_ctrl, p_alarm or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_NOT_OPEN	Driver not open already for operation.

9.46.10 R_RTC_CalendarCounterStart

```
ssp_err_t R_RTC_CalendarCounterStart ( rtc_ctrl_t  *const p_api_ctrl )
```

9.46.10.1 Brief description

Start the calendar counter.

9.46.10.2 Detailed description

Implements calendarCounterStart.

Table 1798:Return values

Name	Description
SSP_SUCCESS	Calendar counter started.
SSP_ERR_ASSERTION	Invalid p_api_ctrl or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_NOT_OPEN	Driver not open already for operation.

9.46.11 R_RTC_CalendarCounterStop

```
ssp_err_t R_RTC_CalendarCounterStop ( rtc_ctrl_t  *const p_api_ctrl )
```

9.46.11.1 Brief description

Stop the calendar counter.

9.46.11.2 Detailed description

Implements calendarCounterStop.

Table 1799:Return values

Name	Description
SSP_SUCCESS	Calendar counter stopped.
SSP_ERR_ASSERTION	Invalid p_api_ctrl or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_NOT_OPEN	Driver not open already for operation.

9.46.12 R_RTC_IrqEnable

```
ssp_err_t R_RTC_IrqEnable ( rtc_ctrl_t  *const p_api_ctrl ,
 rtc_event_t  event )
```

9.46.12.1 Brief description

Enable the alarm interrupt.

9.46.12.2 Detailed description

Implements rtc_api_t::interruptEnable.

Table 1800:Return values

Name	Description
SSP_SUCCESS	Alarm interrupt enabled.
SSP_ERR_ASSERTION	Invalid p_api_ctrl or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_IRQ_BSP_DISABLED	User IRQ parameter not valid.
SSP_ERR_INVALID_ARGUMENT	Invalid IRQ event.
SSP_ERR_TIMEOUT	IRQ enable operation timed out.
SSP_ERR_NOT_OPEN	Driver not open already for operation.

9.46.13 R_RTC_IrqDisable

```
ssp_err_t R_RTC_IrqDisable ( rtc_ctrl_t  *const p_api_ctrl ,
 rtc_event_t  event )
```

9.46.13.1 Brief description

Disable the alarm interrupt.

9.46.13.2 Detailed description

Implements rtc_api_t::interruptDisable.

Table 1801:Return values

Name	Description
SSP_SUCCESS	Alarm interrupt disabled.
SSP_ERR_ASSERTION	Invalid p_api_ctrl or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_IRQ_BSP_DISABLED	User IRQ parameter not valid
SSP_ERR_INVALID_ARGUMENT	Invalid IRQ event
SSP_ERR_TIMEOUT	IRQ disable operation timed out.
SSP_ERR_NOT_OPEN	Driver not open already for operation.

9.46.14 R_RTC_PeriodicIrqRateSet

```
ssp_err_t R_RTC_PeriodicIrqRateSet ( rtc_ctrl_t  *const p_api_ctrl ,
 rtc_periodic_irq_select_t  rate )
```

9.46.14.1 Brief description

Set the periodic interrupt rate.

9.46.14.2 Detailed description

Implements rtc_api_t::periodicInterruptRateSet.

Table 1802:Return values

Name	Description
SSP_SUCCESS	The periodic interrupt rate was successfully set.
SSP_ERR_ASSERTION	Invalid p_api_ctrl or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_TIMEOUT	Periodic interrupt rate get query timed out.
SSP_ERR_NOT_OPEN	Driver not open already for operation.

9.46.15 R_RTC_InfoGet

```
ssp_err_t R_RTC_InfoGet ( rtc_ctrl_t  * p_api_ctrl ,  rtc_info_t  * p_rtc_info )
```

9.46.15.1 Brief description

This function returns information about the driver clock source.

9.46.15.2 Detailed description

Implements infoGet

Table 1803:Return values

Name	Description
SSP_SUCCESS	Get information Successful.
SSP_ERR_ASSERTION	Invalid p_api_ctrl, p_rtc_info or p_ctrl->p_reg member pointed by p_api_ctrl pointer.
SSP_ERR_NOT_OPEN	Driver not open already for operation.

9.46.16 R_RTC_ErrorAdjustmentModeSet

```
ssp_err_t R_RTC_ErrorAdjustmentModeSet ( rtc_ctrl_t  * p_api_ctrl ,
 rtc_error_adjustment_mode_cfg_t  * p_error_adjustment_mode )
```

9.46.16.1 Brief description

This function sets time error adjustment mode.

9.46.16.2 Detailed description

Implements errorAdjustmentModeSet

Table 1804:Return values

Name	Description
SSP_SUCCESS	Time error adjustment mode set successful.
SSP_ERR_ASSERTION	Invalid p_api_ctrl or error_adjustment_mode pointer.
SSP_ERR_NOT_OPEN	Driver not open for operation.
SSP_ERR_UNSUPPORTED	The clock source is not SubClock.
SSP_ERR_INVALID_ARGUMENT	Invalid error adjustment period.
SSP_ERR_TIMEOUT	Time error adjustment get query timed out.

9.46.17 R_RTC_ErrorAdjustmentSet

```
ssp_err_t R_RTC_ErrorAdjustmentSet ( rtc_ctrl_t  * p_api_ctrl ,
 rtc_error_adjustment_cfg_t  * p_error_adjustment_config )
```

9.46.17.1 Brief description

This function sets time error adjustment.

9.46.17.2 Detailed description

Implements errorAdjustmentSet

Table 1805:Return values

Name	Description
SSP_SUCCESS	Time error adjustment successful.
SSP_ERR_ASSERTION	Invalid p_api_ctrl or p_error_adjustment_config pointer.
SSP_ERR_NOT_OPEN	Driver not open for operation.
SSP_ERR_UNSUPPORTED	The clock source is not SubClock.
SSP_ERR_INVALID_ARGUMENT	Invalid error adjustment value.

Table 1805:Return values (Continued)

Name	Description
SSP_ERR_TIMEOUT	Time error adjustment get query timed out.

9.46.18 R_RTC_VersionGet

```
ssp_err_t R_RTC_VersionGet ( ssp_version_t  * p_version )
```

9.46.18.1 Brief description

Get driver version based on compile time macros.

9.46.18.2 Detailed description

Implements versionGet

Table 1806:Return values

Name	Description
SSP_SUCCESS	Successful close.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

9.46.19 r_rtc_start_bit_clear

```
ssp_err_t r_rtc_start_bit_clear (  R_RTC_Type * p_rtc_reg )
```

9.46.19.1 Brief description

Clear the start bit.

9.46.19.2 Detailed description

Table 1807:Return values

Name	Description
SSP_SUCCESS	start bit cleared
SSP_ERR_TIMEOUT	start bit not cleared

9.46.20 r_rtc_start_bit_set

```
ssp_err_t r_rtc_start_bit_set (  R_RTC_Type * p_rtc_reg )
```

9.46.20.1 Brief description

Set the start bit.

9.46.20.2 Detailed description

Table 1808:Return values

Name	Description
SSP_SUCCESS	start bit set
SSP_ERR_TIMEOUT	start bit not set

9.46.21 r_rtc_software_reset

```
ssp_err_t r_rtc_software_reset (  R_RTC_Type * p_rtc_reg )
```

9.46.21.1 Brief description

Perform a software reset.

9.46.21.2 Detailed description

Table 1809:Return values

Name	Description
SSP_SUCCESS	software reset complete
SSP_ERR_TIMEOUT	software reset not complete

9.46.22 r_rtc_set_clock_source

```
ssp_err_t r_rtc_set_clock_source (  R_RTC_Type * p_rtc_reg ,
 rtc_instance_ctrl_t  * p_ctrl )
```

9.46.22.1 Brief description

Set the RTC clock source.

9.46.22.2 Detailed description

Table 1810:Return values

Name	Description
SSP_SUCCESS	RTC clock source set
SSP_ERR_TIMEOUT	status check for counter mode or reset timed out

9.46.23 r_rtc_nvic_enable_irq

```
ssp_err_t r_rtc_nvic_enable_irq (  IRQn_Type nvic_interrupt ,
  uint32_t irq_en )
```

9.46.23.1 Brief description

check if timeout set else enable passed NVIC interrupt.

9.46.23.2 Detailed description

Implements a helper function

Table 1811:Return values

Name	Description
SSP_SUCCESS	Calendar counter stopped.

9.46.24 r_rtc_config_rtc_interrupts

```
ssp_err_t r_rtc_config_rtc_interrupts (  fmi_event_info_t * event_info ,
 rtc_instance_ctrl_t  * p_ctrl ,  rtc_cfg_t  const *const p_cfg ,  ssp_feature_t
* ssp_feature )
```

9.46.24.1 Brief description

get IRQ from event info to set IRQ priority and control info for IRQ handler .

9.46.24.2 Detailed description

Implements a helper function

Table 1812:Return values

Name	Description
SSP_SUCCESS	Successful configuration

9.46.25 r_rtc_enable_alarm_irq

```
ssp_err_t r_rtc_enable_alarm_irq ( rtc_instance_ctrl_t  * p_ctrl ,
  bool interrupt_enable_flag )
```

9.46.25.1 Brief description

enable alarm irq if valid

9.46.25.2 Detailed description

Implements a helper function

Table 1813:Return values

Name	Description
SSP_SUCCESS	Alarm IRQ enabled
SSP_ERR_TIMEOUT	check for Alarm IRQ enable bit timed out

9.46.26 r_rtc_enable_irq

```
ssp_err_t r_rtc_enable_irq (  R_RTC_Type * p_rtc_reg ,   IRQn_Type irq ,
 rtc_event_t  event ,   uint32_t timeout )
```

9.46.26.1 Brief description

enable alarm irq if valid

9.46.26.2 Detailed description

Implements a helper function

Table 1814:Return values

Name	Description
SSP_SUCCESS	enable IRQ successful
SSP_ERR_TIMEOUT	check for IRQ enable bit for the event timed out

9.46.27 r_rtc_disable_irq

```
ssp_err_t r_rtc_disable_irq (  R_RTC_Type * p_rtc_reg ,   IRQn_Type irq ,
 rtc_event_t  event ,   uint32_t timeout )
```

9.46.27.1 Brief description

enable alarm irq if valid

9.46.27.2 Detailed description

Implements a helper function

Table 1815:Return values

Name	Description
SSP_SUCCESS	disable IRQ successful
SSP_ERR_TIMEOUT	check for IRQ disable bit for the event timed out

9.46.28 r_rtc_error_adjustment_mode_set_common

```
ssp_err_t r_rtc_error_adjustment_mode_set_common (  R_RTC_Type * p_rtc_reg ,
 rtc_error_adjustment_mode_t  mode )
```

9.46.28.1 Brief description

Helper function to set time error adjustment mode.

9.46.28.2 Detailed description

Table 1816:Return values

Name	Description
SSP_SUCCESS	time error adjustment mode set successful
SSP_ERR_TIMEOUT	check for adjustment mode bit timed out

9.46.29 r_rtc_error_adjustment_period_set

```
ssp_err_t r_rtc_error_adjustment_period_set (  R_RTC_Type * p_rtc_reg ,
 rtc_error_adjustment_period_t  period )
```

9.46.29.1 Brief description

Helper function to set time error adjustment period.

9.46.29.2 Detailed description

Table 1817:Return values

Name	Description
SSP_SUCCESS	time error adjustment mode set successful
SSP_ERR_TIMEOUT	check for adjustment mode bit timed out

9.46.30 rtc_dec_to_bcd

```
rtc_dec_to_bcd (  uint8_t to_convert )
```

9.46.30.1 Brief description

RTC Alarm ISR.

9.46.30.2 Detailed description

Saves context if RTOS is used, stops the timer if one-shot mode, clears interrupts, calls callback if one was provided in the open function, and restores context if RTOS is used. Convert decimal to BCD

9.46.31 rtc_bcd_to_dec

```
rtc_bcd_to_dec (  uint8_t to_convert )
```

9.46.31.1 Brief description

Convert BCD to decimal.

9.46.32 API Data

9.46.32.1 rtc_count_mode_t

rtc_count_mode_t

Detailed description

Counting mode

Enumerated values

Name	Description
RTC_CALENDAR_MODE	
RTC_BINARY_MODE	

9.46.33 Extensions

9.46.33.1 rtc_instance_ctrl_t

rtc_instance_ctrl_t

Detailed description

Channel control block. DO NOT INITIALIZE. Initialization occurs when open is called

Variables

- void * p_reg

  Pointer to register base address.
- void(* p_callback)(*cb_data)

  Called from the ISR.
- void const * p_context

  Passed to the callback.
- uint32_t open

  Whether or not driver is open.

- IRQn_Type alarm_irq

  Alarm IRQ number.
- IRQn_Type periodic_irq

  Periodic IRQ number.
- IRQn_Type carry_irq

  Carry IRQ number.
- rtc_clock_source_t clock_source

  Clock source for the RTC block.

9.47 Simple I2C on SCI

Driver for the Simple IIC on SCI.

This module supports the SCI in I2C mode. It implements the following interfaces:

- I2C Master Interface r_i2c_api.h

9.47.1 Functions

- sci_siic_notify
- sci_siic_clock_settings
- sci_siic_sda_delay_settings
- sci_siic_abort_seq_master
- sci_siic_open_hw_master
- sci_siic_close_hw_master
- sci_siic_abort_hw_master
- sci_siic_run_hw_master
- sci_siic_set_irq_parameters
- sci_siic_configure_irqs
- sci_i2c_rxi_isr
- sci_i2c_txi_isr
- sci_i2c_tei_isr
- sci_siic_open_transfer_interface
- sci_siic_reconfigure_interrupts_for_transfer
- sci_siic_stop_transfer_interface
- sci_siic_transfer_configure_rx

- sci_siic_transfer_configure_tx
- sci_siic_enable_transfer_support_tx
- sci_siic_enable_transfer_support_rx
- sci_siic_txi_send_data
- sci_siic_tei_send_address
- sci_siic_open_parameter_check
- sci_siic_tei_handler
- sci_siic_txi_handler
- sci_siic_rxi_handler
- sci_siic_txi_process_nack
- sci_siic_dtc_max_length_check
- R_SCI_SIIC_MasterVersionGet
- R_SCI_SIIC_MasterOpen
- R_SCI_SIIC_MasterClose
- R_SCI_SIIC_MasterRead
- R_SCI_SIIC_MasterWrite
- R_SCI_SIIC_MasterReset
- R_SCI_SIIC_MasterSlaveAddressSet

9.47.2 Variables

- g_sci_siic_master_version
- g_dummy_write_data_for_read_op
- g_i2c_master_on_sci
- sync_baud

9.47.3 Defines

- #define SCI_SIIC_MASTER_CODE_VERSION_MAJOR

  Initial value: `(1U)`
- #define SCI_SIIC_MASTER_CODE_VERSION_MINOR

  Initial value: `(7U)`
- #define SIIC_OPEN

  Initial value: `(0x83737343ULL)`

  "SIIC" in ASCII, used to determine if channel is open.

- #define MDDR_MIN

  Initial value:`128U`
- #define MDDR_MAX

  Initial value:`256U`
- #define SCI_SIIC_ERROR_RETURN

  Initial value:`#define SSP_ERROR_RETURN((a), (err), &g_module_name[0], NULL)`

  Macro for error logger.
- #define I2C_CODE_READ

  Initial value: `(0x01U)`
- #define I2C_CODE_10BIT

  Initial value: `(0xF0U)`
- #define SCI_SIIC_NUM_DIVISORS_SYNC

  Initial value: `(4U)`
- #define SCI_SIIC_BRR_MAX

  Initial value: `(255U)`
- #define SCI_SIIC_BRR_MIN

  Initial value: `(0U)`
- #define SCI_SIIC_MAX_PCLK

  Initial value: `(0xFFFFFFFFFFFFFFFFULL)`
- #define SCI_I2C_NANOSECONDS_PER_SECOND

  Initial value: `(1000000000U)`
- #define SCI_I2C_SIMR1_IICDL_MAXIMUM_VALUE

  Initial value: `(0x1FU)`

9.47.4 sci_siic_notify

```
 sci_siic_notify ( sci_i2c_instance_ctrl_t  *const p_ctrl ,  i2c_event_t
const event )
```

9.47.4.1 Brief description

Single point for managing the logic around notifying a transfer has finished.

9.47.4.2 Detailed description

(end defgroup SIIC)

Table 1818:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to transfer that is ending.
event	in	The event code to pass to the callback.

9.47.4.3 Function steps

- Set the flag indicating that the transaction is completed

9.47.5 sci_siic_clock_settings

```
sci_siic_clock_settings (  uint32_t *const p_rate ,   uint8_t *const p_brr ,
 uint8_t *const p_divisor ,   uint32_t *const p_mddr ,   uint16_t sda_delay ,
 uint32_t * cycles )
```

9.47.6 sci_siic_sda_delay_settings

```
sci_siic_sda_delay_settings (  uint32_t const clk_divisor ,
 uint16_t sda_delay ,   uint32_t *const p_cycles )
```

9.47.7 sci_siic_abort_seq_master

```
ssp_err_t sci_siic_abort_seq_master ( sci_i2c_instance_ctrl_t  *const p_ctrl )
```

9.47.7.1 Brief description

Single point for managing the logic around aborting a transfer when operating as a master.

9.47.7.2 Detailed description

Table 1819:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control struct of specific device

Table 1820:Return values

Name	Description
SSP_ERR_ABORTED	If there is an in-progress transfer

9.47.8 sci_siic_open_hw_master

```
ssp_err_t sci_siic_open_hw_master ( sci_i2c_instance_ctrl_t  *const p_ctrl )
```

9.47.8.1 Brief description

Performs the hardware initialization sequence when operating as a master.

9.47.8.2 Detailed description

Table 1821:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control structure of specific device

Table 1822:Return values

Name	Description
SSP_SUCCESS	Hardware initialized with proper configurations
SSP_ERR_INVALID_RATE	The requested rate cannot be set.

9.47.8.3 Function steps

- enables or disable the bitrate modulation function

9.47.9 sci_siic_close_hw_master

```
sci_siic_close_hw_master ( sci_i2c_instance_ctrl_t  *const p_ctrl )
```

9.47.9.1 Brief description

Performs the hardware initialization sequence when operating as a master.

9.47.9.2 Detailed description

Table 1823:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control structure of specific device

9.47.10 sci_siic_abort_hw_master

```
sci_siic_abort_hw_master ( sci_i2c_instance_ctrl_t  *const p_ctrl )
```

9.47.10.1 Brief description

Safely stops the current data transfer when operating as a master.

9.47.10.2 Detailed description

Table 1824:Parameters

Name	Direction	Description
p_ctrl	in	Pointer to control structure of specific device

9.47.10.3 Function steps

- Disable channel interrupts

9.47.11 sci_siic_run_hw_master

```
ssp_err_t sci_siic_run_hw_master ( sci_i2c_instance_ctrl_t  *const p_ctrl )
```

9.47.11.1 Brief description

Performs the data transfer described by the parameters when operating as a master.

9.47.11.2 Detailed description

Table 1825:

Name	Direction	Description
p_ctrl	in	Pointer to Control structure of specific device.

Table 1826:

Name	Description
SSP_SUCCESS	Data transfered when operating as a master.
SSP_ERR_IN_USE	If a transfer is in progress.
SSP_ERR_ABORTED	If there is an in-progress transfer.

9.47.12 sci_siic_set_irq_parameters

```
 sci_siic_set_irq_parameters (  uint8_t ipl ,   void * p_ctrl ,   IRQn_Type
* p_irq )
```

9.47.12.1 Detailed description

Sets interrupt priority and initializes vector info for the callback

Table 1827:

Name	Direction	Description
ipl	in	Interrupt priority level
p_ctrl	in	Pointer to driver control block
p_irq	in	Pointer to IRQ for this signal

9.47.12.2 Function steps

- Set the interrupt priority for the specified interrupt number(*p_irq)
- Set the p_ctrl into the vector_info structure for the element. This information will be used by the ISR to determine the p_ctrl to be used in the ISR processing.

9.47.13 sci_siic_configure_irqs

```
ssp_err_t sci_siic_configure_irqs (  ssp_feature_t * p_feature ,  i2c_ctrl_t
*const p_api_ctrl ,  i2c_cfg_t  const *const p_cfg )
```

9.47.13.1 Detailed description

Sets interrupt priority and initializes vector info to be used in the callback. Then, Disables and clears interrupts in the NVIC and the peripheral.

Table 1828:

Name	Direction	Description
p_feature	in	SSP feature
p_api_ctrl	in	Pointer to driver control block
p_cfg	in	Pointer to driver configuration block

Table 1829:

Name	Description
SSP_SUCCESS	Interrupt enabled
SSP_ERR_IRQ_BSP_DISABLED	Interrupt does not exist in the vector table

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- eventInfoGet

9.47.13.2 Function steps

- Get the interrupt vector number for SSP_SIGNAL_SCI_RXI
- Save the interrupt vector number to the control block
- Get the interrupt vector number for SSP_SIGNAL_SCI_TXI
- Save the interrupt vector number to the control block
- Get the interrupt vector number for SSP_SIGNAL_SCI_TEI
- Save the interrupt vector number to the control block
- Disable the interrupt in the NVIC and the peripheral
- Clear the IR flag in the ICU
- Clear interrupt flag in the NVIC

- Disable the interrupt in the NVIC and the peripheral
- Clear the IR flag in the ICU
- Clear interrupt flag in the NVIC
- Disable the interrupt in the NVIC and the peripheral
- Clear the IR flag in the ICU
- Clear interrupt flag in the NVIC

9.47.14 sci_i2c_rxi_isr

```
sci_i2c_rxi_isr ( void )
```

9.47.14.1 Brief description

ISR for ACK/RXI interrupt.

9.47.15 sci_i2c_txi_isr

```
sci_i2c_txi_isr ( void )
```

9.47.15.1 Brief description

ISR for NACK/TXI interrupt.

9.47.16 sci_i2c_tei_isr

```
sci_i2c_tei_isr ( void )
```

9.47.16.1 Brief description

Handles the STI interrupt.

9.47.17 sci_siic_open_transfer_interface

```
ssp_err_t sci_siic_open_transfer_interface ( sci_i2c_instance_ctrl_t
*const p_ctrl , i2c_cfg_t const *const p_cfg )
```

9.47.17.1 Brief description

Configures SCI I2C related transfer drivers (if enabled).

9.47.17.2 Detailed description

Table 1830:

Name	Direction	Description
p_ctrl	in	Pointer to SCI I2C specific control structure
p_cfg	in	Pointer to SCI I2C specific configuration structure

Table 1831:

Name	Description
SSP_SUCCESS	If configures SCI I2C related transfer drivers
SSP_ERR_ASSERTION	Transfer configuration for tx/rx not proper.

9.47.18 sci_siic_reconfigure_interrupts_for_transfer

```
ssp_err_t sci_siic_reconfigure_interrupts_for_transfer ( sci_i2c_instance_ctrl_t
  *const p_ctrl )
```

9.47.18.1 Brief description

Reconfigure the address mode for transfer interface.

9.47.18.2 Detailed description

Table 1832:

Name	Direction	Description
p_ctrl	in	transfer control block

Table 1833:

Name	Description
SSP_SUCCESS	Address mode for transfer interface reconfigured.
SSP_ERR_IN_USE	If a transfer is in progress.

9.47.19 sci_siic_stop_transfer_interface

```
sci_siic_stop_transfer_interface ( sci_i2c_instance_ctrl_t  *const p_ctrl )
```

9.47.19.1 Brief description

Stop any running instance of the transfer interface.

9.47.19.2 Detailed description

Table 1834:

Name	Direction	Description
p_ctrl	in	transfer control block

9.47.20 sci_siic_transfer_configure_rx

```
ssp_err_t sci_siic_transfer_configure_rx ( sci_i2c_instance_ctrl_t
*const p_ctrl ,  i2c_cfg_t  const *const p_cfg ,   R_SCI0_Type * p_sci_reg )
```

9.47.20.1 Brief description

Configures SCI I2C RX related transfer (if enabled).

9.47.20.2 Detailed description

Table 1835:

9.47.32 R_SCI_SIIC_MasterVersionGet

```
ssp_err_t R_SCI_SIIC_MasterVersionGet ( ssp_version_t  *const p_version )
```

9.47.32.1 Brief description

Sets driver version based on compile time macros.

9.47.32.2 Detailed description

Table 1848:

Name	Description
SSP_SUCCESS	Successful version get.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

9.47.33 R_SCI_SIIC_MasterOpen

```
ssp_err_t R_SCI_SIIC_MasterOpen ( i2c_ctrl_t  *const p_api_ctrl ,  i2c_cfg_t
const *const p_cfg )
```

9.47.33.1 Brief description

Opens the I2C device. Power on I2C peripheral and perform initialization described in hardware manual.

9.47.33.2 Detailed description

This function will reconfigure the clock settings of the peripheral when a device with a lower rate than previously configured is opened.

Table 1849:

Name	Description
SSP_SUCCESS	Requested baud rate was valid.
SSP_ERR_ASSERTION	The parameter p_ctrl or p_cfg is NULL or if clock rate greater than 400KHz.
SSP_ERR_INVALID_RATE	The requested rate cannot be set.
SSP_ERR_IN_USE	Lock was not acquired
SSP_ERR_IRQ_BSP_DISABLED	Event information could not be found.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- productFeatureGet
- eventInfoGet

9.47.33.3 Function steps

- Disable, clear and configure interrupts

9.47.34 R_SCI_SIIC_MasterClose

```
ssp_err_t R_SCI_SIIC_MasterClose ( i2c_ctrl_t  *const p_api_ctrl )
```

9.47.34.1 Brief description

Closes the I2C device. Power down I2C peripheral.

9.47.34.2 Detailed description

This function will safely terminate any in-progress I2C transfer with the device. If a transfer is aborted, the user will be notified via callback with an abort event. Since the callback is optional, this function will also return a specific error code in this situation.

Table 1850:

Name	Description
SSP_SUCCESS	Device closed without issue.
SSP_ERR_ASSERTION	The parameter p_ctrl is NULL.

Table 1850: (Continued)

Name	Description
SSP_ERR_ABORTED	Device was closed while a transfer was in-progress.
SSP_ERR_NOT_OPEN	Device was not even opened.

9.47.35 R_SCI_SIIC_MasterRead

```
ssp_err_t R_SCI_SIIC_MasterRead ( i2c_ctrl_t  *const p_api_ctrl ,   uint8_t
*const p_dest ,   uint32_t const bytes ,   bool const restart )
```

9.47.35.1 Brief description

Performs a read from the I2C device.

9.47.35.2 Detailed description

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C read operation will begin. When no callback is provided by the user, this function performs a blocking read. Otherwise, the read operation is non-blocking and the caller will be notified when the operation has finished by an I2C_EVENT_RX_COMPLETE in the callback.

Table 1851:

Name	Description
SSP_SUCCESS	Function executed without issue.
SSP_ERR_ASSERTION	The parameter p_ctrl, p_dest is NULL, bytes is 0.
SSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size(65535) while DTC is used for data transfer.
SSP_ERR_IN_USE	Another transfer was in-progress.
SSP_ERR_NOT_OPEN	Device was not even opened.

9.47.36 R_SCI_SIIC_MasterWrite

```
ssp_err_t R_SCI_SIIC_MasterWrite ( i2c_ctrl_t  *const p_api_ctrl ,   uint8_t
*const p_src ,   uint32_t const bytes ,   bool const restart )
```

9.47.36.1 Brief description

Performs a write to the I2C device.

9.47.36.2 Detailed description

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C write operation will begin. When no callback is provided by the user, this function performs a blocking write. Otherwise, the write operation is non-blocking and the caller will be notified when the operation has finished by an I2C_EVENT_TX_COMPLETE in the callback.

Table 1852:

Name	Description
SSP_SUCCESS	Function executed without issue.
SSP_ERR_ASSERTION	p_ctrl, p_src is NULL.
SSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size(65535) while DTC is used for data transfer.
SSP_ERR_IN_USE	Another transfer was in-progress.
SSP_ERR_NOT_OPEN	Device was not even opened.

9.47.37 R_SCI_SIIC_MasterReset

```
ssp_err_t R_SCI_SIIC_MasterReset ( i2c_ctrl_t  *const p_api_ctrl )
```

9.47.37.1 Brief description

Aborts any in-progress transfer and forces the I2C peripheral into a ready state.

9.47.37.2 Detailed description

This function will safely terminate any in-progress I2C transfer with the device. If a transfer is aborted, the user will be notified via callback with an abort event. Since the callback is optional, this function will also return a specific error code in this situation.

Table 1853:

Name	Description
SSP_SUCCESS	Channel was reset without issue.

Table 1853: (Continued)

Name	Description
SSP_ERR_ASSERTION	p_ctrl is NULL.
SSP_ERR_ABORTED	A transfer was aborted while resetting the hardware.
SSP_ERR_NOT_OPEN	Device was not even opened.

9.47.38 R_SCI_SIIC_MasterSlaveAddressSet

```
ssp_err_t R_SCI_SIIC_MasterSlaveAddressSet ( i2c_ctrl_t  *const p_api_ctrl ,
  uint16_t const slave ,  i2c_addr_mode_t  const addr_mode )
```

9.47.38.1 Brief description

Sets address and addressing mode of the slave device.

9.47.38.2 Detailed description

This function is used to set the device address and addressing mode of the slave without reconfiguring the entire bus.

Table 1854:

Name	Description
SSP_SUCCESS	Address of the slave is set correctly.
SSP_ERR_ASSERTION	p_ctrl or address is NULL.
SSP_ERR_IN_USE	Another transfer was in-progress.
SSP_ERR_NOT_OPEN	Device was not even opened.

Detailed description

I2C control structure. DO NOT INITIALIZE.

Variables

- i2c_cfg_t info

  Information describing I2C device.

- uint32_t open

  Flag to determine if the device is open.

- void * p_reg

  Base register for this channel.
- transfer_instance_t const * p_transfer_tx

  DTC instance for I2C transmit.Set to NULL if unused.

  DTC/DMA support
- transfer_instance_t const * p_transfer_rx

  DTC instance for I2C receive. Set to NULL if unused.
- IRQn_Type rxi_irq

  Receive IRQ number.
- IRQn_Type txi_irq

  Transmit IRQ number.
- IRQn_Type tei_irq

  Transmit end IRQ number.
- uint8_t * p_buff

  Holds the data associated with the transfer
- uint32_t total

  Holds the total number of data bytes to transfer
- uint32_t remain

  Tracks the remaining data bytes to transfer
- uint32_t loaded

  Tracks the number of data bytes written to the register
- uint8_t addr_low

  Holds the last address byte to issue
- uint8_t addr_high

  Holds the first address byte to issue in 10-bit mode
- uint8_t addr_total

  Holds the total number of address bytes to transfer
- uint8_t addr_remain

  Tracks the remaining address bytes to transfer
- uint8_t addr_loaded

  Tracks the number of address bytes written to the register
- bool read

  Holds the direction of the data byte transfer

- bool restart

  Holds whether or not the restart should be issued when done

- bool err

  Tracks whether or not an error occurred during processing

- bool restarted

  Tracks whether or not a restart was issued during the previous transfer

- bool transaction_completed

  Tracks if the transaction started earlier was completed

- bool do_dummy_read
- bool activation_on_rxi

  << Tracks whether a dummy read is issued on the first RX < Tracks whether the transfer is activated on RXI interrupt

- bool activation_on_txi

  < Tracks whether the transfer is activated on TXI interrupt

9.48 Simple SPI on SCI

Driver for the Simple SPI on SCI.

This module supports simple SPI serial communication using the microcontroller's SCI peripheral. The Interface is defined in r_spi_api.h. This module implements SPI Interface.

9.48.1 Functions

- R_SCI_SPI_Open
- R_SCI_SPI_Read
- R_SCI_SPI_Write

- R_SCI_SPI_WriteRead
- r_sci_spi_write_read_common
- R_SCI_SPI_Close
- R_SCI_SPI_VersionGet

9.48.2 Variables

- g_spi_on_sci

9.48.3 Defines

- #define SCI_SPI_CODE_VERSION_MAJOR

  Initial value: `(1U)`
- #define SCI_SPI_CODE_VERSION_MINOR

  Initial value: `(9U)`

9.48.4 R_SCI_SPI_Open

```
ssp_err_t R_SCI_SPI_Open ( spi_ctrl_t  * p_api_ctrl ,  spi_cfg_t  const
*const p_cfg )
```

9.48.4.1 Brief description

Initialize a channel for SPI communication mode. Implements open. This function performs the following tasks: Performs parameter checking and processes error conditions. Applies power to the SPI channel. Disables interrupts. Initializes the associated registers with default value and the user-configurable options. Provides the channel handle for use with other API functions. Updates user-configurable file if necessary.

9.48.4.2 Detailed description

Table 1855:

Name	Description
SSP_SUCCESS	Channel initialized successfully.
SSP_ERR_ASSERTION	One of the following invalid parameter passed. • Pointer p_api_ctrl is NULL • Pointer p_cfg is NULL
SSP_ERR_IN_USE	Channel currently in operation; Close channel first.

Table 1855: (Continued)

Name	Description
SSP_ERR_HW_LOCKED	The lock could not be acquired. The channel is busy.
See	Common Error Codes or functions called by this function for other possible return codes. This function calls: • productFeatureGet

NOTE: This function is reentrant.

NOTE: The bit-rate argument in p_cfg ranges from 2500 to 7.5m for Simple SPI at PCLK=120 MHz. For RSPI, BRDV is fixed at 0 to get the maximum bit rate. The range is 10.0 mbps to 30.0 mbps at PCLK=120.0 MHz.

9.48.5 R_SCI_SPI_Read

```
ssp_err_t R_SCI_SPI_Read ( spi_ctrl_t  *const p_api_ctrl ,   void const
* p_dest ,   uint32_t const length ,  spi_bit_width_t  const bit_width )
```

9.48.5.1 Brief description

Receive data from an SPI device. Implements read. The function performs the following tasks:

9.48.5.2 Detailed description

- Performs parameter checking and processes error conditions.
- Disable Interrupts.
- Set-up data bit width per user request.
- Enable transmitter.
- Enable receiver.
- Enable interrupts.
- Start data transmission with dummy data via transmit buffer empty interrupt.
- Copy data from source buffer to the SPI data register for transmission.
- Receive data from receive buffer full interrupt occurs and copy data to the buffer of destination.
- Complete data reception via receive buffer full interrupt and transmitting dummy data.
- Disable transmitter.

- Disable receiver.
- Disable interrupts.

Table 1856:

Name	Description
SSP_SUCCESS	Read operation successfully completed.
SSP_ERR_ASSERTION	One of the following invalid parameters passed • Pointer p_api_ctrl is NULL • Bit width is not 8 bits • Length is equal to 0 • Pointer to destination is NULL
SSP_ERR_HW_LOCKED	The lock could not be acquired. The channel is busy.
SSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
See	Common Error Codes or functions called by this function for other possible return codes. This function calls: • reset

NOTE: This function is reentrant.

9.48.6 R_SCI_SPI_Write

```
ssp_err_t R_SCI_SPI_Write ( spi_ctrl_t  *const p_api_ctrl ,   void const
* p_src ,   uint32_t const length ,  spi_bit_width_t  const bit_width )
```

9.48.6.1 Brief description

Transmit data to a SPI device. Implements write.

9.48.6.2 Detailed description

- The function performs the following tasks:
- Performs parameter checking and processes error conditions.
- Disable Interrupts.

- Setup data bit width per user request.
- Enable transmitter.
- Enable receiver.
- Enable interrupts.
- Start data transmission with data via transmit buffer empty interrupt.
- Copy data from source buffer to the SPI data register for transmission.
- Receive data from receive buffer full interrupt occurs and do nothing with the received data.
- Complete data transmission via receive buffer full interrupt.
- Disable transmitter.
- Disable receiver.
- Disable interrupts.

Table 1857:

Name	Description
SSP_SUCCESS	Write operation successfully completed.
SSP_ERR_ASSERTION	One of the following invalid parameters passed • Pointer p_api_ctrl is NULL • Pointer to source is NULL • Length is equal to 0 • Bit width is not equal to 8 bits
SSP_ERR_HW_LOCKED	The lock could not be acquired. The channel is busy.
SSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
See	Common Error Codes or functions called by this function for other possible return codes. This function calls: • reset

NOTE: This function is reentrant.

9.48.7 R_SCI_SPI_WriteRead

```
ssp_err_t R_SCI_SPI_WriteRead ( spi_ctrl_t  *const p_api_ctrl ,   void const
* p_src ,   void const * p_dest ,   uint32_t const length ,  spi_bit_width_t
const bit_width )
```

9.48.7.1 Brief description

Simultaneously transmit data to SPI device while receiving data from SPI device (full duplex). Implements writeRead. The function performs the following tasks:

9.48.7.2 Detailed description

- Performs parameter checking and processes error conditions.
- Disable Interrupts. Setup data bit width per user request. Enable transmitter. Enable receiver. Enable interrupts. Start data transmission using transmit buffer empty interrupt. Copy data from source buffer to the SPI data register for transmission. Receive data from receive buffer full interrupt occurs and copy data to the buffer of destination. Complete data transmission and reception via receive buffer full interrupt. Disable transmitter. Disable receiver. Disable interrupts.

Table 1858:

Name	Description
SSP_SUCCESS	Write operation successfully completed.
SSP_ERR_ASSERTION	One of the following invalid parameters passed • Pointer p_api_ctrl is NULL • Pointer to source is NULL • Pointer to destination is NULL • Length is equal to 0 • Bit width is not equal to 8 bits
SSP_ERR_HW_LOCKED	The lock could not be acquired. The channel is busy.
SSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
See	Common Error Codes or functions called by this function for other possible return codes. This function calls: • reset

NOTE: This function is reentrant.

9.48.8 r_sci_spi_write_read_common

```
ssp_err_t r_sci_spi_write_read_common ( sci_spi_instance_ctrl_t  *const p_ctrl ,
  void const * p_src ,   void const * p_dest ,   uint32_t const length ,
 spi_bit_width_t  const bit_width ,  spi_operation_t  tx_rx_mode )
```

9.48.8.1 Brief description

Initiates writ or read process. Common routine used by RSPI API write or read functions.

9.48.8.2 Detailed description

Table 1859:

Name	Direction	Description
p_ctrl	in	Pointer to the control block.
p_src	in	Pointer to data buffer which need to be sent.
p_dest	out	Pointer to buffer where received data will be stored.
length	in	Number of data transactions to be performed.
bit_width	in	Size of data for each transaction.
tx_rx_mode	in	Mode of the data transaction.

Table 1860:

Name	Description
SSP_SUCCESS	Operation successfully completed.
SSP_ERR_HW_LOCKED	The lock could not be acquired. The channel is busy.
SSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.

9.49 UART on SCI

Driver for the UART on SCI.

9.49.1 Summary

This module supports the UART on SCI. It implements the UART interface and drives SCI as a full-duplex UART communication port. This module can drive all SCI channels as UART ports.

Extends UART Interface.

NOTE: This module can use either the 16-stage hardware FIFO or a DTC transfer implementation to write multiple bytes.

9.49.2 Functions

- R_SCI_UartOpen
- R_SCI_UartClose
- R_SCI_UartRead
- R_SCI_UartWrite
- R_SCI_UartBaudSet
- R_SCI_UartInfoGet
- R_SCI_UartVersionGet
- R_SCI_UartAbort

9.49.3 Defines

- #define SCI_UART_CODE_VERSION_MAJOR

  Initial value: `(1U)`
- #define SCI_UART_CODE_VERSION_MINOR

  Initial value: `(6U)`

9.49.4 R_SCI_UartOpen

```

```

9.49.4.1 Detailed description

Configures the UART driver based on the input configurations. If reception is enabled at compile time, reception is enabled at the end of this function.

Table 1863:

Name	Description
SSP_SUCCESS	Channel opened successfully.
SSP_ERR_ASSERTION	Pointer to UART control block or configuration structure is NULL.
SSP_ERR_INVALID_ARGUMENT	Invalid parameter setting found in the configuration structure.
SSP_ERR_IN_USE	Control block has already been opened or channel is being used by another instance. Call close then open() to reconfigure.
SSP_ERR_IRQ_BSP_DISABLED	A required interrupt does not exist in the vector table

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- productFeatureGet
- eventInfoGet
- systemClockFreqGet
- open

9.49.4.2 Function steps

- Make sure this channel exists.
- Reserve the hardware lock.
- Determine if this channel has a FIFO.
- Calculate the baud rate register settings.
- Configure the interrupts.
- Configure the transfer interface for transmission and reception if provided.
- Enable the SCI channel and reset the registers to their initial state.
- Set the default level of the TX pin to 1.
- Set the baud rate registers.
- Set the UART configuration settings provided in uart_cfg_t and uart_on_sci_cfg_t.
- If reception is enabled at build time, enable reception.

9.49.5 R_SCI_UartClose

```
ssp_err_t R_SCI_UartClose ( uart_ctrl_t  *const p_api_ctrl )
```

9.49.5.1 Detailed description

Disables interrupts, receiver, and transmitter. Closes lower level transfer drivers if used. Removes power and releases hardware lock.

Table 1864:

Name	Description
SSP_SUCCESS	Channel successfully closed.
SSP_ERR_ASSERTION	Pointer to UART control block is NULL.
SSP_ERR_NOT_OPEN	The control block has not been opened

9.49.5.2 Function steps

- Mark the channel not open so other APIs cannot use it.
- Disable interrupts, receiver, and transmitter.
- If reception is enabled at build time, disable reception irqs.
- If transmission is enabled at build time, disable transmission irqs.
- Disable baud clock output.
- Close the lower level transfer instances.
- Clear control block parameters.
- Remove power to the channel.
- Unlock the SCI channel.

9.49.6 R_SCI_UartRead

```
ssp_err_t R_SCI_UartRead ( uart_ctrl_t  *const p_api_ctrl ,   uint8_t const
*const p_dest ,   uint32_t const bytes )
```

9.49.6.1 Detailed description

Receives user specified number of bytes into destination buffer pointer.

Table 1865:

Name	Description
SSP_SUCCESS	Data reception successfully ends.
SSP_ERR_ASSERTION	Pointer to UART control block is NULL. Number of transfers outside the max or min boundary when transfer instance used
SSP_ERR_INVALID_ARGUMENT	Destination address or data size is not valid for 9-bit mode.
SSP_ERR_NOT_OPEN	The control block has not been opened
SSP_ERR_UNSUPPORTED	SCI_UART_CFG_RX_ENABLE is set to 0

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- reset

NOTE: This API is only valid when SCI_UART_CFG_RX_ENABLE is enabled. If 9-bit data length is specified at R_SCI_UartOpen call, p_dest must be aligned 16-bit boundary.

9.49.6.2 Function steps

- Configure transfer instance to receive the requested number of bytes if transfer is used for reception.
- Do nothing in non-transfer case. Bytes will come in through the callback.

9.49.7 R_SCI_UartWrite

```
ssp_err_t R_SCI_UartWrite ( uart_ctrl_t  *const p_api_ctrl ,   uint8_t const
*const p_src ,   uint32_t const bytes )
```

9.49.7.1 Detailed description

Transmits user specified number of bytes from the source buffer pointer.

Table 1866:

Name	Description
SSP_SUCCESS	Data transmission finished successfully.

Table 1866: (Continued)

Name	Description
SSP_ERR_ASSERTION	Pointer to UART control block is NULL. Number of transfers outside the max or min boundary when transfer instance used
SSP_ERR_INVALID_ARGUMENT	Source address or data size is not valid for 9-bit mode.
SSP_ERR_NOT_OPEN	The control block has not been opened
SSP_ERR_IN_USE	A UART transmission is in progress
SSP_ERR_UNSUPPORTED	SCI_UART_CFG_TX_ENABLE is set to 0

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- reset

NOTE: This API is only valid when SCI_UART_CFG_TX_ENABLE is enabled. If 9-bit data length is specified at R_SCI_UartOpen call, p_src must be aligned on a 16-bit boundary.

9.49.7.2 Function steps

- Transmit interrupts must be disabled to start with.
- Save data to transmit to the control block. It will be transmitted in the TXI ISR.
- If a transfer instance is used for transmission, reset the transfer instance to transmit the requested data.
- Trigger a TXI interrupt. This triggers the transfer instance or a TXI interrupt if the transfer instance is not used.

9.49.8 R_SCI_UartBaudSet

```
ssp_err_t R_SCI_UartBaudSet ( uart_ctrl_t  *const p_api_ctrl ,   uint32_t
const baudrate )
```

9.49.8.1 Detailed description

Updates the baud rate.

ATTENTION: This terminates any in-progress transmission.

Table 1867:

Name	Description
SSP_SUCCESS	Baud rate was successfully changed.
SSP_ERR_ASSERTION	Pointer to UART control block is NULL or the UART is not configured to use the internal clock.
SSP_ERR_INVALID_ARGUMENT	Illegal baud rate value is specified.
SSP_ERR_NOT_OPEN	The control block has not been opened

9.49.8.2 Function steps

- Calculate new baud rate register settings.
- Disables transmitter and receiver. This terminates any in-progress transmission.
- Apply new baud rate register settings.
- Enable receiver.

9.49.9 R_SCI_UartInfoGet

```
ssp_err_t R_SCI_UartInfoGet ( uart_ctrl_t  *const p_api_ctrl ,  uart_info_t
*const p_info )
```

9.49.9.1 Detailed description

Provides the driver information, including the maximum number of bytes that can be received or transmitted at a time.

Table 1868:

Name	Description
SSP_SUCCESS	Information stored in provided p_info.
SSP_ERR_ASSERTION	Pointer to UART control block is NULL.
SSP_ERR_NOT_OPEN	The control block has not been opened

9.49.9.2 Function steps

- Store number of bytes that can be read at a time.
- Store number of bytes that can be written at a time.

9.49.10 R_SCI_UartVersionGet

```
ssp_err_t R_SCI_UartVersionGet ( ssp_version_t  * p_version )
```

9.49.10.1 Detailed description

Provides API and code version in the user provided pointer.

Table 1869:

Name	Direction	Description
p_version	in	Version number set here

Table 1870:

Name	Description
SSP_SUCCESS	Version information stored in provided p_version.
SSP_ERR_ASSERTION	p_version is NULL.

9.49.11 R_SCI_UartAbort

```
ssp_err_t R_SCI_UartAbort ( uart_ctrl_t  *const p_api_ctrl ,
 uart_dir_t  communication_to_abort )
```

9.49.11.1 Detailed description

Provides API to abort ongoing transfer. Transmission is aborted after the current character is transmitted. Reception is still enabled after abort(). Any characters received after abort() and before the transfer is reset in the next call to read(), will arrive via the callback function with event UART_EVENT_RX_CHAR.

Table 1871:

Name	Description
SSP_SUCCESS	UART transaction aborted successfully.
SSP_ERR_ASSERTION	Pointer to UART control block is NULL.
SSP_ERR_NOT_OPEN	The control block has not been opened.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- disable

9.49.12 API Data

9.49.12.1 sci_clk_src_t

sci_clk_src_t

Detailed description

Enumeration for SCI clock source

Enumerated values

Name	Description
SCI_CLK_SRC_INT	Use internal clock for baud generation.
SCI_CLK_SRC_EXT	Use external clock for baud generation.
SCI_CLK_SRC_EXT8X	Use external clock 8x baud rate.
SCI_CLK_SRC_EXT16X	Use external clock 16x baud rate.

9.49.12.2 sci_uart_rx_fifo_trigger_t

sci_uart_rx_fifo_trigger_t

Detailed description

Receive FIFO trigger configuration.

Enumerated values

Name	Description
SCI_UART_RX_FIFO_TRIGGER_1	Callback after each byte is received without buffering.
SCI_UART_RX_FIFO_TRIGGER_MAX	Callback when FIFO is full or after 15 bit times with no data (fewer interrupts)

9.49.13 Extensions

9.49.13.1 sci_uart_instance_ctrl_t

sci_uart_instance_ctrl_t

Detailed description

UART instance control block.

Variables

- uint8_t channel

  Channel number.

- uint8_t fifo_depth

  FIFO depth of the UART channel.

- uint8_t rx_transfer_in_progress

  Set to 1 if a receive transfer is in progress, 0 otherwise.

- uint8_t data_bytes

  1 byte for 7 or 8 bit data, 2 bytes for 9 bit data

- uint8_t bitrate_modulation

  1 if bit rate modulation is enabled, 0 otherwise

- uint32_t open

  Used to determine if the channel is configured.

- transfer_instance_t const * p_transfer_rx

  Optional transfer instance used to send or receive multiple bytes without interrupts.

- transfer_instance_t const * p_transfer_tx

  Optional transfer instance used to send or receive multiple bytes without interrupts.

- uint8_t const * p_tx_src

  Source buffer pointer used to fill hardware FIFO from transmit ISR.

- uint32_t tx_src_bytes

  Size of source buffer pointer used to fill hardware FIFO from transmit ISR.

- IRQn_Type rxi_irq

  Receive IRQ number.

- IRQn_Type txi_irq

  Transmit IRQ number.

- IRQn_Type tei_irq

  Transmit end IRQ number.

- IRQn_Type eri_irq

  Error IRQ number.

- void(* p_callback)(*p_args)

  Pointer to callback function.

- void const * p_context

  Pointer to user interrupt context data.

- void * p_reg

  Base register for this channel.

- void(* p_extpin_ctrl)(uint32_t channel, uint32_t level)

  External pin control.

9.49.13.2 uart_on_sci_cfg_t

uart_on_sci_cfg_t

Detailed description

UART on SCI device Configuration

Variables

- sci_clk_src_t clk_src

  Use SCI_CLK_SRC_INT/EXT8X/EXT16X.

- bool baudclk_out

  Baud rate clock output enable.

- bool rx_edge_start

  Start reception on falling edge.

- bool noisecancel_en

  Noise cancel enable.

- sci_uart_rx_fifo_trigger_t rx_fifo_trigger

  Receive FIFO trigger level, unused if channel has no FIFO or if DTC is used.

- void(* p_extpin_ctrl)(uint32_t channel, uint32_t level)

  Pointer to the user callback function to control external GPIO pin control used as RTS signal.channelThe UART channel used. levelWhen level is 0, assert RTS. When level is 1, deassert RTS.

- bool bitrate_modulation

  Bitrate Modulation Function enable or disable.

9.50 Sigma Delta ADC (SDADC)

Driver for the 24-bit Sigma Delta A/D Converter (SDADC).

This module supports the SDADC peripheral. It implements the following interfaces:

- ADC Interface

9.50.1 Functions

- R_SDADC_Open
- R_SDADC_ScanConfigure
- R_SDADC_SampleStateCountSet
- R_SDADC_InfoGet
- R_SDADC_ScanStart
- R_SDADC_ScanStop
- R_SDADC_CheckScanDone
- R_SDADC_Read
- R_SDADC_Read32
- R_SDADC_OffsetSet
- R_SDADC_Calibrate
- R_SDADC_Close
- R_SDADC_VersionGet

9.50.2 Defines

- #define SDADC_CODE_VERSION_MAJOR

  Initial value: `(1U)`

  Version of code that implements the API defined in this file
- #define SDADC_CODE_VERSION_MINOR

  Initial value: `(0U)`
- #define SDADC_MAX_NUM_CHANNELS

  Initial value: `(5U)`

9.50.3 R_SDADC_Open

```
ssp_err_t R_SDADC_Open ( adc_ctrl_t  * p_api_ctrl ,  adc_cfg_t  const
*const p_cfg )
```

9.50.3.1 Detailed description

Applies power to the SDADC and initializes the hardware based on the user configuration. As part of this initialization, the SDADC clock is configured and enabled. If an interrupt priority is non-zero, enables an interrupt which will call a callback to notify the user when a conversion, scan, or calibration is complete. For all channels that are configured in differential mode, calibration is performed unless it is disabled in the user configuration. Implements open.

Table 1872:

Name	Description
SSP_SUCCESS	Configuration and calibration successful.
SSP_ERR_CALIBRATE_FAILED	Calibration failed.
SSP_ERR_ASSERTION	An input pointer is NULL.
SSP_ERR_INVALID_ARGUMENT	An input argument is invalid.
SSP_ERR_IN_USE	Control block is already open.
SSP_ERR_IRQ_BSP_DISABLED	A required interrupt is disabled

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- productFeatureGet

9.50.3.2 Function steps

- Ensure the SDADC exists on the hardware, enable interrupts, and reserve the SDADC hardware lock.
- Initialize the hardware based on the configuration.
- Start the SDADC.
- Configure the SDADC clock source and divisor to the clock source selected in the clock configuration.
- Set the reference voltage for sensors (internal or external VREF mode).
- Set the A/D conversion operation mode (normal or low power mode).
- Supply the 24-bit sigma-delta A/D converter clock (SDADCCLK).
- Turn on the power of ADBGR, SBIAS, and ADREG.
- Stabilization wait time of 2 ms is required between power on of ADBGR/SBIAS/ADREG and VBIAS/channel/SDADC.
- Turn on the power of VBIAS, channel, and sigma-delta A/D converter.
- For each channel:
- Set the oversampling ratio.
- Set the gain.
- Select single-end input/differential input.
- If differential mode is used and calibration during open is not skipped, enable calibration on this channel.
- Select the polarity of single-end input (only for single-end mode).
- Set the A/D conversion count.

- Select the averaging operation. Select the average data count.
- Select whether to reverse the A/D conversion results of single-end input (only for negative-side single
- end mode).
- Enable conversion for the channel.
- Configure enabled channels and autoscan mode.
- If the A/D conversion trigger is ELC hardware events, the hardware events are enabled in scanStart.
- Mark driver as opened.
- If at least one channel is configured for differential mode and calibration is not disabled in the user configuration, calibrate all PGAs configured for differential mode.
- The calibration takes approximately 3.4 ms per channel in normal mode or 27 ms in low power mode. The open() API blocks waiting for calibration to complete unless calibration is skipped. Calibration during open can be skipped and handled in at the application level by setting skip_internal_calibration to true, then calling calibrate.

9.50.4 R_SDADC_ScanConfigure

```
ssp_err_t R_SDADC_ScanConfigure ( adc_ctrl_t  * p_api_ctrl ,  adc_channel_cfg_t
const *const p_channel_cfg )
```

9.50.4.1 Detailed description

Configures the enabled channels of the ADC. Only scan_mask is used. Implements scanCfg.

Table 1873:

Name	Description
SSP_SUCCESS	Information stored in p_adc_info.
SSP_ERR_ASSERTION	An input pointer was NULL.
SSP_ERR_NOT_OPEN	Instance control block is not open.
SSP_ERR_INVALID_ARGUMENT	An input argument is invalid.

9.50.4.2 Function steps

- Update the enabled channels.

9.50.5 R_SDADC_SampleStateCountSet

```
ssp_err_t R_SDADC_SampleStateCountSet ( adc_ctrl_t  * p_api_ctrl ,
 adc_sample_state_t  * p_sample )
```

9.50.5.1 Detailed description

sampleStateCountSet is not supported on the SDADC.

Table 1874:

Name	Description
SSP_ERR_UNSUPPORTED	This API is not supported.

9.50.5.2 Function steps

- Return the unsupported error.

9.50.6 R_SDADC_InfoGet

```
ssp_err_t R_SDADC_InfoGet ( adc_ctrl_t  * p_api_ctrl ,  adc_info_t
* p_adc_info )
```

9.50.6.1 Detailed description

Returns the address of the lowest number configured channel, the total number of results to be read in order to read the results of all configured channels, the size of each result, and the ELC event enumerations. Implements infoGet.

Table 1875:

Name	Description
SSP_SUCCESS	Information stored in p_adc_info.
SSP_ERR_ASSERTION	An input pointer was NULL.
SSP_ERR_NOT_OPEN	Instance control block is not open.

9.50.6.2 Function steps

- Retrieve the scan mask of active channels from the control block
- Determine the lowest channel that is configured.
- Determine the highest channel that is configured.
- Determine the size of data that must be read to read all the channels between and including the highest and lowest channels.
- Determine the base address and transfer size.
- Specify the peripheral name in the ELC list

- Set sensor information to invalid value

9.50.7 R_SDADC_ScanStart

```
ssp_err_t R_SDADC_ScanStart ( adc_ctrl_t  * p_api_ctrl )
```

9.50.7.1 Detailed description

If the SDADC is configured for hardware triggers, enables hardware triggers. Otherwise, starts a scan. Implements scanStart.

Table 1876:

Name	Description
SSP_SUCCESS	Scan started or hardware triggers enabled successfully.
SSP_ERR_ASSERTION	An input pointer was NULL.
SSP_ERR_NOT_OPEN	Instance control block is not open.
SSP_ERR_IN_USE	A conversion or calibration is in progress.

9.50.7.2 Function steps

- Conversion cannot be performed if conversion or calibration is already in progress.
- If the unit is configured for software triggering, trigger a scan.
- Otherwise, enable hardware triggers.
- Return the error code

9.50.8 R_SDADC_ScanStop

```
ssp_err_t R_SDADC_ScanStop ( adc_ctrl_t  * p_api_ctrl )
```

9.50.8.1 Detailed description

If the SDADC is configured for hardware triggers, disables hardware triggers. Otherwise, stops any in-progress scan started by software. Implements scanStop.

Table 1877:

Name	Description
SSP_SUCCESS	Scan stopped or hardware triggers disabled successfully.
SSP_ERR_ASSERTION	An input pointer was NULL.
SSP_ERR_NOT_OPEN	Instance control block is not open.

9.50.8.2 Function steps

- If the unit is configured for software triggering, stop the scan.
- Otherwise, disable hardware triggers.
- Return the error code

9.50.9 R_SDADC_CheckScanDone

```
ssp_err_t R_SDADC_CheckScanDone ( adc_ctrl_t  * p_api_ctrl )
```

9.50.9.1 Detailed description

Returns the status of a scan started by software, including calibration scans. It is not possible to determine the status of a scan started by a hardware trigger. Implements scanStatusGet.

Table 1878:

Name	Description
SSP_SUCCESS	No software scan or calibration is in progress.
SSP_ERR_ASSERTION	An input pointer was NULL.
SSP_ERR_IN_USE	A conversion or calibration is in progress.
SSP_ERR_NOT_OPEN	Instance control block is not open.

9.50.9.2 Function steps

- If calibration is in progress, return an error.
- Return the scan status of a scan triggered by software.

9.50.10 R_SDADC_Read

```
ssp_err_t R_SDADC_Read ( adc_ctrl_t  * p_api_ctrl ,  adc_register_t
const reg_id ,   uint16_t *const p_data )
```

9.50.10.1 Detailed description

Reads the most recent conversion result from a channel. Truncates 24-bit results to the upper 16 bits. Implements read.

Table 1879:

Name	Description
SSP_SUCCESS	Conversion result in p_data.
SSP_ERR_INVALID_ARGUMENT	An input argument was outside the valid range.
SSP_ERR_ASSERTION	An input pointer was NULL.
SSP_ERR_NOT_OPEN	Instance control block is not open.

9.50.10.2 Function steps

- Read the most recent conversion value into a 16-bit result.

9.50.11 R_SDADC_Read32

```
ssp_err_t R_SDADC_Read32 ( adc_ctrl_t  * p_api_ctrl ,  adc_register_t
const reg_id ,   uint32_t *const p_data )
```

9.50.11.1 Detailed description

Reads the most recent conversion result from a channel. Implements read32.

Table 1880:

Name	Description
SSP_SUCCESS	Conversion result in p_data.
SSP_ERR_INVALID_ARGUMENT	An input argument was outside the valid range.
SSP_ERR_ASSERTION	An input pointer was NULL.
SSP_ERR_NOT_OPEN	Instance control block is not open.

9.50.11.2 Function steps

- Read the most recent conversion value into a 32-bit result.

9.50.12 R_SDADC_OffsetSet

```
ssp_err_t R_SDADC_OffsetSet ( adc_ctrl_t  *const p_api_ctrl ,  adc_register_t
const reg_id ,   int32_t const offset )
```

9.50.12.1 Detailed description

Sets the offset. Offset is applied after stage 1 of the input channel. Offset can only be applied when the channel is configured for differential input. Implements offsetSet.

Note: The offset is cleared if calibrate is called. The offset can be re-applied if necessary after the the callback with event ADC_EVENT_CALIBRATION_COMPLETE is called.

Table 1881:

Name	Direction	Description
p_api_ctrl	in	See p_ctrl in offsetSet.
reg_id	in	See reg_id in offsetSet.
offset	in	Must be between -15 and 15, offset (mV) = 10.9376 mV * offset_steps / stage 1 gain.

Table 1882:

Name	Description
SSP_SUCCESS	Offset updated successfully.
SSP_ERR_INVALID_ARGUMENT	An input argument was outside the valid range.
SSP_ERR_ASSERTION	An input pointer was NULL.
SSP_ERR_IN_USE	A conversion or calibration is in progress.
SSP_ERR_NOT_OPEN	Instance control block is not open.

9.50.12.2 Function steps

- Offset cannot be updated if conversion or calibration is in progress.

- Set the offset.

9.50.13 R_SDADC_Calibrate

```
ssp_err_t R_SDADC_Calibrate ( adc_ctrl_t  *const p_api_ctrl ,   void
*const p_extend )
```

9.50.13.1 Detailed description

Requires sdadc_calibrate_args_t passed to p_extend. Calibrates the specified channel. Calibration is not required or supported for single-ended mode. Internal calibration is automatically done during open() unless it is disabled in the user configuration. This API is provided primarily for external calibration. A callback with the event ADC_EVENT_CALIBRATION_COMPLETE is called when calibration completes. The calibration status can also be monitored using adc_api_t::statusGet(). Implements calibrate.

During external offset calibration, apply a differential voltage of 0 to ANSDnP - ANSDnN, where n is the input channel and ANSDnP is OPAMP0 for channel 4 and ANSDnN is OPAMP1 for channel 4. Complete external offset calibration before external gain calibration.

During external gain calibration apply a voltage between 0.4 V / total_gain and 0.8 V / total_gain. The differential voltage applied during calibration is corrected to a conversion result of 0x7FFFFF, which is the maximum possible positive differential measurement.

This function clears the offset value. If offset is required after calibration, it must be reapplied after calibration is complete using offsetSet.

Table 1883:

Name	Description
SSP_SUCCESS	Calibration began successfully.
SSP_ERR_ASSERTION	An input pointer was NULL.
SSP_ERR_IN_USE	A conversion or calibration is in progress.
SSP_ERR_NOT_OPEN	Instance control block is not open.

9.50.13.2 Function steps

- Calibration cannot be performed if conversion or calibration is already in progress.
- Select software trigger.
- Select single scan mode.
- Enable calibration.
- Set the offset voltage to 0 mV.
- Set the calibration mode.
- Start calibration.

- Confirm that calibration started.
- Return the error code

9.50.14 R_SDADC_Close

```
ssp_err_t R_SDADC_Close ( adc_ctrl_t  * p_api_ctrl )
```

9.50.14.1 Detailed description

Stops any scan in progress, disables interrupts, and powers down the SDADC peripheral. Implements close.

Table 1884:

Name	Description
SSP_SUCCESS	Instance control block closed successfully.
SSP_ERR_ASSERTION	An input pointer was NULL.
SSP_ERR_NOT_OPEN	Instance control block is not open.

9.50.14.2 Function steps

- Perform parameter checking
- Mark driver as closed
- Disable hardware triggers.
- Stop A/D conversion.
- Disable interrupts.
- Wait 3 us in normal mode as required by the hardware manual.
- Turn off the power of VBIAS, channel, and sigma-delta A/D converter.
- Turn off the power of ADBGR, SBIAS, and ADREG.
- Stop the input clock for the 24-bit sigma-delta A/D converter (SDADCCLK).
- Enter the module-stop state.
- Release the hardware lock
- Return the error code

9.50.15 R_SDADC_VersionGet

```
ssp_err_t R_SDADC_VersionGet ( ssp_version_t  *const p_version )
```

9.50.15.1 Detailed description

Gets the API and code version. Implements versionGet.

Table 1885:

Name	Description
SSP_SUCCESS	Version information available in p_version.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

9.50.15.2 Function steps

- Return the version number

9.50.16 API Data

9.50.16.1 sdadc_vref_src_t

`sdadc_vref_src_t`

Detailed description

Source of Vref.

Enumerated values

Name	Description
SDADC_VREF_SRC_INTERNAL	Vref is internally sourced, can be output as SBIAS.
SDADC_VREF_SRC_EXTERNAL	Vref is externally sourced from the VREFI pin.

9.50.16.2 sdadc_vref_voltage_t

`sdadc_vref_voltage_t`

Detailed description

Voltage of Vref.

Enumerated values

Name	Description
SDADC_VREF_VOLTAGE_800_MV	Vref is 0.8 V.

Name	Description
SDADC_VREF_VOLTAGE_1000_MV	Vref is 1.0 V.
SDADC_VREF_VOLTAGE_1200_MV	Vref is 1.2 V.
SDADC_VREF_VOLTAGE_1400_MV	Vref is 1.4 V.
SDADC_VREF_VOLTAGE_1600_MV	Vref is 1.6 V.
SDADC_VREF_VOLTAGE_1800_MV	Vref is 1.8 V.
SDADC_VREF_VOLTAGE_2000_MV	Vref is 2.0 V.
SDADC_VREF_VOLTAGE_2200_MV	Vref is 2.2 V.
SDADC_VREF_VOLTAGE_2400_MV	Vref is 2.4 V (only valid for external Vref)

9.50.16.3 sdadc_channel_input_t

`sdadc_channel_input_t`

Detailed description

Per channel input mode.

Enumerated values

Name	Description
SDADC_CHANNEL_INPUT_DIFFERENTIAL	Differential input.
SDADC_CHANNEL_INPUT_SINGLE_ENDED	Single-ended input.

9.50.16.4 sdadc_channel_stage_1_gain_t

`sdadc_channel_stage_1_gain_t`

Detailed description

Per channel stage 1 gain options.

Enumerated values

Name	Description
SDADC_CHANNEL_STAGE_1_GAIN_1	Gain of 1.
SDADC_CHANNEL_STAGE_1_GAIN_2	Gain of 2.

Name	Description
SDADC_CHANNEL_STAGE_1_GAIN_3	Gain of 3 (only valid for stage 1)
SDADC_CHANNEL_STAGE_1_GAIN_4	Gain of 4.
SDADC_CHANNEL_STAGE_1_GAIN_8	Gain of 8.

9.50.16.5 sdadc_channel_stage_2_gain_t

`sdadc_channel_stage_2_gain_t`

Detailed description

Per channel stage 2 gain options.

Enumerated values

Name	Description
SDADC_CHANNEL_STAGE_2_GAIN_1	Gain of 1.
SDADC_CHANNEL_STAGE_2_GAIN_2	Gain of 2.
SDADC_CHANNEL_STAGE_2_GAIN_4	Gain of 4.
SDADC_CHANNEL_STAGE_2_GAIN_8	Gain of 8.

9.50.16.6 sdadc_channel_oversampling_t

`sdadc_channel_oversampling_t`

Detailed description

Per channel oversampling ratio.

Enumerated values

Name	Description
SDADC_CHANNEL_OVERSAMPLING_64	Oversampling ratio of 64.
SDADC_CHANNEL_OVERSAMPLING_128	Oversampling ratio of 128.
SDADC_CHANNEL_OVERSAMPLING_256	Oversampling ratio of 256.
SDADC_CHANNEL_OVERSAMPLING_512	Oversampling ratio of 512.
SDADC_CHANNEL_OVERSAMPLING_1024	Oversampling ratio of 1024.

Name	Description
SDADC_CHANNEL_OVERSAMPLING_2048	Oversampling ratio of 2048.

9.50.16.7 sdadc_channel_polarity_t

`sdadc_channel_polarity_t`

Detailed description

Per channel polarity, valid for single-ended input only.

Enumerated values

Name	Description
SDADC_CHANNEL_POLARITY_POSITIVE	Positive-side single-ended input.
SDADC_CHANNEL_POLARITY_NEGATIVE	Negative-side single-ended input.

9.50.16.8 sdadc_channel_average_t

`sdadc_channel_average_t`

Detailed description

Per channel number of conversions to average before conversion end callback.

Enumerated values

Name	Description
SDADC_CHANNEL_AVERAGE_NONE	Do not average (callback for each conversion)
SDADC_CHANNEL_AVERAGE_8	Average 8 samples for each conversion end callback.
SDADC_CHANNEL_AVERAGE_16	Average 16 samples for each conversion end callback.
SDADC_CHANNEL_AVERAGE_32	Average 32 samples for each conversion end callback.
SDADC_CHANNEL_AVERAGE_64	Average 64 samples for each conversion end callback.

9.50.16.9 sdadc_channel_inversion_t

`sdadc_channel_inversion_t`

Detailed description

Per channel polarity, valid for negative-side single-ended input only.

Enumerated values

Name	Description
SDADC_CHANNEL_INVERSION_OFF	Do not invert conversion result.
SDADC_CHANNEL_INVERSION_ON	Invert conversion result.

9.50.16.10 sdadc_channel_count_formula_t

`sdadc_channel_count_formula_t`

Detailed description

Select a formula to specify the number of conversions. The following symbols are used in the formulas:

- N: Number of conversions
- n: coefficient_n, do not set to 0 if m is 0
- m: coefficient_m, do not set to 0 if n is 0

Either m or n must be non-zero.

Enumerated values

Name	Description
SDADC_CHANNEL_COUNT_FORMULA_EXPONENTIAL	N = 32 * (2 ^ n - 1) + m * 2 ^ n.
SDADC_CHANNEL_COUNT_FORMULA_LINEAR	N = (32 * n) + m.

9.50.16.11 sdadc_calibration_t

`sdadc_calibration_t`

Detailed description

Calibration mode.

Enumerated values

Name	Description
SDADC_CALIBRATION_INTERNAL_GAIN_OFFSET	
SDADC_CALIBRATION_EXTERNAL_OFFSET	
SDADC_CALIBRATION_EXTERNAL_GAIN	

9.50.17 Extensions

9.50.17.1 sdadc_calibrate_args_t

sdadc_calibrate_args_t

Detailed description

Structure to pass to the calibrate p_extend argument.

Variables

- adc_register_t channel

  Which channel to calibrate.

- sdadc_calibration_t mode

  Calibration mode.

9.50.17.2 sdadc_channel_cfg_t

sdadc_channel_cfg_t

Detailed description

SDADC per channel configuration.

Variables

- sdadc_channel_stage_2_gain_t stage_2_gain

  Gain of PGA stage 2, must be 1 for single-ended input.

- sdadc_channel_stage_1_gain_t stage_1_gain

  Gain of PGA stage 1, must be 1 for single-ended input.

- sdadc_channel_oversampling_t oversampling

  Oversampling ratio, must be 256 in single-ended input.

- uint32_t __pad0__

- sdadc_channel_polarity_t polarity

  Polarity, valid for single-ended mode only.

- sdadc_channel_input_t input

  Single-ended or differential input.

- uint32_t coefficient_m

  See sdadc_channel_count_formula_t.

- uint32_t coefficient_n

  See sdadc_channel_count_formula_t.

- sdadc_channel_average_t average

  Number of samples to average for each conversion result.

- sdadc_channel_inversion_t invert

  Whether to invert negative single-ended input.
- uint32_t __pad1__
- sdadc_channel_count_formula_t count_formula

  Linear or exponential formula used for number of conversions.

9.50.17.3 adc_on_sdadc_cfg_t

adc_on_sdadc_cfg_t

Detailed description

SDADC configuration extension. This extension is required and must be provided in p_extend.

Variables

- uint8_t calibration_end_ipl

  Calibration end interrupt priority.
- uint8_t conversion_end_ipl

  Conversion end interrupt priority.
- bool skip_internal_calibration

  Whether to skip internal calibration of of the PGA during open.
- sdadc_vref_src_t vref_src

  Source of Vref (internal or external)
- sdadc_vref_voltage_t vref_voltage

  Voltage of Vref, required for both internal and external Vref. If Vref is from an external source, the voltage must match the specified voltage within 3%.
- sdadc_channel_cfg_t const * p_channel_cfgs[SDADC_MAX_NUM_CHANNELS]

  Configuration for each channel, set to NULL if unused.

9.50.17.4 sdadc_instance_ctrl_t

sdadc_instance_ctrl_t

Detailed description

ADC instance control block. DO NOT INITIALIZE. Initialized in open.

Variables

- adc_mode_t mode
- adc_resolution_t resolution
- adc_alignment_t alignment
- void const * p_context

- R_SDADC0_Type * p_reg
- void(* p_callback)(*p_args)
- adc_trigger_t trigger
- uint32_t trigger_enabled
- uint32_t opened
- uint32_t scan_mask
- uint32_t scan_cfg_mask
- uint16_t unit
- uint8_t calib_status
- IRQn_Type scan_end_irq
- IRQn_Type calib_end_irq
- IRQn_Type conv_end_irq
- uint16_t results_16[SDADC_MAX_NUM_CHANNELS]
- uint32_t results_32[SDADC_MAX_NUM_CHANNELS]
- union{} results

  See source code for definition of this member.

9.51 SDMMC

Driver for the SD/MMC Host Interface (SDHI).

SD/MMC driver to access SD, eMMC, and SDIO devices.

9.51.1 Functions

- R_SDMMC_Open
- R_SDMMC_Close
- R_SDMMC_Read
- R_SDMMC_Write
- R_SDMMC_Control
- R_SDMMC_ReadIo
- R_SDMMC_WriteIo
- R_SDMMC_ReadIoExt
- R_SDMMC_WriteIoExt
- R_SDMMC_IoIntEnable
- R_SDMMC_VersionGet

- R_SDMMC_InfoGet
- R_SDMMC_Erase

9.51.2 Defines

- #define SDMMC_CODE_VERSION_MAJOR

  Initial value: `(1U)`
- #define SDMMC_CODE_VERSION_MINOR

  Initial value: `(7U)`

9.51.3 R_SDMMC_Open

```
ssp_err_t R_SDMMC_Open ( sdmmc_ctrl_t *const p_api_ctrl , sdmmc_cfg_t const
*const p_cfg )
```

9.51.3.1 Detailed description

Initializes the SDHI hardware and completes identification and configuration for the SD or eMMC device. This procedure requires several sequential commands. This API blocks until all identification and configuration commands are complete.

For SDIO, SDIO interrupts are enabled after card identification is complete. SDIO interrupts can be disabled using sdmmc_api_t::ioIntEnable().

Implements open.

Table 1886:

Name	Description
SSP_SUCCESS	Port is available and is now open for read/write/control access.
SSP_ERR_ASSERTION	Null Pointer or block size is not in the valid range of 1-512.
SSP_ERR_INVALID_ARGUMENT	Block size must be 512 bytes for SD cards and eMMC devices. It is configurable for SDIO only.
SSP_ERR_ALREADY_OPEN	Driver has already been opened with this instance of the control structure.
SSP_ERR_HW_LOCKED	The channel specified has already been opened.
SSP_ERR_CARD_INIT_FAILED	Hardware related failure occurred, with the MCU or with the card itself.
SSP_ERR_IRQ_BSP_DISABLED	Access interrupt is not enabled.

Table 1886: (Continued)

Name	Description
SSP_ERR_CARD_NOT_INSERTED	Card detection is enabled and no card is plugged in.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- productFeatureGet
- eventInfoGet
- systemClockFreqGet

NOTE: This function is reentrant for different channels. It is not reentrant for the same channel.

9.51.3.2 Function steps

- Verify the requested hardware channel exists on the MCU.
- Configure interrupts.
- Perform the identification procedure for SD card or eMMC device.
- Configure bus clock, block size, and bus width.
- Check to see if the card is write protected (SD cards only).

9.51.4 R_SDMMC_Close

```
ssp_err_t R_SDMMC_Close ( sdmmc_ctrl_t  *const p_api_ctrl )
```

9.51.4.1 Detailed description

Closes an open SD/MMC device. Implements close.

Table 1887:

Name	Description
SSP_SUCCESS	Successful close.
SSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
SSP_ERR_NOT_OPEN	Driver has not been initialized.
SSP_ERR_TRANSFER_BUSY	Driver is busy with a previous operation.

NOTE: This function is reentrant for different channels. It is not reentrant for the same channel.

9.51.4.2 Function steps

- Disable SDHI interrupts.
- Close the transfer driver.
- Release hardware lock.

9.51.5 R_SDMMC_Read

```
ssp_err_t R_SDMMC_Read ( sdmmc_ctrl_t  *const p_api_ctrl ,   uint8_t
*const p_dest ,   uint32_t const start_sector ,   uint32_t const sector_count )
```

9.51.5.1 Detailed description

Reads data from an SD or eMMC device. Up to 0x10000 sectors can be read at a time. Implements read.

This function blocks until the command is sent and the response is received. A callback with the event SDMMC_EVENT_TRANSFER_COMPLETE is called when the read data is available.

Table 1888:

Name	Description
SSP_SUCCESS	Data read successfully.
SSP_ERR_ASSERTION	NULL pointer.
SSP_ERR_NOT_OPEN	Driver has not been initialized.
SSP_ERR_CARD_NOT_READY	Card was unplugged.
SSP_ERR_TRANSFER_BUSY	Driver is busy with a previous operation.
SSP_ERR_READ_FAILED	Read operation failed.

NOTE: This function is reentrant for different channels. It is not reentrant for the same channel.

9.51.6 R_SDMMC_Write

```
ssp_err_t R_SDMMC_Write ( sdmmc_ctrl_t  *const p_api_ctrl ,   uint8_t const
*const p_source ,   uint32_t const start_sector ,   uint32_t const sector_count )
```

9.51.6.1 Detailed description

Writes data to an SD or eMMC device. Up to 0x10000 sectors can be written at a time. Implements write.

This function blocks until the command is sent and the response is received. A callback with the event SDMMC_EVENT_TRANSFER_COMPLETE is called when the all data has been written.

Table 1889:

Name	Description
SSP_SUCCESS	Card write finished successfully.
SSP_ERR_ASSERTION	Handle or Source address is NULL.
SSP_ERR_NOT_OPEN	Driver has not been initialized.
SSP_ERR_CARD_NOT_READY	Card was unplugged.
SSP_ERR_TRANSFER_BUSY	Driver is busy with a previous operation.
SSP_ERR_WRITE_PROTECTED	SD card is Write Protected.
SSP_ERR_WRITE_FAILED	Write operation failed.

NOTE: This function is reentrant for different channels.

9.51.7 R_SDMMC_Control

```
ssp_err_t R_SDMMC_Control ( sdmmc_ctrl_t  *const p_api_ctrl ,  ssp_command_t
const command ,   void * p_data )
```

9.51.7.1 Detailed description

Sends control commands to and receives the status of the SD/MMC device. Implements control.

Table 1890:

Name	Description
SSP_SUCCESS	Command executed successfully.
SSP_ERR_ASSERTION	Null Pointer.
SSP_ERR_INVALID_ARGUMENT	Command is invalid.
SSP_ERR_INVALID_SIZE	Block size not in valid range of 1-512 for SDIO or 512 only for SD cards and eMMC.

NOTE: This function is reentrant for different channels. It is not reentrant for the same channel.

9.51.8 R_SDMMC_ReadIo

```
ssp_err_t R_SDMMC_ReadIo ( sdmmc_ctrl_t  *const p_api_ctrl ,   uint8_t
*const p_data ,   uint32_t const function ,   uint32_t const address )
```

9.51.8.1 Detailed description

The Read function reads a one byte register from an SDIO card. Implements readIo.

This function blocks until the command is sent and the response is received. p_data contains the register value read when this function returns.

Table 1891:

Name	Description
SSP_SUCCESS	Data read successfully.
SSP_ERR_ASSERTION	NULL pointer.
SSP_ERR_NOT_OPEN	Driver has not been initialized.
SSP_ERR_CARD_NOT_READY	Card was unplugged.
SSP_ERR_TRANSFER_BUSY	Driver is busy with a previous operation.
SSP_ERR_READ_FAILED	Read operation failed.

NOTE: This function is reentrant for different channels. It is not reentrant for the same channel.

9.51.9 R_SDMMC_WriteIo

```
ssp_err_t R_SDMMC_WriteIo ( sdmmc_ctrl_t  *const p_api_ctrl ,   uint8_t
*const p_data ,   uint32_t const function ,   uint32_t const address ,
  sdmmc_io_write_mode_t const read_after_write )
```

9.51.9.1 Detailed description

Writes a one byte register to an SDIO card. Implements writeIo.

This function blocks until the command is sent and the response is received. The register has been written when this function returns. If read_after_write is true, p_data contains the register value read when this function returns.

Table 1892:

Name	Description
SSP_SUCCESS	Card write finished successfully.
SSP_ERR_ASSERTION	Handle or Source address is NULL.
SSP_ERR_NOT_OPEN	Driver has not been initialized.
SSP_ERR_CARD_NOT_READY	Card was unplugged.
SSP_ERR_TRANSFER_BUSY	Driver is busy with a previous operation.
SSP_ERR_WRITE_FAILED	Write operation failed.

NOTE: This function is reentrant for different channels.

9.51.10 R_SDMMC_ReadIoExt

```
ssp_err_t R_SDMMC_ReadIoExt ( sdmmc_ctrl_t  *const p_api_ctrl ,   uint8_t
*const p_dest ,   uint32_t const function ,   uint32_t const address ,   uint32_t
*const count ,   sdmmc_io_transfer_mode_t transfer_mode ,
  sdmmc_io_address_mode_t address_mode )
```

9.51.10.1 Detailed description

Reads data from an SDIO card function. Implements readIoExt.

This function blocks until the command is sent and the response is received. A callback with the event SDMMC_EVENT_TRANSFER_COMPLETE is called when the read data is available.

Table 1893:

Name	Description
SSP_SUCCESS	Data read successfully.
SSP_ERR_ASSERTION	NULL pointer, or count is not in the valid range of 1-512 for byte mode or 1-511 for block mode.
SSP_ERR_NOT_OPEN	Driver has not been initialized.
SSP_ERR_CARD_NOT_READY	Card was unplugged.
SSP_ERR_TRANSFER_BUSY	Driver is busy with a previous operation.
SSP_ERR_READ_FAILED	Read operation failed.

NOTE: This function is reentrant for different channels. It is not reentrant for the same channel.

9.51.11 R_SDMMC_WriteIoExt

```
ssp_err_t R_SDMMC_WriteIoExt ( sdmmc_ctrl_t  *const p_api_ctrl ,   uint8_t const
*const p_source ,   uint32_t const function ,   uint32_t const address ,
  uint32_t const count ,   sdmmc_io_transfer_mode_t transfer_mode ,
  sdmmc_io_address_mode_t address_mode )
```

9.51.11.1 Detailed description

Writes data to an SDIO card function. Implements writeIoExt.

This function blocks until the command is sent and the response is received. A callback with the event SDMMC_EVENT_TRANSFER_COMPLETE is called when the all data has been written.

Table 1894:

Name	Description
SSP_SUCCESS	Card write finished successfully.

Table 1894: (Continued)

Name	Description
SSP_ERR_ASSERTION	NULL pointer, or count is not in the valid range of 1-512 for byte mode or 1-511 for block mode.
SSP_ERR_NOT_OPEN	Driver has not been initialized.
SSP_ERR_CARD_NOT_READY	Card was unplugged.
SSP_ERR_TRANSFER_BUSY	Driver is busy with a previous operation.
SSP_ERR_WRITE_FAILED	Write operation failed.

NOTE: This function is reentrant for different channels.

9.51.12 R_SDMMC_IoIntEnable

```
ssp_err_t R_SDMMC_IoIntEnable ( sdmmc_ctrl_t  *const p_api_ctrl ,
  bool enable )
```

9.51.12.1 Detailed description

Enables or disables the SDIO Interrupt. Implements sdmmc_api_t::ioIntEnable().

Table 1895:

Name	Description
SSP_SUCCESS	Card enabled or disabled SDIO interrupts successfully.
SSP_ERR_ASSERTION	NULL pointer.
SSP_ERR_TRANSFER_BUSY	Driver is busy with a previous operation.

NOTE: This function is reentrant for different channels.

9.51.12.2 Function steps

- Enable or disable interrupt.

9.51.13 R_SDMMC_VersionGet

```
ssp_err_t R_SDMMC_VersionGet ( ssp_version_t  *const p_version )
```

9.51.13.1 Detailed description

Returns the version of the firmware and API. Implements versionGet.

Table 1896:

Name	Description
SSP_SUCCESS	Function executed successfully.
SSP_ERR_ASSERTION	Null Pointer.

NOTE: This function is reentrant.

9.51.14 R_SDMMC_InfoGet

```
ssp_err_t R_SDMMC_InfoGet ( sdmmc_ctrl_t  *const p_api_ctrl ,  sdmmc_info_t
*const p_info )
```

9.51.14.1 Detailed description

Provides information about the connected device and driver status. Implements infoGet.

NOTE: This function is reentrant.

9.51.14.2 Function steps

- Copy information stored during open.
- Check if the card is busy.

9.51.15 R_SDMMC_Erase

```
ssp_err_t R_SDMMC_Erase ( sdmmc_ctrl_t  *const p_api_ctrl ,   uint32_t
const start_sector ,   uint32_t const sector_count )
```

9.51.15.1 Detailed description

Erases sectors of an SD card or eMMC device. Implements erase.

This function blocks until erase is complete.

Table 1897:

Name	Description
SSP_SUCCESS	Erase operation requested.
SSP_ERR_ASSERTION	A required pointer is NULL.
SSP_ERR_NOT_OPEN	Driver has not been initialized.
SSP_ERR_CARD_NOT_READY	Card was unplugged.
SSP_ERR_TRANSFER_BUSY	Driver is busy with a previous operation.
SSP_ERR_WRITE_PROTECTED	SD card is Write Protected.
SSP_ERR_ERASE_FAILED	Erase operation unsuccessful.

NOTE: This function is reentrant for different channels.

9.51.15.2 Function steps

- Send command to set start erase address (CMD35 for eMMC, CMD32 for SD).
- Send command to set end erase address (CMD36 for eMMC, CMD33 for SD).
- Send erase command (CMD38).

9.51.16 API Data

9.51.16.1 sdmmc_card_detect_t

```
sdmmc_card_detect_t
```

Detailed description

Card detection configuration options.

Enumerated values

Name	Description
SDMMC_CARD_DETECT_NONE	Card detection unused.
SDMMC_CARD_DETECT_CD	Card detection using the SDnCD pin.

9.51.16.2 sdmmc_transfer_dir_t

`sdmmc_transfer_dir_t`

Enumerated values

Name	Description
SDMMC_TRANSFER_DIR_NONE	
SDMMC_TRANSFER_DIR_READ	
SDMMC_TRANSFER_DIR_WRITE	

9.51.16.3 sdmmc_io_command_t

`sdmmc_io_command_t`

Enumerated values

Name	Description
SDMMC_IO_COMMAND_DIRECT_IO	
SDMMC_IO_COMMAND_DIRECT_IO_EXT	

9.51.17 Extensions

9.51.17.1 sdhi_event_t

9.51.17.5 sdmmc_instance_ctrl_t

sdmmc_instance_ctrl_t

Detailed description

SDMMC instance control block. This is private to the SSP and should not be used or modified by the application.

Variables

- uint32_t open
- sdmmc_hw_t hw
- transfer_instance_t const * p_lower_lvl_transfer
- sdmmc_info_t status
- bool transfer_in_progress
- void(* p_callback)(*p_args)
- void const * p_context
- R_SDHI0_Type * p_reg
- sdhi_event_t sdhi_event

- IRQn_Type transfer_irq
- sdmmc_transfer_dir_t transfer_dir
- uint8_t * p_transfer_data
- uint32_t transfer_blocks_total
- uint32_t transfer_block_current
- uint32_t transfer_block_size
- uint32_t aligned_buff[SDMMC_MAX_BLOCK_SIZE/sizeof(uint32_t)]

9.51.17.6 sdmmc_extended_cfg_t

sdmmc_extended_cfg_t

Detailed description

Extended SDMMC configuration, to be pointed to p_extend.

Variables

- uint32_t block_size

  Block size in bytes. Block size must be 512 bytes for SD cards and eMMC devices. Block size can be 1-512 bytes for SDIO.

- sdmmc_card_detect_t card_detect

  Whether or not card detection is used.

9.52 SLCDC

Driver for the Segment LCD Controller (SLCDC).

9.52.1 Summary

Extends SLCDC Interface.

9.52.2 Functions

- R_SLCDC_Open
- R_SLCDC_Write
- R_SLCDC_Modify
- R_SLCDC_Start
- R_SLCDC_Stop
- R_SLCDC_ContrastIncrease

- R_SLCDC_ContrastDecrease
- R_SLCDC_SetDisplayArea

SSP_ERR_ASSERTION	Pointer to the control block or the configuration structure is NULL.
SSP_ERR_UNSUPPORTED	Unsupported operation
SSP_ERR_NOT_OPEN	Device is not opened or initialized
SSP_ERR_NOT_ENABLED	RTC not enabled for blink operation

See Common Error Codes for other possible return codes. This function calls

- productFeatureGet

9.52.11 R_SLCDC_Close

```
ssp_err_t R_SLCDC_Close ( slcdc_ctrl_t  *const p_api_ctrl )
```

9.52.11.1 Detailed description

Table 1906:

Name	Description
SSP_SUCCESS	Device was opened successfully.
SSP_ERR_ASSERTION	Pointer to the control block or the configuration structure is NULL.
SSP_ERR_INVALID_ARGUMENT	Invalid parameter in the argument.
SSP_ERR_NOT_OPEN	Device is not opened or initialized

9.52.12 R_SLCDC_VersionGet

```
ssp_err_t R_SLCDC_VersionGet ( ssp_version_t  *const p_version )
```

9.52.12.1 Brief description

Retrieve the API version number.

9.52.12.2 Detailed description

Table 1907:

Name	Description
SSP_SUCCESS	Successful return.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

9.52.13 Extensions

9.52.13.1 slcdc_instance_ctrl_t

slcdc_instance_ctrl_t

Detailed description

SLCDC control block. DO NOT INITIALIZE. Initialization occurs when open is called

Variables

- slcdc_display_state_t state
  Status of SLCD module.
- slcdc_cfg_t info
  SLCDC config info.
- void const * p_context
  Pointer to the higher level device context.
- R_LCD_Type * p_reg
  Pointer to register base address.

9.53 SSI

Driver for the Serial Sound Interface (SSI).

9.53.1 Summary

Extends I2S Interface.

9.53.2 Functions

- R_SSI_Open
- R_SSI_Stop
- R_SSI_Close
- R_SSI_Write
- R_SSI_Read
- R_SSI_WriteRead
- R_SSI_Mute
- R_SSI_InfoGet
- R_SSI_VersionGet

9.53.3 Defines

- #define SSI_CODE_VERSION_MAJOR

  Initial value: `(1U)`
- #define SSI_CODE_VERSION_MINOR

  Initial value: `(5U)`

9.53.4 R_SSI_Open

```
ssp_err_t R_SSI_Open ( i2s_ctrl_t  *const p_api_ctrl ,  i2s_cfg_t  const
*const p_cfg )
```

9.53.4.1 Brief description

Opens the SSI. Implements open.

9.53.4.2 Detailed description

This function calculates the clock divisor based on the input audio clock frequency and the requested sampling frequency. It sets this clock divisor and the configurations specified in i2s_cfg_t. It also opens the timer and transfer interfaces if they are provided.

Table 1908:

Name	Description
SSP_SUCCESS	Ready for I2S communication.
SSP_ERR_ASSERTION	The pointer to p_ctrl or p_cfg is null.

Table 1908: (Continued)

Name	Description
SSP_ERR_IN_USE	The requested channel has already been opened or hardware has been locked.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- productFeatureGet
- eventInfoGet
- open
- open

9.53.4.3 Function steps

- Configure dependent timer and transfer drivers.
- Configure interrupts.
- Configure the audio clock.
- Mark driver as open by initializing it to "SSI" in its ASCII equivalent.

9.53.5 R_SSI_Stop

```
ssp_err_t R_SSI_Stop ( i2s_ctrl_t  *const p_api_ctrl ,  i2s_dir_t  const dir )
```

9.53.5.1 Brief description

Stops SSI. Implements stop.

9.53.5.2 Detailed description

This function disables the transfer if the transfer interface is used, or sends a stop signal to stop writing data in the ISR if interrupt driven mode is used.

Table 1909:

Name	Description
SSP_SUCCESS	I2S communication stop request issued.
SSP_ERR_ASSERTION	The pointer to p_ctrl null.
SSP_ERR_NOT_OPEN	The channel is not opened.

See Common Error Codes or lower level drivers for other possible return codes.

9.53.5.3 Function steps

- Stop will occur when the peripheral is idle.

9.53.6 R_SSI_Close

```
ssp_err_t R_SSI_Close ( i2s_ctrl_t  *const p_api_ctrl )
```

9.53.6.1 Brief description

Closes SSI. Implements close.

9.53.6.2 Detailed description

This function powers down the SSI and closes the lower level timer and transfer drivers if they are used.

Table 1910:

Name	Description
SSP_SUCCESS	Device closed successfully.
SSP_ERR_ASSERTION	The pointer to p_ctrl null.
SSP_ERR_NOT_OPEN	The channel is not opened.

9.53.6.3 Function steps

- Stop feeding clock to SSI peripheral to deactivate it.
- If a timer instance is provided, close the timer instance.
- If a transfer instance is provided for write, close the transfer instance.
- If a transfer instance is provided for read, close the transfer instance.
- Release HW lock.

9.53.7 R_SSI_Write

```
ssp_err_t R_SSI_Write ( i2s_ctrl_t  *const p_api_ctrl ,   uint8_t const
*const p_src ,   uint16_t const bytes )
```

9.53.7.1 Brief description

Writes data buffer to SSI. Implements write.

9.53.7.2 Detailed description

This function resets the transfer if the transfer interface is used, or writes the length of data that fits in the FIFO then stores the remaining write buffer in the control block to be written in the ISR.

Write() cannot be called if another write(), read() or writeRead() operation is in progress. Write can be called when the SSI is idle, or after the I2S_EVENT_TX_EMPTY event.

Table 1911:

Name	Description
SSP_SUCCESS	Write initiated successfully.
SSP_ERR_ASSERTION	The pointer to p_ctrl or p_src was null, or bytes requested was 0.
SSP_ERR_IN_USE	Another transfer is in progress, data was not written.
SSP_ERR_NOT_OPEN	The channel is not opened.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- reset
- start

9.53.7.3 Function steps

- Make sure transmission is enabled.
- If a transfer instance is provided for write, reset the transfer.
- Otherwise, write to the FIFO directly.

9.53.8 R_SSI_Read

```
ssp_err_t R_SSI_Read ( i2s_ctrl_t  *const p_api_ctrl ,   uint8_t *const p_dest ,
  uint16_t const bytes )
```

9.53.8.1 Brief description

Reads data into provided buffer. Implements read.

9.53.8.2 Detailed description

This function resets the transfer if the transfer interface is used, or reads the length of data available in the FIFO then stores the remaining read buffer in the control block to be filled in the ISR.

Read() cannot be called if another write(), read() or writeRead() operation is in progress. Read can be called when the SSI is idle, or after the I2S_EVENT_RX_FULL event.

Table 1912:

Name	Description
SSP_SUCCESS	Read initiated successfully.
SSP_ERR_ASSERTION	The pointer to p_ctrl or p_dest was null, or bytes requested was 0.
SSP_ERR_NOT_OPEN	The channel is not opened.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- reset
- start

9.53.8.3 Function steps

- Make sure reception is enabled.
- If a transfer instance is provided for read, reset the transfer.
- Otherwise, read from the FIFO directly.

9.53.9 R_SSI_WriteRead

```
ssp_err_t R_SSI_WriteRead ( i2s_ctrl_t  *const p_api_ctrl ,   uint8_t const
*const p_src ,   uint8_t *const p_dest ,   uint16_t const bytes )
```

9.53.9.1 Brief description

Writes from source buffer and reads data into destination buffer. Implements writeRead.

9.53.9.2 Detailed description

This function calls R_SSI_Write and R_SSI_Read.

writeRead() cannot be called if another write(), read() or writeRead() operation is in progress. writeRead() can be called when the SSI is idle, or after the I2S_EVENT_RX_FULL event.

Table 1913:

Name	Description
SSP_SUCCESS	Write and read initiated successfully.
SSP_ERR_ASSERTION	The pointer to p_ctrl, p_src, or p_dest was null, or bytes requested was 0.
SSP_ERR_NOT_OPEN	The channel is not opened.

See Common Error Codes or lower level drivers for other possible return codes.

9.53.9.3 Function steps

- Call read, then write.

9.53.10 R_SSI_Mute

```
ssp_err_t R_SSI_Mute ( i2s_ctrl_t  *const p_api_ctrl ,  i2s_mute_t
const mute_enable )
```

9.53.10.1 Brief description

Mutes SSI. Implements mute.

9.53.10.2 Detailed description

Data is still written while mute is enabled, but the transmit line outputs zeros.

Table 1914:

Name	Description
SSP_SUCCESS	Transmission is muted.
SSP_ERR_ASSERTION	The pointer to p_ctrl was null.
SSP_ERR_NOT_OPEN	The channel is not opened.

9.53.11 R_SSI_InfoGet

```
ssp_err_t R_SSI_InfoGet ( i2s_ctrl_t  *const p_api_ctrl ,  i2s_info_t
*const p_info )
```

9.53.11.1 Brief description

Get I2S information and store it in provided pointer p_info. Implements infoGet.

9.53.11.2 Detailed description

Table 1915:

Name	Description
SSP_SUCCESS	Information stored successfully.
SSP_ERR_ASSERTION	The p_ctrl or p_info parameter was null.
SSP_ERR_NOT_OPEN	The channel is not opened.

9.53.12 R_SSI_VersionGet

```
ssp_err_t R_SSI_VersionGet ( ssp_version_t  *const p_version )
```

9.53.12.1 Brief description

Sets driver version based on compile time macros.

9.53.12.2 Detailed description

Table 1916:

Name	Description
SSP_SUCCESS	Successful close.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

9.53.13 API Data

9.53.13.1 ssi_audio_clock_t

```
ssi_audio_clock_t
```

Detailed description

Audio clock source

Enumerated values

Name	Description
SSI_AUDIO_CLOCK_EXTERNAL	Audio clock source is the AUDIO_CLK input pin.
SSI_AUDIO_CLOCK_GTIOC1A	Audio clock source is internal connection to GPT channel 1 output.

9.53.14 Extensions

9.53.14.1 ssi_instance_ctrl_t

ssi_instance_ctrl_t

Detailed description

Channel instance control block. DO NOT INITIALIZE. Initialization occurs when open is called.

Variables

- void(* p_callback)(*p_args)

  Callback provided when an I2S ISR occurs. NULL indicates no CPU interrupt.
- void const * p_context

  Placeholder for user data. Passed to the user callback in i2s_callback_args_t.
- R_SSI0_Type * p_reg

  Pointer to SSI register base address.
- timer_instance_t const * p_timer

  Timer used to generate audio clock.
- transfer_instance_t const * p_transfer_tx

  Transfer used for hardware acceleration during write.
- transfer_instance_t const * p_transfer_rx

  Transfer used for hardware acceleration during read.
- uint32_t const * p_tx_src

  Source buffer pointer used to fill hardware FIFO from transmit ISR.
- uint32_t tx_src_bytes

  Size of source buffer used to fill hardware FIFO from transmit ISR.
- uint32_t * p_rx_dest

  Destination buffer pointer used to fill from hardware FIFO in receive ISR.

- uint32_t rx_dest_bytes

  Size of destination buffer used to fill from hardware FIFO in receive ISR.
- uint32_t sampling_freq_hz

  Sampling frequency in Hertz.
- uint8_t channel

  Channel number.
- uint8_t fifo_access_bytes

  Byte access to FIFO.
- uint8_t stop_requested_tx

  Stops I2S after transmit is complete.
- uint8_t stop_requested_rx

  Stops I2S after receive is complete.
- uint8_t tx_in_progress

  True if a transmit transfer is in progress.
- uint8_t tx_in_use

  True if a transmission is in progress.
- uint8_t rx_in_use

  True if a reception is in progress.
- uint8_t zeros_written

  True if zeros have been transmitted.
- IRQn_Type txi_irq

  Transmit IRQ number.
- IRQn_Type rxi_irq

  Receive IRQ number.
- IRQn_Type int_irq

  Idle/Error IRQ number.
- uint32_t open

  Whether or not this control block is initialized.

9.53.14.2 i2s_on_ssi_cfg_t

i2s_on_ssi_cfg_t

Detailed description

SSI configuration extension. This extension is optional.

Variables

- ssi_audio_clock_t audio_clock

  Audio clock source, default is SSI_AUDIO_CLOCK_EXTERNAL.

9.54 WDT

Driver for the Watchdog Timer (WDT).

9.54.1 Summary

This module supports the Watchdog Timer (WDT). It implements the WDT Interface. The WDT HAL APIs provide the ability to configure the operation of the WDT (when used in register start mode), refresh the watchdog, read the timer value and read and clear status flags.

9.54.2 Functions

- R_WDT_Open
- R_WDT_CfgGet
- R_WDT_TimeoutGet
- R_WDT_Refresh
- R_WDT_StatusGet
- R_WDT_StatusClear
- R_WDT_CounterGet
- R_WDT_VersionGet

9.54.3 Defines

- #define WDT_CODE_VERSION_MAJOR

  Initial value: `(1U)`
- #define WDT_CODE_VERSION_MINOR

  Initial value: `(4U)`

9.54.4 R_WDT_Open

```
ssp_err_t R_WDT_Open ( wdt_ctrl_t  *const p_api_ctrl ,  wdt_cfg_t  const
*const p_cfg )
```

9.54.4.1 Brief description

Configure the WDT in register start mode. In auto-start_mode the NMI callback can be registered. Implements open.

9.54.4.2 Detailed description

This function should only be called once as WDT configuration registers can only be written to once so subsequent calls will have no effect.

Table 1917:

Name	Description
SSP_SUCCESS	WDT successfully configured.
SSP_ERR_ASSERTION	Null Pointer(s).
SSP_ERR_INVALID_ARGUMENT	One or more configuration options is invalid.
SSP_ERR_INVALID_MODE	An attempt to open the WDT in register-start mode when the OFS0 register is configured for auto-start mode. Or to open the WDT in auto-start mode when the OSF0 is configured for register start mode.

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- productFeatureGet

NOTE: This function is reentrant. In auto-start mode the only valid configuration option is for registering the callback for the NMI ISR if NMI output has been selected.

9.54.4.3 Function steps

- g_wdt_version is accessed by the ASSERT macro only and so compiler toolchain can issue a warning that it is not accessed. The code below eliminates this warning and also ensures this data structure is not optimised away.
- Eliminate toolchain warning when NMI output is not being used.
- Check the expected start mode matches the OSF0 configuration.
- Lock the IWDT Hardware Resource
- Initialize global pointer to WDT for NMI callback use.
- Configuration only valid when WDT operating in register-start mode.
- Register-start mode.
- Register callback with BSP NMI ISR.

- Enable the WDT underflow/refresh error interrupt (will generate an NMI).
- Start the timer by performing a refresh.

9.54.5 R_WDT_CfgGet

```
ssp_err_t R_WDT_CfgGet ( wdt_ctrl_t  *const p_api_ctrl ,  wdt_cfg_t
*const p_cfg )
```

9.54.5.1 Brief description

Read the configuration of the WDT in both register-start and auto-start modes. Implements cfgGet.

9.54.5.2 Detailed description

Table 1918:

Name	Description
SSP_SUCCESS	WDT successfully configured.
SSP_ERR_ASSERTION	Null Pointer.

NOTE: This function is reentrant.

9.54.5.3 Function steps

- Register-start mode.
- Get timeout value from WDTCR register.

9.54.6 R_WDT_TimeoutGet

```
ssp_err_t R_WDT_TimeoutGet ( wdt_ctrl_t  *const p_api_ctrl ,
 wdt_timeout_values_t  *const p_timeout )
```

9.54.6.1 Brief description

Read timeout information for the watchdog timer. Implements timeoutGet.

9.54.6.2 Detailed description

Table 1919:

Name	Description
SSP_SUCCESS	WDT successfully refreshed.
SSP_ERR_ASSERTION	Null Pointer.
SSP_ERR_ABORTED	Invalid clock divider for this watchdog

NOTE: This function is reentrant. This function must not be called before calling R_WDT_Open.

9.54.7 R_WDT_Refresh

```
ssp_err_t R_WDT_Refresh ( wdt_ctrl_t  *const p_api_ctrl )
```

9.54.7.1 Brief description

Refresh the watchdog timer. Implements refresh.

9.54.7.2 Detailed description

In addition to refreshing the watchdog counter this function can be used, in register start mode to start the counter.

Table 1920:

Name	Description
SSP_SUCCESS	WDT successfully refreshed.

NOTE: This function is reentrant. This function only returns SSP_SUCCESS. If the refresh fails due to being performed outside of the permitted refresh period the device will either reset or trigger an NMI ISR to run. This function must not be called before calling R_WDT_Open.

9.54.8 R_WDT_StatusGet

```
ssp_err_t R_WDT_StatusGet ( wdt_ctrl_t  *const p_api_ctrl ,  wdt_status_t
*const p_status )
```

9.54.8.1 Brief description

Read the WDT status flags. Implements statusGet.

9.54.8.2 Detailed description

Indicates both status and error conditions.

Table 1921:

Name	Description
SSP_SUCCESS	WDT status successfully read.
SSP_ERR_ASSERTION	Null pointer as a parameter.

NOTE: This function is reentrant. When the WDT is configured to output a reset on underflow or refresh error reading the status and error flags serves no purpose as they will always indicate that no underflow has occurred and there is no refresh error. Reading the status and error flags is only valid when interrupt request output is enabled.

9.54.9 R_WDT_StatusClear

```
ssp_err_t R_WDT_StatusClear ( wdt_ctrl_t  *const p_api_ctrl ,
 wdt_status_t const  status )
```

9.54.9.1 Brief description

Clear the WDT status and error flags. Implements statusClear.

9.54.9.2 Detailed description

Table 1922:

Name	Description
SSP_SUCCESS	WDT flag(s) successfully cleared.

Table 1922: (Continued)

Name	Description
SSP_ERR_ASSERTION	Null pointer as a parameter.

NOTE: This function is reentrant.

9.54.9.3 Function steps

- Write zero to clear flags.

9.54.10 R_WDT_CounterGet

```
ssp_err_t R_WDT_CounterGet ( wdt_ctrl_t  *const p_api_ctrl ,   uint32_t
*const p_count )
```

9.54.10.1 Brief description

Read the current count value of the WDT. Implements counterGet.

9.54.10.2 Detailed description

Table 1923:

Name	Description
SSP_SUCCESS	WDT current count successfully read.
SSP_ERR_ASSERTION	Null pointer passed as a parameter.

NOTE: This function is reentrant.

9.54.11 R_WDT_VersionGet

```
ssp_err_t R_WDT_VersionGet ( ssp_version_t  *const p_data )
```

9.54.11.1 Brief description

Return WDT HAL driver version. Implements versionGet.

9.54.11.2 Detailed description

Table 1924:

Name	Description
SSP_SUCCESS	Version information successfully read.
SSP_ERR_ASSERTION	Null pointer passed as a parameter

NOTE: This function is reentrant.

9.54.12 Extensions

9.54.12.1 wdt_instance_ctrl_t

wdt_instance_ctrl_t

Detailed description

WDT control block. DO NOT INITIALIZE. Initialization occurs when open is called.

Variables

- bool wdt_open

  Indicates whether the open() API has been successfully called.
- void const * p_context

  Placeholder for user data. Passed to the user callback in wdt_callback_args_t.
- R_WDT_Type * p_reg

  Pointer to register base address.
- void(* p_callback)(*p_args)

  Callback provided when a WDT NMI ISR occurs.

9.55 SCE Module

Synergy Cryptographic Engine that provides primitive cryptographic functions.
Initializes the SCE module cryptographic operations.

9.55.1 Functions

- R_SCE_Open
- R_SCE_StatusGet
- R_SCE_Close
- R_SCE_VersionGet

9.55.2 Variables

- g_sce_crypto_api
- sceInitializationStatus
- s_sce_version
- crypto_bsp_lock

9.55.3 R_SCE_Open

```
R_SCE_Open (  crypto_ctrl_t *const p_ctrl ,   crypto_cfg_t const *const p_cfg )
```

9.55.3.1 Detailed description

SCE Initialization

Table 1925:

Name	Direction	Description
p_ctrl	inout	control structure for the SCE module
p_cfg	in	configuration structure for the SCE module

an uint32_t integer indicating

- PASS if the initialization is successful
- FAIL if the initialization failed
- RESOURCE_CONFLICT if the SCE hardware resource is busy

9.55.4 R_SCE_StatusGet

```
R_SCE_StatusGet (  uint32_t * p_status )
```

9.55.4.1 Brief description

This function indicates if the SCE has been initialized or not.

9.55.4.2 Detailed description

SCE Get status of SCE module initialization

Table 1926:

Name	Direction	Description
p_status	in	pointer to uint32_t. This memory location is updated with the SCE module initialization

Table 1927:

Name	Description
SSP_SUCCESS	Successful close.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

9.55.5 R_SCE_Close

```
R_SCE_Close (  crypto_ctrl_t *const p_ctrl )
```

9.55.5.1 Brief description

Close SCE driver. Does nothing. Always returns success.

9.55.5.2 Detailed description

Table 1928:

Name	Direction	Description
p_ctrl	in	control structure for SCE block

Table 1929:

Name	Description
SSP_SUCCESS	Successful close.

9.55.6 R_SCE_VersionGet

```
R_SCE_VersionGet ( ssp_version_t  *const p_version )
```

9.55.6.1 Brief description

Sets driver version based on compile time macros.

9.55.6.2 Detailed description

Table 1930:

Name	Direction	Description
p_version	out	version info for the SCE implementation

Table 1931:

Name	Description
SSP_SUCCESS	Successful close.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

9.55.7 g_sce_crypto_api

```
const g_sce_crypto_api
```

9.55.7.1 Initialized as

```
g_sce_crypto_api=
{
    .open           = R_SCE_Open,
    .close          = R_SCE_Close,
    .interfaceGet   = R_SCE_InterfaceGet,
    .statusGet      = R_SCE_StatusGet,
    .versionGet     = R_SCE_VersionGet
}
```

9.55.8 Modules

Detailed description

Encrypted Key AES 128-bit CBC mode implementation for encrypt interface API

Encrypt num_words words of input data from buffer p_source using the wrapped 128-bit AES key from buffer p_key and initialization vector from buffer p_iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for at least num_words words of data.

Table 1978:

Name	Description
SF_CRYPTO_SUCCESS	Normal end

Table 1978: (Continued)

Name	Description
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred
SSP_ERR_CRYPTO_SCE_HRK_INVALID_INDEX	Plain text key is passed

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: num_words must be a multiple of 4

NOTE: p_dest must have space to hold at least num_words words of data.

NOTE: The p_key is a wrapped/encrypted 128-bit AES key generated using the R_SCE_HRK_AES_128CreateEncrypt-edKey.

Detailed description

Encrypted AES 256-bit CBC mode implementation for encrypt interface API

Encrypt num_words words of input data from buffer p_source using the 256-bit AES key from buffer p_key and initialization vector from buffer p_iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for at least num_words words of data.

Table 1995:Return values

Name	Description
SF_CRYPTO_SUCCESS	Normal end
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred
SSP_ERR_CRYPTO_SCE_HRK_INVALID_INDEX	Plain text key is passed

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: num_words must be a multiple of 4

NOTE: p_dest must have space to hold at least num_words words of data.

NOTE: The p_key is a wrapped/encrypted 256-bit AES key generated using the R_SCE_HRK_AES_256CreateEncrypt-edKey.

R_SCE_HRK_AES_256CbcDecrypt

```
 R_SCE_HRK_AES_256CbcDecrypt ( aes_ctrl_t  *const p_ctrl ,   const uint32_t
* p_key ,   uint32_t * p_iv ,   uint32_t num_words ,   uint32_t * p_source ,
  uint32_t * p_dest )
```

Detailed description

Encrypted AES 256-bit ECB mode implementation for decrypt interface API

Decrypt num_words words of input data from buffer p_source using a wrapped 256-bit AES key from buffer p_key and initialization vector from buffer p_iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for at least num_words words of data.

Table 1996:Return values

```

Brief description

ARC4 Encrypt or decrypt source data and output result to destination buffer.

Detailed description

Table 2007:Return values

Name	Description
SSP_ERR_CRYPTO_INVALID_STATE	Invalid state, ensure that key data is configured either using the open() or using the keyset() function.
SSP_ERR_CRYPTO_INVALID_SIZE	invalid num_bytes passed. Should be a multiple of 16.
SF_CRYPTO_SUCCESS	successful.
SSP_ERR_ASSERTION	An input parameter is invalid.
SSP_ERR_CRYPTO_SCE_FAIL	An internal error has occurred.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Hardware is busy, unable to encrypt at this time.

Encrypt or decrypt input data using the previously configured key data

R_SCE_ARC4_VersionGet

```
R_SCE_ARC4_VersionGet ( ssp_version_t  *const p_version )
```

Brief description

Sets driver version based on compile time macros.

Detailed description

Table 2008:Return values

Name	Description
SSP_SUCCESS	Successful close.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

R_SCE_ARC4_KeySet

```
R_SCE_ARC4_KeySet ( arc4_ctrl_t  *const p_ctrl ,   uint32_t length ,   uint8_t
const * p_key )
```

Brief description

Sets user provided for use with subsequent encryptions.

Detailed description

Table 2009:Return values

Name	Description
SF_CRYPTO_SUCCESS	KeySet successful
SSP_ERR_NOT_OPEN	Module not opened.
SSP_ERR_ASSERTION	One of input parameter is NULL.

Signature verification using (1024-bit,160-bit) DSA public key.

Detailed description

Verify DSA signature data from buffer p_signature of length 2*imaxcnt words using (L=1024,N=160) DSA public key from buffer p_key. The buffer p_paddedHash indicates the message buffer from which the DSA signature should have been generated.

Table 2013:Return values

Name	Description
SF_CRYPTO_SUCCESS	Call successful
SSP_ERR_ASSERTION	An input parameter is invalid.
SSP_ERR_CRYPTO_SCE_VERIFY_FAIL	Incorrect signature

Table 2013:Return values (Continued)

Name	Description
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred

NOTE: SCE module must have been initialized by calling the function R_SCE_Open API

NOTE: The p_key buffer must contain 32 words of DSA public key data

NOTE: The p_domain buffer must contain (20+128+128) bytes of data in the format (Q || P || G) where Q is 5 words, P is 32 words and G is 32 words.

R_SCE_DSA_1024_160SignatureGenerate

```
 R_SCE_DSA_1024_160SignatureGenerate (  const uint32_t * p_key ,   const uint32_t
* p_domain ,   uint32_t imaxcnt ,   uint32_t * p_source ,   uint32_t * p_dest )
```

Brief description

Signature generation using (1024-bit,160-bit) DSA private key.

Detailed description

Sign imaxcnt words of input data from buffer p_source using the (L=1024,N=160)-bit DSA private key from buffer p_key and domain parameters from buffer p_domain. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast 2*imaxcnt words of data.

Table 2014:Return values

Name	Description
SF_CRYPTO_SUCCESS	Call successful
SSP_ERR_ASSERTION	An input parameter is invalid.
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred

NOTE: SCE module must have been initialized by calling the function R_SCE_Open API

NOTE: p_dest must have space to hold at least 2*imaxcnt words of data.

NOTE: The p_key buffer must contain a valid DSA private key data and p_domain should contain DSA domain parameters in the order (Q || P || G) where Q is 5 words, P is 32 words and G is 32 words.

```

Brief description

Perform scalar multiplication of a scalar pointed by p_k (k) with a point pointed by p_p (P) and return the result at location pointed by p_r (R=kP). Ensure the domain parameter, p_domain, exists and is valid.

Detailed description

Table 2054:Return values

Name	Description
SSP_SUCCESS	Normal end.
SSP_ERR_ASSERTION	NULL input parameter(s).
SSP_ERR_CRYPTO_INVALID_SIZE	invalid input buffer length(s).
SSP_ERR_CRYPTO_SCE_FAIL	Internal Error.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred.

NOTE: In case of failure, output buffer(s) may get partially updated. Data length field of output data handle(s) will be updated to the expected return buffer size irrespective of the return value of this API. The caller must check the return status before using the output data.

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: p_domain must be of size ECC_192_DOMAIN_PARAMETER_WITHOUT_ORDER_LENGTH_WORDS (18 words). (a||b||p - 6 words each)

NOTE: p_k must be of size ECC_192_PRIVATE_KEY_LENGTH_WORDS (6 words).

NOTE: p_p must be of size ECC_192_POINT_ON_CURVE_LENGTH_WORDS (12 words).

NOTE: p_r must have space to hold at least ECC_192_POINT_ON_CURVE_LENGTH_WORDS (12 words) of output data.

R_SCE_ECC_192KeyCreate

```
ssp_err_t R_SCE_ECC_192KeyCreate (  ecc_ctrl_t *const p_ctrl ,
  r_crypto_data_handle_t *const p_domain ,   r_crypto_data_handle_t
*const p_generator_point ,   r_crypto_data_handle_t *const p_key_private ,
  r_crypto_data_handle_t *const p_key_public )
```

Brief description

Generate public and private key pair for elliptic curve cryptography on 192 bit of prime field. Ensure the domain parameter, p_domain, exists and is valid. Ensure the p_generator point, generator_point, exists and is valid.

Detailed description

Table 2055:Return values

Name	Description

```

Brief description

Perform scalar multiplication of p_key_index (k) (wrapped key) with a point pointed by p_p (P) and return the result at location pointed by p_r (R=kP). Ensure the domain parameter, p_domain, exists and is valid.

Detailed description

Table 2066:Return values

Name	Description
SSP_SUCCESS	Normal end.
SSP_ERR_ASSERTION	NULL input parameter(s).
SSP_ERR_CRYPTO_INVALID_SIZE	invalid input buffer length(s).
SSP_ERR_CRYPTO_SCE_FAIL	Internal Error.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred.

NOTE: In case of failure, output buffer(s) may get partially updated. Data length field of output data handle(s) will be updated to the expected return buffer size irrespective of the return value of this API. The caller must check the return status before using the output data.

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: p_domain must be of size ECC_192_DOMAIN_PARAMETER_WITH_ORDER_LENGTH_WORDS (24 words). (a||b||p||n - 6 words each)

NOTE: p_key_index must be of size ECC_192_PRIVATE_KEY_HRK_LENGTH_WORDS (13 words).

NOTE: p_p must be of size ECC_192_GENERATOR_POINT_LENGTH_WORDS (12 words).

NOTE: p_r must have space to hold at least ECC_192_GENERATOR_POINT_LENGTH_WORDS (12 words) of output data.

NOTE: p_key_index is generated using generateKey API.

R_SCE_HRK_ECC_192KeyCreate

```
ssp_err_t R_SCE_HRK_ECC_192KeyCreate (  ecc_ctrl_t *const p_ctrl ,

ssp_err_t R_SCE_HRK_ECC_256KeyCreate (  ecc_ctrl_t *const p_ctrl ,
  r_crypto_data_handle_t *const p_domain ,   r_crypto_data_handle_t
*const p_generator_point ,   r_crypto_data_handle_t *const p_key_index ,
  r_crypto_data_handle_t *const p_key_public )
```

Brief description

Generate public key and wrapped key for elliptic curve cryptography on 256 bit of prime field. Ensure the domain parameter, p_domain, exists and is valid. Ensure the p_generator point, generator_point, exists and is valid. p_key_index is the wrapped key.

Detailed description

Table 2094:Return values

Name	Description
SSP_SUCCESS	Normal end.
SSP_ERR_ASSERTION	NULL input parameter(s).
SSP_ERR_CRYPTO_INVALID_SIZE	invalid input buffer length(s).
SSP_ERR_CRYPTO_SCE_FAIL	Internal Error.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred.

NOTE: In case of failure, output buffer(s) may get partially updated. Data length field of output data handle(s) will be updated to the expected return buffer size irrespective of the return value of this API. The caller must check the return status before using the output data.

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: p_domain must be of size ECC_256_DOMAIN_PARAMETER_WITH_ORDER_LENGTH_WORDS (32 words). (a||b||p||n - 8 words each)

NOTE: p_generator_point must be of size ECC_256_GENERATOR_POINT_LENGTH_WORDS (16 words).

NOTE: p_key_index must have space to hold at least ECC_256_PRIVATE_KEY_HRK_LENGTH_WORDS (13 words) of output data.

NOTE: p_key_public must have space to hold at least ECC_256_PUBLIC_KEY_LENGTH_WORDS (16 words) of output data.

R_SCE_HRK_ECC_256PrivateKeySign

```
ssp_err_t R_SCE_HRK_ECC_256PrivateKeySign (  ecc_ctrl_t *const p_ctrl ,
  r_crypto_data_handle_t *const p_domain ,   r_crypto_data_handle_t
*const p_generator_point ,   r_crypto_data_handle_t *const p_key_index ,
  r_crypto_data_handle_t *const msg_digest ,   r_crypto_data_handle_t
*const signature_r ,   r_crypto_data_handle_t *const signature_s )
```

Brief description

Generate signature of ECDSA on 256 bit of prime field. Ensure the domain parameter, p_domain, exists and is valid. Ensure the p_generator point, generator_point, exists and is valid. p_key_index is the wrapped key.

Detailed description

Table 2095:Return values

Name	Description
SSP_SUCCESS	Normal end.
SSP_ERR_ASSERTION	NULL input parameter(s).
SSP_ERR_CRYPTO_INVALID_SIZE	invalid input buffer length(s).
SSP_ERR_CRYPTO_SCE_FAIL	Internal Error.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred.

NOTE: In case of failure, output buffer(s) may get partially updated. Data length field of output data handle(s) will be updated to the expected return buffer size irrespective of the return value of this API. The caller must check the return status before using the output data.

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: p_domain must be of size ECC_256_DOMAIN_PARAMETER_WITH_ORDER_LENGTH_WORDS (32 words). (a||b||p||n - 8 words each)

NOTE: p_generator_point must be of size ECC_256_GENERATOR_POINT_LENGTH_WORDS (16 words).

NOTE: p_key_index must be of size ECC_256_PRIVATE_KEY_HRK_LENGTH_WORDS (13 words).

NOTE: msg_digest must be of size ECC_256_MESSAGE_DIGEST_LENGTH_WORDS (8 words).

NOTE: signature_r must have space to hold at least ECC_256_SIGNATURE_S_LENGTH_WORDS (8 words) of output data.

NOTE: signature_s must have space to hold at least ECC_256_SIGNATURE_S_LENGTH_WORDS (8 words) of output data.

```

Brief description

Creation of 1024-bit RSA Key pair in with private key in wrapped format.

Detailed description

RSA private key is created based on the key_format specified by p_private_key.
RSA_KEY_FORMAT_WRAPPED_PRIVATE_KEY specifies a wrapped standard format key.

Table 2104:Return values

Name	Description
SSP_ERR_ASSERTION	An input parameter is NULL or of invalid format.
SF_CRYPTO_SUCCESS	Key creation was successful.
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer may not empty.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict occurred.
SSP_ERR_CRYPTO_INVALID_SIZE	An input parameter of invalid size.
SSP_ERR_CRYPTO_UNKNOWN	An input parameter is of unknown type.

NOTE: The buffers to hold the keys must be adequate for the key formats requested.

R_SCE_HRK_RSA_2048PublicKeyEncrypt

```
 R_SCE_HRK_RSA_2048PublicKeyEncrypt (  rsa_ctrl_t *const p_ctrl ,   const
uint32_t * p_key ,   const uint32_t * p_domain ,   uint32_t num_words ,
  uint32_t * p_source ,   uint32_t * p_dest )
```

Brief description

Encrypt using 2048-bit RSA public key.

Detailed description

Encrypt num_words words of input data from buffer p_source using the 2048-bit RSA public key from buffer p_key and domain parameters from p_domain. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast num_words words of data.

Table 2105:Return values

Name	Description
SSP_ERR_ASSERTION	An input parameter is NULL or of invalid format.
SF_CRYPTO_SUCCESS	Normal end
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occured

NOTE: SCE module must have been initialized by calling the functions R_Open()

NOTE: p_dest must have space to hold at least num_words words of data.

NOTE: The p_key buffer must contain 260 bytes of RSA public key data in the format (public_exponent || public_modulus), where public_exponent is 1 words of data and public_modulus is 64 words of data

R_SCE_HRK_RSA_2048PublicKeyVerify

```
 R_SCE_HRK_RSA_2048PublicKeyVerify (  rsa_ctrl_t *const p_ctrl ,   const uint32_t
* p_key ,   const uint32_t * p_domain ,   uint32_t num_words ,   uint32_t
* p_signature ,   uint32_t * p_padded_hash )
```

Brief description

Signature Verification using 2048-bit RSA public key.

Detailed description

Verify RSA signature data from buffer p_signature of length num_words using 2048-bit RSA public key. The buffer p_padded_hash indicates the message buffer from which the RSA signature should have been generated.

Table 2106:Return values

Name	Description
SSP_ERR_ASSERTION	An input parameter is NULL or of invalid format.
SF_CRYPTO_SUCCESS	Normal end, valid signature
SSP_ERR_CRYPTO_SCE_VERIFY_FAIL	incorrect signature

Table 2106:Return values (Continued)

Name	Description
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occured

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: The p_key buffer must contain 260 bytes of RSA public key data in the format (public_exponent || public_modulus) where public_exponent is 1 word and public_modulus is 64 words.

NOTE: Length of the p_key, p_signature and p_padded_hash must each be equal to num_words. For RSA 2048-bit key, num_words should be equal to 64.

R_SCE_HRK_RSA_2048PrivateKeyDecrypt

```
 R_SCE_HRK_RSA_2048PrivateKeyDecrypt (  rsa_ctrl_t *const p_ctrl ,   const
uint32_t * p_key ,   const uint32_t * p_domain ,   uint32_t imaxcnt ,   uint32_t
* p_source ,   uint32_t * p_dest )
```

Brief description

Decrypt using 2048-bit RSA private key in wrapped format.

Detailed description

Decrypt imaxcnt words of input data from buffer p_source using the 2048-bit RSA private key from buffer p_key. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast imaxcnt words of data.

Table 2107:Return values

Name	Description
SSP_ERR_ASSERTION	An input parameter is NULL or of invalid format.
SF_CRYPTO_SUCCESS	Decrypt operation was successful.
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occured

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: p_dest must have space to hold at least imaxcnt words of data.

NOTE: The p_key buffer must contain 64 words of RSA private key data followed by 64 words of RSA key modulus data

R_SCE_HRK_RSA_2048PrivateKeySign

```
 R_SCE_HRK_RSA_2048PrivateKeySign (  rsa_ctrl_t *const p_ctrl ,   const uint32_t
* p_key ,   const uint32_t * p_domain ,   uint32_t imaxcnt ,   uint32_t
* p_source ,   uint32_t * p_dest )
```

Brief description

Signature generation using 2048-bit RSA private key in wrapped format.

Detailed description

Sign imaxcnt words of input data from buffer p_source using the 2048-bit RSA private key from buffer p_key and domain parameters from buffer p_domain. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast imaxcnt words of data.

Table 2108:Return values

Name	Description
SSP_ERR_ASSERTION	An input parameter is NULL or of invalid format.
SF_CRYPTO_SUCCESS	Signature generation was successful.
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict occurred

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: p_dest must have space to hold at least imaxcnt words of data.

NOTE: The p_key buffer must contain 64 words of RSA private key data followed by 64 words of RSA key modulus data

R_SCE_HRK_RSA_2048PrivateCrtKeyDecrypt

```
R_SCE_HRK_RSA_2048PrivateCrtKeyDecrypt ( rsa_ctrl_t *const p_ctrl , const
uint32_t * p_key , const uint32_t * p_domain , uint32_t imaxcnt , uint32_t
* p_source , uint32_t * p_dest )
```

Brief description

Decrypt using 2048-bit RSA private key in wrapped CRT format.

Detailed description

Wrapped CRT format is not supported at present. Parameter check is not performed as the function only returns SSP_ERR_CRYPTO_NOT_IMPLEMENTED.

Table 2109:Return values

Name	Description
SSP_ERR_CRYPTO_NOT_IMPLEMENTED	This function is not implemented.

R_SCE_HRK_RSA_2048PrivateCrtKeySign

```
R_SCE_HRK_RSA_2048PrivateCrtKeySign ( rsa_ctrl_t *const p_ctrl , const
uint32_t * p_key , const uint32_t * p_domain , uint32_t imaxcnt , uint32_t
* p_source , uint32_t * p_dest )
```

Brief description

Signature generation using 2048-bit RSA private key represented in wrapped CRT format.

Detailed description

Wrapped CRT format is not supported at present. Parameter check is not performed as the function only returns SSP_ERR_CRYPTO_NOT_IMPLEMENTED.

Table 2110:Return values

Name	Description
SSP_ERR_CRYPTO_NOT_IMPLEMENTED	This function is not implemented.

R_SCE_HRK_RSA_2048KeyCreate

```
R_SCE_HRK_RSA_2048KeyCreate ( rsa_ctrl_t *const p_ctrl , rsa_key_t
* p_private_key , rsa_key_t * p_public_key )
```

Brief description

Creation of 2048-bit RSA Key pair in with private key in wrapped format.

Detailed description

RSA private key is created based on the key_format specified by p_private_key.
RSA_KEY_FORMAT_WRAPPED_PRIVATE_KEY specifies a wrapped standard format key.

Table 2111:Return values

Name	Description
SSP_ERR_ASSERTION	An input parameter is NULL or of invalid format.
SF_CRYPTO_SUCCESS	Key creation was successful.
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer may not empty.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict occurred.
SSP_ERR_CRYPTO_INVALID_SIZE	An input parameter of invalid size.
SSP_ERR_CRYPTO_UNKNOWN	An input parameter is of unknown type.

NOTE: The buffers to hold the keys must be adequate for the key formats requested.

R_SCE_RSA_Open

```
R_SCE_RSA_Open (  rsa_ctrl_t *const p_ctrl ,   rsa_cfg_t const *const p_cfg )
```

Detailed description

RSA Initialization

Table 2112:Return values

Name	Description
SF_CRYPTO_SUCCESS	random number generation successful
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	SCE resource is busy
SSP_ERR_CRYPTO_SCE_FAIL	SCE internal I/O is not empty

R_SCE_RSA_Close

```
R_SCE_RSA_Close (  rsa_ctrl_t *const p_ctrl )
```

Detailed description

Close RSA driver

Table 2113:Return values

Name	Description
SF_CRYPTO_SUCCESS	random numbergeneration successful
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	SCE resource is busy
SSP_ERR_CRYPTO_SCE_FAIL	SCE internal I/O is not empty

R_SCE_RSA_VersionGet

```
R_SCE_RSA_VersionGet ( ssp_version_t  *const p_version )
```

Brief description

Sets driver version based on compile time macros.

Detailed description

Table 2114:Return values

Name	Description
SSP_SUCCESS	Successful close.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

R_SCE_RSA_1024PublicKeyEncrypt

```
R_SCE_RSA_1024PublicKeyEncrypt (  rsa_ctrl_t *const p_ctrl ,   const uint32_t
* p_key ,   const uint32_t * p_domain ,   uint32_t num_words ,   uint32_t
* p_source ,   uint32_t * p_dest )
```

Brief description

Encryption using 1024-bit RSA public key.

Detailed description

Encrypt num_words words of input data from buffer p_source using the 1024-bit RSA public key from buffer p_key and domain parameters from p_domain. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast num_words words of data.

Table 2115:Return values

Name	Description
SF_CRYPTO_SUCCESS	Normal end
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty

Table 2115:Return values (Continued)

Name	Description
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred

NOTE: SCE module must have been initialized by calling the functions R_Open()

NOTE: p_dest must have space to hold at least num_words words of data.

NOTE: The p_key buffer must contain 132 bytes of RSA public key data in the format (public_exponent || public_modulus), where public_exponent is 1 words of data and public_modulus is 32 words of data

NOTE: num_words must be equal to RSA MODULUS size (RSA Public Key_size / number of bits per word). For example, RSA MODULUS size for RSA 1024-bit Public key = 1024/32 = 32 words.

R_SCE_RSA_1024PublicKeyVerify

```
 R_SCE_RSA_1024PublicKeyVerify (  rsa_ctrl_t *const p_ctrl ,   const uint32_t
* p_key ,   const uint32_t * p_domain ,   uint32_t num_words ,   uint32_t
* p_signature ,   uint32_t * p_padded_hash )
```

Brief description

Signature Verification using 1024-bit RSA public key.

Detailed description

Verify RSA signature data from buffer p_signature of length num_words using 1024-bit RSA public key. The buffer p_padded_hash indicates the message buffer from which the RSA signature should have been generated.

Table 2116:Return values

Name	Description
SF_CRYPTO_SUCCESS	Normal end, valid signature
SSP_ERR_CRYPTO_SCE_VERIFY_FAIL	incorrect signature
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty

Table 2116:Return values (Continued)

Name	Description
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: The p_key buffer must contain 132 bytes of RSA public key data in the format (public_exponent || public_modulus) where public_exponent is 1 word and public_modulus is 32 words.

NOTE: Length of the p_key, p_signature and p_padded_hash must each be equal to num_words. For RSA 1024-bit key, num_words should be equal to 32.

NOTE: num_words must be equal to RSA MODULUS size (RSA Public Key_size / number of bits per word). For example, RSA MODULUS size for RSA 1024-bit Pubic key = 1024/32 = 32 words.

R_SCE_RSA_1024PrivateKeyDecrypt

```
 R_SCE_RSA_1024PrivateKeyDecrypt (  rsa_ctrl_t *const p_ctrl ,   const uint32_t
* p_key ,   const uint32_t * p_domain ,   uint32_t imaxcnt ,   uint32_t
* p_source ,   uint32_t * p_dest )
```

Brief description

Decrypt using 1024-bit RSA private key (standard format)

Detailed description

Decrypt imaxcnt words of input data from buffer p_source using the 1024-bit RSA private key from buffer p_key. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast imaxcnt words of data.

Table 2117:Return values

Name	Description
SF_CRYPTO_SUCCESS	Normal end
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty

Table 2117:Return values (Continued)

Name	Description
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: p_dest must have space to hold at least imaxcnt words of data.

NOTE: The p_key buffer must contain 32 words of RSA private key data followed by 32 words of RSA key modulus data

NOTE: imaxcnt must be equal to RSA MODULUS size (RSA Private Key_size / number of bits per word). For example, RSA MODULUS size for RSA 1024-bit private key = 1024/32 = 32 words.

R_SCE_RSA_1024PrivateKeySign

```
 R_SCE_RSA_1024PrivateKeySign (  rsa_ctrl_t *const p_ctrl ,   const uint32_t
* p_key ,   const uint32_t * p_domain ,   uint32_t imaxcnt ,   uint32_t
* p_source ,   uint32_t * p_dest )
```

Brief description

Signature generation using 1024-bit RSA private key.

Detailed description

Sign imaxcnt words of input data from buffer p_source using the 1024-bit RSA private key from buffer p_key and domain parameters from buffer p_domain. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast imaxcnt words of data.

Table 2118:Return values

Name	Description
SF_CRYPTO_SUCCESS	Normal end
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: p_dest must have space to hold at least imaxcnt words of data.

NOTE: The p_key buffer must contain 32 words of RSA private key data followed by 32 words of RSA key modulus data

NOTE: imaxcnt must be equal to RSA MODULUS size (RSA Private Key_size / number of bits per word). For example, RSA MODULUS size for RSA 1024-bit private key = 1024/32 = 32 words.

R_SCE_RSA_1024PrivateCrtKeyDecrypt

```
R_SCE_RSA_1024PrivateCrtKeyDecrypt ( rsa_ctrl_t *const p_ctrl , const
uint32_t * p_key , const uint32_t * p_domain , uint32_t imaxcnt , uint32_t
* p_source , uint32_t * p_dest )
```

Brief description

Decrypt using 1024-bit RSA private key (CRT format)

Detailed description

Decrypt imaxcnt words of input data from buffer p_source using the 1024-bit RSA private key from buffer key and domain parameters from buffer p_domain. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast imaxcnt words of data.

Table 2119:Return values

Name	Description
SF_CRYPTO_SUCCESS	Normal end
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred

NOTE: SCE module must have been initialized R_SCE_Open

NOTE: p_dest must have space to hold at least imaxcnt words of data.

NOTE: The p_key pointer to 80-word buffer with 1024-bit RSA key CRT parameters (d mod (q-1) || q || d mod (p-1) || p || q^-1 mod p)

NOTE: imaxcnt must be equal to RSA MODULUS size (RSA Private Key_size / number of bits per word). For example, RSA MODULUS size for RSA 1024-bit private key = 1024/32 = 32 words.

R_SCE_RSA_1024PrivateCrtKeySign

```
 R_SCE_RSA_1024PrivateCrtKeySign (  rsa_ctrl_t *const p_ctrl ,   const uint32_t
* p_key ,   const uint32_t * p_domain ,   uint32_t imaxcnt ,   uint32_t
* p_source ,   uint32_t * p_dest )
```

Brief description

Signature generation using 1024-bit RSA private key represented in CRT format.

Detailed description

Sign imaxcnt words of input data from buffer p_source using the 1024-bit RSA private key from buffer p_key and domain parameters from buffer p_domain. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast imaxcnt words of data.

Table 2120:Return values

Name	Description
SF_CRYPTO_SUCCESS	Normal end
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	resource conflict occurred

NOTE: SCE module must have been initialized by calling the functions R_SCE_Open

NOTE: p_dest must have space to hold at least imaxcnt words of data.

NOTE: The p_key pointer to 80-word buffer with 1024-bit RSA key CRT parameters (d mod (q-1) || q || d mod (p-1) || p || q^-1 mod p)

* p_key ,   uint32_t * p_iv ,   uint32_t num_words ,   uint32_t * p_source ,
  uint32_t * p_dest )
```

Brief description

Triple DES Encryption with CBC mode.

Detailed description

Encrypt num_words words of input data from buffer p_source using the 192-bit TDES key from buffer key and initialization vector from buffer iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for at least num_words words of data.

Table 2132:Return values

Name	Description
PASS	Normal end
FAIL	Internal I/O buffer is not empty
RESOURCE_CONFLICT	resource conflict occurred

NOTE: SCE module must have been initialized.

NOTE: p_dest must have space to hold at least num_words words of data.

NOTE: The key buffer must contain 24 bytes of TDES key data and

NOTE: the iv buffer must have 8 bytes of random data.

R_SCE_TDES_192CbcDecrypt

```
 R_SCE_TDES_192CbcDecrypt (  tdes_ctrl_t *const p_ctrl ,   const uint32_t
* p_key ,   uint32_t * p_iv ,   uint32_t num_words ,   uint32_t * p_source ,
  uint32_t * p_dest )
```

Brief description

Triple DES Decryption with CBC mode.

Detailed description

Decrypt num_words words of input data from buffer p_source using the 192-bit TDES key from buffer key and initialization vector from buffer iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast num_words words of data.

Table 2133:Return values

Name	Description
PASS	Normal end
FAIL	Internal I/O buffer is not empty
RESOURCE_CONFLICT	resource conflict occured

NOTE: SCE module must have been initialized.

NOTE: p_dest must have space to hold at least num_words words of data.

NOTE: The key buffer must contain 24 bytes of TDES key data and

NOTE: the iv buffer must have 8 bytes of random data.

R_SCE_TDES_192CtrEncrypt

```
 R_SCE_TDES_192CtrEncrypt (  tdes_ctrl_t *const p_ctrl ,   const uint32_t
* p_key ,   uint32_t * p_iv ,   uint32_t num_words ,   uint32_t * p_source ,
  uint32_t * p_dest )
```

Brief description

Triple DES Encryption with CTR mode.

Detailed description

Encrypt num_words words of input data from buffer p_source using the 192-bit TDES key from buffer key and initialization vector from buffer iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for at least num_words words of data.

Table 2134:Return values

Name	Description
PASS	Normal end
FAIL	Internal I/O buffer is not empty
RESOURCE_CONFLICT	resource conflict occured
SSP_ERR_CRYPTO_NOT_IMPLEMENTED	API not yet implemented

NOTE: SCE module must have been initialized.

NOTE: p_dest must have space to hold at least num_words words of data.

NOTE: The key buffer must contain 24 bytes of TDES key data and

NOTE: the iv buffer must have 8 bytes of random data.

R_SCE_TDES_192EcbEncrypt

```
 R_SCE_TDES_192EcbEncrypt (  tdes_ctrl_t *const p_ctrl ,   const uint32_t
* p_key ,   uint32_t * p_iv ,   uint32_t num_words ,   uint32_t * p_source ,
  uint32_t * p_dest )
```

Brief description

Triple DES Encryption with ECB mode.

Detailed description

Encrypt num_words words of input data from buffer p_source using the 192-bit TDES key from buffer key and initialization vector from buffer iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast num_words words of data.

Table 2135:Return values

Name	Description
PASS	Normal end
FAIL	Internal I/O buffer is not empty
RESOURCE_CONFLICT	resource conflict occurred

NOTE: SCE module must have been initialized and RNG quality check performed by calling the functions R_SCE_SoftReset(), R_SCE_Initialization1() and R_SCE_Initialization2()

NOTE: Block size for TDES is 64-bits (8 bytes or 2 words). Hence num_words must be a multiple of 2.

NOTE: p_dest must have space to hold at least num_words words of data.

NOTE: The key buffer must contain 24 bytes of TDES key data.

NOTE: The contents of iv buffer are ignored in ECB chaining mode.

Function steps

- To prevent compiler warning for unused parameter.

R_SCE_TDES_192EcbDecrypt

```
 R_SCE_TDES_192EcbDecrypt (  tdes_ctrl_t *const p_ctrl ,   const uint32_t
* p_key ,   uint32_t * p_iv ,   uint32_t num_words ,   uint32_t * p_source ,
  uint32_t * p_dest )
```

Brief description

Triple DES Decryption with ECB mode. Decrypt num_words words of input data from buffer p_source using the 192-bit TDES key from buffer key and initialization vector from buffer iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast num_words words of data.

Detailed description

NOTE: SCE module must have been initialized.

NOTE: p_dest must have space to hold at least num_words words of data.

NOTE: The key buffer must contain 24 bytes of TDES key data and

NOTE: The contents of iv buffer are ignored in ECB chaining mode.

Function steps

- To prevent compiler warning for unused parameter.

9.55.8.10 SCE_TRNG

Primitive cryptographic functions.

random number generation functions

Functions

- s_generate_16byte_random_data
- R_SCE_TRNG_Open
- R_SCE_TRNG_Close
- R_SCE_TRNG_VersionGet
- R_SCE_TRNG_Read

Variables

- g_trng_on_sce
- s_sce_trng_version

g_trng_on_sce

`trng_api_t::g_trng_on_sce`

Detailed description

SCE/TRNG implementation of RNG API.

Initialized as

```
g_trng_on_sce=
{
    .open       = R_SCE_TRNG_Open,
    .read       = R_SCE_TRNG_Read,
    .close      = R_SCE_TRNG_Close,
    .versionGet = R_SCE_TRNG_VersionGet
}
```

s_sce_trng_version

`ssp_version_t::s_sce_trng_version`

Detailed description

Version data structure used by error logger macro.

Initialized as

```
s_sce_trng_version=
{
    .api_version_major  = #define  TRNG_API_VERSION_MAJOR,
    .api_version_minor  = TRNG_API_VERSION_MINOR,
    .code_version_major = SCE_TRNG_CODE_VERSION_MAJOR,
    .code_version_minor = SCE_TRNG_CODE_VERSION_MINOR
}
```

s_generate_16byte_random_data

```
s_generate_16byte_random_data ( trng_ctrl_t  * p_ctrl )
```

Brief description

Generate 16-bytes of random data using the SCE TRNG hardware block.

Detailed description

This function makes p_ctrl->nattempts to generate 16-bytes of random data using the SCE TRNG block. If successful, the buffer p_ctrl->currbuf[0..15] will be updated with newly generated 16-byte block. This data will be different from previously generated 16-byte block (p_ctrl->prevbuf[0..15]).

Table 2137:Return values

Name	Description
SF_CRYPTO_SUCCESS	successul generation of 16-byte random data

Table 2137:Return values (Continued)

Name	Description
SSP_ERR_CRYPTO_RNG_FATAL_ERROR	fatal error, unable to generate 16-byte random data that differs from the previously generated 16-byte block.

R_SCE_TRNG_Open

```
R_SCE_TRNG_Open ( trng_ctrl_t  *const p_ctrl ,  trng_cfg_t  const *const p_cfg )
```

Detailed description

Open the TRNG driver for reading random data from the hardware TRNG module TRNG Initialization

Table 2138:Return values

Name	Description
SF_CRYPTO_SUCCESS	random number generation successful
SF_CRPYTO_ERR_CRYPTO_RESOURCE_CONFLICT	SCE resource is busy
SF_CRYPTO_ERR_CRYPTO_SCEFAIL	SCE internal I/O is not empty

R_SCE_TRNG_Close

```
R_SCE_TRNG_Close ( trng_ctrl_t  *const p_ctrl )
```

Detailed description

Close the TRNG interface driver

R_SCE_TRNG_VersionGet

```
R_SCE_TRNG_VersionGet ( ssp_version_t  *const p_version )
```

Brief description

Sets driver version based on compile time macros.

Detailed description

Table 2139:Return values

Name	Description
SSP_SUCCESS	Successful close.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

R_SCE_TRNG_Read

```
R_SCE_TRNG_Read ( trng_ctrl_t  *const p_ctrl ,   uint32_t *const p_rngbuf ,
 uint32_t nwords )
```

Detailed description

Generate nwords of random number words (4-bytes each) and store them in p_rngbuf buffer SCE hardware TRNG module will be used for generating the random data.

Table 2140:Return values

Name	Description
SF_CRYPTO_SUCCESS	random number generation successful
SSP_ERR_CRYPTO_RNG_FATAL_ERROR	HW_SCE_RNG_Read failed to generate 128-bit (16-byte) random number in p_ctrl->nattempts number of attempts.
SF_CRPYTO_ERR_CRYPTO_RESOURCE_CONFLICT	SCE resource is busy
SF_CRYPTO_ERR_CRYPTO_SCEFAIL	SCE internal I/O is not empty

Chapter 10 API Reference: Board Support Package

10.1 Board Support Package

Common BSP includes.

The BSP is responsible for getting the MCU from reset to the user application (i.e. the main function). Before reaching the user application the BSP sets up the stacks, heap, clocks, interrupts, and C runtime environment. The BSP is configurable to allow users to modify the process to meet design requirements.

10.2 Supported MCUs

Supported MCUs in this version of the BSP.

The BSP has code specific to a MCU and a board. The code that is specific to a MCU can be shared amongst boards that use the MCU.

10.2.1 Functions

- R_SSP_VersionGet

10.2.2 R_SSP_VersionGet

```
ssp_err_t R_SSP_VersionGet ( ssp_pack_version_t  *const p_version )
```

10.2.2.1 Brief description

Set SSP version based on compile time macros.

10.2.2.2 Detailed description

Table 2141:Parameters

Name	Direction	Description
p_version	out	Memory address to return version information to.

Table 2142:Return values

Name	Description
SSP_SUCCESS	Version information stored.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

10.2.3 S124

Code that is common to S124 MCUs.

Implements functions that are common to S124 MCUs.

10.2.3.1 elc_peripheral_t

Possible peripherals to be linked to event signals

10.2.3.2 elc_event_t

Sources of event signals to be linked to other peripherals or the CPU1
NOTE: This list may change based on device. This list is for S124.

10.2.3.3 Cache Functions

This module implements cache functions.

Typedefs

- bsp_cache_frequency_t

bsp_cache_state_t

Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

bsp_cache_frequency_t

```
typedef uint32_t bsp_cache_frequency_t
```

10.2.3.4 Clock Initialization

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Functions

- bsp_clock_init
- bsp_cpu_clock_get

- bsp_clock_set_callback
- bsp_clocks_mem_wait_set
- bsp_clocks_mem_wait_get
- bsp_clock_set_prechange
- bsp_clock_set_postchange
- bsp_clocks_rom_wait_set
- bsp_clocks_rom_wait_get
- bsp_clocks_sram_wait_set
- bsp_clocks_hsram_wait_set

Defines

- #define CGC_SRAM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for SRAM.
- #define CGC_SRAM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for SRAM.
- #define CGC_ZERO_WAIT_CYCLES

  Initial value: `(0U)`
- #define CGC_TWO_WAIT_CYCLES

  Initial value: `(1U)`
- #define CGC_MAX_ZERO_WAIT_FREQ

  Initial value: `(32000000U)`
- #define CGC_PRCR_KEY

  Initial value: `(0xA500U)`
- #define CGC_PRCR_UNLOCK

  Initial value: `((CGC_PRCR_KEY) | 0x1U)`
- #define CGC_PRCR_LOCK

  Initial value: `((CGC_PRCR_KEY) | 0x0U)`
- #define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

  Initial value: `(120000000U)`
- #define CGC_SYS_CLOCK_FREQ_NO_HSRAM_WAITS

  Initial value: `(200000000U)`

- #define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

  Initial value: `(80000000U)`
- #define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

  Initial value: `(160000000U)`
- #define CGC_ROM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for ROM.
- #define CGC_ROM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for ROM.
- #define CGC_ROM_TWO_WAIT_CYCLES

  Initial value: `(2U)`

  Specify two wait states for ROM.
- #define CGC_SRAM_PRCR_KEY

  Initial value: `(0x78U)`
- #define CGC_SRAM_UNLOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x1U)`
- #define CGC_SRAM_LOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x0U)`

bsp_clock_init

```
bsp_clock_init (  void  )
```

Brief description

Sets up system clocks.

Function steps

- MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL.
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- PLL Source clock is always the main oscillator.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- PLL Source clock is always the main oscillator.

- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- Set PLL Source clock.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- Set USB clock divisor.
- Configure BCLK
- Configure SDRAM Clock

bsp_cpu_clock_get

```
bsp_cpu_clock_get (  void  )
```

Brief description

Returns frequency of CPU clock in Hz.

Detailed description

Table 2143:Return values

Name	Description
Frequency	of the CPU in Hertz

bsp_clock_set_callback

```
ssp_err_t bsp_clock_set_callback (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings for a requested system clock change (PRE) or a just updated system clock change (POST)

Detailed description

Table 2144:Parameters

Name	Direction	Description
p_args	in	- Pre/Post request and clock frequency information

Table 2145:Return values

Name	Description
return	SSP_SUCCESS

Function steps

- The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.
- < No MEMWAIT cycles

bsp_clocks_mem_wait_set

```
bsp_clocks_mem_wait_set (  uint32_t setting )
```

Brief description

This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Detailed description

Table 2146:Parameters

Name	Direction	Description
setting	in	

Table 2147:Return values

Name	Description
none	

bsp_clocks_mem_wait_get

```
bsp_clocks_mem_wait_get (  void  )
```

Brief description

This function gets the value of the MEMWAIT register.

Detailed description

Table 2148:Return values

Name	Description
MEMWAIT	setting

bsp_clock_set_prechange

```
bsp_clock_set_prechange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the requested clock change to the CGC.

Detailed description

Table 2149:Return values

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK < 120 MHz
- 1 wait: ICLK >= 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- Calculate the Wait states for ROM
- If the requested_frequency <= 80 MHz 0 ROM wait states are required)
- If the 80 MHz < requested_frequency <= 160 MHz 1 ROM wait state is required)
- Anything above 160 MHz requires 2 ROM wait states
- Set the wait state BEFORE we change iclk

bsp_clock_set_postchange

```
bsp_clock_set_postchange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the system clock which has just been set by the CGC.

Detailed description

Table 2150:Return values

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK <= 120 MHz
- 1 wait: ICLK > 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- In this case we need to set the wait state AFTER we change iclk

bsp_clocks_rom_wait_set

```
bsp_clocks_rom_wait_set (  uint8_t setting )
```

Brief description

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Detailed description

Table 2151:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2152:Return values

Name	Description
none	

bsp_clocks_rom_wait_get

```
bsp_clocks_rom_wait_get (  void  )
```

Brief description

This function gets the value of the ROMWT register.

Detailed description

Table 2153:Return values

Name	Description
MEMWAIT	setting

bsp_clocks_sram_wait_set

```
bsp_clocks_sram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for both the SRAM0 and SRAM1 RAM memory.

Detailed description

Table 2154:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2155:Return values

Name	Description
none	

bsp_clocks_hsram_wait_set

```
bsp_clocks_hsram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for High Speed RAM memory.

Detailed description

Table 2156:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2157:Return values

Name	Description
none	

10.2.3.5 Hardware Locks

This file allocates hardware locks used in Atomic Locking.

10.2.3.6 Module Start and Stop

Module start and stop functions are provided to enable or disable peripherals.

Functions

- r_bsp_module_start_stop
- R_BSP_ModuleStop
- R_BSP_ModuleStart

Data structures

- bsp_mstp_bit_t
- bsp_mstp_data_t

Variables

- g_bsp_module_stop
- gp_mstp

Defines

- #define BSP_MSTP_DATA_INVALID

  Initial value: `(0xFFU)`
- #define BSP_MSTP_EXCEPTION

  Initial value: `(1U << 5)`
- #define BSP_MSTP_REG

  Initial value: `((x) << 6)`
- #define BSP_MSTP_BIT

  Initial value: `(x)`
- #define BSP_MSTPCRA

  Initial value: `(0U)`
- #define BSP_MSTPCRB

  Initial value: `(1U)`
- #define BSP_MSTPCRC

  Initial value: `(2U)`
- #define BSP_MSTPCRD

  Initial value: `(3U)`
- #define BSP_COMPILE_TIME_ASSERT

  Initial value: `((void) sizeof(char[1 - 2 * !(e)]))`

  Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

g_bsp_module_stop

```
const uint8_t g_bsp_module_stop[]
```

Detailed description

Module stop bit definitions for each ssp_ip_t enum value.

gp_mstp

```
volatile uint32_t* const gp_mstp[]
```

Detailed description

Module stop register addresses.

r_bsp_module_start_stop

```
ssp_err_t r_bsp_module_start_stop (  ssp_feature_t const *const p_feature ,
  bool stop )
```

Brief description

Start module (cancel module stop) or stop module (enter module stop).

Detailed description

NOTE: Some module stop bits are shared between peripherals. Entering module stop is not permitted for these peripherals.

Table 2158:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.
stop	in	true to stop module, false to start module

Table 2159:Return values

Name	Description
SSP_SUCCESS	Module is stopped or started based on stop parameter
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

Function steps

- The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.
- Set MSTP bit if stop parameter is true and the bit is not shared with other channels.
- Clear MSTP bit if stop parameter is false.

R_BSP_ModuleStop

```
ssp_err_t R_BSP_ModuleStop (  ssp_feature_t const *const p_feature )
```

Brief description

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Detailed description

NOTE: Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Table 2160:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2161:Return values

Name	Description
SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

R_BSP_ModuleStart

```
ssp_err_t R_BSP_ModuleStart (  ssp_feature_t const *const p_feature )
```

Brief description

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Detailed description

Table 2162:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2163:Return values

Name	Description
SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

bsp_mstp_bit_t

bsp_mstp_bit_t

Detailed description

Definition of BSP module stop bit.

Variables

- uint8_t bit

  Which bit in MSTP register.

- uint8_t reg

  < Special processing required

  Which MSTP register

bsp_mstp_data_t

Detailed description

Definition of BSP module stop bit.

Variables

byte

bit

10.2.3.7 ROM Registers

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Functions

- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2

Defines

- #define BSP_ROM_REG_OFS1_SETTING

  Initial value:
  ```
  (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) |
  ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))
  ```

  OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

- #define BSP_ROM_REG_MPU_CONTROL_SETTING

  Initial value:
  ```
  ((0xFFFFFCFEU) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABLE << 8) |
  \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABLE << 9) | \
  ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_ENABLE))
  ```

  Build up SECMPUAC register based on MPU settings.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ROM_REGISTERS )
```

Detailed description

ROM registers defined here. Some have masks to make sure reserved bits are set appropriately. S124 has no MPU.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_1 )
```

Detailed description

ID code definitions defined here.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_2 )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_3 )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_4 )
```

10.2.4 S128

Code that is common to S128 MCUs.

Implements functions that are common to S128 MCUs.

10.2.4.1 Cache Functions

This module implements cache functions.

Typedefs

- bsp_cache_frequency_t

bsp_cache_state_t

Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

bsp_cache_frequency_t

```
typedef uint32_t bsp_cache_frequency_t
```

10.2.4.2 Clock Initialization

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Functions

- bsp_clock_init
- bsp_cpu_clock_get
- bsp_clock_set_callback
- bsp_clocks_mem_wait_set
- bsp_clocks_mem_wait_get
- bsp_clock_set_prechange
- bsp_clock_set_postchange
- bsp_clocks_rom_wait_set
- bsp_clocks_rom_wait_get
- bsp_clocks_sram_wait_set
- bsp_clocks_hsram_wait_set

Defines

- #define CGC_SRAM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for SRAM.
- #define CGC_SRAM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for SRAM.

- #define CGC_ZERO_WAIT_CYCLES

  Initial value: `(0U)`
- #define CGC_TWO_WAIT_CYCLES

  Initial value: `(1U)`
- #define CGC_MAX_ZERO_WAIT_FREQ

  Initial value: `(32000000U)`
- #define CGC_PRCR_KEY

  Initial value: `(0xA500U)`
- #define CGC_PRCR_UNLOCK

  Initial value: `((CGC_PRCR_KEY) | 0x1U)`
- #define CGC_PRCR_LOCK

  Initial value: `((CGC_PRCR_KEY) | 0x0U)`
- #define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

  Initial value: `(120000000U)`
- #define CGC_SYS_CLOCK_FREQ_NO_HSRAM_WAITS

  Initial value: `(200000000U)`
- #define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

  Initial value: `(80000000U)`
- #define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

  Initial value: `(160000000U)`
- #define CGC_ROM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for ROM.
- #define CGC_ROM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for ROM.
- #define CGC_ROM_TWO_WAIT_CYCLES

  Initial value: `(2U)`

  Specify two wait states for ROM.
- #define CGC_SRAM_PRCR_KEY

  Initial value: `(0x78U)`
- #define CGC_SRAM_UNLOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x1U)`

- #define CGC_SRAM_LOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x0U)`

bsp_clock_init

```
bsp_clock_init (  void  )
```

Brief description

Sets up system clocks.

Function steps

- MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL.
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- PLL Source clock is always the main oscillator.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- PLL Source clock is always the main oscillator.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- Set PLL Source clock.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- Set USB clock divisor.
- Configure BCLK
- Configure SDRAM Clock

bsp_cpu_clock_get

```
bsp_cpu_clock_get ( void )
```

Brief description

Returns frequency of CPU clock in Hz.

Detailed description

Table 2164:Return values

Name	Description
Frequency	of the CPU in Hertz

bsp_clock_set_callback

```
ssp_err_t bsp_clock_set_callback ( bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings for a requested system clock change (PRE) or a just updated system clock change (POST)

Detailed description

Table 2165:Parameters

Name	Direction	Description
p_args	in	- Pre/Post request and clock frequency information

Table 2166:Return values

Name	Description
return	SSP_SUCCESS

Function steps

- The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.
- < No MEMWAIT cycles

bsp_clocks_mem_wait_set

```
bsp_clocks_mem_wait_set ( uint32_t setting )
```

Brief description

This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Detailed description

Table 2167:Parameters

Name	Direction	Description
setting	in	

Table 2168:Return values

Name	Description
none	

bsp_clocks_mem_wait_get

```
bsp_clocks_mem_wait_get (  void  )
```

Brief description

This function gets the value of the MEMWAIT register.

Detailed description

Table 2169:Return values

Name	Description
MEMWAIT	setting

bsp_clock_set_prechange

```
bsp_clock_set_prechange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the requested clock change to the CGC.

Detailed description

Table 2170:Return values

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)

- No wait: ICLK < 120 MHz
- 1 wait: ICLK >= 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- Calculate the Wait states for ROM
- If the requested_frequency <= 80 MHz 0 ROM wait states are required)
- If the 80 MHz < requested_frequency <= 160 MHz 1 ROM wait state is required)
- Anything above 160 MHz requires 2 ROM wait states
- Set the wait state BEFORE we change iclk

bsp_clock_set_postchange

```
bsp_clock_set_postchange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the system clock which has just been set by the CGC.

Detailed description

Table 2171:Return values

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK <= 120 MHz
- 1 wait: ICLK > 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- In this case we need to set the wait state AFTER we change iclk

bsp_clocks_rom_wait_set

```
bsp_clocks_rom_wait_set (  uint8_t setting )
```

Brief description

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Detailed description

Table 2172:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2173:Return values

Name	Description
none	

bsp_clocks_rom_wait_get

```
bsp_clocks_rom_wait_get (  void  )
```

Brief description

This function gets the value of the ROMWT register.

Detailed description

Table 2174:Return values

Name	Description
MEMWAIT	setting

bsp_clocks_sram_wait_set

```
bsp_clocks_sram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for both the SRAM0 and SRAM1 RAM memory.

Detailed description

Table 2175:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2176:Return values

Name	Description
none	

bsp_clocks_hsram_wait_set

```
bsp_clocks_hsram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for High Speed RAM memory.

Detailed description

Table 2177:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2178:Return values

Name	Description
none	

10.2.4.3 Hardware Locks

This file allocates hardware locks used in Atomic Locking.

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( ADC , 0U , 0U )
```

Detailed description

Used to allocated hardware locks. Parameters are as follows:

1) IP name (ssp_ip_t enum without the SSP_IP_ prefix).
2) Unit number (used for blocks with variations like USB, not to be confused with ADC unit).
3) Channel number

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( AES , 0U , 0U )
```

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( AGT , 0U , 0U )
```

10.2.4.4 Module Start and Stop

Module start and stop functions are provided to enable or disable peripherals.

Functions

- r_bsp_module_start_stop
- R_BSP_ModuleStop
- R_BSP_ModuleStart

Data structures

- bsp_mstp_bit_t
- bsp_mstp_data_t

Variables

- g_bsp_module_stop
- gp_mstp

Defines

- #define BSP_MCU_GROUP_S128

  Initial value:
- #define BSP_MSTP_DATA_INVALID

  Initial value: `(0xFFU)`
- #define BSP_MSTP_EXCEPTION

  Initial value: `(1U << 5)`

- #define BSP_MSTP_REG

  Initial value: `((x) << 6)`
- #define BSP_MSTP_BIT

  Initial value: `(x)`
- #define BSP_MSTPCRA

  Initial value: `(0U)`
- #define BSP_MSTPCRB

  Initial value: `(1U)`
- #define BSP_MSTPCRC

  Initial value: `(2U)`
- #define BSP_MSTPCRD

  Initial value: `(3U)`
- #define BSP_COMPILE_TIME_ASSERT

  Initial value: `((void) sizeof(char[1 - 2 * !(e)]))`

  Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

g_bsp_module_stop

```
const uint8_t g_bsp_module_stop[]
```

Detailed description

Module stop bit definitions for each ssp_ip_t enum value.

gp_mstp

```
volatile uint32_t* const gp_mstp[]
```

Detailed description

Module stop register addresses.

r_bsp_module_start_stop

```
ssp_err_t r_bsp_module_start_stop (  ssp_feature_t const *const p_feature ,
  bool stop )
```

Brief description

Start module (cancel module stop) or stop module (enter module stop).

Detailed description

NOTE: Some module stop bits are shared between peripherals. Entering module stop is not permitted for these peripherals.

Table 2179:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.
stop	in	true to stop module, false to start module

Table 2180:Return values

Name	Description
SSP_SUCCESS	Module is stopped or started based on stop parameter
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

Function steps

- The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.
- Set MSTP bit if stop parameter is true and the bit is not shared with other channels.
- Clear MSTP bit if stop parameter is false.

R_BSP_ModuleStop

```
ssp_err_t R_BSP_ModuleStop (  ssp_feature_t const *const p_feature )
```

Brief description

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Detailed description

NOTE: Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Table 2181:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2182:Return values

Name	Description
SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

R_BSP_ModuleStart

```
ssp_err_t R_BSP_ModuleStart (  ssp_feature_t const *const p_feature )
```

Brief description

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Detailed description

Table 2183:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2184:Return values

Name	Description
SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

bsp_mstp_bit_t

bsp_mstp_bit_t

Detailed description

Definition of BSP module stop bit.

Variables

- uint8_t bit

  Which bit in MSTP register.

- uint8_t reg

  < Special processing required

  Which MSTP register

bsp_mstp_data_t

Detailed description

Definition of BSP module stop bit.

Variables

byte

bit

10.2.4.5 ROM Registers

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Functions

- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2

Defines

- #define BSP_ROM_REG_OFS1_SETTING

  Initial value:`(((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))`

  OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

- #define BSP_ROM_REG_MPU_CONTROL_SETTING

  Initial value:`((0xFFFFFCFEU) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABLE << 8) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABLE << 9) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_ENABLE))`

  Build up SECMPUAC register based on MPU settings.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ROM_REGISTERS  )
```

Detailed description

ROM registers defined here. Some have masks to make sure reserved bits are set appropriately. S124 has no MPU.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_1  )
```

Detailed description

ID code definitions defined here.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_2  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_3  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_4  )
```

10.2.5 S1JA

Code that is common to S1JA MCUs.

Implements functions that are common to S1JA MCUs.

10.2.5.1 Cache Functions

This module implements cache functions.

Typedefs

- bsp_cache_frequency_t

bsp_cache_state_t

Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

bsp_cache_frequency_t

```
typedef uint32_t bsp_cache_frequency_t
```

10.2.5.2 Clock Initialization

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Functions

- bsp_clock_init
- bsp_cpu_clock_get
- bsp_clock_set_callback
- bsp_clocks_mem_wait_set
- bsp_clocks_mem_wait_get
- bsp_clock_set_prechange
- bsp_clock_set_postchange
- bsp_clocks_rom_wait_set
- bsp_clocks_rom_wait_get
- bsp_clocks_sram_wait_set
- bsp_clocks_hsram_wait_set

Defines

- #define CGC_SRAM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for SRAM.
- #define CGC_SRAM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for SRAM.
- #define CGC_ZERO_WAIT_CYCLES

  Initial value: `(0U)`
- #define CGC_TWO_WAIT_CYCLES

  Initial value: `(1U)`
- #define CGC_MAX_ZERO_WAIT_FREQ

  Initial value: `(32000000U)`
- #define CGC_PRCR_KEY

  Initial value: `(0xA500U)`
- #define CGC_PRCR_UNLOCK

  Initial value: `((CGC_PRCR_KEY) | 0x1U)`
- #define CGC_PRCR_LOCK

  Initial value: `((CGC_PRCR_KEY) | 0x0U)`

- #define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

  Initial value: `(120000000U)`
- #define CGC_SYS_CLOCK_FREQ_NO_HSRAM_WAITS

  Initial value: `(200000000U)`
- #define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

  Initial value: `(80000000U)`
- #define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

  Initial value: `(160000000U)`
- #define CGC_ROM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for ROM.
- #define CGC_ROM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for ROM.
- #define CGC_ROM_TWO_WAIT_CYCLES

  Initial value: `(2U)`

  Specify two wait states for ROM.
- #define CGC_SRAM_PRCR_KEY

  Initial value: `(0x78U)`
- #define CGC_SRAM_UNLOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x1U)`
- #define CGC_SRAM_LOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x0U)`

bsp_clock_init

```
bsp_clock_init (  void  )
```

Brief description

Sets up system clocks.

Function steps

- MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL.
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.

- PLL Source clock is always the main oscillator.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- PLL Source clock is always the main oscillator.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- Set PLL Source clock.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- Set USB clock divisor.
- Configure BCLK
- Configure SDRAM Clock

bsp_cpu_clock_get

```
bsp_cpu_clock_get (  void  )
```

Brief description

Returns frequency of CPU clock in Hz.

Detailed description

Table 2185:Return values

Name	Description
Frequency	of the CPU in Hertz

bsp_clock_set_callback

```
ssp_err_t bsp_clock_set_callback (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings for a requested system clock change (PRE) or a just updated system clock change (POST)

Detailed description

Table 2186:Parameters

Name	Direction	Description
p_args	in	- Pre/Post request and clock frequency information

Table 2187:Return values

Name	Description
return	SSP_SUCCESS

Function steps

- The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.
- < No MEMWAIT cycles

bsp_clocks_mem_wait_set

```
bsp_clocks_mem_wait_set (  uint32_t setting )
```

Brief description

This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Detailed description

Table 2188:Parameters

Name	Direction	Description
setting	in	

Table 2189:Return values

Name	Description
none	

bsp_clocks_mem_wait_get

```
bsp_clocks_mem_wait_get (  void  )
```

Brief description

This function gets the value of the MEMWAIT register.

Detailed description

Table 2190:Return values

Name	Description
MEMWAIT	setting

bsp_clock_set_prechange

```
bsp_clock_set_prechange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the requested clock change to the CGC.

Detailed description

Table 2191:Return values

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK < 120 MHz
- 1 wait: ICLK >= 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- Calculate the Wait states for ROM
- If the requested_frequency <= 80 MHz 0 ROM wait states are required)
- If the 80 MHz < requested_frequency <= 160 MHz 1 ROM wait state is required)
- Anything above 160 MHz requires 2 ROM wait states
- Set the wait state BEFORE we change iclk

bsp_clock_set_postchange

```
bsp_clock_set_postchange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the system clock which has just been set by the CGC.

Detailed description

Table 2192:Return values

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK <= 120 MHz
- 1 wait: ICLK > 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- In this case we need to set the wait state AFTER we change iclk

bsp_clocks_rom_wait_set

```
bsp_clocks_rom_wait_set (  uint8_t setting )
```

Brief description

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Detailed description

Table 2193:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2194:Return values

Name	Description
none	

bsp_clocks_rom_wait_get

```
bsp_clocks_rom_wait_get (  void  )
```

Brief description

This function gets the value of the ROMWT register.

Detailed description

Table 2195:Return values

Name	Description
MEMWAIT	setting

bsp_clocks_sram_wait_set

```
bsp_clocks_sram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for both the SRAM0 and SRAM1 RAM memory.

Detailed description

Table 2196:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2197:Return values

Name	Description
none	

bsp_clocks_hsram_wait_set

```
bsp_clocks_hsram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for High Speed RAM memory.

Detailed description

Table 2198:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2199:Return values

Name	Description
none	

10.2.5.3 Hardware Locks

This file allocates hardware locks used in Atomic Locking.

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( ADC , 0U , 0U )
```

Detailed description

Used to allocated hardware locks. Parameters are as follows:

1) IP name (ssp_ip_t enum without the SSP_IP_ prefix).
2) Unit number (used for blocks with variations like USB, not to be confused with ADC unit).
3) Channel number

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( AES , 0U , 0U )

10.2.5.4 Module Start and Stop

Module start and stop functions are provided to enable or disable peripherals.

Functions

- r_bsp_module_start_stop
- R_BSP_ModuleStop
- R_BSP_ModuleStart

Data structures

- bsp_mstp_bit_t
- bsp_mstp_data_t

Variables

- g_bsp_module_stop
- gp_mstp

Defines

- #define BSP_MCU_GROUP_S1JA

  Initial value:
- #define BSP_MSTP_DATA_INVALID

  Initial value: `(0xFFU)`
- #define BSP_MSTP_EXCEPTION

  Initial value: `(1U << 5)`
- #define BSP_MSTP_REG

  Initial value: `((x) << 6)`
- #define BSP_MSTP_BIT

  Initial value: `(x)`
- #define BSP_MSTPCRA

  Initial value: `(0U)`
- #define BSP_MSTPCRB

  Initial value: `(1U)`
- #define BSP_MSTPCRC

  Initial value: `(2U)`
- #define BSP_MSTPCRD

  Initial value: `(3U)`
- #define BSP_COMPILE_TIME_ASSERT

  Initial value: `((void) sizeof(char[1 - 2 * !(e)]))`

  Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

g_bsp_module_stop

```
const uint8_t g_bsp_module_stop[]
```

Detailed description

Module stop bit definitions for each ssp_ip_t enum value.

gp_mstp

```
volatile uint32_t* const gp_mstp[]
```

Detailed description

Module stop register addresses.

r_bsp_module_start_stop

```
ssp_err_t r_bsp_module_start_stop (  ssp_feature_t const *const p_feature ,
  bool stop )
```

Brief description

Start module (cancel module stop) or stop module (enter module stop).

Detailed description

NOTE: Some module stop bits are shared between peripherals. Entering module stop is not permitted for these peripherals.

Table 2200:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.
stop	in	true to stop module, false to start module

Table 2201:Return values

Name	Description
SSP_SUCCESS	Module is stopped or started based on stop parameter
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

Function steps

- The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.
- Set MSTP bit if stop parameter is true and the bit is not shared with other channels.
- Clear MSTP bit if stop parameter is false.

R_BSP_ModuleStop

```
ssp_err_t R_BSP_ModuleStop (  ssp_feature_t const *const p_feature )
```

Brief description

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Detailed description

NOTE: Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Table 2202:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2203:Return values

Name	Description
SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

R_BSP_ModuleStart

```
ssp_err_t R_BSP_ModuleStart (  ssp_feature_t const *const p_feature )
```

Brief description

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Detailed description

Table 2204:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2205:Return values

Name	Description
SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

bsp_mstp_bit_t

bsp_mstp_bit_t

Detailed description

Definition of BSP module stop bit.

Variables

- uint8_t bit

  Which bit in MSTP register.

- uint8_t reg

  < Special processing required

  Which MSTP register

bsp_mstp_data_t

Detailed description

Definition of BSP module stop bit.

Variables

byte

bit

10.2.5.5 ROM Registers

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Functions

- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2

Defines

- #define BSP_ROM_REG_OFS1_SETTING

  Initial value:
  ```
  (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) |
  ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))
  ```

  OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

- #define BSP_ROM_REG_MPU_CONTROL_SETTING

  Initial value:
  ```
  ((0xFFFFFCFEU) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABLE << 8) |
  \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABLE << 9) | \
  ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_ENABLE))
  ```

  Build up SECMPUAC register based on MPU settings.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ROM_REGISTERS )
```

Detailed description

ROM registers defined here. Some have masks to make sure reserved bits are set appropriately. S124 has no MPU.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_1 )
```

Detailed description

ID code definitions defined here.

BSP_PLACE_IN_SECTION_V2

```

10.2.6 S3A1

Code that is common to S3A1 MCUs.

Implements functions that are common to S3A1 MCUs.

10.2.6.1 elc_peripheral_t

Possible peripherals to be linked to event signals

10.2.6.2 elc_event_t

Sources of event signals to be linked to other peripherals or the CPU1
NOTE: This list may change based on device. This list is for S3A7.

10.2.6.3 Cache Functions

This module implements cache functions.

Typedefs

- bsp_cache_frequency_t

bsp_cache_state_t

Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

bsp_cache_frequency_t

```
typedef uint32_t bsp_cache_frequency_t
```

10.2.6.4 Clock Initialization

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Functions

- bsp_clock_init
- bsp_cpu_clock_get
- bsp_clock_set_callback
- bsp_clocks_mem_wait_set
- bsp_clocks_mem_wait_get
- bsp_clock_set_prechange
- bsp_clock_set_postchange
- bsp_clocks_rom_wait_set
- bsp_clocks_rom_wait_get
- bsp_clocks_sram_wait_set
- bsp_clocks_hsram_wait_set

Defines

- #define CGC_SRAM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for SRAM.
- #define CGC_SRAM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for SRAM.
- #define CGC_ZERO_WAIT_CYCLES

  Initial value: `(0U)`
- #define CGC_TWO_WAIT_CYCLES

  Initial value: `(1U)`
- #define CGC_MAX_ZERO_WAIT_FREQ

  Initial value: `(32000000U)`
- #define CGC_PRCR_KEY

  Initial value: `(0xA500U)`
- #define CGC_PRCR_UNLOCK

  Initial value: `((CGC_PRCR_KEY) | 0x1U)`
- #define CGC_PRCR_LOCK

  Initial value: `((CGC_PRCR_KEY) | 0x0U)`
- #define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

  Initial value: `(120000000U)`
- #define CGC_SYS_CLOCK_FREQ_NO_HSRAM_WAITS

  Initial value: `(200000000U)`
- #define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

  Initial value: `(80000000U)`
- #define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

  Initial value: `(160000000U)`
- #define CGC_ROM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for ROM.
- #define CGC_ROM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for ROM.

- #define CGC_ROM_TWO_WAIT_CYCLES

  Initial value: `(2U)`

  Specify two wait states for ROM.
- #define CGC_SRAM_PRCR_KEY

  Initial value: `(0x78U)`
- #define CGC_SRAM_UNLOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x1U)`
- #define CGC_SRAM_LOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x0U)`

bsp_clock_init

```
bsp_clock_init (  void  )
```

Brief description

Sets up system clocks.

Function steps

- MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL.
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- PLL Source clock is always the main oscillator.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- PLL Source clock is always the main oscillator.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- Set PLL Source clock.
- Wait for PLL clock source to stabilize

- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- Set USB clock divisor.
- Configure BCLK
- Configure SDRAM Clock

bsp_cpu_clock_get

```
bsp_cpu_clock_get (  void  )
```

Brief description

Returns frequency of CPU clock in Hz.

Detailed description

Table 2206:Return values

Name	Description
Frequency	of the CPU in Hertz

bsp_clock_set_callback

```
ssp_err_t bsp_clock_set_callback (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings for a requested system clock change (PRE) or a just updated system clock change (POST)

Detailed description

Table 2207:Parameters

Name	Direction	Description
p_args	in	- Pre/Post request and clock frequency information

Table 2208:Return values

Name	Description
return	SSP_SUCCESS

Function steps

- The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.
- < No MEMWAIT cycles

bsp_clocks_mem_wait_set

```
bsp_clocks_mem_wait_set (  uint32_t setting )
```

Brief description

This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Detailed description

Table 2209:Parameters

Name	Direction	Description
setting	in	

Table 2210:Return values

Name	Description
none	

bsp_clocks_mem_wait_get

```
bsp_clocks_mem_wait_get (  void  )
```

Brief description

This function gets the value of the MEMWAIT register.

Detailed description

Table 2211:Return values

Name	Description
MEMWAIT	setting

bsp_clock_set_prechange

```
bsp_clock_set_prechange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the requested clock change to the CGC.

Detailed description

Table 2212:Return values

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK < 120 MHz
- 1 wait: ICLK >= 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- Calculate the Wait states for ROM
- If the requested_frequency <= 80 MHz 0 ROM wait states are required)
- If the 80 MHz < requested_frequency <= 160 MHz 1 ROM wait state is required)
- Anything above 160 MHz requires 2 ROM wait states
- Set the wait state BEFORE we change iclk

bsp_clock_set_postchange

```
bsp_clock_set_postchange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the system clock which has just been set by the CGC.

Detailed description

Table 2213:Return values

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK <= 120 MHz
- 1 wait: ICLK > 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz

- 1 wait: ICLK > 200 MHz
- In this case we need to set the wait state AFTER we change iclk

bsp_clocks_rom_wait_set

```
bsp_clocks_rom_wait_set (  uint8_t setting )
```

Brief description

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Detailed description

Table 2214:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2215:Return values

Name	Description
none	

bsp_clocks_rom_wait_get

```
bsp_clocks_rom_wait_get (  void  )
```

Brief description

This function gets the value of the ROMWT register.

Detailed description

Table 2216:Return values

Name	Description
MEMWAIT	setting

bsp_clocks_sram_wait_set

```
bsp_clocks_sram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for both the SRAM0 and SRAM1 RAM memory.

Detailed description

Table 2217:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2218:Return values

Name	Description
none	

bsp_clocks_hsram_wait_set

```
bsp_clocks_hsram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for High Speed RAM memory.

Detailed description

Table 2219:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2220:Return values

Name	Description
none	

10.2.6.5 Hardware Locks

This file allocates hardware locks used in Atomic Locking.

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( ADC , 0U , 0U )
```

Detailed description

Used to allocated hardware locks. Parameters are as follows:

1) IP name (ssp_ip_t enum without the SSP_IP_ prefix).
2) Unit number (used for blocks with variations like USB, not to be confused with ADC unit).
3) Channel number

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( AES , 0U , 0U )
```

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( AGT , 0U , 0U )

10.2.6.6 Module Start and Stop

Module start and stop functions are provided to enable or disable peripherals.

Functions

- r_bsp_module_start_stop
- R_BSP_ModuleStop
- R_BSP_ModuleStart

Data structures

- bsp_mstp_bit_t
- bsp_mstp_data_t

Variables

- g_bsp_module_stop
- gp_mstp

Defines

- #define BSP_MCU_GROUP_S3A1

  Initial value:

- #define BSP_MSTP_DATA_INVALID

  Initial value: `(0xFFU)`
- #define BSP_MSTP_EXCEPTION

  Initial value: `(1U << 5)`
- #define BSP_MSTP_REG

  Initial value: `((x) << 6)`
- #define BSP_MSTP_BIT

  Initial value: `(x)`
- #define BSP_MSTPCRA

  Initial value: `(0U)`
- #define BSP_MSTPCRB

  Initial value: `(1U)`
- #define BSP_MSTPCRC

  Initial value: `(2U)`
- #define BSP_MSTPCRD

  Initial value: `(3U)`
- #define BSP_COMPILE_TIME_ASSERT

  Initial value: `((void) sizeof(char[1 - 2 * !(e)]))`

  Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

g_bsp_module_stop

```
const uint8_t g_bsp_module_stop[]
```

Detailed description

Module stop bit definitions for each ssp_ip_t enum value.

gp_mstp

```
volatile uint32_t* const gp_mstp[]
```

Detailed description

Module stop register addresses.

r_bsp_module_start_stop

```
ssp_err_t r_bsp_module_start_stop (  ssp_feature_t const *const p_feature ,
  bool stop )
```

Brief description

Start module (cancel module stop) or stop module (enter module stop).

Detailed description

NOTE: Some module stop bits are shared between peripherals. Entering module stop is not permitted for these peripherals.

Table 2221:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.
stop	in	true to stop module, false to start module

Table 2222:Return values

Name	Description
SSP_SUCCESS	Module is stopped or started based on stop parameter
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

Function steps

- The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.
- Set MSTP bit if stop parameter is true and the bit is not shared with other channels.
- Clear MSTP bit if stop parameter is false.

R_BSP_ModuleStop

```
ssp_err_t R_BSP_ModuleStop (  ssp_feature_t const *const p_feature )
```

Brief description

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Detailed description

NOTE: Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Table 2223:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2224:Return values

Name	Description
SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

R_BSP_ModuleStart

```
ssp_err_t R_BSP_ModuleStart (  ssp_feature_t const *const p_feature )
```

Brief description

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Detailed description

Table 2225:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2226:Return values

Name	Description
SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

bsp_mstp_bit_t

bsp_mstp_bit_t

Detailed description

Definition of BSP module stop bit.

Variables

- uint8_t bit

  Which bit in MSTP register.

- uint8_t reg

  < Special processing required

  Which MSTP register

bsp_mstp_data_t

Detailed description

Definition of BSP module stop bit.

Variables

byte

bit

10.2.6.7 ROM Registers

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Functions

- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2

Defines

- #define BSP_ROM_REG_OFS1_SETTING

  Initial value:`(((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))`

  OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

- #define BSP_ROM_REG_MPU_CONTROL_SETTING

  Initial value:`((0xFFFFFCFEU) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABLE << 8) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABLE << 9) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_ENABLE))`

  Build up SECMPUAC register based on MPU settings.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ROM_REGISTERS  )
```

Detailed description

ROM registers defined here. Some have masks to make sure reserved bits are set appropriately. S124 has no MPU.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_1  )
```

Detailed description

ID code definitions defined here.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_2  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_3  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_4  )
```

10.2.7 S3A3

Code that is common to S3A3 MCUs.

Implements functions that are common to S3A3 MCUs.

10.2.7.1 Cache Functions

This module implements cache functions.

Typedefs

- bsp_cache_frequency_t

bsp_cache_state_t

Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

bsp_cache_frequency_t

```
typedef uint32_t bsp_cache_frequency_t
```

10.2.7.2 Clock Initialization

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Functions

- bsp_clock_init
- bsp_cpu_clock_get
- bsp_clock_set_callback
- bsp_clocks_mem_wait_set
- bsp_clocks_mem_wait_get
- bsp_clock_set_prechange
- bsp_clock_set_postchange
- bsp_clocks_rom_wait_set
- bsp_clocks_rom_wait_get
- bsp_clocks_sram_wait_set
- bsp_clocks_hsram_wait_set

Defines

- #define CGC_SRAM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for SRAM.
- #define CGC_SRAM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for SRAM.
- #define CGC_ZERO_WAIT_CYCLES

  Initial value: `(0U)`
- #define CGC_TWO_WAIT_CYCLES

  Initial value: `(1U)`
- #define CGC_MAX_ZERO_WAIT_FREQ

  Initial value: `(32000000U)`
- #define CGC_PRCR_KEY

  Initial value: `(0xA500U)`
- #define CGC_PRCR_UNLOCK

  Initial value: `((CGC_PRCR_KEY) | 0x1U)`
- #define CGC_PRCR_LOCK

  Initial value: `((CGC_PRCR_KEY) | 0x0U)`

- #define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

  Initial value: `(120000000U)`
- #define CGC_SYS_CLOCK_FREQ_NO_HSRAM_WAITS

  Initial value: `(200000000U)`
- #define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

  Initial value: `(80000000U)`
- #define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

  Initial value: `(160000000U)`
- #define CGC_ROM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for ROM.
- #define CGC_ROM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for ROM.
- #define CGC_ROM_TWO_WAIT_CYCLES

  Initial value: `(2U)`

  Specify two wait states for ROM.
- #define CGC_SRAM_PRCR_KEY

  Initial value: `(0x78U)`
- #define CGC_SRAM_UNLOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x1U)`
- #define CGC_SRAM_LOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x0U)`

bsp_clock_init

```
bsp_clock_init (  void  )
```

Brief description

Sets up system clocks.

Function steps

- MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL.
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.

- PLL Source clock is always the main oscillator.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- PLL Source clock is always the main oscillator.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- Set PLL Source clock.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- Set USB clock divisor.
- Configure BCLK
- Configure SDRAM Clock

bsp_cpu_clock_get

```
bsp_cpu_clock_get (  void  )
```

Brief description

Returns frequency of CPU clock in Hz.

Detailed description

Table 2227:Return values

Name	Description
Frequency	of the CPU in Hertz

bsp_clock_set_callback

```
ssp_err_t bsp_clock_set_callback (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings for a requested system clock change (PRE) or a just updated system clock change (POST)

Detailed description

Table 2228:Parameters

Name	Direction	Description
p_args	in	- Pre/Post request and clock frequency information

Table 2229:Return values

Name	Description
return	SSP_SUCCESS

Function steps

- The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.
- < No MEMWAIT cycles

bsp_clocks_mem_wait_set

```
bsp_clocks_mem_wait_set (  uint32_t setting )
```

Brief description

This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Detailed description

Table 2230:Parameters

Name	Direction	Description
setting	in	

Table 2231:Return values

Name	Description
none	

bsp_clocks_mem_wait_get

```
bsp_clocks_mem_wait_get (  void  )
```

Brief description

This function gets the value of the MEMWAIT register.

Detailed description

Table 2232:Return values

Name	Description
MEMWAIT	setting

bsp_clock_set_prechange

```
bsp_clock_set_prechange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the requested clock change to the CGC.

Detailed description

Table 2233:Return values

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK < 120 MHz
- 1 wait: ICLK >= 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- Calculate the Wait states for ROM
- If the requested_frequency <= 80 MHz 0 ROM wait states are required)
- If the 80 MHz < requested_frequency <= 160 MHz 1 ROM wait state is required)
- Anything above 160 MHz requires 2 ROM wait states
- Set the wait state BEFORE we change iclk

bsp_clock_set_postchange

```
bsp_clock_set_postchange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the system clock which has just been set by the CGC.

Detailed description

Table 2234:Return values

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK <= 120 MHz
- 1 wait: ICLK > 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- In this case we need to set the wait state AFTER we change iclk

bsp_clocks_rom_wait_set

```
bsp_clocks_rom_wait_set (  uint8_t setting )
```

Brief description

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Detailed description

Table 2235:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2236:Return values

Name	Description
none	

bsp_clocks_rom_wait_get

```
bsp_clocks_rom_wait_get (  void  )
```

Brief description

This function gets the value of the ROMWT register.

Detailed description

Table 2237:Return values

Name	Description
MEMWAIT	setting

bsp_clocks_sram_wait_set

```
bsp_clocks_sram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for both the SRAM0 and SRAM1 RAM memory.

Detailed description

Table 2238:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2239:Return values

Name	Description
none	

bsp_clocks_hsram_wait_set

```
bsp_clocks_hsram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for High Speed RAM memory.

Detailed description

Table 2240:Parameters

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2241:Return values

Name	Description
none	

10.2.7.3 Hardware Locks

This file allocates hardware locks used in Atomic Locking.

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( ADC , 0U , 0U )
```

Detailed description

Used to allocated hardware locks. Parameters are as follows:

1) IP name (ssp_ip_t enum without the SSP_IP_ prefix).
2) Unit number (used for blocks with variations like USB, not to be confused with ADC unit).
3) Channel number

SSP_HW_LOCK_DEFINE

10.2.7.4 Module Start and Stop

Module start and stop functions are provided to enable or disable peripherals.

Functions

- r_bsp_module_start_stop
- R_BSP_ModuleStop
- R_BSP_ModuleStart

Data structures

- bsp_mstp_bit_t
- bsp_mstp_data_t

Variables

- g_bsp_module_stop
- gp_mstp

Defines

- #define BSP_MCU_GROUP_S3A3

  Initial value:
- #define BSP_MSTP_DATA_INVALID

  Initial value: `(0xFFU)`
- #define BSP_MSTP_EXCEPTION

  Initial value: `(1U << 5)`
- #define BSP_MSTP_REG

  Initial value: `((x) << 6)`
- #define BSP_MSTP_BIT

  Initial value: `(x)`
- #define BSP_MSTPCRA

  Initial value: `(0U)`
- #define BSP_MSTPCRB

  Initial value: `(1U)`
- #define BSP_MSTPCRC

  Initial value: `(2U)`
- #define BSP_MSTPCRD

  Initial value: `(3U)`
- #define BSP_COMPILE_TIME_ASSERT

  Initial value: `((void) sizeof(char[1 - 2 * !(e)]))`

  Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

g_bsp_module_stop

```
const uint8_t g_bsp_module_stop[]
```

Detailed description

Module stop bit definitions for each ssp_ip_t enum value.

gp_mstp

```
volatile uint32_t* const gp_mstp[]
```

Detailed description

Module stop register addresses.

r_bsp_module_start_stop

```
ssp_err_t r_bsp_module_start_stop (  ssp_feature_t const *const p_feature ,
  bool stop )
```

Brief description

Start module (cancel module stop) or stop module (enter module stop).

Detailed description

NOTE: Some module stop bits are shared between peripherals. Entering module stop is not permitted for these peripherals.

Table 2242:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.
stop	in	true to stop module, false to start module

Table 2243:Return values

Name	Description
SSP_SUCCESS	Module is stopped or started based on stop parameter
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

Function steps

- The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.
- Set MSTP bit if stop parameter is true and the bit is not shared with other channels.
- Clear MSTP bit if stop parameter is false.

R_BSP_ModuleStop

```
ssp_err_t R_BSP_ModuleStop (  ssp_feature_t const *const p_feature )
```

Brief description

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Detailed description

NOTE: Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Table 2244:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2245:Return values

Name	Description
SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

R_BSP_ModuleStart

```
ssp_err_t R_BSP_ModuleStart (  ssp_feature_t const *const p_feature )
```

Brief description

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Detailed description

Table 2246:Parameters

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2247:Return values

Name	Description
SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

bsp_mstp_bit_t

bsp_mstp_bit_t

Detailed description

Definition of BSP module stop bit.

Variables

- uint8_t bit

  Which bit in MSTP register.

- uint8_t reg

  < Special processing required

  Which MSTP register

bsp_mstp_data_t

Detailed description

Definition of BSP module stop bit.

Variables

byte

bit

10.2.7.5 ROM Registers

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Functions

- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2

Defines

- #define BSP_ROM_REG_OFS1_SETTING

  Initial value:
  ```
  (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) |
  ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))
  ```

  OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

- #define BSP_ROM_REG_MPU_CONTROL_SETTING

  Initial value:
  ```
  ((0xFFFFFCFEU) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABLE << 8) |
  \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABLE << 9) | \
  ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_ENABLE))
  ```

  Build up SECMPUAC register based on MPU settings.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ROM_REGISTERS )
```

Detailed description

ROM registers defined here. Some have masks to make sure reserved bits are set appropriately. S124 has no MPU.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_1 )
```

Detailed description

ID code definitions defined here.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_2 )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_3 )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_4 )
```

10.2.8 S3A6

Code that is common to S3A6 MCUs.

Implements functions that are common to S3A6 MCUs.

10.2.8.1 Cache Functions

This module implements cache functions.

Typedefs

- bsp_cache_frequency_t

bsp_cache_state_t

Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

bsp_cache_frequency_t

```
typedef uint32_t bsp_cache_frequency_t
```

10.2.8.2 Clock Initialization

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Functions

- bsp_clock_init
- bsp_cpu_clock_get
- bsp_clock_set_callback
- bsp_clocks_mem_wait_set
- bsp_clocks_mem_wait_get
- bsp_clock_set_prechange
- bsp_clock_set_postchange
- bsp_clocks_rom_wait_set
- bsp_clocks_rom_wait_get
- bsp_clocks_sram_wait_set
- bsp_clocks_hsram_wait_set

Defines

- #define CGC_SRAM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for SRAM.
- #define CGC_SRAM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for SRAM.

- #define CGC_ZERO_WAIT_CYCLES

  Initial value: `(0U)`
- #define CGC_TWO_WAIT_CYCLES

  Initial value: `(1U)`
- #define CGC_MAX_ZERO_WAIT_FREQ

  Initial value: `(32000000U)`
- #define CGC_PRCR_KEY

  Initial value: `(0xA500U)`
- #define CGC_PRCR_UNLOCK

  Initial value: `((CGC_PRCR_KEY) | 0x1U)`
- #define CGC_PRCR_LOCK

  Initial value: `((CGC_PRCR_KEY) | 0x0U)`
- #define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

  Initial value: `(120000000U)`
- #define CGC_SYS_CLOCK_FREQ_NO_HSRAM_WAITS

  Initial value: `(200000000U)`
- #define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

  Initial value: `(80000000U)`
- #define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

  Initial value: `(160000000U)`
- #define CGC_ROM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for ROM.
- #define CGC_ROM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for ROM.
- #define CGC_ROM_TWO_WAIT_CYCLES

  Initial value: `(2U)`

  Specify two wait states for ROM.
- #define CGC_SRAM_PRCR_KEY

  Initial value: `(0x78U)`
- #define CGC_SRAM_UNLOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x1U)`

- #define CGC_SRAM_LOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x0U)`

bsp_clock_init

```
bsp_clock_init (  void  )
```

Brief description

Sets up system clocks.

Function steps

- MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL.
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- PLL Source clock is always the main oscillator.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- PLL Source clock is always the main oscillator.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- Set PLL Source clock.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- Set USB clock divisor.
- Configure BCLK
- Configure SDRAM Clock

bsp_cpu_clock_get

```
bsp_cpu_clock_get ( void )
```

Brief description

Returns frequency of CPU clock in Hz.

Detailed description

Table 2248:Return values

Name	Description
Frequency	of the CPU in Hertz

bsp_clock_set_callback

```
ssp_err_t bsp_clock_set_callback ( bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings for a requested system clock change (PRE) or a just updated system clock change (POST)

Detailed description

Table 2249:Parameters

Name	Direction	Description
p_args	in	- Pre/Post request and clock frequency information

Table 2250:

Name	Description
return	SSP_SUCCESS

Function steps

- The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.
- < No MEMWAIT cycles

bsp_clocks_mem_wait_set

```
bsp_clocks_mem_wait_set ( uint32_t setting )
```

Brief description

This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Detailed description

Table 2251:

Name	Direction	Description
setting	in	

Table 2252:

Name	Description
none	

bsp_clocks_mem_wait_get

```
bsp_clocks_mem_wait_get (  void  )
```

Brief description

This function gets the value of the MEMWAIT register.

Detailed description

Table 2253:

Name	Description
MEMWAIT	setting

bsp_clock_set_prechange

```
bsp_clock_set_prechange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the requested clock change to the CGC.

Detailed description

Table 2254:

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)

- No wait: ICLK < 120 MHz
- 1 wait: ICLK >= 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- Calculate the Wait states for ROM
- If the requested_frequency <= 80 MHz 0 ROM wait states are required)
- If the 80 MHz < requested_frequency <= 160 MHz 1 ROM wait state is required)
- Anything above 160 MHz requires 2 ROM wait states
- Set the wait state BEFORE we change iclk

bsp_clock_set_postchange

```
bsp_clock_set_postchange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the system clock which has just been set by the CGC.

Detailed description

Table 2255:

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK <= 120 MHz
- 1 wait: ICLK > 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- In this case we need to set the wait state AFTER we change iclk

bsp_clocks_rom_wait_set

```
bsp_clocks_rom_wait_set (  uint8_t setting )
```

Brief description

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Detailed description

Table 2256:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2257:

Name	Description
none	

bsp_clocks_rom_wait_get

```
bsp_clocks_rom_wait_get (  void  )
```

Brief description

This function gets the value of the ROMWT register.

Detailed description

Table 2258:

Name	Description
MEMWAIT	setting

bsp_clocks_sram_wait_set

```
bsp_clocks_sram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for both the SRAM0 and SRAM1 RAM memory.

Detailed description

Table 2259:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2260:

Name	Description
none	

bsp_clocks_hsram_wait_set

```
bsp_clocks_hsram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for High Speed RAM memory.

Detailed description

Table 2261:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2262:

Name	Description
none	

10.2.8.3 Hardware Locks

This file allocates hardware locks used in Atomic Locking.

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( ADC , 0U , 0U )
```

Detailed description

Used to allocated hardware locks. Parameters are as follows:

1) IP name (ssp_ip_t enum without the SSP_IP_ prefix).
2) Unit number (used for blocks with variations like USB, not to be confused with ADC unit).
3) Channel number

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( AES , 0U , 0U )
```

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( AGT , 0U , 0U )
```

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( AGT , 0U , 1U )
```

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( BSC , 0U , 1U )
```

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( CAC , 0U , 0U )

10.2.8.4 Module Start and Stop

Module start and stop functions are provided to enable or disable peripherals.

Functions

- r_bsp_module_start_stop
- calc_mask
- R_BSP_ModuleStop
- R_BSP_ModuleStart

Data structures

- bsp_mstp_bit_t
- bsp_mstp_data_t

Variables

- g_bsp_module_stop
- gp_mstp

Defines

- #define BSP_MCU_GROUP_S3A6

  Initial value:
- #define BSP_MSTP_DATA_INVALID

  Initial value: `(0xFFU)`
- #define BSP_MSTP_EXCEPTION

  Initial value: `(1U << 5)`

- #define BSP_MSTP_REG

  Initial value: `((x) << 6)`
- #define BSP_MSTP_BIT

  Initial value: `(x)`
- #define BSP_MSTPCRA

  Initial value: `(0U)`
- #define BSP_MSTPCRB

  Initial value: `(1U)`
- #define BSP_MSTPCRC

  Initial value: `(2U)`
- #define BSP_MSTPCRD

  Initial value: `(3U)`
- #define BSP_COMPILE_TIME_ASSERT

  Initial value: `((void) sizeof(char[1 - 2 * !(e)]))`

  Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

g_bsp_module_stop

```
const uint8_t g_bsp_module_stop[]
```

Detailed description

Module stop bit definitions for each ssp_ip_t enum value.

gp_mstp

```
volatile uint32_t* const gp_mstp[]
```

Detailed description

Module stop register addresses.

r_bsp_module_start_stop

```
ssp_err_t r_bsp_module_start_stop (  ssp_feature_t const *const p_feature ,
  bool stop )
```

Brief description

Start module (cancel module stop) or stop module (enter module stop).

Detailed description

NOTE: Some module stop bits are shared between peripherals. Entering module stop is not permitted for these peripherals.

Table 2263:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.
stop	in	true to stop module, false to start module

Table 2264:

Name	Description
SSP_SUCCESS	Module is stopped or started based on stop parameter
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

Function steps

- The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.
- Set MSTP bit if stop parameter is true and the bit is not shared with other channels.
- Clear MSTP bit if stop parameter is false.

calc_mask

```
 calc_mask (  ssp_feature_t const *const p_feature ,   uint8_t data ,   uint32_t
* mask )
```

Brief description

Calculate the mask that will be used with the mstp base register used by the calling function.

R_BSP_ModuleStop

```
ssp_err_t R_BSP_ModuleStop (  ssp_feature_t const *const p_feature )
```

Brief description

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Detailed description

NOTE: Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Table 2265:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2266:

Name	Description
SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

R_BSP_ModuleStart

```
ssp_err_t R_BSP_ModuleStart (  ssp_feature_t const *const p_feature )
```

Brief description

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Detailed description

Table 2267:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2268:

Name	Description
SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid

Table 2268: (Continued)

Name	Description
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

bsp_mstp_bit_t

bsp_mstp_bit_t

Detailed description

Definition of BSP module stop bit.

Variables

- uint8_t bit

  Which bit in MSTP register.

- uint8_t reg

  < Special processing required

  Which MSTP register

bsp_mstp_data_t

Detailed description

Definition of BSP module stop bit.

Variables

byte

bit

10.2.8.5 ROM Registers

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Functions

- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2

Defines

- #define BSP_ROM_REG_OFS1_SETTING

  Initial value: `(((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))`

  OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

- #define BSP_ROM_REG_MPU_CONTROL_SETTING

  Initial value: `((0xFFFFFCFEU) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABLE << 8) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABLE << 9) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_ENABLE))`

  Build up SECMPUAC register based on MPU settings.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ROM_REGISTERS  )
```

Detailed description

ROM registers defined here. Some have masks to make sure reserved bits are set appropriately. S124 has no MPU.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_1  )
```

Detailed description

ID code definitions defined here.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_2  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_3  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_4  )
```

10.2.9 S3A7

Code that is common to S3A7 MCUs.

Implements functions that are common to S3A7 MCUs.

10.2.9.1 elc_peripheral_t

Possible peripherals to be linked to event signals

10.2.9.2 elc_event_t

Sources of event signals to be linked to other peripherals or the CPU1
NOTE: This list may change based on device. This list is for S3A7.

10.2.9.3 Cache Functions

This module implements cache functions.

Typedefs

- bsp_cache_frequency_t

bsp_cache_state_t

Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

bsp_cache_frequency_t

```
typedef uint32_t bsp_cache_frequency_t
```

10.2.9.4 Clock Initialization

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Functions

- bsp_clock_init
- bsp_cpu_clock_get
- bsp_clock_set_callback
- bsp_clocks_mem_wait_set
- bsp_clocks_mem_wait_get
- bsp_clock_set_prechange
- bsp_clock_set_postchange
- bsp_clocks_rom_wait_set
- bsp_clocks_rom_wait_get
- bsp_clocks_sram_wait_set
- bsp_clocks_hsram_wait_set

Defines

- #define CGC_SRAM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for SRAM.

- #define CGC_SRAM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for SRAM.
- #define CGC_ZERO_WAIT_CYCLES

  Initial value: `(0U)`
- #define CGC_TWO_WAIT_CYCLES

  Initial value: `(1U)`
- #define CGC_MAX_ZERO_WAIT_FREQ

  Initial value: `(32000000U)`
- #define CGC_PRCR_KEY

  Initial value: `(0xA500U)`
- #define CGC_PRCR_UNLOCK

  Initial value: `((CGC_PRCR_KEY) | 0x1U)`
- #define CGC_PRCR_LOCK

  Initial value: `((CGC_PRCR_KEY) | 0x0U)`
- #define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

  Initial value: `(120000000U)`
- #define CGC_SYS_CLOCK_FREQ_NO_HSRAM_WAITS

  Initial value: `(200000000U)`
- #define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

  Initial value: `(80000000U)`
- #define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

  Initial value: `(160000000U)`
- #define CGC_ROM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for ROM.
- #define CGC_ROM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for ROM.
- #define CGC_ROM_TWO_WAIT_CYCLES

  Initial value: `(2U)`

  Specify two wait states for ROM.

- #define CGC_SRAM_PRCR_KEY

  Initial value: `(0x78U)`
- #define CGC_SRAM_UNLOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x1U)`
- #define CGC_SRAM_LOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x0U)`

bsp_clock_init

```
bsp_clock_init (  void  )
```

Brief description

Sets up system clocks.

Function steps

- MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL.
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- PLL Source clock is always the main oscillator.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- PLL Source clock is always the main oscillator.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- Set PLL Source clock.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.

- Set USB clock divisor.
- Configure BCLK
- Configure SDRAM Clock

bsp_cpu_clock_get

```
bsp_cpu_clock_get (  void  )
```

Brief description

Returns frequency of CPU clock in Hz.

Detailed description

Table 2269:

Name	Description
Frequency	of the CPU in Hertz

bsp_clock_set_callback

```
ssp_err_t bsp_clock_set_callback (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings for a requested system clock change (PRE) or a just updated system clock change (POST)

Detailed description

Table 2270:

Name	Direction	Description
p_args	in	- Pre/Post request and clock frequency information

Table 2271:

Name	Description
return	SSP_SUCCESS

Function steps

- The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.
- < No MEMWAIT cycles

bsp_clocks_mem_wait_set

```
bsp_clocks_mem_wait_set ( uint32_t setting )
```

Brief description

This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Detailed description

Table 2272:

Name	Direction	Description
setting	in	

Table 2273:

Name	Description
none	

bsp_clocks_mem_wait_get

```
bsp_clocks_mem_wait_get ( void )
```

Brief description

This function gets the value of the MEMWAIT register.

Detailed description

Table 2274:

Name	Description
MEMWAIT	setting

bsp_clock_set_prechange

```
bsp_clock_set_prechange ( bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the requested clock change to the CGC.

Detailed description

Table 2275:

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK < 120 MHz
- 1 wait: ICLK >= 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- Calculate the Wait states for ROM
- If the requested_frequency <= 80 MHz 0 ROM wait states are required)
- If the 80 MHz < requested_frequency <= 160 MHz 1 ROM wait state is required)
- Anything above 160 MHz requires 2 ROM wait states
- Set the wait state BEFORE we change iclk

bsp_clock_set_postchange

```
bsp_clock_set_postchange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the system clock which has just been set by the CGC.

Detailed description

Table 2276:

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK <= 120 MHz
- 1 wait: ICLK > 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz

- 1 wait: ICLK > 200 MHz
- In this case we need to set the wait state AFTER we change iclk

bsp_clocks_rom_wait_set

```
bsp_clocks_rom_wait_set (  uint8_t setting )
```

Brief description

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Detailed description

Table 2277:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2278:

Name	Description
none	

bsp_clocks_rom_wait_get

```
bsp_clocks_rom_wait_get (  void  )
```

Brief description

This function gets the value of the ROMWT register.

Detailed description

Table 2279:

Name	Description
MEMWAIT	setting

bsp_clocks_sram_wait_set

```
bsp_clocks_sram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for both the SRAM0 and SRAM1 RAM memory.

Detailed description

Table 2280:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2281:

Name	Description
none	

bsp_clocks_hsram_wait_set

```
bsp_clocks_hsram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for High Speed RAM memory.

Detailed description

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( ADC , 0U , 0U )
```

Detailed description

Used to allocated hardware locks. Parameters are as follows:

1) IP name (ssp_ip_t enum without the SSP_IP_ prefix).
2) Unit number (used for blocks with variations like USB, not to be confused with ADC unit).
3) Channel number

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( AES , 0U , 0U )
```

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( AGT , 0U , 0U )
```

10.2.9.6 Module Start and Stop

Module start and stop functions are provided to enable or disable peripherals.

Functions

- r_bsp_module_start_stop
- R_BSP_ModuleStop
- R_BSP_ModuleStart

Data structures

- bsp_mstp_bit_t
- bsp_mstp_data_t

Variables

- g_bsp_module_stop
- gp_mstp

Defines

- #define BSP_MCU_GROUP_S3A7

  Initial value:

- #define BSP_MSTP_DATA_INVALID

  Initial value: `(0xFFU)`
- #define BSP_MSTP_EXCEPTION

  Initial value: `(1U << 5)`
- #define BSP_MSTP_REG

  Initial value: `((x) << 6)`
- #define BSP_MSTP_BIT

  Initial value: `(x)`
- #define BSP_MSTPCRA

  Initial value: `(0U)`
- #define BSP_MSTPCRB

  Initial value: `(1U)`
- #define BSP_MSTPCRC

  Initial value: `(2U)`
- #define BSP_MSTPCRD

  Initial value: `(3U)`
- #define BSP_COMPILE_TIME_ASSERT

  Initial value: `((void) sizeof(char[1 - 2 * !(e)]))`

  Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

g_bsp_module_stop

```
const uint8_t g_bsp_module_stop[]
```

Detailed description

Module stop bit definitions for each ssp_ip_t enum value.

gp_mstp

```
volatile uint32_t* const gp_mstp[]
```

Detailed description

Module stop register addresses.

r_bsp_module_start_stop

```
ssp_err_t r_bsp_module_start_stop (  ssp_feature_t const *const p_feature ,
  bool stop )
```

Brief description

Start module (cancel module stop) or stop module (enter module stop).

Detailed description

NOTE: Some module stop bits are shared between peripherals. Entering module stop is not permitted for these peripherals.

Table 2284:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.
stop	in	true to stop module, false to start module

Table 2285:

Name	Description
SSP_SUCCESS	Module is stopped or started based on stop parameter
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

Function steps

- The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.
- Set MSTP bit if stop parameter is true and the bit is not shared with other channels.
- Clear MSTP bit if stop parameter is false.

R_BSP_ModuleStop

```
ssp_err_t R_BSP_ModuleStop (  ssp_feature_t const *const p_feature )
```

Brief description

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Detailed description

NOTE: Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Table 2286:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2287:

Name	Description
SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

R_BSP_ModuleStart

```
ssp_err_t R_BSP_ModuleStart (  ssp_feature_t const *const p_feature )
```

Brief description

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Detailed description

Table 2288:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2289:

Name	Description
SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

bsp_mstp_bit_t

bsp_mstp_bit_t

Detailed description

Definition of BSP module stop bit.

Variables

- uint8_t bit

  Which bit in MSTP register.

- uint8_t reg

  < Special processing required

  Which MSTP register

bsp_mstp_data_t

Detailed description

Definition of BSP module stop bit.

Variables

byte

bit

10.2.9.7 ROM Registers

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Functions

- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2

Defines

- #define BSP_ROM_REG_OFS1_SETTING

  Initial value:`(((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))`

  OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

- #define BSP_ROM_REG_MPU_CONTROL_SETTING

  Initial value:
  ```
  ((0xFFFFFCFEU) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABLE << 8) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABLE << 9) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_ENABLE))
  ```

  Build up SECMPUAC register based on MPU settings.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ROM_REGISTERS  )
```

Detailed description

ROM registers defined here. Some have masks to make sure reserved bits are set appropriately. S124 has no MPU.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_1  )
```

Detailed description

ID code definitions defined here.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_2  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_3  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_4  )
```

10.2.10 S5D5

Code that is common to S5D5 MCUs.

Implements functions that are common to S5D5 MCUs.

10.2.10.1 Cache Functions

This module implements cache functions.

bsp_cache_state_t

Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

10.2.10.2 Clock Initialization

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Functions

- bsp_clock_init
- bsp_cpu_clock_get
- bsp_clock_set_callback
- bsp_clocks_mem_wait_set
- bsp_clocks_mem_wait_get
- bsp_clock_set_prechange
- bsp_clock_set_postchange
- bsp_clocks_rom_wait_set
- bsp_clocks_rom_wait_get
- bsp_clocks_sram_wait_set
- bsp_clocks_hsram_wait_set

Defines

- #define CGC_SRAM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for SRAM.
- #define CGC_SRAM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for SRAM.
- #define CGC_ZERO_WAIT_CYCLES

  Initial value: `(0U)`
- #define CGC_TWO_WAIT_CYCLES

  Initial value: `(1U)`
- #define CGC_MAX_ZERO_WAIT_FREQ

  Initial value: `(32000000U)`
- #define CGC_PRCR_KEY

  Initial value: `(0xA500U)`
- #define CGC_PRCR_UNLOCK

  Initial value: `(160000000U)`
- #define CGC_ROM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for ROM.
- #define CGC_ROM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for ROM.
- #define CGC_ROM_TWO_WAIT_CYCLES

  Initial value: `(2U)`

  Specify two wait states for ROM.
- #define CGC_SRAM_PRCR_KEY

  Initial value: `(0x78U)`
- #define CGC_SRAM_UNLOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x1U)`
- #define CGC_SRAM_LOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x0U)`

bsp_clock_init

```
bsp_clock_init (  void  )
```

Brief description

Sets up system clocks.

Function steps

- MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL.
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- PLL Source clock is always the main oscillator.
- Need to start PLL source clock and let it stabilize before starting PLL

- Set PLL Divider.
- Set PLL Multiplier.
- PLL Source clock is always the main oscillator.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- Set PLL Source clock.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- Set USB clock divisor.
- Configure BCLK
- Configure SDRAM Clock

bsp_cpu_clock_get

```
bsp_cpu_clock_get (  void  )
```

Brief description

Returns frequency of CPU clock in Hz.

Detailed description

Table 2290:

Name	Description
Frequency	of the CPU in Hertz

bsp_clock_set_callback

```
ssp_err_t bsp_clock_set_callback (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings for a requested system clock change (PRE) or a just updated system clock change (POST)

Detailed description

Table 2291:

Name	Direction	Description
p_args	in	- Pre/Post request and clock frequency information

Table 2292:

Name	Description
return	SSP_SUCCESS

Function steps

- The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.
- < No MEMWAIT cycles

bsp_clocks_mem_wait_set

```
bsp_clocks_mem_wait_set (  uint32_t setting )
```

Brief description

This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Detailed description

Table 2293:

Name	Direction	Description
setting	in	

Table 2294:

Name	Description
none	

bsp_clocks_mem_wait_get

```
bsp_clocks_mem_wait_get (  void  )
```

Brief description

This function gets the value of the MEMWAIT register.

Detailed description

Table 2295:

Name	Description
MEMWAIT	setting

bsp_clock_set_prechange

```
bsp_clock_set_prechange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the requested clock change to the CGC.

Detailed description

Table 2296:

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK < 120 MHz
- 1 wait: ICLK >= 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- Calculate the Wait states for ROM
- If the requested_frequency <= 80 MHz 0 ROM wait states are required)
- If the 80 MHz < requested_frequency <= 160 MHz 1 ROM wait state is required)
- Anything above 160 MHz requires 2 ROM wait states
- Set the wait state BEFORE we change iclk

bsp_clock_set_postchange

```
bsp_clock_set_postchange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the system clock which has just been set by the CGC.

Detailed description

Table 2297:

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK <= 120 MHz
- 1 wait: ICLK > 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- In this case we need to set the wait state AFTER we change iclk

bsp_clocks_rom_wait_set

```
bsp_clocks_rom_wait_set (  uint8_t setting )
```

Brief description

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Detailed description

Table 2298:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2299:

Name	Description
none	

bsp_clocks_rom_wait_get

```
bsp_clocks_rom_wait_get (  void  )
```

Brief description

This function gets the value of the ROMWT register.

Detailed description

Table 2300:

Name	Description
MEMWAIT	setting

bsp_clocks_sram_wait_set

```
bsp_clocks_sram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for both the SRAM0 and SRAM1 RAM memory.

Detailed description

Table 2301:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2302:

Name	Description
none	

bsp_clocks_hsram_wait_set

```
bsp_clocks_hsram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for High Speed RAM memory.

Detailed description

Table 2303:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2304:

Name	Description
none

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( ADC , 0U , 0U )
```

Detailed description

Used to allocated hardware locks. Parameters are as follows:

1) IP name (ssp_ip_t enum without the SSP_IP_ prefix).
2) Unit number (used for blocks with variations like USB, not to be confused with ADC unit).
3) Channel number

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( AES , 0U , 0U )
```

SSP_HW_LOCK_DEFINE

10.2.10.4 Module Start and Stop

Module start and stop functions are provided to enable or disable peripherals.

Functions

- r_bsp_module_start_stop
- R_BSP_ModuleStop
- R_BSP_ModuleStart

Data structures

- bsp_mstp_bit_t
- bsp_mstp_data_t

Variables

- g_bsp_module_stop
- gp_mstp

Defines

- #define BSP_MCU_GROUP_S5D5

  Initial value:
- #define BSP_MSTP_DATA_INVALID

  Initial value: `(0xFFU)`
- #define BSP_MSTP_EXCEPTION

  Initial value: `(1U << 5)`
- #define BSP_MSTP_REG

  Initial value: `((x) << 6)`
- #define BSP_MSTP_BIT

  Initial value: `(x)`
- #define BSP_MSTPCRA

  Initial value: `(0U)`
- #define BSP_MSTPCRB

  Initial value: `(1U)`
- #define BSP_MSTPCRC

  Initial value: `(2U)`
- #define BSP_MSTPCRD

  Initial value: `(3U)`
- #define BSP_COMPILE_TIME_ASSERT

  Initial value: `((void) sizeof(char[1 - 2 * !(e)]))`

  Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

g_bsp_module_stop

```
const uint8_t g_bsp_module_stop[]
```

Detailed description

Module stop bit definitions for each ssp_ip_t enum value.

gp_mstp

```
volatile uint32_t* const gp_mstp[]
```

Detailed description

Module stop register addresses.

r_bsp_module_start_stop

```
ssp_err_t r_bsp_module_start_stop (  ssp_feature_t const *const p_feature ,
  bool stop )
```

Brief description

Start module (cancel module stop) or stop module (enter module stop).

Detailed description

NOTE: Some module stop bits are shared between peripherals. Entering module stop is not permitted for these peripherals.

Table 2305:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.
stop	in	true to stop module, false to start module

Table 2306:

Name	Description
SSP_SUCCESS	Module is stopped or started based on stop parameter
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

Function steps

- The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.
- Do nothing.
- Set MSTP bit if stop parameter is true and the bit is not shared with other channels.
- Clear MSTP bit if stop parameter is false.

R_BSP_ModuleStop

```
ssp_err_t R_BSP_ModuleStop (  ssp_feature_t const *const p_feature )
```

Brief description

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Detailed description

NOTE: Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Table 2307:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2308:

Name	Description
SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

R_BSP_ModuleStart

```
ssp_err_t R_BSP_ModuleStart (  ssp_feature_t const *const p_feature )
```

Brief description

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Detailed description

Table 2309:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2310:

Name	Description
SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

bsp_mstp_bit_t

bsp_mstp_bit_t

Detailed description

Definition of BSP module stop bit.

Variables

- uint8_t bit

  Which bit in MSTP register.

- uint8_t reg

  < Special processing required

  Which MSTP register

bsp_mstp_data_t

Detailed description

Definition of BSP module stop bit.

Variables

byte

bit

10.2.10.5 ROM Registers

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Functions

- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2

Defines

- #define BSP_ROM_REG_OFS1_SETTING

  Initial value:
  ```
  (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) |
  ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))
  ```

  OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

- #define BSP_ROM_REG_MPU_CONTROL_SETTING

  Initial value:
  ```
  ((0xFFFFFCFEU) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABLE << 8) |
  \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABLE << 9) | \
  ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_ENABLE))
  ```

  Build up SECMPUAC register based on MPU settings.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ROM_REGISTERS )
```

Detailed description

ROM registers defined here. Some have masks to make sure reserved bits are set appropriately. S124 has no MPU.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_1 )
```

Detailed description

ID code definitions defined here.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_2 )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_3 )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 ( BSP_SECTION_ID_CODE_4 )
```

10.2.11 S5D9

Code that is common to S5D9 MCUs.

Implements functions that are common to S5D9 MCUs.

10.2.11.1 Cache Functions

This module implements cache functions.

bsp_cache_state_t

Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

10.2.11.2 Clock Initialization

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Functions

- bsp_clock_init
- bsp_cpu_clock_get
- bsp_clock_set_callback
- bsp_clocks_mem_wait_set
- bsp_clocks_mem_wait_get
- bsp_clock_set_prechange
- bsp_clock_set_postchange
- bsp_clocks_rom_wait_set
- bsp_clocks_rom_wait_get
- bsp_clocks_sram_wait_set
- bsp_clocks_hsram_wait_set

Defines

- #define CGC_SRAM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for SRAM.
- #define CGC_SRAM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for SRAM.
- #define CGC_ZERO_WAIT_CYCLES

  Initial value: `(0U)`
- #define CGC_TWO_WAIT_CYCLES

  Initial value: `(1U)`

- #define CGC_MAX_ZERO_WAIT_FREQ

  Initial value: `(32000000U)`
- #define CGC_PRCR_KEY

  Initial value: `(0xA500U)`
- #define CGC_PRCR_UNLOCK

  Initial value: `((CGC_PRCR_KEY) | 0x1U)`
- #define CGC_PRCR_LOCK

  Initial value: `((CGC_PRCR_KEY) | 0x0U)`
- #define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

  Initial value: `(120000000U)`
- #define CGC_SYS_CLOCK_FREQ_NO_HSRAM_WAITS

  Initial value: `(200000000U)`
- #define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

  Initial value: `(80000000U)`
- #define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

  Initial value: `(160000000U)`
- #define CGC_ROM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for ROM.
- #define CGC_ROM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for ROM.
- #define CGC_ROM_TWO_WAIT_CYCLES

  Initial value: `(2U)`

  Specify two wait states for ROM.
- #define CGC_SRAM_PRCR_KEY

  Initial value: `(0x78U)`
- #define CGC_SRAM_UNLOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x1U)`
- #define CGC_SRAM_LOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x0U)`

bsp_clock_init

```
bsp_clock_init (  void  )
```

Brief description

Sets up system clocks.

Function steps

- MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL.
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- PLL Source clock is always the main oscillator.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- PLL Source clock is always the main oscillator.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- Set PLL Source clock.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- Set USB clock divisor.
- Configure BCLK
- Configure SDRAM Clock

bsp_cpu_clock_get

```
bsp_cpu_clock_get (  void  )
```

Brief description

Returns frequency of CPU clock in Hz.

Detailed description

Table 2311:

Name	Description
Frequency	of the CPU in Hertz

bsp_clock_set_callback

```
ssp_err_t bsp_clock_set_callback (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings for a requested system clock change (PRE) or a just updated system clock change (POST)

Detailed description

Table 2312:

Name	Direction	Description
p_args	in	- Pre/Post request and clock frequency information

Table 2313:

Name	Description
return	SSP_SUCCESS

Function steps

- The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.
- < No MEMWAIT cycles

bsp_clocks_mem_wait_set

```
bsp_clocks_mem_wait_set (  uint32_t setting )
```

Brief description

This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Detailed description

Table 2314:

Name	Direction	Description
setting	in	

Table 2315:

Name	Description
none	

bsp_clocks_mem_wait_get

```
bsp_clocks_mem_wait_get (  void  )
```

Brief description

This function gets the value of the MEMWAIT register.

Detailed description

Table 2316:

Name	Description
MEMWAIT	setting

bsp_clock_set_prechange

```
bsp_clock_set_prechange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the requested clock change to the CGC.

Detailed description

Table 2317:

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK < 120 MHz

- 1 wait: ICLK >= 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- Calculate the Wait states for ROM
- If the requested_frequency <= 80 MHz 0 ROM wait states are required)
- If the 80 MHz < requested_frequency <= 160 MHz 1 ROM wait state is required)
- Anything above 160 MHz requires 2 ROM wait states
- Set the wait state BEFORE we change iclk

bsp_clock_set_postchange

```
bsp_clock_set_postchange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the system clock which has just been set by the CGC.

Detailed description

Table 2318:

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK <= 120 MHz
- 1 wait: ICLK > 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- In this case we need to set the wait state AFTER we change iclk

bsp_clocks_rom_wait_set

```
bsp_clocks_rom_wait_set (  uint8_t setting )
```

Brief description

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Detailed description

Table 2319:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2320:

Name	Description
none	

bsp_clocks_rom_wait_get

```
bsp_clocks_rom_wait_get (  void  )
```

Brief description

This function gets the value of the ROMWT register.

Detailed description

Table 2321:

Name	Description
MEMWAIT	setting

bsp_clocks_sram_wait_set

```
bsp_clocks_sram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for both the SRAM0 and SRAM1 RAM memory.

Detailed description

Table 2322:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2323:

Name	Description
none	

bsp_clocks_hsram_wait_set

```
bsp_clocks_hsram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for High Speed RAM memory.

Detailed description

Table 2324:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2325:

Name	Description
none	

10.2.11.3 Hardware Locks

This file allocates hardware locks used in Atomic Locking.

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( ADC , 0U , 0U )
```

Detailed description

Used to allocated hardware locks. Parameters are as follows:

1) IP name (ssp_ip_t enum without the SSP_IP_ prefix).
2) Unit number (used for blocks with variations like USB, not to be confused with ADC unit).
3) Channel number

SSP_HW_LOCK_DEFINE

10.2.11.4 Module Start and Stop

Module start and stop functions are provided to enable or disable peripherals.

Functions

- r_bsp_module_start_stop
- R_BSP_ModuleStop
- R_BSP_ModuleStart

Data structures

- bsp_mstp_bit_t
- bsp_mstp_data_t

Variables

- g_bsp_module_stop
- gp_mstp

Defines

- #define BSP_MCU_GROUP_S5D9

  Initial value:
- #define BSP_MSTP_DATA_INVALID

  Initial value: `(0xFFU)`
- #define BSP_MSTP_EXCEPTION

  Initial value: `(1U << 5)`

- #define BSP_MSTP_REG

  Initial value: `((x) << 6)`
- #define BSP_MSTP_BIT

  Initial value: `(x)`
- #define BSP_MSTPCRA

  Initial value: `(0U)`
- #define BSP_MSTPCRB

  Initial value: `(1U)`
- #define BSP_MSTPCRC

  Initial value: `(2U)`
- #define BSP_MSTPCRD

  Initial value: `(3U)`
- #define BSP_COMPILE_TIME_ASSERT

  Initial value: `((void) sizeof(char[1 - 2 * !(e)]))`

  Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

g_bsp_module_stop

```
const uint8_t g_bsp_module_stop[]
```

Detailed description

Module stop bit definitions for each ssp_ip_t enum value.

gp_mstp

```
volatile uint32_t* const gp_mstp[]
```

Detailed description

Module stop register addresses.

r_bsp_module_start_stop

```
ssp_err_t r_bsp_module_start_stop (  ssp_feature_t const *const p_feature ,
  bool stop )
```

Brief description

Start module (cancel module stop) or stop module (enter module stop).

Detailed description

NOTE: Some module stop bits are shared between peripherals. Entering module stop is not permitted for these peripherals.

Table 2326:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.
stop	in	true to stop module, false to start module

Table 2327:

Name	Description
SSP_SUCCESS	Module is stopped or started based on stop parameter
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

Function steps

- The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.
- Do nothing.
- Set MSTP bit if stop parameter is true and the bit is not shared with other channels.
- Clear MSTP bit if stop parameter is false.

R_BSP_ModuleStop

```
ssp_err_t R_BSP_ModuleStop (  ssp_feature_t const *const p_feature )
```

Brief description

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Detailed description

NOTE: Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Table 2328:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2329:

Name	Description
SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

R_BSP_ModuleStart

```
ssp_err_t R_BSP_ModuleStart (  ssp_feature_t const *const p_feature )
```

Brief description

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Detailed description

Table 2330:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2331:

Name	Description
SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

bsp_mstp_bit_t

bsp_mstp_bit_t

Detailed description

Definition of BSP module stop bit.

Variables

- uint8_t bit

  Which bit in MSTP register.

- uint8_t reg

  < Special processing required

  Which MSTP register

bsp_mstp_data_t

Detailed description

Definition of BSP module stop bit.

Variables

byte

bit

10.2.11.5 ROM Registers

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Functions

- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2

Defines

- #define BSP_ROM_REG_OFS1_SETTING

  Initial value:`(((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))`

  OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

- #define BSP_ROM_REG_MPU_CONTROL_SETTING

  Initial value:`((0xFFFFFCFEU) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABLE << 8) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABLE << 9) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_ENABLE))`

  Build up SECMPUAC register based on MPU settings.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ROM_REGISTERS  )
```

Detailed description

ROM registers defined here. Some have masks to make sure reserved bits are set appropriately. S124 has no MPU.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_1  )
```

Detailed description

ID code definitions defined here.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_2  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_3  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_4  )
```

10.2.12 S7G2

Code that is common to S7G2 MCUs.

Implements functions that are common to S7G2 MCUs.

10.2.12.1 elc_peripheral_t

Possible peripherals to be linked to event signals

10.2.12.2 elc_event_t

Sources of event signals to be linked to other peripherals or the CPU1
NOTE: This list may change based on device. This list is for S7G2.

10.2.12.3 Cache Functions

This module implements cache functions.

bsp_cache_state_t

Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

10.2.12.4 Clock Initialization

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Functions

- bsp_clock_init
- bsp_cpu_clock_get
- bsp_clock_set_callback
- bsp_clocks_mem_wait_set
- bsp_clocks_mem_wait_get
- bsp_clock_set_prechange
- bsp_clock_set_postchange
- bsp_clocks_rom_wait_set
- bsp_clocks_rom_wait_get
- bsp_clocks_sram_wait_set
- bsp_clocks_hsram_wait_set

Defines

- #define CGC_SRAM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for SRAM.
- #define CGC_SRAM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for SRAM.
- #define CGC_ZERO_WAIT_CYCLES

  Initial value: `(0U)`
- #define CGC_TWO_WAIT_CYCLES

  Initial value: `(1U)`
- #define CGC_MAX_ZERO_WAIT_FREQ

  Initial value: `(32000000U)`

- #define CGC_PRCR_KEY

  Initial value: `(0xA500U)`
- #define CGC_PRCR_UNLOCK

  Initial value: `((CGC_PRCR_KEY) | 0x1U)`
- #define CGC_PRCR_LOCK

  Initial value: `((CGC_PRCR_KEY) | 0x0U)`
- #define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

  Initial value: `(120000000U)`
- #define CGC_SYS_CLOCK_FREQ_NO_HSRAM_WAITS

  Initial value: `(200000000U)`
- #define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

  Initial value: `(80000000U)`
- #define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

  Initial value: `(160000000U)`
- #define CGC_ROM_ZERO_WAIT_CYCLES

  Initial value: `(0U)`

  Specify zero wait states for ROM.
- #define CGC_ROM_ONE_WAIT_CYCLES

  Initial value: `(1U)`

  Specify one wait states for ROM.
- #define CGC_ROM_TWO_WAIT_CYCLES

  Initial value: `(2U)`

  Specify two wait states for ROM.
- #define CGC_SRAM_PRCR_KEY

  Initial value: `(0x78U)`
- #define CGC_SRAM_UNLOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x1U)`
- #define CGC_SRAM_LOCK

  Initial value: `(((CGC_SRAM_PRCR_KEY) << 1) | 0x0U)`

bsp_clock_init

```
bsp_clock_init (  void  )
```

Brief description

Sets up system clocks.

Function steps

- MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL.
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- PLL Source clock is always the main oscillator.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- PLL Source clock is always the main oscillator.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- MOCO is default clock out of reset. Enable new clock if chosen.
- Need to start PLL source clock and let it stabilize before starting PLL
- Set PLL Divider.
- Set PLL Multiplier.
- Set PLL Source clock.
- Wait for PLL clock source to stabilize
- MOCO, LOCO, and subclock do not have stabilization flags that can be checked.
- Wait for clock source to stabilize
- Set which clock to use for system clock and divisors for all system clocks.
- Set USB clock divisor.
- Configure BCLK
- Configure SDRAM Clock

bsp_cpu_clock_get

```
bsp_cpu_clock_get (  void  )
```

Brief description

Returns frequency of CPU clock in Hz.

Detailed description

Table 2332:

Name	Description
Frequency	of the CPU in Hertz

bsp_clock_set_callback

```
ssp_err_t bsp_clock_set_callback (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings for a requested system clock change (PRE) or a just updated system clock change (POST)

Detailed description

Table 2333:

Name	Direction	Description
p_args	in	- Pre/Post request and clock frequency information

Table 2334:

Name	Description
return	SSP_SUCCESS

Function steps

- The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.
- < No MEMWAIT cycles

bsp_clocks_mem_wait_set

```
bsp_clocks_mem_wait_set (  uint32_t setting )
```

Brief description

This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Detailed description

Table 2335:

Name	Direction	Description
setting	in	

Table 2336:

Name	Description
none	

bsp_clocks_mem_wait_get

```
bsp_clocks_mem_wait_get (  void  )
```

Brief description

This function gets the value of the MEMWAIT register.

Detailed description

Table 2337:

Name	Description
MEMWAIT	setting

bsp_clock_set_prechange

```
bsp_clock_set_prechange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the requested clock change to the CGC.

Detailed description

Table 2338:

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK < 120 MHz

- 1 wait: ICLK >= 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- Calculate the Wait states for ROM
- If the requested_frequency <= 80 MHz 0 ROM wait states are required)
- If the 80 MHz < requested_frequency <= 160 MHz 1 ROM wait state is required)
- Anything above 160 MHz requires 2 ROM wait states
- Set the wait state BEFORE we change iclk

bsp_clock_set_postchange

```
bsp_clock_set_postchange (  bsp_clock_set_callback_args_t * p_args )
```

Brief description

This function sets the ROM and RAM wait state settings based on the system clock which has just been set by the CGC.

Detailed description

Table 2339:

Name	Description
none.	

Function steps

- Wait states for low speed RAM (SRAM0, SRAM1 and SRAM0 (DED)
- No wait: ICLK <= 120 MHz
- 1 wait: ICLK > 120 MHz
- Wait states for High speed RAM (SRAMHS)
- No wait: ICLK <= 200 MHz
- 1 wait: ICLK > 200 MHz
- In this case we need to set the wait state AFTER we change iclk

bsp_clocks_rom_wait_set

```
bsp_clocks_rom_wait_set (  uint8_t setting )
```

Brief description

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Detailed description

Table 2340:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2341:

Name	Description
none	

bsp_clocks_rom_wait_get

```
bsp_clocks_rom_wait_get (  void  )
```

Brief description

This function gets the value of the ROMWT register.

Detailed description

Table 2342:

Name	Description
MEMWAIT	setting

bsp_clocks_sram_wait_set

```
bsp_clocks_sram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for both the SRAM0 and SRAM1 RAM memory.

Detailed description

Table 2343:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2344:

Name	Description
none	

bsp_clocks_hsram_wait_set

```
bsp_clocks_hsram_wait_set (  uint32_t setting )
```

Brief description

This function sets the RAM wait state settings for High Speed RAM memory.

Detailed description

Table 2345:

Name	Direction	Description
setting	in	The number of wait states to be used.

Table 2346:

Name	Description
none	

10.2.12.5 Hardware Locks

SSP_HW_LOCK_DEFINE

```
SSP_HW_LOCK_DEFINE ( ADC , 0U , 0U )
```

Detailed description

Used to allocated hardware locks. Parameters are as follows:

1) IP name (ssp_ip_t enum without the SSP_IP_ prefix).
2) Unit number (used for blocks with variations like USB, not to be confused with ADC unit).
3) Channel number

SSP_HW_LOCK_DEFINE

10.2.12.6 Module Start and Stop

Module start and stop functions are provided to enable or disable peripherals.

Functions

- r_bsp_module_start_stop
- R_BSP_ModuleStop
- R_BSP_ModuleStart

Data structures

- bsp_mstp_bit_t
- bsp_mstp_data_t

Variables

- g_bsp_module_stop
- gp_mstp

Defines

- #define BSP_MCU_GROUP_S7G2

  Initial value:
- #define BSP_MSTP_DATA_INVALID

  Initial value: `(0xFFU)`
- #define BSP_MSTP_EXCEPTION

  Initial value: `(1U << 5)`

- #define BSP_MSTP_REG

  Initial value: `((x) << 6)`
- #define BSP_MSTP_BIT

  Initial value: `(x)`
- #define BSP_MSTPCRA

  Initial value: `(0U)`
- #define BSP_MSTPCRB

  Initial value: `(1U)`
- #define BSP_MSTPCRC

  Initial value: `(2U)`
- #define BSP_MSTPCRD

  Initial value: `(3U)`
- #define BSP_COMPILE_TIME_ASSERT

  Initial value: `((void) sizeof(char[1 - 2 * !(e)]))`

  Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

g_bsp_module_stop

```
const uint8_t g_bsp_module_stop[]
```

Detailed description

Module stop bit definitions for each ssp_ip_t enum value.

gp_mstp

```
volatile uint32_t* const gp_mstp[]
```

Detailed description

Module stop register addresses.

r_bsp_module_start_stop

```
ssp_err_t r_bsp_module_start_stop (  ssp_feature_t const *const p_feature ,
  bool stop )
```

Brief description

Start module (cancel module stop) or stop module (enter module stop).

Detailed description

NOTE: Some module stop bits are shared between peripherals. Entering module stop is not permitted for these peripherals.

Table 2347:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.
stop	in	true to stop module, false to start module

Table 2348:

Name	Description
SSP_SUCCESS	Module is stopped or started based on stop parameter
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

Function steps

- The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.
- Do nothing.
- Set MSTP bit if stop parameter is true and the bit is not shared with other channels.
- Clear MSTP bit if stop parameter is false.

R_BSP_ModuleStop

```
ssp_err_t R_BSP_ModuleStop (  ssp_feature_t const *const p_feature )
```

Brief description

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Detailed description

NOTE: Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Table 2349:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2350:

Name	Description
SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

R_BSP_ModuleStart

```
ssp_err_t R_BSP_ModuleStart (  ssp_feature_t const *const p_feature )
```

Brief description

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Detailed description

Table 2351:

Name	Direction	Description
p_feature	in	Pointer to definition of the feature, defined by ssp_feature_t.

Table 2352:

Name	Description
SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

bsp_mstp_bit_t

bsp_mstp_bit_t

Detailed description

Definition of BSP module stop bit.

Variables

- uint8_t bit

  Which bit in MSTP register.

- uint8_t reg

  < Special processing required

  Which MSTP register

bsp_mstp_data_t

Detailed description

Definition of BSP module stop bit.

Variables

byte

bit

10.2.12.7 ROM Registers

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Functions

- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2
- BSP_PLACE_IN_SECTION_V2

Defines

- #define BSP_ROM_REG_OFS1_SETTING

  Initial value:`(((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))`

  OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

- #define BSP_ROM_REG_MPU_CONTROL_SETTING

  Initial value:`((0xFFFFFCFEU) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABLE << 8) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABLE << 9) | \ ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_ENABLE))`

  Build up SECMPUAC register based on MPU settings.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ROM_REGISTERS  )
```

Detailed description

ROM registers defined here. Some have masks to make sure reserved bits are set appropriately. S124 has no MPU.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_1  )
```

Detailed description

ID code definitions defined here.

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_2  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_3  )
```

BSP_PLACE_IN_SECTION_V2

```
BSP_PLACE_IN_SECTION_V2 (  BSP_SECTION_ID_CODE_4  )
```

10.3 Common BSP Code

Code common to all BSPs.

Implements functions that are common to all BSPs.

10.3.1 Functions

- R_BSP_VersionGet
- R_SSP_VersionGet
- bsp_init_internal

10.3.2 Defines

- #define BSP_IRQ_DISABLED

  Initial value: `(0xFFU)`

  Used to signify that an ELC event is not able to be used as an interrupt.

- #define BSP_CODE_VERSION_MAJOR

  Initial value: `(1U)`

- #define BSP_CODE_VERSION_MINOR

  Initial value: `(10U)`

- #define BSP_API_VERSION_MAJOR

  Initial value: `(1U)`

- #define BSP_API_VERSION_MINOR

  Initial value: `(0U)`

- #define SF_CONTEXT_SAVE

  Initial value:

- #define SF_CONTEXT_RESTORE

  Initial value:

- #define SSP_ASSERT_FAIL

  Initial value:

  Function call to insert before returning assertion error.

- #define SSP_ERROR_LOG

  Initial value:

  This function is called before returning an error code. To stop on a runtime error, define ssp_error_log in user code and do required debugging (breakpoints, stack dump, etc) in this function.

- #define SSP_ERROR_RETURN

  Initial value:`{ \ if ((a)) \ { \ (void) 0; /* Do nothing */ \ } \ else \ { \ #define SSP_ERROR_LOG((err), (module), (version)); \ return (err); \ } \ }`

  All SSP error codes are returned using this macro. Calls #define SSP_ERROR_LOG function if condition "a" is false. Used to identify runtime errors in SSP functions.

- #define SSP_CRITICAL_SECTION_DEFINE

  Initial value:`uint32_t old_mask_level = 0U`

  This check is performed to select suitable ASM API with respect to core This macro defines a variable for saving previous mask value

- #define SSP_CRITICAL_SECTION_ENTER

  Initial value:`old_mask_level = __get_PRIMASK(); \ __set_PRIMASK(1U)`

  This macro defined to get the mask value
- #define SSP_CRITICAL_SECTION_EXIT

  Initial value:`__set_PRIMASK(old_mask_level)`

  This macro defined to restore the old mask value

10.3.3 R_BSP_VersionGet

```
ssp_err_t R_BSP_VersionGet ( ssp_version_t  * p_version )
```

10.3.3.1 Brief description

Set BSP version based on compile time macros.

10.3.3.2 Detailed description

Table 2353:

Name	Direction	Description
p_version	out	Memory address to return version information to.

Table 2354:

Name	Description
SSP_SUCCESS	Version information stored.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

10.3.4 R_SSP_VersionGet

```
ssp_err_t R_SSP_VersionGet ( ssp_pack_version_t  *const p_version )
```

10.3.4.1 Brief description

Set SSP version based on compile time macros.

10.3.4.2 Detailed description

Table 2355:

Name	Direction	Description
p_version	out	Memory address to return version information to.

Table 2356:

Name	Description
SSP_SUCCESS	Version information stored.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

10.3.5 bsp_init_internal

```
bsp_init_internal (  void * p_args )
```

10.3.5.1 Brief description

Default initialization function, used only if bsp_init is not defined in the user application.

10.3.6 Common BSP LED Code and Types

Common support for board LEDs.

Contains types and functions that allow for common use of LEDs on boards

10.3.6.1 Data structures

- bsp_leds_t

10.3.6.2 Functions

- R_BSP_LedsGet

10.3.6.3 R_BSP_LedsGet

```
ssp_err_t R_BSP_LedsGet ( bsp_leds_t  * p_leds )
```

Brief description

Return information about the LEDs on the current board.

Detailed description

Structure with LED information.

Table 2357:

Name	Direction	Description
p_leds	out	Pointer to structure where LED info is stored.

10.3.6.4 bsp_leds_t

bsp_leds_t

Detailed description

Information on how many LEDs and what pins they are on.

Variables

- uint16_t led_count

  The number of LEDs on this board.

- ioport_port_pin_t const * p_leds

  Pointer to an array of IOPORT pins for controlling LEDs.

10.3.7 Compiler Support

The macros in this file are defined based upon which compiler is being used. The macros abstract common section names and gives a common way to place code in a particular section. Some macros have a version that ends in V2. These were created to unify the usage between compilers while retaining backwards compatibility in the existing macros and should be preferred in new code.

Description of macros:

- BSP_SECTION_STACK - Name of section where stack(s) are stored
- BSP_SECTION_HEAP - Name of section where heap(s) are stored
- BSP_SECTION_VECTOR - Name of section where vector table is stored
- BSP_SECTION_ROM_REGISTERS - Name of section where ROM registers are located
- BSP_PLACE_IN_SECTION - Macro for placing code in a particular section
- BSP_ALIGN_VARIABLE - Macro for specifying a minimum alignment in bytes
- BSP_PACKED - Macro for setting a 1 byte alignment to remove padding

- BSP_DONT_REMOVE - Keyword to tell linker/compiler to not optimize out a variable or function

NOTE: Currently supported compilers are GCC and IAR

10.3.7.1 Defines

- #define BSP_PLACE_IN_SECTION_V2
  Initial value:`__attribute__ ((section(x))) __attribute__ ((__used__))`
- #define BSP_ALIGN_VARIABLE_V2
  Initial value:`__attribute__ ((aligned (x)))`
- #define BSP_PACKED_V2
  Initial value:`__attribute__ ((aligned(1)))`

10.3.8 Software Delay

Common function to implement a software delay.
Implements a software delay function for all BSPs.

10.3.8.1 Functions

- R_BSP_SoftwareDelay
- software_delay_loop

10.3.8.2 R_BSP_SoftwareDelay

```
R_BSP_SoftwareDelay (  uint32_t delay ,   bsp_delay_units_t units )
```

Brief description

Delay the specified duration in units and return.

Detailed description

Table 2358:

Name	Direction	Description
delay	in	The number of 'units' to delay.

Table 2358: (Continued)

Name	Direction	Description
units	in	The 'base' (bsp_delay_units_t) for the units specified. Valid values are: BSP_DELAY_UNITS_SECONDS, BSP_DELAY_UNITS_MILLISECONDS, BSP_DELAY_UNITS_MICROSECONDS. For example: At 1 MHz one cycle takes 1 microsecond (.000001 seconds). At 12 MHz one cycle takes 1/12 microsecond or 83 nanoseconds. Therefore one run through software_delay_loop() takes: ~ (83 * DELAY_LOOP_CYCLES) or 332 ns. A delay of 2 us therefore requires 2000ns/332ns or 6 loops.

The 'theoretical' maximum delay that may be obtained is determined by a full 32 bit loop count and the system clock rate. @240MHz: ((0xFFFFFFFF loops * 4 cycles /loop) / 240000000) = 71 seconds. @32MHz: ((0xFFFFFFFF loops * 4 cycles /loop) / 32000000) = 536 seconds

Note that requests for very large delays will be affected by rounding in the calculations and the actual delay achieved may be slightly less. @32 MHz, for example, a request for 532 seconds will be closer to 536 seconds.

Note also that if the calculations result in a loop_cnt of zero, the software_delay_loop() function is not called at all. In this case the requested delay is too small (nanoseconds) to be carried out by the loop itself, and the overhead associated with executing the code to just get to this point has certainly satisfied the requested delay.

NOTE: This function calls bsp_cpu_clock_get which ultimately calls R_CGC_SystemClockFreqGet and therefore requires that the BSP has already initialized the CGC (which it does as part of the Sysinit). Care should be taken to ensure this remains the case if in the future this function were to be called as part of the BSP initialization.

Table 2359:

Name	Description
None.	

Function steps

- Convert the requested time to microseconds.
- Get the system clock frequency in Hz.
- Get the # of nanoseconds/cycle.
- Only delay if the supplied parameters constitute a delay.

10.3.8.3 software_delay_loop

```
software_delay_loop (  uint32_t loop_cnt )
```

Brief description

This assembly language routine takes roughly 4 cycles per loop. 2 additional cycles occur when the loop exits. The 'naked' attribute indicates that the specified function does not need prologue/epilogue sequences generated by the compiler.

Detailed description

Table 2360:

Name	Direction	Description
loop_cnt	in	The number of loops to iterate.

Table 2361:

Name	Description
None.	

Function steps

- < 1 cycle
- < 2 cycles
- < 2 cycles
- loop_cnt is used but since it is used in assembly an unused parameter warning can be generated.

10.3.9 Error Checking

This file performs build time error checking where possible.

10.3.9.1 Defines

- #define BSP_STACK_ALIGNMENT

  Initial value: `(8)`

  Stacks (and heap) must be sized and aligned to an integer multiple of this number.

10.3.10 Module specific feature overrides

This group contains lookup functions that provide MCU specific feature information that is not available in the factory flash.

10.3.10.1 Functions

- R_BSP_FeatureSciGet
- R_BSP_FeatureRspiGet
- R_BSP_FeatureLvdGet
- R_BSP_FeatureAcmphsGet
- R_BSP_FeatureAdcGet
- R_BSP_FeatureCtsuGet
- R_BSP_FeatureIoportGet
- R_BSP_FeatureCgcGet
- R_BSP_FeatureCanGet
- R_BSP_FeatureDacGet
- R_BSP_FeatureFlashLpGet
- R_BSP_FeatureOpampGet
- R_BSP_FeatureSdhiGet
- R_BSP_FeatureSsiGet

10.3.10.2 Data structures

- bsp_feature_sci_t
- bsp_feature_rspi_t
- bsp_feature_lvd_t
- bsp_feature_acmphs_t
- bsp_feature_adc_t

- bsp_feature_can_t
- bsp_feature_dac_t
- bsp_feature_flash_lp
- bsp_feature_flash_hp
- bsp_feature_ctsu_t
- bsp_feature_ioport_t
- bsp_feature_cgc_t
- bsp_feature_opamp_t
- bsp_feature_sdhi_t
- bsp_feature_ssi_t

10.3.10.3 R_BSP_FeatureSciGet

```
R_BSP_FeatureSciGet ( bsp_feature_sci_t  * p_sci_feature )
```

Detailed description

Get MCU specific SCI features.

Table 2362:

Name	Direction	Description
p_sci_feature	out	Pointer to structure to store SCI features.

10.3.10.4 R_BSP_FeatureRspiGet

```
R_BSP_FeatureRspiGet ( bsp_feature_rspi_t  * p_rspi_feature )
```

Detailed description

Get MCU specific RSPI features.

Table 2363:

Name	Direction	Description
p_rspi_feature	out	Pointer to structure to store RSPI features.

10.3.10.5 R_BSP_FeatureLvdGet

```
R_BSP_FeatureLvdGet ( bsp_feature_lvd_t  * p_lvd_feature )
```

Detailed description

Get MCU specific LVD features.

Table 2364:

Name	Direction	Description
p_lvd_feature	out	Pointer to structure to store LVD features.

10.3.10.6 R_BSP_FeatureAcmphsGet

```
R_BSP_FeatureAcmphsGet ( bsp_feature_acmphs_t  * p_acmphs_feature )
```

10.3.10.13 R_BSP_FeatureFlashLpGet

```
R_BSP_FeatureFlashLpGet ( bsp_feature_flash_lp  * p_flash_lp_feature )
```

Detailed description

Get MCU specific FLASH LP features

Table 2372:

Name	Direction	Description
p_flash_lp_feature	out	Pointer to structure to store Flash LP features.

Function steps

- S124 uses 1 macro of 128K and single access for Code Flash. It can therefore access 128K as a single macro and it's Code Flash memory is effectively organized as a single macro of 128K, yielding a total of 128K Code Flash.
- S3A7 uses 4 macros of 256K and double access for Code Flash. It can therefore access 512K as a single macro and it's Code Flash memory is effectively organized as 2 macros of 512K each, yielding a total of 1MB Code Flash. This generates a macro boundary at 512K which is important for blank checking.

10.3.10.17 bsp_feature_sci_t

bsp_feature_sci_t

Detailed description

SCI MCU specific features.

Variables

- uint8_t clock

  Which clock the SCI is connected to.

10.3.10.18 bsp_feature_rspi_t

bsp_feature_rspi_t

Detailed description

RSPI MCU specific features.

Variables

- uint8_t clock

  Which clock the RSPI is connected to.
- uint8_t has_ssl_level_keep

10.3.10.19 bsp_feature_lvd_t

bsp_feature_lvd_t

Detailed description

LVD MCU specific features.

Variables

- uint8_t monitor_1_low_threshold

  Monitor 1 lowest valid voltage threshold.

- uint8_t monitor_1_hi_threshold

  Monitor 1 highest valid voltage threshold.
- uint8_t monitor_2_low_threshold

  Monitor 2 lowest valid voltage threshold.
- uint8_t monitor_2_hi_threshold

  Monitor 2 highest valid voltage threshold.
- uint32_t has_digital_filter

  Whether or not LVD has a digital filter.
- uint32_t negation_delay_clock

  Clock required for LVD signal negation delay after reset.

10.3.10.20 bsp_feature_acmphs_t

bsp_feature_acmphs_t

Detailed description

ACMPHS MCU specific features.

Variables

- uint32_t min_wait_time_us

  Minimum stabilization wait time in microseconds.

10.3.10.21 bsp_feature_adc_t

bsp_feature_adc_t

Detailed description

ADC MCU specific features.

Variables

- uint8_t has_sample_hold_reg

  Whether or not sample and hold registers are present.
- uint8_t group_b_sensors_allowed

  Whether or not sensors are allowed on group b.
- uint8_t sensors_exclusive

  Whether or not sensors can be used with other sensors/channels.
- uint8_t tsn_calibration_available

  Identify if the TSN calibration data is available.

- uint8_t tsn_control_available

  Identify if the TSN control register is available.
- int16_t tsn_slope

  TSN slope in micro-volts/°C.
- uint32_t sensor_min_sampling_time

  The minimum sampling time required by the on-chip temperature and voltage sensor in nsec.
- uint32_t clock_source

  The conversion clock used by the ADC peripheral.
- uint8_t addition_supported

  Whether addition is supported or not in this MCU.
- uint8_t calibration_reg_available

  Whether CALEXE register is available.

10.3.10.22 bsp_feature_can_t

bsp_feature_can_t

Detailed description

CAN MCU specific features.

Variables

- uint8_t mclock_only

  Whether or not MCLK is the only valid clock.
- uint8_t check_pclkb_ratio

  Whether clock:PCLKB must be 2:1.
- uint8_t clock

  Which clock to compare PCLKB to.

10.3.10.23 bsp_feature_dac_t

bsp_feature_dac_t

Detailed description

DAC MCU specific features.

Variables

- uint8_t has_davrefcr

  Whether or not DAC has DAVREFCR register.

10.3.10.24 bsp_feature_flash_lp

bsp_feature_flash_lp

Detailed description

FLASH LP MCU specific features.

Variables

- uint8_t flash_clock_src

  Source clock for Flash (ie. FCLK or ICLK)
- uint8_t flash_cf_macros

  Number of implemented code flash hardware macros.
- uint32_t cf_macro_size

  The size of the implemented Code Flash macro.

10.3.10.25 bsp_feature_flash_hp

bsp_feature_flash_hp

Detailed description

FLASH HP MCU specific features.

Variables

- uint8_t cf_block_size_write

  Code Flash Block size write.

10.3.10.26 bsp_feature_ctsu_t

bsp_feature_ctsu_t

Detailed description

CTSU MCU specific features.

Variables

- uint8_t ctsucr0_mask

  Mask of valid bits in CTSUCR0.
- uint8_t ctsucr1_mask

  Mask of valid bits in CTSUCR1.
- uint8_t ctsumch0_mask

  Mask of valid bits in CTSUMCH0.

- uint8_t ctsumch1_mask

  Mask of valid bits in CTSUMCH1.
- uint8_t ctsuchac_register_count

  Number of CTSUCHAC registers.
- uint8_t ctsuchtrc_register_count

  Number of CTSUCHTRC registers.

10.3.10.27 bsp_feature_ioport_t

bsp_feature_ioport_t

Detailed description

I/O port MCU specific features.

Variables

- uint8_t has_ethernet

  Whether or not MCU has Ethernet port configurations.
- uint8_t has_vbatt_pins

  Whether or not MCU has pins on vbatt domain.

10.3.10.28 bsp_feature_cgc_t

bsp_feature_cgc_t

Detailed description

CGC MCU specific features.

Variables

- uint32_t high_speed_freq_hz

  Frequency above which high speed mode must be used.
- uint32_t middle_speed_max_freq_hz

  Max frequency for middle speed, 0 indicates not available.
- uint32_t low_speed_max_freq_hz

  Max frequency for low speed, 0 indicates not available.
- uint32_t low_voltage_max_freq_hz

  Max frequency for low voltage, 0 indicates not available.
- uint32_t low_speed_pclk_div_min

  Minimum divisor for peripheral clocks when using oscillator stop detect.

- uint32_t low_voltage_pclk_div_min

  Minimum divisor for peripheral clocks when using oscillator stop detect.
- uint32_t hoco_freq_hz

  HOCO frequency.
- uint32_t main_osc_freq_hz

  Main oscillator frequency.
- uint8_t modrv_mask

  Mask for MODRV in MOMCR.
- uint8_t modrv_shift

  Offset of lowest bit of MODRV in MOMCR.
- uint8_t sodrv_mask

  Mask for SODRV in SOMCR.
- uint8_t sodrv_shift

  Offset of lowest bit of SODRV in SOMCR.
- uint8_t pll_div_max

  Maximum PLL divisor.
- uint8_t pll_mul_min

  Minimum PLL multiplier.
- uint8_t pll_mul_max

  Maximum PLL multiplier.
- uint8_t mainclock_drive

  Main clock drive capacity.
- uint32_t iclk_div

  ICLK divisor.
- uint32_t pllccr_type

  0: No PLL, 1: PLLCCR, 2: PLLCCR2
- uint32_t pll_src_configurable

  Whether or not PLL clock source is configurable.
- uint32_t has_subosc_speed

  Whether or not MCU has subosc speed mode.
- uint32_t has_lcd_clock

  Whether or not MCU has LCD clock.
- uint32_t has_sdram_clock

  Whether or not MCU has SDRAM clock.

- uint32_t has_usb_clock_div

  Whether or not MCU has USB clock divisor.
- uint32_t has_pclka

  Whether or not MCU has PCLKA clock.
- uint32_t has_pclkb

  Whether or not MCU has PCLKB clock.
- uint32_t has_pclkc

  Whether or not MCU has PCLKC clock.
- uint32_t has_pclkd

  Whether or not MCU has PCLKD clock.
- uint32_t has_fclk

  Whether or not MCU has FCLK clock.
- uint32_t has_bclk

  Whether or not MCU has BCLK clock.
- uint32_t has_sdadc_clock

  Whether or not MCU has SDADC clock.

10.3.10.29 bsp_feature_opamp_t

bsp_feature_opamp_t

Detailed description

OPAMP MCU specific features.

Variables

- uint16_t min_wait_time_lp_us

  Minimum wait time in low power mode.
- uint16_t min_wait_time_ms_us

  Minimum wait time in middle speed mode.
- uint16_t min_wait_time_hs_us

  Minimum wait time in high speed mode.

10.3.10.30 bsp_feature_sdhi_t

bsp_feature_sdhi_t

Detailed description

SDHI MCU specific features.

Variables

- uint8_t has_card_detection

  Whether or not MCU has card detection.

- uint32_t max_clock_frequency

  Maximum clock rate supported by the peripheral.

10.3.10.31 bsp_feature_ssi_t

bsp_feature_ssi_t

Detailed description

SSI MCU specific features.

Variables

- uint8_t fifo_num_stages

  Number of FIFO stages on this MCU.

10.3.11 Grouped Interrupt Support

Support for grouped interrupts. Grouped interrupts occur when multiple interrupt events trigger the same interrupt vector. When this common vector is triggered the activation source must be discovered. The functions in this file allow users to register a callback function for a single interrupt source in an interrupt group.

10.3.11.1 Functions

- R_BSP_GroupIrqWrite
- NMI_Handler

10.3.11.2 R_BSP_GroupIrqWrite

```
ssp_err_t R_BSP_GroupIrqWrite (  bsp_grp_irq_t irq ,   void(*)(bsp_grp_irq_t
irq) p_callback )
```

Brief description

Register a callback function for supported interrupts. If NULL is passed for the callback argument then any previously registered callbacks are unregistered.

Detailed description

Table 2376:

Name	Direction	Description
irq	in	Interrupt for which to register a callback.
p_callback	in	Pointer to function to call when interrupt occurs.

Table 2377:

Name	Description
SSP_SUCCESS	Callback registered

Function steps

- Check for valid address.
- Callback was NULL. De-register callback.
- Register callback.

10.3.11.3 NMI_Handler

```
NMI_Handler ( void )
```

Brief description

Non-maskable interrupt handler. This exception is defined by the BSP, unlike other system exceptions, because there are many sources that map to the NMI exception.

Function steps

- Determine what is the cause of this interrupt.
- IWDT underflow/refresh error interrupt is requested.
- Clear IWDT flag.
- WDT underflow/refresh error interrupt is requested.
- Clear WDT flag.
- Voltage monitoring 1 interrupt is requested.
- Clear LVD1 flag.
- Voltage monitoring 2 interrupt is requested.

- Clear LVD2 flag.
- Oscillation stop detection interrupt is requested.
- Clear oscillation stop detect flag.
- NMI pin interrupt is requested.
- Clear NMI pin interrupt flag.
- RAM Parity Error interrupt is requested.
- Clear RAM parity error flag.
- RAM ECC Error interrupt is requested.
- Clear RAM ECC error flag.
- Determine what is the cause of this interrupt.
- IWDT underflow/refresh error interrupt is requested.
- Clear IWDT flag.
- WDT underflow/refresh error interrupt is requested.
- Clear WDT flag.
- Voltage monitoring 1 interrupt is requested.
- Clear LVD1 flag.
- Voltage monitoring 2 interrupt is requested.
- Clear LVD2 flag.
- VBATT Monitor interrupt is requested.
- Clear VBATT flag.
- Oscillation stop detection interrupt is requested.
- Clear oscillation stop detect flag.
- NMI pin interrupt is requested.
- Clear NMI pin interrupt flag.
- RAM Parity Error interrupt is requested.
- Clear RAM parity error flag.
- RAM ECC Error interrupt is requested.
- Clear RAM ECC error flag.
- MPU Bus Slave Error interrupt is requested.
- Clear MPU Bus Slave error flag.
- MPU Bus Slave Error interrupt is requested.
- Clear MPU Bus Master error flag.
- MPU Stack Error interrupt is requested.
- Clear MPU Stack error flag.

- Determine what is the cause of this interrupt.
- IWDT underflow/refresh error interrupt is requested.
- Clear IWDT flag.
- WDT underflow/refresh error interrupt is requested.
- Clear WDT flag.
- Voltage monitoring 1 interrupt is requested.
- Clear LVD1 flag.
- Voltage monitoring 2 interrupt is requested.
- Clear LVD2 flag.
- VBATT Monitor interrupt is requested.
- Clear VBATT flag.
- Oscillation stop detection interrupt is requested.
- Clear oscillation stop detect flag.
- NMI pin interrupt is requested.
- Clear NMI pin interrupt flag.
- RAM Parity Error interrupt is requested.
- Clear RAM parity error flag.
- RAM ECC Error interrupt is requested.
- Clear RAM ECC error flag.
- MPU Bus Slave Error interrupt is requested.
- Clear MPU Bus Slave error flag.
- MPU Bus Master Error interrupt is requested.
- Clear MPU Bus Master error flag.
- MPU Stack Error interrupt is requested.
- Clear MPU Stack error flag.

10.3.12 Interrupt Initialization

This module configures certain ELC events so that they can trigger NVIC interrupts. Which events are used as interrupts depends on settings in bsp_irq_cfg.h.

10.3.12.1 Functions

- R_BSP_IrqStatusClear
- bsp_irq_cfg

10.3.12.2 R_BSP_IrqStatusClear

```
R_BSP_IrqStatusClear (  IRQn_Type irq )
```

Brief description

Clear the interrupt status flag (IR) for a given interrupt. When an interrupt is triggered the IR bit is set. If it is not cleared in the ISR then the interrupt will trigger again immediately.

Detailed description

Table 2378:

Name	Direction	Description
irq	in	Interrupt for which to clear the IR bit. Note that the enums listed for IRQn_Type are only those for the Cortex Processor Exceptions Numbers. In prior releases this list contained all of the interrupts enabled for the specfic MCU but enabled interrupts are now configured using the SSP_VECTOR_DEFINE macro.

NOTE: This does not work for system exceptions where the IRQn_Type value is < 0.

10.3.12.3 bsp_irq_cfg

```
bsp_irq_cfg (  void  )
```

Brief description

Using the vector table information section that has been built by the linker and placed into ROM in the .vector_info. section, this function will initialize the ICU so that configured ELC events will trigger interrupts in the NVIC.

10.3.13 Atomic Locking

This module implements atomic locking mechanisms.

10.3.13.1 Functions

- R_BSP_SoftwareLock
- r_bsp_software_lock_cm0plus
- R_BSP_SoftwareUnlock

- R_BSP_HardwareLock
- R_BSP_HardwareUnlock
- bsp_init_hardware_locks
- R_BSP_SoftwareLockInit

10.3.13.2 Data structures

- bsp_lock_t

10.3.13.3 R_BSP_SoftwareLock

```
ssp_err_t R_BSP_SoftwareLock ( bsp_lock_t  * p_lock )
```

Brief description

Attempt to acquire the lock that has been sent in.

Detailed description

Table 2379:

Name	Direction	Description
p_lock	in	Pointer to the structure which contains the lock to be acquired.

Table 2380:

Name	Description
SSP_SUCCESS	Lock was acquired
SSP_ERR_IN_USE	Lock was not acquired

10.3.13.4 r_bsp_software_lock_cm0plus

```
ssp_err_t r_bsp_software_lock_cm0plus ( bsp_lock_t  * p_lock )
```

Brief description

Attempt to acquire the lock that has been sent in (CM0+ implementation).

Detailed description

Table 2381:

Name	Direction	Description
p_lock	in	Pointer to the structure which contains the lock to be acquired.

Table 2382:

Name	Description
SSP_SUCCESS	Lock was acquired
SSP_ERR_IN_USE	Lock was not acquired

10.3.13.5 R_BSP_SoftwareUnlock

```
R_BSP_SoftwareUnlock ( bsp_lock_t  * p_lock )
```

Brief description

Release hold on lock.

Detailed description

Table 2383:

Name	Direction	Description
p_lock	in	Pointer to the structure which contains the lock to unlock.

10.3.13.6 R_BSP_HardwareLock

```
ssp_err_t R_BSP_HardwareLock (  ssp_feature_t const *const p_feature )
```

Brief description

Attempt to reserve a hardware resource lock.

Detailed description

Table 2384:

Name	Direction	Description
p_feature	in	Pointer to the module specific feature information.

Table 2385:

Name	Description
SSP_SUCCESS	Lock was acquired
SSP_ERR_IN_USE	Lock was not acquired

10.3.13.7 R_BSP_HardwareUnlock

```
R_BSP_HardwareUnlock (  ssp_feature_t const *const p_feature )
```

Brief description

Release hold on lock.

Detailed description

Table 2386:

Name	Direction	Description
p_feature	in	Pointer to the module specific feature information.

10.3.13.8 bsp_init_hardware_locks

```
bsp_init_hardware_locks (  void  )
```

Brief description

Initialize all of the hardware locks to BSP_LOCK_UNLOCKED.

10.3.13.9 R_BSP_SoftwareLockInit

```
R_BSP_SoftwareLockInit ( bsp_lock_t  * p_lock )
```

Brief description

Initialize lock value to be unlocked.

Detailed description

Table 2387:

Name	Direction	Description
p_lock	in	Pointer to the structure which contains the lock to initialize.

10.3.13.10 bsp_lock_t

bsp_lock_t

Detailed description

Lock structure. Passed into software locking functions such as R_BSP_SoftwareLock and R_BSP_SoftwareUnLock.

Variables

- uint8_t lock

  A uint8_t is used instead of a enum because the size must be 8-bits.

10.3.14 Register Protection

Important registers are write protected. This module provides APIs for configuring the protection of these registers. Reference counters are used to ensure proper operation.

10.3.14.1 Functions

- R_BSP_RegisterProtectEnable
- R_BSP_RegisterProtectDisable
- bsp_register_protect_open

10.3.14.2 R_BSP_RegisterProtectEnable

```
R_BSP_RegisterProtectEnable (  bsp_reg_protect_t regs_to_protect )
```

Brief description

Enable register protection. Registers that are protected cannot be written to. Register protection is enabled by using the Protect Register (PRCR) and the MPC's Write-Protect Register (PWPR).

Detailed description

Table 2388:

Name	Direction	Description
regs_to_protect	in	Registers which have write protection enabled.

Function steps

- Get/save the current state of interrupts
- Enable protection using PRCR register.
- When writing to the PRCR register the upper 8-bits must be the correct key. Set lower bits to 0 to disable writes.
- Restore the interrupt state

10.3.14.3 R_BSP_RegisterProtectDisable

```
R_BSP_RegisterProtectDisable (  bsp_reg_protect_t regs_to_unprotect )
```

Brief description

Disable register protection. Registers that are protected cannot be written to. Register protection is disabled by using the Protect Register (PRCR) and the MPC's Write-Protect Register (PWPR).

Detailed description

Table 2389:

Name	Direction	Description
regs_to_unprotect	in	Registers which have write protection disabled.

Function steps

- Get/save the current state of interrupts
- Disable protection using PRCR register.
- When writing to the PRCR register the upper 8-bits must be the correct key. Set lower bits to 0 to disable writes.
- Increment the protect counter
- Restore the interrupt state

10.3.14.4 bsp_register_protect_open

```
bsp_register_protect_open (  void  )
```

Brief description

Initializes variables needed for register protection functionality.

Function steps

- Initialize reference counters to 0.

Chapter 11 API Reference: Structure Index

11.1 Structures

```

11.1.4.1 unit

uint16_t adc_callback_args_t::unit

Brief description

ADC device in use.

11.1.4.2 event

adc_cb_event_t::event

Brief description

ADC callback event.

11.1.4.3 p_context

void const* adc_callback_args_t::p_context

Brief description

Placeholder for user data.

11.1.4.4 channel

adc_register_t::channel

Brief description

Channel of conversion result. Only valid for ADC_EVENT_CONVERSION_COMPLETE.

11.1.5 adc_cfg_t

```
typedef struct{
    uint16_t  unit
    adc_mode_t  mode
    adc_resolution_t  resolution
    adc_alignment_t  alignment
    adc_add_t  add_average_count
    adc_clear_t  clearing
    adc_trigger_t  trigger
    adc_trigger_t  trigger_group_b
    uint8_t  scan_end_ipl
    uint8_t  scan_end_b_ipl
    bool  calib_adc_skip
    void(*  p_callback)(adc_callback_args_t *p_args)
    void const  *  p_context
    void const  *  p_extend
} adc_cfg_t
```

11.1.5.1 unit

uint16_t adc_cfg_t::unit

Brief description

ADC Unit to be used.

11.1.5.2 mode

adc_mode_t::mode

Brief description

ADC operation mode.

11.1.5.3 resolution

adc_resolution_t::resolution

Brief description

ADC resolution 8, 10, or 12-bit.

11.1.5.4 alignment

adc_alignment_t::alignment

Brief description

Specify left or right alignment; ignored if addition used.

11.1.5.5 add_average_count

adc_add_t::add_average_count

Brief description

Add or average samples.

11.1.5.6 clearing

adc_clear_t::clearing

Brief description

Clear after read.

11.1.5.7 trigger

adc_trigger_t::trigger

Brief description

Default and Group A trigger source.

11.1.5.8 trigger_group_b

`adc_trigger_t::trigger_group_b`

Brief description

Group B trigger source; valid only for group mode.

11.1.5.9 scan_end_ipl

`uint8_t adc_cfg_t::scan_end_ipl`

Brief description

Scan end interrupt priority.

11.1.5.10 scan_end_b_ipl

`uint8_t adc_cfg_t::scan_end_b_ipl`

Brief description

Scan end group B interrupt priority.

11.1.5.11 calib_adc_skip

`bool adc_cfg_t::calib_adc_skip`

Brief description

Option to perform calibration when channels are configured.

11.1.5.12 p_callback

`void(* adc_cfg_t::p_callback) (adc_callback_args_t *p_args)`

Brief description

Callback function; set to NULL for none.

11.1.5.13 p_context

`void const* adc_cfg_t::p_context`

Brief description

Placeholder for user data. Passed to the user callback in adc_api_t::adc_callback_args_t.

11.1.5.14 p_extend

```
void const* adc_cfg_t::p_extend
```

Brief description

Extension parameter for hardware specific settings.

11.1.6 adc_channel_cfg_t

```
typedef struct{
    uint32_t  scan_mask
    uint32_t  scan_mask_group_b
    adc_group_a_t  priority_group_a
    uint32_t  add_mask
    uint8_t  sample_hold_mask
    uint8_t  sample_hold_states
} adc_channel_cfg_t
```

11.1.6.1 scan_mask

```
uint32_t adc_channel_cfg_t::scan_mask
```

Detailed description

Channels/bits: bit 0 is ch0; bit 15 is ch15. Use #define ADC_MASK_xxx from r_adc.h.

11.1.6.2 scan_mask_group_b

```
uint32_t adc_channel_cfg_t::scan_mask_group_b
```

Brief description

Valid for group modes. Use #define ADC_MASK_xxx from r_adc.h.

11.1.6.3 priority_group_a

```
adc_group_a_t::priority_group_a
```

Brief description

Valid for group modes.

11.1.6.4 add_mask

```
uint32_t adc_channel_cfg_t::add_mask
```

Brief description

Valid if add enabled in Open(). Use #define ADC_MASK_xxx from r_adc.h.

11.1.6.5 sample_hold_mask

```
uint8_t adc_channel_cfg_t::sample_hold_mask
```

Brief description

Channels/bits 0-2. Use #define ADC_MASK_xxx from r_adc.h.

11.1.6.6 sample_hold_states

```
uint8_t adc_channel_cfg_t::sample_hold_states
```

Brief description

Number of states to be used for sample and hold. Affects channels 0-2.

11.1.7 adc_info_t

```
typedef struct{
    __I uint16_t *  p_address
    uint32_t  length
    transfer_size_t  transfer_size
    elc_peripheral_t  elc_peripheral
    elc_event_t  elc_event
    uint32_t  calibration_data
    int16_t  slope_microvolts
    bool  calibration_ongoing
} adc_info_t
```

11.1.7.1 p_address

```
__I uint16_t* adc_info_t::p_address
```

Brief description

The address to start reading the data from.

11.1.7.2 length

```
uint32_t adc_info_t::length
```

Brief description

The total number of transfers to read.

11.1.7.3 transfer_size

```
transfer_size_t::transfer_size
```

Brief description

The size of each transfer.

11.1.7.4 elc_peripheral

`elc_peripheral_t::elc_peripheral`

Brief description

Name of the peripheral in the ELC list.

11.1.7.5 elc_event

`elc_event_t::elc_event`

Brief description

Name of the ELC event for the peripheral.

11.1.7.6 calibration_data

`uint32_t adc_info_t::calibration_data`

Detailed description

Temperature sensor calibration data (0xFFFFFFFF if unsupported). Refer to hardware manual for steps on using slope with calibration data to determine temperature

11.1.7.7 slope_microvolts

`int16_t adc_info_t::slope_microvolts`

Brief description

Temperature sensor slope in microvolts/°C.

11.1.7.8 calibration_ongoing

`bool adc_info_t::calibration_ongoing`

Brief description

Calibration is in progress.

11.1.8 adc_instance_ctrl_t

```
typedef struct{
    uint16_t  unit
    int16_t  slope_microvolts
```

```
    adc_mode_t  mode
    adc_alignment_t  alignment
    uint8_t  max_resolution
    uint8_t  pga_available
    uint8_t  tsn_ctrl_available
    uint8_t  tsn_calib_available
    uint8_t  adc_calib_available
    R_TSN_Control_Type *  p_tsn_ctrl_regs
    R_TSN_Calibration_Type *  p_tsn_calib_regs
    void const  *  p_context
    void *  p_reg
    void(*  callback)(adc_callback_args_t *p_args)
    adc_trigger_t  trigger
    uint32_t  opened
    uint32_t  scan_mask
    IRQn_Type  scan_end_irq
    IRQn_Type  scan_end_b_irq
} adc_instance_ctrl_t
```

11.1.8.1 unit

`uint16_t ::unit`

Brief description

ADC Unit in use.

11.1.8.2 slope_microvolts

`int16_t ::slope_microvolts`

Brief description

Temperature sensor slope in microvolts/°C.

11.1.8.3 mode

`adc_mode_t::mode`

Brief description

operational mode

11.1.8.4 alignment

`adc_alignment_t::alignment`

Brief description

alignment

11.1.8.5 max_resolution

```
uint8_t ::max_resolution
```

Brief description

ADC max resolution: 8, 10, 12, or 14-bit.

11.1.8.6 pga_available

```
uint8_t ::pga_available
```

Brief description

PGA available or not on MCU.

11.1.8.7 tsn_ctrl_available

```
uint8_t ::tsn_ctrl_available
```

Brief description

Availability of TSN control register.

11.1.8.8 tsn_calib_available

```
uint8_t ::tsn_calib_available
```

Brief description

Availability of TSn calibration register.

11.1.8.9 adc_calib_available

```
uint8_t ::adc_calib_available
```

Brief description

Availability of ADC calibration feature.

11.1.8.10 p_tsn_ctrl_regs

```
R_TSN_Control_Type* ::p_tsn_ctrl_regs
```

Brief description

Pointer to temperature control register.

11.1.8.11 p_tsn_calib_regs

```
R_TSN_Calibration_Type* ::p_tsn_calib_regs
```

Brief description

Pointer to temperature calibration register.

11.1.8.12 p_context

```
void const* ::p_context
```

Brief description

Placeholder for user data.

11.1.8.13 p_reg

```
void* ::p_reg
```

Brief description

Base register for this unit.

11.1.8.14 callback

```
void(* ::callback) ( *p_args)
```

Brief description

User callback pointer.

11.1.8.15 trigger

```
adc_trigger_t::trigger
```

Brief description

Trigger defined for normal mode.

11.1.8.16 opened

```
uint32_t ::opened
```

Brief description

Boolean to verify that the Unit has been initialized.

11.1.8.17 scan_mask

```
uint32_t ::scan_mask
```

Brief description

Scan mask used for Normal scan.

11.1.8.18 scan_end_irq

```
IRQn_Type ::scan_end_irq
```

Brief description

Scan end IRQ number.

11.1.8.19 scan_end_b_irq

```
IRQn_Type ::scan_end_b_irq
```

Brief description

Scan end group B IRQ number.

11.1.9 adc_instance_t

```
typedef struct{
    adc_ctrl_t *  p_ctrl
    adc_cfg_t const  *  p_cfg
    adc_channel_cfg_t const  *  p_channel_cfg
    adc_api_t const  *  p_api
} adc_instance_t
```

11.1.9.1 p_ctrl

```
adc_ctrl_t::p_ctrl
```

Brief description

Pointer to the control structure for this instance.

11.1.9.2 p_cfg

```
adc_cfg_t::p_cfg
```

Brief description

Pointer to the configuration structure for this instance.

11.1.9.3 p_channel_cfg

```
adc_channel_cfg_t::p_channel_cfg
```

Brief description

Pointer to the channel configuration structure for this instance.

11.1.9.4 p_api

adc_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.10 adc_on_sdadc_cfg_t

```
typedef struct{
    uint8_t  calibration_end_ipl
    uint8_t  conversion_end_ipl
    bool  skip_internal_calibration
    sdadc_vref_src_t  vref_src
    sdadc_vref_voltage_t  vref_voltage
    sdadc_channel_cfg_t const  *  p_channel_cfgs[SDADC_MAX_NUM_CHANNELS]
} adc_on_sdadc_cfg_t
```

11.1.10.1 calibration_end_ipl

uint8_t ::calibration_end_ipl

Brief description

Calibration end interrupt priority.

11.1.10.2 conversion_end_ipl

uint8_t ::conversion_end_ipl

Brief description

Conversion end interrupt priority.

11.1.10.3 skip_internal_calibration

bool ::skip_internal_calibration

Brief description

Whether to skip internal calibration of of the PGA during open.

11.1.10.4 vref_src

sdadc_vref_src_t::vref_src

Brief description

Source of Vref (internal or external)

11.1.10.5 vref_voltage

sdadc_vref_voltage_t::vref_voltage

Detailed description

Voltage of Vref, required for both internal and external Vref. If Vref is from an external source, the voltage must match the specified voltage within 3%.

11.1.10.6 p_channel_cfgs

sdadc_channel_cfg_t::p_channel_cfgs

Brief description

Configuration for each channel, set to NULL if unused.

11.1.11 adc_sample_state_t

```
typedef struct{
    adc_sample_state_reg_t  reg_id
    uint8_t  num_states
} adc_sample_state_t
```

11.1.11.1 reg_id

adc_sample_state_reg_t::reg_id

Brief description

Sample state register ID.

11.1.11.2 num_states

uint8_t adc_sample_state_t::num_states

Brief description

Number of sampling states for conversion. Ch16-20/21 use the same value.

11.1.12 aes_api_t

```
typedef struct{
    uint32_t(*  open)(aes_ctrl_t *const p_ctrl, aes_cfg_t const *const p_cfg)
    uint32_t(*  createKey)(aes_ctrl_t *const p_ctrl, uint32_t num_words, uint32_t
*p_key)
    uint32_t(*  encrypt)(aes_ctrl_t *const p_ctrl, const uint32_t *p_key,
uint32_t *p_iv, uint32_t num_words, uint32_t *p_source, uint32_t *p_dest)
    uint32_t(*  addAdditionalAuthenticationData)(aes_ctrl_t *const p_ctrl, const
```

```
uint32_t *p_key, uint32_t *p_iv, uint32_t num_words, uint32_t *p_source)
    uint32_t(*  encryptFinal)(aes_ctrl_t *const p_ctrl, const uint32_t *p_key,
uint32_t *p_iv, uint32_t input_num_words, uint32_t *p_source, uint32_t
output_num_words, uint32_t *p_dest)
    uint32_t(*  decrypt)(aes_ctrl_t *const p_ctrl, const uint32_t *p_key,
uint32_t *p_iv, uint32_t imaxcnt, uint32_t *p_source, uint32_t *p_dest)
    uint32_t(*  setGcmTag)(aes_ctrl_t *const p_ctrl, uint32_t num_words, uint32_t
*p_source)
    uint32_t(*  getGcmTag)(aes_ctrl_t *const p_ctrl, uint32_t num_words, uint32_t
*p_dest)
    uint32_t(*  close)(aes_ctrl_t *const p_ctrl)
    uint32_t(*  zeroPaddingEncrypt)(aes_ctrl_t *const p_ctrl, const uint32_t
*p_key, uint32_t *p_iv, uint32_t num_bytes, uint32_t *p_source, uint32_t *p_dest)
    uint32_t(*  zeroPaddingDecrypt)(aes_ctrl_t *const p_ctrl, const uint32_t
*p_key, uint32_t *p_iv, uint32_t num_bytes, uint32_t *p_source, uint32_t *p_dest)
    uint32_t(*  versionGet)(ssp_version_t *const p_version)
} aes_api_t
```

11.1.13 aes_cfg_t

```
typedef struct{
    crypto_api_t const  *  p_crypto_api
} aes_cfg_t
```

11.1.13.1 p_crypto_api

```
const* aes_cfg_t::p_crypto_api
```

Brief description

pointer to crypto engine api

11.1.14 aes_ctrl_t

```
typedef struct{
    crypto_ctrl_t *  p_crypto_ctrl
    crypto_api_t const  *  p_crypto_api
    uint32_t  work_buffer[DRV_AES_CONTEXT_BUFFER_SIZE]
} aes_ctrl_t
```

11.1.14.1 p_crypto_ctrl

```
* aes_ctrl_t::p_crypto_ctrl
```

Brief description

pointer to crypto engine control structure

11.1.14.2 p_crypto_api

```
const* aes_ctrl_t::p_crypto_api
```

Brief description

pointer to crypto engine API

11.1.14.3 work_buffer

```
uint32_t aes_ctrl_t::work_buffer[DRV_AES_CONTEXT_BUFFER_SIZE]
```

Brief description

Examples: AES-GCM mode uses this for storing authentication tag etc.

Detailed description

used for storing context/state of the Cipher

11.1.15 aes_instance_t

```
typedef struct{
    aes_ctrl_t *  p_ctrl
    aes_cfg_t const  *  p_cfg
    aes_api_t const  *  p_api
} aes_instance_t
```

11.1.15.1 p_ctrl

```
aes_ctrl_t::p_ctrl
```

Brief description

Pointer to the control structure for this instance.

11.1.15.2 p_cfg

```
aes_cfg_t::p_cfg
```

Brief description

Pointer to the configuration structure for this instance.

11.1.15.3 p_api

```
aes_api_t::p_api
```

Brief description

Pointer to the API structure for this instance.

11.1.16 agt_instance_ctrl_t

```
typedef struct{
    void(*  p_callback)(timer_callback_args_t *p_args)
    void const  *  p_context
    void *  p_reg
    uint32_t  open
    uint16_t  period
    uint8_t  channel
    IRQn_Type  irq
    timer_mode_t  mode
} agt_instance_ctrl_t
```

11.1.16.1 p_callback

```
void(* ::p_callback) ( *p_args)
```

Detailed description

Callback provided when a timer ISR occurs. NULL indicates no CPU interrupt.

11.1.16.2 p_context

```
void const* ::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in timer_callback_args_t.

11.1.16.3 p_reg

```
void* ::p_reg
```

Brief description

Base register for this channel.

11.1.16.4 open

```
uint32_t ::open
```

Brief description

Whether or not channel is open.

11.1.16.5 period

```
uint16_t ::period
```

Brief description

Current timer period (counts)

11.1.16.6 channel

`uint8_t ::channel`

Brief description

Channel number.

11.1.16.7 irq

`IRQn_Type ::irq`

Brief description

Counter overflow IRQ number.

11.1.16.8 mode

`timer_mode_t::mode`

Brief description

Timer mode.

11.1.17 arc4_api_t

```
typedef struct{
    uint32_t(*  open)(arc4_ctrl_t *const p_ctrl, arc4_cfg_t const *const p_cfg)
    uint32_t(*  keySet)(arc4_ctrl_t *const p_ctrl, uint32_t length, uint8_t const
*p_key)
    uint32_t(*  arc4Process)(arc4_ctrl_t *const p_ctrl, uint32_t num_bytes,
uint8_t *p_source, uint8_t *p_dest)
    uint32_t(*  close)(arc4_ctrl_t *const p_ctrl)
    uint32_t(*  versionGet)(ssp_version_t *const p_version)
} arc4_api_t
```

11.1.18 arc4_cfg_t

```
typedef struct{
    crypto_api_t const  *  p_crypto_api
    uint32_t  length
    uint8_t const  *  p_key
} arc4_cfg_t
```

11.1.18.1 p_crypto_api

```
const* arc4_cfg_t::p_crypto_api
```

Brief description

pointer to crypto engine api

11.1.18.2 length

```
uint32_t arc4_cfg_t::length
```

Brief description

Length of p_key in bytes.

11.1.18.3 p_key

```
uint8_t const* arc4_cfg_t::p_key
```

Brief description

ARC4 key to use for encrypt or decrypto operations.

11.1.19 arc4_ctrl_t

```
typedef struct{
    crypto_ctrl_t *  p_crypto_ctrl
    crypto_api_t const  *  p_crypto_api
    uint32_t  state
    uint32_t  work_buffer[DRV_ARC4_CONTEXT_BUFFER_SIZE]
    bsp_lock_t  open
} arc4_ctrl_t
```

11.1.19.1 p_crypto_ctrl

```
* arc4_ctrl_t::p_crypto_ctrl
```

Brief description

pointer to crypto engine control structure

11.1.19.2 p_crypto_api

```
const* arc4_ctrl_t::p_crypto_api
```

Brief description

pointer to crypto engine API

11.1.19.3 state

uint32_t arc4_ctrl_t::state

Brief description

used to identify state of the ARC4 control block

11.1.19.4 work_buffer

uint32_t arc4_ctrl_t::work_buffer[DRV_ARC4_CONTEXT_BUFFER_SIZE]

11.1.19.5 open

bsp_lock_t::open

Brief description

indicates whether driver is opened with this control block

Detailed description

used for storing context of the cipher < ARC4 uses this for storing the sbox results for the next encrypt/ decrypt operations

11.1.20 arc4_instance_t

```
typedef struct{
    arc4_ctrl_t *  p_ctrl
    arc4_cfg_t const  *  p_cfg
    arc4_api_t const  *  p_api
} arc4_instance_t
```

11.1.20.1 p_ctrl

arc4_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.20.2 p_cfg

arc4_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.20.3 p_api

```
arc4_api_t::p_api
```

Brief description

Pointer to the API structure for this instance.

11.1.21 bsp_feature_acmphs_t

```
typedef struct{
    uint32_t  min_wait_time_us
} bsp_feature_acmphs_t
```

11.1.21.1 min_wait_time_us

```
uint32_t ::min_wait_time_us
```

Brief description

Minimum stabilization wait time in microseconds.

11.1.22 bsp_feature_adc_t

```
typedef struct{
    uint8_t  has_sample_hold_reg
    uint8_t  group_b_sensors_allowed
    uint8_t  sensors_exclusive

    uint8_t  addition_supported
    uint8_t  calibration_reg_available
} bsp_feature_adc_t
```

11.1.22.1 has_sample_hold_reg

```
uint8_t ::has_sample_hold_reg
```

Brief description

Whether or not sample and hold registers are present.

11.1.22.2 group_b_sensors_allowed

```
uint8_t ::group_b_sensors_allowed
```

Brief description

Whether or not sensors are allowed on group b.

11.1.22.3 sensors_exclusive

```
uint8_t ::sensors_exclusive
```

Brief description

Whether or not sensors can be used with other sensors/channels.

11.1.22.4 tsn_calibration_available

```
uint8_t ::tsn_calibration_available
```

Brief description

Identify if the TSN calibration data is available.

11.1.22.5 tsn_control_available

```
uint8_t ::tsn_control_available
```

Brief description

Identify if the TSN control register is available.

11.1.22.6 tsn_slope

```
int16_t ::tsn_slope
```

Brief description

TSN slope in micro-volts/°C.

11.1.22.7 sensor_min_sampling_time

```
uint32_t ::sensor_min_sampling_time
```

Brief description

The minimum sampling time required by the on-chip temperature and voltage sensor in nsec.

11.1.22.8 clock_source

```
uint32_t ::clock_source
```

Brief description

The conversion clock used by the ADC peripheral.

11.1.22.9 addition_supported

```
uint8_t ::addition_supported
```

Brief description

Whether addition is supported or not in this MCU.

11.1.22.10 calibration_reg_available

```
uint8_t ::calibration_reg_available
```

Brief description

Whether CALEXE register is available.

11.1.23 bsp_feature_can_t

```
typedef struct{
    uint8_t  mclock_only
    uint8_t  check_pclkb_ratio
    uint8_t  clock
} bsp_feature_can_t
```

11.1.23.1 mclock_only

```
uint8_t ::mclock_only
```

Brief description

Whether or not MCLK is the only valid clock.

11.1.23.2 check_pclkb_ratio

```
uint8_t ::check_pclkb_ratio
```

Brief description

Whether clock:PCLKB must be 2:1.

11.1.23.3 clock

```
uint8_t ::clock
```

Brief description

Which clock to compare PCLKB to.

11.1.24 bsp_feature_cgc_t

```
typedef struct{

```

11.1.24.1 high_speed_freq_hz

```
uint32_t ::high_speed_freq_hz
```

Brief description

Frequency above which high speed mode must be used.

11.1.24.2 middle_speed_max_freq_hz

```
uint32_t ::middle_speed_max_freq_hz
```

Brief description

Max frequency for middle speed, 0 indicates not available.

11.1.24.3 low_speed_max_freq_hz

```
uint32_t ::low_speed_max_freq_hz
```

Brief description

Max frequency for low speed, 0 indicates not available.

11.1.24.4 low_voltage_max_freq_hz

```
uint32_t ::low_voltage_max_freq_hz
```

Brief description

Max frequency for low voltage, 0 indicates not available.

11.1.24.5 low_speed_pclk_div_min

```
uint32_t ::low_speed_pclk_div_min
```

Brief description

Minimum divisor for peripheral clocks when using oscillator stop detect.

11.1.24.6 low_voltage_pclk_div_min

```
uint32_t ::low_voltage_pclk_div_min
```

Brief description

Minimum divisor for peripheral clocks when using oscillator stop detect.

11.1.24.7 hoco_freq_hz

```
uint32_t ::hoco_freq_hz
```

Brief description

HOCO frequency.

11.1.24.8 main_osc_freq_hz

```
uint32_t ::main_osc_freq_hz
```

Brief description

Main oscillator frequency.

11.1.24.9 modrv_mask

```
uint8_t ::modrv_mask
```

Brief description

Mask for MODRV in MOMCR.

11.1.24.10 modrv_shift

```
uint8_t ::modrv_shift
```

Brief description

Offset of lowest bit of MODRV in MOMCR.

11.1.24.11 sodrv_mask

```
uint8_t ::sodrv_mask
```

Brief description

Mask for SODRV in SOMCR.

11.1.24.12 sodrv_shift

```
uint8_t ::sodrv_shift
```

Brief description

Offset of lowest bit of SODRV in SOMCR.

11.1.24.13 pll_div_max

```
uint8_t ::pll_div_max
```

Brief description

Maximum PLL divisor.

11.1.24.14 pll_mul_min

```
uint8_t ::pll_mul_min
```

Brief description

Minimum PLL multiplier.

11.1.24.15 pll_mul_max

```
uint8_t ::pll_mul_max
```

Brief description

Maximum PLL multiplier.

11.1.24.16 mainclock_drive

```
uint8_t ::mainclock_drive
```

Brief description

Main clock drive capacity.

11.1.24.17 iclk_div

```
uint32_t ::iclk_div
```

Brief description

ICLK divisor.

11.1.24.18 pllccr_type

```
uint32_t ::pllccr_type
```

Brief description

0: No PLL, 1: PLLCCR, 2: PLLCCR2

11.1.24.19 pll_src_configurable

```
uint32_t ::pll_src_configurable
```

Brief description

Whether or not PLL clock source is configurable.

11.1.24.20 has_subosc_speed

```
uint32_t ::has_subosc_speed
```

Brief description

Whether or not MCU has subosc speed mode.

11.1.24.21 has_lcd_clock

```
uint32_t ::has_lcd_clock
```

Brief description

Whether or not MCU has LCD clock.

11.1.24.22 has_sdram_clock

```
uint32_t ::has_sdram_clock
```

Brief description

Whether or not MCU has SDRAM clock.

11.1.24.23 has_usb_clock_div

```
uint32_t ::has_usb_clock_div
```

Brief description

Whether or not MCU has USB clock divisor.

11.1.24.24 has_pclka

```
uint32_t ::has_pclka
```

Brief description

Whether or not MCU has PCLKA clock.

11.1.24.25 has_pclkb

```
uint32_t ::has_pclkb
```

Brief description

Whether or not MCU has PCLKB clock.

11.1.24.26 has_pclkc

```
uint32_t ::has_pclkc
```

Brief description

Whether or not MCU has PCLKC clock.

11.1.24.27 has_pclkd

```
uint32_t ::has_pclkd
```

Brief description

Whether or not MCU has PCLKD clock.

11.1.24.28 has_fclk

```
uint32_t ::has_fclk
```

Brief description

Whether or not MCU has FCLK clock.

11.1.24.29 has_bclk

```
uint32_t ::has_bclk
```

Brief description

Whether or not MCU has BCLK clock.

11.1.24.30 has_sdadc_clock

```
uint32_t ::has_sdadc_clock
```

Brief description

Whether or not MCU has SDADC clock.

11.1.25 bsp_feature_ctsu_t

```
typedef struct{
    uint8_t  ctsucr0_mask
    uint8_t  ctsucr1_mask
    uint8_t  ctsumch0_mask
    uint8_t  ctsumch1_mask
    uint8_t  ctsuchac_register_count
    uint8_t  ctsuchtrc_register_count
} bsp_feature_ctsu_t
```

11.1.25.1 ctsucr0_mask

```
uint8_t ::ctsucr0_mask
```

Brief description

Mask of valid bits in CTSUCR0.

11.1.25.2 ctsucr1_mask

```
uint8_t ::ctsucr1_mask
```

Brief description

Mask of valid bits in CTSUCR1.

11.1.25.3 ctsumch0_mask

```
uint8_t ::ctsumch0_mask
```

Brief description

Mask of valid bits in CTSUMCH0.

11.1.25.4 ctsumch1_mask

```
uint8_t ::ctsumch1_mask
```

Brief description

Mask of valid bits in CTSUMCH1.

11.1.25.5 ctsuchac_register_count

```
uint8_t ::ctsuchac_register_count
```

Brief description

Number of CTSUCHAC registers.

11.1.25.6 ctsuchtrc_register_count

```
uint8_t ::ctsuchtrc_register_count
```

Brief description

Number of CTSUCHTRC registers.

11.1.26 bsp_feature_dac_t

```
typedef struct{
    uint8_t  has_davrefcr
} bsp_feature_dac_t
```

11.1.26.1 has_davrefcr

```
uint8_t ::has_davrefcr
```

Brief description

Whether or not DAC has DAVREFCR register.

11.1.27 bsp_feature_flash_hp

```
typedef struct{
    uint8_t  cf_block_size_write
} bsp_feature_flash_hp
```

11.1.27.1 cf_block_size_write

```
uint8_t bsp_feature_flash_hp::cf_block_size_write
```

Brief description

Code Flash Block size write.

11.1.28 bsp_feature_flash_lp

```
typedef struct{
    uint8_t  flash_clock_src
    uint8_t  flash_cf_macros
    uint32_t  cf_macro_size
} bsp_feature_flash_lp
```

11.1.28.1 flash_clock_src

```
uint8_t bsp_feature_flash_lp::flash_clock_src
```

Brief description

Source clock for Flash (ie. FCLK or ICLK)

11.1.28.2 flash_cf_macros

```
uint8_t bsp_feature_flash_lp::flash_cf_macros
```

Brief description

Number of implemented code flash hardware macros.

11.1.28.3 cf_macro_size

```
uint32_t bsp_feature_flash_lp::cf_macro_size
```

Brief description

The size of the implemented Code Flash macro.

11.1.29 bsp_feature_ioport_t

```
typedef struct{
    uint8_t  has_ethernet
    uint8_t  has_vbatt_pins
} bsp_feature_ioport_t
```

11.1.29.1 has_ethernet

```
uint8_t ::has_ethernet
```

Brief description

Whether or not MCU has Ethernet port configurations.

11.1.29.2 has_vbatt_pins

```
uint8_t ::has_vbatt_pins
```

Brief description

Whether or not MCU has pins on vbatt domain.

11.1.30 bsp_feature_lvd_t

```
typedef struct{
    uint8_t  monitor_1_low_threshold
    uint8_t  monitor_1_hi_threshold
    uint8_t  monitor_2_low_threshold
    uint8_t  monitor_2_hi_threshold
    uint32_t  has_digital_filter
    uint32_t  negation_delay_clock
} bsp_feature_lvd_t
```

11.1.30.1 monitor_1_low_threshold

```
uint8_t ::monitor_1_low_threshold
```

Brief description

Monitor 1 lowest valid voltage threshold.

11.1.30.2 monitor_1_hi_threshold

```
uint8_t ::monitor_1_hi_threshold
```

Brief description

Monitor 1 highest valid voltage threshold.

11.1.30.3 monitor_2_low_threshold

```
uint8_t ::monitor_2_low_threshold
```

Brief description

Monitor 2 lowest valid voltage threshold.

11.1.30.4 monitor_2_hi_threshold

```
uint8_t ::monitor_2_hi_threshold
```

Brief description

Monitor 2 highest valid voltage threshold.

11.1.30.5 has_digital_filter

```
uint32_t ::has_digital_filter
```

Brief description

Whether or not LVD has a digital filter.

11.1.30.6 negation_delay_clock

```
uint32_t ::negation_delay_clock
```

Brief description

Clock required for LVD signal negation delay after reset.

11.1.31 bsp_feature_opamp_t

```
typedef struct{
    uint16_t  min_wait_time_lp_us
    uint16_t  min_wait_time_ms_us
    uint16_t  min_wait_time_hs_us
} bsp_feature_opamp_t
```

11.1.31.1 min_wait_time_lp_us

```
uint16_t ::min_wait_time_lp_us
```

Brief description

Minimum wait time in low power mode.

11.1.31.2 min_wait_time_ms_us

```
uint16_t ::min_wait_time_ms_us
```

Brief description

Minimum wait time in middle speed mode.

11.1.31.3 min_wait_time_hs_us

```
uint16_t ::min_wait_time_hs_us
```

Brief description

Minimum wait time in high speed mode.

11.1.32 bsp_feature_rspi_t

```
typedef struct{
    uint8_t  clock
    uint8_t  has_ssl_level_keep
} bsp_feature_rspi_t
```

11.1.32.1 clock

```
uint8_t ::clock
```

Brief description

Which clock the RSPI is connected to.

11.1.32.2 has_ssl_level_keep

```
uint8_t ::has_ssl_level_keep
```

11.1.33 bsp_feature_sci_t

```
typedef struct{
    uint8_t  clock
} bsp_feature_sci_t
```

11.1.33.1 clock

```
uint8_t ::clock
```

Brief description

Which clock the SCI is connected to.

11.1.34 bsp_feature_sdhi_t

```
typedef struct{
    uint8_t  has_card_detection
    uint32_t  max_clock_frequency
} bsp_feature_sdhi_t
```

11.1.34.1 has_card_detection

```
uint8_t ::has_card_detection
```

Brief description

Whether or not MCU has card detection.

11.1.34.2 max_clock_frequency

```
uint32_t ::max_clock_frequency
```

Brief description

Maximum clock rate supported by the peripheral.

11.1.35 bsp_feature_ssi_t

```
typedef struct{
    uint8_t  fifo_num_stages
} bsp_feature_ssi_t
```

11.1.35.1 fifo_num_stages

```
uint8_t ::fifo_num_stages
```

Brief description

Number of FIFO stages on this MCU.

11.1.36 bsp_leds_t

```
typedef struct{
    uint16_t  led_count
    ioport_port_pin_t const  *  p_leds
} bsp_leds_t
```

11.1.36.1 led_count

```
uint16_t ::led_count
```

Brief description

The number of LEDs on this board.

11.1.36.2 p_leds

`ioport_port_pin_t::p_leds`

Brief description

Pointer to an array of IOPORT pins for controlling LEDs.

11.1.37 bsp_lock_t

```
typedef struct{
    uint8_t  lock
} bsp_lock_t
```

11.1.37.1 lock

`uint8_t ::lock`

Brief description

A uint8_t is used instead of a enum because the size must be 8-bits.

11.1.38 bsp_mstp_bit_t

```
typedef struct{
    uint8_t  bit
    uint8_t  reg
} bsp_mstp_bit_t
```

11.1.38.1 bit

`uint8_t ::bit`

Brief description

Which bit in MSTP register.

11.1.38.2 reg

`uint8_t ::reg`

Brief description

< Special processing required

Detailed description

Which MSTP register

11.1.39 bsp_mstp_data_t

```
typedef struct{
    uint8_t  byte
    bsp_mstp_bit_t  bit
} bsp_mstp_data_t
```

11.1.39.1 byte

```
uint8_t ::byte
```

Brief description

Byte access for comparison.

11.1.39.2 bit

```
::bit
```

11.1.40 cac_api_t

```
typedef struct{
    ssp_err_t(*  open)(cac_ctrl_t *const p_ctrl, cac_cfg_t const *const p_cfg)

11.1.42.1 cac_ref_clock

```
cac_ref_clock_config_t::cac_ref_clock
```

Brief description

reference clock specific settings

11.1.42.2 cac_meas_clock

```
cac_meas_clock_config_t::cac_meas_clock
```

Brief description

measurement clock specific settings

11.1.42.3 cac_upper_limit

```
uint16_t cac_cfg_t::cac_upper_limit
```

Brief description

the upper limit counter threshold

11.1.42.4 cac_lower_limit

```
uint16_t cac_cfg_t::cac_lower_limit
```

Brief description

the lower limit counter threshold

11.1.42.5 mei_interrupt_enabled

```
bool cac_cfg_t::mei_interrupt_enabled
```

Brief description

True if Measurement Complete interrupt is enabled.

11.1.42.6 ovf_interrupt_enabled

```
bool cac_cfg_t::ovf_interrupt_enabled
```

Brief description

True if Overflow interrupt is enabled.

11.1.42.7 ferr_interrupt_enabled

```
bool cac_cfg_t::ferr_interrupt_enabled
```

Brief description

True if Frequency Error interrupt is enabled.

11.1.42.8 continuous_mode

```
bool cac_cfg_t::continuous_mode
```

Brief description

True if measurement continuously restarts after completing.

11.1.42.9 frequency_error_ipl

```
uint8_t cac_cfg_t::frequency_error_ipl
```

Brief description

Frequency error interrupt priority.

11.1.42.10 measurement_end_ipl

```
uint8_t cac_cfg_t::measurement_end_ipl
```

Brief description

Measurement end interrupt priority.

11.1.42.11 overflow_ipl

```
uint8_t cac_cfg_t::overflow_ipl
```

Brief description

Overflow interrupt priority.

11.1.42.12 p_callback

```
void(* cac_cfg_t::p_callback) (cac_callback_args_t *p_args)
```

Brief description

Callback provided when a CAC interrupt ISR occurs.

11.1.42.13 p_extend

```
void const* cac_cfg_t::p_extend
```

Brief description

CAC hardware dependent configuration */.

11.1.42.14 p_context

```
void const* cac_cfg_t::p_context
```

Brief description

Placeholder for user data. Passed to user callback in cac_callback_args_t.

11.1.43 cac_instance_ctrl_t

```
typedef struct{

    void const  *  p_extend
} cac_instance_ctrl_t
```

11.1.43.1 p_reg

```
void* ::p_reg
```

Brief description

Pointer to register base address.

11.1.43.2 p_callback

```
void(* ::p_callback) ( *cb_data)
```

Brief description

Called from the ISR.

11.1.43.3 p_context

```
void const* ::p_context
```

Brief description

Passed to the callback.

11.1.43.4 frequency_error_irq

```
IRQn_Type ::frequency_error_irq
```

Brief description

Frequency error IRQ number.

11.1.43.5 measurement_end_irq

```
IRQn_Type ::measurement_end_irq
```

Brief description

Measurement end IRQ number.

11.1.43.6 overflow_irq

```
IRQn_Type ::overflow_irq
```

Brief description

Overflow IRQ number.

11.1.43.7 cac_api_open

```
uint32_t ::cac_api_open
```

Brief description

Set to "CAC" once API has been successfully opened.

11.1.43.8 cac_continous_mode

```
bool ::cac_continous_mode
```

Brief description

Set as a result of the Open() call.

11.1.43.9 cac_lock

```
bsp_lock_t::cac_lock
```

Brief description

CAC commands software lock.

11.1.43.10 measurement_clock

```
cac_clock_source_t::measurement_clock
```

Brief description

Clock specified in Open() as the measurement clock.

11.1.43.11 reference_clock

```
cac_clock_source_t::reference_clock
```

Brief description

Clock specified in Open() as the reference clock.

11.1.43.12 p_extend

```
void const* ::p_extend
```

11.1.44 cac_instance_t

```
typedef struct{
    cac_ctrl_t *  p_ctrl

} can_bit_timing_cfg_t
```

11.1.48.1 baud_rate_prescaler

```
uint32_t can_bit_timing_cfg_t::baud_rate_prescaler
```

Brief description

Baud rate prescaler. Valid values: 1 - 1024.

11.1.48.2 time_segment_1

```
can_time_segment1_t::time_segment_1
```

Brief description

Time segment 1 control.

11.1.48.3 time_segment_2

```
can_time_segment2_t::time_segment_2
```

Brief description

Time segment 2 control.

11.1.48.4 synchronization_jump_width

can_sync_jump_width_t::synchronization_jump_width

Brief description

Synchronization jump width.

11.1.49 can_callback_args_t

```
typedef struct{
    uint32_t  channel
    can_event_t  event
    uint32_t  mailbox
    void const  *  p_context
} can_callback_args_t
```

11.1.49.1 channel

uint32_t can_callback_args_t::channel

Brief description

Device channel number.

11.1.49.2 event

can_event_t::event

Brief description

Event code.

11.1.49.3 mailbox

uint32_t can_callback_args_t::mailbox

Brief description

Mailbox number of interrupt source.

11.1.49.4 p_context

void const* can_callback_args_t::p_context

Brief description

Context provided to user during callback.

11.1.50 can_cfg_t

```
typedef struct{
    uint32_t  channel
    can_bit_timing_cfg_t *  p_bit_timing
    can_id_mode_t  id_mode
    uint32_t  mailbox_count
    can_mailbox_t *  p_mailbox
    can_message_mode_t  message_mode
    void(*  p_callback)(can_callback_args_t *p_args)
    void const  *  p_context
    void const  *  p_extend
    uint8_t  error_ipl
    uint8_t  mailbox_rx_ipl
    uint8_t  mailbox_tx_ipl
} can_cfg_t
```

11.1.50.1 channel

uint32_t can_cfg_t::channel

Brief description

CAN channel.

11.1.50.2 p_bit_timing

can_bit_timing_cfg_t::p_bit_timing

Brief description

CAN bit timing.

11.1.50.3 id_mode

can_id_mode_t::id_mode

Brief description

Standard or Extended ID mode.

11.1.50.4 mailbox_count

uint32_t can_cfg_t::mailbox_count

Brief description

Number of mailboxes.

11.1.50.5 p_mailbox

```
can_mailbox_t::p_mailbox
```

Brief description

Pointer to mailboxes.

11.1.50.6 message_mode

```
can_message_mode_t::message_mode
```

Brief description

Overwrite message or overrun.

11.1.50.7 p_callback

```
void(* can_cfg_t::p_callback) (can_callback_args_t *p_args)
```

Brief description

Pointer to callback function.

11.1.50.8 p_context

```
void const* can_cfg_t::p_context
```

Brief description

User defined callback context.

11.1.50.9 p_extend

```
void const* can_cfg_t::p_extend
```

Brief description

CAN hardware dependent configuration.

11.1.50.10 error_ipl

```
uint8_t can_cfg_t::error_ipl
```

Brief description

Error interrupt priority.

11.1.50.11 mailbox_rx_ipl

```
uint8_t can_cfg_t::mailbox_rx_ipl
```

Brief description

Receive interrupt priority.

11.1.50.12 mailbox_tx_ipl

```
uint8_t can_cfg_t::mailbox_tx_ipl
```

Brief description

Transmit interrupt priority.

11.1.51 can_error_t

```
typedef struct{
    uint32_t  error
    struct can_error_t::st_error_b  error_b
} can_error_t
```

11.1.51.1 error

```
uint32_t can_error_t::error
```

11.1.51.2 error_b

```
struct can_error_t::st_error_b can_error_t::error_b
```

11.1.52 can_extended_cfg_t

```
typedef struct{
    can_clock_source_t  clock_source
    uint32_t *  p_mailbox_mask
} can_extended_cfg_t
```

11.1.52.1 clock_source

```
can_clock_source_t::clock_source
```

Brief description

Source of the CAN clock.

11.1.52.2 p_mailbox_mask

```
uint32_t* ::p_mailbox_mask
```

Brief description

Mailbox mask, one for every 4 mailboxes.

11.1.53 can_frame_t

```
typedef struct{
    can_id_t  id
    uint8_t  data_length_code
    uint8_t  data[8]
    can_frame_type_t  type
} can_frame_t
```

11.1.53.1 id

`can_id_t::id`

Brief description

CAN id.

11.1.53.2 data_length_code

`uint8_t can_frame_t::data_length_code`

Brief description

CAN Data Length code, number of bytes in the message.

11.1.53.3 data

`uint8_t can_frame_t::data[8]`

Brief description

CAN data, up to 8 bytes.

11.1.53.4 type

`can_frame_type_t::type`

Brief description

Frame type, data or remote frame.

11.1.54 can_info_t

```
typedef struct{
    can_mode_t  operation_mode
```

```
    can_status_t  status
    uint32_t  bit_rate
    uint8_t  error_count_transmit
    uint8_t  error_count_receive
    can_error_t  error_code
} can_info_t
```

11.1.54.1 operation_mode

can_mode_t::operation_mode

Brief description

Can operation mode.

11.1.54.2 status

can_status_t::status

Brief description

CAN status.

11.1.54.3 bit_rate

uint32_t can_info_t::bit_rate

Brief description

CAN bit rate.

11.1.54.4 error_count_transmit

uint8_t can_info_t::error_count_transmit

Brief description

Transmit error count.

11.1.54.5 error_count_receive

uint8_t can_info_t::error_count_receive

Brief description

Receive error count.

11.1.54.6 error_code

can_error_t::error_code

Brief description

Error code, cleared after reading.

11.1.55 can_instance_ctrl_t

```
typedef struct{
    uint32_t  channel
    uint32_t  open
    can_mode_t  operation_mode
    can_id_mode_t  id_mode
    uint32_t  mailbox_count
    can_mailbox_t *  p_mailbox
    can_message_mode_t  message_mode
    can_clock_source_t  clock_source
    void(*  p_callback)(can_callback_args_t *p_args)
    void const  *  p_context
    void *  p_reg
    IRQn_Type  error_irq
    IRQn_Type  mailbox_rx_irq
    IRQn_Type  mailbox_tx_irq
} can_instance_ctrl_t
```

11.1.55.1 channel

```
uint32_t ::channel
```

Brief description

Channel number.

Detailed description

Parameters to control CAN peripheral device

11.1.55.2 open

```
uint32_t ::open
```

Brief description

Open status of channel.

11.1.55.3 operation_mode

```
can_mode_t::operation_mode
```

Brief description

Can operation mode.

11.1.55.4 id_mode

can_id_mode_t::id_mode

Brief description

Standard or Extended ID mode.

11.1.55.5 mailbox_count

uint32_t ::mailbox_count

Brief description

Number of mailboxes.

11.1.55.6 p_mailbox

can_mailbox_t::p_mailbox

Brief description

Pointer to mailboxes.

11.1.55.7 message_mode

can_message_mode_t::message_mode

Brief description

Overwrite message or overrun.

11.1.55.8 clock_source

can_clock_source_t::clock_source

Brief description

Clock source. CANMCLK or PCLKB.

11.1.55.9 p_callback

void(* ::p_callback) (*p_args)

Brief description

Pointer to callback function.

Detailed description

Parameters to process CAN Event

11.1.55.10 p_context

```
void const* ::p_context
```

Brief description

Pointer to the higher level device context.

11.1.55.11 p_reg

```
void* ::p_reg
```

Brief description

Pointer to register base address.

11.1.55.12 error_irq

```
IRQn_Type ::error_irq
```

Brief description

Error IRQ number.

11.1.55.13 mailbox_rx_irq

```
IRQn_Type ::mailbox_rx_irq
```

Brief description

Receive mailbox IRQ number.

11.1.55.14 mailbox_tx_irq

```
IRQn_Type ::mailbox_tx_irq
```

Brief description

Transmit mailbox IRQ number.

11.1.56 can_instance_t

```
typedef struct{
    can_ctrl_t *  p_ctrl
    can_cfg_t const  *  p_cfg
    can_api_t const  *  p_api
} can_instance_t
```

11.1.56.1 p_ctrl

can_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.56.2 p_cfg

can_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.56.3 p_api

can_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.57 can_mailbox_t

```
typedef struct{
    can_id_t  mailbox_id
    can_mailbox_send_receive_t  mailbox_type
    can_frame_type_t  frame_type
} can_mailbox_t
```

11.1.57.1 mailbox_id

can_id_t::mailbox_id

Brief description

Mailbox ID.

11.1.57.2 mailbox_type

can_mailbox_send_receive_t::mailbox_type

Brief description

Receive or Transmit mailbox type.

11.1.57.3 frame_type

can_frame_type_t::frame_type

Brief description

Frame type for receive mailbox.

11.1.58 can_status_t

```
typedef struct{
    uint32_t  status
    struct can_status_t::st_status_b  status_b
} can_status_t
```

11.1.58.1 status

uint32_t can_status_t::status

11.1.58.2 status_b

struct can_status_t::st_status_b can_status_t::status_b

11.1.59 cgc_api_t

```
typedef struct{
    ssp_err_t(*  init)(void)

```

11.1.60 cgc_callback_args_t

```
typedef struct{
    cgc_event_t  event
    void const  *  p_context
} cgc_callback_args_t
```

11.1.60.1 event

cgc_event_t::event

Brief description

The event can be used to identify what caused the callback.

11.1.60.2 p_context

void const* cgc_callback_args_t::p_context

Brief description

Placeholder for user data.

11.1.61 cgc_clock_cfg_t

```
typedef struct{
    cgc_clock_t  source_clock
    cgc_pll_div_t  divider
    float  multiplier
} cgc_clock_cfg_t
```

11.1.61.1 source_clock

cgc_clock_t::source_clock

Brief description

PLL source clock (S7G2 only).

11.1.61.2 divider

cgc_pll_div_t::divider

Brief description

PLL divider.

11.1.61.3 multiplier

float cgc_clock_cfg_t::multiplier

Brief description

PLL multiplier.

11.1.62 cgc_clocks_cfg_t

```
typedef struct{
    cgc_clock_t  system_clock
    cgc_clock_cfg_t  pll_cfg
    cgc_system_clock_cfg_t  sys_cfg

    cgc_clock_change_t  moco_state
    cgc_clock_change_t  hoco_state
    cgc_clock_change_t  subosc_state
    cgc_clock_change_t  mainosc_state
    cgc_clock_change_t  pll_state
} cgc_clocks_cfg_t
```

11.1.62.1 system_clock

cgc_clock_t::system_clock

Brief description

System clock source enumeration.

11.1.62.2 pll_cfg

cgc_clock_cfg_t::pll_cfg

Brief description

PLL configuration structure.

11.1.62.3 sys_cfg

`cgc_system_clock_cfg_t::sys_cfg`

Brief description

Clock dividers structure.

11.1.62.4 loco_state

`cgc_clock_change_t::loco_state`

Brief description

State of LOCO.

11.1.62.5 moco_state

`cgc_clock_change_t::moco_state`

Brief description

State of MOCO.

11.1.62.6 hoco_state

`cgc_clock_change_t::hoco_state`

Brief description

State of HOCO.

11.1.62.7 subosc_state

`cgc_clock_change_t::subosc_state`

Brief description

State of Sub-oscillator.

11.1.62.8 mainosc_state

`cgc_clock_change_t::mainosc_state`

Brief description

State of Main oscillator.

11.1.62.9 pll_state

cgc_clock_change_t::pll_state

Brief description

State of PLL.

11.1.63 cgc_instance_t

```
typedef struct{
    cgc_clock_cfg_t const  *  p_cfg
    cgc_api_t const  *  p_api
} cgc_instance_t
```

11.1.63.1 p_cfg

cgc_clock_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.63.2 p_api

cgc_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.64 cgc_system_clock_cfg_t

```
typedef struct{
    cgc_sys_clock_div_t  pclka_div
    cgc_sys_clock_div_t  pclkb_div
    cgc_sys_clock_div_t  pclkc_div
    cgc_sys_clock_div_t  pclkd_div
    cgc_sys_clock_div_t  bclk_div

    cgc_sys_clock_div_t  iclk_div
} cgc_system_clock_cfg_t
```

11.1.64.1 pclka_div

cgc_sys_clock_div_t::pclka_div

Brief description

Divider value for PCLKA.

11.1.64.2 pclkb_div

cgc_sys_clock_div_t::pclkb_div

Brief description

Divider value for PCLKB.

11.1.64.3 pclkc_div

cgc_sys_clock_div_t::pclkc_div

Brief description

Divider value for PCLKC.

11.1.64.4 pclkd_div

cgc_sys_clock_div_t::pclkd_div

Brief description

Divider value for PCLKD.

11.1.64.5 bclk_div

cgc_sys_clock_div_t::bclk_div

Brief description

Divider value for BCLK.

11.1.64.6 fclk_div

cgc_sys_clock_div_t::fclk_div

Brief description

Divider value for FCLK.

11.1.64.7 iclk_div

cgc_sys_clock_div_t::iclk_div

Brief description

Divider value for ICLK.

11.1.65 comparator_api_t

```
typedef struct{
    ssp_err_t(*  open)(comparator_ctrl_t *const p_ctrl, comparator_cfg_t const

```
uint8_t comparator_cfg_t::irq_ipl
```

Brief description

Interrupt priority.

11.1.67.3 mode

```
comparator_mode_t::mode
```

Brief description

Normal or window mode.

11.1.67.4 trigger

```
comparator_trigger_t::trigger
```

Brief description

Trigger setting.

11.1.67.5 filter

```
comparator_filter_t::filter
```

Brief description

Digital filter clock divisor setting.

11.1.67.6 invert

```
comparator_polarity_invert_t::invert
```

Brief description

Whether to invert output.

11.1.67.7 pin_output

`comparator_pin_output_t::pin_output`

Brief description

Whether to include output on output pin.

11.1.67.8 p_callback

```
void(* comparator_cfg_t::p_callback) (comparator_callback_args_t *p_args)
```

Detailed description

Callback called when comparator event occurs.

11.1.67.9 p_context

```
void const* comparator_cfg_t::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in comparator_callback_args_t.

11.1.67.10 p_extend

```
void const* comparator_cfg_t::p_extend
```

Brief description

Comparator hardware dependent configuration.

11.1.68 comparator_info_t

```

11.1.74 crc_instance_t

```
typedef struct{
    crc_ctrl_t *  p_ctrl
    crc_cfg_t const  *  p_cfg
    crc_api_t const  *  p_api
} crc_instance_t
```

11.1.74.1 p_ctrl

crc_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.74.2 p_cfg

crc_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.74.3 p_api

crc_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.75 crc_snoop_cfg_t

```
typedef struct{
    uint32_t  snoop_channel
    crc_snoop_direction_t  snoop_direction
} crc_snoop_cfg_t
```

11.1.75.1 snoop_channel

uint32_t crc_snoop_cfg_t::snoop_channel

Brief description

Register Snoop Address (CRCSA)

11.1.75.2 snoop_direction

crc_snoop_direction_t::snoop_direction

Brief description

Snoop-On-Write/Read Switch (CRCSWR)

11.1.76 ctsu_api_t

```
typedef struct{
    ssp_err_t(*  open)(ctsu_ctrl_t *p_ctrl, ctsu_cfg_t *p_cfg)
    ssp_err_t(*  close)(ctsu_ctrl_t *p_ctrl, ctsu_close_option_t opts)
    ssp_err_t(*  scan)(ctsu_ctrl_t *p_ctrl)
    ssp_err_t(*  update)(ctsu_ctrl_t *p_ctrl)
    ssp_err_t(*  read)(ctsu_ctrl_t *p_ctrl, void *p_dest, ctsu_read_t opts, const
ctsu_channel_pair_t *channels, const uint16_t count)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
} ctsu_api_t
```

11.1.77 ctsu_callback_args_t

```
typedef struct{
    ctsu_event_t  event
    void const  *  p_context
} ctsu_callback_args_t
```

11.1.77.1 event

ctsu_event_t::event

Brief description

CTSU callback event.

11.1.77.2 p_context

void const* ctsu_callback_args_t::p_context

Brief description

Placeholder for user data.

11.1.78 ctsu_cfg_t

```
typedef struct{
    transfer_instance_t const  *const  p_lower_lvl_transfer_read
    transfer_instance_t const  *const  p_lower_lvl_transfer_write
    ctsu_hw_cfg_t *  p_ctsu_hw_cfg
    ctsu_functions_t *  p_ctsu_functions
    void(*  p_callback)(ctsu_callback_args_t *p_args)
    void *  p_context
    ctsu_process_option_t  ctsu_soft_option
    ctsu_close_option_t  ctsu_close_option
    uint8_t  write_ipl
```

```
    uint8_t  read_ipl
    uint8_t  end_ipl
} ctsu_cfg_t
```

11.1.78.1 p_lower_lvl_transfer_read

`transfer_instance_t::p_lower_lvl_transfer_read`

Brief description

Pointer to the Transfer instance to read results.

11.1.78.2 p_lower_lvl_transfer_write

`transfer_instance_t::p_lower_lvl_transfer_write`

Brief description

Pointer to the Transfer instance to write cfg.

11.1.78.3 p_ctsu_hw_cfg

`ctsu_hw_cfg_t::p_ctsu_hw_cfg`

Brief description

Pointer to a CTSU configuration.

11.1.78.4 p_ctsu_functions

`ctsu_functions_t::p_ctsu_functions`

Brief description

Pointer to a place holder for custom data functions.

11.1.78.5 p_callback

```
void(* ctsu_cfg_t::p_callback) (ctsu_callback_args_t *p_args)
```

Brief description

Callback to the function to use when scan is complete.

11.1.78.6 p_context

```
void* ctsu_cfg_t::p_context
```

Brief description

Pointer to data that should be passed to update_complete notification.

11.1.78.7 ctsu_soft_option

`ctsu_process_option_t::ctsu_soft_option`

Brief description

Software options to use when performing Open and Process.

11.1.78.8 ctsu_close_option

`ctsu_close_option_t::ctsu_close_option`

Brief description

Software options to use when closing touch operation.

11.1.78.9 write_ipl

`uint8_t ctsu_cfg_t::write_ipl`

Brief description

Write interrupt priority.

11.1.78.10 read_ipl

`uint8_t ctsu_cfg_t::read_ipl`

Brief description

Read interrupt priority.

11.1.78.11 end_ipl

`uint8_t ctsu_cfg_t::end_ipl`

Brief description

End interrupt priority.

11.1.79 ctsu_channel_data_mutual_t

```
typedef struct{
    uint16_t  sen_cnt_1
    uint16_t  ref_cnt_1
    uint16_t  sen_cnt_2
```

```
    uint16_t  ref_cnt_2
} ctsu_channel_data_mutual_t
```

11.1.79.1 sen_cnt_1

```
uint16_t ctsu_channel_data_mutual_t::sen_cnt_1
```

Brief description

Raw Sensor count primary reading.

11.1.79.2 ref_cnt_1

```
uint16_t ctsu_channel_data_mutual_t::ref_cnt_1
```

Brief description

Raw reference ICO count primary reading.

11.1.79.3 sen_cnt_2

```
uint16_t ctsu_channel_data_mutual_t::sen_cnt_2
```

Brief description

Raw sensor ICO count secondary reading.

11.1.79.4 ref_cnt_2

```
uint16_t ctsu_channel_data_mutual_t::ref_cnt_2
```

Brief description

Raw reference ICO count secondary reading.

11.1.80 ctsu_channel_data_self_t

```
typedef struct{
    uint16_t  sensor_count
    uint16_t  reference_count
} ctsu_channel_data_self_t
```

11.1.80.1 sensor_count

```
uint16_t ctsu_channel_data_self_t::sensor_count
```

Brief description

Raw sensor count.

11.1.80.2 reference_count

```
uint16_t ctsu_channel_data_self_t::reference_count
```

Brief description

Raw reference count.

11.1.81 ctsu_channel_pair_t

```
typedef struct{
    int8_t  rx
    int8_t  tx
} ctsu_channel_pair_t
```

11.1.81.1 rx

```
int8_t ctsu_channel_pair_t::rx
```

Brief description

Denotes the primary channel.

11.1.81.2 tx

```
int8_t ctsu_channel_pair_t::tx
```

Brief description

Denotes the secondary channel (used only for mutual capacitance mode)

11.1.82 ctsu_channel_setting_t

```
typedef struct{
    uint16_t  ctsussc
    uint16_t  ctsuso0
    uint16_t  ctsuso1
} ctsu_channel_setting_t
```

11.1.82.1 ctsussc

```
volatile uint16_t ctsu_channel_setting_t::ctsussc
```

Brief description

Holds value for the CTSUSSC register.

11.1.82.2 ctsuso0

```
volatile uint16_t ctsu_channel_setting_t::ctsuso0
```

Brief description

Holds value for the CTSUSO0 register.

11.1.82.3 ctsuso1

```
volatile uint16_t ctsu_channel_setting_t::ctsuso1
```

Brief description

Holds value for the CTSUSO1 register.

11.1.83 ctsu_functions_t

```
typedef struct{
    int32_t(*  preFilter)(void *p_args)
    int32_t(*  filter)(volatile uint16_t *output, volatile uint16_t *input)
    int32_t(*  postFilter)(void *p_args)
    int32_t(*  ctsuDecode)(void *p_args)
    int32_t(*  otDriftComp)(void *p_args)
    int32_t(*  rtDriftComp)(void *p_args)
    int32_t(*  otAutoTune)(void *p_args)
    int32_t(*  rtAutoTune)(void *p_args)
} ctsu_functions_t
```

11.1.83.1 preFilter

```
int32_t(* ctsu_functions_t::preFilter) (void *p_args)
```

Brief description

Used for calculating raw data SNR before data gets filtered.

11.1.83.2 filter

```
int32_t(* ctsu_functions_t::filter) (volatile uint16_t *output, volatile uint16_t
*input)
```

Brief description

Weighted averaging using CTSU_CFG_FILTER_DEPTH.

11.1.83.3 postFilter

```
int32_t(* ctsu_functions_t::postFilter) (void *p_args)
```

Brief description

Processing the filter results.

11.1.83.4 ctsuDecode

```
int32_t(* ctsu_functions_t::ctsuDecode) (void *p_args)
```

Brief description

Algorithm to decide if channel is touched or not.

11.1.83.5 otDriftComp

```
int32_t(* ctsu_functions_t::otDriftComp) (void *p_args)
```

Brief description

Algorithm to perform manipulations to baseline, envelope, and thresholds on initialization.

11.1.83.6 rtDriftComp

```
int32_t(* ctsu_functions_t::rtDriftComp) (void *p_args)
```

Brief description

Algorithm to perform run time manipulations to baseline, envelope, and thresholds.

11.1.83.7 otAutoTune

```
int32_t(* ctsu_functions_t::otAutoTune) (void *p_args)
```

Brief description

Function called once on initialization of system.

11.1.83.8 rtAutoTune

```
int32_t(* ctsu_functions_t::rtAutoTune) (void *p_args)
```

Brief description

Function called to auto tune sensor when system is running.

11.1.84 ctsu_hw_cfg_t

```
typedef struct{
    R_CTSU_Type  ctsu_settings
    ctsu_channel_setting_t *  write_settings
    uint16_t *  threshold
```

```
    uint16_t *  hysteresis
    uint16_t *  baseline
    void *  raw_result
    void *  filter_output
    void *  binary_result
    ctsu_channel_pair_t *  excluded
    int8_t  num_excluded
    const uint16_t *  series_resistance
} ctsu_hw_cfg_t
```

11.1.84.1 ctsu_settings

```
R_CTSU_Type ctsu_hw_cfg_t::ctsu_settings
```

Brief description

User defined SFR settings for CR0, CR1, SDPRS, SST, CHACn, CHTRCn, DCLKC.

11.1.84.2 write_settings

```
ctsu_channel_setting_t::write_settings
```

Brief description

User defined initial settings for thresholds for each active channel . Threshold is difference between runtime baseline and filtered output of sensor count.

Detailed description

User defined settings for SSC, SO0, SO1 for each active channel.

11.1.84.3 threshold

```
uint16_t* ctsu_hw_cfg_t::threshold
```

11.1.84.4 hysteresis

```
uint16_t* ctsu_hw_cfg_t::hysteresis
```

Brief description

User defined settings for tolerance in count values.

11.1.84.5 baseline

```
uint16_t* ctsu_hw_cfg_t::baseline
```

Brief description

A baseline of the expected count for each active channel when not touched.

11.1.84.6 raw_result

```
void* ctsu_hw_cfg_t::raw_result
```

Brief description

A pointer to a buffer which will hold raw results of CTSU measurement.

11.1.84.7 filter_output

```
void* ctsu_hw_cfg_t::filter_output
```

Brief description

A pointer to a buffer which will hold output after filtering raw results.

11.1.84.8 binary_result

```
void* ctsu_hw_cfg_t::binary_result
```

Brief description

A pointer to a location where binary data can be stored.

11.1.84.9 excluded

```
ctsu_channel_pair_t::excluded
```

Brief description

A pointer to an array which contains a list of channel pairs which need to be ignored in ascending order of rx and then tx.

11.1.84.10 num_excluded

```
int8_t ctsu_hw_cfg_t::num_excluded
```

Brief description

Number of elements in the array excluded.

11.1.84.11 series_resistance

```
const uint16_t* ctsu_hw_cfg_t::series_resistance
```

Brief description

Resistance of the channel (to determine RC constant when tuning).

11.1.85 ctsu_instance_ctrl_t

```
typedef struct{
    transfer_api_t const  *  p_api_transfer
    transfer_ctrl_t *  p_lowerl_lvl_transfer_read_ctrl
    transfer_ctrl_t *  p_lowerl_lvl_transfer_write_ctrl
    bool  ctsu_opened
    uint8_t  ctsu_unit
    ctsu_hw_cfg_t *  p_ctsu_hw_cfg
    ctsu_process_option_t  ctsu_open_option
    ctsu_process_option_t  ctsu_update_option
    ctsu_close_option_t  ctsu_close_option
    ctsu_action_t  ctsu_process_state
    void(*  p_callback)(ctsu_callback_args_t *p_args)
    void *  p_context
    R_CTSU_Type *  p_reg
} ctsu_instance_ctrl_t
```

11.1.85.1 p_api_transfer

transfer_api_t::p_api_transfer

Brief description

Pointer to lower level Transfer driver function pointers.

11.1.85.2 p_lowerl_lvl_transfer_read_ctrl

transfer_ctrl_t::p_lowerl_lvl_transfer_read_ctrl

Brief description

Pointer to the Transfer Read control.

11.1.85.3 p_lowerl_lvl_transfer_write_ctrl

transfer_ctrl_t::p_lowerl_lvl_transfer_write_ctrl

Brief description

Pointer to the Transfer Write control.

11.1.85.4 ctsu_opened

bool ::ctsu_opened

Brief description

Store initialization state.

11.1.85.5 ctsu_unit

```
uint8_t ::ctsu_unit
```

Brief description

CTSU Unit in use.

11.1.85.6 p_ctsu_hw_cfg

```
ctsu_hw_cfg_t::p_ctsu_hw_cfg
```

Brief description

Pointer to a CTSU configuration.

11.1.85.7 ctsu_open_option

```
ctsu_process_option_t::ctsu_open_option
```

Brief description

Software options to use when performing Open and Process.

11.1.85.8 ctsu_update_option

```
ctsu_process_option_t::ctsu_update_option
```

Brief description

Software options to use when performing parameter Update process.

11.1.85.9 ctsu_close_option

```
ctsu_close_option_t::ctsu_close_option
```

Brief description

Software options to use when closing touch operation.

11.1.85.10 ctsu_process_state

```
ctsu_action_t::ctsu_process_state
```

Brief description

Variable to observe CTSU processing state machine operation.

11.1.85.11 p_callback

```
void(* ::p_callback) ( *p_args)
```

Brief description

Callback to the function to use when updating dependent parameters is complete.

11.1.85.12 p_context

```
void* ::p_context
```

Brief description

Pointer to data that should be passed to update_complete notification.

11.1.85.13 p_reg

```
R_CTSU_Type* ::p_reg
```

Brief description

Pointer to base register address.

11.1.86 ctsu_instance_t

```
typedef struct{
    ctsu_ctrl_t *  p_ctrl
    ctsu_cfg_t *  p_cfg
    ctsu_api_t const  *  p_api
} ctsu_instance_t
```

11.1.86.1 p_ctrl

```
ctsu_ctrl_t::p_ctrl
```

Brief description

Pointer to the control structure for this instance.

11.1.86.2 p_cfg

```
ctsu_cfg_t::p_cfg
```

Brief description

Pointer to the configuration structure for this instance.

11.1.86.3 p_api

```
ctsu_api_t::p_api
```

Brief description

Pointer to the API structure for this instance.

11.1.87 dac8_extended_cfg_t

```
typedef struct{
    bool  enable_charge_pump
    dac8_mode_t  dac_mode
} dac8_extended_cfg_t
```

11.1.87.1 enable_charge_pump

```
bool ::enable_charge_pump
```

Brief description

Enable DAC charge pump.

11.1.87.2 dac_mode

```
dac8_mode_t::dac_mode
```

Brief description

DAC mode.

11.1.88 dac8_instance_ctrl_t

```
typedef struct{
    void *  p_reg
    uint8_t  channel
    uint8_t  channel_started
    uint32_t  channel_opened
    dac_data_format_t  data_format
} dac8_instance_ctrl_t
```

11.1.88.1 p_reg

```
void* ::p_reg
```

Brief description

Pointer to DAC base register.

11.1.88.2 channel

```
uint8_t ::channel
```

Brief description

ID associated with this DAC channel.

11.1.88.3 channel_started

`uint8_t ::channel_started`

Brief description

DAC operation on channel started.

11.1.88.4 channel_opened

`uint32_t ::channel_opened`

Brief description

DAC channel open.

11.1.88.5 data_format

`dac_data_format_t::data_format`

Brief description

DAC data format.

11.1.89 dac_api_t

```
typedef struct{
    ssp_err_t(*  open)(dac_ctrl_t *p_ctrl, dac_cfg_t const *const p_cfg)
    ssp_err_t(*  close)(dac_ctrl_t *p_ctrl)

    bool  ad_da_synchronized
    dac_data_format_t  data_format
    bool  output_amplifier_enabled
    void const  *  p_extend
} dac_cfg_t
```

11.1.90.1 channel

```
uint8_t dac_cfg_t::channel
```

Brief description

ID associated with this DAC channel.

11.1.90.2 ad_da_synchronized

```
bool dac_cfg_t::ad_da_synchronized
```

Brief description

AD/DA synchronization.

11.1.90.3 data_format

```
dac_data_format_t::data_format
```

Brief description

Data format.

11.1.90.4 output_amplifier_enabled

```
bool dac_cfg_t::output_amplifier_enabled
```

Brief description

Output amplifier enable.

11.1.90.5 p_extend

```
void const* dac_cfg_t::p_extend
```

11.1.91 dac_info_t

```
typedef struct{
    uint8_t  bit_width
} dac_info_t
```

11.1.91.1 bit_width

```
uint8_t dac_info_t::bit_width
```

Brief description

Resolution of the DAC.

11.1.92 dac_instance_ctrl_t

```
typedef struct{
    void *  p_reg

```

Brief description

Pointer to callback function.

Detailed description

Configuration for display event processing

11.1.97.8 p_context

```
void const* display_cfg_t::p_context
```

Brief description

User defined context passed into callback function.

11.1.97.9 p_extend

```
void const* display_cfg_t::p_extend
```

Brief description

Display hardware dependent configuration.

Detailed description

Pointer to display peripheral specific configuration

11.1.98 display_clut_cfg_t

```
typedef struct{
    uint32_t *  p_base
    uint16_t  start
    uint16_t  size
} display_clut_cfg_t
```

11.1.98.1 p_base

```
uint32_t* display_clut_cfg_t::p_base
```

Brief description

Pointer to CLUT source data.

11.1.98.2 start

```
uint16_t display_clut_cfg_t::start
```

Brief description

Beginning of CLUT entry to be updated.

11.1.98.3 size

```
uint16_t display_clut_cfg_t::size
```

Brief description

Size of CLUT entry to be updated.

11.1.99 display_clut_t

```
typedef struct{
    uint32_t  color_num
    const uint32_t *  p_clut
} display_clut_t
```

11.1.99.1 color_num

```
uint32_t display_clut_t::color_num
```

Brief description

The number of colors in CLUT.

11.1.99.2 p_clut

```
const uint32_t* display_clut_t::p_clut
```

Brief description

Address of the area storing the CLUT data (in ARGB8888 format)

11.1.100 display_color_t

```
typedef struct{
    uint32_t  argb

```
bool display_contrast_t::enable
```

Brief description

Contrast Correction On/Off.

11.1.101.2 r

```
uint8_t display_contrast_t::r
```

Brief description

Contrast (gain) adjustment for R channel.

11.1.101.3 g

```
uint8_t display_contrast_t::g
```

Brief description

Contrast (gain) adjustment for G channel.

11.1.101.4 b

```
uint8_t display_contrast_t::b
```

Brief description

Contrast (gain) adjustment for B channel.

11.1.102 display_coordinate_t

```
typedef struct{
    int16_t  x
    int16_t  y
} display_coordinate_t
```

11.1.102.1 x

```
int16_t display_coordinate_t::x
```

Brief description

Coordinate X, this allows to set signed value.

11.1.102.2 y

```
int16_t display_coordinate_t::y
```

Brief description

Coordinate Y, this allows to set signed value.

11.1.103 display_correction_t

```
typedef struct{
    display_brightness_t  brightness
    display_contrast_t  contrast
} display_correction_t
```

11.1.103.1 brightness

```
display_brightness_t::brightness
```

Brief description

Brightness.

11.1.103.2 contrast

display_contrast_t::contrast

Brief description

Contrast.

11.1.104 display_gamma_correction_t

    display_in_format_t  format
    bool  line_descending_enable
```

```
    bool  lines_repeat_enable
    uint16_t  lines_repeat_times
} display_input_cfg_t
```

11.1.105.1 p_base

```
uint32_t* display_input_cfg_t::p_base
```

Brief description

Base address to the frame buffer.

11.1.105.2 hsize

```
uint16_t display_input_cfg_t::hsize
```

Brief description

Horizontal pixel size in a line.

11.1.105.3 vsize

```
uint16_t display_input_cfg_t::vsize
```

Brief description

Vertical pixel size in a frame.

11.1.105.4 hstride

```
uint32_t display_input_cfg_t::hstride
```

Brief description

Memory stride (bytes) in a line.

11.1.105.5 format

```
display_in_format_t::format
```

Brief description

Input format setting.

11.1.105.6 line_descending_enable

```
bool display_input_cfg_t::line_descending_enable
```

Brief description

Line descending enable.

11.1.105.7 lines_repeat_enable

```
bool display_input_cfg_t::lines_repeat_enable
```

Brief description

Line repeat enable.

11.1.105.8 lines_repeat_times

```
uint16_t display_input_cfg_t::lines_repeat_times
```

Brief description

Expected number of line repeating.

11.1.106 display_instance_t

```
typedef struct{
    display_ctrl_t *  p_ctrl
    display_cfg_t const  *  p_cfg
    display_api_t const  *  p_api

```

11.1.106.1 p_ctrl

```
display_ctrl_t::p_ctrl
```

Brief description

Pointer to the control structure for this instance.

11.1.106.2 p_cfg

```
display_cfg_t::p_cfg
```

Brief description

Pointer to the configuration structure for this instance.

11.1.106.3 p_api

```
display_api_t::p_api
```

Brief description

Pointer to the API structure for this instance.

11.1.107 display_layer_t

```
typedef struct{
    display_coordinate_t  coordinate
    display_color_t  bg_color
    display_fade_control_t  fade_control
    uint8_t  fade_speed
} display_layer_t
```

11.1.107.1 coordinate

`display_coordinate_t::coordinate`

Brief description

Blending location (starting point of image)

11.1.107.2 bg_color

`display_color_t::bg_color`

Brief description

Color outside region.

11.1.107.3 fade_control

`display_fade_control_t::fade_control`

Brief description

Layer fade-in/out control on/off.

11.1.107.4 fade_speed

`uint8_t display_layer_t::fade_speed`

Brief description

Layer fade-in/out frame rate.

11.1.108 display_output_cfg_t

```
typedef struct{
    display_timing_t  htiming
```

```
    display_timing_t  vtiming

    display_sync_edge_t  sync_edge
    display_color_t  bg_color
    display_brightness_t  brightness
    display_contrast_t  contrast
    display_gamma_correction_t *  p_gamma_correction
    bool  dithering_on
} display_output_cfg_t
```

11.1.108.1 htiming

`display_timing_t::htiming`

Brief description

Horizontal display cycle setting.

11.1.108.2 vtiming

`display_timing_t::vtiming`

Brief description

Vertical display cycle setting.

11.1.108.3 format

`display_out_format_t::format`

Brief description

Output format setting.

11.1.108.4 endian

`display_endian_t::endian`

Brief description

Bit order of output data.

11.1.108.5 color_order

`display_color_order_t::color_order`

Brief description

Color order in pixel.

11.1.108.6 data_enable_polarity

`display_signal_polarity_t::data_enable_polarity`

Brief description

Data Enable signal polarity.

11.1.108.7 sync_edge

`display_sync_edge_t::sync_edge`

Brief description

Signal sync edge selection.

11.1.108.8 bg_color

`display_color_t::bg_color`

Brief description

Background color.

11.1.108.9 brightness

`display_brightness_t::brightness`

Brief description

Brightness setting.

11.1.108.10 contrast

`display_contrast_t::contrast`

Brief description

Contrast setting.

11.1.108.11 p_gamma_correction

`display_gamma_correction_t::p_gamma_correction`

Brief description

Pointer to gamma correction setting.

11.1.108.12 dithering_on

```
bool display_output_cfg_t::dithering_on
```

Brief description

Dithering on/off.

11.1.109 display_runtime_cfg_t

```
typedef struct{
    display_input_cfg_t  input
    display_layer_t  layer
} display_runtime_cfg_t
```

11.1.109.1 input

```
display_input_cfg_t::input
```

Brief description

Graphics input frame setting.

Detailed description

Generic configuration for display devices

11.1.109.2 layer

```
display_layer_t::layer
```

Brief description

Graphics layer alpha blending setting.

11.1.110 display_status_t

```
typedef struct{
    display_state_t  state
    display_fade_status_t  fade_status[DISPLAY_FRAME_LAYER_2+1]
} display_status_t
```

11.1.110.1 state

```
display_state_t::state
```

Brief description

Status of GLCD module.

11.1.110.2 fade_status

display_fade_status_t::fade_status

Brief description

Status of fade-in/fade-out status.

11.1.111 display_timing_t

```
typedef struct{
    uint16_t  total_cyc
    uint16_t  display_cyc
    uint16_t  back_porch
    uint16_t  sync_width
    display_signal_polarity_t  sync_polarity
} display_timing_t
```

11.1.111.1 total_cyc

uint16_t display_timing_t::total_cyc

Brief description

Total cycles in one line or total lines in one frame.

11.1.111.2 display_cyc

uint16_t display_timing_t::display_cyc

Brief description

Active video cycles or lines.

11.1.111.3 back_porch

uint16_t display_timing_t::back_porch

Brief description

Back poach cycles or lines.

11.1.111.4 sync_width

uint16_t display_timing_t::sync_width

Brief description

Sync signal asserting width.

11.1.111.5 sync_polarity

`display_signal_polarity_t::sync_polarity`

Brief description

Sync signal polarity.

11.1.112 dmac_instance_ctrl_t

```
typedef struct{
    uint32_t  id
    elc_event_t  trigger
    IRQn_Type  irq
    uint8_t  channel

    void const  *  p_context
    void *  p_reg
} dmac_instance_ctrl_t
```

11.1.112.1 id

`uint32_t ::id`

Brief description

Driver ID.

11.1.112.2 trigger

`elc_event_t::trigger`

Brief description

Transfer activation event. Matches event returned by infoGet.

11.1.112.3 irq

`IRQn_Type ::irq`

Brief description

Transfer activation IRQ.

11.1.112.4 channel

`uint8_t ::channel`

Brief description

Channel number.

11.1.112.5 p_callback

```
void(* ::p_callback) ( *cb_data)
```

Detailed description

Callback for transfer end interrupt.

11.1.112.6 p_context

```
void const* ::p_context
```

Detailed description

Placeholder for user data. Passed to the user p_callback in transfer_callback_args_t.

11.1.112.7 p_reg

```
void* ::p_reg
```

Detailed description

Pointer to base register.

11.1.113 doc_api_t

```
typedef struct{
    ssp_err_t(*  open)(doc_ctrl_t *const p_ctrl, doc_cfg_t const *const p_cfg)

    ssp_err_t(*  statusGet)(doc_ctrl_t *const p_ctrl, doc_status_t *p_status)
    ssp_err_t(*  statusClear)(doc_ctrl_t *const p_ctrl)
    ssp_err_t(*  write)(doc_ctrl_t *const p_ctrl, doc_data_t *const p_data)
    ssp_err_t(*  inputRegisterWrite)(doc_ctrl_t *const p_ctrl, doc_size_t data)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
} doc_api_t
```

11.1.114 doc_callback_args_t

```
typedef struct{
    doc_event_t  event
    void const  *  p_context
} doc_callback_args_t
```

11.1.114.1 event

doc_event_t::event

Brief description

The event is used to identify what caused the callback.

11.1.114.2 p_context

void const* doc_callback_args_t::p_context

Detailed description

Placeholder for user data. Set in open function in doc_cfg_t.

11.1.115 doc_cfg_t

```
typedef struct{
    doc_event_t  event
    uint8_t  irq_ipl
    void(*  p_callback)(doc_callback_args_t *p_args)
    void const  *  p_context
} doc_cfg_t
```

11.1.115.1 event

doc_event_t::event

Brief description

Select enumerated value from doc_event_t.

11.1.115.2 irq_ipl

uint8_t doc_cfg_t::irq_ipl

Brief description

DOC interrupt priority.

11.1.115.3 p_callback

void(* doc_cfg_t::p_callback) (doc_callback_args_t *p_args)

Detailed description

Callback provided when a DOC ISR occurs.

11.1.115.4 p_context

```
void const* doc_cfg_t::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in doc_callback_args_t.

11.1.116 doc_data_t

```
typedef struct{
    doc_size_t  dodir
    doc_size_t  dodsr
} doc_data_t
```

11.1.116.1 dodir

```
doc_size_t::dodir
```

Brief description

Value to be written to the DOC DODIR.

11.1.116.2 dodsr

```
doc_size_t::dodsr
```

Brief description

Value to be written to the DOC DODSR.

11.1.117 doc_instance_ctrl_t

```
typedef struct{
    uint32_t  open
    void(*  p_callback)(doc_callback_args_t *p_args)

    void const  *  p_context
    void *  p_reg
} doc_instance_ctrl_t
```

11.1.117.1 open

```
uint32_t ::open
```

Brief description

Used by driver to check if the control structure is valid.

11.1.117.2 p_callback

```
void(* ::p_callback) ( *p_args)
```

Detailed description

Callback provided when a DOC ISR occurs. NULL indicates no CPU interrupt.

11.1.117.3 event

```
doc_event_t::event
```

Brief description

The event DOC is configured for. Passed in ISR callback.

11.1.117.4 p_context

```
void const* ::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in doc_callback_args_t.

11.1.117.5 p_reg

```
void* ::p_reg
```

Brief description

Base register.

11.1.118 doc_instance_t

```

11.1.151.1 enable

```
bool gamma_correction_t::enable
```

Brief description

Gamma Correction On/Off.

11.1.151.2 gain

```
uint16_t gamma_correction_t::gain[DISPLAY_GAMMA_CURVE_ELEMENT_NUM]
```

Brief description

Gain adjustment.

11.1.151.3 threshold

```
uint16_t gamma_correction_t::threshold[DISPLAY_GAMMA_CURVE_ELEMENT_NUM]
```

Brief description

Start threshold.

11.1.152 glcd_cfg_t

```
typedef struct{
    glcd_tcon_pin_t  tcon_hsync
    glcd_tcon_pin_t  tcon_vsync
    glcd_tcon_pin_t  tcon_de
    glcd_correction_proc_order_t  correction_proc_order
    glcd_clk_src_t  clksrc
    glcd_panel_clk_div_t  clock_div_ratio
    glcd_dithering_mode_t  dithering_mode
    glcd_dithering_pattern_t  dithering_pattern_A
    glcd_dithering_pattern_t  dithering_pattern_B
    glcd_dithering_pattern_t  dithering_pattern_C
    glcd_dithering_pattern_t  dithering_pattern_D
} glcd_cfg_t
```

11.1.152.1 tcon_hsync

glcd_tcon_pin_t::tcon_hsync

Brief description

GLCD TCON output pin select.

11.1.152.2 tcon_vsync

glcd_tcon_pin_t::tcon_vsync

Brief description

GLCD TCON output pin select.

11.1.152.3 tcon_de

glcd_tcon_pin_t::tcon_de

Brief description

GLCD TCON output pin select.

11.1.152.4 correction_proc_order

glcd_correction_proc_order_t::correction_proc_order

Brief description

Correction control route select.

11.1.152.5 clksrc

glcd_clk_src_t::clksrc

Brief description

Clock Source selection.

11.1.152.6 clock_div_ratio

glcd_panel_clk_div_t::clock_div_ratio

Brief description

Clock divide ratio for dot clock.

11.1.152.7 dithering_mode

glcd_dithering_mode_t::dithering_mode

Brief description

Dithering mode.

11.1.152.8 dithering_pattern_A

glcd_dithering_pattern_t::dithering_pattern_A

Brief description

Dithering pattern A.

11.1.152.9 dithering_pattern_B

glcd_dithering_pattern_t::dithering_pattern_B

Brief description

Dithering pattern B.

11.1.152.10 dithering_pattern_C

glcd_dithering_pattern_t::dithering_pattern_C

Brief description

Dithering pattern C.

11.1.152.11 dithering_pattern_D

glcd_dithering_pattern_t::dithering_pattern_D

Brief description

Dithering pattern D.

11.1.153 glcd_ctrl_t

```
typedef struct{
    display_coordinate_t  back_porch
    uint16_t  hsize
    uint16_t  vsize
    bsp_lock_t  resource_lock
    void *  p_context
} glcd_ctrl_t
```

11.1.153.1 back_porch

display_coordinate_t::back_porch

Brief description

Zero coordinate for graphics plane(Bach porch End)

11.1.153.2 hsize

uint16_t ::hsize

Brief description

Horizontal pixel size in a line.

11.1.153.3 vsize

uint16_t ::vsize

Brief description

Vertical pixel size in a frame.

11.1.153.4 resource_lock

bsp_lock_t::resource_lock

Brief description

Resource lock.

11.1.153.5 p_context

```
void* ::p_context
```

Detailed description

Pointer to the function level device context (e.g. display_ctrl_t type data)

11.1.154 glcd_instance_ctrl_t

```
typedef struct{
    display_state_t  state
    void(*  p_callback)(display_callback_args_t *p_args)
    void const  *  p_context
    R_GLCDC_Type *  p_reg
} glcd_instance_ctrl_t
```

11.1.154.1 state

```
display_state_t::state
```

Brief description

Status of GLCD module.

11.1.154.2 p_callback

```
void(* ::p_callback) ( *p_args)
```

Brief description

Pointer to callback function.

11.1.154.3 p_context

```
void const* ::p_context
```

Brief description

Pointer to the higher level device context.

11.1.154.4 p_reg

```
R_GLCDC_Type* ::p_reg
```

Brief description

Base register address.

11.1.155 gpt_input_capture_extend_t

```
typedef struct{
    gpt_input_capture_signal_t  signal
    gpt_input_capture_signal_filter_t  signal_filter
    gpt_input_capture_clock_divider_t  clock_divider
    input_capture_signal_level_t  enable_level
    gpt_input_capture_signal_filter_t  enable_filter
} gpt_input_capture_extend_t
```

11.1.155.1 signal

gpt_input_capture_signal_t::signal

Brief description

One of gpt_input_capture_signal_t.

11.1.155.2 signal_filter

gpt_input_capture_signal_filter_t::signal_filter

Brief description

One of gpt_input_capture_signal_filter_t.

11.1.155.3 clock_divider

gpt_input_capture_clock_divider_t::clock_divider

Brief description

One of gpt_input_capture_clock_divider_t.

11.1.155.4 enable_level

input_capture_signal_level_t::enable_level

Detailed description

The unused GTIOCx pin can be used as an enable signal to enable captures. If the Input Capture Signal Pin is GTIOCA, then the enable pin is GTIOCB. The enable level is set here if used.

11.1.155.5 enable_filter

gpt_input_capture_signal_filter_t::enable_filter

Brief description

One of gpt_input_capture_signal_filter_t.

11.1.156 gpt_input_capture_instance_ctrl_t

```
typedef struct{
    uint32_t  open
    uint8_t  channel
    input_capture_mode_t  mode
    input_capture_repetition_t  repetition
    uint32_t  capture_count
    uint32_t  overflows_last
    uint32_t  overflows_current
    void(*  p_callback)(input_capture_callback_args_t *p_args)
    void const  *  p_context
    void *  p_reg
    IRQn_Type  capture_irq
    IRQn_Type  overflow_irq
    input_capture_variant_t  variant
    uint32_t  start_bitmask
    uint32_t  stop_bitmask
} gpt_input_capture_instance_ctrl_t
```

11.1.156.1 open

```
uint32_t ::open
```

Brief description

Whether or not channel is open.

11.1.156.2 channel

```
uint8_t ::channel
```

Brief description

The channel in use.

11.1.156.3 mode

```
input_capture_mode_t::mode
```

Brief description

The mode of measurement being performed.

11.1.156.4 repetition

```
input_capture_repetition_t::repetition
```

Brief description

One-shot or periodic measurement.

11.1.156.5 capture_count

```
uint32_t ::capture_count
```

Brief description

The value of the timer captured at the time of interrupt.

11.1.156.6 overflows_last

```
uint32_t ::overflows_last
```

Brief description

Overflow count that occurred during last measurement.

11.1.156.7 overflows_current

```
uint32_t ::overflows_current
```

Brief description

Running count of overflows in current measurement.

11.1.156.8 p_callback

```
void(* ::p_callback) ( *p_args)
```

Brief description

Pointer to user callback.

11.1.156.9 p_context

```
void const* ::p_context
```

Brief description

Pointer to user's context data, to be passed to the callback function.

11.1.156.10 p_reg

```
void* ::p_reg
```

Brief description

GPT base register for this channel.

11.1.156.11 capture_irq

```
IRQn_Type ::capture_irq
```

Brief description

Capture IRQ number.

11.1.156.12 overflow_irq

```
IRQn_Type ::overflow_irq
```

Brief description

Overflow IRQ number.

11.1.156.13 variant

```
input_capture_variant_t::variant
```

Brief description

Timer variant.

11.1.156.14 start_bitmask

```
uint32_t ::start_bitmask
```

Brief description

Start and Clear bitmask for input capture.

11.1.156.15 stop_bitmask

```
uint32_t ::stop_bitmask
```

Brief description

Stop and capture bitmask for input capture.

11.1.157 gpt_instance_ctrl_t

```
typedef struct{
    void(*  p_callback)(timer_callback_args_t *p_args)
    void const  *  p_context
    void *  p_reg
    uint32_t  open
    uint8_t  channel
    bool  one_shot
    IRQn_Type  irq
```

```
    timer_variant_t  variant
} gpt_instance_ctrl_t
```

11.1.157.1 p_callback

```
void(* ::p_callback) ( *p_args)
```

Detailed description

Callback provided when a timer ISR occurs. NULL indicates no CPU interrupt.

11.1.157.2 p_context

```
void const* ::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in timer_callback_args_t.

11.1.157.3 p_reg

```
void* ::p_reg
```

Brief description

Base register for this channel.

11.1.157.4 open

```
uint32_t ::open
```

Brief description

Whether or not channel is open.

11.1.157.5 channel

```
uint8_t ::channel
```

Brief description

Channel number.

11.1.157.6 one_shot

```
bool ::one_shot
```

Brief description

Whether or not timer is in one shot mode.

11.1.157.7 irq

```
IRQn_Type ::irq
```

Brief description

Counter overflow IRQ number.

11.1.157.8 variant

```
timer_variant_t::variant
```

Brief description

Timer variant.

11.1.158 gpt_output_pin_t

```
typedef struct{
    bool  output_enabled
    gpt_pin_level_t  stop_level
} gpt_output_pin_t
```

11.1.158.1 output_enabled

```
bool ::output_enabled
```

Brief description

Set to true to enable output, false to disable output.

11.1.158.2 stop_level

```
gpt_pin_level_t::stop_level
```

Brief description

Select a stop level from gpt_pin_level_t.

11.1.159 hash_api_t

```
typedef struct{
    uint32_t(*  open)(hash_ctrl_t *const p_ctrl, hash_cfg_t const *const p_cfg)
    uint32_t(*  updateHash)(const uint32_t *p_source, uint32_t num_words,
uint32_t *p_dest)
    uint32_t(*  hashUpdate)(hash_ctrl_t *const p_ctrl, const uint32_t *p_source,
uint32_t num_words, uint32_t *p_dest)
    uint32_t(*  close)(hash_ctrl_t *const p_ctrl)
```

```
    uint32_t(*  versionGet)(ssp_version_t *const p_version)
} hash_api_t
```

11.1.160 hash_cfg_t

```
typedef struct{
    crypto_ctrl_t *  p_crypto_ctrl
    crypto_api_t const  *  p_crypto_api
} hash_cfg_t
```

11.1.160.1 p_crypto_ctrl

```
* hash_cfg_t::p_crypto_ctrl
```

Brief description

pointer to crypto engine control structure

11.1.160.2 p_crypto_api

```
const* hash_cfg_t::p_crypto_api
```

Brief description

pointer to crypto engine API structure

11.1.161 hash_ctrl_t

```
typedef struct{
    uint32_t  msgbuf[HASH_MESSAGE_BLOCK_SIZE_WORDS]
    uint32_t  hash[HASH_MAX_DIGEST_SIZE_WORDS]
    uint64_t  length
} hash_ctrl_t
```

11.1.161.1 msgbuf

```
uint32_t hash_ctrl_t::msgbuf[HASH_MESSAGE_BLOCK_SIZE_WORDS]
```

Brief description

message buffer to be hashed

11.1.161.2 hash

```
uint32_t hash_ctrl_t::hash[HASH_MAX_DIGEST_SIZE_WORDS]
```

Brief description

current hash value

11.1.161.3 length

`uint64_t hash_ctrl_t::length`

Brief description

64-bit message length (number of bits)

11.1.162 hash_instance_t

```
typedef struct{
    hash_ctrl_t *  p_ctrl
    hash_cfg_t const  *  p_cfg
    hash_api_t const  *  p_api
} hash_instance_t
```

11.1.162.1 p_ctrl

`hash_ctrl_t::p_ctrl`

Brief description

Pointer to the control structure for this instance.

11.1.162.2 p_cfg

`hash_cfg_t::p_cfg`

Brief description

Pointer to the configuration structure for this instance.

11.1.162.3 p_api

`hash_api_t::p_api`

Brief description

Pointer to the API structure for this instance.

11.1.163 i2c_api_master_t

```
typedef struct{
    ssp_err_t(*  open)(i2c_ctrl_t *const p_ctrl, i2c_cfg_t const *const p_cfg)
    ssp_err_t(*  close)(i2c_ctrl_t *const p_ctrl)
```

```
    ssp_err_t(*  read)(i2c_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t
const bytes, bool const restart)
    ssp_err_t(*  write)(i2c_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t
const bytes, bool const restart)
    ssp_err_t(*  reset)(i2c_ctrl_t *const p_ctrl)
    ssp_err_t(*  slaveAddressSet)(i2c_ctrl_t *const p_ctrl, uint16_t const slave,
i2c_addr_mode_t const addr_mode)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
} i2c_api_master_t
```

11.1.164 i2c_api_slave_t

```
typedef struct{
    ssp_err_t(*  open)(i2c_ctrl_t *const p_ctrl, i2c_cfg_t const *const p_cfg)
    ssp_err_t(*  close)(i2c_ctrl_t *const p_ctrl)
    ssp_err_t(*  masterWriteSlaveRead)(i2c_ctrl_t *const p_ctrl, uint8_t *const
p_dest, uint32_t const bytes)
    ssp_err_t(*  masterReadSlaveWrite)(i2c_ctrl_t *const p_ctrl, uint8_t *const
p_src, uint32_t const bytes)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
} i2c_api_slave_t
```

11.1.165 i2c_callback_args_t

```
typedef struct{
    void const  *const  p_context
    uint32_t const  bytes
    i2c_event_t const  event
} i2c_callback_args_t
```

11.1.165.1 p_context

```
void const* const i2c_callback_args_t::p_context
```

Brief description

Pointer to user-provided context.

11.1.165.2 bytes

```
uint32_t const i2c_callback_args_t::bytes
```

Brief description

Number of received/transmitted bytes in buff.

11.1.165.3 event

i2c_event_t::event

Brief description

Event code.

11.1.166 i2c_cfg_t

```
typedef struct{
    uint8_t  channel
    i2c_rate_t  rate
    uint16_t  slave
    i2c_addr_mode_t  addr_mode
    uint16_t  sda_delay
    uint8_t  rxi_ipl
    uint8_t  txi_ipl
    uint8_t  tei_ipl
    uint8_t  eri_ipl
    transfer_instance_t const  *  p_transfer_tx
    transfer_instance_t const  *  p_transfer_rx
    void(*  p_callback)(i2c_callback_args_t *p_args)
    void const  *  p_context
    void const  *  p_extend
} i2c_cfg_t
```

11.1.166.1 channel

uint8_t i2c_cfg_t::channel

Brief description

Identifier recognizable by implementation.

Detailed description

Generic configuration

11.1.166.2 rate

i2c_rate_t::rate

Brief description

Device's maximum clock rate from enum i2c_rate_t.

11.1.166.3 slave

uint16_t i2c_cfg_t::slave

Brief description

The address of the slave device.

11.1.166.4 addr_mode

`i2c_addr_mode_t::addr_mode`

Brief description

Indicates how slave fields should be interpreted.

11.1.166.5 sda_delay

`uint16_t i2c_cfg_t::sda_delay`

Brief description

The SDA output delay.

11.1.166.6 rxi_ipl

`uint8_t i2c_cfg_t::rxi_ipl`

Brief description

Receive interrupt priority.

11.1.166.7 txi_ipl

`uint8_t i2c_cfg_t::txi_ipl`

Brief description

Transmit interrupt priority.

11.1.166.8 tei_ipl

`uint8_t i2c_cfg_t::tei_ipl`

Brief description

Transmit end interrupt priority.

11.1.166.9 eri_ipl

`uint8_t i2c_cfg_t::eri_ipl`

Brief description

Error interrupt priority.

11.1.166.10 p_transfer_tx

`transfer_instance_t::p_transfer_tx`

Brief description

DTC instance for I2C transmit.Set to NULL if unused.

Detailed description

DTC/DMA support

11.1.166.11 p_transfer_rx

`transfer_instance_t::p_transfer_rx`

Brief description

DTC instance for I2C receive. Set to NULL if unused.

11.1.166.12 p_callback

```
void(* i2c_cfg_t::p_callback) (i2c_callback_args_t *p_args)
```

Brief description

Pointer to callback function.

Detailed description

Parameters to control software behavior

11.1.166.13 p_context

```
void const* i2c_cfg_t::p_context
```

Brief description

Pointer to the user-provided context.

11.1.166.14 p_extend

```
void const* i2c_cfg_t::p_extend
```

Brief description

Any configuration data needed by the hardware.

Detailed description

Implementation-specific configuration

11.1.167 i2c_master_instance_t

```
typedef struct{
    i2c_ctrl_t *  p_ctrl
    i2c_cfg_t const  *  p_cfg
    i2c_api_master_t const  *  p_api
} i2c_master_instance_t
```

11.1.167.1 p_ctrl

i2c_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.167.2 p_cfg

i2c_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.167.3 p_api

i2c_api_master_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.168 i2c_slave_instance_t

```
typedef struct{
    i2c_ctrl_t *  p_ctrl
    i2c_cfg_t const  *  p_cfg
    i2c_api_slave_t const  *  p_api
} i2c_slave_instance_t
```

11.1.168.1 p_ctrl

i2c_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.168.2 p_cfg

i2c_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.168.3 p_api

i2c_api_slave_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.169 i2s_api_t

```
typedef struct{
    ssp_err_t(*  open)(i2s_ctrl_t *const p_ctrl, i2s_cfg_t const *const p_cfg)
    ssp_err_t(*  stop)(i2s_ctrl_t *const p_ctrl, i2s_dir_t const dir)
    ssp_err_t(*  mute)(i2s_ctrl_t *const p_ctrl, i2s_mute_t const mute_enable)
    ssp_err_t(*  write)(i2s_ctrl_t *const p_ctrl, uint8_t const *const p_src,
uint16_t const bytes)
    ssp_err_t(*  read)(i2s_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint16_t
const bytes)
    ssp_err_t(*  writeRead)(i2s_ctrl_t *const p_ctrl, uint8_t const *const p_src,
uint8_t *const p_dest, uint16_t const bytes)
    ssp_err_t(*  infoGet)(i2s_ctrl_t *const p_ctrl, i2s_info_t *const p_info)
    ssp_err_t(*  close)(i2s_ctrl_t *const p_ctrl)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
} i2s_api_t
```

11.1.170 i2s_callback_args_t

```
typedef struct{
    void const  *  p_context
    i2s_event_t  event
} i2s_callback_args_t
```

11.1.170.1 p_context

void const* i2s_callback_args_t::p_context

Detailed description

Placeholder for user data. Set in open function in i2s_cfg_t.

11.1.170.2 event

i2s_event_t::event

Brief description

The event can be used to identify what caused the callback (overflow or error).

11.1.171 i2s_cfg_t

```
typedef struct{
    uint8_t  channel
    i2s_pcm_width_t  pcm_width
    i2s_word_length_t  word_length
    i2s_ws_continue_t  ws_continue
    uint32_t  sampling_freq_hz
    uint32_t  audio_clk_freq_hz
    timer_instance_t const  *  p_timer
    transfer_instance_t const  *  p_transfer_tx
    transfer_instance_t const  *  p_transfer_rx
    void(*  p_callback)(i2s_callback_args_t *p_args)
    void const  *  p_context
    void const  *  p_extend
    uint8_t  rxi_ipl
    uint8_t  txi_ipl
    uint8_t  idle_err_ipl
} i2s_cfg_t
```

11.1.171.1 channel

uint8_t i2s_cfg_t::channel

Detailed description

Select a channel corresponding to the channel number of the hardware.

11.1.171.2 pcm_width

i2s_pcm_width_t::pcm_width

Brief description

Audio PCM data width.

11.1.171.3 word_length

i2s_word_length_t::word_length

Brief description

Audio word length, bits must be >= pcm_width bits.

11.1.171.4 ws_continue

`i2s_ws_continue_t::ws_continue`

Brief description

Whether to continue WS transmission during idle state.

11.1.171.5 sampling_freq_hz

`uint32_t i2s_cfg_t::sampling_freq_hz`

Brief description

Sampling frequency in Hertz.

11.1.171.6 audio_clk_freq_hz

`uint32_t i2s_cfg_t::audio_clk_freq_hz`

Detailed description

Audio clock frequency in Hertz. Must be a multiple between 1 and 128 of (16 * sampling_freq_hz * (word_length <enum_value> + 1)

11.1.171.7 p_timer

`timer_instance_t::p_timer`

Detailed description

To generate audio clock with GPT, link a timer instance here. Set to NULL if unused.

11.1.171.8 p_transfer_tx

`transfer_instance_t::p_transfer_tx`

Detailed description

To use DTC during write, link a DTC instance here. Set to NULL if unused.

11.1.171.9 p_transfer_rx

`transfer_instance_t::p_transfer_rx`

Detailed description

To use DTC during read, link a DTC instance here. Set to NULL if unused.

11.1.171.10 p_callback

```
void(* i2s_cfg_t::p_callback) (i2s_callback_args_t *p_args)
```

Detailed description

Callback provided when an I2S ISR occurs. Set to NULL for no CPU interrupt.

11.1.171.11 p_context

```
void const* i2s_cfg_t::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in i2s_callback_args_t.

11.1.171.12 p_extend

```
void const* i2s_cfg_t::p_extend
```

Brief description

Extension parameter for hardware specific settings.

11.1.171.13 rxi_ipl

```
uint8_t i2s_cfg_t::rxi_ipl
```

Brief description

Receive interrupt priority.

11.1.171.14 txi_ipl

```
uint8_t i2s_cfg_t::txi_ipl
```

Brief description

Transmit interrupt priority.

11.1.171.15 idle_err_ipl

```
uint8_t i2s_cfg_t::idle_err_ipl
```

Brief description

Idle/Error interrupt priority.

11.1.172 i2s_info_t

```
typedef struct{
    i2s_status_t  status
    uint32_t  sampling_freq_hz
} i2s_info_t
```

11.1.172.1 status

i2s_status_t::status

11.1.172.2 sampling_freq_hz

uint32_t i2s_info_t::sampling_freq_hz

Brief description

Sampling frequency in Hertz.

11.1.173 i2s_instance_t

```
typedef struct{
    i2s_ctrl_t *  p_ctrl
    i2s_cfg_t const  *  p_cfg
    i2s_api_t const  *  p_api
} i2s_instance_t
```

11.1.173.1 p_ctrl

i2s_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.173.2 p_cfg

i2s_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.173.3 p_api

i2s_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.174 i2s_on_ssi_cfg_t

```
typedef struct{
    ssi_audio_clock_t  audio_clock
} i2s_on_ssi_cfg_t
```

11.1.174.1 audio_clock

ssi_audio_clock_t::audio_clock

Brief description

Audio clock source, default is SSI_AUDIO_CLOCK_EXTERNAL.

11.1.175 icu_instance_ctrl_t

```
typedef struct{
    uint32_t  open
    R_ICU_Type *  p_reg
    void(*  p_callback)(external_irq_callback_args_t *p_args)
    void const  *  p_context
    IRQn_Type  irq
    uint8_t  channel
} icu_instance_ctrl_t
```

11.1.175.1 open

uint32_t ::open

Brief description

Used to determine if channel control block is in use.

11.1.175.2 p_reg

R_ICU_Type* ::p_reg

Brief description

Pointer to register base address.

11.1.175.3 p_callback

void(* ::p_callback) (*p_args)

Detailed description

Callback provided when a external IRQ ISR occurs. Set to NULL for no CPU interrupt.

11.1.175.4 p_context

```
void const* ::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in external_irq_callback_args_t.

11.1.175.5 irq

```
IRQn_Type ::irq
```

Brief description

NVIC interrupt number.

11.1.175.6 channel

```
uint8_t ::channel
```

Brief description

Channel.

11.1.176 in_addr

```
typedef struct{
    unsigned long  s_addr
    ULONG  s_addr
} in_addr
```

11.1.176.1 s_addr

```
ULONG in_addr::s_addr
```

Brief description

load with inet_aton()

Detailed description

Load with inet_aton()

11.1.176.2 s_addr

```
ULONG in_addr::s_addr
```

11.1.177 input_capture_api_t

```
typedef struct{
    ssp_err_t(*  open)(input_capture_ctrl_t *const p_ctrl, input_capture_cfg_t
const *const p_cfg)
    ssp_err_t(*  disable)(input_capture_ctrl_t const *const p_ctrl)
    ssp_err_t(*  enable)(input_capture_ctrl_t const *const p_ctrl)
    ssp_err_t(*  infoGet)(input_capture_ctrl_t const *const p_ctrl,
input_capture_info_t *const p_info)
    ssp_err_t(*  lastCaptureGet)(input_capture_ctrl_t const *const p_ctrl,
input_capture_capture_t *const p_counter)
    ssp_err_t(*  close)(input_capture_ctrl_t *const p_ctrl)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
} input_capture_api_t
```

11.1.178 input_capture_callback_args_t

```
typedef struct{
    uint8_t  channel
    input_capture_event_t  event
    uint32_t  counter
    uint32_t  overflows
    void const  *  p_context
} input_capture_callback_args_t
```

11.1.178.1 channel

uint8_t input_capture_callback_args_t::channel

Brief description

The channel being used.

11.1.178.2 event

input_capture_event_t::event

Brief description

The event that caused the interrupt and callback.

11.1.178.3 counter

uint32_t input_capture_callback_args_t::counter

Brief description

The value of the timer captured at the time of interrupt.

11.1.178.4 overflows

```
uint32_t input_capture_callback_args_t::overflows
```

Brief description

The number of counter overflows that occurred during this measurement.

11.1.178.5 p_context

```
void const* input_capture_callback_args_t::p_context
```

Brief description

Placeholder for user data, set in p_context.

11.1.179 input_capture_capture_t

```
typedef struct{
    uint32_t  counter
    uint32_t  overflows
} input_capture_capture_t
```

11.1.179.1 counter

```
uint32_t input_capture_capture_t::counter
```

Brief description

The value of the timer captured at the time of interrupt.

11.1.179.2 overflows

```
uint32_t input_capture_capture_t::overflows
```

Brief description

The number of counter overflows that occurred during this measurement.

11.1.180 input_capture_cfg_t

```
typedef struct{
    uint8_t  channel
    uint8_t  capture_irq_ipl
    uint8_t  overflow_irq_ipl
    input_capture_mode_t  mode
    input_capture_signal_edge_t  edge
    input_capture_repetition_t  repetition
    bool  autostart
```

```
    void const  *  p_extend
    void(*  p_callback)(input_capture_callback_args_t *p_args)
    void const  *  p_context
} input_capture_cfg_t
```

11.1.180.1 channel

```
uint8_t input_capture_cfg_t::channel
```

Brief description

The channel in use.

11.1.180.2 capture_irq_ipl

```
uint8_t input_capture_cfg_t::capture_irq_ipl
```

Brief description

Capture interrupt priority.

11.1.180.3 overflow_irq_ipl

```
uint8_t input_capture_cfg_t::overflow_irq_ipl
```

Brief description

Overflow interrupt priority.

11.1.180.4 mode

```
input_capture_mode_t::mode
```

Brief description

The mode of measurement to be performed.

11.1.180.5 edge

```
input_capture_signal_edge_t::edge
```

Brief description

The triggering edge to start a measurement (rise or fall).

11.1.180.6 repetition

```
input_capture_repetition_t::repetition
```

Brief description

One-shot or periodic measurement.

11.1.180.7 autostart

```
bool input_capture_cfg_t::autostart
```

Brief description

Specifies whether interrupts are enabled or not after open.

11.1.180.8 p_extend

```
void const* input_capture_cfg_t::p_extend
```

Detailed description

REQUIRED. Pointer to peripheral-specific extension parameters. See gpt_input_capture_extend_t for GPT.

11.1.180.9 p_callback

```
void(* input_capture_cfg_t::p_callback) (input_capture_callback_args_t *p_args)
```

Detailed description

Pointer to user's callback function, or NULL if no interrupt desired.

11.1.180.10 p_context

```
void const* input_capture_cfg_t::p_context
```

Brief description

Pointer to user's context data, to be passed to the callback.

11.1.181 input_capture_info_t

```
typedef struct{
    input_capture_status_t  status
    input_capture_variant_t  variant
} input_capture_info_t
```

11.1.181.1 status

```
input_capture_status_t::status
```

Brief description

Whether or not a capture is in progress.

11.1.181.2 variant

input_capture_variant_t::variant

Brief description

Whether timer is 16 or 32 bits.

11.1.182 input_capture_instance_t

```
typedef struct{
    input_capture_ctrl_t *  p_ctrl
    input_capture_cfg_t const  *  p_cfg
    input_capture_api_t const  *  p_api
} input_capture_instance_t
```

11.1.182.1 p_ctrl

input_capture_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.182.2 p_cfg

input_capture_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.182.3 p_api

input_capture_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.183 ioport_api_t

```
typedef struct{
    ssp_err_t(*  init)(const ioport_cfg_t *p_cfg)
    ssp_err_t(*  pinsCfg)(const ioport_cfg_t *p_cfg)
    ssp_err_t(*  pinCfg)(ioport_port_pin_t pin, uint32_t cfg)
    ssp_err_t(*  pinDirectionSet)(ioport_port_pin_t pin, ioport_direction_t
direction)
    ssp_err_t(*  pinEventInputRead)(ioport_port_pin_t pin, ioport_level_t
```

```
*p_pin_event)
    ssp_err_t(*  pinEventOutputWrite)(ioport_port_pin_t pin, ioport_level_t
pin_value)

ioport_ethernet_mode_t mode)
    ssp_err_t(*  pinRead)(ioport_port_pin_t pin, ioport_level_t *p_pin_value)
    ssp_err_t(*  pinWrite)(ioport_port_pin_t pin, ioport_level_t level)
    ssp_err_t(*  portDirectionSet)(ioport_port_t port, ioport_size_t
direction_values, ioport_size_t mask)
    ssp_err_t(*  portEventInputRead)(ioport_port_t port, ioport_size_t
*p_event_data)
    ssp_err_t(*  portEventOutputWrite)(ioport_port_t port, ioport_size_t
event_data, ioport_size_t mask_value)
    ssp_err_t(*  portRead)(ioport_port_t port, ioport_size_t *p_port_value)
    ssp_err_t(*  portWrite)(ioport_port_t port, ioport_size_t value,
ioport_size_t mask)
    ssp_err_t(*  versionGet)(ssp_version_t *p_data)
} ioport_api_t
```

11.1.184 ioport_cfg_t

```
typedef struct{
    uint16_t  number_of_pins
    ioport_pin_cfg_t const  *  p_pin_cfg_data
} ioport_cfg_t
```

11.1.184.1 number_of_pins

```
uint16_t ioport_cfg_t::number_of_pins
```

Brief description

Number of pins for which there is configuration data.

11.1.184.2 p_pin_cfg_data

```
ioport_pin_cfg_t::p_pin_cfg_data
```

Brief description

Pin configuration data.

11.1.185 ioport_instance_t

```
typedef struct{
    ioport_cfg_t const  *  p_cfg
    ioport_api_t const  *  p_api
} ioport_instance_t
```

11.1.185.1 p_cfg

ioport_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.185.2 p_api

ioport_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.186 ioport_pin_cfg_t

```
typedef struct{
    uint32_t  pin_cfg
    ioport_port_pin_t  pin
} ioport_pin_cfg_t
```

11.1.186.1 pin_cfg

uint32_t ioport_pin_cfg_t::pin_cfg

Brief description

Pin PFS configuration - Use ioport_cfg_options_t parameters to configure.

11.1.186.2 pin

ioport_port_pin_t::pin

Brief description

Pin identifier.

11.1.187 iwdt_instance_ctrl_t

```
typedef struct{
    bool  wdt_open
    void const  *  p_context
    R_IWDT_Type *  p_reg
    void(*  p_callback)(wdt_callback_args_t *p_args)
} iwdt_instance_ctrl_t
```

11.1.187.1 wdt_open

```
bool ::wdt_open
```

Detailed description

Indicates whether the open() API has been successfully called.

11.1.187.2 p_context

```
void const* ::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in wdt_callback_args_t.

11.1.187.3 p_reg

```
R_IWDT_Type* ::p_reg
```

Brief description

Pointer to register base address.

11.1.187.4 p_callback

```
void(* ::p_callback) ( *p_args)
```

Brief description

Callback provided when a WDT NMI ISR occurs.

11.1.188 jpeg_decode_api_t

```
typedef struct{
    ssp_err_t(*  open)(jpeg_decode_ctrl_t *const p_ctrl, jpeg_decode_cfg_t const

    void const  *  p_context
} jpeg_decode_cfg_t
```

11.1.190.1 color_space

jpeg_decode_color_space_t::color_space

Brief description

Color space.

11.1.190.2 input_data_format

jpeg_decode_data_format_t::input_data_format

Brief description

Input data stream byte order.

11.1.190.3 output_data_format

jpeg_decode_data_format_t::output_data_format

Brief description

Output data stream byte order.

11.1.190.4 pixel_format

jpeg_decode_pixel_format_t::pixel_format

Brief description

Pixel format.

11.1.190.5 alpha_value

uint8_t jpeg_decode_cfg_t::alpha_value

Brief description

Alpha value to be applied to decoded pixel data. Only valid for ARGB888 format.

11.1.190.6 jdti_ipl

uint8_t jpeg_decode_cfg_t::jdti_ipl

Brief description

Data transfer interrupt priority.

11.1.190.7 jedi_ipl

uint8_t jpeg_decode_cfg_t::jedi_ipl

Brief description

Decompression interrupt priority.

11.1.190.8 p_callback

```
void(* jpeg_decode_cfg_t::p_callback) (jpeg_decode_callback_args_t *p_args)
```

Brief description

User-supplied callback functions.

11.1.190.9 p_context

```
void const* jpeg_decode_cfg_t::p_context
```

Brief description

Placeholder for user data. Passed to user callback in jpeg_decode_callback_args_t.

11.1.191 jpeg_decode_instance_ctrl_t

```
typedef struct{
    jpeg_decode_status_t  status

11.1.191.1 status

```
jpeg_decode_status_t::status
```

Brief description

JPEG Codec module status.

11.1.191.2 error_code

```
::error_code
```

Brief description

JPEG Codec error code (if any).

11.1.191.3 p_callback

```
void(* ::p_callback) ( *p_args)
```

Brief description

User-supplied callback functions.

11.1.191.4 p_extend

```
void const* ::p_extend
```

Brief description

JPEG Codec hardware dependent configuration */.

11.1.191.5 p_context

```
void const* ::p_context
```

Brief description

Placeholder for user data. Passed to user callback in jpeg_decode_callback_args_t.

11.1.191.6 p_reg

```
R_JPEG_Type* ::p_reg
```

Brief description

Pointer to register base address.

11.1.191.7 pixel_format

```
jpeg_decode_pixel_format_t::pixel_format
```

Brief description

Pixel format.

11.1.191.8 horizontal_stride

```
uint32_t ::horizontal_stride
```

Brief description

Horizontal Stride settings.

11.1.191.9 outbuffer_size

```
uint32_t ::outbuffer_size
```

Brief description

out buffer size

11.1.191.10 total_lines_decoded

```
uint16_t ::total_lines_decoded
```

Brief description

Track the number of lines decoded so far.

11.1.191.11 horizontal_subsample

```
jpeg_decode_subsample_t::horizontal_subsample
```

Brief description

Horizontal sub-sample setting.

11.1.192 jpeg_decode_instance_t

11.1.229.1 x_capture_start_pixel

```
uint16_t pdc_cfg_t::x_capture_start_pixel
```

Brief description

Horizontal position to start capture.

11.1.229.2 x_capture_pixels

```
uint16_t pdc_cfg_t::x_capture_pixels
```

Brief description

Number of horizontal pixels to capture.

11.1.229.3 y_capture_start_pixel

```
uint16_t pdc_cfg_t::y_capture_start_pixel
```

Brief description

Vertical position to start capture.

11.1.229.4 y_capture_pixels

`uint16_t pdc_cfg_t::y_capture_pixels`

Brief description

Number of vertical lines/pixels to capture.

11.1.229.5 clock_division

`pdc_clock_division_t::clock_division`

Brief description

Clock divider.

11.1.229.6 endian

`pdc_endian_t::endian`

Brief description

Endian of capture data.

11.1.229.7 hsync_polarity

`pdc_hsync_polarity_t::hsync_polarity`

Brief description

Polarity of HSYNC input.

11.1.229.8 vsync_polarity

`pdc_vsync_polarity_t::vsync_polarity`

Brief description

Polarity of VSYNC input.

11.1.229.9 p_buffer

`uint8_t* pdc_cfg_t::p_buffer`

Brief description

Pointer to buffer to write image into.

11.1.229.10 bytes_per_pixel

```
uint8_t pdc_cfg_t::bytes_per_pixel
```

Brief description

Number of bytes per pixel.

11.1.229.11 frame_end_ipl

```
uint8_t pdc_cfg_t::frame_end_ipl
```

Brief description

Frame end interrupt priority.

11.1.229.12 irq_ipl

```
uint8_t pdc_cfg_t::irq_ipl
```

Brief description

PDC interrupt priority.

11.1.229.13 p_lower_lvl_transfer

```
transfer_instance_t::p_lower_lvl_transfer
```

Brief description

Pointer to the transfer instance the PDC should use.

11.1.229.14 p_callback

```
void(* pdc_cfg_t::p_callback) (pdc_callback_args_t *p_args)
```

Brief description

Callback provided when a PDC transfer ISR occurs.

11.1.229.15 p_context

```
void const* pdc_cfg_t::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in pdc_callback_args_t.

11.1.229.16 p_extend

```
void const* pdc_cfg_t::p_extend
```

11.1.230 pdc_instance_ctrl_t

```
typedef struct{

    IRQn_Type  irq
} pdc_instance_ctrl_t
```

11.1.230.1 p_reg

```
R_PDC_Type* ::p_reg
```

Brief description

Pointer to PDC base address.

11.1.230.2 open

```
uint32_t ::open
```

Detailed description

Indicates whether or not the driver is open called.

11.1.230.3 bytes_per_pixel

```
uint8_t ::bytes_per_pixel
```

Brief description

Number of bytes per pixel.

11.1.230.4 x_resolution_pixels

```
uint16_t ::x_resolution_pixels
```

Brief description

Total number of horizontal pixels input to PDC.

11.1.230.5 y_resolution_pixels

```
uint16_t ::y_resolution_pixels
```

Brief description

Total number of lines input to the PDC.

11.1.230.6 x_capture_start_pixel

```
uint16_t ::x_capture_start_pixel
```

Brief description

Horizontal position to start capture.

11.1.230.7 x_capture_pixels

```
uint16_t ::x_capture_pixels
```

Brief description

Number of horizontal pixels to capture.

11.1.230.8 y_capture_start_pixel

```
uint16_t ::y_capture_start_pixel
```

Brief description

Vertical position to start capture.

11.1.230.9 y_capture_pixels

```
uint16_t ::y_capture_pixels
```

Brief description

Number of vertical lines/pixels to capture.

11.1.230.10 endian

```
pdc_endian_t::endian
```

Brief description

Endian of capture data.

11.1.230.11 hsync_polarity

`pdc_hsync_polarity_t::hsync_polarity`

Brief description

Polarity of HSYNC input.

11.1.230.12 vsync_polarity

`pdc_vsync_polarity_t::vsync_polarity`

Brief description

Polarity of VSYNC input.

11.1.230.13 p_current_buffer

`uint8_t* ::p_current_buffer`

Brief description

Pointer to buffer currently in use.

11.1.230.14 transfer_in_progress

`bool ::transfer_in_progress`

Brief description

Indicates if a PDC transfer is already in progress.

11.1.230.15 p_lower_lvl_transfer

`transfer_instance_t::p_lower_lvl_transfer`

Brief description

Pointer to the transfer instance the PDC should use.

11.1.230.16 info_transfer

`transfer_info_t::info_transfer`

Brief description

Transfer info structure for low level Transfer interface.

11.1.230.17 p_context

```
void const* ::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in pdc_callback_args_t.

11.1.230.18 p_callback

```
void(* ::p_callback) ( *p_args)
```

Brief description

Callback provided when a PDC transfer ISR occurs.

11.1.230.19 frame_end_irq

```
IRQn_Type ::frame_end_irq
```

Brief description

Frame end interrupt number.

11.1.230.20 irq

```
IRQn_Type ::irq
```

Brief description

PDC interrupt number.

11.1.231 pdc_instance_t

Brief description

Information describing I2C device.

11.1.240.2 open

uint32_t ::open

Brief description

Flag to determine if the device is open.

11.1.240.3 p_reg

void* ::p_reg

Brief description

Base register for this channel.

11.1.240.4 rxi_irq

IRQn_Type ::rxi_irq

Brief description

Receive IRQ number.

11.1.240.5 txi_irq

```
IRQn_Type ::txi_irq
```

Brief description

Transmit IRQ number.

11.1.240.6 eri_irq

```
IRQn_Type ::eri_irq
```

Brief description

Error IRQ number.

11.1.240.7 p_buff

```
uint8_t* ::p_buff
```

Detailed description

Holds the data associated with the transfer

11.1.240.8 total

```
uint32_t ::total
```

Detailed description

Holds the total number of data bytes to transfer

11.1.240.9 remain

```
uint32_t ::remain
```

Detailed description

Tracks the remaining data bytes to transfer

11.1.240.10 loaded

```
uint32_t ::loaded
```

Detailed description

Tracks the number of data bytes written to the register

11.1.240.11 transaction_count

```
uint32_t ::transaction_count
```

Detailed description

Tracks the actual number of transactions

11.1.240.12 read

```
volatile bool ::read
```

Detailed description

Holds the direction of the data byte transfer

11.1.240.13 err

```
volatile bool ::err
```

Detailed description

Tracks whether or not an error occurred during processing

11.1.240.14 slave_busy

```
volatile bool ::slave_busy
```

Detailed description

Tracks if the slave is busy performing a transaction

11.1.240.15 do_dummy_read

```
volatile bool ::do_dummy_read
```

11.1.240.16 start_interrupt_enabled

```
volatile bool ::start_interrupt_enabled
```

Detailed description

<< Tracks whether a dummy read is issued on the first RX < Tracks whether the start interrupt is enabled

11.1.240.17 restarted

```
volatile bool ::restarted
```

11.1.241 rspi_access_delay_t

```
typedef struct{
    rspi_next_access_delay_count_t  rspi_next_access_delay_count
    rspi_next_access_delay_state_t  rspi_next_access_delay_state
} rspi_access_delay_t
```

11.1.241.1 rspi_next_access_delay_count

rspi_next_access_delay_count_t::rspi_next_access_delay_count

11.1.241.2 rspi_next_access_delay_state

rspi_next_access_delay_state_t::rspi_next_access_delay_state

11.1.242 rspi_clock_delay_t

```
typedef struct{
    rspi_clock_delay_count_t  rspi_clock_delay_count
    rspi_clock_delay_state_t  rspi_clock_delay_state
} rspi_clock_delay_t
```

11.1.242.1 rspi_clock_delay_count

rspi_clock_delay_count_t::rspi_clock_delay_count

11.1.242.2 rspi_clock_delay_state

rspi_clock_delay_state_t::rspi_clock_delay_state

11.1.243 rspi_instance_ctrl_t

```
typedef struct{
    uint8_t  channel
    uint8_t  current_slave
    uint32_t  channel_opened
    transfer_instance_t const  *  p_transfer_tx
    transfer_instance_t const  *  p_transfer_rx
    void(*  p_callback)(spi_callback_args_t *p_args)
    void const  *  p_context
    void *  p_reg
    IRQn_Type  rxi_irq
    IRQn_Type  txi_irq
    IRQn_Type  tei_irq
    IRQn_Type  eri_irq
```

```
    void *  p_src
    void *  p_dest
    uint32_t  tx_count
    uint32_t  rx_count
    uint32_t  xfr_length
    uint8_t  bytes_per_transfer
    bool  do_tx
    bool  using_dtc
    transfer_addr_mode_t  tx_dtc_addr_mode
    transfer_addr_mode_t  rx_dtc_addr_mode
    spi_operation_t  transfer_mode
    uint32_t  rx_data
    bsp_lock_t  resource_lock_tx_rx
} rspi_instance_ctrl_t
```

11.1.243.1 channel

```
uint8_t ::channel
```

Brief description

Channel number to be used.

11.1.243.2 current_slave

```
uint8_t ::current_slave
```

Brief description

Number of the currently assigned slave.

11.1.243.3 channel_opened

```
uint32_t ::channel_opened
```

Brief description

Internal flag to indicate the peripheral was initialized.

11.1.243.4 p_transfer_tx

```
transfer_instance_t::p_transfer_tx
```

Brief description

To use SPI DTC/DMA write transfer.

11.1.243.5 p_transfer_rx

`transfer_instance_t::p_transfer_rx`

Brief description

To use SPI DTC/DMA read transfer.

11.1.243.6 p_callback

```
void(* ::p_callback) ( *p_args)
```

Brief description

Pointer to user callback function.

11.1.243.7 p_context

```
void const* ::p_context
```

Brief description

Pointer to the higher level device context.

11.1.243.8 p_reg

```
void* ::p_reg
```

Brief description

Base register for this channel.

11.1.243.9 rxi_irq

```
IRQn_Type ::rxi_irq
```

Brief description

Receive IRQ number.

11.1.243.10 txi_irq

```
IRQn_Type ::txi_irq
```

Brief description

Transmit IRQ number.

11.1.243.11 tei_irq

```
IRQn_Type ::tei_irq
```

Brief description

Transmit end IRQ number.

11.1.243.12 eri_irq

```
IRQn_Type ::eri_irq
```

Brief description

Error IRQ number.

11.1.243.13 p_src

```
void* ::p_src
```

11.1.243.14 p_dest

```
void* ::p_dest
```

11.1.243.15 tx_count

```
uint32_t ::tx_count
```

11.1.243.16 rx_count

```
uint32_t ::rx_count
```

11.1.243.17 xfr_length

```
uint32_t ::xfr_length
```

11.1.243.18 bytes_per_transfer

```
uint8_t ::bytes_per_transfer
```

11.1.243.19 do_tx

```
bool ::do_tx
```

11.1.243.20 using_dtc

```
bool ::using_dtc
```

11.1.243.21 tx_dtc_addr_mode

transfer_addr_mode_t::tx_dtc_addr_mode

11.1.243.22 rx_dtc_addr_mode

transfer_addr_mode_t::rx_dtc_addr_mode

11.1.243.23 transfer_mode

spi_operation_t::transfer_mode

11.1.243.24 rx_data

uint32_t ::rx_data

11.1.243.25 resource_lock_tx_rx

bsp_lock_t::resource_lock_tx_rx

Detailed description

Resource lock for transmission/reception

11.1.244 rspi_loopback_t

```
typedef struct{
    rspi_loopback1_t  rspi_loopback1
    rspi_loopback2_t  rspi_loopback2
} rspi_loopback_t
```

11.1.244.1 rspi_loopback1

rspi_loopback1_t::rspi_loopback1

11.1.244.2 rspi_loopback2

rspi_loopback2_t::rspi_loopback2

11.1.245 rspi_mosi_idle_t

```
typedef struct{
    rspi_mosi_idle_fixed_val_t  rspi_mosi_idle_fixed_val
    rspi_mosi_idle_val_fixing_t  rspi_mosi_idle_val_fixing
} rspi_mosi_idle_t
```

11.1.245.1 rspi_mosi_idle_fixed_val

rspi_mosi_idle_fixed_val_t::rspi_mosi_idle_fixed_val

11.1.245.2 rspi_mosi_idle_val_fixing

rspi_mosi_idle_val_fixing_t::rspi_mosi_idle_val_fixing

11.1.246 rspi_parity_t

```
typedef struct{
    rspi_parity_state_t  rspi_parity
    rspi_parity_mode_t  rspi_parity_mode
} rspi_parity_t
```

11.1.246.1 rspi_parity

rspi_parity_state_t::rspi_parity

11.1.246.2 rspi_parity_mode

rspi_parity_mode_t::rspi_parity_mode

11.1.247 rspi_ssl_negation_delay_t

```
typedef struct{
    rspi_ssl_negation_delay_count_t  rspi_ssl_neg_delay_count
    rspi_ssl_negation_delay_state_t  rspi_ssl_neg_delay_state
} rspi_ssl_negation_delay_t
```

11.1.247.1 rspi_ssl_neg_delay_count

rspi_ssl_negation_delay_count_t::rspi_ssl_neg_delay_count

11.1.247.2 rspi_ssl_neg_delay_state

rspi_ssl_negation_delay_state_t::rspi_ssl_neg_delay_state

11.1.248 rspi_ssl_polarity_t

```
typedef struct{
    rspi_sslp_t  rspi_ssl2
    rspi_sslp_t  rspi_ssl3
    rspi_sslp_t  rspi_ssl0
```

```
    rspi_sslp_t  rspi_ssl1
} rspi_ssl_polarity_t
```

11.1.248.1 rspi_ssl2

rspi_sslp_t::rspi_ssl2

11.1.248.2 rspi_ssl3

rspi_sslp_t::rspi_ssl3

11.1.248.3 rspi_ssl0

rspi_sslp_t::rspi_ssl0

11.1.248.4 rspi_ssl1

rspi_sslp_t::rspi_ssl1

11.1.249 rtc_alarm_time_t

```
typedef struct{
    rtc_time_t  time
    bool  sec_match
    bool  min_match
    bool  hour_match
    bool  mday_match
    bool  mon_match
    bool  year_match
    bool  dayofweek_match
} rtc_alarm_time_t
```

11.1.249.1 time

rtc_time_t::time

Brief description

Time structure.

11.1.249.2 sec_match

bool rtc_alarm_time_t::sec_match

Brief description

Enable the alarm based on a match of the seconds field.

11.1.249.3 min_match

```
bool rtc_alarm_time_t::min_match
```

Brief description

Enable the alarm based on a match of the minutes field.

11.1.249.4 hour_match

```
bool rtc_alarm_time_t::hour_match
```

Brief description

Enable the alarm based on a match of the hours field.

11.1.249.5 mday_match

```
bool rtc_alarm_time_t::mday_match
```

Brief description

Enable the alarm based on a match of the days field.

11.1.249.6 mon_match

```
bool rtc_alarm_time_t::mon_match
```

Brief description

Enable the alarm based on a match of the months field.

11.1.249.7 year_match

```
bool rtc_alarm_time_t::year_match
```

Brief description

Enable the alarm based on a match of the years field.

11.1.249.8 dayofweek_match

```
bool rtc_alarm_time_t::dayofweek_match
```

Brief description

Enable the alarm based on a match of the dayofweek field.

11.1.250 rtc_api_t

```
typedef struct{
    ssp_err_t(*  open)(rtc_ctrl_t *const p_ctrl, rtc_cfg_t const *const p_cfg)

} rtc_api_t
```

11.1.251 rtc_callback_args_t

```
typedef struct{
    rtc_event_t  event
    void const  *  p_context
} rtc_callback_args_t
```

11.1.251.1 event

rtc_event_t::event

Brief description

The event can be used to identify what caused the callback (compare match or error).

11.1.251.2 p_context

void const* rtc_callback_args_t::p_context

Brief description

Placeholder for user data. Set in r_timer_t::open function in timer_cfg_t.

11.1.252 rtc_cfg_t

```
typedef struct{
    rtc_clock_source_t  clock_source
    bool  hw_cfg
    uint32_t  error_adjustment_value
    rtc_error_adjustment_t  error_adjustment_type
    uint8_t  alarm_ipl
    uint8_t  periodic_ipl
    uint8_t  carry_ipl
    void(*  p_callback)(rtc_callback_args_t *p_args)
    void const  *  p_context
    void const  *  p_extend
} rtc_cfg_t
```

11.1.252.1 clock_source

`rtc_clock_source_t::clock_source`

Brief description

Clock source for the RTC block.

11.1.252.2 hw_cfg

`bool rtc_cfg_t::hw_cfg`

Brief description

Initialize RTC in Open()

11.1.252.3 error_adjustment_value

`uint32_t rtc_cfg_t::error_adjustment_value`

Brief description

Value of the prescaler for error adjustment.

11.1.252.4 error_adjustment_type

`rtc_error_adjustment_t::error_adjustment_type`

Brief description

How the prescaler value is applied.

11.1.252.5 alarm_ipl

```
uint8_t rtc_cfg_t::alarm_ipl
```

Brief description

Alarm interrupt priority.

11.1.252.6 periodic_ipl

```
uint8_t rtc_cfg_t::periodic_ipl
```

Brief description

Periodic interrupt priority.

11.1.252.7 carry_ipl

```
uint8_t rtc_cfg_t::carry_ipl
```

Brief description

Carry interrupt priority.

11.1.252.8 p_callback

```
void(* rtc_cfg_t::p_callback) (rtc_callback_args_t *p_args)
```

Brief description

Called from the ISR.

11.1.252.9 p_context

```
void const* rtc_cfg_t::p_context
```

Brief description

Passed to the callback.

11.1.252.10 p_extend

```
void const* rtc_cfg_t::p_extend
```

Brief description

RTC hardware dependant configuration.

11.1.253 rtc_error_adjustment_cfg_t

```
typedef struct{
    rtc_error_adjustment_t  adjustment_type
    uint8_t  adjustment_value
} rtc_error_adjustment_cfg_t
```

11.1.253.1 adjustment_type

rtc_error_adjustment_t::adjustment_type

Brief description

Time error adjustment type setting.

11.1.253.2 adjustment_value

uint8_t rtc_error_adjustment_cfg_t::adjustment_value

Brief description

Time error adjustment value.

11.1.254 rtc_error_adjustment_mode_cfg_t

```
typedef struct{
    rtc_error_adjustment_mode_t  adjustment_mode
    rtc_error_adjustment_period_t  adjustment_period
} rtc_error_adjustment_mode_cfg_t
```

11.1.254.1 adjustment_mode

rtc_error_adjustment_mode_t::adjustment_mode

Brief description

Time error adjustment mode setting.

11.1.254.2 adjustment_period

rtc_error_adjustment_period_t::adjustment_period

Brief description

Time error adjustment period setting.

11.1.255 rtc_info_t

```
typedef struct{
    rtc_clock_source_t  clock_source
    rtc_status_t  status
} rtc_info_t
```

11.1.255.1 clock_source

rtc_clock_source_t::clock_source

Brief description

Clock source for the RTC block.

11.1.255.2 status

rtc_status_t::status

Brief description

RTC run status.

11.1.256 rtc_instance_ctrl_t

```
typedef struct{
    void *  p_reg
    void(*  p_callback)(rtc_callback_args_t *cb_data)

    IRQn_Type  periodic_irq
    IRQn_Type  carry_irq
    rtc_clock_source_t  clock_source
} rtc_instance_ctrl_t
```

11.1.256.1 p_reg

void* ::p_reg

Brief description

Pointer to register base address.

11.1.256.2 p_callback

void(* ::p_callback) (*cb_data)

Brief description

Called from the ISR.

11.1.256.3 p_context

```
void const* ::p_context
```

Brief description

Passed to the callback.

11.1.256.4 open

```
uint32_t ::open
```

Brief description

Whether or not driver is open.

11.1.256.5 alarm_irq

```
IRQn_Type ::alarm_irq
```

Brief description

Alarm IRQ number.

11.1.256.6 periodic_irq

```
IRQn_Type ::periodic_irq
```

Brief description

Periodic IRQ number.

11.1.256.7 carry_irq

```
IRQn_Type ::carry_irq
```

Brief description

Carry IRQ number.

11.1.256.8 clock_source

```
rtc_clock_source_t::clock_source
```

Brief description

Clock source for the RTC block.

11.1.257 rtc_instance_t

```
typedef struct{
    rtc_ctrl_t *  p_ctrl
    rtc_cfg_t const  *  p_cfg
    rtc_api_t const  *  p_api
} rtc_instance_t
```

11.1.257.1 p_ctrl

rtc_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.257.2 p_cfg

rtc_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.257.3 p_api

rtc_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.258 sb_ble_prf_ias_set_alert_t

```
typedef struct{
    sf_ble_prf_ias_svc_code_t  svc_code
    sf_ble_prf_ias_alert_type_t  lvl
} sb_ble_prf_ias_set_alert_t
```

11.1.258.1 svc_code

sf_ble_prf_ias_svc_code_t::svc_code

Brief description

SVC code.

11.1.258.2 lvl

sf_ble_prf_ias_alert_type_t::lvl

Brief description

Alert level.

11.1.259 sci_i2c_extended_cfg

```
typedef struct{
    bool  bitrate_modulation
} sci_i2c_extended_cfg
```

11.1.259.1 bitrate_modulation

bool sci_i2c_extended_cfg::bitrate_modulation

Detailed description

Bitrate Modulation Function enable or disable

11.1.260.1 info

i2c_cfg_t::info

Brief description

Information describing I2C device.

11.1.260.2 open

uint32_t ::open

Brief description

Flag to determine if the device is open.

11.1.260.3 p_reg

void* ::p_reg

Brief description

Base register for this channel.

11.1.260.4 p_transfer_tx

transfer_instance_t::p_transfer_tx

Brief description

DTC instance for I2C transmit.Set to NULL if unused.

Detailed description

DTC/DMA support

11.1.260.5 p_transfer_rx

transfer_instance_t::p_transfer_rx

Brief description

DTC instance for I2C receive. Set to NULL if unused.

11.1.260.6 rxi_irq

```
IRQn_Type ::rxi_irq
```

Brief description

Receive IRQ number.

11.1.260.7 txi_irq

```
IRQn_Type ::txi_irq
```

Brief description

Transmit IRQ number.

11.1.260.8 tei_irq

```
IRQn_Type ::tei_irq
```

Brief description

Transmit end IRQ number.

11.1.260.9 p_buff

```
uint8_t* ::p_buff
```

Detailed description

Holds the data associated with the transfer

11.1.260.10 total

```
uint32_t ::total
```

Detailed description

Holds the total number of data bytes to transfer

11.1.260.11 remain

```
uint32_t ::remain
```

Detailed description

Tracks the remaining data bytes to transfer

11.1.260.12 loaded

```
uint32_t ::loaded
```

Detailed description

Tracks the number of data bytes written to the register

11.1.260.13 addr_low

```
uint8_t ::addr_low
```

Detailed description

Holds the last address byte to issue

11.1.260.14 addr_high

```
uint8_t ::addr_high
```

Detailed description

Holds the first address byte to issue in 10-bit mode

11.1.260.15 addr_total

```
uint8_t ::addr_total
```

Detailed description

Holds the total number of address bytes to transfer

11.1.260.16 addr_remain

```
uint8_t ::addr_remain
```

Detailed description

Tracks the remaining address bytes to transfer

11.1.260.17 addr_loaded

```
uint8_t ::addr_loaded
```

Detailed description

Tracks the number of address bytes written to the register

11.1.260.18 read

```
volatile bool ::read
```

Detailed description

Holds the direction of the data byte transfer

11.1.260.19 restart

```
volatile bool ::restart
```

Detailed description

Holds whether or not the restart should be issued when done

11.1.260.20 err

```
volatile bool ::err
```

Detailed description

} sdadc_channel_cfg_t
```

11.1.265.1 stage_2_gain

sdadc_channel_stage_2_gain_t::stage_2_gain

Brief description

Gain of PGA stage 2, must be 1 for single-ended input.

11.1.265.2 stage_1_gain

sdadc_channel_stage_1_gain_t::stage_1_gain

Brief description

Gain of PGA stage 1, must be 1 for single-ended input.

11.1.265.3 oversampling

sdadc_channel_oversampling_t::oversampling

Brief description

Oversampling ratio, must be 256 in single-ended input.

11.1.265.4 __pad0__

`uint32_t ::__pad0__`

11.1.265.5 polarity

`sdadc_channel_polarity_t::polarity`

Brief description

Polarity, valid for single-ended mode only.

11.1.265.6 input

`sdadc_channel_input_t::input`

Brief description

Single-ended or differential input.

11.1.265.7 coefficient_m

`uint32_t ::coefficient_m`

Brief description

See sdadc_channel_count_formula_t.

11.1.265.8 coefficient_n

`uint32_t ::coefficient_n`

Brief description

See sdadc_channel_count_formula_t.

11.1.265.9 average

`sdadc_channel_average_t::average`

Brief description

Number of samples to average for each conversion result.

11.1.265.10 invert

sdadc_channel_inversion_t::invert

Brief description

Whether to invert negative single-ended input.

11.1.265.11 __pad1__

uint32_t ::__pad1__

11.1.265.12 count_formula

sdadc_channel_count_formula_t::count_formula

Brief description

Linear or exponential formula used for number of conversions.

11.1.272.1 hw

sdmmc_hw_t::hw

Brief description

Channel, media type, bus width defined by the hardware.

11.1.272.2 p_lower_lvl_transfer

transfer_instance_t::p_lower_lvl_transfer

Brief description

Transfer instance used to move data with DMA or DTC.

11.1.272.3 p_callback

```
void(* sdmmc_cfg_t::p_callback) (sdmmc_callback_args_t *p_args)
```

Brief description

Pointer to callback function.

11.1.272.4 p_context

```
void const* sdmmc_cfg_t::p_context
```

Brief description

User defined context passed into callback function.

11.1.272.5 p_extend

```
void const* sdmmc_cfg_t::p_extend
```

Brief description

SD/MMC hardware dependent configuration.

11.1.272.6 access_ipl

```
uint8_t sdmmc_cfg_t::access_ipl
```

Brief description

Access interrupt priority.

11.1.272.7 sdio_ipl

```
uint8_t sdmmc_cfg_t::sdio_ipl
```

Brief description

SDIO interrupt priority.

11.1.272.8 card_ipl

```
uint8_t sdmmc_cfg_t::card_ipl
```

Brief description

Card interrupt priority.

11.1.272.9 dma_req_ipl

```
uint8_t sdmmc_cfg_t::dma_req_ipl
```

Brief description

DMA request interrupt priority.

11.1.275.5 write_protected

bool sdmmc_info_t::write_protected

Brief description

true = Card is write protected

11.1.275.6 transfer_in_progress

bool sdmmc_info_t::transfer_in_progress

Brief description

true = Card is busy

11.1.275.7 csd_version

```
uint8_t sdmmc_info_t::csd_version
```

Brief description

CSD version.

11.1.275.8 device_type

```
uint8_t sdmmc_info_t::device_type
```

Brief description

Speed and data rate (eMMC)

11.1.275.9 bus_width

```
sdmmc_bus_width_t::bus_width
```

Brief description

Current media bus width.

11.1.275.10 hs_timing

```
uint8_t sdmmc_info_t::hs_timing
```

Brief description

High Speed status.

11.1.275.11 sdhi_rca

```
uint32_t sdmmc_info_t::sdhi_rca
```

Brief description

Relative Card Address.

11.1.275.12 max_clock_rate

```
uint32_t sdmmc_info_t::max_clock_rate
```

Brief description

Maximum clock rate for media card.

11.1.275.13 clock_rate

```
uint32_t sdmmc_info_t::clock_rate
```

Brief description

Current clock rate.

11.1.275.14 sector_size

```
uint32_t sdmmc_info_t::sector_size
```

Brief description

Sector size.

11.1.275.15 sector_count

```
uint32_t sdmmc_info_t::sector_count
```

Brief description

Sector count.

11.1.275.16 erase_sector_count

```
uint32_t sdmmc_info_t::erase_sector_count
```

Brief description

Minimum erasable unit (in 512 byte sectors)

11.1.276 sdmmc_instance_ctrl_t

    uint32_t  num_new_samples
} sf_adc_periodic_callback_args_t
```

11.1.280.1 event

sf_adc_periodic_event_t::event

Brief description

Periodic ADC callback event.

11.1.280.2 buffer_index

uint32_t sf_adc_periodic_callback_args_t::buffer_index

Brief description

Index to the buffer where the new data is stored.

11.1.280.3 p_context

void const* sf_adc_periodic_callback_args_t::p_context

Brief description

Placeholder for user data.

11.1.280.4 p_data_buffer

adc_data_size_t* sf_adc_periodic_callback_args_t::p_data_buffer

Brief description

Pointer to the buffer that will store the samples.

11.1.280.5 num_new_samples

uint32_t sf_adc_periodic_callback_args_t::num_new_samples

Brief description

Number of new samples in the data buffer.

11.1.281 sf_adc_periodic_cfg_t

```
typedef struct{
    adc_instance_t const  *const  p_lower_lvl_adc
```

```
    timer_instance_t const  *const  p_lower_lvl_timer
    transfer_instance_t const  *const  p_lower_lvl_transfer
    adc_data_size_t *  p_data_buffer

} sf_adc_periodic_cfg_t
```

11.1.281.1 p_lower_lvl_adc

`adc_instance_t::p_lower_lvl_adc`

Brief description

Pointer to the ADC instance.

11.1.281.2 p_lower_lvl_timer

`timer_instance_t::p_lower_lvl_timer`

Brief description

Pointer to the Timer instance.

11.1.281.3 p_lower_lvl_transfer

`transfer_instance_t::p_lower_lvl_transfer`

Brief description

Pointer to the Transfer instance.

11.1.281.4 p_data_buffer

`adc_data_size_t* sf_adc_periodic_cfg_t::p_data_buffer`

Brief description

Pointer to the buffer that will store the samples.

11.1.281.5 data_buffer_length

`uint32_t sf_adc_periodic_cfg_t::data_buffer_length`

Brief description

Length of the data buffer that will store the samples.

11.1.281.6 sample_count

```
uint32_t sf_adc_periodic_cfg_t::sample_count
```

Brief description

Samples per channel to be buffered before notifying the app.

11.1.281.7 scan_trigger

```
elc_event_t::scan_trigger
```

Brief description

The hardware trigger that starts the ADC scan.

11.1.281.8 p_callback

```
void(* sf_adc_periodic_cfg_t::p_callback) (sf_adc_periodic_callback_args_t
*p_args)
```

Brief description

Callback function.

11.1.281.9 p_context

```
void const* sf_adc_periodic_cfg_t::p_context
```

Brief description

Placeholder for user data.

11.1.281.10 p_extend

```
void const* sf_adc_periodic_cfg_t::p_extend
```

Brief description

Extension parameter for hardware specific settings.

11.1.282 sf_adc_periodic_instance_ctrl_t

```
typedef struct{
    uint32_t  open
    TX_MUTEX  mutex
    adc_instance_t const  *  p_lower_lvl_adc

    transfer_instance_t const  *  p_lower_lvl_transfer
    void const  *volatile  p_src_transfer
```

```
    adc_data_size_t *  p_data_buffer
    uint32_t  data_buffer_length
    uint32_t  data_buffer_index
    uint32_t  sample_count
    uint32_t  dtc_transfer_length
    void(*  p_callback)(sf_adc_periodic_callback_args_t *p_args)
    void const  *  p_context
} sf_adc_periodic_instance_ctrl_t
```

11.1.282.1 open

`uint32_t ::open`

Brief description

Used by driver to check if pointer to control block is valid.

11.1.282.2 mutex

`TX_MUTEX ::mutex`

Brief description

Mutex used to protect access to lower level driver hardware registers.

11.1.282.3 p_lower_lvl_adc

`adc_instance_t::p_lower_lvl_adc`

Brief description

Pointer to the ADC instance.

11.1.282.4 p_lower_lvl_timer

`timer_instance_t::p_lower_lvl_timer`

Brief description

Pointer to the Timer instance.

11.1.282.5 p_lower_lvl_transfer

`transfer_instance_t::p_lower_lvl_transfer`

Brief description

Pointer to the Transfer instance.

11.1.282.6 p_src_transfer

```
void const* volatile ::p_src_transfer
```

Brief description

Source pointer for the low level transfer method.

11.1.282.7 p_data_buffer

```
* ::p_data_buffer
```

Brief description

Pointer to the buffer that will store the samples.

11.1.282.8 data_buffer_length

```
uint32_t ::data_buffer_length
```

Brief description

Length of the data buffer that will store the samples.

11.1.282.9 data_buffer_index

```
uint32_t ::data_buffer_index
```

Brief description

Index of the data buffer where data is to be written to next.

11.1.282.10 sample_count

```
uint32_t ::sample_count
```

Brief description

Samples per channel to be buffered before notifying the app.

11.1.282.11 dtc_transfer_length

```
uint32_t ::dtc_transfer_length
```

Brief description

Total Length of DTC transfer for requested number of samples.

11.1.282.12 p_callback

```
void(* ::p_callback) ( *p_args)
```

Brief description

Callback function.

11.1.282.13 p_context

```
void const* ::p_context
```

Brief description

Placeholder for user data.

11.1.283 sf_adc_periodic_instance_t

```
typedef struct{
    sf_adc_periodic_ctrl_t *  p_ctrl
    sf_adc_periodic_cfg_t const  *  p_cfg
    sf_adc_periodic_api_t const  *  p_api
} sf_adc_periodic_instance_t
```

11.1.283.1 p_ctrl

```
sf_adc_periodic_ctrl_t::p_ctrl
```

Brief description

Pointer to the control structure for this instance.

11.1.283.2 p_cfg

```
sf_adc_periodic_cfg_t::p_cfg
```

Brief description

Pointer to the configuration structure for this instance.

11.1.283.3 p_api

```
sf_adc_periodic_api_t::p_api
```

Brief description

Pointer to the API structure for this instance.

11.1.284 sf_audio_playback_api_t

```
typedef struct{
    ssp_err_t(*  open)(sf_audio_playback_ctrl_t *const p_ctrl,
sf_audio_playback_cfg_t const *const p_cfg)
```

```
    ssp_err_t(*  close)(sf_audio_playback_ctrl_t *const p_ctrl)
    ssp_err_t(*  start)(sf_audio_playback_ctrl_t *const p_ctrl,
sf_audio_playback_data_t *const p_data, UINT const timeout)
    ssp_err_t(*  pause)(sf_audio_playback_ctrl_t *const p_ctrl)
    ssp_err_t(*  stop)(sf_audio_playback_ctrl_t *const p_ctrl)

volume)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
} sf_audio_playback_api_t
```

11.1.285 sf_audio_playback_cfg_t

```
typedef struct{
    void(*  p_callback)(sf_message_callback_args_t *p_args)
    sf_audio_playback_common_ctrl_t *  p_common_ctrl
    sf_audio_playback_common_cfg_t const  *  p_common_cfg
    uint8_t  class_instance
} sf_audio_playback_cfg_t
```

11.1.285.1 p_callback

```
void(* sf_audio_playback_cfg_t::p_callback) (sf_message_callback_args_t *p_args)
```

Detailed description

Callback called when playback of a buffer passed to start is complete. Set to NULL for no callback.

11.1.285.2 p_common_ctrl

```
sf_audio_playback_common_ctrl_t::p_common_ctrl
```

Detailed description

Pointer to the hardware control block used by this stream.

11.1.285.3 p_common_cfg

```
sf_audio_playback_common_cfg_t::p_common_cfg
```

Detailed description

Pointer to common configurations shared by all streams using the same hardware.

11.1.285.4 class_instance

```
uint8_t sf_audio_playback_cfg_t::class_instance
```

Brief description

Class instance used to identify the stream to the messaging framework.

11.1.286 sf_audio_playback_common_cfg_t

```
typedef struct{
    UINT  priority
    sf_audio_playback_hw_instance_t const  *  p_lower_lvl_hw
    sf_message_instance_t const  *  p_message
    TX_QUEUE *  p_queue
    void const  *  p_extend
} sf_audio_playback_common_cfg_t
```

11.1.286.1 priority

```
UINT sf_audio_playback_common_cfg_t::priority
```

Brief description

Priority of the audio playback thread.

11.1.286.2 p_lower_lvl_hw

```
sf_audio_playback_hw_instance_t::p_lower_lvl_hw
```

Brief description

Hardware instance.

11.1.286.3 p_message

```
sf_message_instance_t::p_message
```

Detailed description

Pointer to messaging framework instance used to post audio messages.

11.1.286.4 p_queue

```
TX_QUEUE* sf_audio_playback_common_cfg_t::p_queue
```

Detailed description

Pointer to the messaging framework queue specified for this audio stream. Must be subscribed to the SF_MESSAGE_EVENT_CLASS_AUDIO event class.

11.1.286.5 p_extend

```
void const* sf_audio_playback_common_cfg_t::p_extend
```

Detailed description

Implementation specific extension configuration.

11.1.287 sf_audio_playback_common_instance_ctrl_t

```
typedef struct{
    uint32_t  open
    void const  *  p_next_buffer
    uint32_t  next_length
    sf_message_instance_t const  *  p_message
    TX_QUEUE *  p_queue
    sf_audio_playback_hw_instance_t const  *  p_lower_lvl_hw
    sf_audio_playback_instance_ctrl_t
*  p_stream[SF_AUDIO_PLAYBACK_CFG_MAX_STREAMS]
    TX_THREAD  thread
    TX_EVENT_FLAGS_GROUP  flags
    sf_audio_playback_data_type_t  data_type
    uint8_t  volume
    uint8_t  buffer_index
    uint8_t  stack[SF_AUDIO_PLAYBACK_STACK_SIZE]
    int16_t  samples[2][SF_AUDIO_PLAYBACK_CFG_BUFFER_SIZE_BYTES/sizeof(int16_t)]
    bool  playing
} sf_audio_playback_common_instance_ctrl_t
```

11.1.287.1 open

```
uint32_t ::open
```

Brief description

Used to determine if driver is initialized.

11.1.287.2 p_next_buffer

```
void const* ::p_next_buffer
```

Brief description

Pointer to next buffer (to be played when the current buffer completes).

11.1.287.3 next_length

```
uint32_t ::next_length
```

Brief description

Length of next buffer (to be played when the current buffer completes).

11.1.287.4 p_message

sf_message_instance_t::p_message

Brief description

Pointer to message control block.

11.1.287.5 p_queue

TX_QUEUE* ::p_queue

Brief description

Queue subscribed to SF_MESSAGE_EVENT_CLASS_AUDIO events.

11.1.287.6 p_lower_lvl_hw

sf_audio_playback_hw_instance_t::p_lower_lvl_hw

Brief description

Hardware API's used.

11.1.287.7 p_stream

* ::p_stream[SF_AUDIO_PLAYBACK_CFG_MAX_STREAMS]

Brief description

Stream specific data.

11.1.287.8 thread

TX_THREAD ::thread

Brief description

Main audio thread.

11.1.287.9 flags

TX_EVENT_FLAGS_GROUP ::flags

Brief description

Event flags used to end wait in audio thread.

11.1.287.10 data_type

sf_audio_playback_data_type_t::data_type

Brief description

Sample format required by the hardware.

11.1.287.11 volume

uint8_t ::volume

Brief description

Volume from 0 (muted) to 255 (maximum, default on open).

11.1.287.12 buffer_index

uint8_t ::buffer_index

Brief description

Which ping pong buffer to use.

11.1.287.13 stack

uint8_t ::stack[SF_AUDIO_PLAYBACK_STACK_SIZE]

Brief description

Stack for audio thread.

11.1.287.14 samples

int16_t ::samples[2][SF_AUDIO_PLAYBACK_CFG_BUFFER_SIZE_BYTES/sizeof(int16_t)]

Detailed description

Ping pong buffers, used to store converted data during transfer.

11.1.287.15 playing

bool ::playing

Brief description

State of audio instance (currently playing if true)

11.1.288 sf_audio_playback_data_t

```
typedef struct{
    sf_message_header_t  header
    sf_audio_playback_data_type_t  type
    uint32_t  size_bytes
    void const  *  p_data
    UINT  loop_timeout
    bool  stream_end
} sf_audio_playback_data_t
```

11.1.288.1 header

sf_message_header_t::header

Brief description

Required common members of messaging framework payloads.

11.1.288.2 type

sf_audio_playback_data_type_t::type

Brief description

Data type. Must be uncompressed.

11.1.288.3 size_bytes

uint32_t sf_audio_playback_data_t::size_bytes

Brief description

Size of data in bytes.

11.1.288.4 p_data

void const* sf_audio_playback_data_t::p_data

Brief description

Pointer to data. Data start address must be 4-byte aligned.

11.1.288.5 loop_timeout

UINT sf_audio_playback_data_t::loop_timeout

Detailed description

ThreadX timeout, select TX_NO_WAIT to play the entire buffer once, TX_WAIT_FOREVER to loop until SF_AUDIO_PLAYBACK_Pause is called from another thread, or any timeout value from (0x00000001 through 0xFFFFFFFE) in ThreadX tick counts to loop until the tick counts expire.

11.1.288.6 stream_end

```
bool sf_audio_playback_data_t::stream_end
```

Detailed description

This releases ownership of the stream and allows other threads to post data. Set to true if not more data will be sent as a part of this logical bitstream. Set to false if more packets are being prepared.

11.1.289 sf_audio_playback_data_type_t

```
typedef struct{
    uint8_t  scale_bits_max
    bool  is_signed
} sf_audio_playback_data_type_t
```

11.1.289.1 scale_bits_max

```
uint8_t sf_audio_playback_data_type_t::scale_bits_max
```

Brief description

Maximum data resolution in bits.

11.1.289.2 is_signed

```
bool sf_audio_playback_data_type_t::is_signed
```

Brief description

Set to 1 for signed samples, or 0 for unsigned samples.

11.1.290 sf_audio_playback_hw_api_t

```
typedef struct{
    ssp_err_t(*  open)(sf_audio_playback_hw_ctrl_t *const p_ctrl,
sf_audio_playback_hw_cfg_t const *const p_cfg)
    ssp_err_t(*  start)(sf_audio_playback_hw_ctrl_t *const p_ctrl)
    ssp_err_t(*  stop)(sf_audio_playback_hw_ctrl_t *const p_ctrl)
    ssp_err_t(*  play)(sf_audio_playback_hw_ctrl_t *const p_ctrl, int16_t const
*const p_buffer, uint32_t length)
    ssp_err_t(*  dataTypeGet)(sf_audio_playback_hw_ctrl_t *const p_ctrl,
sf_audio_playback_data_type_t *const p_data_type)
```

```
    ssp_err_t(*  close)(sf_audio_playback_hw_ctrl_t *const p_ctrl)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
} sf_audio_playback_hw_api_t
```

11.1.291 sf_audio_playback_hw_callback_args_t

```
typedef struct{
    void *  p_context
} sf_audio_playback_hw_callback_args_t
```

11.1.291.1 p_context

```
void* sf_audio_playback_hw_callback_args_t::p_context
```

Detailed description

Placeholder for user data. Set in open function in sf_audio_playback_hw_cfg_t.

11.1.292 sf_audio_playback_hw_cfg_t

```
typedef struct{
    void(*  p_callback)(sf_audio_playback_hw_callback_args_t *p_args)
    void *  p_context
    void const  *  p_extend
} sf_audio_playback_hw_cfg_t
```

11.1.292.1 p_callback

```
void(* sf_audio_playback_hw_cfg_t::p_callback)
(sf_audio_playback_hw_callback_args_t *p_args)
```

Detailed description

Callback called when play is complete. Set to NULL for no callback.

11.1.292.2 p_context

```
void* sf_audio_playback_hw_cfg_t::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in sf_audio_playback_hw_callback_args_t.

11.1.292.3 p_extend

```
void const* sf_audio_playback_hw_cfg_t::p_extend
```

Brief description

Hardware dependent configuration.

11.1.293 sf_audio_playback_hw_dac_cfg_t

```
typedef struct{
    dac_instance_t const  *  p_lower_lvl_dac
    timer_instance_t const  *  p_lower_lvl_timer
    transfer_instance_t const  *  p_lower_lvl_transfer
} sf_audio_playback_hw_dac_cfg_t
```

11.1.293.1 p_lower_lvl_dac

dac_instance_t::p_lower_lvl_dac

Brief description

DAC API used to access DAC hardware.

11.1.293.2 p_lower_lvl_timer

timer_instance_t::p_lower_lvl_timer

Brief description

Timer API used to generate sampling frequency.

11.1.293.3 p_lower_lvl_transfer

transfer_instance_t::p_lower_lvl_transfer

Brief description

Transfer API used to transfer data each sampling frequency.

11.1.294 sf_audio_playback_hw_dac_instance_ctrl_t

```
typedef struct{
    void(*  p_callback)(sf_audio_playback_hw_callback_args_t *p_args)
    void *  p_context

    timer_instance_t const  *  p_lower_lvl_timer
    transfer_instance_t const  *  p_lower_lvl_transfer
} sf_audio_playback_hw_dac_instance_ctrl_t
```

11.1.294.1 p_callback

```
void(* sf_::p_callback) ( *p_args)
```

Detailed description

Callback called when play is complete.

11.1.294.2 p_context

```
void* sf_::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in sf_audio_playback_hw_callback_args_t.

11.1.294.3 p_lower_lvl_dac

```
dac_instance_t::p_lower_lvl_dac
```

Brief description

DAC API used to access DAC hardware.

11.1.294.4 p_lower_lvl_timer

```
timer_instance_t::p_lower_lvl_timer
```

Brief description

Timer API used to generate sampling frequency.

11.1.294.5 p_lower_lvl_transfer

```
transfer_instance_t::p_lower_lvl_transfer
```

Brief description

Transfer API used to transfer data each sampling frequency.

11.1.295 sf_audio_playback_hw_i2s_cfg_t

```
typedef struct{
    i2s_instance_t const  *  p_lower_lvl_i2s
} sf_audio_playback_hw_i2s_cfg_t
```

11.1.295.1 p_lower_lvl_i2s

```
i2s_instance_t::p_lower_lvl_i2s
```

Brief description

I2S API used to access I2S hardware.

11.1.296 sf_audio_playback_hw_i2s_instance_ctrl_t

```
typedef struct{
    void(*  p_callback)(sf_audio_playback_hw_callback_args_t *p_args)
    void *  p_context
    i2s_instance_t const  *  p_lower_lvl_i2s
} sf_audio_playback_hw_i2s_instance_ctrl_t
```

11.1.296.1 p_callback

```
void(* sf_::p_callback) ( *p_args)
```

Detailed description

Callback called when play is complete.

11.1.296.2 p_context

```
void* sf_::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in sf_audio_playback_hw_callback_args_t.

11.1.296.3 p_lower_lvl_i2s

```
i2s_instance_t::p_lower_lvl_i2s
```

Brief description

I2S API used to access I2S hardware.

11.1.297 sf_audio_playback_hw_instance_t

```
typedef struct{
    sf_audio_playback_hw_ctrl_t *  p_ctrl
    sf_audio_playback_hw_cfg_t const  *  p_cfg
    sf_audio_playback_hw_api_t const  *  p_api
} sf_audio_playback_hw_instance_t
```

11.1.297.1 p_ctrl

```
sf_audio_playback_hw_ctrl_t::p_ctrl
```

Brief description

Pointer to the control structure for this instance.

11.1.297.2 p_cfg

sf_audio_playback_hw_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.297.3 p_api

sf_audio_playback_hw_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.298 sf_audio_playback_instance_t

```
typedef struct{
    sf_audio_playback_ctrl_t *  p_ctrl
    sf_audio_playback_cfg_t const  *  p_cfg
    sf_audio_playback_api_t const  *  p_api
} sf_audio_playback_instance_t
```

11.1.298.1 p_ctrl

sf_audio_playback_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.298.2 p_cfg

sf_audio_playback_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.298.3 p_api

sf_audio_playback_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.299 sf_audio_record_adc_hw_cfg_t

```
typedef struct{
    sf_adc_periodic_instance_t const  *  p_lower_lvl_adc_periodic
} sf_audio_record_adc_hw_cfg_t
```

11.1.299.1 p_lower_lvl_adc_periodic

sf_adc_periodic_instance_t::p_lower_lvl_adc_periodic

11.1.300 sf_audio_record_adc_instance_ctrl_t

```
typedef struct{

    sf_adc_periodic_instance_t const  *  p_lower_lvl_adc_periodic
} sf_audio_record_adc_instance_ctrl_t
```

11.1.300.1 open

uint32_t ::open

Detailed description

Used by driver to check if pointer to control block is valid

11.1.300.2 mutex

TX_MUTEX ::mutex

Detailed description

Mutex used to protect access to lower level driver hardware registers

11.1.300.3 p_capture_data_buffer

void* ::p_capture_data_buffer

Detailed description

Pointer to the buffer that will store the samples

11.1.300.4 sample_count

```
uint32_t ::sample_count
```

Detailed description

Samples per channel to be buffered before notifying the app

11.1.300.5 p_callback

```
void(* ::p_callback) ( *p_args)
```

Brief description

Callback function.

11.1.300.6 p_context

```
void const* ::p_context
```

Brief description

Placeholder for user data.

11.1.300.7 p_lower_lvl_adc_periodic

```
sf_adc_periodic_instance_t::p_lower_lvl_adc_periodic
```

Brief description

Lower level ADC periodic instance.

11.1.301 sf_audio_record_api_t

```
typedef struct{

} sf_audio_record_cfg_t
```

11.1.303.1 capture_data_size

sf_audio_record_data_size_t::capture_data_size

Brief description

Size of data in the sample 8 or 16 bit.

11.1.303.2 sampling_rate_hz

```
uint32_t sf_audio_record_cfg_t::sampling_rate_hz
```

Brief description

Sampling rate for audio capture.

11.1.303.3 p_capture_data_buffer

```
void* sf_audio_record_cfg_t::p_capture_data_buffer
```

Detailed description

Pointer to the buffer that will store the samples

11.1.303.4 capture_data_buffer_size

```
uint32_t sf_audio_record_cfg_t::capture_data_buffer_size
```

Detailed description

total size of buffer configured by user to store samples

11.1.303.5 sample_count

```
uint32_t sf_audio_record_cfg_t::sample_count
```

Detailed description

Samples per channel to be buffered before notifying the user via callback

11.1.303.6 p_callback

```
void(* sf_audio_record_cfg_t::p_callback) (sf_audio_record_callback_args_t
*p_args)
```

Brief description

Callback function.

11.1.303.7 p_context

```
void const* sf_audio_record_cfg_t::p_context
```

Brief description

Placeholder for user data.

11.1.303.8 p_extend

```

    sf_ble_adv_data_t  adv_data
} sf_ble_adv_info_t
```

11.1.311.1 disc_mode

sf_ble_disc_type_t::disc_mode

Brief description

Discovery mode.

11.1.311.2 conn_mode

sf_ble_conn_type_t::conn_mode

Brief description

Connection mode.

11.1.311.3 adv_type

sf_ble_adv_type_t::adv_type

Brief description

Advertisement type.

11.1.311.4 adv_intv_min

uint16_t sf_ble_adv_info_t::adv_intv_min

Brief description

Minimum interval for advertising.

11.1.311.5 adv_intv_max

uint16_t sf_ble_adv_info_t::adv_intv_max

Brief description

Maximum interval for advertising.

11.1.311.6 own_addr_type

sf_ble_addr_type_t::own_addr_type

Brief description

Own address type.

11.1.311.7 direct_addr_type

`sf_ble_addr_type_t::direct_addr_type`

Brief description

Direct connection address type.

11.1.311.8 direct_bd_addr

`uint8_t sf_ble_adv_info_t::direct_bd_addr[SF_BLE_ADDR_LEN]`

Brief description

Direct connection BLE address.

11.1.311.9 adv_chnl_map

`sf_ble_adv_chnl_map_t::adv_chnl_map`

Brief description

Advertising channel map.

11.1.311.10 adv_filt_policy

`sf_ble_adv_filt_type_t::adv_filt_policy`

Brief description

Advertising filter policy.

11.1.311.11 scan_response_data

`sf_ble_scan_response_data_t::scan_response_data`

Brief description

Scan Response information, will be advertised only for active scan.

11.1.311.12 adv_data

`sf_ble_adv_data_t::adv_data`

Brief description

Advertising data.

11.1.312 sf_ble_anp_ancp_change_t

    uint8_t  rkey_dist
} sf_ble_bonding_req_ind_t
```

11.1.323.1 bd_addr

sf_ble_addr_t::bd_addr

Brief description

BLE address.

11.1.323.2 index

`uint8_t sf_ble_bonding_req_ind_t::index`

Brief description

Connection index.

11.1.323.3 auth_req

`uint8_t sf_ble_bonding_req_ind_t::auth_req`

Brief description

Authentication request type.

11.1.323.4 io_cap

`uint8_t sf_ble_bonding_req_ind_t::io_cap`

Brief description

IO capability.

11.1.323.5 oob_data_flg

`uint8_t sf_ble_bonding_req_ind_t::oob_data_flg`

Brief description

Indicating if OOB data is present.

11.1.323.6 max_enc_size

`uint8_t sf_ble_bonding_req_ind_t::max_enc_size`

Brief description

Maximum encryption key size.

11.1.323.7 ikey_dist

`uint8_t sf_ble_bonding_req_ind_t::ikey_dist`

Brief description

Type of key distributed by the initiator.

11.1.323.8 rkey_dist

uint8_t sf_ble_bonding_req_ind_t::rkey_dist

Brief description

Type of key distributed by the responder.

11.1.324 sf_ble_bonding_response_t

```
typedef struct{
    uint8_t  accept
    sf_ble_iocap_t  io_cap

    sf_ble_key_dist_t  rkeys
} sf_ble_bonding_response_t
```

11.1.324.1 accept

uint8_t sf_ble_bonding_response_t::accept

Brief description

accept or reject bonding

11.1.324.2 io_cap

sf_ble_iocap_t::io_cap

Brief description

IO capabilities.

11.1.324.3 max_key_size

uint8_t sf_ble_bonding_response_t::max_key_size

Brief description

Max key size.

11.1.324.4 ikeys

sf_ble_key_dist_t::ikeys

Brief description

Initiator key distribution.

11.1.324.5 rkeys

sf_ble_key_dist_t::rkeys

Brief description

Responder key distribution.

11.1.325 sf_ble_bonding_start_t

```
typedef struct{
    sf_ble_iocap_t  iocap
    uint8_t  key_size

    uint16_t  slave_latency
    uint16_t  sup_timeout
    void const  *  p_extend
} sf_ble_cfg_t
```

11.1.326.1 bd_addr

```
uint8_t sf_ble_cfg_t::bd_addr[SF_BLE_ADDR_LEN]
```

Brief description

BLE address.

11.1.326.2 own_addr_type

```
sf_ble_addr_type_t::own_addr_type
```

Brief description

self address type

11.1.326.3 max_slaves

```
uint8_t sf_ble_cfg_t::max_slaves
```

Brief description

Maximum slaves allowed to be connected.

11.1.326.4 update_bd_addr

```
uint8_t sf_ble_cfg_t::update_bd_addr
```

Brief description

Set this to true to update bluetooth address during SF_BLE_Open.

11.1.326.5 scan_interval

```
uint16_t sf_ble_cfg_t::scan_interval
```

Brief description

BLE scan interval for receiving advertisement.

11.1.326.6 scan_window

```
uint16_t sf_ble_cfg_t::scan_window
```

Brief description

Period of time during which advertising data is received at the scan interval.

11.1.326.7 disc_time

```
uint16_t sf_ble_cfg_t::disc_time
```

Brief description

Duration for which the device remain discoverable.

11.1.326.8 con_interval

```
uint16_t sf_ble_cfg_t::con_interval
```

Brief description

Interval for transmitting and receiving data periodically after connection establishment.

11.1.326.9 slave_latency

```
uint16_t sf_ble_cfg_t::slave_latency
```

Brief description

Period of time during which data is transmitted and received at the connection interval.

11.1.326.10 sup_timeout

```
uint16_t sf_ble_cfg_t::sup_timeout
```

Brief description

Link loss time-out.

11.1.326.11 p_extend

```
void const* sf_ble_cfg_t::p_extend
```

Brief description

Instance specific configuration.

11.1.327 sf_ble_char_attribute_t

```
typedef struct{
    sf_ble_svc_attribute_t *  p_service
    sf_ble_uuid_t  attr_uuid
    uint16_t  attr_declare_handle
    uint16_t  attr_declare_type
    uint16_t  attr_value_handle
    sf_ble_char_attr_permissions_t  attr_perm
    sf_ble_char_property_t  attr_properties
    uint8_t *  p_attr_value
    uint8_t  attr_value_len
} sf_ble_char_attribute_t
```

11.1.327.1 p_service

sf_ble_svc_attribute_t::p_service

Brief description

Service to which this characteristics belongs.

11.1.327.2 attr_uuid

sf_ble_uuid_t::attr_uuid

Brief description

UUID of characteristics value.

11.1.327.3 attr_declare_handle

uint16_t sf_ble_char_attribute_t::attr_declare_handle

Brief description

Characteristics handle.

11.1.327.4 attr_declare_type

uint16_t sf_ble_char_attribute_t::attr_declare_type

Brief description

Characteristics declare type SF_BLE_GATT_CHAR_DECLARE.

11.1.327.5 attr_value_handle

uint16_t sf_ble_char_attribute_t::attr_value_handle

Brief description

Characteristics value handle.

11.1.327.6 attr_perm

sf_ble_char_attr_permissions_t::attr_perm

Brief description

Characteristics permission.

11.1.327.7 attr_properties

sf_ble_char_property_t::attr_properties

Brief description

Characteristics properties.

11.1.327.8 p_attr_value

uint8_t* sf_ble_char_attribute_t::p_attr_value

Brief description

Characteristics value data.

11.1.327.9 attr_value_len

uint8_t sf_ble_char_attribute_t::attr_value_len

Brief description

Characteristics value data length.

11.1.328 sf_ble_char_desc_discovery_rsp_t

```
typedef struct{
    uint16_t  desc_handle

uint16_t sf_ble_char_desc_discovery_rsp_t::desc_handle

Brief description

Characteristic descriptor handle.

11.1.328.2 uuid

sf_ble_uuid_t::uuid

Brief description

Characteristic descriptor UUID.

11.1.329 sf_ble_char_discovery_req_t

```
typedef struct{
    sf_ble_uuid_t  uuid
    uint16_t  start_handle
    uint16_t  end_handle
    sf_ble_char_discovery_t  discovery_type
} sf_ble_char_discovery_req_t
```

11.1.329.1 uuid

sf_ble_uuid_t::uuid

Brief description

Characteristic UUID.

11.1.329.2 start_handle

uint16_t sf_ble_char_discovery_req_t::start_handle

Brief description

Discovery start handle.

11.1.329.3 end_handle

uint16_t sf_ble_char_discovery_req_t::end_handle

Brief description

Discovery end handle.

11.1.329.4 discovery_type

sf_ble_char_discovery_t::discovery_type

Brief description

Characteristic discovery type.

11.1.330 sf_ble_char_discovery_rsp_t

```
typedef struct{

uint8_t sf_ble_cts_local_time_t::dst_offset

Brief description

DST Offset.

11.1.344 sf_ble_cts_ref_time_t

```
typedef struct{
    uint8_t  time_source
    uint8_t  accuracy
    uint8_t  days_since_update
    uint8_t  hours_since_update
} sf_ble_cts_ref_time_t
```

11.1.344.1 time_source

uint8_t sf_ble_cts_ref_time_t::time_source

Brief description

Source of time.

11.1.344.2 accuracy

`uint8_t sf_ble_cts_ref_time_t::accuracy`

Brief description

Estimated accuracy of time compared to original time source.

11.1.344.3 days_since_update

`uint8_t sf_ble_cts_ref_time_t::days_since_update`

Brief description

Days that passed since time was updated successfully from time source.

11.1.344.4 hours_since_update

`uint8_t sf_ble_cts_ref_time_t::hours_since_update`

Brief description

Time that passed since time was updated successfully from time source.

11.1.345 sf_ble_disconnect_t

```
typedef struct{
    sf_ble_disconnect_reason_t  reason
    uint8_t  status
    sf_ble_conn_handle_t  conhdl
} sf_ble_disconnect_t
```

11.1.345.1 reason

`sf_ble_disconnect_reason_t::reason`

Brief description

Disconnection reason.

11.1.345.2 status

`uint8_t sf_ble_disconnect_t::status`

Brief description

Disconnect status if initiated by local host.

11.1.345.3 conhdl

sf_ble_conn_handle_t::conhdl

Brief description

Connection handle of the remote device.

11.1.346 sf_ble_event_info_t

```
typedef struct{
    void *  p_data
    uint16_t  event
} sf_ble_event_info_t
```

11.1.346.1 p_data

void* sf_ble_event_info_t::p_data

Brief description

Data for BLE event.

11.1.346.2 event

uint16_t sf_ble_event_info_t::event

Brief description

Event type.

11.1.347 sf_ble_gatt_attr_event_t

```
typedef struct{
    uint16_t  attr_handle

    ssp_err_t  response
} sf_ble_gatt_attr_event_t
```

11.1.347.1 attr_handle

uint16_t sf_ble_gatt_attr_event_t::attr_handle

Brief description

Attribute handle for which event is generated.

11.1.347.2 offset

```
uint16_t sf_ble_gatt_attr_event_t::offset
```

Brief description

The offset at which the client is willing to write.

11.1.347.3 p_value

```
uint8_t const* sf_ble_gatt_attr_event_t::p_value
```

Brief description

The value at which the client is willing to write.

11.1.347.4 length

```
uint16_t sf_ble_gatt_attr_event_t::length
```

Brief description

The amount of bytes that the client is willing to write as from this offset.

11.1.347.5 response

```
ssp_err_t sf_ble_gatt_attr_event_t::response
```

Brief description

User will update this variable, Pass SSP_SUCCESS if user accepts the remote request.

11.1.348 sf_ble_gatt_notif_ind_event_data_t

```
typedef struct{
    uint16_t  handle

} sf_ble_prf_tip_write_data_t
```

11.1.375.1 current_time

sf_ble_prf_cts_curr_time_t::current_time

Brief description

Current Time Information.

11.1.375.2 local_time

sf_ble_cts_local_time_t::local_time

Brief description

Local Time Information.

11.1.375.3 ref_time

sf_ble_cts_ref_time_t::ref_time

Brief description

Reference Time Information.

11.1.375.4 next_dst

sf_ble_prf_ndcs_time_dst_t::next_dst

Brief description

Next DST Information.

11.1.375.5 update_state

sf_ble_prf_rtus_time_updt_state_t::update_state

Brief description

Update Status Information.

11.1.376 sf_ble_prf_value_t

```
typedef struct{

    sf_ble_gap_role_t  gap_role
    sf_ble_callback_t  p_ble_callback
} sf_ble_provisioning_t
```

11.1.377.1 gap_name

`uint8_t sf_ble_provisioning_t::gap_name[SF_BLE_MAX_GAP_NAME_LEN]`

Brief description

GAP name.

11.1.377.2 bcast_mode

`uint8_t sf_ble_provisioning_t::bcast_mode`

Brief description

broadcast mode

11.1.377.3 bonding_mode

`sf_ble_bonding_mode_t::bonding_mode`

Brief description

bonding mode

11.1.377.4 sec_info

sf_ble_sec_info_t::sec_info

Brief description

Security information.

11.1.377.5 gap_role

sf_ble_gap_role_t::gap_role

Brief description

GAP role (master/slave)

11.1.377.6 p_ble_callback

sf_ble_callback_t::p_ble_callback

Detailed description

GAP user event callback that runs in driver thread context. Application should make sure callback logic is as minimal as possible without any blocking calls

11.1.378 sf_ble_scan_info_t

```
typedef struct{
    uint16_t  total_scan_duration
    sf_ble_scan_mode_t  scan_mode
    sf_ble_disc_type_t  discovery_type
    sf_ble_addr_type_t  address_type
    sf_ble_adv_filt_type_t  filt_policy
    sf_ble_duplicate_filter_t  duplicate_filt
} sf_ble_scan_info_t
```

11.1.378.1 total_scan_duration

uint16_t sf_ble_scan_info_t::total_scan_duration

Brief description

BLE total scan duration in milliseconds.

11.1.378.2 scan_mode

sf_ble_scan_mode_t::scan_mode

Brief description

BLE scan mode.

11.1.378.3 discovery_type

`sf_ble_disc_type_t::discovery_type`

Brief description

Specifies discovery type, Used only in active scan.

11.1.378.4 address_type

`sf_ble_addr_type_t::address_type`

Brief description

BLE address type.

11.1.378.5 filt_policy

`sf_ble_adv_filt_type_t::filt_policy`

Brief description

Scan Filter policy.

11.1.378.6 duplicate_filt

`sf_ble_duplicate_filter_t::duplicate_filt`

Brief description

Duplicate filter configuration.

11.1.379 sf_ble_scan_response_data_t

```
typedef struct{
    uint8_t  scan_response_data[SF_BLE_ADV_DATA_LEN]
    uint8_t  scan_response_data_length
} sf_ble_scan_response_data_t
```

11.1.379.1 scan_response_data

`uint8_t sf_ble_scan_response_data_t::scan_response_data[SF_BLE_ADV_DATA_LEN]`

Brief description

Advertising data bytes array.

11.1.379.2 scan_response_data_length

```
uint8_t sf_ble_scan_response_data_t::scan_response_data_length
```

Brief description

Advertising data length.

11.1.380 sf_ble_scan_t

```
typedef struct{
    sf_ble_addr_type_t  addr_type
    uint8_t  bd_addr[SF_BLE_ADDR_LEN]
    uint16_t  data_len
    uint8_t  data[SF_BLE_MAX_BLE_ADV_DATA_LEN]
    int16_t  rssi
    sf_ble_adv_event_type_t  event_type
} sf_ble_scan_t
```

11.1.380.1 addr_type

```
sf_ble_addr_type_t::addr_type
```

Brief description

Address type of remote BLE device.

11.1.380.2 bd_addr

```
uint8_t sf_ble_scan_t::bd_addr[SF_BLE_ADDR_LEN]
```

Brief description

Remote BLE address.

11.1.380.3 data_len

```
uint16_t sf_ble_scan_t::data_len
```

Brief description

Scan data length.

11.1.380.4 data

```
uint8_t sf_ble_scan_t::data[SF_BLE_MAX_BLE_ADV_DATA_LEN]
```

Brief description

Scan data.

11.1.380.5 rssi

```
int16_t sf_ble_scan_t::rssi
```

Brief description

RSSI value.

11.1.380.6 event_type

```
sf_ble_adv_event_type_t::event_type
```

Brief description

Advertising event type.

11.1.381 sf_ble_scps_scan_intv_change_t

```
typedef struct{
    sf_ble_conn_handle_t  conhdl
    sf_ble_prf_scps_scan_intv_t  scan_interval_window_val
} sf_ble_scps_scan_intv_change_t
```

11.1.381.1 conhdl

```
sf_ble_conn_handle_t::conhdl
```

Brief description

Connection handle.

11.1.381.2 scan_interval_window_val

```
sf_ble_prf_scps_scan_intv_t::scan_interval_window_val
```

Brief description

Scan Interval window.

11.1.382 sf_ble_sec_enc_start_ind_t

```
typedef struct{
    sf_ble_conn_handle_t  conhdl
    uint8_t  status
    uint8_t  key_size
    sf_ble_auth_type_t  auth_type
    uint8_t  bonding_status
} sf_ble_sec_enc_start_ind_t
```

11.1.382.1 conhdl

sf_ble_conn_handle_t::conhdl

Brief description

Connection handle of the remote device.

11.1.382.2 status

uint8_t sf_ble_sec_enc_start_ind_t::status

Brief description

Result of encryption start, 0 = SUCCESS else error.

11.1.382.3 key_size

uint8_t sf_ble_sec_enc_start_ind_t::key_size

Brief description

Key Size.

11.1.382.4 auth_type

sf_ble_auth_type_t::auth_type

Brief description

Security properties.

11.1.382.5 bonding_status

uint8_t sf_ble_sec_enc_start_ind_t::bonding_status

Brief description

Bonding Status, 0 = Unbonded, 1 = Bonded.

11.1.383 sf_ble_sec_info_t

```
typedef struct{
    sf_ble_sec_mode_t  sec_mode
    uint8_t  id_key[SF_BLE_SEC_KEY_LEN]

    uint8_t  ltk_key[SF_BLE_SEC_KEY_LEN]
    uint8_t  rand_num[SF_BLE_RAND_NUM_LENGTH]
    uint16_t  ediv
} sf_ble_sec_info_t
```

11.1.383.1 sec_mode

`sf_ble_sec_mode_t::sec_mode`

Brief description

security mode

11.1.383.2 id_key

`uint8_t sf_ble_sec_info_t::id_key[SF_BLE_SEC_KEY_LEN]`

Brief description

GAP Identity Resolving Security key.

11.1.383.3 csrk_key

`uint8_t sf_ble_sec_info_t::csrk_key[SF_BLE_SEC_KEY_LEN]`

Brief description

GAP Connection Signature Resolving Security key.

11.1.383.4 ltk_key

`uint8_t sf_ble_sec_info_t::ltk_key[SF_BLE_SEC_KEY_LEN]`

Brief description

GAP Connection Long term Security key.

11.1.383.5 rand_num

`uint8_t sf_ble_sec_info_t::rand_num[SF_BLE_RAND_NUM_LENGTH]`

Brief description

GAP Connection Random number for Long term Security key.

11.1.383.6 ediv

`uint16_t sf_ble_sec_info_t::ediv`

Brief description

GAP Connection Encrypted Diversifier for Long term Security key.

11.1.384 sf_ble_service_discovery_req_t

```
typedef struct{
    sf_ble_uuid_t  uuid
    uint16_t  start_handle
    uint16_t  end_handle
    sf_ble_service_discovery_t  discovery_type
} sf_ble_service_discovery_req_t
```

11.1.384.1 uuid

sf_ble_uuid_t::uuid

Brief description

Service UUID.

11.1.384.2 start_handle

uint16_t sf_ble_service_discovery_req_t::start_handle

Brief description

Discovery start handle.

11.1.384.3 end_handle

uint16_t sf_ble_service_discovery_req_t::end_handle

Brief description

Discovery end handle.

11.1.384.4 discovery_type

sf_ble_service_discovery_t::discovery_type

Brief description

Service discovery type.

11.1.385 sf_ble_service_discovery_rsp_t

```
typedef struct{
    uint16_t  service_handle
    sf_ble_uuid_t  uuid
    uint16_t  start_handle
    uint16_t  end_handle
} sf_ble_service_discovery_rsp_t
```

11.1.385.1 service_handle

```
uint16_t sf_ble_service_discovery_rsp_t::service_handle
```

Brief description

Service handle.

11.1.385.2 uuid

```
sf_ble_uuid_t::uuid
```

Brief description

Service UUID.

11.1.385.3 start_handle

```
uint16_t sf_ble_service_discovery_rsp_t::start_handle
```

Brief description

Start handle of sub-attributes handle range.

11.1.385.4 end_handle

```
uint16_t sf_ble_service_discovery_rsp_t::end_handle
```

Brief description

End handle of sub-attributes handle range.

11.1.386 sf_ble_set_tx_pwr_info_t

```
typedef struct{
    int8_t  power_lvl
    sf_ble_tx_pwr_state_t  state
} sf_ble_set_tx_pwr_info_t
```

11.1.386.1 power_lvl

```
int8_t sf_ble_set_tx_pwr_info_t::power_lvl
```

Brief description

TX power level in dBm.

11.1.386.2 state

```
sf_ble_tx_pwr_state_t::state
```

Brief description

Operating state to set the transmit power level.

11.1.387 sf_ble_sm_enc_info_t

```
typedef struct{
    sf_ble_conn_handle_t  conn_idx
    uint16_t  ediv

    uint8_t  ltk_key[SF_BLE_SEC_KEY_LEN]
} sf_ble_sm_key_ind_t
```

11.1.388.1 conn_idx

`uint8_t sf_ble_sm_key_ind_t::conn_idx`

Brief description

connection index

11.1.388.2 key_code

`sf_ble_key_dist_t::key_code`

Brief description

type of security key

11.1.388.3 ediv

`uint16_t sf_ble_sm_key_ind_t::ediv`

Brief description

BLE Security EDIV.

11.1.388.4 rand_num

`uint8_t sf_ble_sm_key_ind_t::rand_num[SF_BLE_RAND_NUM_LENGTH]`

Brief description

Random number for security.

11.1.388.5 ltk_key

`uint8_t sf_ble_sm_key_ind_t::ltk_key[SF_BLE_SEC_KEY_LEN]`

Brief description

BLE long term security key.

11.1.389 sf_ble_sm_tk_ind_t

```
typedef struct{
    sf_ble_sm_tk_info_t  tk_info
    uint8_t  tk_req_status
    uint8_t  tk_key[SF_BLE_SEC_KEY_LEN]
} sf_ble_sm_tk_ind_t
```

11.1.389.1 tk_info

`sf_ble_sm_tk_info_t::tk_info`

Brief description

input parameter,information to app about temporary key request

11.1.389.2 tk_req_status

`uint8_t sf_ble_sm_tk_ind_t::tk_req_status`

Brief description

output parameter: request status, application has to set this in callback event whether request is valid or not

11.1.389.3 tk_key

`uint8_t sf_ble_sm_tk_ind_t::tk_key[SF_BLE_SEC_KEY_LEN]`

Brief description

application has to set this in callback event temporary key for encryption

11.1.390 sf_ble_sm_tk_info_t

```
typedef struct{
    sf_ble_conn_handle_t  conhdl
    uint8_t  disp_en
} sf_ble_sm_tk_info_t
```

11.1.390.1 conhdl

`sf_ble_conn_handle_t::conhdl`

Brief description

Connection handle.

11.1.390.2 disp_en

```
uint8_t sf_ble_sm_tk_info_t::disp_en
```

Brief description

Whether to enable display.

11.1.391 sf_ble_svc_attribute_t

```
typedef struct{
    uint16_t  attr_handle
    uint16_t  attr_type
    uint16_t  parent_svc_handle
    uint8_t *  p_attr_value
    sf_ble_uuid_length_t  attr_value_len
} sf_ble_svc_attribute_t
```

11.1.391.1 attr_handle

```
uint16_t sf_ble_svc_attribute_t::attr_handle
```

Brief description

Service Handle.

11.1.391.2 attr_type

```
uint16_t sf_ble_svc_attribute_t::attr_type
```

Brief description

Attribute type such as SF_BLE_GATT_PRI_SERVICE, SF_BLE_GATT_INCLUDE_SERVICE.

11.1.391.3 parent_svc_handle

```
uint16_t sf_ble_svc_attribute_t::parent_svc_handle
```

Brief description

parent_svc_handle is service handle of parent service which is already registered

Detailed description

If service is included service,

11.1.391.4 p_attr_value

```
uint8_t* sf_ble_svc_attribute_t::p_attr_value
```

Brief description

Service UUID Pointer.

11.1.391.5 attr_value_len

`sf_ble_uuid_length_t::attr_value_len`

Brief description

UUID Length.

11.1.392 sf_ble_tip_cp_change_t

```
typedef struct{
    sf_ble_conn_handle_t  conhdl
    sf_ble_prf_tip_time_ctrl_point_t  control_point_value
} sf_ble_tip_cp_change_t
```

11.1.392.1 conhdl

`sf_ble_conn_handle_t::conhdl`

Brief description

Connection handle.

11.1.392.2 control_point_value

`sf_ble_prf_tip_time_ctrl_point_t::control_point_value`

Brief description

Time Update Control point value.

11.1.393 sf_ble_uuid_t

```
typedef struct{
    uint16_t  uuid16
    uint32_t  uuid32
    uint8_t  uuid128[SF_BLE_128BITS_UUID_LENGTH]
    union{}                 union{}
    sf_ble_uuid_length_t  uuid_length
} sf_ble_uuid_t
```

11.1.393.1 uuid16

`uint16_t sf_ble_uuid_t::uuid16`

Brief description

16 bit UUID

11.1.393.2 uuid32

```
uint32_t sf_ble_uuid_t::uuid32
```

Brief description

32 bit UUID

11.1.393.3 uuid128

```
uint8_t sf_ble_uuid_t::uuid128[SF_BLE_128BITS_UUID_LENGTH]
```

Brief description

128 bit UUID

11.1.393.4 union{}

```
See source code for the definition of this member.
```

11.1.393.5 uuid_length

```
sf_ble_uuid_length_t::uuid_length
```

Brief description

Service UUID length.

11.1.394 sf_ble_write_cmd_event_data_t

```
typedef struct{
    uint16_t  handle
    uint16_t  offset
    sf_ble_write_response_t  response_required
    uint8_t *  p_data
    uint16_t  data_length
} sf_ble_write_cmd_event_data_t
```

11.1.394.1 handle

```
uint16_t sf_ble_write_cmd_event_data_t::handle
```

Brief description

Characteristic value or descriptor handle.

11.1.394.2 offset

`uint16_t sf_ble_write_cmd_event_data_t::offset`

Brief description

Offset for long Characteristic value.

11.1.394.3 response_required

`sf_ble_write_response_t::response_required`

Brief description

Write response required or not.

11.1.394.4 p_data

`uint8_t* sf_ble_write_cmd_event_data_t::p_data`

Brief description

Pointer to data.

11.1.394.5 data_length

`uint16_t sf_ble_write_cmd_event_data_t::data_length`

Brief description

Data length.

11.1.395 sf_block_media_api_t

```
typedef struct{
    ssp_err_t(*  open)(sf_block_media_ctrl_t *p_ctrl, sf_block_media_cfg_t const

11.1.396.1 block_size

```
uint32_t sf_block_media_cfg_t::block_size
```

Brief description

Block size in bytes.

11.1.396.2 p_extend

```
void const* sf_block_media_cfg_t::p_extend
```

Brief description

Instance dependent configuration.

11.1.397 sf_block_media_instance_t

```
typedef struct{
    sf_block_media_ctrl_t *  p_ctrl
    sf_block_media_cfg_t const  *  p_cfg
    sf_block_media_api_t const  *  p_api
} sf_block_media_instance_t
```

11.1.397.1 p_ctrl

```
sf_block_media_ctrl_t::p_ctrl
```

Brief description

Block media pointer to device driver control structure.

11.1.397.2 p_cfg

```
sf_block_media_cfg_t::p_cfg
```

Brief description

Block media pointer to device driver configuration structure.

11.1.397.3 p_api

sf_block_media_api_t::p_api

Brief description

Block media pointer to device driver api structure.

11.1.398 sf_block_media_on_qspi_cfg_t

```
typedef struct{
    qspi_instance_t const  *const  p_lower_lvl_qspi
} sf_block_media_on_qspi_cfg_t
```

11.1.398.1 p_lower_lvl_qspi

qspi_instance_t::p_lower_lvl_qspi

Brief description

Pointer to QSPI instance structure.

11.1.399 sf_block_media_on_ram_cfg_t

```
typedef struct{
    uint8_t *  p_ram_buffer
    uint32_t  ram_buffer_size
} sf_block_media_on_ram_cfg_t

    uint32_t  memory_pool_size
    sf_crypto_close_option_t  close_option
} sf_crypto_cfg_t
```

11.1.434.1 wait_option

uint32_t ::wait_option

Brief description

Wait option for RTOS service calls.

11.1.434.2 p_lower_lvl_crypto

* ::p_lower_lvl_crypto

Brief description

Pointer to a low-level Crypto engine HAL driver instance.

11.1.434.3 p_extend

```
void const* ::p_extend
```

Brief description

Extension parameter for hardware specific settings.

11.1.434.4 p_context

```
void const* ::p_context
```

Brief description

Placeholder for user data.

11.1.434.5 p_memory_pool

```
void* ::p_memory_pool
```

Brief description

Byte pool address.

11.1.434.6 memory_pool_size

```
uint32_t ::memory_pool_size
```

Brief description

Byte pool size.

11.1.434.7 close_option

```
sf_crypto_close_option_t::close_option
```

Brief description

Close option.

11.1.435 sf_crypto_cipher_aes_init_params_t

```
typedef struct{
    sf_crypto_cipher_padding_scheme_t  padding_scheme
    sf_crypto_data_handle_t *  p_iv
```

```
    sf_crypto_data_handle_t *  p_auth_tag
} sf_crypto_cipher_aes_init_params_t
```

11.1.435.1 padding_scheme

sf_crypto_cipher_padding_scheme_t::padding_scheme

11.1.435.2 p_iv

sf_crypto_data_handle_t::p_iv

Brief description

pointer to IV for the AES operation.

11.1.435.3 p_auth_tag

sf_crypto_data_handle_t::p_auth_tag

Detailed description

Pointer to the GCM Authentication Tag. Only tag length of SF_CRYPTO_CIPHER_AES_GCM_TAG_LENGTH_16_BYTES is supported.

11.1.436 sf_crypto_cipher_api_t

```

sf_crypto_key_type_t::key_type
```

Brief description

Key type.

11.1.438.2 key_size

```
sf_crypto_key_size_t::key_size
```

Brief description

Key size.

11.1.438.3 cipher_chaining_mode

```
sf_crypto_cipher_mode_t::cipher_chaining_mode
```

Brief description

Chaining mode specified for the cipher operation.

11.1.438.4 status

sf_crypto_cipher_state_t::status

Brief description

Module status.

11.1.438.5 cipher_algorithm_type

::cipher_algorithm_type

Brief description

Cipher algorithm for the keys selected.

11.1.438.6 p_lower_lvl_fwk_common_ctrl

sf_crypto_instance_ctrl_t::p_lower_lvl_fwk_common_ctrl

Brief description

Pointer to the Crypto Framework Common instance.

11.1.438.7 p_lower_lvl_fwk_common_api

sf_crypto_api_t::p_lower_lvl_fwk_common_api

Brief description

Pointer to the Crypto Framework Common API.

11.1.438.8 p_lower_lvl_sf_crypto_trng_ctrl

* ::p_lower_lvl_sf_crypto_trng_ctrl

Brief description

Pointer to the Crypto TRNG API.

11.1.438.9 p_sf_crypto_trng_api

sf_crypto_trng_api_t::p_sf_crypto_trng_api

Brief description

Pointer to the Crypto TRNG API.

11.1.438.10 p_hal_ctrl

void* ::p_hal_ctrl

Brief description

Pointer to HAL control structure for the Cipher operation.

11.1.438.11 p_hal_api

```
void* ::p_hal_api
```

Brief description

Pointer to HAL API structure for the cipher algorithm.

11.1.438.12 p_cipher_context_buffer

```
void* ::p_cipher_context_buffer
```

Brief description

Cipher context buffer after DWORD alignment.

11.1.439 sf_crypto_cipher_instance_t

```
typedef struct{
    sf_crypto_cipher_ctrl_t *  p_ctrl

} sf_external_irq_instance_ctrl_t
```

11.1.467.1 open

uint32_t ::open

Brief description

Used by driver to check if control block is valid.

11.1.467.2 mutex

```
TX_MUTEX ::mutex
```

Brief description

Mutex used to protect access to lower level driver hardware registers.

11.1.467.3 semaphore

```
TX_SEMAPHORE ::semaphore
```

Brief description

Semaphore used for SF_EXTERNAL_IRQ_Wait.

11.1.467.4 p_lower_lvl_irq

```
external_irq_instance_t::p_lower_lvl_irq
```

Brief description

Pointer to lower level driver instance.

11.1.467.5 callback_used

```
bool ::callback_used
```

Brief description

Used by driver to check if wait can be used.

11.1.468 sf_external_irq_instance_t

```
typedef struct{
    sf_external_irq_ctrl_t *  p_ctrl

```

11.1.470.1 channel

```
uint8_t sf_i2c_bus_t::channel
```

Brief description

Channel.

11.1.470.2 p_lock_mutex

```
TX_MUTEX* sf_i2c_bus_t::p_lock_mutex
```

Brief description

Lock mutex handle for this channel.

11.1.470.3 p_sync_eventflag

```
TX_EVENT_FLAGS_GROUP* sf_i2c_bus_t::p_sync_eventflag
```

Brief description

Pointer to the event flag object for I2C data transfer.

11.1.470.4 pp_curr_ctrl

```
sf_i2c_ctrl_t::pp_curr_ctrl
```

Brief description

Current device using the bus (by switching the address)

11.1.470.5 p_bus_name

```
uint8_t* sf_i2c_bus_t::p_bus_name
```

Brief description

User-supplied name to identify the bus. Useful for debugging.

11.1.470.6 p_lower_lvl_api

```
i2c_api_master_t::p_lower_lvl_api
```

Brief description

Pointer to I2C HAL interface to be used in the framework.

11.1.470.7 device_count

```
uint8_t sf_i2c_bus_t::device_count
```

Brief description

Number of devices on the bus; initialize to 0.

11.1.470.8 pp_curr_bus_ctrl

sf_i2c_ctrl_t::pp_curr_bus_ctrl

Brief description

Device configured on the bus (low level configuration)

11.1.471 sf_i2c_cfg_t

```
typedef struct{
    sf_i2c_bus_t *  p_bus

} sf_i2c_cfg_t
```

11.1.471.1 p_bus

sf_i2c_bus_t::p_bus

Brief description

Bus used by the device.

11.1.471.2 p_lower_lvl_cfg

i2c_cfg_t::p_lower_lvl_cfg

Brief description

Pointer to I2C HAL configuration.

11.1.472 sf_i2c_instance_ctrl_t

```
typedef struct{
    sf_i2c_bus_t *  p_bus
    i2c_master_instance_t const  *  p_lower_lvl_i2c
    i2c_cfg_t  lower_lvl_cfg
    i2c_ctrl_t *  p_lower_lvl_ctrl
    sf_i2c_dev_state_t  dev_state
    bool  locked
    bool  restarted
} sf_i2c_instance_ctrl_t
```

11.1.472.1 p_bus

sf_i2c_bus_t::p_bus

Brief description

Bus using this device. Copy from configuration structure.

11.1.472.2 p_lower_lvl_i2c

i2c_master_instance_t::p_lower_lvl_i2c

Brief description

I2C instance.

11.1.472.3 lower_lvl_cfg

i2c_cfg_t::lower_lvl_cfg

Brief description

Used to reconfigure I2C driver.

11.1.472.4 p_lower_lvl_ctrl

i2c_ctrl_t::p_lower_lvl_ctrl

Brief description

I2C peripheral control block.

11.1.472.5 dev_state

sf_i2c_dev_state_t::dev_state

Brief description

Device status.

11.1.472.6 locked

bool ::locked

Brief description

Lock and unlock bus for a device.

11.1.472.7 restarted

bool ::restarted

Brief description

Indicates whether device issued a restart.

11.1.473 sf_i2c_instance_t

```
typedef struct{

    TX_MUTEX  mutex
    TX_EVENT_FLAGS_GROUP  events
    jpeg_decode_instance_t const  *  p_lower_lvl_jpeg_decode
} sf_jpeg_decode_instance_ctrl_t
```

11.1.476.1 open

uint32_t ::open

Brief description

Indicate whether the driver is open.

11.1.476.2 state

```
uint32_t ::state
```

Brief description

Used by driver to check if pointer to control block is valid.

11.1.476.3 mutex

```
TX_MUTEX ::mutex
```

Brief description

Mutex used to protect access to lower level driver hardware.

11.1.476.4 events

```
TX_EVENT_FLAGS_GROUP ::events
```

Brief description

Event flags used by the HAL driver to notify the framework driver of.

11.1.476.5 p_lower_lvl_jpeg_decode

```
jpeg_decode_instance_t::p_lower_lvl_jpeg_decode
```

Brief description

Pointer to lower level instance.

11.1.477 sf_jpeg_decode_instance_t

```

```

Brief description

Number of nodes in the subscriber group.

11.1.490.3 pp_subscriber_group

sf_message_subscriber_t::pp_subscriber_group

Brief description

Subscriber group for the event class.

11.1.491 sf_message_subscriber_t

```
typedef struct{
    TX_QUEUE *  p_queue
    sf_message_instance_range_t  instance_range
} sf_message_subscriber_t
```

11.1.491.1 p_queue

TX_QUEUE* sf_message_subscriber_t::p_queue

Brief description

Pointer to the message queue for subscriber thread.

11.1.491.2 instance_range

sf_message_instance_range_t::instance_range

Brief description

Range of the event class instance to receive message.

11.1.492 sf_power_profiles_api_t

```
typedef struct{
    ssp_err_t(*  open)(sf_power_profiles_ctrl_t *const p_ctrl,
sf_power_profiles_cfg_t const *const p_cfg)
    ssp_err_t(*  sleep)(sf_power_profiles_ctrl_t *const p_ctrl)
    ssp_err_t(*  close)(sf_power_profiles_ctrl_t *const p_ctrl)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
} sf_power_profiles_api_t
```

11.1.493 sf_power_profiles_callback_args_t

```
typedef struct{
    sf_power_profiles_event_t  event
    void *  p_context
} sf_power_profiles_callback_args_t
```

11.1.493.1 event

sf_power_profiles_event_t::event

Brief description

Power profiles callback event.

11.1.493.2 p_context

void* sf_power_profiles_callback_args_t::p_context

Brief description

Placeholder for user data.

11.1.494 sf_power_profiles_cfg_t

```
typedef struct{
    ioport_cfg_t const  *const  p_wake_ioport_pin_tbl
    ioport_cfg_t const  *const  p_sleep_ioport_pin_tbl
    sf_power_profiles_mode_t  operating_mode

    void *  p_context
} sf_power_profiles_cfg_t
```

11.1.494.1 p_wake_ioport_pin_tbl

ioport_cfg_t::p_wake_ioport_pin_tbl

Brief description

Pointer to ioport settings for wakeup.

11.1.494.2 p_sleep_ioport_pin_tbl

ioport_cfg_t::p_sleep_ioport_pin_tbl

Brief description

Pointer to ioport settings for sleep.

11.1.494.3 operating_mode

sf_power_profiles_mode_t::operating_mode

Brief description

Power profile mode to use.

11.1.494.4 retain_output_signals

```
bool sf_power_profiles_cfg_t::retain_output_signals
```

Detailed description

(Future implementation:) True (Default) ==> address bus and bus control signals retain the output state False ==> signals are set to high-impedance state

11.1.494.5 p_lower_lvl_lpm

```
lpm_instance_t::p_lower_lvl_lpm
```

Brief description

Pointer to the LPM instance.

11.1.494.6 p_lower_lvl_rtc

```
rtc_instance_t::p_lower_lvl_rtc
```

Brief description

Pointer to the RTC instance (if any)

11.1.494.7 p_callback

```
void(* sf_power_profiles_cfg_t::p_callback) (sf_power_profiles_callback_args_t
*p_args)
```

Brief description

Callback function.

11.1.494.8 p_context

```
void* sf_power_profiles_cfg_t::p_context
```

Brief description

Placeholder for user data.

11.1.495 sf_power_profiles_ctrl_t

```
typedef struct{
    uint32_t  open
```

```
    ioport_cfg_t const  *  p_wake_ioport_pin_tbl
    ioport_cfg_t const  *  p_sleep_ioport_pin_tbl

    rtc_ctrl_t *  p_ctrl_rtc
    void(*  p_callback)(sf_power_profiles_callback_args_t *p_args)
    void *  p_context
} sf_power_profiles_ctrl_t
```

11.1.495.1 open

uint32_t sf_power_profiles_ctrl_t::open

Brief description

Used by driver to check if pointer to control block is valid.

11.1.495.2 p_wake_ioport_pin_tbl

ioport_cfg_t::p_wake_ioport_pin_tbl

Brief description

Pointer to ioport settings for wakeup.

11.1.495.3 p_sleep_ioport_pin_tbl

ioport_cfg_t::p_sleep_ioport_pin_tbl

Brief description

Pointer to ioport settings for sleep.

11.1.495.4 operating_mode

sf_power_profiles_mode_t::operating_mode

Brief description

Power profile mode to use.

11.1.495.5 p_api_lpm

lpm_api_t::p_api_lpm

Brief description

Pointer to lower level Low Power driver function pointers.

11.1.495.6 p_api_rtc

rtc_api_t::p_api_rtc

Brief description

Pointer to lower level RTC driver function pointers.

11.1.495.7 p_ctrl_rtc

rtc_ctrl_t::p_ctrl_rtc

Brief description

Pointer to lower level RTC driver control block.

11.1.495.8 p_callback

```
void(* sf_power_profiles_ctrl_t::p_callback) (sf_power_profiles_callback_args_t
*p_args)
```

Brief description

Callback function.

11.1.495.9 p_context

```
void* sf_power_profiles_ctrl_t::p_context
```

Brief description

Placeholder for user data.

11.1.496 sf_power_profiles_instance_t

```
typedef struct{
    sf_power_profiles_ctrl_t *  p_ctrl

```

11.1.504.9 p_slider_delta

```
int32_t* const ::p_slider_delta
```

11.1.504.10 id

sf_touch_ctsu_slider_id_t::id

Detailed description

Unique identifier for slider

11.1.504.11 max_slider_value

```
int32_t ::max_slider_value
```

Detailed description

Maximum slider value, must be greater than 0; Minimum is always 0

11.1.504.12 slider_norm_max

```
const uint16_t ::slider_norm_max
```

Detailed description

Individual slider settings that can be modified by the user. Should be the same as in st_sf_touch_ctsu_slider_hdlTOUCH_SLIDER_CFG_NORM_MAX

11.1.504.13 slider_threshold

```
const int32_t ::slider_threshold
```

Detailed description

Touch threshold. Ensure that value is greater than 0

11.1.504.14 channel_average_weight

```
const int32_t ::channel_average_weight
```

Detailed description

Weight of running average of counts for each channel

11.1.504.15 prev_sum_weight

```
const int32_t ::prev_sum_weight
```

Detailed description

Weight of running average of previous sum in position calculation, must be greater than 0

11.1.504.16 cutoff

```
const int32_t ::cutoff
```

Detailed description

Defines how far below prev_sum running average to get before "SF_TOUCH_SLIDER_STATE_RELEASED" detected

11.1.505 sf_socket_api_t

```

uint8_t sf_spi_bus_t::channel
```

Brief description

Channel.

11.1.510.2 freq_hz_min

```
uint32_t sf_spi_bus_t::freq_hz_min
```

Brief description

Bus min frequency supported.

11.1.510.3 p_lock_mutex

```
TX_MUTEX* sf_spi_bus_t::p_lock_mutex
```

Brief description

Lock mutex handle for this channel.

11.1.510.4 p_sync_eventflag

```
TX_EVENT_FLAGS_GROUP* sf_spi_bus_t::p_sync_eventflag
```

Brief description

Pointer to the event flag object for SPI data transfer.

11.1.510.5 pp_curr_ctrl

```
sf_spi_ctrl_t::pp_curr_ctrl
```

Brief description

Current device using the bus.

11.1.510.6 p_bus_name

```
uint8_t* sf_spi_bus_t::p_bus_name
```

Brief description

peripheral name SCI_SPI/RSPI

11.1.510.7 p_lower_lvl_api

```
spi_api_t::p_lower_lvl_api
```

Brief description

Pointer to SPI HAL interface to be used in the framework.

11.1.510.8 device_count

```
uint8_t sf_spi_bus_t::device_count
```

Brief description

Number of devices on the bus, initialize to 0.

11.1.511 sf_spi_cfg_t

```
typedef struct{
    sf_spi_bus_t *  p_bus

    bool  locked
} sf_spi_instance_ctrl_t
```

11.1.512.1 p_bus

sf_spi_bus_t::p_bus

Brief description

Bus using this device (copy from cfg)

11.1.512.2 chip_select

ioport_port_pin_t::chip_select

Brief description

Chip select for this device (copy from cfg)

11.1.512.3 chip_select_level_active

ioport_level_t::chip_select_level_active

Brief description

Polarity of CS, active High or Low (copy from cfg)

11.1.512.4 lower_lvl_cfg

spi_cfg_t::lower_lvl_cfg

Brief description

SPI peripheral configuration, use for bus reconfiguration.

11.1.512.5 p_lower_lvl_ctrl

spi_ctrl_t::p_lower_lvl_ctrl

Brief description

SPI peripheral control block.

11.1.512.6 dev_state

sf_spi_dev_state_t::dev_state

Brief description

Device status.

11.1.512.7 locked

bool ::locked

Brief description

Lock and unlock bus for a device.

11.1.513 sf_spi_instance_t

```
typedef struct{
    sf_spi_ctrl_t *  p_ctrl

```

11.1.515.1 p_lower_lvl_wdt

wdt_instance_t::p_lower_lvl_wdt

Brief description

Pointer to lower level watchdog instance.

11.1.515.2 profiling_mode_enabled

bool sf_thread_monitor_cfg_t::profiling_mode_enabled

Brief description

Enables or disables profiling mode.

11.1.515.3 priority

UINT sf_thread_monitor_cfg_t::priority

Brief description

Priority of thread monitor thread.

11.1.516 sf_thread_monitor_counter_min_max_t

```
typedef struct{
    uint32_t  minimum_count
    uint32_t  maximum_count
} sf_thread_monitor_counter_min_max_t
```

11.1.516.1 minimum_count

```
uint32_t sf_thread_monitor_counter_min_max_t::minimum_count
```

Detailed description

Minimum expected count value. If the current count is less than this value the watchdog will reset.

11.1.516.2 maximum_count

```
uint32_t sf_thread_monitor_counter_min_max_t::maximum_count
```

Detailed description

Maximum expected count value. If the current count is more than this value the watchdog will reset

11.1.517 sf_thread_monitor_instance_ctrl_t

```
typedef struct{
    uint32_t  open
    wdt_instance_t const  *  p_lower_lvl_wdt
    uint32_t  timeout_period_msec
    uint32_t  timeout_period_watchdog_clocks
    bool  profiling_mode_enabled
    TX_MUTEX  mutex
    uint32_t  profiling_mode_check
    sf_thread_monitor_thread_counter_t  thread_counters[THREAD_MONITOR_CFG_MAX_N
UMBER_OF_THREADS]
    TX_THREAD  thread
    void const  *  p_extend
    uint8_t  stack[THREAD_MONITOR_THREAD_STACK_SIZE]
} sf_thread_monitor_instance_ctrl_t
```

11.1.517.1 open

```
uint32_t ::open
```

Detailed description

Used by driver to check if the control structure is valid

11.1.517.2 p_lower_lvl_wdt

`wdt_instance_t::p_lower_lvl_wdt`

Detailed description

Pointer to interface structure for the watchdog peripheral

11.1.517.3 timeout_period_msec

`uint32_t ::timeout_period_msec`

Detailed description

Time in milliseconds of the watchdog timeout period. Used to calculate the period of the monitoring thread.

11.1.517.4 timeout_period_watchdog_clocks

`uint32_t ::timeout_period_watchdog_clocks`

Detailed description

Maximum count value of the watchdog. Used to synchronise to the count.

11.1.517.5 profiling_mode_enabled

`bool ::profiling_mode_enabled`

Detailed description

Used by the driver to check if profiling mode is enabled.

11.1.517.6 mutex

`TX_MUTEX ::mutex`

Brief description

Mutex to protect access to the thread counters.

11.1.517.7 profiling_mode_check

`uint32_t ::profiling_mode_check`

Detailed description

Value used to verify profiling mode is enabled when prfiling_mode_enabled == true.

11.1.517.8 thread_counters

sf_thread_monitor_thread_counter_t::thread_counters

Detailed description

Data storage for the thread counter information.

11.1.517.9 thread

TX_THREAD ::thread

Brief description

Thread monitor thread.

11.1.517.10 p_extend

void const* ::p_extend

Brief description

Extended configuration data.

11.1.517.11 stack

uint8_t ::stack[THREAD_MONITOR_THREAD_STACK_SIZE]

Detailed description

Stack for thread monitor thread.

11.1.518 sf_thread_monitor_instance_t

```
typedef struct{
    sf_thread_monitor_ctrl_t *  p_ctrl
    sf_thread_monitor_cfg_t const  *  p_cfg
    sf_thread_monitor_api_t const  *  p_api
} sf_thread_monitor_instance_t
```

11.1.518.1 p_ctrl

sf_thread_monitor_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.518.2 p_cfg

sf_thread_monitor_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.518.3 p_api

sf_thread_monitor_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.519 sf_thread_monitor_thread_counter_t

```
typedef struct{
    uint32_t  current_count
    uint32_t  minimum_count
    uint32_t  maximum_count
    bool  active
    TX_THREAD *  p_thread
} sf_thread_monitor_thread_counter_t
```

11.1.519.1 current_count

uint32_t sf_thread_monitor_thread_counter_t::current_count

Brief description

Current count value for a thread.

11.1.519.2 minimum_count

uint32_t sf_thread_monitor_thread_counter_t::minimum_count

Detailed description

Minimum expected count value. If the current count is less than this value the watchdog will reset.

11.1.519.3 maximum_count

uint32_t sf_thread_monitor_thread_counter_t::maximum_count

Detailed description

Maximum expected count value. If the current count is more than this value the watchdog will reset

11.1.519.4 active

```
bool sf_thread_monitor_thread_counter_t::active
```

Detailed description

Indicates to the monitoring thread whether this count data is currently active. When a thread is registered this value will be set to false as the count is likely to be a partial count and so should not be monitored. This value will be set to true by the thread monitor thread when it clears all counts to zero.

11.1.519.5 p_thread

```
TX_THREAD* sf_thread_monitor_thread_counter_t::p_thread
```

Brief description

Pointer to thread for this counter data.

11.1.520 sf_touch_ctsu_api_t

```

    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
} sf_touch_ctsu_button_api_t
```

11.1.522 sf_touch_ctsu_button_callback_args_t

```
typedef struct{
    sf_touch_ctsu_button_id  id
    sf_touch_button_state_t  event
```

```
    void const  *  p_context
} sf_touch_ctsu_button_callback_args_t
```

11.1.522.1 id

sf_touch_ctsu_button_id::id

Brief description

Unique id for button.

11.1.522.2 event

sf_touch_button_state_t::event

Brief description

Button callback event.

11.1.522.3 p_context

void const* sf_touch_ctsu_button_callback_args_t::p_context

Brief description

Placeholder for user data.

11.1.523 sf_touch_ctsu_button_cfg_t

```
typedef struct{
    sf_touch_ctsu_instance_t const  *const  p_lower_lvl_touch_framework
    uint32_t  button_count

    void(*  p_callback)(sf_touch_ctsu_button_callback_args_t *p_args)
    void const  *  p_context
    void const  *  p_extend
} sf_touch_ctsu_button_cfg_t
```

11.1.523.1 p_lower_lvl_touch_framework

sf_touch_ctsu_instance_t::p_lower_lvl_touch_framework

Brief description

Pointer to the Touch Framework instance.

11.1.523.2 button_count

uint32_t sf_touch_ctsu_button_cfg_t::button_count

Brief description

Number of buttons in configuration.

11.1.523.3 pp_button_cfgs

```
sf_touch_ctsu_button_individual_t::pp_button_cfgs
```

Brief description

Pointer to button configurations.

11.1.523.4 p_callback

```
void(* sf_touch_ctsu_button_cfg_t::p_callback)
(sf_touch_ctsu_button_callback_args_t *p_args)
```

Brief description

Callback function.

11.1.523.5 p_context

```
void const* sf_touch_ctsu_button_cfg_t::p_context
```

Brief description

Placeholder for user data.

11.1.523.6 p_extend

```
void const* sf_touch_ctsu_button_cfg_t::p_extend
```

Brief description

Extension parameter for instance specific settings.

11.1.524 sf_touch_ctsu_button_hdl

```
typedef struct{
    sf_touch_ctsu_button_individual_t  button_cfg
    sf_touch_button_state_t  state
    int16_t  offset
    sf_touch_button_state_t  prev_state
    uint32_t  debounce_counter
    uint32_t  active_event_counter
    uint32_t  press_down_counter
    uint32_t  open
} sf_touch_ctsu_button_hdl
```

11.1.524.1 button_cfg

sf_touch_ctsu_button_individual_t::button_cfg

Brief description

Individual button configuration.

11.1.524.2 state

sf_touch_button_state_t::state

Brief description

Represents the current state of the button.

11.1.524.3 offset

```
int16_t sf_touch_ctsu_button_hdl::offset
```

Brief description

Offset in the results array and bit offset in the binary.

11.1.524.4 prev_state

sf_touch_button_state_t::prev_state

Brief description

Holds previous state of the button.

11.1.524.5 debounce_counter

```
uint32_t sf_touch_ctsu_button_hdl::debounce_counter
```

Brief description

Debounce counter.

11.1.524.6 active_event_counter

```
uint32_t sf_touch_ctsu_button_hdl::active_event_counter
```

Brief description

Amount of time for which button is spending between states.

11.1.524.7 press_down_counter

```
uint32_t sf_touch_ctsu_button_hdl::press_down_counter
```

Brief description

Time for which button is held down.

11.1.524.8 open

```
uint32_t sf_touch_ctsu_button_hdl::open
```

Brief description

Indicate that button has been opened.

11.1.525 sf_touch_ctsu_button_individual_t

```
typedef struct{
    ctsu_channel_pair_t  button_channel
    uint8_t  release_enable
    uint8_t  press_enable
    uint8_t  repeat_enable

    union{}                 event_enable
    uint16_t  debounce_threshold
    sf_touch_ctsu_button_id  id
} sf_touch_ctsu_button_individual_t
```

11.1.525.1 button_channel

```
ctsu_channel_pair_t::button_channel
```

Brief description

Define the channel/channel pairs which make up a button.

11.1.525.2 release_enable

```
uint8_t sf_touch_ctsu_button_individual_t::release_enable
```

Brief description

enable release events

11.1.525.3 press_enable

```
uint8_t sf_touch_ctsu_button_individual_t::press_enable
```

Brief description

enable press events

11.1.525.4 repeat_enable

`uint8_t sf_touch_ctsu_button_individual_t::repeat_enable`

Brief description

enable repeat events

11.1.525.5 shorthold_enable

`uint8_t sf_touch_ctsu_button_individual_t::shorthold_enable`

Brief description

enable short hold events

11.1.525.6 longhold_enable

`uint8_t sf_touch_ctsu_button_individual_t::longhold_enable`

Brief description

enable long hold events

11.1.525.7 byte

`uint8_t sf_touch_ctsu_button_individual_t::byte`

Brief description

Byte representation of events enabled.

11.1.525.8 event_enable

`See source code for the definition of this member.`

11.1.525.9 debounce_threshold

`uint16_t sf_touch_ctsu_button_individual_t::debounce_threshold`

Brief description

Number of consecutive times a button is determined as touched before state changes.

11.1.525.10 id

`sf_touch_ctsu_button_id::id`

Brief description

Unique id for button.

11.1.526 sf_touch_ctsu_button_instance_ctrl_t

```
typedef struct{
    uint32_t  opened

11.1.526.1 opened

```
uint32_t ::opened
```

Brief description

Save the initialization state.

11.1.526.2 p_button_hdl

```
sf_touch_ctsu_button_hdl::p_button_hdl
```

Brief description

Pointer to the button handle.

11.1.526.3 button_count

```
uint32_t ::button_count
```

Brief description

Button Count.

11.1.526.4 p_lower_lvl_ctsu

```
sf_touch_ctsu_instance_t::p_lower_lvl_ctsu
```

Brief description

Pointer to the lower level instance.

11.1.526.5 p_context

```
void const* ::p_context
```

Brief description

Placeholder for user data.

11.1.526.6 p_callback

```
void(* ::p_callback) ( *p_args)
```

Brief description

Callback function.

11.1.527 sf_touch_ctsu_button_instance_t

```
typedef struct{
    sf_touch_ctsu_button_ctrl_t *  p_ctrl
    sf_touch_ctsu_button_cfg_t const  *  p_cfg

    ctsu_instance_t *  p_ctsu_instance
} sf_touch_ctsu_cfg_t
```

11.1.529.1 priority

```
UINT sf_touch_ctsu_cfg_t::priority
```

Brief description

Priority of the touch panel thread.

11.1.529.2 update_hz

```
uint16_t sf_touch_ctsu_cfg_t::update_hz
```

Brief description

The frequency to run the scans. This is set by the latest open() call.

11.1.529.3 p_callback

```
void(* sf_touch_ctsu_cfg_t::p_callback) (sf_touch_ctsu_callback_args_t *p_args)
```

Brief description

Callback function;.

11.1.529.4 p_context

```
void* sf_touch_ctsu_cfg_t::p_context
```

Brief description

Arguments to the callback.

11.1.529.5 p_ctsu_instance

```
ctsu_instance_t::p_ctsu_instance
```

Brief description

CTSU instance.

11.1.530 sf_touch_ctsu_instance_ctrl_t

```
typedef struct{
    uint32_t  open
    uint16_t  update_hz

```
typedef struct{
    uint16_t  hsize_pixels
    uint16_t  vsize_pixels
    UINT  priority
    sf_message_instance_t const  *  p_message
    uint8_t  event_class_instance
    uint16_t  update_hz
    uint16_t  rotation_angle
    void const  *  p_extend
} sf_touch_panel_cfg_t
```

11.1.539.1 hsize_pixels

```
uint16_t sf_touch_panel_cfg_t::hsize_pixels
```

Brief description

Horizontal size of screen in pixels.

11.1.539.2 vsize_pixels

`uint16_t sf_touch_panel_cfg_t::vsize_pixels`

Brief description

Vertical size of screen in pixels.

11.1.539.3 priority

`UINT sf_touch_panel_cfg_t::priority`

Brief description

Priority of the touch panel thread.

11.1.539.4 p_message

`sf_message_instance_t::p_message`

Brief description

Pointer to messaging framework control block.

11.1.539.5 event_class_instance

`uint8_t sf_touch_panel_cfg_t::event_class_instance`

Brief description

Event class instance number for posting touch event class messages.

11.1.539.6 update_hz

`uint16_t sf_touch_panel_cfg_t::update_hz`

Detailed description

The frequency to report repeat (SF_TOUCH_PANEL_EVENT_DOWN or SF_TOUCH_PANEL_EVENT_HOLD) touch events in Hertz.
NOTE: This will be converted to RTOS ticks in the driver and rounded up to the nearest integer value of RTOS ticks.

11.1.539.7 rotation_angle

`uint16_t sf_touch_panel_cfg_t::rotation_angle`

Brief description

Touch coordinate rotation angle(0/90/180/270)

11.1.539.8 p_extend

```
void const* sf_touch_panel_cfg_t::p_extend
```

Detailed description

Pointer to hardware specific extension. See sf_touch_panel_<instance>.h.

11.1.540 sf_touch_panel_i2c_cfg_t

```
typedef struct{
    i2c_master_instance_t const  *  p_lower_lvl_i2c
    sf_external_irq_instance_t const  *  p_lower_lvl_irq
    ioport_port_pin_t  pin
    sf_touch_panel_i2c_chip_t const  *const  p_chip
} sf_touch_panel_i2c_cfg_t
```

11.1.540.1 p_lower_lvl_i2c

```
i2c_master_instance_t::p_lower_lvl_i2c
```

Detailed description

Pointer to lower level I2C.

11.1.540.2 p_lower_lvl_irq

```
sf_external_irq_instance_t::p_lower_lvl_irq
```

Detailed description

Pointer to lower level external IRQ.

11.1.540.3 pin

```
ioport_port_pin_t::pin
```

Detailed description

Port pin connected to reset line on touch controller chip. Set to SF_TOUCH_PANEL_I2C_RESET_PIN_UNUSED if unused.

11.1.540.4 p_chip

```
sf_touch_panel_i2c_chip_t::p_chip
```

Detailed description

Selected touch controller chip.

11.1.541 sf_touch_panel_i2c_chip_t

```
typedef struct{
    ssp_err_t(*  payloadGet)(sf_touch_panel_ctrl_t *const p_ctrl,
sf_touch_panel_payload_t *const p_payload)
    ssp_err_t(*  reset)(sf_touch_panel_ctrl_t *const p_ctrl)
} sf_touch_panel_i2c_chip_t
```

11.1.541.1 payloadGet

```
(* ::payloadGet) ( *const p_ctrl, *const p_payload)
```

Detailed description

Reads the touch chip and fills in the touch payload data.

Table 2390:

Name	Direction	Description
p_ctrl	inout	Pointer to a structure allocated by user. This control structure is initialized in this function.
p_payload	out	Pointer to the payload to data structure. Touch data provided should be processed to logical pixel values.

Parameter p_ctrl

Parameter p_payload

11.1.541.2 reset

```
(* ::reset) ( *const p_ctrl)
```

Detailed description

Resets the touch chip.

Table 2391:

Name	Direction	Description
p_ctrl	inout	Pointer to a structure allocated by user. This control structure is initialized in this function.

Parameter p_ctrl

11.1.542 sf_touch_panel_i2c_instance_ctrl_t

```
typedef struct{
    uint32_t  open
    uint16_t  hsize_pixels
    uint16_t  vsize_pixels
    sf_message_instance_t const  *  p_message
    uint8_t  event_class_instance
    sf_touch_panel_payload_t *  p_payload
    sf_touch_panel_payload_t  last_payload
    TX_MUTEX  mutex
    TX_EVENT_FLAGS_GROUP  flags
    TX_THREAD  thread
    ioport_port_pin_t  pin
    i2c_master_instance_t const  *  p_lower_lvl_i2c
    sf_external_irq_instance_t const  *  p_lower_lvl_irq
    uint8_t  stack[SF_TOUCH_PANEL_I2C_STACK_SIZE]
    sf_touch_panel_i2c_chip_t const  *  p_chip
    uint16_t  update_hz
    uint16_t  rotation_angle
} sf_touch_panel_i2c_instance_ctrl_t
```

11.1.542.1 open

```
uint32_t ::open
```

Brief description

Used by driver to check if control block is valid.

11.1.542.2 hsize_pixels

```
uint16_t ::hsize_pixels
```

Brief description

Horizontal size of screen in pixels.

11.1.542.3 vsize_pixels

```
uint16_t ::vsize_pixels
```

Brief description

Vertical size of screen in pixels.

11.1.542.4 p_message

```
sf_message_instance_t::p_message
```

Brief description

Pointer to messaging framework control block.

11.1.542.5 event_class_instance

```
uint8_t ::event_class_instance
```

Brief description

Event class instance number for posting touch event class messages.

11.1.542.6 p_payload

```
sf_touch_panel_payload_t::p_payload
```

Brief description

Pointer to buffer used to store payload.

11.1.542.7 last_payload

```
sf_touch_panel_payload_t::last_payload
```

Brief description

Stores most recent payload put on queue for comparison.

11.1.542.8 mutex

```
TX_MUTEX ::mutex
```

Brief description

Mutex used to protect access to shared resources.

11.1.542.9 flags

```
TX_EVENT_FLAGS_GROUP ::flags
```

Brief description

Event flags for internal communication.

11.1.542.10 thread

```
TX_THREAD ::thread
```

Brief description

Main touch panel thread.

11.1.542.11 pin

```
ioport_port_pin_t::pin
```

Brief description

Reset pin.

11.1.542.12 p_lower_lvl_i2c

```
i2c_master_instance_t::p_lower_lvl_i2c
```

Brief description

Lower level I2C.

11.1.542.13 p_lower_lvl_irq

```
sf_external_irq_instance_t::p_lower_lvl_irq
```

Brief description

Lower level external IRQ.

11.1.542.14 stack

```
uint8_t ::stack[SF_TOUCH_PANEL_I2C_STACK_SIZE]
```

Brief description

Stack for touch panel thread.

11.1.542.15 p_chip

```
sf_touch_panel_i2c_chip_t::p_chip
```

Brief description

Chip specific functions and definitions.

11.1.542.16 update_hz

```
uint16_t ::update_hz
```

Detailed description

The frequency to report repeat (SF_TOUCH_PANEL_EVENT_DOWN or SF_TOUCH_PANEL_EVENT_HOLD) touch events in Hertz.
NOTE: This will be converted to RTOS ticks in the driver and rounded up to the nearest integer value of RTOS ticks.

11.1.542.17 rotation_angle

```
uint16_t ::rotation_angle
```

Brief description

Touch coordinate rotation angle(0/90/180/270)

11.1.543 sf_touch_panel_instance_t

```
typedef struct{
    sf_touch_panel_ctrl_t *  p_ctrl
    sf_touch_panel_cfg_t const  *  p_cfg
    sf_touch_panel_api_t const  *  p_api
} sf_touch_panel_instance_t
```

11.1.543.1 p_ctrl

```
sf_touch_panel_ctrl_t::p_ctrl
```

Brief description

Pointer to the control structure for this instance.

11.1.543.2 p_cfg

```
sf_touch_panel_cfg_t::p_cfg
```

Brief description

Pointer to the configuration structure for this instance.

11.1.543.3 p_api

```
sf_touch_panel_api_t::p_api
```

Brief description

Pointer to the API structure for this instance.

11.1.544 sf_touch_panel_payload_t

```
typedef struct{
    sf_message_header_t  header
    int16_t  x
    int16_t  y
    sf_touch_panel_event_t  event_type
} sf_touch_panel_payload_t
```

11.1.544.1 header

sf_message_header_t::header

Brief description

Required header for messaging framework.

11.1.544.2 x

int16_t sf_touch_panel_payload_t::x

Brief description

X coordinate.

11.1.544.3 y

int16_t sf_touch_panel_payload_t::y

Brief description

Y coordinate.

11.1.544.4 event_type

sf_touch_panel_event_t::event_type

Brief description

Touch event type.

11.1.545 sf_uart_comms_cfg_t

```
typedef struct{
    uart_instance_t const  *  p_lower_lvl_uart
} sf_uart_comms_cfg_t
```

11.1.545.1 p_lower_lvl_uart

uart_instance_t::p_lower_lvl_uart

Detailed description

Pointer to UART Driver instance

11.1.546 sf_uart_comms_instance_ctrl_t

```
typedef struct{
    uint32_t  state
    uart_instance_t const  *  p_lower_lvl_uart
    TX_MUTEX  mutex[2]
    TX_EVENT_FLAGS_GROUP  eventflag[2]
    TX_QUEUE  queue
    uint32_t  queue_mem[SF_UART_COMMS_CFG_QUEUE_SIZE_WORDS]
} sf_uart_comms_instance_ctrl_t
```

11.1.546.1 state

uint32_t ::state

Brief description

UART status.

11.1.546.2 p_lower_lvl_uart

uart_instance_t::p_lower_lvl_uart

Brief description

Pointer to UART interface (copied from cfg)

11.1.546.3 mutex

TX_MUTEX ::mutex[2]

Brief description

Pointer to the mutex object for UART resource mutual exclusion.

11.1.546.4 eventflag

TX_EVENT_FLAGS_GROUP ::eventflag[2]

Brief description

Pointer to the event flag object for UART data transfer.

11.1.546.5 queue

```
TX_QUEUE ::queue
```

Brief description

Queue for reading.

11.1.546.6 queue_mem

```
uint32_t ::queue_mem[SF_UART_COMMS_CFG_QUEUE_SIZE_WORDS]
```

Brief description

Queue memory.

11.1.547 sf_wifi_api_t

```
typedef struct{
    ssp_err_t(*  open)(sf_wifi_ctrl_t *p_ctrl, sf_wifi_cfg_t const *const p_cfg)

    void const  *  p_context
} sf_wifi_callback_args_t
```

11.1.548.1 event

sf_wifi_event_t::event

Brief description

Event code.

11.1.548.2 p_data

uint8_t* sf_wifi_callback_args_t::p_data

Brief description

Packet data.

11.1.548.3 length

uint32_t sf_wifi_callback_args_t::length

Brief description

Packet Data length.

11.1.548.4 mac_addr

uint8_t sf_wifi_callback_args_t::mac_addr[SF_WIFI_MAC_ADDR_LENGTH]

Brief description

Client station MAC address.

11.1.548.5 p_context

void const* sf_wifi_callback_args_t::p_context

Brief description

Context provided to user during callback.

11.1.549 sf_wifi_cfg_t

```
typedef struct{
    uint8_t  mac_addr[6]
    sf_wifi_interface_hw_mode_t  hw_mode

    void const  *  p_extend
} sf_wifi_cfg_t
```

11.1.549.1 mac_addr

```
uint8_t sf_wifi_cfg_t::mac_addr[6]
```

Brief description

MAC address of WiFi Device.

11.1.549.2 hw_mode

```
sf_wifi_interface_hw_mode_t::hw_mode
```

Brief description

Modulation type: 11a/b/g/n.

11.1.549.3 tx_power

```
uint8_t sf_wifi_cfg_t::tx_power
```

Brief description

Sets transmit power in dBm.

11.1.549.4 rts

sf_wifi_rts_t::rts

Brief description

RTS/CTS handshake flag.

11.1.549.5 fragmentation

uint16_t sf_wifi_cfg_t::fragmentation

Brief description

Fragmentation threshold.

11.1.549.6 dtim

uint8_t sf_wifi_cfg_t::dtim

Brief description

Delivery traffic indication message interval.

11.1.549.7 high_throughput

sf_wifi_high_throughput_t::high_throughput

Brief description

High-throughput mode. Only valid for 802.11n.

11.1.549.8 preamble

sf_wifi_preamble_t::preamble

Brief description

Preamble type.

11.1.549.9 wmm

sf_wifi_wmm_t::wmm

Brief description

WiFi Multimedia Mode flag. If enabled, also requires.

11.1.549.10 max_stations

uint8_t sf_wifi_cfg_t::max_stations

Brief description

Maximum permitted stations. Valid in AP mode only.

11.1.549.11 ssid_broadcast

`sf_wifi_ssid_broadcast_t::ssid_broadcast`

Brief description

SSID broadcast flag. Valid in AP mode only.

11.1.549.12 access_control

`sf_wifi_access_control_t::access_control`

Brief description

Mode of access control MAC list.

11.1.549.13 beacon

`uint32_t sf_wifi_cfg_t::beacon`

Brief description

Beacon interval. Valid in AP mode only.

11.1.549.14 station_inactivity_timeout

`uint32_t sf_wifi_cfg_t::station_inactivity_timeout`

Brief description

Station inactivity timeout value. Valid in AP mode only.

11.1.549.15 wds

`sf_wifi_wds_t::wds`

Brief description

WDS flag. Valid in AP mode only.

11.1.549.16 p_buffer_pool_rx

`void* sf_wifi_cfg_t::p_buffer_pool_rx`

Brief description

Pointer to Network stack Rx buffer pool.

11.1.549.17 req_high_throughput

`sf_wifi_mandatory_high_throughput_t::req_high_throughput`

Brief description

Only allow HT mode. Valid in AP mode only.

11.1.549.18 p_callback

```
void(* sf_wifi_cfg_t::p_callback) (sf_wifi_callback_args_t *p_args)
```

Brief description

Pointer to callback function.

11.1.549.19 p_context

```
void const* sf_wifi_cfg_t::p_context
```

Brief description

User defined context passed into callback function.

11.1.549.20 p_extend

```
void const* sf_wifi_cfg_t::p_extend
```

Brief description

Instance specific configuration.

11.1.550 sf_wifi_ctrl_t

```
typedef struct{
    void *  p_driver_handle
} sf_wifi_ctrl_t
```

11.1.550.1 p_driver_handle

```
void* sf_wifi_ctrl_t::p_driver_handle
```

Detailed description

Storage for information needed for each WiFi device driver in the system.

11.1.551 sf_wifi_info_t

```
typedef struct{
    uint8_t *  p_chipset
    uint16_t  rssi
    uint16_t  noise_level
    uint16_t  link_quality
} sf_wifi_info_t
```

11.1.551.1 p_chipset

```
uint8_t* sf_wifi_info_t::p_chipset
```

Brief description

Pointer to sting showing WiFi chipset/driver information.

11.1.551.2 rssi

```
uint16_t sf_wifi_info_t::rssi
```

Brief description

Received signal strength indication.

11.1.551.3 noise_level

```
uint16_t sf_wifi_info_t::noise_level
```

Brief description

Signal to noise ratio.

11.1.551.4 link_quality

```
uint16_t sf_wifi_info_t::link_quality
```

Brief description

Signal strength / quality.

11.1.552 sf_wifi_instance_t

```
typedef struct{
    sf_wifi_ctrl_t *  p_ctrl
    sf_wifi_cfg_t const  *  p_cfg
    sf_wifi_api_t const  *  p_api
} sf_wifi_instance_t
```

11.1.552.1 p_ctrl

sf_wifi_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.552.2 p_cfg

sf_wifi_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.552.3 p_api

sf_wifi_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.553 sf_wifi_ip_addr_t

```
typedef struct{
    sf_wifi_ip_addr_version_t  version
    uint32_t  v4
    uint32_t  v6[4]
    union{}                addr
} sf_wifi_ip_addr_t
```

11.1.553.1 version

sf_wifi_ip_addr_version_t::version

Brief description

IP Address Version : v4 or v6.

11.1.553.2 v4

uint32_t sf_wifi_ip_addr_t::v4

11.1.553.3 v6

uint32_t sf_wifi_ip_addr_t::v6[4]

11.1.553.4 addr

See source code for the definition of this member.

Brief description

IP address.

11.1.554 sf_wifi_nsal_callback_args_t

```
typedef struct{
    NX_INTERFACE *  p_interface
    sf_wifi_nsal_cfg_t *  p_wifi_nsal_cfg
} sf_wifi_nsal_callback_args_t
```

11.1.554.1 p_interface

NX_INTERFACE* sf_wifi_nsal_callback_args_t::p_interface

Brief description

Pointer to NetX interface.

11.1.554.2 p_wifi_nsal_cfg

sf_wifi_nsal_cfg_t::p_wifi_nsal_cfg

Brief description

pointer to NSAL configuration

11.1.555 sf_wifi_nsal_cfg_t

```
typedef struct{
    sf_wifi_nsal_zero_copy_t  tx_zero_copy
    sf_wifi_nsal_zero_copy_t  rx_zero_copy
    uint8_t *  p_tx_packet_buffer
} sf_wifi_nsal_cfg_t
```

11.1.555.1 tx_zero_copy

sf_wifi_nsal_zero_copy_t::tx_zero_copy

Brief description

Transmit path zero copy support.

11.1.555.2 rx_zero_copy

sf_wifi_nsal_zero_copy_t::rx_zero_copy

Brief description

Receive path zero copy support.

11.1.555.3 p_tx_packet_buffer

uint8_t* sf_wifi_nsal_cfg_t::p_tx_packet_buffer

Brief description

Pointer to Tx buffer used to consolidate data from chained NetX packets.

11.1.556 sf_wifi_onchip_stack_api_t

```
typedef struct{
    ssp_err_t(*  open)(sf_wifi_onchip_stack_ctrl_t *p_ctrl,

uint8_t spi_cfg_t::channel
```

Brief description

Channel number to be used.

11.1.572.2 rxi_ipl

```
uint8_t spi_cfg_t::rxi_ipl
```

Brief description

Receive interrupt priority.

11.1.572.3 txi_ipl

```
uint8_t spi_cfg_t::txi_ipl
```

Brief description

Transmit interrupt priority.

11.1.572.4 tei_ipl

`uint8_t spi_cfg_t::tei_ipl`

Brief description

Transmit end interrupt priority.

11.1.572.5 eri_ipl

`uint8_t spi_cfg_t::eri_ipl`

Brief description

Error interrupt priority.

11.1.572.6 operating_mode

`spi_mode_t::operating_mode`

Brief description

Select master or slave operating mode.

11.1.572.7 clk_phase

`spi_clk_phase_t::clk_phase`

Brief description

Data sampling on odd or even clock edge.

11.1.572.8 clk_polarity

`spi_clk_polarity_t::clk_polarity`

Brief description

Clock level when idle.

11.1.572.9 mode_fault

`spi_mode_fault_t::mode_fault`

Brief description

Mode fault error (master/slave conflict) flag.

11.1.572.10 bit_order

`spi_bit_order_t::bit_order`

Brief description

Select to transmit MSB/LSB first.

11.1.572.11 bitrate

```
uint32_t spi_cfg_t::bitrate
```

Brief description

Bits Per Second.

11.1.572.12 p_transfer_tx

```
transfer_instance_t::p_transfer_tx
```

Brief description

To use SPI DTC/DMA write transfer, link a DTC/DMA instance here. Set to NULL if unused.

11.1.572.13 p_transfer_rx

```
transfer_instance_t::p_transfer_rx
```

Brief description

To use SPI DTC/DMA read transfer, link a DTC/DMA instance here. Set to NULL if unused.

11.1.572.14 p_callback

```
void(* spi_cfg_t::p_callback) (spi_callback_args_t *p_args)
```

Brief description

Pointer to user callback function.

11.1.572.15 p_context

```
void const* spi_cfg_t::p_context
```

Brief description

User defined context passed to callback function.

11.1.572.16 p_extend

```
void const* spi_cfg_t::p_extend
```

Brief description

Extended SPI hardware dependent configuration.

11.1.573 spi_instance_t

```
typedef struct{
    spi_ctrl_t *  p_ctrl
    spi_cfg_t const  *  p_cfg
    spi_api_t const  *  p_api
} spi_instance_t
```

11.1.573.1 p_ctrl

spi_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.573.2 p_cfg

spi_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.573.3 p_api

spi_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.574 spi_on_rspi_cfg_t

```
typedef struct{
    rspi_operation_t  rspi_clksyn

    rspi_access_delay_t  access_delay
} spi_on_rspi_cfg_t
```

11.1.574.1 rspi_clksyn

rspi_operation_t::rspi_clksyn

Detailed description

Select spi or clock syn mode operation

11.1.574.2 rspi_comm

rspi_communication_t::rspi_comm

Detailed description

Select full-duplex or transmit-only communication

11.1.574.3 ssl_polarity

rspi_ssl_polarity_t::ssl_polarity

Detailed description

Select SSLn signal polarity

11.1.574.4 loopback

rspi_loopback_t::loopback

Detailed description

Select loopback1 and loopback2

11.1.574.5 mosi_idle

rspi_mosi_idle_t::mosi_idle

Detailed description

Select mosi idle fixed value and selection

11.1.574.6 parity

rspi_parity_t::parity

Detailed description

Select parity and enable/disable parity

11.1.574.7 ssl_select

rspi_ssl_select_t::ssl_select

Detailed description

Select which slave to use;0-SSL0;1-SSL1;2-SSL2;3-SSL3

11.1.574.8 ssl_level_keep

rspi_ssl_level_keep_t::ssl_level_keep

Detailed description

Select SSL level after transfer completion;0-negate;1-keeps

11.1.574.9 clock_delay

rspi_clock_delay_t::clock_delay

Detailed description

Select clock delay from 0 to 7

11.1.574.10 ssl_neg_delay

rspi_ssl_negation_delay_t::ssl_neg_delay

Detailed description

Select Slave elect negation delay from 0 to 7

11.1.574.11 access_delay

rspi_access_delay_t::access_delay

Detailed description

Select next access delay from 0 to 7

11.1.575 ssi_instance_ctrl_t

```

void(* ::p_callback) ( *p_args)
```

Detailed description

Callback provided when an I2S ISR occurs. NULL indicates no CPU interrupt.

11.1.575.2 p_context

```
void const* ::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in i2s_callback_args_t.

11.1.575.3 p_reg

```
R_SSI0_Type* ::p_reg
```

Brief description

Pointer to SSI register base address.

11.1.575.4 p_timer

```
timer_instance_t::p_timer
```

Brief description

Timer used to generate audio clock.

11.1.575.5 p_transfer_tx

```
transfer_instance_t::p_transfer_tx
```

Brief description

Transfer used for hardware acceleration during write.

11.1.575.6 p_transfer_rx

`transfer_instance_t::p_transfer_rx`

Brief description

Transfer used for hardware acceleration during read.

11.1.575.7 p_tx_src

```
uint32_t const* ::p_tx_src
```

Detailed description

Source buffer pointer used to fill hardware FIFO from transmit ISR.

11.1.575.8 tx_src_bytes

```
uint32_t ::tx_src_bytes
```

Detailed description

Size of source buffer used to fill hardware FIFO from transmit ISR.

11.1.575.9 p_rx_dest

```
uint32_t* ::p_rx_dest
```

Detailed description

Destination buffer pointer used to fill from hardware FIFO in receive ISR.

11.1.575.10 rx_dest_bytes

```
uint32_t ::rx_dest_bytes
```

Detailed description

Size of destination buffer used to fill from hardware FIFO in receive ISR.

11.1.575.11 sampling_freq_hz

```
uint32_t ::sampling_freq_hz
```

Brief description

Sampling frequency in Hertz.

11.1.575.12 channel

```
uint8_t ::channel
```

Brief description

Channel number.

11.1.575.13 fifo_access_bytes

```
uint8_t ::fifo_access_bytes
```

Brief description

Byte access to FIFO.

11.1.575.14 stop_requested_tx

```
uint8_t ::stop_requested_tx
```

Brief description

Stops I2S after transmit is complete.

11.1.575.15 stop_requested_rx

```
uint8_t ::stop_requested_rx
```

Brief description

Stops I2S after receive is complete.

11.1.575.16 tx_in_progress

```
uint8_t ::tx_in_progress
```

Brief description

True if a transmit transfer is in progress.

11.1.575.17 tx_in_use

```
uint8_t ::tx_in_use
```

Brief description

True if a transmission is in progress.

11.1.575.18 rx_in_use

```
uint8_t ::rx_in_use
```

Brief description

True if a reception is in progress.

11.1.575.19 zeros_written

```
uint8_t ::zeros_written
```

Brief description

True if zeros have been transmitted.

11.1.575.20 txi_irq

```
IRQn_Type ::txi_irq
```

Brief description

Transmit IRQ number.

11.1.575.21 rxi_irq

```
IRQn_Type ::rxi_irq
```

Brief description

Receive IRQ number.

11.1.575.22 int_irq

```
IRQn_Type ::int_irq
```

Brief description

Idle/Error IRQ number.

11.1.575.23 open

    sf_audio_playback_data_t *  p_data[2]
    sf_audio_playback_status_t  status
    sf_audio_playback_common_instance_ctrl_t *  p_common_ctrl
} st_sf_audio_playback_instance_ctrl
```

11.1.576.1 open

```
uint32_t ::open
```

Brief description

Used to determine if driver is initialized.

11.1.576.2 p_owner

```
TX_THREAD* ::p_owner
```

Detailed description

Pointer to thread that began the stream at this index. Used to ensure multiple threads don't interleave data on the same stream.

11.1.576.3 p_callback

```
void(* ::p_callback) ( *p_args)
```

Detailed description

Callback called when playback of a buffer passed to start is complete.

11.1.576.4 class_instance

```
uint8_t ::class_instance
```

Brief description

Class instance used to identify the stream to the messaging framework.

11.1.576.5 samples_remaining

```
uint32_t ::samples_remaining
```

Brief description

Internal state of data samples remaining for this stream.

11.1.576.6 samples_total

`uint32_t ::samples_total`

Brief description

Total number of samples to play (independent of sample size like 8/12/16).

11.1.576.7 index

`uint32_t ::index`

Brief description

Internal state of current data index for this stream.

11.1.576.8 end

`uint32_t ::end`

Brief description

Used to track completion of looped playback.

11.1.576.9 p_data

`sf_audio_playback_data_t::p_data`

Brief description

Audio data read from queue.

11.1.576.10 status

`sf_audio_playback_status_t::status`

Brief description

Status of current stream.

11.1.576.11 p_common_ctrl

`sf_audio_playback_common_instance_ctrl_t::p_common_ctrl`

Detailed description

Pointer to the hardware control block used by this stream.

11.1.577 st_sf_ble_prf_htp_meas_intv_val_t

```
typedef struct{
    uint16_t  conhdl
    uint16_t  intv
} st_sf_ble_prf_htp_meas_intv_val_t
```

11.1.577.1 conhdl

```
uint16_t st_sf_ble_prf_htp_meas_intv_val_t::conhdl
```

Brief description

Connection handle.

11.1.577.2 intv

```
uint16_t st_sf_ble_prf_htp_meas_intv_val_t::intv
```

Brief description

Interval value.

11.1.578 st_sf_touch_ctsu_slider_hdl

```
typedef struct{
    uint32_t  open
    sf_touch_ctsu_slider_id_t  id
    sf_touch_ctsu_slider_state_t  state

    int32_t  cutoff
} st_sf_touch_ctsu_slider_hdl
```

11.1.578.1 open

uint32_t ::open

Detailed description

Indicate that slider has been opened

11.1.578.2 id

sf_touch_ctsu_slider_id_t::id

Detailed description

Unique identifier for slider.

11.1.578.3 state

sf_touch_ctsu_slider_state_t::state

Detailed description

Represents the current state of the slider.

11.1.578.4 type

sf_slider_type_t::type

Detailed description

Linear or circular (wheel)

11.1.578.5 num_slider_channels

uint32_t ::num_slider_channels

11.1.578.6 p_slider_channels

ctsu_channel_pair_t::p_slider_channels

Detailed description

Define the channel/channel pairs which make up a slider.

11.1.578.7 p_normalization

```
int32_t const* ::p_normalization
```

11.1.578.8 p_channel_average

```
int32_t* ::p_channel_average
```

11.1.578.9 p_offset

```
uint32_t* ::p_offset
```

11.1.578.10 p_slider_scount

```
uint16_t* ::p_slider_scount
```

11.1.578.11 p_slider_baseline

```
uint16_t* ::p_slider_baseline
```

11.1.578.12 p_slider_delta

```
int32_t* ::p_slider_delta
```

11.1.578.13 position

```
uint32_t ::position
```

Detailed description

Calculated position.

11.1.578.14 prev_sum

```
int32_t ::prev_sum
```

Detailed description

Used to store the running average of previous sum in position calculation

11.1.578.15 max_slider_value

```
int32_t ::max_slider_value
```

Detailed description

Maximum slider value, must be greater than 0; Minimum is always 0

11.1.578.16 p_update

```
(* ::p_update) ( *const hdl, const *const p_lower_lvl_touch_framework, uint32_t
*p_pos, *const p_state)
```

Detailed description

Function to calculate position of touch.

11.1.578.17 bit_mask

```
uint64_t ::bit_mask[SF_TOUCH_CTSU_SLIDER_BIT_MASK_ARRAY_SIZE]
```

Detailed description

Bit mask to be used in update function

11.1.578.18 slider_norm_max

```
uint16_t ::slider_norm_max
```

Detailed description

Individual slider settings that can be modified by the user. Should be the same as in sf_slider_on_ctsu_cfg_tTOUCH_SLIDER_CFG_NORM_MAX

11.1.578.19 slider_threshold

```
int32_t ::slider_threshold
```

Detailed description

Touch threshold. Ensure that value is greater than 0

11.1.578.20 channel_average_weight

```
int32_t ::channel_average_weight
```

Detailed description

Weight of running average of counts for each channel

11.1.578.21 prev_sum_weight

```
int32_t ::prev_sum_weight
```

Detailed description

Weight of running average of previous sum in position calculation, must be greater than 0

11.1.578.22 cutoff

```
int32_t ::cutoff
```

Detailed description

Defines how far below prev_sum running average to get before "SF_TOUCH_SLIDER_STATE_RELEASED" detected

11.1.579 tcon_func_t

```
typedef struct{
    void(*  tcon_select)(R_GLCDC_Type *p_glcd_reg, glcd_tcon_signal_select_t)
    void(*  invert)(R_GLCDC_Type *p_glcd_reg)
} tcon_func_t
```

11.1.579.1 tcon_select

```
void(* ::tcon_select) (R_GLCDC_Type *p_glcd_reg, )
```

11.1.579.2 invert

```
void(* ::invert) (R_GLCDC_Type *p_glcd_reg)
```

11.1.580 timer_api_t

```
typedef struct{
    ssp_err_t(*  open)(timer_ctrl_t *const p_ctrl, timer_cfg_t const *const
p_cfg)
    ssp_err_t(*  stop)(timer_ctrl_t *const p_ctrl)
    ssp_err_t(*  start)(timer_ctrl_t *const p_ctrl)

duty_cycle, timer_pwm_unit_t const duty_cycle_unit, uint8_t const pin)
    ssp_err_t(*  infoGet)(timer_ctrl_t *const p_ctrl, timer_info_t *const p_info)
    ssp_err_t(*  close)(timer_ctrl_t *const p_ctrl)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
} timer_api_t
```

11.1.581 timer_callback_args_t

```
typedef struct{
    void const  *  p_context
```

```
    timer_event_t  event
} timer_callback_args_t
```

11.1.581.1 p_context

```
void const* timer_callback_args_t::p_context
```

Detailed description

Placeholder for user data. Set in open function in timer_cfg_t.

11.1.581.2 event

```
timer_event_t::event
```

Brief description

The event can be used to identify what caused the callback (overflow or error).

11.1.582 timer_cfg_t

```
typedef struct{
    timer_mode_t  mode
    uint32_t  period
    timer_unit_t  unit
    timer_size_t  duty_cycle
    timer_pwm_unit_t  duty_cycle_unit
    uint8_t  channel
    uint8_t  irq_ipl
    bool  autostart
    void(*  p_callback)(timer_callback_args_t *p_args)
    void const  *  p_context
    void const  *  p_extend
} timer_cfg_t
```

11.1.582.1 mode

```
timer_mode_t::mode
```

Brief description

Select enumerated value from timer_mode_t.

11.1.582.2 period

```
uint32_t timer_cfg_t::period
```

Detailed description

Defines when the timer should expire. For a free running counter, set to TIMER_MAX_CLOCK with unit TIMER_UNIT_PERIOD_RAW_COUNTS

11.1.582.3 unit

`timer_unit_t::unit`

Brief description

Units of period.

11.1.582.4 duty_cycle

`timer_size_t::duty_cycle`

Brief description

Duty cycle in units duty_cycle_unit.

11.1.582.5 duty_cycle_unit

`timer_pwm_unit_t::duty_cycle_unit`

Brief description

Units of duty_cycle.

11.1.582.6 channel

`uint8_t timer_cfg_t::channel`

Detailed description

Select a channel corresponding to the channel number of the hardware.

11.1.582.7 irq_ipl

`uint8_t timer_cfg_t::irq_ipl`

Brief description

Timer interrupt priority.

11.1.582.8 autostart

`bool timer_cfg_t::autostart`

Detailed description

Whether to start during Open call or not. True: Start during open. False: Don't start during open.

11.1.582.9 p_callback

```
void(* timer_cfg_t::p_callback) (timer_callback_args_t *p_args)
```

Detailed description

Callback provided when a timer ISR occurs. Set to NULL for no CPU interrupt.

11.1.582.10 p_context

```
void const* timer_cfg_t::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in timer_callback_args_t.

11.1.582.11 p_extend

```
void const* timer_cfg_t::p_extend
```

Brief description

Extension parameter for hardware specific settings.

11.1.583 timer_info_t

```
typedef struct{
    timer_direction_t  count_direction
    uint32_t  clock_frequency
    timer_size_t  period_counts
    timer_status_t  status
    elc_event_t  elc_event
} timer_info_t
```

11.1.583.1 count_direction

```
timer_direction_t::count_direction
```

Brief description

Clock counting direction of the timer resource.

11.1.583.2 clock_frequency

```
uint32_t timer_info_t::clock_frequency
```

Brief description

Clock frequency of the timer resource.

11.1.583.3 period_counts

timer_size_t::period_counts

Brief description

Time in clock counts until timer will expire.

11.1.583.4 status

timer_status_t::status

11.1.583.5 elc_event

elc_event_t::elc_event

Brief description

ELC event associated with the count operation of the timer resource.

11.1.584 timer_instance_t

```
typedef struct{
    timer_ctrl_t *  p_ctrl
    timer_cfg_t const  *  p_cfg
    timer_api_t const  *  p_api
} timer_instance_t
```

11.1.584.1 p_ctrl

timer_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.584.2 p_cfg

timer_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.584.3 p_api

timer_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.585 timer_on_agt_cfg_t

```
typedef struct{
    agt_count_source_t  count_source
    bool  agto_output_enabled
    bool  agtio_output_enabled
    bool  output_inverted
    bool  agtoa_output_enable
    bool  agtob_output_enable
} timer_on_agt_cfg_t
```

11.1.585.1 count_source

agt_count_source_t::count_source

Brief description

AGT channel clock source. Valid values are: AGT_CLOCK_PCLKB, AGT_CLOCK_LOCO, AGT_CLOCK_FSUB.

11.1.585.2 agto_output_enabled

bool ::agto_output_enabled

Brief description

AGTO pin is enabled for output compare (true, false)

11.1.585.3 agtio_output_enabled

bool ::agtio_output_enabled

Brief description

AGTIO pin is enabled for output compare (true, false)

11.1.585.4 output_inverted

bool ::output_inverted

Brief description

Output inverted (true, false)

11.1.585.5 agtoa_output_enable

```
bool ::agtoa_output_enable
```

Brief description

Enable comparator A output pin (true, false)

11.1.585.6 agtob_output_enable

```
bool ::agtob_output_enable
```

Brief description

Enable comparator B output pin (true, false)

11.1.586 timer_on_gpt_cfg_t

```
typedef struct{
    gpt_output_pin_t  gtioca
    gpt_output_pin_t  gtiocb
} timer_on_gpt_cfg_t
```

11.1.586.1 gtioca

```
gpt_output_pin_t::gtioca
```

Brief description

Configuration for GPT I/O pin A.

11.1.586.2 gtiocb

```
gpt_output_pin_t::gtiocb
```

Brief description

Configuration for GPT I/O pin B.

11.1.587 transfer_api_t

```
typedef struct{
    ssp_err_t(*  open)(transfer_ctrl_t *const p_ctrl, transfer_cfg_t const *const
p_cfg)
    ssp_err_t(*  reset)(transfer_ctrl_t *const p_ctrl, void const *p_src, void
*p_dest, uint16_t const num_transfers)
    ssp_err_t(*  enable)(transfer_ctrl_t *const p_ctrl)
    ssp_err_t(*  disable)(transfer_ctrl_t *const p_ctrl)
    ssp_err_t(*  start)(transfer_ctrl_t *const p_ctrl, transfer_start_mode_t
```

```
mode)
    ssp_err_t(*  stop)(transfer_ctrl_t *const p_ctrl)
    ssp_err_t(*  infoGet)(transfer_ctrl_t *const p_ctrl, transfer_properties_t
*const p_info)
    ssp_err_t(*  close)(transfer_ctrl_t *const p_ctrl)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_version)
    ssp_err_t(*  blockReset)(transfer_ctrl_t *const p_ctrl, void const *p_src,
void *p_dest, uint16_t const length, transfer_size_t size, uint16_t const
num_transfers)
} transfer_api_t
```

11.1.588 transfer_callback_args_t

```
typedef struct{
    void const  *  p_context
} transfer_callback_args_t
```

11.1.588.1 p_context

```
void const* transfer_callback_args_t::p_context
```

Brief description

Placeholder for user data. Set in r_transfer_t::open function in transfer_cfg_t.

11.1.589 transfer_cfg_t

```
typedef struct{
    transfer_info_t *  p_info
    elc_event_t  activation_source
    bool  auto_enable
    uint8_t  irq_ipl
    void(*  p_callback)(transfer_callback_args_t *p_args)
    void const  *  p_context
    void const  *  p_extend
} transfer_cfg_t
```

11.1.589.1 p_info

```
transfer_info_t::p_info
```

Detailed description

Pointer to transfer configuration options. If using chain transfer (DTC only), this can be a pointer to an array of chained transfers that will be completed in order.

11.1.589.2 activation_source

```
elc_event_t::activation_source
```

Detailed description

Select which event will trigger the transfer.
NOTE: Select ELC_EVENT_ELC_SOFTWARE_EVENT_0 or ELC_EVENT_ELC_SOFTWARE_EVENT_0 for software activation. When using DTC, these events may only be used once each. DMAC uses internal software start when either of these events are selected.

11.1.589.3 auto_enable

```
bool transfer_cfg_t::auto_enable
```

Detailed description

Select whether the transfer should be enabled after open.

11.1.589.4 irq_ipl

```
uint8_t transfer_cfg_t::irq_ipl
```

Detailed description

Interrupt priority level.
ATTENTION: Unsupported for DTC except when ELC software events are used. DTC transfers trigger the interrupt associated with the activation source.

11.1.589.5 p_callback

```
void(* transfer_cfg_t::p_callback) (transfer_callback_args_t *p_args)
```

Detailed description

Callback for transfer end interrupt. Set to NULL for no CPU interrupt.
ATTENTION: Unsupported for DTC except when ELC software events are used. DTC transfers trigger the interrupt associated with the activation source.

11.1.589.6 p_context

```
void const* transfer_cfg_t::p_context
```

Detailed description

Placeholder for user data. Passed to the user p_callback in transfer_callback_args_t.

11.1.589.7 p_extend

```
void const* transfer_cfg_t::p_extend
```

Brief description

Extension parameter for hardware specific settings.

11.1.590 transfer_info_t

```
typedef struct{
    uint32_t  __pad0__
    uint32_t  __pad1__
    transfer_addr_mode_t  dest_addr_mode
    transfer_repeat_area_t  repeat_area
    transfer_irq_t  irq
    transfer_chain_mode_t  chain_mode
    uint32_t  __pad2__
    transfer_addr_mode_t  src_addr_mode
    transfer_size_t  size
    transfer_mode_t  mode
    void const  *volatile  p_src
    void *volatile  p_dest
    uint16_t  num_blocks
    uint16_t  length
} transfer_info_t
```

11.1.590.1 __pad0__

```
uint32_t transfer_info_t::__pad0__
```

11.1.590.2 __pad1__

```
uint32_t transfer_info_t::__pad1__
```

11.1.590.3 dest_addr_mode

```
transfer_addr_mode_t::dest_addr_mode
```

Detailed description

Select what happens to destination pointer after each transfer.

11.1.590.4 repeat_area

```
transfer_repeat_area_t::repeat_area
```

Detailed description

Select to repeat source or destination area, unused in TRANSFER_MODE_NORMAL.

11.1.590.5 irq

transfer_irq_t::irq

Detailed description

Select if interrupts should occur after each individual transfer or after the completion of all planned transfers.

11.1.590.6 chain_mode

transfer_chain_mode_t::chain_mode

Detailed description

Select when the chain transfer ends.

11.1.590.7 __pad2__

uint32_t transfer_info_t::__pad2__

11.1.590.8 src_addr_mode

transfer_addr_mode_t::src_addr_mode

Detailed description

Select what happens to source pointer after each transfer.

11.1.590.9 size

transfer_size_t::size

Detailed description

Select number of bytes to transfer at once. length.

11.1.590.10 mode

transfer_mode_t::mode

Detailed description

Select mode from transfer_mode_t.

11.1.590.11 p_src

```
void const* volatile transfer_info_t::p_src
```

Brief description

Source pointer.

11.1.590.12 p_dest

```
void* volatile transfer_info_t::p_dest
```

Brief description

Destination pointer.

11.1.590.13 num_blocks

```
volatile uint16_t transfer_info_t::num_blocks
```

Detailed description

Number of blocks to transfer when using TRANSFER_MODE_BLOCK (both DTC an DMAC) and TRANSFER_MODE_REPEAT (DMAC only), unused in other modes.

11.1.590.14 length

```
volatile uint16_t transfer_info_t::length
```

Detailed description

Length of each transfer. Range limited for TRANSFER_MODE_BLOCK and TRANSFER_MODE_REPEAT, see HAL driver for details.

11.1.591 transfer_instance_t

```
typedef struct{
    transfer_ctrl_t *  p_ctrl
    transfer_cfg_t const  *  p_cfg
    transfer_api_t const  *  p_api
} transfer_instance_t
```

11.1.591.1 p_ctrl

```
transfer_ctrl_t::p_ctrl
```

Brief description

Pointer to the control structure for this instance.

11.1.591.2 p_cfg

transfer_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.591.3 p_api

transfer_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.592 transfer_on_dmac_cfg_t

```
typedef struct{
    uint8_t  channel
} transfer_on_dmac_cfg_t
```

11.1.592.1 channel

uint8_t ::channel

Brief description

Channel number, does not apply to all HAL drivers.

11.1.593 transfer_properties_t

```
typedef struct{
    uint32_t  transfer_length_max
    uint16_t  transfer_length_remaining
    bool  in_progress
} transfer_properties_t
```

11.1.593.1 transfer_length_max

uint32_t transfer_properties_t::transfer_length_max

Brief description

Maximum number of transfers.

11.1.593.2 transfer_length_remaining

```
uint16_t transfer_properties_t::transfer_length_remaining
```

Brief description

Number of transfers remaining.

11.1.593.3 in_progress

```
bool transfer_properties_t::in_progress
```

Brief description

Whether or not this transfer is in progress.

11.1.594 trng_api_t

```
typedef struct{
    uint32_t(*  open)(trng_ctrl_t *const p_ctrl, trng_cfg_t const *const p_cfg)
    uint32_t(*  read)(trng_ctrl_t *const p_ctrl, uint32_t *const p_rngbuf,
uint32_t nwords)
    uint32_t(*  close)(trng_ctrl_t *const p_ctrl)
    uint32_t(*  versionGet)(ssp_version_t *const p_version)
} trng_api_t
```

11.1.595 trng_cfg_t

```
typedef struct{
    crypto_api_t const  *  p_crypto_api
    uint32_t  nattempts
} trng_cfg_t
```

11.1.595.1 p_crypto_api

```
const* trng_cfg_t::p_crypto_api
```

Brief description

pointer to crypto API

11.1.595.2 nattempts

```
uint32_t trng_cfg_t::nattempts
```

Brief description

number of retries when a continuous test failure occurs

11.1.596 trng_ctrl_t

```
typedef struct{
    uint32_t  nattempts
    crypto_ctrl_t *  p_crypto_ctrl
    crypto_api_t const  *  p_crypto_api
    uint32_t  prevbuf[TRNG_REGISTER_SIZE_WORDS]
    uint32_t  currbuf[TRNG_REGISTER_SIZE_WORDS]
} trng_ctrl_t
```

11.1.596.1 nattempts

```
uint32_t trng_ctrl_t::nattempts
```

Brief description

number of retries

11.1.596.2 p_crypto_ctrl

```
* trng_ctrl_t::p_crypto_ctrl
```

Brief description

pointer to crypto control structure

11.1.596.3 p_crypto_api

```
const* trng_ctrl_t::p_crypto_api
```

Brief description

pointer to crypto-engine API

11.1.596.4 prevbuf

```
uint32_t trng_ctrl_t::prevbuf[TRNG_REGISTER_SIZE_WORDS]
```

Brief description

previous random data

11.1.596.5 currbuf

```
uint32_t trng_ctrl_t::currbuf[TRNG_REGISTER_SIZE_WORDS]
```

Brief description

current random data

11.1.597 trng_instance_t

```
typedef struct{
    trng_ctrl_t *  p_ctrl
    trng_cfg_t const  *  p_cfg
    trng_api_t const  *  p_api
} trng_instance_t
```

11.1.597.1 p_ctrl

trng_ctrl_t::p_ctrl

Brief description

Pointer to the control structure for this instance.

11.1.597.2 p_cfg

trng_cfg_t::p_cfg

Brief description

Pointer to the configuration structure for this instance.

11.1.597.3 p_api

trng_api_t::p_api

Brief description

Pointer to the API structure for this instance.

11.1.598 uart_api_t

```
typedef struct{
    ssp_err_t(*  open)(uart_ctrl_t *const p_ctrl, uart_cfg_t const *const p_cfg)

    void const  *  p_context
} uart_callback_args_t
```

11.1.599.1 channel

```
uint32_t uart_callback_args_t::channel
```

Brief description

Device channel number.

11.1.599.2 event

```
uart_event_t::event
```

Brief description

Event code.

11.1.599.3 data

```
uint32_t uart_callback_args_t::data
```

Detailed description

Contains the next character received for the events UART_EVENT_RX_CHAR, UART_EVENT_ERR_PARITY, UART_EVENT_ERR_FRAMING, or UART_EVENT_ERR_OVERFLOW. Otherwise unused.

11.1.599.4 p_context

```
void const* uart_callback_args_t::p_context
```

Brief description

Context provided to user during callback.

11.1.600 uart_cfg_t

```
typedef struct{
    uint8_t  channel
    uint32_t  baud_rate
    uart_data_bits_t  data_bits
    uart_parity_t  parity
```

```

    void const  *  p_extend
} uart_cfg_t
```

11.1.600.1 channel

```
uint8_t uart_cfg_t::channel
```

Brief description

Select a channel corresponding to the channel number of the hardware.

11.1.600.2 baud_rate

```
uint32_t uart_cfg_t::baud_rate
```

Brief description

Baud rate, i.e. 9600, 19200, 115200.

11.1.600.3 data_bits

```
uart_data_bits_t::data_bits
```

Brief description

Data bit length (8 or 7 or 9)

11.1.600.4 parity

```
uart_parity_t::parity
```

Brief description

Parity type (none or odd or even)

11.1.600.5 stop_bits

```
uart_stop_bits_t::stop_bits
```

Brief description

Stop bit length (1 or 2)

11.1.600.6 ctsrts_en

```
bool uart_cfg_t::ctsrts_en
```

Brief description

CTS/RTS hardware flow control enable.

11.1.600.7 rxi_ipl

```
uint8_t uart_cfg_t::rxi_ipl
```

Brief description

Receive interrupt priority.

11.1.600.8 txi_ipl

```
uint8_t uart_cfg_t::txi_ipl
```

Brief description

Transmit interrupt priority.

11.1.600.9 tei_ipl

```
uint8_t uart_cfg_t::tei_ipl
```

Brief description

Transmit end interrupt priority.

11.1.600.10 eri_ipl

```
uint8_t uart_cfg_t::eri_ipl
```

Brief description

Error interrupt priority.

11.1.600.11 p_transfer_rx

```
transfer_instance_t::p_transfer_rx
```

Detailed description

Optional transfer instance used to receive multiple bytes without interrupts. Set to NULL if unused. If NULL, the number of bytes allowed in the read API is limited to one byte at a time.

11.1.600.12 p_transfer_tx

```
transfer_instance_t::p_transfer_tx
```

Detailed description

Optional transfer instance used to send multiple bytes without interrupts. Set to NULL if unused. If NULL, the number of bytes allowed in the write APIs is limited to one byte at a time.

11.1.600.13 p_callback

```
void(* uart_cfg_t::p_callback) (uart_callback_args_t *p_args)
```

Brief description

Pointer to callback function.

11.1.600.14 p_context

```
void const* uart_cfg_t::p_context
```

Brief description

User defined context passed into callback function.

11.1.600.15 p_extend

```
void const* uart_cfg_t::p_extend
```

Brief description

UART hardware dependent configuration.

11.1.601 uart_info_t

```
typedef struct{
    uint32_t  write_bytes_max
    uint32_t  read_bytes_max
} uart_info_t
```

11.1.601.1 write_bytes_max

```
uint32_t uart_info_t::write_bytes_max
```

Detailed description

Maximum bytes that can be written at this time. Only applies if p_transfer_tx is not NULL.

11.1.601.2 read_bytes_max

```
uint32_t uart_info_t::read_bytes_max
```

Detailed description

Maximum bytes that are available to read at one time. Only applies if p_transfer_rx is not NULL.

11.1.602 uart_instance_t

```
typedef struct{
    uart_ctrl_t *  p_ctrl
    uart_cfg_t const  *  p_cfg
    uart_api_t const  *  p_api
} uart_instance_t
```

11.1.602.1 p_ctrl

```
uart_ctrl_t::p_ctrl
```

Brief description

Pointer to the control structure for this instance.

11.1.602.2 p_cfg

```
uart_cfg_t::p_cfg
```

Brief description

Pointer to the configuration structure for this instance.

11.1.602.3 p_api

```
uart_api_t::p_api
```

Brief description

Pointer to the API structure for this instance.

11.1.603 uart_on_sci_cfg_t

```
typedef struct{
    sci_clk_src_t  clk_src
    bool  baudclk_out
```

```
    bool  rx_edge_start
    bool  noisecancel_en
    sci_uart_rx_fifo_trigger_t  rx_fifo_trigger
    void(*  p_extpin_ctrl)(uint32_t channel, uint32_t level)
    bool  bitrate_modulation
} uart_on_sci_cfg_t
```

11.1.603.1 clk_src

sci_clk_src_t::clk_src

Brief description

Use SCI_CLK_SRC_INT/EXT8X/EXT16X.

11.1.603.2 baudclk_out

bool ::baudclk_out

Brief description

Baud rate clock output enable.

11.1.603.3 rx_edge_start

bool ::rx_edge_start

Brief description

Start reception on falling edge.

11.1.603.4 noisecancel_en

bool ::noisecancel_en

Brief description

Noise cancel enable.

11.1.603.5 rx_fifo_trigger

sci_uart_rx_fifo_trigger_t::rx_fifo_trigger

Detailed description

Receive FIFO trigger level, unused if channel has no FIFO or if DTC is used.

11.1.603.6 p_extpin_ctrl

void(* ::p_extpin_ctrl) (uint32_t channel, uint32_t level)

Detailed description

Pointer to the user callback function to control external GPIO pin control used as RTS signal.

Table 2392:

Name	Direction	Description
channel	in	The UART channel used.
level	in	When level is 0, assert RTS. When level is 1, deassert RTS.

Parameter channel

`uint32_t`

Parameter level

`uint32_t`

11.1.603.7 bitrate_modulation

`bool ::bitrate_modulation`

Brief description

Bitrate Modulation Function enable or disable.

11.1.604 wdt_api_t

```
typedef struct{
    ssp_err_t(*  cfgGet)(wdt_ctrl_t *const p_ctrl, wdt_cfg_t *const p_cfg)
    ssp_err_t(*  open)(wdt_ctrl_t *const p_ctrl, wdt_cfg_t const *const p_cfg)
    ssp_err_t(*  refresh)(wdt_ctrl_t *const p_ctrl)
    ssp_err_t(*  statusGet)(wdt_ctrl_t *const p_ctrl, wdt_status_t *const
p_status)
    ssp_err_t(*  statusClear)(wdt_ctrl_t *const p_ctrl, const wdt_status_t
status)
    ssp_err_t(*  counterGet)(wdt_ctrl_t *const p_ctrl, uint32_t *const p_count)
    ssp_err_t(*  timeoutGet)(wdt_ctrl_t *const p_ctrl, wdt_timeout_values_t
*const p_timeout)
    ssp_err_t(*  versionGet)(ssp_version_t *const p_data)
} wdt_api_t
```

11.1.605 wdt_callback_args_t

```
typedef struct{
    void const  *  p_context
} wdt_callback_args_t
```

11.1.605.1 p_context

```
void const* wdt_callback_args_t::p_context
```

Brief description

Placeholder for user data. Set in open function in wdt_cfg_t.

11.1.606 wdt_cfg_t

```
typedef struct{
    wdt_start_mode_t  start_mode
    bool  autostart
    wdt_timeout_t  timeout
    wdt_clock_division_t  clock_division
    wdt_window_start_t  window_start
    wdt_window_end_t  window_end
    wdt_reset_control_t  reset_control
    wdt_stop_control_t  stop_control
    void(*  p_callback)(wdt_callback_args_t *p_args)
    void const  *  p_context
    void const  *  p_extend
} wdt_cfg_t
```

11.1.606.1 start_mode

```
wdt_start_mode_t::start_mode
```

Brief description

The expected start mode for the WDT.

11.1.606.2 autostart

```
bool wdt_cfg_t::autostart
```

Detailed description

When true the WDT is started as part of its configuration (register start mode). If false the WDT needs to be started manually by calling the refresh API.

11.1.606.3 timeout

wdt_timeout_t::timeout

Brief description

Timeout period.

11.1.606.4 clock_division

wdt_clock_division_t::clock_division

Brief description

Clock divider.

11.1.606.5 window_start

wdt_window_start_t::window_start

Brief description

Refresh permitted window start position.

11.1.606.6 window_end

wdt_window_end_t::window_end

Brief description

Refresh permitted window end position.

11.1.606.7 reset_control

wdt_reset_control_t::reset_control

Brief description

Select NMI or reset generated on underflow.

11.1.606.8 stop_control

wdt_stop_control_t::stop_control

Brief description

Select whether counter operates in sleep mode.

11.1.606.9 p_callback

```
void(* wdt_cfg_t::p_callback) (wdt_callback_args_t *p_args)
```

Brief description

Callback provided when a WDT NMI ISR occurs.

11.1.606.10 p_context

```
void const* wdt_cfg_t::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in wdt_callback_args_t.

11.1.606.11 p_extend

```
void const* wdt_cfg_t::p_extend
```

Brief description

Placeholder for user extension.

11.1.607 wdt_instance_ctrl_t

```
typedef struct{
    bool  wdt_open
    void const  *  p_context
    R_WDT_Type *  p_reg
    void(*  p_callback)(wdt_callback_args_t *p_args)
} wdt_instance_ctrl_t
```

11.1.607.1 wdt_open

```
bool ::wdt_open
```

Detailed description

Indicates whether the open() API has been successfully called.

11.1.607.2 p_context

```
void const* ::p_context
```

Detailed description

Placeholder for user data. Passed to the user callback in wdt_callback_args_t.

11.1.607.3 p_reg

```
R_WDT_Type* ::p_reg
```

Brief description

Pointer to register base address.

11.1.607.4 p_callback

```
void(* ::p_callback) ( *p_args)
```

Brief description

Callback provided when a WDT NMI ISR occurs.

11.1.608 wdt_instance_t

```
typedef struct{
    wdt_ctrl_t *  p_ctrl
    wdt_cfg_t const  *  p_cfg
    wdt_api_t const  *  p_api
} wdt_instance_t
```

11.1.608.1 p_ctrl

```
wdt_ctrl_t::p_ctrl
```

Brief description

Pointer to the control structure for this instance.

11.1.608.2 p_cfg

```
wdt_cfg_t::p_cfg
```

Brief description

Pointer to the configuration structure for this instance.

11.1.608.3 p_api

```
wdt_api_t::p_api
```

Brief description

Pointer to the API structure for this instance.

11.1.609 wdt_timeout_values_t

```
typedef struct{
    uint32_t  clock_frequency_hz
```

```
    uint32_t  timeout_clocks
} wdt_timeout_values_t
```

11.1.609.1 clock_frequency_hz

`uint32_t wdt_timeout_values_t::clock_frequency_hz`

Brief description

Frequency of watchdog clock after divider.

11.1.609.2 timeout_clocks

`uint32_t wdt_timeout_values_t::timeout_clocks`

Brief description

Timeout period in units of watchdog clock ticks.

11.2 Interface Functions

11.2.1 Interface: adc_api_t

Description: ADC Interface

Function name	Definition
.open	ssp_err_t(* adc_api_t::open) (adc_ctrl_t *const p_ctrl, adc_cfg_t const *const p_cfg)
.scanCfg	ssp_err_t(* adc_api_t::scanCfg) (adc_ctrl_t *const p_ctrl, adc_channel_cfg_t const *const p_channel_cfg)
.scanStart	ssp_err_t(* adc_api_t::scanStart) (adc_ctrl_t *const p_ctrl)
.scanStop	ssp_err_t(* adc_api_t::scanStop) (adc_ctrl_t *const p_ctrl)
.scanStatusGet	ssp_err_t(* adc_api_t::scanStatusGet) (adc_ctrl_t *const p_ctrl)
.read	ssp_err_t(* adc_api_t::read) (adc_ctrl_t *const p_ctrl, adc_register_t const reg_id, uint16_t *const p_data)
.read32	ssp_err_t(* adc_api_t::read32) (adc_ctrl_t *const p_ctrl, adc_register_t const reg_id, uint32_t *const p_data)

Function name	Definition
.sampleStateCountSet	ssp_err_t(* adc_api_t::sampleStateCountSet) (adc_ctrl_t *const p_ctrl, adc_sample_state_t *p_sample)
.calibrate	ssp_err_t(* adc_api_t::calibrate) (adc_ctrl_t *const p_ctrl, void *const p_extend)
.offsetSet	ssp_err_t(* adc_api_t::offsetSet) (adc_ctrl_t *const p_ctrl, adc_register_t const reg_id, int32_t const offset)
.close	ssp_err_t(* adc_api_t::close) (adc_ctrl_t *const p_ctrl)
.infoGet	ssp_err_t(* adc_api_t::infoGet) (adc_ctrl_t *const p_ctrl, adc_info_t *const p_adc_info)
.versionGet	ssp_err_t(* adc_api_t::versionGet) (ssp_version_t *const p_version)

11.2.2 Interface: aes_api_t

Description: AES Interface

Function name	Definition
.open	uint32_t(* aes_api_t::open) (aes_ctrl_t *const p_ctrl, aes_cfg_t const *const p_cfg)
.createKey	uint32_t(* aes_api_t::createKey) (aes_ctrl_t *const p_ctrl, uint32_t num_words, uint32_t *p_key)
.encrypt	uint32_t(* aes_api_t::encrypt) (aes_ctrl_t *const p_ctrl, const uint32_t *p_key, uint32_t *p_iv, uint32_t num_words, uint32_t *p_source, uint32_t *p_dest)
.addAdditionalAuthenticationData	uint32_t(* aes_api_t::addAdditionalAuthenticationData) (aes_ctrl_t *const p_ctrl, const uint32_t *p_key, uint32_t *p_iv, uint32_t num_words, uint32_t *p_source)
.encryptFinal	uint32_t(* aes_api_t::encryptFinal) (aes_ctrl_t *const p_ctrl, const uint32_t *p_key, uint32_t *p_iv, uint32_t input_num_words, uint32_t *p_source, uint32_t output_num_words, uint32_t *p_dest)
.decrypt	uint32_t(* aes_api_t::decrypt) (aes_ctrl_t *const p_ctrl, const uint32_t *p_key, uint32_t *p_iv, uint32_t imaxcnt, uint32_t *p_source, uint32_t *p_dest)

Function name	Definition
.setGcmTag	uint32_t(* aes_api_t::setGcmTag) (aes_ctrl_t *const p_ctrl, uint32_t num_words, uint32_t *p_source)
.getGcmTag	uint32_t(* aes_api_t::getGcmTag) (aes_ctrl_t *const p_ctrl, uint32_t num_words, uint32_t *p_dest)
.close	uint32_t(* aes_api_t::close) (aes_ctrl_t *const p_ctrl)
.zeroPaddingEncrypt	uint32_t(* aes_api_t::zeroPaddingEncrypt) (aes_ctrl_t *const p_ctrl, const uint32_t *p_key, uint32_t *p_iv, uint32_t num_bytes, uint32_t *p_source, uint32_t *p_dest)
.zeroPaddingDecrypt	uint32_t(* aes_api_t::zeroPaddingDecrypt) (aes_ctrl_t *const p_ctrl, const uint32_t *p_key, uint32_t *p_iv, uint32_t num_bytes, uint32_t *p_source, uint32_t *p_dest)
.versionGet	uint32_t(* aes_api_t::versionGet) (ssp_version_t *const p_version)

11.2.3 Interface: arc4_api_t

Description: ARC4 Interface

Function name	Definition
.open	uint32_t(* arc4_api_t::open) (arc4_ctrl_t *const p_ctrl, arc4_cfg_t const *const p_cfg)
.keySet	uint32_t(* arc4_api_t::keySet) (arc4_ctrl_t *const p_ctrl, uint32_t length, uint8_t const *p_key)
.arc4Process	uint32_t(* arc4_api_t::arc4Process) (arc4_ctrl_t *const p_ctrl, uint32_t num_bytes, uint8_t *p_source, uint8_t *p_dest)
.close	uint32_t(* arc4_api_t::close) (arc4_ctrl_t *const p_ctrl)
.versionGet	uint32_t(* arc4_api_t::versionGet) (ssp_version_t *const p_version)

11.2.4 Interface: cac_api_t

Description: CAC Interface

Function name	Definition
.open	ssp_err_t(* cac_api_t::open) (cac_ctrl_t *const p_ctrl, cac_cfg_t const *const p_cfg)
.read	ssp_err_t(* cac_api_t::read) (cac_ctrl_t *const p_ctrl, uint8_t *const p_status, uint16_t *const p_counter)
.close	ssp_err_t(* cac_api_t::close) (cac_ctrl_t *const p_ctrl)
.stopMeasurement	ssp_err_t(* cac_api_t::stopMeasurement) (cac_ctrl_t *const p_ctrl)
.startMeasurement	ssp_err_t(* cac_api_t::startMeasurement) (cac_ctrl_t *const p_ctrl)
.reset	ssp_err_t(* cac_api_t::reset) (cac_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* cac_api_t::versionGet) (ssp_version_t *p_version)

11.2.5 Interface: can_api_t

Description: CAN Interface

Function name	Definition
.open	ssp_err_t(* can_api_t::open) (can_ctrl_t *const p_ctrl, can_cfg_t const *const p_cfg)
.read	ssp_err_t(* can_api_t::read) (can_ctrl_t *const p_ctrl, uint32_t mailbox, can_frame_t *const p_frame)
.write	ssp_err_t(* can_api_t::write) (can_ctrl_t *const p_ctrl, uint32_t mailbox, can_frame_t *const p_frame)
.close	ssp_err_t(* can_api_t::close) (can_ctrl_t *const p_ctrl)
.control	ssp_err_t(* can_api_t::control) (can_ctrl_t *const p_ctrl, can_command_t const command, void *p_data)

Function name	Definition
.infoGet	ssp_err_t(* can_api_t::infoGet) (can_ctrl_t *const p_ctrl, can_info_t *const p_info)
.versionGet	ssp_err_t(* can_api_t::versionGet) (ssp_version_t *const p_version)

11.2.6 Interface: cgc_api_t

Description: CGC Interface

Function name	Definition
.init	ssp_err_t(* cgc_api_t::init) (void)
.clocksCfg	ssp_err_t(* cgc_api_t::clocksCfg) (cgc_clocks_cfg_t const *const p_clock_cfg)
.clockStart	ssp_err_t(* cgc_api_t::clockStart) (cgc_clock_t clock_source, cgc_clock_cfg_t *p_clock_cfg)
.clockStop	ssp_err_t(* cgc_api_t::clockStop) (cgc_clock_t clock_source)
.systemClockSet	ssp_err_t(* cgc_api_t::systemClockSet) (cgc_clock_t clock_source, cgc_system_clock_cfg_t const *const p_clock_cfg)
.systemClockGet	ssp_err_t(* cgc_api_t::systemClockGet) (cgc_clock_t *p_clock_source, cgc_system_clock_cfg_t *p_set_clock_cfg)
.systemClockFreqGet	ssp_err_t(* cgc_api_t::systemClockFreqGet) (cgc_system_clocks_t clock, uint32_t *p_freq_hz)
.clockCheck	ssp_err_t(* cgc_api_t::clockCheck) (cgc_clock_t clock_source)
.oscStopDetect	ssp_err_t(* cgc_api_t::oscStopDetect) (void(*p_callback)(cgc_callback_args_t *p_args), bool enable)
.oscStopStatusClear	ssp_err_t(* cgc_api_t::oscStopStatusClear) (void)
.busClockOutCfg	ssp_err_t(* cgc_api_t::busClockOutCfg) (cgc_bclockout_dividers_t divider)

Function name	Definition
.busClockOutEnable	ssp_err_t(* cgc_api_t::busClockOutEnable) (void)
.busClockOutDisable	ssp_err_t(* cgc_api_t::busClockOutDisable) (void)
.clockOutCfg	ssp_err_t(* cgc_api_t::clockOutCfg) (cgc_clock_t clock, cgc_clockout_dividers_t divider)
.clockOutEnable	ssp_err_t(* cgc_api_t::clockOutEnable) (void)
.clockOutDisable	ssp_err_t(* cgc_api_t::clockOutDisable) (void)
.lcdClockCfg	ssp_err_t(* cgc_api_t::lcdClockCfg) (cgc_clock_t clock)
.lcdClockEnable	ssp_err_t(* cgc_api_t::lcdClockEnable) (void)
.lcdClockDisable	ssp_err_t(* cgc_api_t::lcdClockDisable) (void)
.sdadcClockCfg	ssp_err_t(* cgc_api_t::sdadcClockCfg) (cgc_clock_t clock)
.sdadcClockEnable	ssp_err_t(* cgc_api_t::sdadcClockEnable) (void)
.sdadcClockDisable	ssp_err_t(* cgc_api_t::sdadcClockDisable) (void)
.sdramClockOutEnable	ssp_err_t(* cgc_api_t::sdramClockOutEnable) (void)
.sdramClockOutDisable	ssp_err_t(* cgc_api_t::sdramClockOutDisable) (void)
.usbClockCfg	ssp_err_t(* cgc_api_t::usbClockCfg) (cgc_usb_clock_div_t divider)
.systickUpdate	ssp_err_t(* cgc_api_t::systickUpdate) (uint32_t period_count, cgc_systick_period_units_t units)
.versionGet	ssp_err_t(* cgc_api_t::versionGet) (ssp_version_t *p_version)

11.2.7 Interface: comparator_api_t

Description: COMPARATOR Interface

Function name	Definition
.open	ssp_err_t(* comparator_api_t::open) (comparator_ctrl_t *const p_ctrl, comparator_cfg_t const *const p_cfg)

Function name	Definition
.outputEnable	ssp_err_t(* comparator_api_t::outputEnable) (comparator_ctrl_t *const p_ctrl)
.infoGet	ssp_err_t(* comparator_api_t::infoGet) (comparator_ctrl_t *const p_ctrl, comparator_info_t *const p_info)
.statusGet	ssp_err_t(* comparator_api_t::statusGet) (comparator_ctrl_t *const p_ctrl, comparator_status_t *const p_status)
.close	ssp_err_t(* comparator_api_t::close) (comparator_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* comparator_api_t::versionGet) (ssp_version_t *const p_version)

11.2.8 Interface: crc_api_t

Description: CRC Interface

Function name	Definition
.open	ssp_err_t(* crc_api_t::open) (crc_ctrl_t *const p_ctrl, crc_cfg_t const *const p_cfg)
.close	ssp_err_t(* crc_api_t::close) (crc_ctrl_t *const p_ctrl)
.crcResultGet	ssp_err_t(* crc_api_t::crcResultGet) (crc_ctrl_t *const p_ctrl, uint32_t *crc_result)
.snoopEnable	ssp_err_t(* crc_api_t::snoopEnable) (crc_ctrl_t *const p_ctrl, uint32_t crc_seed)
.snoopDisable	ssp_err_t(* crc_api_t::snoopDisable) (crc_ctrl_t *const p_ctrl)
.snoopCfg	ssp_err_t(* crc_api_t::snoopCfg) (crc_ctrl_t *const p_ctrl, crc_snoop_cfg_t *const p_snoop_cfg)
.calculate	ssp_err_t(* crc_api_t::calculate) (crc_ctrl_t *const p_ctrl, void *p_input_buffer, uint32_t num_bytes, uint32_t crc_seed, uint32_t *p_crc_result)
.versionGet	ssp_err_t(* crc_api_t::versionGet) (ssp_version_t *version)

11.2.9 Interface: ctsu_api_t

Description: CTSU Interface

Function name	Definition
.open	ssp_err_t(* ctsu_api_t::open) (ctsu_ctrl_t *p_ctrl, ctsu_cfg_t *p_cfg)
.close	ssp_err_t(* ctsu_api_t::close) (ctsu_ctrl_t *p_ctrl, ctsu_close_option_t opts)
.scan	ssp_err_t(* ctsu_api_t::scan) (ctsu_ctrl_t *p_ctrl)
.update	ssp_err_t(* ctsu_api_t::update) (ctsu_ctrl_t *p_ctrl)
.read	ssp_err_t(* ctsu_api_t::read) (ctsu_ctrl_t *p_ctrl, void *p_dest, ctsu_read_t opts, const ctsu_channel_pair_t *channels, const uint16_t count)
.versionGet	ssp_err_t(* ctsu_api_t::versionGet) (ssp_version_t *const p_version)

11.2.10 Interface: dac_api_t

Description: DAC Interface

Function name	Definition
.open	ssp_err_t(* dac_api_t::open) (dac_ctrl_t *p_ctrl, dac_cfg_t const *const p_cfg)
.close	ssp_err_t(* dac_api_t::close) (dac_ctrl_t *p_ctrl)
.write	ssp_err_t(* dac_api_t::write) (dac_ctrl_t *p_ctrl, dac_size_t value)
.start	ssp_err_t(* dac_api_t::start) (dac_ctrl_t *p_ctrl)
.stop	ssp_err_t(* dac_api_t::stop) (dac_ctrl_t *p_ctrl)
.versionGet	ssp_err_t(* dac_api_t::versionGet) (ssp_version_t *p_version)
.infoGet	ssp_err_t(* dac_api_t::infoGet) (dac_info_t *const p_info)

11.2.11 Interface: display_api_t

Description: Display Interface

Function name	Definition
.open	ssp_err_t(* display_api_t::open) (display_ctrl_t *const p_ctrl, display_cfg_t const *const p_cfg)
.close	ssp_err_t(* display_api_t::close) (display_ctrl_t *const p_ctrl)
.start	ssp_err_t(* display_api_t::start) (display_ctrl_t *const p_ctrl)
.stop	ssp_err_t(* display_api_t::stop) (display_ctrl_t *const p_ctrl)
.layerChange	ssp_err_t(* display_api_t::layerChange) (display_ctrl_t const *const p_ctrl, display_runtime_cfg_t const *const p_cfg, display_frame_layer_t frame)
.correction	ssp_err_t(* display_api_t::correction) (display_ctrl_t const *const p_ctrl, display_correction_t const *const p_param)
.clut	ssp_err_t(* display_api_t::clut) (display_ctrl_t const *const p_ctrl, display_clut_cfg_t const *const p_clut_cfg, display_frame_layer_t frame)
.statusGet	ssp_err_t(* display_api_t::statusGet) (display_ctrl_t const *const p_ctrl, display_status_t *const p_status)
.versionGet	ssp_err_t(* display_api_t::versionGet) (ssp_version_t *p_version)

11.2.12 Interface: doc_api_t

Description: DOC Interface

Function name	Definition
.open	ssp_err_t(* doc_api_t::open) (doc_ctrl_t *const p_ctrl, doc_cfg_t const *const p_cfg)
.close	ssp_err_t(* doc_api_t::close) (doc_ctrl_t *const p_ctrl)

Function name	Definition
.statusGet	ssp_err_t(* doc_api_t::statusGet) (doc_ctrl_t *const p_ctrl, doc_status_t *p_status)
.statusClear	ssp_err_t(* doc_api_t::statusClear) (doc_ctrl_t *const p_ctrl)
.write	ssp_err_t(* doc_api_t::write) (doc_ctrl_t *const p_ctrl, doc_data_t *const p_data)
.inputRegisterWrite	ssp_err_t(* doc_api_t::inputRegisterWrite) (doc_ctrl_t *const p_ctrl, doc_size_t data)
.versionGet	ssp_err_t(* doc_api_t::versionGet) (ssp_version_t *const p_version)

11.2.13 Interface: elc_api_t

Description: ELC Interface

Function name	Definition
.init	ssp_err_t(* elc_api_t::init) (elc_cfg_t const *const p_cfg)
.softwareEventGenerate	ssp_err_t(* elc_api_t::softwareEventGenerate) (elc_software_event_t event_num)
.linkSet	ssp_err_t(* elc_api_t::linkSet) (elc_peripheral_t peripheral, elc_event_t signal)
.linkBreak	ssp_err_t(* elc_api_t::linkBreak) (elc_peripheral_t peripheral)
.enable	ssp_err_t(* elc_api_t::enable) (void)
.disable	ssp_err_t(* elc_api_t::disable) (void)
.versionGet	ssp_err_t(* elc_api_t::versionGet) (ssp_version_t *const p_version)

11.2.14 Interface: external_irq_api_t

Description: External IRQ Interface

Function name	Definition
.open	ssp_err_t(* external_irq_api_t::open) (external_irq_ctrl_t *const p_ctrl, external_irq_cfg_t const *const p_cfg)
.enable	ssp_err_t(* external_irq_api_t::enable) (external_irq_ctrl_t *const p_ctrl)
.disable	ssp_err_t(* external_irq_api_t::disable) (external_irq_ctrl_t *const p_ctrl)
.triggerSet	ssp_err_t(* external_irq_api_t::triggerSet) (external_irq_ctrl_t *const p_ctrl, external_irq_trigger_t const trigger)
.filterEnable	ssp_err_t(* external_irq_api_t::filterEnable) (external_irq_ctrl_t *const p_ctrl)
.filterDisable	ssp_err_t(* external_irq_api_t::filterDisable) (external_irq_ctrl_t *const p_ctrl)
.close	ssp_err_t(* external_irq_api_t::close) (external_irq_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* external_irq_api_t::versionGet) (ssp_version_t *const p_version)

11.2.15 Interface: flash_api_t

Description: Flash Interface

Function name	Definition
.open	ssp_err_t(* flash_api_t::open) (flash_ctrl_t *const p_ctrl, flash_cfg_t const *const p_cfg)
.write	ssp_err_t(* flash_api_t::write) (flash_ctrl_t *const p_ctrl, uint32_t const src_address, uint32_t const flash_address, uint32_t const num_bytes)
.read	ssp_err_t(* flash_api_t::read) (flash_ctrl_t *const p_ctrl, uint8_t *const p_dest_address, uint32_t const flash_address, uint32_t const num_bytes)
.erase	ssp_err_t(* flash_api_t::erase) (flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_blocks)

Function name	Definition
.blankCheck	ssp_err_t(* flash_api_t::blankCheck) (flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_bytes, flash_result_t *const p_blank_check_result)
.infoGet	ssp_err_t(* flash_api_t::infoGet) (flash_ctrl_t *const p_ctrl, flash_info_t *const p_info)
.close	ssp_err_t(* flash_api_t::close) (flash_ctrl_t *const p_ctrl)
.statusGet	ssp_err_t(* flash_api_t::statusGet) (flash_ctrl_t *const p_ctrl)
.accessWindowSet	ssp_err_t(* flash_api_t::accessWindowSet) (flash_ctrl_t *const p_ctrl, uint32_t const start_addr, uint32_t const end_addr)
.accessWindowClear	ssp_err_t(* flash_api_t::accessWindowClear) (flash_ctrl_t *const p_ctrl)
.reset	ssp_err_t(* flash_api_t::reset) (flash_ctrl_t *const p_ctrl)
.updateFlashClockFreq	ssp_err_t(* flash_api_t::updateFlashClockFreq) (flash_ctrl_t *const p_ctrl)
.startupAreaSelect	ssp_err_t(* flash_api_t::startupAreaSelect) (flash_ctrl_t *const p_ctrl, flash_startup_area_swap_t swap_type, bool is_temporary)
.versionGet	ssp_err_t(* flash_api_t::versionGet) (ssp_version_t *p_version)

11.2.16 Interface: fmi_api_t

Description: FMI Interface

Function name	Definition
.init	ssp_err_t(* fmi_api_t::init) (void)
.productInfoGet	ssp_err_t(* fmi_api_t::productInfoGet) (fmi_product_info_t **pp_product_info)
.uniqueIdGet	ssp_err_t(* fmi_api_t::uniqueIdGet) (fmi_unique_id_t *p_unique_id)

Function name	Definition
.productFeatureGet	ssp_err_t(* fmi_api_t::productFeatureGet) (ssp_feature_t const *const p_feature, fmi_feature_info_t *const p_info)
.eventInfoGet	ssp_err_t(* fmi_api_t::eventInfoGet) (ssp_feature_t const *const p_feature, ssp_signal_t signal, fmi_event_info_t *const p_info)
.versionGet	ssp_err_t(* fmi_api_t::versionGet) (ssp_version_t *const p_version)

11.2.17 Interface: hash_api_t

Description: HASH Algorithm Interface

Function name	Definition
.open	uint32_t(* hash_api_t::open) (hash_ctrl_t *const p_ctrl, hash_cfg_t const *const p_cfg)
.updateHash	uint32_t(* hash_api_t::updateHash) (const uint32_t *p_source, uint32_t num_words, uint32_t *p_dest)
.hashUpdate	uint32_t(* hash_api_t::hashUpdate) (hash_ctrl_t *const p_ctrl, const uint32_t *p_source, uint32_t num_words, uint32_t *p_dest)
.close	uint32_t(* hash_api_t::close) (hash_ctrl_t *const p_ctrl)
.versionGet	uint32_t(* hash_api_t::versionGet) (ssp_version_t *const p_version)

11.2.18 Interface: i2s_api_t

Description: I2S Interface

Function name	Definition
.open	ssp_err_t(* i2s_api_t::open) (i2s_ctrl_t *const p_ctrl, i2s_cfg_t const *const p_cfg)
.stop	ssp_err_t(* i2s_api_t::stop) (i2s_ctrl_t *const p_ctrl, i2s_dir_t const dir)

Function name	Definition
.mute	ssp_err_t(* i2s_api_t::mute) (i2s_ctrl_t *const p_ctrl, i2s_mute_t const mute_enable)
.write	ssp_err_t(* i2s_api_t::write) (i2s_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint16_t const bytes)
.read	ssp_err_t(* i2s_api_t::read) (i2s_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint16_t const bytes)
.writeRead	ssp_err_t(* i2s_api_t::writeRead) (i2s_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint8_t *const p_dest, uint16_t const bytes)
.infoGet	ssp_err_t(* i2s_api_t::infoGet) (i2s_ctrl_t *const p_ctrl, i2s_info_t *const p_info)
.close	ssp_err_t(* i2s_api_t::close) (i2s_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* i2s_api_t::versionGet) (ssp_version_t *const p_version)

11.2.19 Interface: input_capture_api_t

Description: Input Capture Interface

Function name	Definition
.open	ssp_err_t(* input_capture_api_t::open) (input_capture_ctrl_t *const p_ctrl, input_capture_cfg_t const *const p_cfg)
.disable	ssp_err_t(* input_capture_api_t::disable) (input_capture_ctrl_t const *const p_ctrl)
.enable	ssp_err_t(* input_capture_api_t::enable) (input_capture_ctrl_t const *const p_ctrl)
.infoGet	ssp_err_t(* input_capture_api_t::infoGet) (input_capture_ctrl_t const *const p_ctrl, input_capture_info_t *const p_info)
.lastCaptureGet	ssp_err_t(* input_capture_api_t::lastCaptureGet) (input_capture_ctrl_t const *const p_ctrl, input_capture_capture_t *const p_counter)

Function name	Definition
.close	ssp_err_t(* input_capture_api_t::close) (input_capture_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* input_capture_api_t::versionGet) (ssp_version_t *const p_version)

11.2.20 Interface: ioport_api_t

Description: I/O Port Interface

Function name	Definition
.init	ssp_err_t(* ioport_api_t::init) (const ioport_cfg_t *p_cfg)
.pinsCfg	ssp_err_t(* ioport_api_t::pinsCfg) (const ioport_cfg_t *p_cfg)
.pinCfg	ssp_err_t(* ioport_api_t::pinCfg) (ioport_port_pin_t pin, uint32_t cfg)
.pinDirectionSet	ssp_err_t(* ioport_api_t::pinDirectionSet) (ioport_port_pin_t pin, ioport_direction_t direction)
.pinEventInputRead	ssp_err_t(* ioport_api_t::pinEventInputRead) (ioport_port_pin_t pin, ioport_level_t *p_pin_event)
.pinEventOutputWrite	ssp_err_t(* ioport_api_t::pinEventOutputWrite) (ioport_port_pin_t pin, ioport_level_t pin_value)
.pinEthernetModeCfg	ssp_err_t(* ioport_api_t::pinEthernetModeCfg) (ioport_ethernet_channel_t channel, ioport_ethernet_mode_t mode)
.pinRead	ssp_err_t(* ioport_api_t::pinRead) (ioport_port_pin_t pin, ioport_level_t *p_pin_value)
.pinWrite	ssp_err_t(* ioport_api_t::pinWrite) (ioport_port_pin_t pin, ioport_level_t level)
.portDirectionSet	ssp_err_t(* ioport_api_t::portDirectionSet) (ioport_port_t port, ioport_size_t direction_values, ioport_size_t mask)
.portEventInputRead	ssp_err_t(* ioport_api_t::portEventInputRead) (ioport_port_t port, ioport_size_t *p_event_data)

Function name	Definition
.portEventOutputWrite	ssp_err_t(* ioport_api_t::portEventOutputWrite) (ioport_port_t port, ioport_size_t event_data, ioport_size_t mask_value)
.portRead	ssp_err_t(* ioport_api_t::portRead) (ioport_port_t port, ioport_size_t *p_port_value)
.portWrite	ssp_err_t(* ioport_api_t::portWrite) (ioport_port_t port, ioport_size_t value, ioport_size_t mask)
.versionGet	ssp_err_t(* ioport_api_t::versionGet) (ssp_version_t *p_data)

11.2.21 Interface: jpeg_decode_api_t

Description: JPEG Decode Interface

Function name	Definition
.open	ssp_err_t(* jpeg_decode_api_t::open) (jpeg_decode_ctrl_t *const p_ctrl, jpeg_decode_cfg_t const *const p_cfg)
.outputBufferSet	ssp_err_t(* jpeg_decode_api_t::outputBufferSet) (jpeg_decode_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)
.horizontalStrideSet	ssp_err_t(* jpeg_decode_api_t::horizontalStrideSet) (jpeg_decode_ctrl_t *const p_ctrl, uint32_t horizontal_stride)
.imageSubsampleSet	ssp_err_t(* jpeg_decode_api_t::imageSubsampleSet) (jpeg_decode_ctrl_t *const p_ctrl, jpeg_decode_subsample_t horizontal_subsample, jpeg_decode_subsample_t vertical_subsample)
.inputBufferSet	ssp_err_t(* jpeg_decode_api_t::inputBufferSet) (jpeg_decode_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)
.linesDecodedGet	ssp_err_t(* jpeg_decode_api_t::linesDecodedGet) (jpeg_decode_ctrl_t *const p_ctrl, uint32_t *const p_lines)
.imageSizeGet	ssp_err_t(* jpeg_decode_api_t::imageSizeGet) (jpeg_decode_ctrl_t *const p_ctrl, uint16_t *p_horizontal_size, uint16_t *p_vertical_size)

Function name	Definition
.statusGet	ssp_err_t(* jpeg_decode_api_t::statusGet) (jpeg_decode_ctrl_t *const p_ctrl, jpeg_decode_status_t *const p_status)
.close	ssp_err_t(* jpeg_decode_api_t::close) (jpeg_decode_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* jpeg_decode_api_t::versionGet) (ssp_version_t *p_version)
.pixelFormatGet	ssp_err_t(* jpeg_decode_api_t::pixelFormatGet) (jpeg_decode_ctrl_t *const p_ctrl, jpeg_decode_color_space_t *const p_color_space)

11.2.22 Interface: jpeg_encode_api_t

Description: JPEG Encode Interface

Function name	Definition
.open	ssp_err_t(* jpeg_encode_api_t::open) (jpeg_encode_ctrl_t *const p_ctrl, jpeg_encode_cfg_t const *const p_cfg)
.imageParameterSet	ssp_err_t(* jpeg_encode_api_t::imageParameterSet) (jpeg_encode_ctrl_t *const p_ctrl, jpeg_encode_raw_image_parameters *p_raw_image_parameters)
.outputBufferSet	ssp_err_t(* jpeg_encode_api_t::outputBufferSet) (jpeg_encode_ctrl_t *const p_ctrl, void *p_buffer)
.inputBufferSet	ssp_err_t(* jpeg_encode_api_t::inputBufferSet) (jpeg_encode_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)
.statusGet	ssp_err_t(* jpeg_encode_api_t::statusGet) (jpeg_encode_ctrl_t *const p_ctrl, volatile jpeg_encode_status_t *p_status)
.close	ssp_err_t(* jpeg_encode_api_t::close) (jpeg_encode_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* jpeg_encode_api_t::versionGet) (ssp_version_t *p_version)

11.2.23 Interface: keymatrix_api_t

Description: Key Matrix Interface

Function name	Definition
.open	ssp_err_t(* keymatrix_api_t::open) (keymatrix_ctrl_t *const p_ctrl, keymatrix_cfg_t const *const p_cfg)
.enable	ssp_err_t(* keymatrix_api_t::enable) (keymatrix_ctrl_t *const p_ctrl)
.disable	ssp_err_t(* keymatrix_api_t::disable) (keymatrix_ctrl_t *const p_ctrl)
.triggerSet	ssp_err_t(* keymatrix_api_t::triggerSet) (keymatrix_ctrl_t *const p_ctrl, keymatrix_trigger_t const trigger)
.close	ssp_err_t(* keymatrix_api_t::close) (keymatrix_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* keymatrix_api_t::versionGet) (ssp_version_t *const p_version)

11.2.24 Interface: lpm_api_t

Description: Low Power Modes Interface

Function name	Definition
.init	ssp_err_t(* lpm_api_t::init) (lpm_cfg_t const *const p_cfg)
.mstpcrSet	ssp_err_t(* lpm_api_t::mstpcrSet) (uint32_t mstpcra_value, uint32_t mstpcrb_value, uint32_t mstpcrc_value, uint32_t mstpcrd_value)
.mstpcrGet	ssp_err_t(* lpm_api_t::mstpcrGet) (uint32_t *mstpcra_value, uint32_t *mstpcrb_value, uint32_t *mstpcrc_value, uint32_t *mstpcrd_value)
.moduleStop	ssp_err_t(* lpm_api_t::moduleStop) (lpm_mstp_t module)
.moduleStart	ssp_err_t(* lpm_api_t::moduleStart) (lpm_mstp_t module)

Function name	Definition
.operatingPowerModeSet	ssp_err_t(* lpm_api_t::operatingPowerModeSet) (lpm_operating_power_t power_mode, lpm_subosc_t subosc)
.snoozeEnable	ssp_err_t(* lpm_api_t::snoozeEnable) (lpm_snooze_rxd0_t rdx0_mode, lpm_snooze_dtc_t dtc_mode, lpm_snooze_request_t requests, lpm_snooze_end_t triggers)
.snoozeDisable	ssp_err_t(* lpm_api_t::snoozeDisable) (void)
.lowPowerCfg	ssp_err_t(* lpm_api_t::lowPowerCfg) (lpm_low_power_mode_t power_mode, lpm_output_port_enable_t output_port_enable, lpm_power_supply_t power_supply, lpm_io_port_t io_port_state)
.wupenSet	ssp_err_t(* lpm_api_t::wupenSet) (uint32_t wupen_value)
.wupenGet	ssp_err_t(* lpm_api_t::wupenGet) (uint32_t *wupen_value)
.deepStandbyCancelRequestEnable	ssp_err_t(* lpm_api_t::deepStandbyCancelRequestEnable) (lpm_deep_standby_t pin_signal, lpm_cancel_request_edge_t rising_falling)
.deepStandbyCancelRequestDisable	ssp_err_t(* lpm_api_t::deepStandbyCancelRequestDisable) (lpm_deep_standby_t pin_signal)
.lowPowerModeEnter	ssp_err_t(* lpm_api_t::lowPowerModeEnter) (void)
.versionGet	ssp_err_t(* lpm_api_t::versionGet) (ssp_version_t *const p_version)

11.2.25 Interface: lpmv2_api_t

Description: Low Power Modes V2 Interface

Function name	Definition
.init	ssp_err_t(* lpmv2_api_t::init) (void)
.lowPowerCfg	ssp_err_t(* lpmv2_api_t::lowPowerCfg) (lpmv2_cfg_t const *const p_cfg)

Function name	Definition
.lowPowerModeEnter	ssp_err_t(* lpmv2_api_t::lowPowerModeEnter) (void)
.versionGet	ssp_err_t(* lpmv2_api_t::versionGet) (ssp_version_t *const p_version)

11.2.26 Interface: lvd_api_t

Description: Low Voltage Detection Interface

Function name	Definition
.open	ssp_err_t(* lvd_api_t::open) (lvd_ctrl_t *const p_ctrl, lvd_cfg_t const *const p_cfg)
.statusGet	ssp_err_t(* lvd_api_t::statusGet) (lvd_ctrl_t *const p_ctrl, lvd_status_t *p_lvd_status)
.statusClear	ssp_err_t(* lvd_api_t::statusClear) (lvd_ctrl_t *const p_ctrl)
.close	ssp_err_t(* lvd_api_t::close) (lvd_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* lvd_api_t::versionGet) (ssp_version_t *const p_version)

11.2.27 Interface: opamp_api_t

Description: OPAMP Interface

Function name	Definition
.open	ssp_err_t(* opamp_api_t::open) (opamp_ctrl_t *const p_ctrl, opamp_cfg_t const *const p_cfg)
.start	ssp_err_t(* opamp_api_t::start) (opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)
.stop	ssp_err_t(* opamp_api_t::stop) (opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)

Function name	Definition
.trim	ssp_err_t(* opamp_api_t::trim) (opamp_ctrl_t *const p_ctrl, opamp_trim_cmd_t const cmd, opamp_trim_args_t const *const p_args)
.infoGet	ssp_err_t(* opamp_api_t::infoGet) (opamp_ctrl_t *const p_ctrl, opamp_info_t *const p_info)
.statusGet	ssp_err_t(* opamp_api_t::statusGet) (opamp_ctrl_t *const p_ctrl, opamp_status_t *const p_status)
.close	ssp_err_t(* opamp_api_t::close) (opamp_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* opamp_api_t::versionGet) (ssp_version_t *const p_version)

11.2.28 Interface: pdc_api_t

Description: PDC Interface

Function name	Definition
.open	ssp_err_t(* pdc_api_t::open) (pdc_ctrl_t *const p_ctrl, pdc_cfg_t const *const p_cfg)
.close	ssp_err_t(* pdc_api_t::close) (pdc_ctrl_t *const p_ctrl)
.captureStart	ssp_err_t(* pdc_api_t::captureStart) (pdc_ctrl_t *const p_ctrl, uint8_t *const p_buffer)
.stateGet	ssp_err_t(* pdc_api_t::stateGet) (pdc_ctrl_t *const p_ctrl, pdc_state_t *p_state)
.versionGet	ssp_err_t(* pdc_api_t::versionGet) (ssp_version_t *const p_data)

11.2.29 Interface: qspi_api_t

Description: Quad SPI Flash Interface

Function name	Definition
.open	ssp_err_t(* qspi_api_t::open) (qspi_ctrl_t *p_ctrl, qspi_cfg_t const *const p_cfg)
.close	ssp_err_t(* qspi_api_t::close) (qspi_ctrl_t *p_ctrl)
.read	ssp_err_t(* qspi_api_t::read) (qspi_ctrl_t *p_ctrl, uint8_t *p_device_address, uint8_t *p_memory_address, uint32_t byte_count)
.pageProgram	ssp_err_t(* qspi_api_t::pageProgram) (qspi_ctrl_t *p_ctrl, uint8_t *p_device_address, uint8_t *p_memory_address, uint32_t byte_count)
.erase	ssp_err_t(* qspi_api_t::erase) (qspi_ctrl_t *p_ctrl, uint8_t *p_device_address, uint32_t byte_count)
.infoGet	ssp_err_t(* qspi_api_t::infoGet) (qspi_ctrl_t *const p_ctrl, qspi_info_t *const p_info)
.sectorErase	ssp_err_t(* qspi_api_t::sectorErase) (qspi_ctrl_t *p_ctrl, uint8_t *p_device_address)
.statusGet	ssp_err_t(* qspi_api_t::statusGet) (qspi_ctrl_t *p_ctrl, bool *p_write_in_progress)
.bankSelect	ssp_err_t(* qspi_api_t::bankSelect) (uint32_t bank)
.versionGet	ssp_err_t(* qspi_api_t::versionGet) (ssp_version_t *const p_version)

11.2.30 Interface: rtc_api_t

Description: RTC Interface

Function name	Definition
.open	ssp_err_t(* rtc_api_t::open) (rtc_ctrl_t *const p_ctrl, rtc_cfg_t const *const p_cfg)
.close	ssp_err_t(* rtc_api_t::close) (rtc_ctrl_t *const p_ctrl)
.configure	ssp_err_t(* rtc_api_t::configure) (rtc_ctrl_t *const p_ctrl, void *const p_extend)

Function name	Definition
.calendarTimeSet	ssp_err_t(* rtc_api_t::calendarTimeSet) (rtc_ctrl_t *const p_ctrl, rtc_time_t *p_time, bool clock_start)
.calendarTimeGet	ssp_err_t(* rtc_api_t::calendarTimeGet) (rtc_ctrl_t *const p_ctrl, rtc_time_t *p_time)
.calendarAlarmSet	ssp_err_t(* rtc_api_t::calendarAlarmSet) (rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *p_alarm, bool irq_enable_flag)
.calendarAlarmGet	ssp_err_t(* rtc_api_t::calendarAlarmGet) (rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *p_alarm)
.calendarCounterStart	ssp_err_t(* rtc_api_t::calendarCounterStart) (rtc_ctrl_t *const p_ctrl)
.calendarCounterStop	ssp_err_t(* rtc_api_t::calendarCounterStop) (rtc_ctrl_t *const p_ctrl)
.irqEnable	ssp_err_t(* rtc_api_t::irqEnable) (rtc_ctrl_t *const p_ctrl, rtc_event_t irq)
.irqDisable	ssp_err_t(* rtc_api_t::irqDisable) (rtc_ctrl_t *const p_ctrl, rtc_event_t irq)
.periodicIrqRateSet	ssp_err_t(* rtc_api_t::periodicIrqRateSet) (rtc_ctrl_t *const p_ctrl, rtc_periodic_irq_select_t rate)
.infoGet	ssp_err_t(* rtc_api_t::infoGet) (rtc_ctrl_t *p_ctrl, rtc_info_t *p_rtc_info)
.errorAdjustmentModeSet	ssp_err_t(* rtc_api_t::errorAdjustmentModeSet) (rtc_ctrl_t *p_ctrl, rtc_error_adjustment_mode_cfg_t *p_error_adjustment_mode)
.errorAdjustmentSet	ssp_err_t(* rtc_api_t::errorAdjustmentSet) (rtc_ctrl_t *p_ctrl, rtc_error_adjustment_cfg_t *p_error_adjustment_config)
.versionGet	ssp_err_t(* rtc_api_t::versionGet) (ssp_version_t *version)

11.2.31 Interface: sdmmc_api_t

Description: SD/MMC Interface

Function name	Definition
.open	ssp_err_t(* sdmmc_api_t::open) (sdmmc_ctrl_t *const p_ctrl, sdmmc_cfg_t const *const p_cfg)
.close	ssp_err_t(* sdmmc_api_t::close) (sdmmc_ctrl_t *const p_ctrl)
.read	ssp_err_t(* sdmmc_api_t::read) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const start_sector, uint32_t const sector_count)
.write	ssp_err_t(* sdmmc_api_t::write) (sdmmc_ctrl_t *const p_ctrl, uint8_t const *const p_source, uint32_t const start_sector, uint32_t const sector_count)
.control	ssp_err_t(* sdmmc_api_t::control) (sdmmc_ctrl_t *const p_ctrl, ssp_command_t const command, void *p_data)
.readIo	ssp_err_t(* sdmmc_api_t::readIo) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t const function, uint32_t const address)
.writeIo	ssp_err_t(* sdmmc_api_t::writeIo) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t const function, uint32_t const address, sdmmc_io_write_mode_t const read_after_write)
.readIoExt	ssp_err_t(* sdmmc_api_t::readIoExt) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const function, uint32_t const address, uint32_t *const count, sdmmc_io_transfer_mode_t transfer_mode, sdmmc_io_address_mode_t address_mode)
.writeIoExt	ssp_err_t(* sdmmc_api_t::writeIoExt) (sdmmc_ctrl_t *const p_ctrl, uint8_t const *const p_source, uint32_t const function, uint32_t const address, uint32_t const count, sdmmc_io_transfer_mode_t transfer_mode, sdmmc_io_address_mode_t address_mode)
.ioIntEnable	ssp_err_t(* sdmmc_api_t::ioIntEnable) (sdmmc_ctrl_t *const p_ctrl, bool enable)
.versionGet	ssp_err_t(* sdmmc_api_t::versionGet) (ssp_version_t *const p_version)
.infoGet	ssp_err_t(* sdmmc_api_t::infoGet) (sdmmc_ctrl_t *const p_ctrl, sdmmc_info_t *const p_info)

Function name	Definition
.erase	ssp_err_t(* sdmmc_api_t::erase) (sdmmc_ctrl_t *const p_ctrl, uint32_t const start_sector, uint32_t const sector_count)

11.2.32 Interface: sf_adc_periodic_api_t

Description: ADC Periodic Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_adc_periodic_api_t::open) (sf_adc_periodic_ctrl_t *const p_ctrl, sf_adc_periodic_cfg_t const *const p_cfg)
.start	ssp_err_t(* sf_adc_periodic_api_t::start) (sf_adc_periodic_ctrl_t *const p_ctrl)
.stop	ssp_err_t(* sf_adc_periodic_api_t::stop) (sf_adc_periodic_ctrl_t *const p_ctrl)
.close	ssp_err_t(* sf_adc_periodic_api_t::close) (sf_adc_periodic_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_adc_periodic_api_t::versionGet) (ssp_version_t *const p_version)

11.2.33 Interface: sf_audio_playback_api_t

Description: Audio Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_audio_playback_api_t::open) (sf_audio_playback_ctrl_t *const p_ctrl, sf_audio_playback_cfg_t const *const p_cfg)
.close	ssp_err_t(* sf_audio_playback_api_t::close) (sf_audio_playback_ctrl_t *const p_ctrl)
.start	ssp_err_t(* sf_audio_playback_api_t::start) (sf_audio_playback_ctrl_t *const p_ctrl, sf_audio_playback_data_t *const p_data, UINT const timeout)

Function name	Definition
.pause	ssp_err_t(* sf_audio_playback_api_t::pause) (sf_audio_playback_ctrl_t *const p_ctrl)
.stop	ssp_err_t(* sf_audio_playback_api_t::stop) (sf_audio_playback_ctrl_t *const p_ctrl)
.resume	ssp_err_t(* sf_audio_playback_api_t::resume) (sf_audio_playback_ctrl_t *const p_ctrl)
.volumeSet	ssp_err_t(* sf_audio_playback_api_t::volumeSet) (sf_audio_playback_ctrl_t *const p_ctrl, uint8_t const volume)
.versionGet	ssp_err_t(* sf_audio_playback_api_t::versionGet) (ssp_version_t *const p_version)

11.2.34 Interface: sf_audio_playback_hw_api_t

Description: Audio Playback Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_audio_playback_hw_api_t::open) (sf_audio_playback_hw_ctrl_t *const p_ctrl, sf_audio_playback_hw_cfg_t const *const p_cfg)
.start	ssp_err_t(* sf_audio_playback_hw_api_t::start) (sf_audio_playback_hw_ctrl_t *const p_ctrl)
.stop	ssp_err_t(* sf_audio_playback_hw_api_t::stop) (sf_audio_playback_hw_ctrl_t *const p_ctrl)
.play	ssp_err_t(* sf_audio_playback_hw_api_t::play) (sf_audio_playback_hw_ctrl_t *const p_ctrl, int16_t const *const p_buffer, uint32_t length)
.dataTypeGet	ssp_err_t(* sf_audio_playback_hw_api_t::dataTypeGet) (sf_audio_playback_hw_ctrl_t *const p_ctrl, sf_audio_playback_data_type_t *const p_data_type)
.close	ssp_err_t(* sf_audio_playback_hw_api_t::close) (sf_audio_playback_hw_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_audio_playback_hw_api_t::versionGet) (ssp_version_t *const p_version)

11.2.35 Interface: sf_audio_record_api_t

Description: Audio Recording Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_audio_record_api_t::open) (sf_audio_record_ctrl_t *const p_ctrl, sf_audio_record_cfg_t const *const p_cfg)
.start	ssp_err_t(* sf_audio_record_api_t::start) (sf_audio_record_ctrl_t *const p_ctrl)
.stop	ssp_err_t(* sf_audio_record_api_t::stop) (sf_audio_record_ctrl_t *const p_ctrl)
.infoGet	ssp_err_t(* sf_audio_record_api_t::infoGet) (sf_audio_record_ctrl_t *const p_ctrl, sf_audio_record_info_t *p_info)
.close	ssp_err_t(* sf_audio_record_api_t::close) (sf_audio_record_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_audio_record_api_t::versionGet) (ssp_version_t *const p_version)

11.2.36 Interface: sf_ble_api_t

Description: SF BLE Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_ble_api_t::open) (sf_ble_ctrl_t *const p_ctrl, const sf_ble_cfg_t *p_cfg)
.close	ssp_err_t(* sf_ble_api_t::close) (sf_ble_ctrl_t *const p_ctrl)
.infoGet	ssp_err_t(* sf_ble_api_t::infoGet) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_ble_info_t *p_ble_info)
.provisionGet	ssp_err_t(* sf_ble_api_t::provisionGet) (sf_ble_ctrl_t *const p_ctrl, sf_ble_provisioning_t *p_ble_provisioning)

Function name	Definition
.provisionSet	ssp_err_t(* sf_ble_api_t::provisionSet) (sf_ble_ctrl_t *const p_ctrl, const sf_ble_provisioning_t *p_ble_provisioning)
.scan	ssp_err_t(* sf_ble_api_t::scan) (sf_ble_ctrl_t *const p_ctrl, sf_ble_scan_t *p_scan, uint8_t *p_cnt, sf_ble_scan_info_t *p_scan_info)
.advertisementStart	ssp_err_t(* sf_ble_api_t::advertisementStart) (sf_ble_ctrl_t *const p_ctrl, sf_ble_adv_info_t *const p_advt_info)
.advertisementStop	ssp_err_t(* sf_ble_api_t::advertisementStop) (sf_ble_ctrl_t *const p_ctrl)
.whitelistAdd	ssp_err_t(* sf_ble_api_t::whitelistAdd) (sf_ble_ctrl_t *const p_ctrl, const uint8_t *p_bd_addr)
.whitelistDel	ssp_err_t(* sf_ble_api_t::whitelistDel) (sf_ble_ctrl_t *const p_ctrl, const uint8_t *p_bd_addr)
.bondingStart	ssp_err_t(* sf_ble_api_t::bondingStart) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, const uint8_t *p_bd_addr, sf_ble_bonding_start_t *p_bonding_start)
.bondingResponse	ssp_err_t(* sf_ble_api_t::bondingResponse) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, const uint8_t *p_bd_addr, sf_ble_bonding_response_t *p_bonding_resp)
.startEncryption	ssp_err_t(* sf_ble_api_t::startEncryption) (sf_ble_ctrl_t *const p_ctrl, sf_ble_sm_enc_info_t const *p_enc_info)
.connect	ssp_err_t(* sf_ble_api_t::connect) (sf_ble_ctrl_t *const p_ctrl, sf_ble_connection_t const *const p_conn, sf_ble_conn_handle_t *p_handle)
.listen	ssp_err_t(* sf_ble_api_t::listen) (sf_ble_ctrl_t *const p_ctrl)
.authorization	ssp_err_t(* sf_ble_api_t::authorization) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle)
.disconnect	ssp_err_t(* sf_ble_api_t::disconnect) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle)

Function name	Definition
.setTxPower	ssp_err_t(* sf_ble_api_t::setTxPower) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *const p_handle, sf_ble_set_tx_pwr_info_t *p_tx_power_info)
.gattAddCustomProfiles	ssp_err_t(* sf_ble_api_t::gattAddCustomProfiles) (sf_ble_ctrl_t *const p_ctrl, sf_ble_svc_attribute_t *p_svc_attr, uint32_t svc_attr_len, sf_ble_char_attribute_t *p_char_attr, uint32_t char_attr_len)
.gattServiceDiscovery	ssp_err_t(* sf_ble_api_t::gattServiceDiscovery) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_ble_service_discovery_req_t const *const p_sf_ble_svc_dscv_req, sf_ble_service_discovery_rsp_t *const p_sf_ble_svc_dscv_rsp, uint32_t *const p_rsp_cnt)
.gattCharDiscovery	ssp_err_t(* sf_ble_api_t::gattCharDiscovery) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_ble_char_discovery_req_t const *const p_sf_ble_char_dscv_req, sf_ble_char_discovery_rsp_t *const p_sf_ble_char_dscv_rsp, uint32_t *const p_rsp_cnt)

.gattCharRead	ssp_err_t(* sf_ble_api_t::gattCharRead) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_ble_char_read_req_t const *const p_char_read_req, sf_ble_char_read_rsp_t *const p_char_read_rsp)
.gattCharWrite	ssp_err_t(* sf_ble_api_t::gattCharWrite) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_ble_char_write_req_t const *const p_char_write_req)
.gattCharExecuteWrite	ssp_err_t(* sf_ble_api_t::gattCharExecuteWrite) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_ble_execute_write_t execute_flag)
.gattCharWriteLocal	ssp_err_t(* sf_ble_api_t::gattCharWriteLocal) (sf_ble_ctrl_t *const p_ctrl, uint16_t char_handle, uint16_t data_length, uint8_t *const p_data)
.gattSendNotify	ssp_err_t(* sf_ble_api_t::gattSendNotify) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, uint16_t char_handle)

Function name	Definition
.gattSendIndicate	ssp_err_t(* sf_ble_api_t::gattSendIndicate) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, uint16_t char_handle)
.gattWriteResponse	ssp_err_t(* sf_ble_api_t::gattWriteResponse) (sf_ble_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, uint16_t handle, sf_ble_attribute_error_code_t error_code)
.versionGet	ssp_err_t(* sf_ble_api_t::versionGet) (ssp_version_t *const p_version)

11.2.37 Interface: sf_ble_onboard_profile_api_t

Description: SF BLE On-Board Profile Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_ble_onboard_profile_api_t::open) (sf_ble_onboard_profile_ctrl_t *const p_ctrl, const sf_ble_onboard_profile_cfg_t *p_cfg)
.close	ssp_err_t(* sf_ble_onboard_profile_api_t::close) (sf_ble_onboard_profile_ctrl_t *const p_ctrl)
.onbpEnable	ssp_err_t(* sf_ble_onboard_profile_api_t::onbpEnable) (sf_ble_onboard_profile_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_onbp_t profile, sf_ble_profile_callback_t p_prf_cb, sf_ble_prf_sec_t sec)
.onbpDisable	ssp_err_t(* sf_ble_onboard_profile_api_t::onbpDisable) (sf_ble_onboard_profile_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_onbp_t profile)
.onbpServerWriteData	ssp_err_t(* sf_ble_onboard_profile_api_t::onbpServerWriteData) (sf_ble_onboard_profile_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_onbp_t profile, sf_ble_onbp_char_t characteristics, const void *p_data)
.onbpServerSendNotification	ssp_err_t(* sf_ble_onboard_profile_api_t::onbpServerSendNotification) (sf_ble_onboard_profile_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_onbp_t profile, sf_ble_onbp_char_t characteristics, const void *p_data)

Function name	Definition
.onbpServerSendIndication	ssp_err_t(* sf_ble_onboard_profile_api_t::onbpServerSendIndication) (sf_ble_onboard_profile_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_onbp_t profile, sf_ble_onbp_char_t characteristics, const void *p_data)
.onbpClientWriteCCCD	ssp_err_t(* sf_ble_onboard_profile_api_t::onbpClientWriteCCCD) (sf_ble_onboard_profile_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_onbp_t profile, sf_ble_onbp_char_t cccd_char, sf_ble_cccd_val_t cccd_val)
.onbpClientWriteChar	ssp_err_t(* sf_ble_onboard_profile_api_t::onbpClientWriteChar) (sf_ble_onboard_profile_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_onbp_t profile, sf_ble_onbp_char_t characteristics, const void *p_data)
.onbpClientReadChar	ssp_err_t(* sf_ble_onboard_profile_api_t::onbpClientReadChar) (sf_ble_onboard_profile_ctrl_t *const p_ctrl, sf_ble_conn_handle_t *p_handle, sf_onbp_t profile, sf_ble_onbp_char_t characteristics)
.versionGet	ssp_err_t(* sf_ble_onboard_profile_api_t::versionGet) (ssp_version_t *const p_version)

11.2.38 Interface: sf_block_media_api_t

Description: Block Media Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_block_media_api_t::open) (sf_block_media_ctrl_t *p_ctrl, sf_block_media_cfg_t const *const p_cfg)
.read	ssp_err_t(* sf_block_media_api_t::read) (sf_block_media_ctrl_t *p_ctrl, uint8_t *const p_dest, uint32_t const start_sector, uint32_t const sector_count)
.write	ssp_err_t(* sf_block_media_api_t::write) (sf_block_media_ctrl_t *p_ctrl, uint8_t const *const p_src, uint32_t const start_sector, uint32_t const sector_count)

Function name	Definition
.ioctl	ssp_err_t(* sf_block_media_api_t::ioctl) (sf_block_media_ctrl_t *p_ctrl, ssp_command_t const command, void *p_data)
.close	ssp_err_t(* sf_block_media_api_t::close) (sf_block_media_ctrl_t *p_ctrl)
.versionGet	ssp_err_t(* sf_block_media_api_t::versionGet) (ssp_version_t *const p_version)

11.2.39 Interface: sf_cellular_api_t

Description: SF CELLULAR Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_cellular_api_t::open) (sf_cellular_ctrl_t *p_ctrl, sf_cellular_cfg_t const *const p_cfg)
.close	ssp_err_t(* sf_cellular_api_t::close) (sf_cellular_ctrl_t *const p_ctrl)
.provisioningGet	ssp_err_t(* sf_cellular_api_t::provisioningGet) (sf_cellular_ctrl_t *const p_ctrl, sf_cellular_provisioning_t *const p_cellular_provisioning)
.provisioningSet	ssp_err_t(* sf_cellular_api_t::provisioningSet) (sf_cellular_ctrl_t *const p_ctrl, sf_cellular_provisioning_t const *const p_cellular_provisioning)
.infoGet	ssp_err_t(* sf_cellular_api_t::infoGet) (sf_cellular_ctrl_t *const p_ctrl, sf_cellular_info_t *const p_cellular_info)
.statisticsGet	ssp_err_t(* sf_cellular_api_t::statisticsGet) (sf_cellular_ctrl_t *const p_ctrl, sf_cellular_stats_t *const p_cellular_device_stats)
.transmit	ssp_err_t(* sf_cellular_api_t::transmit) (sf_cellular_ctrl_t *const p_ctrl, uint8_t *const p_buf, uint32_t length)
.versionGet	ssp_err_t(* sf_cellular_api_t::versionGet) (ssp_version_t *const p_version)

Function name	Definition
.networkConnect	ssp_err_t(* sf_cellular_api_t::networkConnect) (sf_cellular_ctrl_t *const p_ctrl)
.networkDisconnect	ssp_err_t(* sf_cellular_api_t::networkDisconnect) (sf_cellular_ctrl_t *const p_ctrl)
.networkStatusGet	ssp_err_t(* sf_cellular_api_t::networkStatusGet) (sf_cellular_ctrl_t *const p_ctrl, sf_cellular_network_status_t *p_network_status)
.simPinSet	ssp_err_t(* sf_cellular_api_t::simPinSet) (sf_cellular_ctrl_t *const p_ctrl, uint8_t *const p_old_pin, uint8_t *const p_new_pin)

.fotaStart	ssp_err_t(* sf_cellular_api_t::fotaStart) (sf_cellular_ctrl_t *const p_ctrl, void *p_fotastart)
.fotaStop	ssp_err_t(* sf_cellular_api_t::fotaStop) (sf_cellular_ctrl_t *const p_ctrl, void *p_fotastop)
.reset	ssp_err_t(* sf_cellular_api_t::reset) (sf_cellular_ctrl_t *const p_ctrl, sf_cellular_reset_type_t reset_type)

11.2.40 Interface: sf_cellular_socket_api_t

Description: SF Socket CELLULAR Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_cellular_socket_api_t::open) (sf_cellular_socket_ctrl_t *p_ctrl, sf_cellular_socket_cfg_t const *const p_cfg)

Function name	Definition
.close	ssp_err_t(* sf_cellular_socket_api_t::close) (sf_cellular_socket_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_cellular_socket_api_t::versionGet) (ssp_version_t *const p_version)

11.2.41 Interface: sf_comms_api_t

Description: Communications Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_comms_api_t::open) (sf_comms_ctrl_t *const p_ctrl, sf_comms_cfg_t const *const p_cfg)
.close	ssp_err_t(* sf_comms_api_t::close) (sf_comms_ctrl_t *const p_ctrl)
.read	ssp_err_t(* sf_comms_api_t::read) (sf_comms_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes, UINT const timeout)
.write	ssp_err_t(* sf_comms_api_t::write) (sf_comms_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes, UINT const timeout)
.lock	ssp_err_t(* sf_comms_api_t::lock) (sf_comms_ctrl_t *const p_ctrl, sf_comms_lock_t lock_type, UINT timeout)
.unlock	ssp_err_t(* sf_comms_api_t::unlock) (sf_comms_ctrl_t *const p_ctrl, sf_comms_lock_t lock_type)
.versionGet	ssp_err_t(* sf_comms_api_t::versionGet) (ssp_version_t *const p_version)

11.2.42 Interface: sf_console_api_t

Description: Console Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_console_api_t::open) (sf_console_ctrl_t *const p_ctrl, sf_console_cfg_t const *const p_cfg)
.close	ssp_err_t(* sf_console_api_t::close) (sf_console_ctrl_t *const p_ctrl)
.prompt	ssp_err_t(* sf_console_api_t::prompt) (sf_console_ctrl_t *const p_ctrl, sf_console_menu_t const *const p_menu, UINT const timeout)
.parse	ssp_err_t(* sf_console_api_t::parse) (sf_console_ctrl_t *const p_ctrl, sf_console_menu_t const *const p_cmd_list, uint8_t const *const p_input, uint32_t const bytes)
.read	ssp_err_t(* sf_console_api_t::read) (sf_console_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes, uint32_t const timeout)
.write	ssp_err_t(* sf_console_api_t::write) (sf_console_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const timeout)
.argumentFind	ssp_err_t(* sf_console_api_t::argumentFind) (uint8_t const *const p_arg, uint8_t const *const p_str, int32_t *const p_index, int32_t *const p_data)
.versionGet	ssp_err_t(* sf_console_api_t::versionGet) (ssp_version_t *const p_version)

11.2.43 Interface: sf_el_gx_api_t

Description: GUIX Interface

Function name	Definition
.open	ssp_err_t(* sf_el_gx_api_t::open) (sf_el_gx_ctrl_t *const p_ctrl, sf_el_gx_cfg_t const *const p_cfg)
.close	ssp_err_t(* sf_el_gx_api_t::close) (sf_el_gx_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_el_gx_api_t::versionGet) (ssp_version_t *p_version)

Function name	Definition
.setup	UINT(* sf_el_gx_api_t::setup) (GX_DISPLAY *p_display)
.canvasInit	ssp_err_t(* sf_el_gx_api_t::canvasInit) (sf_el_gx_ctrl_t *const p_ctrl, GX_WINDOW_ROOT *p_window_root)

11.2.44 Interface: sf_external_irq_api_t

Description: External IRQ Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_external_irq_api_t::open) (sf_external_irq_ctrl_t *const p_ctrl, sf_external_irq_cfg_t const *const p_cfg)
.wait	ssp_err_t(* sf_external_irq_api_t::wait) (sf_external_irq_ctrl_t *const p_ctrl, ULONG const timeout)
.versionGet	ssp_err_t(* sf_external_irq_api_t::versionGet) (ssp_version_t *const p_version)
.close	ssp_err_t(* sf_external_irq_api_t::close) (sf_external_irq_ctrl_t *const p_ctrl)

11.2.45 Interface: sf_i2c_api_t

Description: I2C Framework

Function name	Definition
.open	ssp_err_t(* sf_i2c_api_t::open) (sf_i2c_ctrl_t *p_ctrl, sf_i2c_cfg_t const *const p_cfg)
.read	ssp_err_t(* sf_i2c_api_t::read) (sf_i2c_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes, bool const restart, uint32_t const timeout)
.write	ssp_err_t(* sf_i2c_api_t::write) (sf_i2c_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes, bool const restart, uint32_t const timeout)

Function name	Definition
.reset	ssp_err_t(* sf_i2c_api_t::reset) (sf_i2c_ctrl_t *const p_ctrl, uint32_t const timeout)
.close	ssp_err_t(* sf_i2c_api_t::close) (sf_i2c_ctrl_t *const p_ctrl)
.lock	ssp_err_t(* sf_i2c_api_t::lock) (sf_i2c_ctrl_t *const p_ctrl)
.unlock	ssp_err_t(* sf_i2c_api_t::unlock) (sf_i2c_ctrl_t *const p_ctrl)
.version	ssp_err_t(* sf_i2c_api_t::version) (ssp_version_t *const p_version)

11.2.46 Interface: sf_jpeg_decode_api_t

Description: JPEG Decode Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_jpeg_decode_api_t::open) (sf_jpeg_decode_ctrl_t *const p_ctrl, sf_jpeg_decode_cfg_t const *const p_cfg)
.inputBufferSet	ssp_err_t(* sf_jpeg_decode_api_t::inputBufferSet) (sf_jpeg_decode_ctrl_t *const p_ctrl, void *const p_buffer, uint32_t const buffer_size)
.outputBufferSet	ssp_err_t(* sf_jpeg_decode_api_t::outputBufferSet) (sf_jpeg_decode_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)
.linesDecodedGet	ssp_err_t(* sf_jpeg_decode_api_t::linesDecodedGet) (sf_jpeg_decode_ctrl_t *const p_ctrl, uint32_t *const p_lines)
.horizontalStrideSet	ssp_err_t(* sf_jpeg_decode_api_t::horizontalStrideSet) (sf_jpeg_decode_ctrl_t *const p_ctrl, uint32_t horizontal_stride)
.imageSubsampleSet	ssp_err_t(* sf_jpeg_decode_api_t::imageSubsampleSet) (sf_jpeg_decode_ctrl_t *const p_ctrl, jpeg_decode_subsample_t horizontal_subsample, jpeg_decode_subsample_t vertical_subsample)

Function name	Definition
.wait	ssp_err_t(* sf_jpeg_decode_api_t::wait) (sf_jpeg_decode_ctrl_t *const p_ctrl, jpeg_decode_status_t *const p_status, uint32_t timeout)
.statusGet	ssp_err_t(* sf_jpeg_decode_api_t::statusGet) (sf_jpeg_decode_ctrl_t *const p_ctrl, jpeg_decode_status_t *const p_status)
.imageSizeGet	ssp_err_t(* sf_jpeg_decode_api_t::imageSizeGet) (sf_jpeg_decode_ctrl_t *const p_ctrl, uint16_t *p_horizontal_size, uint16_t *p_vertical_size)
.pixelFormatGet	ssp_err_t(* sf_jpeg_decode_api_t::pixelFormatGet) (sf_jpeg_decode_ctrl_t *const p_ctrl, jpeg_decode_color_space_t *const p_color_space)
.close	ssp_err_t(* sf_jpeg_decode_api_t::close) (sf_jpeg_decode_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_jpeg_decode_api_t::versionGet) (ssp_version_t *const p_version)

11.2.47 Interface: sf_message_api_t

Description: Messaging Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_message_api_t::open) (sf_message_ctrl_t *const p_ctrl, sf_message_cfg_t const *const p_cfg)
.close	ssp_err_t(* sf_message_api_t::close) (sf_message_ctrl_t *const p_ctrl)
.bufferAcquire	ssp_err_t(* sf_message_api_t::bufferAcquire) (sf_message_ctrl_t const *const p_ctrl, sf_message_header_t **pp_buffer, sf_message_acquire_cfg_t const *const p_acquire_cfg, uint32_t const wait_option)
.bufferRelease	ssp_err_t(* sf_message_api_t::bufferRelease) (sf_message_ctrl_t *const p_ctrl, sf_message_header_t *const p_buffer, sf_message_release_option_t const option)

Function name	Definition
.post	ssp_err_t(* sf_message_api_t::post) (sf_message_ctrl_t *const p_ctrl, sf_message_header_t const *const p_buffer, sf_message_post_cfg_t const *const p_post_cfg, sf_message_post_err_t *const p_post_err, uint32_t const wait_option)
.pend	ssp_err_t(* sf_message_api_t::pend) (sf_message_ctrl_t const *const p_ctrl, TX_QUEUE const *const p_queue, sf_message_header_t **pp_buffer, uint32_t const wait_option)
.versionGet	ssp_err_t(* sf_message_api_t::versionGet) (ssp_version_t *const p_version)

11.2.48 Interface: sf_power_profiles_api_t

Description: Power Profiles Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_power_profiles_api_t::open) (sf_power_profiles_ctrl_t *const p_ctrl, sf_power_profiles_cfg_t const *const p_cfg)
.sleep	ssp_err_t(* sf_power_profiles_api_t::sleep) (sf_power_profiles_ctrl_t *const p_ctrl)
.close	ssp_err_t(* sf_power_profiles_api_t::close) (sf_power_profiles_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_power_profiles_api_t::versionGet) (ssp_version_t *const p_version)

11.2.49 Interface: sf_power_profiles_v2_api_t

Description: Power Profiles Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_power_profiles_v2_api_t::open) (sf_power_profiles_v2_ctrl_t *const p_ctrl, sf_power_profiles_v2_cfg_t const *const p_cfg)

Function name	Definition
.runApply	ssp_err_t(* sf_power_profiles_v2_api_t::runApply) (sf_power_profiles_v2_ctrl_t *const p_ctrl, sf_power_profiles_v2_run_cfg_t const *const p_cfg)
.lowPowerApply	ssp_err_t(* sf_power_profiles_v2_api_t::lowPowerApply) (sf_power_profiles_v2_ctrl_t *const p_ctrl, sf_power_profiles_v2_low_power_cfg_t const *const p_cfg)
.close	ssp_err_t(* sf_power_profiles_v2_api_t::close) (sf_power_profiles_v2_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_power_profiles_v2_api_t::versionGet) (ssp_version_t *const p_version)

11.2.50 Interface: sf_socket_api_t

Description: SF Socket WIFI Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_socket_api_t::open) (sf_socket_ctrl_t *p_ctrl, sf_socket_cfg_t const *const p_cfg)
.close	ssp_err_t(* sf_socket_api_t::close) (sf_socket_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_socket_api_t::versionGet) (ssp_version_t *const p_version)

11.2.51 Interface: sf_spi_api_t

Description: SPI Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_spi_api_t::open) (sf_spi_ctrl_t *p_ctrl, sf_spi_cfg_t const *const p_cfg)
.read	ssp_err_t(* sf_spi_api_t::read) (sf_spi_ctrl_t *const p_ctrl, void *const p_dest, uint32_t const length, spi_bit_width_t const bit_width, uint32_t const timeout)

Function name	Definition
.write	ssp_err_t(* sf_spi_api_t::write) (sf_spi_ctrl_t *const p_ctrl, void *const p_src, uint32_t const length, spi_bit_width_t const bit_width, uint32_t const timeout)
.writeRead	ssp_err_t(* sf_spi_api_t::writeRead) (sf_spi_ctrl_t *const p_ctrl, void *const p_src, void *const p_dest, uint32_t const length, spi_bit_width_t const bit_width, uint32_t const timeout)
.close	ssp_err_t(* sf_spi_api_t::close) (sf_spi_ctrl_t *const p_ctrl)
.lock	ssp_err_t(* sf_spi_api_t::lock) (sf_spi_ctrl_t *const p_ctrl)
.unlock	ssp_err_t(* sf_spi_api_t::unlock) (sf_spi_ctrl_t *const p_ctrl)
.version	ssp_err_t(* sf_spi_api_t::version) (ssp_version_t *const p_version)

11.2.52 Interface: sf_thread_monitor_api_t

Description: Thread Monitor Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_thread_monitor_api_t::open) (sf_thread_monitor_ctrl_t *const p_ctrl, sf_thread_monitor_cfg_t const *const p_cfg)
.close	ssp_err_t(* sf_thread_monitor_api_t::close) (sf_thread_monitor_ctrl_t *const p_ctrl)
.threadRegister	ssp_err_t(* sf_thread_monitor_api_t::threadRegister) (sf_thread_monitor_ctrl_t *const p_ctrl, sf_thread_monitor_counter_min_max_t const *p_counter_min_max)
.threadUnregister	ssp_err_t(* sf_thread_monitor_api_t::threadUnregister) (sf_thread_monitor_ctrl_t *const p_ctrl)
.countIncrement	ssp_err_t(* sf_thread_monitor_api_t::countIncrement) (sf_thread_monitor_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_thread_monitor_api_t::versionGet) (ssp_version_t *const p_version)

11.2.53 Interface: sf_touch_ctsu_api_t

Description: CTSU Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_touch_ctsu_api_t::open) (sf_touch_ctsu_ctrl_t *const p_ctrl, sf_touch_ctsu_cfg_t const *const p_cfg)
.read	ssp_err_t(* sf_touch_ctsu_api_t::read) (sf_touch_ctsu_ctrl_t *const p_ctrl, void *p_dest, ctsu_read_t opts, const ctsu_channel_pair_t *channels, const uint16_t count)
.close	ssp_err_t(* sf_touch_ctsu_api_t::close) (sf_touch_ctsu_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_touch_ctsu_api_t::versionGet) (ssp_version_t *const p_version)

11.2.54 Interface: sf_touch_ctsu_button_api_t

Description: CTSU Button Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_touch_ctsu_button_api_t::open) (sf_touch_ctsu_button_ctrl_t *const p_ctrl, sf_touch_ctsu_button_cfg_t const *const p_cfg)
.enable	ssp_err_t(* sf_touch_ctsu_button_api_t::enable) (sf_touch_ctsu_button_ctrl_t *const p_ctrl, sf_touch_ctsu_button_id const button_id)
.disable	ssp_err_t(* sf_touch_ctsu_button_api_t::disable) (sf_touch_ctsu_button_ctrl_t *const p_ctrl, sf_touch_ctsu_button_id const button_id)
.close	ssp_err_t(* sf_touch_ctsu_button_api_t::close) (sf_touch_ctsu_button_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_touch_ctsu_button_api_t::versionGet) (ssp_version_t *const p_version)

11.2.55 Interface: sf_touch_ctsu_slider_api_t

Description: CTSU Slider Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_touch_ctsu_slider_api_t::open) (sf_touch_ctsu_slider_ctrl_t *const p_ctrl, sf_touch_ctsu_slider_cfg_t const *const p_cfg)
.enable	ssp_err_t(* sf_touch_ctsu_slider_api_t::enable) (sf_touch_ctsu_slider_ctrl_t *const p_ctrl, sf_touch_ctsu_slider_id_t const slider_id)
.disable	ssp_err_t(* sf_touch_ctsu_slider_api_t::disable) (sf_touch_ctsu_slider_ctrl_t *const p_ctrl, sf_touch_ctsu_slider_id_t const slider_id)
.close	ssp_err_t(* sf_touch_ctsu_slider_api_t::close) (sf_touch_ctsu_slider_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_touch_ctsu_slider_api_t::versionGet) (ssp_version_t *const p_version)

11.2.56 Interface: sf_touch_panel_api_t

Description: Touch Panel Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_touch_panel_api_t::open) (sf_touch_panel_ctrl_t *const p_ctrl, sf_touch_panel_cfg_t const *const p_cfg)
.calibrate	ssp_err_t(* sf_touch_panel_api_t::calibrate) (sf_touch_panel_ctrl_t *const p_ctrl, sf_touch_panel_calibrate_t const *const p_expected, sf_touch_panel_payload_t const *const p_actual, ULONG timeout)
.start	ssp_err_t(* sf_touch_panel_api_t::start) (sf_touch_panel_ctrl_t *const p_ctrl)
.stop	ssp_err_t(* sf_touch_panel_api_t::stop) (sf_touch_panel_ctrl_t *const p_ctrl)

Function name	Definition
.reset	ssp_err_t(* sf_touch_panel_api_t::reset) (sf_touch_panel_ctrl_t *const p_ctrl)
.close	ssp_err_t(* sf_touch_panel_api_t::close) (sf_touch_panel_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_touch_panel_api_t::versionGet) (ssp_version_t *const p_version)

11.2.57 Interface: sf_wifi_api_t

Description: SF WIFI Framework Interface

Function name	Definition
.open	ssp_err_t(* sf_wifi_api_t::open) (sf_wifi_ctrl_t *p_ctrl, sf_wifi_cfg_t const *const p_cfg)
.close	ssp_err_t(* sf_wifi_api_t::close) (sf_wifi_ctrl_t *const p_ctrl)
.multicastListAdd	ssp_err_t(* sf_wifi_api_t::multicastListAdd) (sf_wifi_ctrl_t *const p_ctrl, uint8_t const *const p_mac_addr)
.multicastListDelete	ssp_err_t(* sf_wifi_api_t::multicastListDelete) (sf_wifi_ctrl_t *const p_ctrl, uint8_t const *const p_mac_addr)
.statisticsGet	ssp_err_t(* sf_wifi_api_t::statisticsGet) (sf_wifi_ctrl_t *const p_ctrl, sf_wifi_stats_t *const p_wifi_device_stats)
.transmit	ssp_err_t(* sf_wifi_api_t::transmit) (sf_wifi_ctrl_t *const p_ctrl, uint8_t *const p_buf, uint32_t length)
.provisioningSet	ssp_err_t(* sf_wifi_api_t::provisioningSet) (sf_wifi_ctrl_t *const p_ctrl, sf_wifi_provisioning_t const *const p_wifi_provisioning)
.provisioningGet	ssp_err_t(* sf_wifi_api_t::provisioningGet) (sf_wifi_ctrl_t *const p_ctrl, sf_wifi_provisioning_t *const p_wifi_provisioning)
.infoGet	ssp_err_t(* sf_wifi_api_t::infoGet) (sf_wifi_ctrl_t *const p_ctrl, sf_wifi_info_t *const p_wifi_info)

Function name	Definition
.scan	ssp_err_t(* sf_wifi_api_t::scan) (sf_wifi_ctrl_t *const p_ctrl, sf_wifi_scan_t *const p_scan, uint8_t *const p_cnt)
.ACLAdd	ssp_err_t(* sf_wifi_api_t::ACLAdd) (sf_wifi_ctrl_t *const p_ctrl, uint8_t const *const p_mac)
.ACLDelete	ssp_err_t(* sf_wifi_api_t::ACLDelete) (sf_wifi_ctrl_t *const p_ctrl, uint8_t const *const p_mac)
.macAddressGet	ssp_err_t(* sf_wifi_api_t::macAddressGet) (sf_wifi_ctrl_t *const p_ctrl, uint8_t *const p_mac)
.macAddressSet	ssp_err_t(* sf_wifi_api_t::macAddressSet) (sf_wifi_ctrl_t *const p_ctrl, uint8_t const *const p_mac)
.versionGet	ssp_err_t(* sf_wifi_api_t::versionGet) (ssp_version_t *const p_version)

11.2.58 Interface: sf_wifi_onchip_stack_api_t

Description: SF WIFI On-Chip Stack Interface

Function name	Definition
.open	ssp_err_t(* sf_wifi_onchip_stack_api_t::open) (sf_wifi_onchip_stack_ctrl_t *p_ctrl, sf_wifi_onchip_stack_cfg_t const *const p_cfg)
.close	ssp_err_t(* sf_wifi_onchip_stack_api_t::close) (sf_wifi_onchip_stack_ctrl_t *const p_ctrl)
.ipAddressCfg	ssp_err_t(* sf_wifi_onchip_stack_api_t::ipAddressCfg) (sf_wifi_onchip_stack_ctrl_t *const p_ctrl, sf_wifi_onchip_stack_ip_cfg_t *const p_cfg)
.dhcpServerStart	ssp_err_t(* sf_wifi_onchip_stack_api_t::dhcpServerStart) (sf_wifi_onchip_stack_ctrl_t *const p_ctrl, sf_wifi_ip_addr_t const *const p_start_ip, sf_wifi_ip_addr_t const *const p_end_ip)
.dhcpServerStop	ssp_err_t(* sf_wifi_onchip_stack_api_t::dhcpServerStop) (sf_wifi_onchip_stack_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* sf_wifi_onchip_stack_api_t::versionGet) (ssp_version_t *const p_version)

11.2.59 Interface: slcdc_api_t

Description: SLCDC Interface

Function name	Definition
.open	ssp_err_t(* slcdc_api_t::open) (slcdc_ctrl_t *const p_ctrl, slcdc_cfg_t const *const p_cfg)
.write	ssp_err_t(* slcdc_api_t::write) (slcdc_ctrl_t *const p_ctrl, slcdc_size_t const start_segment, slcdc_size_t const *const p_data, slcdc_size_t const segment_count)
.modify	ssp_err_t(* slcdc_api_t::modify) (slcdc_ctrl_t *const p_ctrl, slcdc_size_t const segment, slcdc_size_t const data_mask, slcdc_size_t const data)
.start	ssp_err_t(* slcdc_api_t::start) (slcdc_ctrl_t *const p_ctrl)
.stop	ssp_err_t(* slcdc_api_t::stop) (slcdc_ctrl_t *const p_ctrl)
.contrastIncrease	ssp_err_t(* slcdc_api_t::contrastIncrease) (slcdc_ctrl_t *const p_ctrl)
.contrastDecrease	ssp_err_t(* slcdc_api_t::contrastDecrease) (slcdc_ctrl_t *const p_ctrl)
.setdisplayArea	ssp_err_t(* slcdc_api_t::setdisplayArea) (slcdc_ctrl_t *const p_ctrl, slcdc_display_area_t const display_area)
.close	ssp_err_t(* slcdc_api_t::close) (slcdc_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* slcdc_api_t::versionGet) (ssp_version_t *p_version)

11.2.60 Interface: spi_api_t

Description: SPI Interface

Function name	Definition
.open	ssp_err_t(* spi_api_t::open) (spi_ctrl_t *p_ctrl, spi_cfg_t const *const p_cfg)

Function name	Definition
.read	ssp_err_t(* spi_api_t::read) (spi_ctrl_t *const p_ctrl, void const *p_dest, uint32_t const length, spi_bit_width_t const bit_width)
.write	ssp_err_t(* spi_api_t::write) (spi_ctrl_t *const p_ctrl, void const *p_src, uint32_t const length, spi_bit_width_t const bit_width)
.writeRead	ssp_err_t(* spi_api_t::writeRead) (spi_ctrl_t *const p_ctrl, void const *p_src, void const *p_dest, uint32_t const length, spi_bit_width_t const bit_width)
.close	ssp_err_t(* spi_api_t::close) (spi_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* spi_api_t::versionGet) (ssp_version_t *p_version)

11.2.61 Interface: timer_api_t

Description: Timer Interface

Function name	Definition
.open	ssp_err_t(* timer_api_t::open) (timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg)
.stop	ssp_err_t(* timer_api_t::stop) (timer_ctrl_t *const p_ctrl)
.start	ssp_err_t(* timer_api_t::start) (timer_ctrl_t *const p_ctrl)
.reset	ssp_err_t(* timer_api_t::reset) (timer_ctrl_t *const p_ctrl)
.counterGet	ssp_err_t(* timer_api_t::counterGet) (timer_ctrl_t *const p_ctrl, timer_size_t *const p_value)
.periodSet	ssp_err_t(* timer_api_t::periodSet) (timer_ctrl_t *const p_ctrl, timer_size_t const period, timer_unit_t const unit)
.dutyCycleSet	ssp_err_t(* timer_api_t::dutyCycleSet) (timer_ctrl_t *const p_ctrl, timer_size_t const duty_cycle, timer_pwm_unit_t const duty_cycle_unit, uint8_t const pin)
.infoGet	ssp_err_t(* timer_api_t::infoGet) (timer_ctrl_t *const p_ctrl, timer_info_t *const p_info)

Function name	Definition
.close	ssp_err_t(* timer_api_t::close) (timer_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* timer_api_t::versionGet) (ssp_version_t *const p_version)

11.2.62 Interface: transfer_api_t

Description: Transfer Interface

Function name	Definition
.open	ssp_err_t(* transfer_api_t::open) (transfer_ctrl_t *const p_ctrl, transfer_cfg_t const *const p_cfg)
.reset	ssp_err_t(* transfer_api_t::reset) (transfer_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint16_t const num_transfers)
.enable	ssp_err_t(* transfer_api_t::enable) (transfer_ctrl_t *const p_ctrl)
.disable	ssp_err_t(* transfer_api_t::disable) (transfer_ctrl_t *const p_ctrl)
.start	ssp_err_t(* transfer_api_t::start) (transfer_ctrl_t *const p_ctrl, transfer_start_mode_t mode)
.stop	ssp_err_t(* transfer_api_t::stop) (transfer_ctrl_t *const p_ctrl)
.infoGet	ssp_err_t(* transfer_api_t::infoGet) (transfer_ctrl_t *const p_ctrl, transfer_properties_t *const p_info)
.close	ssp_err_t(* transfer_api_t::close) (transfer_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* transfer_api_t::versionGet) (ssp_version_t *const p_version)
.blockReset	ssp_err_t(* transfer_api_t::blockReset) (transfer_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint16_t const length, transfer_size_t size, uint16_t const num_transfers)

11.2.63 Interface: trng_api_t

Description: Random number generation

Function name	Definition
.open	uint32_t(* trng_api_t::open) (trng_ctrl_t *const p_ctrl, trng_cfg_t const *const p_cfg)
.read	uint32_t(* trng_api_t::read) (trng_ctrl_t *const p_ctrl, uint32_t *const p_rngbuf, uint32_t nwords)
.close	uint32_t(* trng_api_t::close) (trng_ctrl_t *const p_ctrl)
.versionGet	uint32_t(* trng_api_t::versionGet) (ssp_version_t *const p_version)

11.2.64 Interface: uart_api_t

Description: UART Interface

Function name	Definition
.open	ssp_err_t(* uart_api_t::open) (uart_ctrl_t *const p_ctrl, uart_cfg_t const *const p_cfg)
.read	ssp_err_t(* uart_api_t::read) (uart_ctrl_t *const p_ctrl, uint8_t const *const p_dest, uint32_t const bytes)
.write	ssp_err_t(* uart_api_t::write) (uart_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes)
.baudSet	ssp_err_t(* uart_api_t::baudSet) (uart_ctrl_t *const p_ctrl, uint32_t const baudrate)
.infoGet	ssp_err_t(* uart_api_t::infoGet) (uart_ctrl_t *const p_ctrl, uart_info_t *const p_info)
.close	ssp_err_t(* uart_api_t::close) (uart_ctrl_t *const p_ctrl)
.versionGet	ssp_err_t(* uart_api_t::versionGet) (ssp_version_t *p_version)
.communicationAbort	ssp_err_t(* uart_api_t::communicationAbort) (uart_ctrl_t *const p_ctrl, uart_dir_t communication_to_abort)

11.2.65 Interface: wdt_api_t

Description: WDT Interface

Function name	Definition
.cfgGet	ssp_err_t(* wdt_api_t::cfgGet) (wdt_ctrl_t *const p_ctrl, wdt_cfg_t *const p_cfg)
.open	ssp_err_t(* wdt_api_t::open) (wdt_ctrl_t *const p_ctrl, wdt_cfg_t const *const p_cfg)
.refresh	ssp_err_t(* wdt_api_t::refresh) (wdt_ctrl_t *const p_ctrl)
.statusGet	ssp_err_t(* wdt_api_t::statusGet) (wdt_ctrl_t *const p_ctrl, wdt_status_t *const p_status)
.statusClear	ssp_err_t(* wdt_api_t::statusClear) (wdt_ctrl_t *const p_ctrl, const wdt_status_t status)
.counterGet	ssp_err_t(* wdt_api_t::counterGet) (wdt_ctrl_t *const p_ctrl, uint32_t *const p_count)
.timeoutGet	ssp_err_t(* wdt_api_t::timeoutGet) (wdt_ctrl_t *const p_ctrl, wdt_timeout_values_t *const p_timeout)
.versionGet	ssp_err_t(* wdt_api_t::versionGet) (ssp_version_t *const p_data)

Legal Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.

2. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.

3. This document contains information that is the exclusive property of Renesas Electronics. Your use of this document and the material in the document is subject to the terms and conditions of your Renesas SSP license agreement. Unless otherwise agreed in an SSP license agreement with Renesas: 1) you may not use, copy, modify, distribute, display, or perform the document or any of its contents; and 2) you may not use any name or mark of Renesas Electronics for advertising or publicity purposes or in connection with your use of the contents.

4. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.

5. You may create a printed copy of this document solely for your own personal use. Conversion to other formats is allowed as long as the actual content is not altered or edited in any way. You shall not publish or distribute this documentation in any form or on any media. Any other use, such as any dissemination of printed copies or use of this documentation, in whole or in part, in another publication, requires the prior written consent from an authorized representative of Renesas Electronics. Renesas Electronics reserves all rights to this document not expressly granted above.

6. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics product.

7. Renesas Electronics products are classified according to the following two quality grades: “Standard” and “High Quality”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below.

“Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.

“High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anticrime systems; and safety equipment etc.

Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (nuclear reactor control systems, military equipment etc.). You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application for which it is not intended. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.

8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.

9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or systems manufactured by you.

10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.

11. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You should not use Renesas Electronics products or technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. When exporting the Renesas Electronics products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations.

12. It is the responsibility of the buyer or distributor of Renesas Electronics products, who distributes, disposes of, or otherwise places the product with a third party, to notify such third party in advance of the contents and conditions set forth in this document, Renesas Electronics assumes no responsibility for any losses incurred by you or third parties as a result of unauthorized use of Renesas Electronics products.

13. This document may not be reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.

14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.
